rockeye [ORD] A free-fall cluster bomb designed for use against tanks and armored vehicles with antipersonnel secondary effects.

rock fabric *See* fabric.

rock failure [GEOL] Fracture of a rock that has been stressed beyond its ultimate strength.

rockfall [GEOL] **1.** The fastest-moving landslide; free fall of newly detached bedrock segments from a cliff or other steep slope; usually occurs during spring thaw. **2.** The rock material moving in or moved by a rockfall.

rock fan [GEOL] A fan-shaped bedrock surface whose apex is where a mountain stream debouches upon a piedmont slope, and which occupies an area where a pediment meets the mountain slope.

rock-fill [CIV ENG] Composed of large, loosely placed rocks.

rock-fill dam [CIV ENG] A dam constructed of loosely placed rock or stone.

rock-floor robbing [GEOL] A form of sheetflood erosion in which sheetfloods remove crumbling debris from rock surfaces in desert mountains.

rock flour [GEOL] A fine, chemically unweathered powder of rock-forming minerals produced by pulverization of rock fragments during natural transport or crushing. Also known as glacial flour.

rock flowage *See* flow.

rockforming [GEOL] Referring to any minerals which commonly occur in important proportions in common rocks.

rock glacier [GEOL] Boulders and fine material cemented by ice about a meter below the surface. Also known as talus glacier.

rock-glacier creep [GEOL] A rapid talus creep of tongues of debris in a cold region, caused by the expansive force of the alternate freeze and thaw of ice in the interstices of the debris.

rock gypsum [MINERAL] Massive, coarsely crystalline to earthy, finely granular type of gypsum found in gyp rock.

rocking bar [HOROL] **1.** The plate that holds the winding wheels in a watch; rocks to alternately engage the winding mechanism and the hand-setting mechanism. **2.** The part in an alarm timepiece that engages the time and alarm mainsprings.

rocking furnace [MECH ENG] A horizonal, cylindrical melting furnace that is rolled back and forth on a geared cradle.

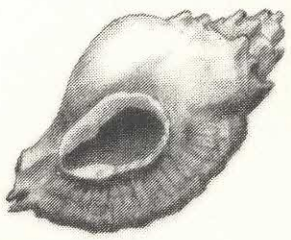
rocking pier [CIV ENG] A pier that is hinged to allow for longitudinal expansion or contraction of the bridge.

rocking stone [GEOL] A stone or boulder, often of great size, so finely poised upon its foundation (as on the side of a hill or cliff) that it can be moved slightly backward and forward with little force (as with the hand) and still retain its original position. Also known as roggan.

rocking the sextant *See* swinging the arc.

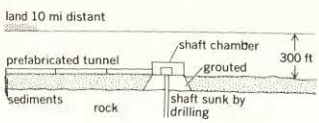
rocking valve [MECH ENG] An engine valve in which a disk or cylinder turns in its seat to permit fluid flow.
rock island *See* meander core.
rock kindred *See* rock association.
rocklath [MATER] A sheet of gypsum used as a base for plaster.
rock loader [MIN ENG] Any device or machine used for loading slate or rock inside a mine.
rock magnetism [GEOPHYS] The natural remanent magnetization of igneous, metamorphic, and sedimentary rocks resulting from the presence of iron oxide minerals.
rock matrix compressibility [GEOL] One of three types of rock compressibility (matrix, bulk, and pore); the fractional change in volume of the solid rock material (grains) with a unit change in pressure.
rock meal *See* rock milk.
rock mechanics [GEOPHYS] Application of the principles of mechanics and geology to quantify the response of rock when it is acted upon by environmental forces, particularly when human-induced factors alter the original ambient forces.
rock milk [MINERAL] A soft, white, earthy or powdery variety of calcite. Also known as agaric mineral; bergmehl; forril farina; rock meal.
rockoon [AERO ENG] A high-altitude sounding system consisting of a small solid-propellant research rocket carried aloft by a large plastic balloon.
rock pedestal *See* pedestal.
rock pediment [GEOL] A pediment formed on the surface of bedrock.
rock permeability [GEOL] The ability of a rock to receive, hold, or pass fluid materials (oil, water, and gas) by nature of the interconnections of its internal porosity.
rock phosphate *See* phosphorite.
rock pillar [GEOL] **1.** A column of rock produced by differential weathering or erosion, as along a joint plane. **2.** In a cave, a pillar-type structure that is residual bedrock rather than a stalactostalagmite.
rock pool [GEOL] A tidal pool formed along a rocky shoreline.
rock pressure [GEOPHYS] **1.** Stress in underground geologic material due to weight of overlying material, residual stresses, and pressures resulting from swelling clays. **2.** *See* ground pressure.
rock river [GEOL] A very long and narrow rock stream.
rock salt *See* halite.
rock saw [MIN ENG] A type of mechanical miner that is used to remove large blocks of material; cuts narrow slots or channels by the action of a moving steel band or blade and a slurry of abrasive particles (sometimes diamonds) rather than teeth; small flame jets are also used.
rockshaft [MIN ENG] A shaft through which rock can be brought into a mine for filling, stopes, or other excavations.
rock shell [INV ZOO] The common name for a large number of gastropod mollusks composing the family Muridae and characterized by having conical shells with various sculpturing.
rock shelter [GEOL] A cave that is formed by a ledge of overhanging rock.
rock silk [MINERAL] A silky variety of asbestos.
Rocksite program [MIN ENG] A U.S. Navy program concerned with undersea mining or consolidated mineral deposits; studied direct sea-floor access at remote sites through shafts drilled in the sea floor.
rockslide [GEOL] The sudden, rapid downward movement of newly detached bedrock segments over a surface of weakness, such as of bedding, jointing, or faulting. Also known as rock slip.
rock slip *See* rockslide.
rock stack [GEOL] A rocky crag that has been uplifted from an old sea floor.
rock step *See* knickpoint.
rock-stratigraphic unit [GEOL] A lithologically homogeneous body of strata characterized by certain observable physical features, or by the dominance of a certain rock type or combination of rock types; rock-stratigraphic units include groups, formations, members, and beds. Also known as geolith; lithologic unit; lithostratic unit; lithostratigraphic unit; rock unit.
rock stream [GEOL] Rocks moving (or already moved) in a mass down a slope under the influence of their own weight.
rock system [GEOPHYS] In rock mechanics, all natural environmental factors that can influence the behavior of that portion of the earth's crust that will become part of an engineering structure.
rock terrace [GEOL] A stream terrace on the side of a valley composed of resistant bedrock which remains during erosion of weaker overlying and underlying beds.
rock type [PETR] **1.** One of the three major rock groups: igneous, sedimentary, metamorphic. **2.** A rock having a unique, identifiable set of characters, such as basalt.
rock unit *See* rock-stratigraphic unit.
Rockwell hardness [ENG] A measure of hardness of a material as determined by the Rockwell hardness test.
Rockwell hardness test [ENG] One of the arbitrarily defined measures of resistance of a material to indentation under static or dynamic load; depth of indentation of either a steel ball or a 120° conical diamond with rounded point, 1/16, 1/8, 1/4, or 1/2 inch (1.5875, 3.175, 6.35, 12.7 millimeters) in diameter, called a brale, under prescribed load is the basis for Rockwell hardness; 60, 100, 150 kilogram load is applied with a special machine, and depth of impression under initial minor load is indicated on a dial whose graduations represent hardness number.
rock wood *See* mountain wood.
rock wool *See* mineral wool.
Rocky Mountain spotted fever [MED] An acute, infectious, typhuslike disease of man caused by the rickettsial organism *Rickettsia rickettsi* and transmitted by species of hard-shelled ticks; characterized by sudden onset of chills, headache, fever, and an exanthem on the extremities. Also known as American spotted fever; tick fever; tick typhus.
rocky point effect [ELECTR] Transient but violent discharges between electrodes in high-voltage transmitting tubes.
rod [DES ENG] **1.** A bar whose end is slotted, tapered, or screwed for the attachment of a drill bit. **2.** A thin, round bar of metal or wood. [GEOL] A rodlike sedimentary particle characterized by a width-length ratio less than 2/3 and a thickness-width ratio more than 2/3. Also known as roller. [HISTOL] One of the rod-shaped sensory bodies in the retina which are sensitive to dim light. [MECH] *See* perch. [NUCLEO] A relatively long and slender body of material used in, or in conjunction with, a nuclear reactor; may contain fuel, absorber, or fertile material or other material in which activation or transmutation is desired.
rod bit [DES ENG] A bit designed to fit a reaming shell that is threaded to couple directly to a drill rod.
rod coupling [DES ENG] A double-pin-thread coupling used to connect two drill rods together.
rodding [PETR] In metamorphic rocks, a linear structure in which the stronger parts, such as vein quartz or quartz pebbles, have been shaped into parallel rods.
rod dope [MATER] Grease or other material used to protect or lubricate drill rods. Also called gunk; rod grease.
rodent [VERT ZOO] The common name for members of the order Rodentia.
Rodentia [VERT ZOO] An order of mammals characterized by a single pair of ever-growing upper and lower incisors, a maximum of five upper and four lower cheek teeth on each side, and free movement of the lower jaw in an anteroposterior direction.
rodenticide [MATER] A chemical agent used to kill rodents.
rod gap [ELEC] **1.** A device that is usually formed of two 1/2 square-inch (3-square-centimeter) rods, one grounded and the other connected to the line conductor, but may also have the shape of rings or horns, used to limit the magnitude of transient overvoltages on an electrical system as a result of lightning strikes. **2.** Spark gap in which the electrodes are two coaxial rods, with ends between which the discharge takes place, cut perpendicularly to the axis.
rod grease *See* rod dope.
rodingite [PETR] A medium- to coarse-grained, commonly calcium-enriched gabbroic rock containing grossular and diallage as essential minerals.
rodite *See* diogenite.
rod level [ENG] A spirit level attached to a level rod or stadia rod to ensure the vertical position of the rod prior to instrument reading.
rod mill [MECH ENG] A pulverizer operated by the impact of heavy metal rods. [MET] A mill for making metal rods.
rod pump [PETRO ENG] Type of oil well sucker-rod pump that can be inserted into or removed from oil well tubing without

ROCK SHELL



The festive rock shell *(Murex festivus)*. It has an elaborately ornamented shell and grows over 3 inches (8 centimeters) long.

ROCKSITE PROGRAM



Proposed method of sea-floor access in the Rocksite program. 300 feet = 90 meters, 10 miles = 16 kilometers.

moving or disturbing the tubing itself. Also known as insert pump.

Rodrigues formula [MATH] The equation giving the *n*th function in a class of special functions in terms of the *n*th derivatives of some polynomial.

rod slide *See* slide.

rod string [MECH ENG] Drill rods coupled to form the connecting link between the core barrel and bit in the borehole and the drill machine at the collar of the borehole.

rod stuffing box [ENG] An annular packing gland fitting between the drill rod and the casing at the borehole collar; allows the rod to rotate freely but prevents the escape of gas or liquid under pressure.

rod thermistor [ELECTR] A type of thermistor that has high resistance, long time constant, and moderate power dissipation; it is extruded as a long vertical rod 0.250–2.0 inches (0.63–5.1 centimeters) long and 0.050–0.110 inch (0.13–0.28 centimeter) in diameter, of oxide-binder mix and sintered; ends are coated with conducting paste and leads are wrapped on the coated area.

rod weeder [AGR] A type of equipment used to prepare the soil during harrowing; it is a power-driven rod, usually square in cross section, which also operates below the surface of loose soil, killing weeds and maintaining the soil in loose mulched condition; adapted to large operations and used in dry areas in the northwestern United States.

roedderite [MINERAL] $(Na,K)_2(Mg,Fe)_5Si_{12}O_{30}$ A silicate meteorite mineral.

roemerite [MINERAL] $FeFe_2(SO_4)_4 \cdot 14H_2O$ A rust-brown to yellow mineral composed of hydrous ferric and ferrous iron sulfate.

roentgen [NUCLEO] An exposure dose of x- or γ-radiation such that the electrons and positrons liberated by this radiation produce, in air, when stopped completely, ions carrying positive and negative charges of 2.58×10^{-4} coulomb per kilogram of air. Abbreviated R (formerly r). Also spelled röntgen.

roentgen diffractometry *See* x-ray crystallography.

roentgen equivalent man *See* rem.

roentgen equivalent physical *See* rep.

Roentgen meter [NUCLEO] A meter for measuring the cumulative quantity of x-rays or γ-rays, without reference to time.

roentgenography [PHYS] Radiography by means of x-rays.

roentgenoluminescence [PHYS] Luminescence which can be produced by x-rays.

roentgen optics *See* x-ray optics.

roentgenotherapy *See* x-ray therapy.

roentgen-per-hour-at-one-meter [NUCLEO] A unit of γ-ray source strength, corresponding to a dose rate of 1 roentgen per hour at a distance of 1 meter in air. Symbolized RHM.

roentgen rays *See* x-rays.

roentgen spectrometry *See* x-ray spectrometry.

Roese-Gottlieb method [ANALY CHEM] A solvent extraction method used to obtain an accurate determination of the fat content of milk.

roesslerite [MINERAL] $MgH(AsO_4) \cdot 7H_2O$ A monoclinic mineral composed of hydrous acid magnesium arsenate; it is isomorphous with phosphorroesslerite.

roestone *See* oolite.

rofla [GEOL] An extremely narrow, tortuous gorge, frequently formed by meltwater streams flowing from a glacier.

ROFOR [METEOROL] An international code word used to indicate a route forecast (along an air route).

ROFOT [METEOROL] An international code word used to indicate a route forecast, with units in the English system.

Rogallo wing [AERO ENG] A glider folded inside a spacecraft; to be deployed during the spacecraft's reentry like a parachute, gliding the spacecraft to a landing.

rogenstein [GEOL] An oolite in which the ooliths are united by argillaceous cement.

roggan *See* rocking stone.

Rohrback solution [MATER] Toxic, clear, yellow liquid used for specific-gravity separation of minerals and microchemical detection of alkaloids.

roil [HYD] A small section of a stream, characterized by swiftly flowing, turbulent water.

roily oil [MATER] Crude petroleum oil that is more or less emulsified with water.

roily water [HYD] **1.** Muddy or sediment-filled water. **2.** Turbulent, agitated, or swirling water.

rolamite mechanism [MECH ENG] An elemental mechanism consisting of two rollers contained by two parallel planes and bounded by a fixed S-shaped band under tension.

role indicator [COMPUT SCI] In information retrieval, a code assigned to a key word to indicate its part of speech, nature, or function.

roll [GEOL] A primary sedimentary structure produced by deformation involving subaqueous slump or vertical foundering. [MECH] Rotational or oscillatory movement of an aircraft or similar body about a longitudinal axis through the body; it is called roll for any degree of such rotation. [MECH ENG] A cylinder mounted in bearings; used for such functions as shaping, crushing, moving, or printing work passing by it. [MIN ENG] *See* horseback. [TEXT] A continuous strand made by rolling, rubbing, or twisting fibers.

roll acceleration [MECH] The angular acceleration of an aircraft or missile about its longitudinal or X axis.

roll axis [MECH] A longitudinal axis through an aircraft, rocket, or similar body, about which the body rolls.

rollback *See* rerun.

roll cloud *See* rotor cloud.

roll compacting [MET] Compacting a metal powder by using a rolling mill.

roll control [ENG] The exercise of control over a missile so as to make it roll to a programmed degree, usually just before pitchover.

roll crusher [MECH ENG] Crusher having one or two toothed rollers to reduce the material.

rolled glass [MATER] Thick flat glass made by passing a roller over the molten glass.

rolled gold [MET] Same as gold-filled except that the proportion of gold alloy to total weight of the article may be less than 1/20; fineness of the gold alloy may not be less than 10 karat.

rolled joint [ENG] A joint made by expanding a tube in a tube sheet hole by use of an expander.

roller [DES ENG] A cylindrical device for transmitting motion and force by rotation. [GEOL] *See* rod. [OCEANOGR] A long, massive wave which usually retains its form without breaking until it reaches the beach or a shoal.

roller analyzer [ENG] Device for quantitative separation of fine particles (down to 5 micrometers) by use of the graduated lift of a variable-rate pneumatic stream.

roller bearing [MECH ENG] A shaft bearing characterized by parallel or tapered steel rollers confined between outer and inner rings.

roller bit *See* cone rock bit.

roller cam follower [MECH ENG] A follower consisting of a rotatable wheel at the end of the shaft.

roller chain [MECH ENG] A chain drive assembled from roller links and pin links.

roller coating [ENG] The application of paints, lacquers, or other coatings onto raised designs or letters by means of a roller.

roller conveyor [MECH ENG] A gravity conveyor having a track of parallel tubular rollers set at a definite grade, usually on antifriction bearings, at fixed locations, over which package goods which are sufficiently rigid to prevent sagging between rollers are moved by gravity or propulsion.

roller drying [CHEM ENG] A method used to dry milk for purposes other than human consumption; concentrated milk is fed between two heated and narrowly spaced stainless steel rollers, the adhering thin film of milk dries as the rollers turn and is scraped off the roller by a doctor blade.

roller gate [CIV ENG] A cylindrical, usually hollow crest gate that is raised and lowered by large toothed wheels running on sloping racks.

roller-hearth kiln [ENG] A type of tunnel kiln through which the ware is conveyed on ceramic rollers.

roller leveling [MECH ENG] Leveling flat stock by passing it through a machine having a series of rolls whose axes are staggered about a mean parallel path by a decreasing amount.

roller mill *See* ring-roller mill.

roller printing [TEXT] Printing patterns on fabrics by running them through copper rollers to which inks are applied.

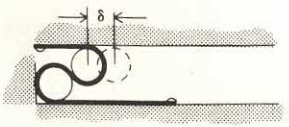
roller pulverizer [MECH ENG] A pulverizer operated by the crushing action of rotating rollers.

rollers [OCEANOGR] Swells coming from a great distance and forming large breakers on exposed coasts.

roller stamping die [MECH ENG] An engraved roller used for stamping designs and other markings on sheet metal.

roller stripping [GRAPHICS] In lithography, referring to the

ROLAMITE MECHANISM

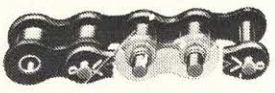


Drawing of rolamite mechanism showing components. δ represents deflection of upper roller during motion of mechanism.

ROLLER CAM FOLLOWER

Drawing showing components of roller cam follower.

ROLLER CHAIN



Section of a single-strand roller chain.

problem of ink failing to adhere to the metal ink rollers of a press.

Rolle's theorem *See* first law of the mean.

roll film [GRAPH] A long strip of plastic material with a sensitive emulsion on one side and a layer of gelatin on the other; the gelatin layer reduces the tendency of the base material to curl; the film is attached to opaque backing paper that protects the film from light before and after it is exposed in the camera.

roll flattening *See* flattening.

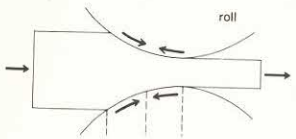
roll forging [MET] Forging metal by using grooved rotating dies.

roll forming [MET] Metal forming by using contoured rolls.

roll in [COMPUT SCI] To restore to main memory a section of program or data that had previously been rolled out.

rolling [MECH] Motion of a body across a surface combined with rotational motion of the body so that the point on the body in contact with the surface is instantaneously at rest. [MET] Reducing or changing the cross-sectional area of a workpiece by the compressive forces exerted by rotating rolls. Also known as metal rolling. [NAV ARCH] The oscillating motion of a vessel from side to side due to ground swell, heavy sea, or other causes.

ROLLING



Direction of friction forces in the roll gap during the rolling process. At the neutral point (arrows meet), roll and metal strip have the same velocity; to the left of this point (entry side) the strip moves slower than the roll; and to the right of this point (exit) it moves faster.

rolling barrage [ORD] An artillery barrage that precedes infantry troops at a predetermined rate in their advance during the attack to protect them and facilitate their advance.

rolling beach [GEOL] At the base of a sea cliff, the upper part of an accumulation of boulder sand pebbles which is being ground to sand and finer particles.

rolling chock *See* bilge keel.

rolling contact [MECH] Contact between bodies such that the relative velocity of the two contacting surfaces at the point of contact is zero.

rolling-contact bearing [MECH ENG] A bearing composed of rolling elements interposed between an outer and inner ring.

rolling door [ENG] A door that moves up and down or from side to side by means of wheels moving along a track.

rolling friction [MECH] A force which opposes the motion of any body which is rolling over the surface of another.

rolling lift bridge [CIV ENG] A bridge having on the shore end of the lifting portion a segmental bearing that rolls on a flat surface.

rolling recoil [ORD] System formerly used for absorbing the recoil energy of some railway guns; with the brakes set, the entire car is allowed to roll back when the gun is fired.

rolling transposition [ELEC] Transposition in which the conductors of an open wire circuit are physically rotated in a substantially helical manner; with two wires, a complete transposition is usually executed in two consecutive spans.

roll mill [MECH ENG] A series of rolls operating at different speeds for grinding and crushing.

roll-off [ELECTR] Gradually increasing loss or attenuation with increase or decrease of frequency beyond the substantially flat portion of the amplitude-frequency response characteristic of a system or transducer.

roll-out [COMPUT SCI] **1.** To make available additional main memory for one task by copying another task onto auxiliary storage. **2.** To read a computer register or counter by adding a one to each digit column simultaneously until all have returned to zero, with a signal being generated at the instant a column returns to zero.

roll resistance spot welding [MET] Resistance spot welding using rotating circular electrodes.

roll roofing [MATER] Composition sheet roofing supplied in rolls from which it is laid in overlapping strips.

roll straightening [ENG] Unbending of metal stock by passing it through staggered rolls in different planes.

roll threading [MECH ENG] Threading a metal workpiece by rolling it either between grooved circular rolls or between grooved straight lines.

roll-tube technique [MICROBIO] A pure-culture technique, employed chiefly in tissue culture, in which, during incubation, the test tubes are held in a wheellike instrument at an angle of about 15° from the horizontal and the wheel is rotated vertically about once every 2 minutes.

roll welding [MET] Forge welding by heating in a furnace and applying pressure with rolls.

rom [ELEC] A unit of electrical conductivity, equal to the conductivity of a material in which an electric field of 1 volt per meter gives rise to a current density of 1 ampere per square meter. Derived from reciprocal ohm meter.

ROM *See* read-only memory.

Romanche trench [GEOL] A 7370-meter-deep trench in the Mid-Atlantic ridge near the equator.

Romberg's sign [MED] **1.** A sign for obturator hernia in which there is pain radiating to the knee. **2.** A sign for loss of position sense in which the patient cannot maintain equilibrium when standing with feet together and eyes closed.

romeite [MINERAL] $(Ca,Fe,Mn,Na)_2(Sb,Ti)_2O_6(O,OH,F)$ A honey-yellow to yellowish-brown mineral composed of oxide of calcium, iron, manganese, sodium, antimony, and titanium, occurring in minute octahedrons.

Römer method [OPTICS] A method of measuring the speed of light, in which apparent changes in the periods of satellites of another planet, such as Jupiter, whose distance from the earth is known, are observed throughout the year.

ROMET [METEOROL] An international code word denoting route forecast, with units in the metric system.

Ronchi test [OPTICS] An improvement on the Foucault knife-edge test for testing curved mirrors, in which the knife edge is replaced with a transmission grating with 15–80 lines per centimeter, and the pinhole source is replaced with a slit or a section of the same grating.

rondada [METEOROL] In Spain, a wind that shifts diurnally from northwest through north, east, south, and west.

rongstockite [GEOL] A medium- to fine-grained plutonic rock composed of zoned plagioclase, orthoclase, some cancrinite, augite, mica, hornblende, magnetite, sphene, and apatite.

ronnel [ORG CHEM] $C_8H_8Cl_3O_3PS$ A tan solid with a melting point of 37–38°C; slightly soluble in water; used as an insecticide and miticide for flies and cockroaches. Also known as *O,O*-dimethyl-*O*-(2,4,5-trichlorophenyl)phosphorothioate.

röntgen *See* roentgen.

rood [MECH] A unit of area, equal to ¼ acre, or 10,890 square feet, or 1011.7141056 square meters.

roof [BUILD] The cover of a building or similar structure. [GEOL] **1.** The rock above an orebody. **2.** The country rock bordering the upper surface of an igneous intrusion. [MIN ENG] The rock immediately above a coal seam; corresponds to a hanging wall in metal mining.

roof beam [BUILD] A load-bearing member in the roof structure.

roof bolt [MIN ENG] One of the long steel bolts driven into walls or roofs of underground excavations to strengthen the pinning of rock strata.

roof control [MIN ENG] The study of rock behavior when undermined by mining operations, and the most effective measures to control movements.

roof cut [MIN ENG] A machine cut made with a turret coal cutter in the roof immediately above the seam.

roofed dike [GEOL] A dike that has an upward termination.

roof filter [ELECTR] Low-pass filter used in carrier telephone systems to limit the frequency response of the equipment to frequencies needed for normal transmission, thereby blocking unwanted higher frequencies induced in the circuit by external sources; improves runaround cross-talk suppression and minimizes high-frequency singing.

roof foundering [GEOL] Collapse of overlying rock into a magma chamber following excavation of a large quantity of magma.

roofing [MATER] Material used in roof construction, such as tar, tar paper, shingles, slate, and tin.

roofing copper [MET] Copper that has been hot-rolled to sheets in 14- to 32-ounce (400- to 900-gram) weights.

roofing felt [MATER] Thick asphalt-impregnated paper used for roofing.

roofing granules [MATER] Graded particles of crushed rock, slate, slag, porcelain, or tile, used as surfacing on asphalt roofing and shingles.

roofing nail [DES ENG] A nail used for attaching paper or shingle to roof boards; usually short with a barbed shank and a large flat head.

roofing putty [MATER] Heavy consistency asphalt solution with asbestos fibers; used for caulking metal roofs.

roofing slate [MATER] Hard varieties of slate varying in size from 12 × 6 inches (30 × 15 centimeters) to 24 × 14 inches (60 × 35 centimeters), and from ⅛ to ¾ inch (3 to 19 millimeters) in thickness.

roof jack [MIN ENG] A screw- or pump-type extension post used as a temporary roof support.

roof pendant [GEOL] Downward projection or sag into an igneous intrusion of the country rock of the roof. Also known as pendant.

roof stringer [MIN ENG] A lagging bar running parallel with the working place above the header in a weak or scaly top in narrow rooms or entries which have short life.

roof truss [BUILD] A truss used in roof construction; it carries the weight of roof deck and framing and of wind loads on the upper chord; an example is a Fink truss.

rookery [ZOO] A location used by birds for breeding and nesting.

room [BUILD] A partitioned-off area inside a building or dwelling. [GEOL] An open area in a cave. [MIN ENG] **1.** Space driven off an entry in which coal is produced. **2.** Working place in a flat mine.

room acoustics [ACOUS] The study of the behavior of sound waves in an enclosed room.

room-and-pillar [MIN ENG] A system of mining in which the coal or ore is mined in rooms separated by narrow ribs or pillars; pillars are subsequently worked.

room conveyor [MIN ENG] Any conveyor which carries coal from the face of a room toward the mouth.

room crosscut *See* breakthrough.

room noise [COMMUN] Ambient noise in a telephone station.

rooseveltite [MINERAL] $BiAsO_4$ A gray mineral consisting of bismuth arsenate; occurs as thin botryoidal crusts.

rooster [AGR] An adult male domestic fowl. [VERT ZOO] An adult male of certain birds and fowl, such as pheasants and ptarmigans.

rooster tail [HYD] A plumelike form of water and sometimes spray that occurs at the intersection of two crossing waves.

root [COMPUT SCI] The origin or most fundamental point of a tree diagram. Also known as base. [BOT] The absorbing and anchoring organ of a vascular plant; it bears neither leaves nor flowers and is usually subterranean. [CIV ENG] The portion of a dam which penetrates into the ground where the dam joins the hillside. [DES ENG] The bottom of a screw thread. [GEOL] **1.** The lower limit of an ore body. Also known as bottom. **2.** The part of a fold nappe that was originally linked to its root zone. [MATH] **1.** A root of a given real or complex number is a number which when raised to some exponent equals that number. Also known as radix. **2.** A root of a polynomial $p(x)$ is a number a such that $p(a) = 0$.

root canal [ANAT] The cavity within the root of a tooth, occupied by pulp, nerves, and vessels.

root cap [BOT] A thick, protective mass of parenchymal cells covering the meristematic tip of the root.

root cast [GEOL] A slender, tubular, near-vertical, and commonly downward-branching sedimentary structure formed by the filling of a tubular opening left by a root. Also known as rhizoconcretion.

root circle [DES ENG] A hypothetical circle defined at the bottom of the tooth spaces of a gear.

root clay *See* underclay.

root component *See* root symbol.

root crack [MET] A crack in the weld or in the heat-affected zone at the root of the weld.

rooted ordered tree [MATH] A rooted tree in which the order of the subtrees formed by deleting the root vertex is significant.

rooted tree [MATH] A directed tree graph in which one vertex has no predecessor, and each of the remaining vertices has a unique predecessor.

rooter [ENG] A heavy plowing device equipped with teeth and used for breaking up the ground surface; a towed scarifier.

root field *See* Galois field.

root fillet [DES ENG] The rounded corner at the angle of a gear tooth flank and the bottom land.

root hair [BOT] One of the hairlike outgrowths of the root epidermis that function in absorption.

root knot [PL PATH] Any of various plant diseases caused by root-knot nematodes which produce gall-like enlargements on the roots.

rootless vent [GEOL] A source of lava that is not directly connected to a volcanic vent or magma source.

root locus plot [CONT SYS] A plot in the complex plane of values at which the loop transfer function of a feedback control system is a negative number.

root-mean-square current *See* effective current.

root-mean-square error [STAT] The square root of the second moment corresponding to the frequency function of a random variable.

root-mean-square sound pressure *See* effective sound pressure.

root-mean-square value Abbreviated rms value. [PHYS] The square root of the time average of the square of a quantity; for a periodic quantity the average is taken over one complete cycle. Also known as effective value. [STAT] The square root of the average of the squares of a series of related values.

root nodule [PL PATH] An abnormal nodular growth on a plant root system caused by the establishment of symbiotic nitrogen-fixing bacteria in the host tissue.

root of an equation [MATH] A number or quantity which satisfies a given equation.

root of joint [MET] The area of closest proximity between members of a joint to be welded.

root of weld [MET] The points at which the bottom of the weld and the base metal surfaces intersect.

root opening [MET] In welding, the distance between members at the root of the joint.

root pass [MET] The first weld bead deposited in a multiple pass weld. Also known as root sealer bead.

root penetration [MET] The depth of penetration of the weld metal into the root of a joint.

root rot [PL PATH] Any of various plant diseases characterized by decay of the roots.

Roots blower [MECH ENG] A compressor in which a pair of hourglass-shaped members rotate within a casing to deliver large volumes of gas at relatively low pressure increments.

root sealer bead *See* root pass.

root segment [COMPUT SCI] The master or controlling segment of an overlay structure which always resides in the main memory of a computer.

root sheath [GEOL] A hollow root cast.

rootstock [BOT] A root or part of a root used as the stock for grafting.

root-sum-square value [PHYS] The square root of the sum of the squares of a series of related values; commonly used to express total harmonic distortion.

root symbol [COMPUT SCI] An element of a formal language, generally unique, that is not derivable from other language elements. Also known as root component.

root test [MATH] An infinite series of nonnegative terms a_n converges if, after some term, the ith root of a_i is less than a fixed number smaller than 1.

root vertex [MATH] The vertex of a rooted tree that has no predecessor.

rootworm [INV ZOO] **1.** An insect larva that feeds on plant roots. **2.** A nematode that infests the roots of plants.

root zone [GEOL] **1.** The area where a low-angle thrust fault steepens and descends into the crust. **2.** The source of the root of a fold nappe.

ropak [OCEANOGR] An ice cake standing on edge as a result of excessive pressure. Also known as turret ice.

rope [MATER] A long, flexible object which consists of many strands of wire, plastic, or vegetable fiber such as manila. [ORD] A form of confusion reflector consisting of long strips of metal foil, sometimes used with tiny parachutes to reduce the rate of fall.

rope-and-buton conveyor [MECH ENG] A conveyor consisting of an endless wire rope or cable with disks or buttons attached at intervals.

rope boring [ENG] A method similar to rod drilling except that rigid rods are replaced by a steel rope to which the boring tools are attached and allowed to fall by their own weight.

rope chaff [ORD] Chaff that contains one or more rope elements.

rope cutter *See* hook tender.

rope drive [MECH ENG] A system of ropes running in grooved pulleys or sheaves to transmit power over distances too great for belt drives.

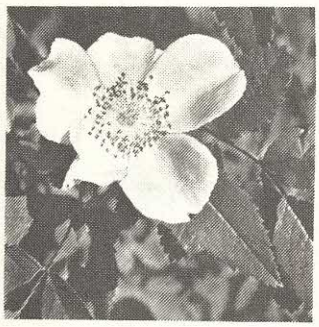
rope-lay conductor [ELEC] Cable composed of a central core surrounded by one or more layers of helically laid groups of wires.

rope rider *See* trip rider.

rope sheave [DES ENG] A grooved wheel, usually made of cast steel or heat-treated alloy steel, used for rope drives.

rope socket [DES ENG] A drop-forged steel device, with a

ROSACEAE



A common eastern American species of wild rose *(Rosa carolina)*, in the family Rosaceae of the order Rosales. *(Photograph by A. W. Ambler, from National Audubon Society)*

ROSE

Typical flowers of a rose plant.

tapered hole, which can be fastened to the end of a wire cable or rope and to which a load may be attached.

ropewalk [ENG] A long walkway down which a worker carries and lays rope in a manufacturing plant.

ropeway [ENG] One or a pair of steel cables between several supporting towers which serve as tracks for transporting materials in mountainous areas or at sea.

Roproniidae [INV ZOO] A small family of hymenopteran insects in the superfamily Proctotrupoidea.

ropy lava *See* pahoehoe.

Rorschach test [PSYCH] A projective psychologic test in which the subject describes what he imagines seeing in a series of 10 standard inkblots of varying designs and colors.

Rosa and Dorsey method [ELECTROMAG] A method of measuring the speed of light by comparing the capacitance of a capacitor in electromagnetic units, as measured experimentally, with values of currents determined from a current balance, to the capacitance of the same capacitor in electrostatic units, as determined from its geometrical dimensions.

rosacea [MED] A chronic skin disorder of middle age characterized by redness, papules, and oiliness.

Rosaceae [BOT] A family of dicotyledonous plants in the order Rosales typically having stipulate leaves and hypogynous, slightly perigynous, or epigynous flowers, numerous stamens, and several or many separate carpels.

Rosales [BOT] A morphologically diffuse order of dicotyledonous plants in the subclass Rosidae.

rosaniline *See* fuchsin.

rosasite [MINERAL] $(Cu,Zn)_2(OH)_2(CO_3)$ A green to bluish-green and sky blue mineral consisting of a carbonate-hydroxide of copper and zinc.

roscherite [MINERAL] $(Ca,Mn,Fe)_2Al(PO_4)(OH)\cdot 2H_2O$ A dark-brown mineral composed of hydrous basic phosphate of aluminum, calcium, manganese, and iron, occurring as monoclinic crystals.

roscoelite [MINERAL] $K(V,Al,Mg)_3Si_3O_{10}(OH)_2$ Tan, grayish-brown, or greenish-brown vanadium-bearing mica mineral occurring in minute scales or flakes.

rose [BOT] A member of the genus *Rosa* in the rose family (Rosaceae); plants are erect, climbing, or trailing shrubs, generally prickly stemmed, and bear alternate, odd-pinnate single leaves. [MATH] A graph consisting of loops shaped like rose petals arising from the equations in polar coordinates $r = a \sin n\theta$ or $r = a \cos n\theta$.

rose absolute [MATER] First filtrate from the cooled alcohol solvent solution of rose concrete (after removal of waxes) during perfume manufacture; pure oil of rose.

rose bit [DES ENG] A hardened steel or alloy noncore bit with a serrated face to cut or mill out bits, casing, or other metal objects lost in the hole.

rosebloom *See* false blossom.

rose chucking reamer [DES ENG] A machine reamer with a straight or tapered shank and a straight or spiral flute; cutting is done at the ends of the teeth only; produces a rough hole since there are few teeth.

rose concrete [MATER] Semisolid mixture of essential oils and waxes solvent-extracted from rose flower petals, leaves, and bark.

rose diagram [GEOL] A circular graph indicating values in several classes of vector properties of rocks such as cross-bedding direction.

rose flower oil *See* rose oil.

rose hip [BOT] The ripened false fruit of a rose plant.

roselite [MINERAL] $(Ca,Co)_2(Co,Mg)(AsO_4)_2\cdot 2H_2O$ A pink or rose-colored, monoclinic mineral consisting of a hydrated arsenate of calcium, cobalt, and magnesium.

rosemary [BOT] *Rosmarinus officinalis*. A fragrant evergreen of the mint family from France, Spain, and Portugal; leaves have a pungent bitter taste and are used as an herb and in perfumes.

rosemary oil [MATER] Pungent, combustible, colorless to yellow essential oil with camphorlike aroma; soluble in ether, glacial acetic acid, and alcohol; derived from flowers of rosemary (*Rosmarinus officinalis*); used in flavors, perfumes, and medicines.

Rosenberg crossed-field generator [ELEC] A type of dynamoelectric amplifier which is self-regulating and can operate while the rotor varies in speed, the current never rising above a certain value.

Rosenmueller's organ *See* epoophoron.

Rosenmund reaction [ORG CHEM] Catalytic hydrogenation of an acid chloride to form an aldehyde; the reaction is in the presence of sulfur to prevent the subsequent hydrogenation of the aldehyde.

rose oil [MATER] Transparent, combustible, yellow-to-green or red essential oil with fragrant scent and sweet taste; solidifies at 18–37°C; steam-distilled from rose flowers; used in flavors, perfumes, and medicines. Also known as attar of roses; otto of rose oil; rose flower oil.

roseola infantum *See* exanthem subitum.

roseola typhosa [MED] The rose-colored eruption characteristic of typhus or typhoid fever.

rose opal [MINERAL] An opaque variety of common opal having a fine red color.

rose point lace [TEXT] A needlepoint lace worked in relief. Also known as gros point; venetian rose point.

rose quartz [MINERAL] A pink variety of crystalline quartz; commonly massive and used as a gemstone. Also known as Bohemian ruby.

rose reamer [DES ENG] A reamer designed to cut on the beveled leading ends of the teeth rather than on the sides.

Rose's metal [MET] An alloy of bismuth tin and lead; melts at 94°C.

rosette [BIOL] Any structure or marking resembling a rose. [MET] **1.** Rounded constituents in a microstructure arranged in whorls. **2.** Strain gages arranged to indicate at a single position the strains in three different directions. [MINERAL] Rose-shaped, crystalline aggregates of barite, marcasite, or pyrite formed in sedimentary rock. [PL PATH] Any of various plant diseases in which the leaves become clustered in the form of a rosette.

Rosette Nebula [ASTRON] A nebula classified as NGC 2237; this nebula contains numerous small dense clouds that have been photographed with large telescopes.

rose water [MATER] Aqueous solution with rose scent (from steam disillation of fresh flowers of rose plants); used in lotions, flavors, and perfumes.

Rosidae [BOT] A large subclass of the class Magnoliatae; most have a well-developed corolla with petals separate from each other, binucleate pollen, and ovules usually with two integuments.

rosieresite [MINERAL] A yellow to brown mineral composed of hydrous aluminum phosphate containing lead and copper, occurring in stalactitic masses.

rosin [MATER] A translucent yellow, umber, or reddish resinous residue from the distillation of crude turpentine from the sap of pine trees (gum rosin) or from an extract of the stumps and other parts of the tree (wood rosin); used in varnishes, lacquers, printing inks, adhesives, and soldering fluxes, in medical ointments, and as a preservative.

rosin-core solder [MATER] Solder made up in tubular or other hollow form, with the inner space filled with noncorrosive rosin flux.

rosin essence [MATER] That part of rosin that can be distilled off at a temperature below 360°C.

rosin ester *See* ester gum.

rosin-extended rubber [MATER] Cold rubber with up to 50% rosin.

rosin joint [ELEC] A soldered joint in which one of the wires is surrounded by an almost invisible film of insulating rosin, making the joint intermittently or continuously open even though it looks good.

rosin oil [MATER] Viscous, water-insoluble, white-to-brown liquid; soluble in ether, chloroform, carbon disulfide, and fatty oils; distilled from rosin; used as a lubricant and in adhesives, inks, and linoleum.

rosin size [MATER] An alkali-treated rosin used as a dry powder or emulsion to surface-size paper products.

rosin tin [MINERAL] A red or yellow variety of cassiterite. Also known as resin tin.

Rosiwal analysis [PETR] A quantitive method of estimating the volume percentages of the minerals in a rock, in which thin sections of a rock are examined under a microscope which has a micrometer to measure the linear intercepts of each mineral along a particular set of lines.

rosolic acid *See* aurin.

Ross Barrier [OCEANOGR] A wall of shelf ice bordering on the Ross Sea.

Rossby diagram [THERMO] A thermodynamic diagram, named after its designer, with mixing ratio as abscissa and

potential temperature as ordinate; lines of constant equivalent potential temperature are added.

Rossby number [FL MECH] The nondimensional ratio of the inertial force to the Coriolis force for a given flow of a rotating fluid, given as $R_0 = U/fL$, where U is a characteristic velocity, f the Coriolis parameter (or, if the system is cylindrical rather than spherical, twice the system's rotation rate), and L a characteristic length.

Rossby parameter [FL MECH] The northward variation of the Coriolis parameter, arising from the sphericity of the earth. Also known as Rossby term.

Rossby regime [FL MECH] A type of flow pattern in a rotating fluid with differential radial heating in which the major radial transport of shear and momentum is effected by horizontal eddies of low wave-number; this regime occurs for low values of the Rossby number (of the order of 0.1).

Rossby term *See* Rossby parameter.

Rossby wave [METEOROL] A wave on a uniform current in a two-dimensional nondivergent fluid system, rotating with varying angular speed about the local vertical (beta plane); this is a special case of a barotropic disturbance, conserving absolute vorticity; applied to atmospheric flow, it takes into account the variability of the Coriolis parameter while assuming the motion to be two-dimensional. Also known as planetary wave.

Rossel Current [OCEANOGR] A seasonal Pacific Ocean current flowing westward and north-westward along both the southern and northeastern coasts of New Guinea, the southern part flowing through Torres Strait and losing its identity in the Arafura Sea, and the northern part curving northeastward to join the equatorial countercurrent of the Pacific Ocean.

Ross feeder [MECH ENG] A chute for conveying bulk materials by means of a screen of heavy endless chains hung on a sprocket shaft; rotation of the shaft causes materials to slide.

rossite [MINERAL] $CaV_2O_6 \cdot 4H_2O$ A yellow, triclinic mineral consisting of a hydrated calcium vanadate.

Rossman drive [ENG] A method used to provide speed control of alternating-current motors; an induction motor stator is mounted on trunnion bearings and driven with an auxiliary motor, to provide the desired change in slip between the stator and rotor.

Ross objective [OPTICS] A type of wide-field lens objective in cameras used for astrometric work.

Ross Sea [GEOGR] Arm of the South Pacific Ocean off Antarctica.

rostellum [BIOL] The anterior, flattened region of the scolex of armed tapeworms.

rosterite *See* vorobyevite.

rosthornite [MINERAL] A brown to garnet-red variety of retinite with a low (4.5%) oxygen content, found in lenticular masses in coal.

Rostratulidae [VERT ZOO] A small family of birds in the order Charadriiformes containing the painted snipe; females are more brightly colored than males.

rostrum [BIOL] A beak or beaklike process.

rot [MATER] *See* curl. [PL PATH] Any plant disease characterized by breakdown and decay of plant tissue.

Rotaliacea [INV ZOO] A superfamily of foraminiferans in the suborder Rotaliina characterized by a planispiral or trochospiral test having apertural pores and composed of radial calcite, with secondarily bilamellar septa.

rotameter [ENG] A variable-area, constant-head, rate-of-flow volume meter in which the fluid flows upward through a tapered tube, lifting a shaped weight to a position where upward fluid force just balances its weight.

rotary [MECH ENG] **1.** A rotary machine, such as a rotary printing press or a rotary well-drilling machine. **2.** The turntable and its supporting and rotating assembly in a well-drilling machine.

rotary abutment meter [ENG] A type of positive displacement meter in which two displacement rotating vanes interleave with cavities on an abutment rotor in such a way that the three elements are geared together.

rotary actuator [MECH ENG] A device that converts electric energy into controlled rotary force; usually consists of an electric motor, gear box, and limit switches.

rotary air heater [MECH ENG] A regenerative air heater in which heat-transferring members are moved alternately through the gas and air streams.

rotary amplifier *See* rotating magnetic amplifier.

rotary annular extractor [MECH ENG] Vertical, cylindrical shell with an inner, rotating cylinder; liquids to be contacted flow countercurrently through the annular space between the rotor and shell; used for liquid-liquid extraction processes.

rotary atomizer [MECH ENG] A hydraulic atomizer having the pump and nozzle combined.

rotary beam [ELECTROMAG] Short-wave antenna system highly directional in azimuth and altitude, mounted in such a manner that it can be rotated to any desired position, either manually or by an electric motor drive.

rotary belt cleaner [MECH ENG] A series of blades symmetrically spaced about the axis of rotation and caused to scrape or beat against the conveyor belt for the purpose of cleaning.

rotary blasthole drilling [MIN ENG] A term applied to two types of drilling: in quarrying and open pit mining it implies rotary drilling with roller-type bits, using compressed air for cuttings removal, either conventional rotary table drive or hydraulic motor to produce rotation, with hydraulic or wire-line mechanisms to add part of the weight of the drill to the weight of the tools to increase bit pressure; and in underground mining and sometimes aboveground, it implies the drilling of small-diameter blastholes with a diamond drill, using either coring or noncoring diamond bits.

rotary blower [MECH ENG] Positive-displacement, rotating-impeller, air-movement device; can be straight-lobe, screw, sliding-vane, or liquid-piston type.

rotary boring [MECH ENG] A system of boring in which rock penetration is achieved by the rotation of the hollow cutting tool.

rotary breaker [MIN ENG] A breaking machine for coal or ore; consists of a trommel screen with a heavy steel shell fitted with lifts which raise and convey the coal and stone forward and break it; as the material is broken, the undersize passes through the apertures.

rotary bucket [MECH ENG] A 12- to 96-inch-diameter (30- to 244-centimeter-diameter) posthole augerlike device, the bottom end of which is equipped with cutting teeth used to rotary-drill large-diameter shallow holes to obtain samples of soil lying above the groundwater level.

rotary calculator [COMPUT SCI] A type of mechanical desk calculator that is distinguished from key-driven calculators by virtue of a latching selection keyboard in which the multiplicand or divisor could be indexed and then repeatedly transferred to the accumulator, positively or negatively by turning a crank; the accumulator and a cycle-counting register were mounted in a carriage that could be shifted right or left, relative to the selection keyboard, to accommodate the successive digits of the multiplier or quotient.

rotary compressor [MECH ENG] A positive-displacement machine in which compression of the fluid is effected directly by a rotor and without the usual piston, connecting rod, and crank mechanism of the reciprocating compressor.

rotary converter *See* dynamotor.

rotary coupler *See* rotating joint.

rotary crane [MECH ENG] A crane consisting of a boom pivoted to a fixed or movable structure.

rotary crusher [MECH ENG] Solids-reduction device in which a high-speed rotating cone on a vertical shaft forces solids against a surrounding shell.

rotary-cup oil burner [ENG] Oil burner that uses centrifugal force to spray fuel oil from a rotary fuel atomizing cup into the combustion chamber.

rotary current [OCEANOGR] A current with the direction of flow rotating through all points of the compass.

rotary cutter [MECH ENG] Device used to cut tough or fibrous materials by the shear action between two sets of blades, one set on a rotating holder, the other stationary on the surrounding casing.

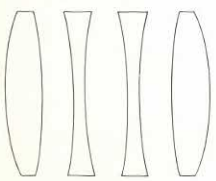
rotary-disk contactor [CHEM ENG] Liquid-liquid contactor, having a vertical cylindrical shell with vertical rotating shaft upon which are mounted a spaced series of flat disks; spinning of the disks forces liquid into shell-mounted baffles, causing mixing; used for liquid-liquid extraction processes. Also known as RDC extractor.

rotary dispersion [OPTICS] The change in the angle through which an optically active substance rotates the plane of polarization of plane polarized light as the wavelength of the light is varied. Also known as rotatory dispersion.

rotary drill [MECH ENG] Any of various drill machines that rotate a rigid, tubular string of rods to which is attached a rock cutting bit, such as an oil well drilling apparatus.

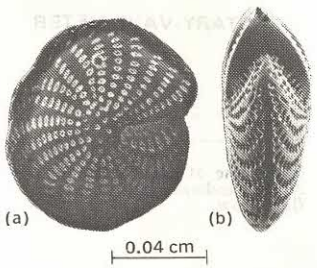
rotary drilling [MECH ENG] The act or process of drilling a

ROSS OBJECTIVE



The four component lenses of the Ross objective.

ROTALIACEA



Scanning electron micrograph of *Elphidium*, suborder Rotaliina, superfamily Rotaliacea, from Recent of Adriatic Sea. *(a)* Side view showing large sutural pores that open into canal system. *(b)* Edge view with series of apertural pores at lower margin of final chamber face and imperforate peripheral band. *(R. B. MacAdam, Chevron Oil Field Research Co.)*

ROTAMETER

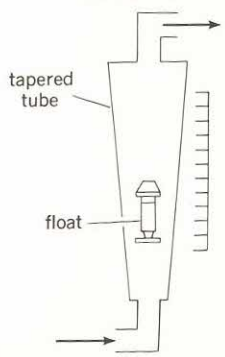


Diagram of a rotameter. Arrows indicate direction of fluid flow.

ROTARY ABUTMENT METER

Rotary abutment positive-displacement flowmeter.

ROTARY-VANE METER

Schematic of rotary-vane meter. Arrows indicate direction of fluid flow.

borehole by means of a rotary-drill machine, such as in drilling an oil well.

rotary dryer [MECH ENG] A cylindrical furnace slightly inclined to the horizontal and rotated on suitable bearings; moisture is removed by rising hot gases.

rotary dump car [MIN ENG] A small mine car in which the car body is mounted on a rotary dumper.

rotary dumper [MIN ENG] A steel structure on which a mine car revolves and discharges the contents, usually sideways.

rotary engine [MECH ENG] A positive displacement engine (such as a steam or internal combustion type) in which the thermodynamic cycle is carried out in a mechanism that is entirely rotary and without the more customary structural elements of a reciprocating piston, connecting rods, and crankshaft.

rotary excavator *See* bucket-wheel excavator.

rotary fault [GEOL] A fault in which displacement is downward at one point and upward at another point. Also known as pivotal fault; rotational fault.

rotary feeder [MECH ENG] Device in which a rotating element or vane discharges powder or granules at a predetermined rate.

rotary filter *See* drum filter.

rotary furnace [MECH ENG] A heat-treating furnace of circular construction which rotates the workpiece around the axis of the furnace during heat treatment; workpieces are transported through the furnace along a circular path.

rotary gap *See* rotary spark gap.

rotary joint *See* rotating joint.

rotary kiln [ENG] A long cylindrical kiln lined with refractory, inclined at a slight angle, and rotated at a slow speed.

rotary-percussive drill [MECH ENG] Drilling machine which operates as a rotary machine by the action of repeated blows to the bit.

rotary phase converter [ELEC] Machine which converts power from an alternating-current system of one or more phases to an alternating-current system of a different number of phases, but of the same frequency.

rotary polarization *See* optical activity.

rotary power source [ELEC] An uninterruptible power system in which a battery driven dc motor mechanically drives an ac generator in the event of a power outage.

rotary press [GRAPHICS] A press utilizing two cylinders, one of which supports the paper while the other one prints on it; large rotary presses are web-fed and accept continuous strips of paper from large rolls; this web of paper is not cut or trimmed until after it is printed.

rotary pump [MECH ENG] A displacement pump that delivers a steady flow by the action of two members in rotational contact.

rotary rig [PETRO ENG] The collective equipment used with a rotary drill; includes prime movers or engines, derrick or mast, hoisting and rotating equipment, drill pipe, drill collars and bit, and the mud system used to circulate drilling fluid.

rotary roughening [MECH ENG] A metal preparation technique in which the workpiece surface is roughened by a cutting tool.

rotary shear [MECH ENG] A sheet-metal cutting machine having two rotary-disk cutters mounted on parallel shafts and driven in unison.

rotary shot drill [MECH ENG] A rotary drill used to drill blastholes.

rotary solenoid [ELECTROMAG] A solenoid in which the armature is rotated when actuated; the rotary stroke, ranging from 25 to 95°, is usually converted to linear motion to give a longer stroke than is possible with a conventional plunger-type solenoid.

rotary spark gap [ELEC] A spark gap in which sparks occur between one or more fixed electrodes and a number of electrodes projecting outward from the circumference of a motor-driven metal disk. Also known as rotary gap.

rotary stepping relay *See* stepping relay.

rotary stepping switch *See* stepping relay.

rotary swager [MECH ENG] A machine for reducing diameter or wall thickness of a bar or tube by delivering hammerlike blows to the surface of the work supported on a mandrel.

rotary switch [ELEC] A switch that is operated by rotating its shaft.

rotary system [COMMUN] A telephone switching system that uses unidirectional, rotary switches that carry ten sets of brushes (wipers), only one of which is tripped as part of the control and selection process.

rotary table [MECH ENG] A milling machine attachment consisting of a round table with T-shaped slots and rotated by means of a handwheel actuating a worm and worm gear. [PETRO ENG] A circular unit on the floor of a derrick which rotates the drill pipe and bit.

rotary transformer [ELEC] A rotating machine used to transform direct-current power from one voltage to another.

rotary vacuum filter *See* drum filter.

rotary valve [MECH ENG] A valve for the admission or release of working fluid to or from an engine cylinder where the valve member is a ported piston that turns on its axis.

rotary-vane attenuator [ELECTROMAG] Device designed to introduce attenuation into a waveguide circuit by varying the angular position of a resistive material in the guide.

rotary-vane meter [ENG] A type of positive-displacement rate-of-flow meter having spring-loaded vanes mounted on an eccentric drum in a circular cavity; each time the drum rotates, a fixed volume of fluid passes through the meter.

rotary vibrating tippler [MIN ENG] A tippler designed to overcome the tendency for coal or dirt to stick to the bottom of the tubs so that when the tippler is inverted, the car rests upon a vibrating frame which frees any material tending to stick to the bottom.

rotary voltmeter [ENG] Type of electrostatic voltmeter used for measuring high voltages.

rotate [BOT] Of a sympetalous corolla, having a short tube and petals radiating like the spokes of a wheel.

rotating amplifier *See* rotating magnetic amplifier.

rotating-anode tube [ELECTR] An x-ray tube in which the anode rotates continuously to bring a fresh area of its surface into the beam of electrons, allowing greater output without melting the target.

rotating beacon [NAV] A navigational beacon with one or more beams that rotate.

rotating-beam ceilometer [ENG] An electronic, automatic-recording meteorological device which determines cloud height by means of triangulation.

rotating coordinate system [MECH] A coordinate system whose axes as seen in an inertial coordinate system are rotating.

rotating crystal method [SOLID STATE] Any method of studying crystalline structures by x-ray or neutron diffraction in which a monochromatic, collimated beam of x-rays or neutrons falls on a single crystal that is rotated about an axis perpendicular to the beam.

rotating crystal source [NUCLEO] A source of ultracold neutrons in which neutrons are slowed down by reflection from the moving surface of a rotating mica crystal; only those neutrons which satisfy the Bragg condition for reflection from crystal planes are reflected.

rotating-cylinder method [FL MECH] A method of measuring the viscosity of a fluid in which the fluid fills the space between two concentric cylinders, and the torque on the stationary inner cylinder is measured when the outer cylinder is rotated at constant speed.

rotating-drum heat transfer [CHEM ENG] Procedure for solidifying layers of solids onto the outside surface of an inside-cooled drum that is partly immersed in a melt of the solids material.

rotating joint [ELECTROMAG] A joint that permits one section of a transmission line or waveguide to rotate continuously with respect to another while passing radio-frequency energy. Also known as rotary coupler; rotary joint.

rotating magnetic amplifier [ELEC] A prime-mover-driven direct-current generator whose power output can be controlled by small field input powers, to give power gain as high as 10,000. Also known as rotary amplifier; rotating amplifier.

rotating meter *See* velocity-type flowmeter.

rotating models [OCEANOGR] Laboratory models for studying ocean currents, the models being rotated to simulate in part the earth's rotation.

rotating platinum electrode [ANALY CHEM] Platinum wire sealed in a soft-glass tubing and rotated by a constant-speed motor; used as the electrode in amperometric titrations. Abbreviated RPE.

rotating Reynolds number [FL MECH] A nondimensional number arising in problems of a rotating viscous fluid and, in particular, in problems involving the agitation of such a fluid by an impeller, equal to the product of the square of the impeller's

diameter and its angular velocity divided by the kinematic viscosity of the fluid. Symbolized Re,.

rotating spreader [ENG] Plastics-molding injection device consisting of a finned torpedo that is rotated by a shaft extending through a tubular cross-section injection ram behind it.

rotating viscometer vacuum gage [ENG] Vacuum (reduced-pressure) measurement device in which the torque on a spinning armature is proportional to the viscosity (and the pressure) of the rarefied gas being measured; sensitive for absolute pressures of 1 millimeter of mercury (133.32 newtons per square meter), down to a few tens of micrometers.

rotating wedge [OPTICS] A circular optical wedge mounted to be rotated in the path of light to divert the line of sight to a limited degree.

rotation [MATH] *See* curl. [MECH] Also known as rotational motion. **1.** Motion of a rigid body in which either one point is fixed, or all the points on a straight line are fixed. **2.** Angular displacement of a rigid body. **3.** The motion of a particle about a fixed point.

rotational bomb [GEOL] A bomb whose shape is formed by spiral motion or rotation during flight.

rotational casting [ENG] Method to make hollow plastic articles from plastisols and lattices using a hollow mold rotated in one or two planes; the hot mold fuses the plastisol into a gel, which is then chilled and the product stripped out. Also known as rotational molding.

rotational constant [PHYS CHEM] That constant inversely proportioned to the moment of inertia of a linear molecule; used in calculations of microwave spectroscopy quantums.

rotational energy [MECH] The kinetic energy of a rigid body due to rotation. [PHYS CHEM] For a diatomic molecule, the difference between the energy of the actual molecule and that of an idealized molecule which is obtained by the hypothetical process of gradually stopping the relative rotation of the nuclei without placing any new constraint on their vibration, or on motions of electrons.

rotational fault *See* rotary fault.

rotational flow [FL MECH] Flow of a fluid in which the curl of the fluid velocity is not zero, so that each minute particle of fluid rotates about its own axis. Also known as rotational motion.

rotational impedance [MECH] A complex quantity, equal to the phasor representing the alternating torque acting on a system divided by the phasor representing the resulting angular velocity in the direction of the torque at its point of application. Also known as mechanical rotational impedance.

rotational inertia *See* moment of inertia.

rotational landslide [GEOL] A landslide in which shearing takes place on a well-defined, curved shear surface, concave upward in cross section, producing a backward rotation in the displaced mass.

rotational latency [COMPUT SCI] The time required, following an order to read or write information in disk storage, for the location of the information to revolve beneath the appropriate read/write head.

rotational level [PHYS CHEM] An energy level of a diatomic or polyatomic molecule characterized by a particular value of the rotational energy and of the angular momentum associated with the motion of the nuclei.

rotational molding *See* rotational casting.

rotational motion *See* rotation; rotational flow.

rotational movement [GEOL] Apparent fault-block displacement in which the blocks have rotated relative to one another, so that alignment of formerly parallel features is disturbed.

rotational position sensing [COMPUT SCI] A fast disk search method whereby the control unit looks for a specified sector, and then receives the sector number required to access the record.

rotational quantum number [PHYS CHEM] A quantum number J characterizing the angular momentum associated with the motion of the nuclei of a molecule; the angular momentum is $(h/2\pi)\sqrt{J(J+1)}$ and the largest component is $(h/2\pi)J$, where h is Planck's constant.

rotational reactance [MECH] The imaginary part of the rotational impedance. Also known as mechanical rotational reactance.

rotational resistance [MECH] The real part of rotational impedance; it is responsible for dissipation of energy. Also known as mechanical rotational resistance.

rotational spectrum [SPECT] The molecular spectrum resulting from transitions between rotational levels of a molecule which behaves as the quantum-mechanical analog of a rotating rigid body.

rotational stability [MECH] Property of a body for which a small angular displacement sets up a restoring torque that tends to return the body to its original position.

rotational strain [MECH] Strain in which the orientation of the axes of strain is changed.

rotational sum rule [SPECT] The rule that, for a molecule which behaves as a symmetric top, the sum of the line strengths corresponding to transitions to or from a given rotational level is proportional to the statistical weight of that level, that is, to $2J + 1$, where J is the total angular momentum quantum number of the level.

rotational transform [PL PHYS] Property possessed by a magnetic field, in a system used to confine a plasma, in which magnetic lines of force do not close in on themselves after making a circuit around the system, but are rotationally displaced.

rotational transformation [CRYSTAL] A type of crystal transformation that is a change from an ordered phase to a partially disordered phase by rotation of groups of atoms.

rotational viscometer *See* Couette viscometer.

rotational wave *See* shear wave; S wave.

rotation anemometer [ENG] A type of anemometer in which the rotation of an element serves to measure the wind speed; rotation anemometers are divided into two classes: those in which the axis of rotation is horizontal, as exemplified by the windmill anemometer; and those in which the axis is vertical, such as the cup anemometer.

rotation axis [CRYSTAL] A symmetry element of certain crystals in which the crystal can be brought into a position physically indistinguishable from its original position by a rotation through an angle of $360°/n$ about the axis, where n is the multiplicity of the axis, equal to 2, 3, 4, or 6. Also known as symmetry axis.

rotation camera [SOLID STATE] An instrument for studying crystalline structure by x-ray or neutron diffraction, in which a monochromatic, collimated beam of x-rays or neutrons falls on a single crystal which is rotated about an axis perpendicular to the beam and parallel to one of the crystal axes, and the various diffracted beams are registered on a cylindrical film concentric with the axis of rotation.

rotation coefficients [MECH] Factors employed in computing the effects on range and deflection which are caused by the rotation of the earth; they are published only in firing tables involving comparatively long ranges.

rotation firing [ENG] Setting off explosions so that each hole throws its burden toward the space made by the preceding explosions.

rotation group [MATH] The group consisting of all orthogonal matrices or linear transformations having determinant 1.

rotation-inversion axis [CRYSTAL] A symmetry element of certain crystals in which a crystal can be brought into a position physically indistinguishable from its original position by a rotation through an angle of $360°/n$ about the axis followed by an inversion, where n is the multiplicity of the axis, equal to 1, 2, 3, 4, or 6. Also known as inversion axis.

rotation moment *See* torque.

rotation-reflection axis [CRYSTAL] A symmetry element of certain crystals in which a crystal can be brought into a position physically indistinguishable from its original position by a rotation through an angle of $360°/n$ about the axis followed by a reflection in the plane perpendicular to the axis, where n is the multiplicity of the axis, equal to 1, 2, 3, 4, or 6.

rotation Reynolds number *See* rotating Reynolds number.

rotation spectrum [PHYS CHEM] Absorption-spectrum (absorbed electromagnetic energy) wavelengths produced if only the rotational energy of a molecule is affected during excitation.

rotation therapy [MED] Radiation therapy in which either the patient or the source of radiation is rotated, to permit a larger dose at the center of rotation within the patient's body than on any area of the skin.

rotation twin [CRYSTAL] A twin crystal in which the parts will coincide if one part is rotated 180° (sometimes 30, 60, or 120°).

rotation-vibration spectrum [PHYS CHEM] Absorption-spectrum (absorbed electromagnetic energy) wavelengths pro-

duced when both the energy of vibration and energy of rotation of a molecule are affected by excitation.

rotator [ELECTROMAG] A device that rotates the plane of polarization of a plane-polarized electromagnetic wave, such as a twist in a waveguide. [MECH] A rotating rigid body. [QUANT MECH] A molecule or other quantum-mechanical system which behaves as the quantum-mechanical analog of a rotating rigid body. Also known as top.

Rotatoria [INV ZOO] The equivalent name for Rotifera.

rotatory [OPTICS] Having the capability to rotate the plane of polarization of polarized electromagnetic radiation.

rotatory dispersion *See* rotary dispersion.

rotatory power [OPTICS] A substance's capability to rotate the plane of polarization of polarized electromagnetic radiation. [PHYS CHEM] The product of the specific rotation of an element or compound and its atomic or molecular weight.

rotary reflection axis *See* rotoreflection axis.

rotaxane [ORG CHEM] A compound with two or more independent portions not bonded to each other but linked by a linear portion threaded through a ring and maintained in this position by bulky end groups.

röteln *See* rubella.

rotenone [ORG CHEM] $C_{23}H_{22}O_6$ White crystals with a melting point of 163°C; soluble in ether and acetone; used as an insecticide and in flea powders and fly sprays. Also known as tubatoxin.

rotenturm wind [METEOROL] A warm south wind blowing through Rotenturm Pass in the Transylvanian Alps.

Rothia [MICROBIO] A genus of bacteria in the family Actinomycetaceae; coccoid, diphtheroid, or branched filamentous cells which are aerobic; carbohydrates are fermented.

Rotifera [INV ZOO] A class of the phylum Aschelminthes distinguished by the corona, a retractile trochal disk provided with several groups of cilia and located on the head.

Rotliegende [GEOL] A European series of geologic time: Lower and Middle Permian.

rotoflector [ELECTROMAG] In radar, elliptically shaped, rotating reflector used to reflect a vertically directed radar beam at right angles so that it radiates in a horizontal direction.

rotogravure [GRAPHICS] A print made by the intaglio process, using a rotary press.

rotoinversion axis [CRYSTAL] A type of crystal symmetry element that combines a rotation of 60, 90, 120, or 180° with inversion across the center. Also known as symmetry axis of rotary inversion; symmetry axis of rotoinversion.

roton [PHYS] A quantum of rotational motion in a liquid, such as superfluid helium.

rotor [AERO ENG] An assembly of blades designed as airfoils that are attached to a helicopter or similar aircraft and rapidly rotated to provide both lift and thrust. [COMMUN] **1.** Disk with a set of input contacts and a set of output contacts, connected by any prearranged scheme designed to rotate within an electrical cipher machine. **2.** Disk whose rotation produces a variation of some cryptographic element in a cipher machine usually by means of lugs (or pins) in or on its periphery. [ELEC] The rotating member of an electrical machine or device, such as the rotating armature of a motor or generator, or the rotating plates of a variable capacitor. [MECH ENG] *See* impeller.

rotor cloud [METEOROL] Turbulent, altocumulus-type cloud formation found in the lee of some large mountain barriers, particularly in the Sierra Nevadas near Bishop, California; the air in the cloud rotates around an axis parallel to the range. Also known as roll cloud.

rotoreflection axis [CRYSTAL] A type of symmetry element that combines a rotation of 60, 90, 120, or 180° with reflection across the plane perpendicular to the axis. Also known as rotatory reflection axis.

rotor plate [ELEC] One of the rotating plates of a variable capacitor, usually directly connected to the metal frame.

rotten ice [HYD] Any piece, body, or area of ice which is in the process of melting or disintegrating; it is characterized by honeycomb structure, weak bonding between crystals, or the presence of meltwater or sea water between grains. Also known as spring sludge.

rotten spot *See* pothole.

rottenstone [MATER] A soft, decomposed limestone, light gray to olive in color; used in powder form as a polishing material for metal and wood.

Rouche's theorem [MATH] If analytic functions $f(z)$ and $g(z)$ in a simply connected domain satisfy on the boundary $|g(z)|<|f(z)|$, then $f(z)$ and $f(z) + g(z)$ have the same number of zeros in the domain.

rouge [MATER] Finely divided, hydrated iron oxide, used in polishing glass, metal, or gems, and as a pigment.

rougemontite [GEOL] A coarse-grained igneous rock composed of anorthite, titanaugite, and small amounts of olivine and iron ore.

rough [LAP] An uncut gemstone.

rough air [AERO ENG] An aviation term for turbulence encountered in flight.

rough-axed brick *See* axed brick.

rough bark [PL PATH] **1.** Any of various virus diseases of woody plants characterized by roughening and often splitting of the bark. **2.** A fungus disease of apples caused by *Phomopsis mali* and characterized by rough cankers on the bark.

rough burning [AERO ENG] Pressure fluctuations frequently observed at the onset of burning and at the combustion limits of a ramjet or rocket.

roughcast [CIV ENG] A rough finish on a surface; in particular, a plaster made of lime and shells or pebbles, applied by throwing it against a wall with a trowel.

rough colony [MICROBIO] A flattened, irregular, and wrinkled colony of bacteria indicative of decreased capsule formation and virulence.

rough cut [ENG] A heavy cut (or cuts) made before the finish cut, the primary object of which is the rapid removal of material.

rougher cell [MIN ENG] Flotation cells in which the bulk of the gangue is removed from the ore.

rough grinding [MECH ENG] Preliminary grinding without regard to finish.

rough hardware [ENG] Utility items such as nails, sash balances, and studs, without attractive finished appearance.

rough ice [HYD] An expanse of ice having an uneven surface caused by formation of pressure ice or by growlers frozen in place.

roughing [ENG] The start of evacuation of a vacuum system under test for leaks.

roughing stand [MET] The first stand of rolls, or the last stand before the finishing rolls, through which a preheated billet is passed.

roughing tool [ENG] A single-point cutting tool having a sharp or small-radius nose, used for deep cuts and rapid material removal from the workpiece.

rough lumber [MATER] Sawed, undressed lumber.

rough machining [MECH ENG] Preliminary machining without regard to finish.

roughness [FL MECH] Distance from peaks to valleys in pipe-wall irregularities; used to modify Reynolds number calculations for fluid flow through pipes.

roughness elements [OCEANOGR] Structures attached to laboratory models to simulate the roughness of the ocean floor.

roughness factor [FL MECH] A correction factor used in fluid-flow calculations to allow for flow resistance caused by the roughness of the surface over which the fluid must flow.

roughness length *See* dynamic roughness.

roughness-width cutoff [MECH ENG] The maximum width of surface irregularities included in roughness height measurements.

rough threading [ENG] **1.** Rapid removal of the bulk of the material in a threading operation. **2.** Roughening a surface prior to hot-metal spraying to enhance adhesions.

rough turning [MECH ENG] The removal of excess stock from a workpiece as rapidly and efficiently as possible.

rouleau [PATH] A roll of erythrocytes resembling a stack of coins.

round [ENG] A series of shots fired either simultaneously or with delay periods between them. [NAV] To pass and alter direction of travel, as a vessel rounds a cape. [ORD] A single munition, missile, or device to be loaded on or in a delivery platform, vehicle, or device for purposes of expenditure; the configuration of the round may vary.

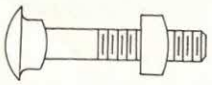
round-face bit [DES ENG] Any bit with a rounded cutting face.

round file [DES ENG] A file having a circular cross section.

round-head bolt [DES ENG] A bolt having a rounded head at one end.

round-head buttress dam [CIV ENG] A mass concrete dam built of parallel buttresses thickened at the upstream end until they meet.

ROUND-HEAD BOLT



Drawing of round-head carriage bolt with a nut.

rounding [MATH] Dropping or neglecting decimals after some significant place. Also known as truncation.

rounding error [MATH] The computational error due to always rounding numbers in a calculation. Also known as round-off error.

round ligament [ANAT] **1.** A flattened band extending from the fovea on the head of the femur to attach on either side of the acetabular notch between which it blends with the transverse ligament. **2.** A fibrous cord running from the umbilicus to the notch in the anterior border of the liver; represents the remains of the obliterated umbilical vein.

roundness [GEOL] The degree of abrasion of sedimentary particles; expressed as the radius of the average radius of curvature of the edges or corners to the radius of curvature of the maximum inscribed sphere.

roundnose chisel [DES ENG] A chisel having a rounded cutting edge.

roundnose tool [DES ENG] A large-radius-nose cutting tool generally used in finishing operations.

round of beam [NAV ARCH] The arch or slope from side to side of a vessel's weather deck for water drainage. Also known as camber.

round of bearings [NAV] A group of bearings observed simultaneously, or over a short period of time with no appreciable delay between the completion of one observation and the start of the next.

round off [MATH] To truncate the least significant digit or digits of a numeral, and adjust the remaining numeral to be as close as possible to the original number.

round-off error *See* rounding error.

round of sights [NAV] A group of celestial observations made with a sextant or other similar instrument over a short period of time, usually with no appreciable delay between the completion of one observation and the start of the next.

round-robin scheduling [COMPUT SCI] A scheduling algorithm which repeatedly runs through a list of users, giving each user the opportunity to use the central processing unit in succession.

rounds complete [ORD] The term used to report that the number of rounds specified in fire for effect have been fired.

roundstone [GEOL] Any naturally rounded rock fragment of any size larger than a sand grain (diameter greater than 2 millimeters), such as a boulder, cobble, pebble, or granule.

round strand rope [DES ENG] A rope composed generally of six strands twisted together or laid to form the rope around a core of hemp, sisal, or manila, or, in a wire-cored rope, around a central strand composed of individual wires.

round-the-world echo [COMMUN] A signal occurring every ⅐ second when a radio wave repeatedly encircles the earth at its speed of 186,000 miles (300,000 kilometers) per second.

round trip [ENG] The combined operations of entering and leaving a hole during drilling operations.

round trip echoes [ELECTROMAG] Multiple reflection echoes produced when a radar pulse is reflected from a target strongly enough so that the echo is reflected back to the target where it produces a second echo.

round wind [METEOROL] A wind that gradually changes direction through approximately 180° during the daylight hours.

round window [ANAT] A membrane-covered opening between the middle and inner ears in amphibians and mammals through which energy is dissipated after traveling in the membranous labyrinth.

roundworm [INV ZOO] The name applied to nematodes.

Rous sarcoma [VET MED] A fibrosarcoma that can be produced in chickens, pheasants, and ducklings inoculated with the filterable, ribonucleic acid Rous virus.

route [NAV] The prescribed course to be traveled from a specific point of origin to a specific destination.

route chart [MAP] A chart showing routes between various places, usually with distances indicated.

route component [METEOROL] The average forecast wind component parallel to the flight path at flight level for an entire route; it is positive if helping (tailwind), and negative if retarding (headwind).

route forecast [METEOROL] An aviation weather forecast for one or more specified air routes.

route locking [CIV ENG] Electrically locking in position switches, movable point frogs, or derails on the route of a train, after the train has passed a proceed signal.

router plane [DES ENG] A plane for cutting grooves and smoothing the bottom of grooves.

route survey [CIV ENG] A survey for the design and construction of linear works, such as roads and pipelines.

Routh's rule [MATH] The number of roots with positive real parts of an algebraic equation is equal to the number of changes of algebraic sign of a sequence whose terms are formed from coefficients of the equation in a specified manner. Also known as Routh test.

Routh's rule of inertia [MECH] The moment of inertia of a body about an axis of symmetry equals $M(a^2 + b^2)/n$, where M is the body's mass, a and b are the lengths of the body's two other perpendicular semiaxes, and n equals 3, 4, or 5 depending on whether the body is a rectangular parallelepiped, elliptic cylinder, or ellipsoid, respectively.

Routh table [MATH] An array of numbers each of which is formed from coefficients of an algebraic equation in a specified manner; the first row of this array constitutes the sequence used in Routh's rule.

Routh test *See* Routh's rule.

routine [COMPUT SCI] A set of digital computer instructions designed and constructed so as to accomplish a specified function.

routine ammunition maintenance [ORD] Maintenance operations not involving disassembly of ammunition or replacement of components, and comprising chiefly cleaning and protecting exterior surfaces of individual items, packages of ammunition, ammunition components, and explosives.

routine library [COMPUT SCI] Ordered set of standard and proven computer routines by which problems or parts of problems may be solved.

routing [COMMUN] The assigning and establishing of a path for sending information between stations of a communications network. [GRAPHICS] In letterpress printing, the removal of the nonprinting areas of a plate.

routing indicator [COMMUN] **1.** A group of letters, engineered and assigned, to identify a station within a digital communications network. **2.** A group of letters assigned to indicate the geographic location of a station; a fixed headquarters of a command, activity, or unit at a geographic location; or the general location of a tape relay or tributary station to facilitate the routing of traffic over tape relay networks.

routing message [COMMUN] The function performed at a central message processor of selecting the route, or alternate route required, by which a message will proceed to the next point in reaching its destination.

routivarite [GEOL] A fine-grained igneous rock containing orthoclase, plagioclase, quartz, and garnet.

rouvillite [GEOL] A light-colored theralite composed predominantly of labradorite and nepheline, with small amounts of titanaugite, hornblende, pyrite, and apatite.

rouvite [MINERAL] $CaU_2V_{12}O_{36}\cdot 20H_2O$ A purplish- to bluish-black mineral consisting of a hydrated vanadate of calcium and uranium; occurs as dense masses, crusts, and coatings.

Rovamycin [MICROBIO] A trade name for spiramycin.

Rover program [ORD] The entire experimental nuclear rocket program of the United States, including the Kiwi, Phoebus, and Nerva series.

roving [MATER] Fibrous glass in which spun strands are woven into a tubular rope. [TEXT] Drawing out and slightly twisting cotton or wool fibers.

roving artillery [ORD] Artillery withdrawn from its regular position and assigned to special missions; usually moved about and fired from different positions to deceive the enemy as to position and strength.

roving gun [ORD] Gun that is moved about and fired from different positions to mislead or harass the enemy; generally used for registration when the location of the battery position must remain secret.

row [COMPUT SCI] **1.** The characters, or corresponding bits of binary-coded characters, in a computer word. **2.** Equipment which simultaneously processes the bits of a character, the characters of a word, or corresponding bits of binary-coded characters in a word. **3.** Corresponding positions in a group of columns.

row address [COMPUT SCI] An index array entry field which contains the main storage address of a data block.

row binary [COMPUT SCI] A method of encoding binary in-

formation onto punched cards in which successive bits are punched row-wise onto the card.

row binary card [COMPUT SCI] A card in which the binary data are punched along the rows.

roweite [MINERAL] $(Mn,Mg,Zn)Ca(BO_2)_2(OH)_2$ A light-brown mineral composed of basic borate of calcium, manganese, magnesium, and zinc.

rowland [SPECT] A unit of length, formerly used in spectroscopy, equal to 999.81/999.94 angstrom, or approximately 0.99987×10^{-10} meter.

Rowland circle [SPECT] A circle drawn tangent to the face of a concave diffraction grating at its midpoint, having a diameter equal to the radius of curvature of a grating surface; the slit and camera for the grating should lie on this circle.

Rowland ghost [SPECT] A false spectral line produced by a diffraction grating, arising from periodic errors in groove position.

Rowland grating *See* concave grating.

Rowland mounting [SPECT] A mounting for a concave grating spectrograph in which camera and grating are connected by a bar forming a diameter of the Rowland circle, and the two run on perpendicular tracks with the slit placed at their junction.

Rowland ring [ELECTROMAG] A ring-shaped sample of magnetic material, generally surrounded by a coil of wire carrying a current.

rowlock [NAV ARCH] A U-shaped fitting with shank or socket attachment to the gunwale of a boat, through which an oar is swung.

rowlock arch [ARCH] An arch in which wedge-shaped blocks are arranged in concentric rings.

row order [COMPUT SCI] The storage of a matrix $a(m,n)$ as $a(1,1),a(1,2),\ldots,a(1,n),a(2,1),a(2,2),\ldots$ Also known as lexicographic order.

row pitch [COMPUT SCI] The distance between the centerlines of adjacent rows of holes in punched cards and paper tapes.

row shooting [MIN ENG] Setting off a row of holes nearest the face first, and then other rows in succession behind it.

roxarsone *See* 4-hydroxy-3-nitrobenzenearsonic acid.

royal jelly [MATER] A protein complex high in vitamin B secreted by bees to nourish the egg of the queen bee; used in face creams.

RPE *See* rotating platinum electrode.

RPG *See* report program generator.

rpm *See* revolution per minute.

RPN *See* reverse Polish notation.

r-process [NUC PHYS] The synthesis of elements and nuclides in supernovas through rapid captures of neutrons in a matter of seconds, followed by beta decay.

rps *See* revolution per second.

RPV *See* remotely piloted vehicle.

RQ *See* respiratory quotient.

RR Lyrae stars [ASTRON] Pulsating variable stars with a period of 0.05–1.2 days in the halo population of the Milky Way Galaxy; color is white, and they are mostly stars of spectral class A. Also known as cluster cepheids; cluster variables.

r-RNA *See* ribosomal ribonucleic acid.

RSA algorithm *See* Rivest-Shamir-Adleman algorithm.

R scan *See* R scope.

R scope [ELECTR] An A scope presentation with a segment of the horizontal trace expanded near the target spot (pip) for greater accuracy in range measurement. Also known as R indicator; R scan.

R tectonite [PETR] A tectonite in which the fabric is believed to have resulted from rotation.

RTF *See* resistance transfer factor.

RTG *See* radioisotope thermoelectric generator.

r-theta navigation *See* omnibearing-distance navigation.

RTL *See* resistor-transistor logic.

RTTY *See* radioteletype.

Ru *See* ruthenium.

rubber [ORG CHEM] A natural, synthetic, or modified high polymer with elastic properties and, after vulcanization, elastic recovery; the generic term is elastomer.

rubber accelerator [ORG CHEM] A substance that increases the speed of curing of rubber, such as thiocarbanilide.

rubber adhesive [MATER] An adhesive made with a rubber base by using natural or synthetic rubber in an evaporative solvent; a tacky mixture of rubber and filler material, as used on pressure-sensitive tapes; or rubber-solvent-catalyst mixtures (usually two-part) that cure in place.

rubber-base paint [MATER] A paint in which chlorinated rubber or synthetic latex is the nonvolatile vehicle.

rubber belt [DES ENG] A conveyor belt that consists essentially of a rubber-covered fabric; fabric is cotton, or nylon or other synthetic fiber, with steel-wire reinforcement.

rubber blanket [ENG] A rubber sheet used as a functional die in rubber forming.

rubber cement [MATER] An adhesive composed of unvulcanized rubber in an organic solvent.

rubber-covered steel conveyor [DES ENG] A steel conveyor band with a cover of rubber bonded to the steel.

rubber fiber [MATER] A fiber composed of natural or synthetic rubber; used to make elastic yarn for clothing.

rubber foam *See* rubber sponge.

rubber hydrochloride [ORG CHEM] White, thermoplastic hydrochloric acid derivative of rubber; water-insoluble powder or clear film, soluble in aromatic hydrocarbons; softens at 110–120°C; used for protective coverings, food packaging, shower curtains, and rainwear.

rubber ice [OCEANOGR] Newly formed sea ice which is weak and elastic.

rubber plating [ENG] The laying down of a rubber coating onto metals by electrodeposition or by ionic coagulation.

rubber solvent [MATER] Fast-evaporating petroleum distillate used as a solvent for tackifying rubber during plying (laminating) operations, and in compounding rubber cements.

rubber sponge [MATER] Foamed, flexible rubber; produced by beating air into unvulcanized latex, or by incorporating a gas-producing ingredient (such as sodium bicarbonate) into a strongly masticated rubber stock; used for comfort cushioning, packaging, and shock insulation. Also known as cellular rubber; foam rubber; rubber foam; sponge rubber.

rubber tree [BOT] *Hevea brasiliensis*. A tall tree of the spurge family (Euphorbiaceae) from which latex is collected and coagulated to produce rubber.

rubber wheel [DES ENG] A grinding wheel made with rubber as the bonding agent.

rubbing [GRAPHICS] An impression made by moistening a thin, tough paper and patting it into the incised parts of a carved or modeled surface, then rubbing it with pencil, chalk, inked pad, or watercolor; an actual-size image of the original is produced on the paper.

rubbing oil [MATER] **1.** A low-viscosity petroleum oil used either with or without an abrasive to polish dried surfaces, such as paint. **2.** A nonviscous oil used for polishing wood furniture.

rubble [CIV ENG] **1.** Rough, broken stones and other debris resulting from the deterioration and destruction of a building. **2.** Rough stone or brick used in coarse masonry or to fill the space in a wall between the facing courses. [GEOL] **1.** A loose mass of rough, angular rock fragments, coarser than sand. **2.** *See* talus. [HYD] Fragments of floating or grounded sea ice in hard, roughly spherical blocks measuring 0.5–1.5 meters (1.5–4.5 feet) in diameter, and resulting from the breakup of larger ice formations. Also known as rubble ice.

rubble drift [GEOL] **1.** A rubbly deposit (or congeliturbate) formed by solifluction under periglacial conditions. **2.** A coarse mass of angular debris and large blocks set in an earthy matrix of glacial origin.

rubble ice *See* rubble.

rubble-mound structure [CIV ENG] A mound of nonselectively formed and placed stones which are protected with a covering layer of selected stones or of specially shaped concrete armored elements.

rubble tract [GEOL] The part of the reef flat immediately behind and on the lagoon side of the reef front, paved with cobbles, pebbles, blocks, and other coarse reef fragments.

rubeanic acid *See* dithiooxamide.

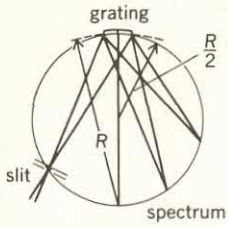
rubella [MED] An infectious virus disease of humans characterized by coldlike symptoms, fever, and transient, generalized pale-pink rash; its occurrence in early pregnancy is associated with congenital abnormalities. Also known as epidemic roseola; French measles; German measles; röteln.

rubellite [MINERAL] The red to red-violet variety of the gem mineral tourmaline; hardness is 7–7.5 on Mohs scale, and specific gravity is near 3.04.

rubeola *See* measles.

Rubiaceae [BOT] The single family of the plant order Rubiales.

ROWLAND CIRCLE



R represents a radius of the circle of which the curved surface of the grating forms a part. *R*/2 represents a radius of the Rowland circle. The camera may be located anywhere on this circle.

RUBBER TREE

Branch of the rubber tree.

Rubiales [BOT] An order of dicotyledonous plants marked by their inferior ovary, regular or nearly regular corolla, and opposite leaves with interpetiolar stipules or whorled leaves without stipules.

rubicelle [MINERAL] A yellow or orange-red gem variety of spinel.

rubidium [CHEM] A chemical element, symbol Rb, atomic number 37, atomic weight 85.47; a reactive alkali metal; salts of the metal may be used in glass and ceramic manufacture.

rubidium bromide [INORG CHEM] RbBr Colorless, regular crystals, melting at 683°C; soluble in water; used as a nerve sedative.

rubidium chloride [INORG CHEM] RbCl A water-soluble, white, lustrous powder melting at 715°C; used as a source for rubidium metal, and as a laboratory reagent.

rubidium halide [INORG CHEM] Any of the halogen compounds of rubidium; examples are RbBr, RbCl, RbF, RbIBrCl, $RbBr_2Cl$, and $RbIBr_2$.

rubidium halometallate [INORG CHEM] Halogen-metal-containing compounds of rubidium; examples are Rb_2GeF_6 (rubidium hexafluorogermanate), Rb_2PtCl_6 (rubidium chloroplatinate), and Rb_2PdCl_5 (rubidium palladium chloride).

rubidium magnetometer *See* rubidium-vapor magnetometer.

rubidium-strontium dating [GEOL] A method for determining the age of a mineral or rock based on the decay rate of rubidium-87 to strontium-87.

rubidium sulfate [INORG CHEM] Rb_2SO_4 Colorless, water-soluble rhomboid crystals, melting at 1060°C; used as a cathartic.

rubidium-vapor frequency standard [PHYS] An atomic frequency standard in which the frequency is established by a gas cell containing rubidium vapor and a neutral buffer gas.

rubidium-vapor magnetometer [ENG] A highly sensitive magnetometer in which the spin precession principle is combined with optical pumping and monitoring for detecting and recording variations as small as 0.01 gamma (0.1 microoersted) in the total magnetic field intensity of the earth. Also known as rubidium magnetometer.

rubriblast *See* pronormoblast.

rubricyte *See* pronormoblast.

ruby [MINERAL] The red variety of the mineral corundum; in its finest quality, the most valuable of gemstones.

ruby copper ore *See* cuprite.

ruby glass [MATER] Glass of a rich red color produced by adding selenium or cadmium sulfide, or copper oxide to the glass.

ruby laser [OPTICS] An optically pumped solid-state laser that uses a ruby crystal to produce an intense and extremely narrow beam of coherent red light.

ruby maser [PHYS] A maser that uses a ruby crystal in the cavity resonator.

ruby mica [MINERAL] The finest grade of Indian mica; used for electrical capacitors.

ruby silver [MINERAL] Either of two red silver sulfide minerals: pyrorgyrite (dark-ruby silver) and proustite (light-ruby silver).

ruby spinel [MINERAL] A clear-red gem variety of spinel, containing small amounts of chromium and having the color but none of the other attributes of true ruby.

ruby zinc *See* zincite.

rudaceous [PETR] Of or pertaining to a sedimentary rock composed of a large quantity of fragments that are larger than sand grains (diameter greater than 2 millimeters).

rudder [ENG] **1.** A flat, usually foil-shaped movable control surface attached upright to the stern of a boat, ship, or aircraft, and used to steer the craft. **2.** *See* rudder angle.

rudder angle [ENG] The acute angle between a ship or plane's rudder and its fore-and-aft line. Also known as rudder.

rudder gudgeon [NAV ARCH] One of the lugs cast or forged on the sternpost for the purpose of hanging and hinging the rudder.

rudder lug [NAV ARCH] A projection that is cast or fitted to the forward edge of the rudder frame for the purpose of taking the pintles.

rudderpost [NAV ARCH] A second sternpost to which the rudder of a single-screw ship is joined.

rudderstock [NAV ARCH] A vertical shaft of a rudder having a yoke, quadrant, or tiller fitted to its upper portion by which it may be turned.

rudder stop [NAV ARCH] One of the fittings attached to the structure of the ship or to the shoulders of the sternpost, which limit the swing of the rudder to an angle of about 35°.

ruddy turnstone [VERT ZOO] *Arenaria interpes*. A member of the avian order Charadriiformes that perform transpacific flights during their migration.

ruderal [ECOL] **1.** Growing on rubbish, or waste or disturbed places. **2.** A plant that thrives in such a habitat.

rudistids [PALEON] Fossil sessile bivalves that formed reefs during the Cretaceous in the southern Mediterranean or the Tethyan belt.

rudite [GEOL] A sedimentary rock composed of fragments coarser than sand grains.

Rudzki anomaly [GEOPHYS] A gravity anomaly calculated by replacing the surface topography by its mirror image within the geoid.

rue oil [MATER] Yellow, combustible essential oil, soluble in most fixed and mineral oils; derived from blooming plants of genus *Ruta;* used in perfumery and veterinary medicine, and as a chemical intermediate.

Ruffini cylinder [ANAT] A cutaneous nerve ending suspected as the mediator of warmth.

ruffle [GEOL] A ripple mark produced by an eddy.

ruffled groove cast [GEOL] A groove cast with a feather pattern, consisting of a groove with lateral wrinkles that join the main cast in the downcurrent direction at an acute angle.

rufous [BOT] Having a reddish-brown color.

ruggedization [ELECTR] Making electronic equipment and components resistant to severe shock, temperature changes, high humidity, or other detrimental environmental influences.

ruggedized computer [COMPUT SCI] A computer, especially a minicomputer, built so as to reduce vibrations, resist moisture, and remain unaffected by electromagnetic interferences such as are found in factory, military, or mobile environments.

ruggedness number [GEOL] A dimensionless number that expresses the geometric characteristics of a drainage system; derived from the product of maximum basin relief and drainage density within the drainage basin.

Rugosa [PALEON] An order of extinct corals having either simple or compound skeletons with internal skeletal structures consisting mainly of three elements, the septa, tabulae, and dissepiments.

rugose [BIOL] Having a wrinkled surface.

rugose mosaic [PL PATH] A virus disease of potatoes marked by dwarfed, wrinkled, and mottled leaves and resulting in premature death.

ruin agate [MINERAL] A brown variety of agate displaying, on a polished surface, markings that resemble or suggest the outlines of ruins or ruined buildings.

ruin marble [PETR] A brecciated limestone that, when cut and polished, gives a mosaic effect suggesting the appearance of ruins or ruined buildings.

Rule *See* Norma.

ruled surface [MATH] A surface that can be generated by the motion of a straight line.

rule of approximation [MIN ENG] A rule applicable to placer mining locations and entries upon surveyed lands, to be applied on the basis of 10-acre (40,469-square-meter) legal subdivisions.

rule of false position *See* regula falsi.

rule of inference *See* production.

rule of sixty [NAV] An air navigation rule of thumb which states that for each mile off course in a 60-mile leg, the correction to parallel the original course is 1°.

rule of V's [GEOL] The outcrop of a formation that crosses a valley forms an acute angle (a V) that points in the direction in which the formation lies underneath the stream.

ruler [ENG] A graduated strip of wood, metal, or other material, used to measure lines or as a guide in drawing lines.

ruling engine [SPECT] A machine operated by a long micrometer screw which rules equally spaced lines on an optical diffraction grating.

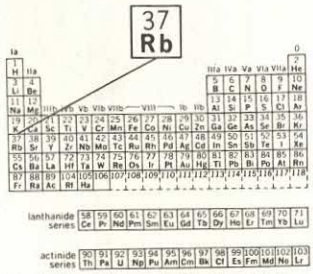
ruling pen [GRAPHICS] A draftsman's pen that has two adjustable pointed blades between which ink is contained.

rumble *See* turntable rumble.

rumen [VERT ZOO] The first chamber of the ruminant stomach. Also known as paunch.

ruminant [PHYSIO] Characterized by the act of regurgitation and rechewing of food. [VERT ZOO] A mammal belonging to the Ruminantia.

RUBIDIUM



Periodic table of the chemical elements showing the position of rubidium.

RUFFINI CYLINDER

Longitudinal section through a Ruffini cylinder. *(From F. A Geldard, Human Senses, 2d ed., copyright © 1972 by John Wiley & Sons, Inc.; reprinted by permission)*

Ruminantia [VERT ZOO] A suborder of the Artiodactyla including sheep, goats, camels, and other forms which have a complex stomach and ruminate their food.

rumination [MED] Voluntary regurgitation of food from the stomach, followed by remastication and swallowing in emotionally or mentally disturbed persons. Also known as merycism. [PHYSIO] Regurgitation and remastication of food in preparation for true digestion in ruminants. [PSYCH] An obsessional preoccupation with a single idea or system of ideas.

Ruminococcus [MICROBIO] A genus of bacteria in the family Peptococcaceae; cells are spherical to elongated and occur singly, in pairs, or in chains of three or four cells; ferment cellobiose and digest cellulose.

run [COMPUT SCI] A single, complete execution of a computer program, or one continuous segment of computer processing, used to complete one or more tasks for a single customer or application. Also known as machine run. [CHEM ENG] **1.** The amount of feedstock processed by a petroleum refinery unit during a given time; often used colloquially in relation to the type of stock being processed, as in crude run or naphtha run. **2.** A processing-cycle or batch-treatment operation. [ENG] A portion of pipe or fitting lying in a straight line in the same direction of flow as the pipe to which it is connected. [GEOL] **1.** A ribbonlike, flat-lying, irregular orebody following the stratification of the host rock. **2.** A branching or finger-like extension of the feeder of an igneous intrusion. [MIN ENG] *See* slant. [NAV] The distance traveled by a craft during any given time interval, or since leaving a designated place. [NAV ARCH] The underwater portion of that part of the aft end of a ship where it curves inward and upward to the stern. [ORD] **1.** Steady, level flight of an aircraft across a target to enable bombs to be dropped accurately in horizontal bombing. **2.** Passing of a moving target once across the range.

run a line of soundings [ENG] To obtain a series of soundings along a course line.

runaround [GRAPHICS] In composition, a type area set in a measure that is adjusted to fit around a picture or another design element. [MIN ENG] A bypass driven in the shaft pillar to permit safe passage from one side of the shaft to the other.

runaround crosstalk [COMMUN] Crosstalk resulting from coupling between the high-level end of one repeater and the low-level end of another repeater, as at a carrier telephone repeater station.

runaway effect [ELECTR] The phenomenon whereby an increase in temperature causes an increase in a collector-terminal current in a transistor, which in turn results in a higher temperature and, ultimately, failure of the transistor; the effect limits the power output of the transistor.

runaway electron [ELECTR] An electron, in an ionized gas to which an electric field is applied, that gains energy from the field faster than it loses energy by colliding with other particles in the gas.

runaway gun [ORD] Automatic weapon that continues firing after the trigger is released; caused by a defect in some part of its mechanism.

runback [CHEM ENG] A pipe through which all or part of a distillation column's overhead condensate can be run back into the column, instead of being drawn off as product. [ENG] **1.** To retract the drill feed mechanism to its starting position. **2.** To drill slowly downward toward the bottom of the hole when the drill string has been lifted off-bottom for rechucking.

run before the wind [NAV] To steer a course downwind.

run book [COMPUT SCI] The collection of materials necessary to document a program run on a computer. Also known as problem file; problem folder.

run chart [COMPUT SCI] A flow chart for one or more computer runs which shows input, output, and the use of peripheral units, but no details of the execution of the run. Also known as run diagram.

runcinate [BOT] Pinnately cut with downward-pointing lobes.

run diagram *See* run chart.

run down a coast [NAV] To sail approximately parallel with the coastline.

rundown line [CHEM ENG] A line from a process unit that connects the look box in the receiving house with the tank in which the product is temporarily stored.

rundown tank [CHEM ENG] A tank in which the product from a still, agitator, or other processing equipment is received, and from which the product is pumped to larger storage tanks. Also known as pan tank; receiving tank.

Runge-Kutta method [MATH] A numerical approximation technique for solving differential equations.

Runge vector [MECH] A vector which describes certain unchanging features of a nonrelativistic two-body interaction obeying an inverse-square law, either in classical or quantum mechanics; its constancy is a reflection of the symmetry inherent in the inverse-square interaction.

run in [ENG] To lower the assembled drill rods and auxiliary equipment into a borehole.

R unit *See* German R unit; Solomon R unit.

runite *See* graphic granite.

run motor [ELEC] In facsimile equipment, a motor which supplies the power to drive the scanning or recording mechanisms; a synchronous motor is used to limit the speed.

runnel [GEOL] A troughlike hollow on a tidal sand beach which carries water drainage off the beach as the tide retreats.

runner [BOT] A horizontally growing, sympodial stem system; adventitious roots form near the apex, and a new runner emerges from the axil of a reduced leaf. Also known as stolon. [ENG] In a plastics injection or transfer mold, the channel (usually circular) that connects the sprue with the gate to the mold cavity. [MET] **1.** The part of a casting between itself and the gate assembly of the mold. **2.** A channel through which molten metal flows from one receptacle to another. [MIN ENG] A vertical timber sheet pile used to prevent collapse of an excavation.

runner box [MET] A box that divides the molten metal into several streams before it enters the cavity of the mold.

running accumulator *See* push-down storage.

running bird [VERT ZOO] Any of the large, flightless, heavy birds usually categorized as ratites.

running block *See* traveling block.

running bond [CIV ENG] A masonry bond involving the placing of each brick as a stretcher and overlapping the bricks in adjoining courses.

running fit [DES ENG] The intentional difference in dimensions of mating mechanical parts that permits them to move relative to each other.

running fix [NAV] A position determined by crossing lines of position obtained at different times and advanced or retarded to a common time.

running gate [MET] A gate through which molten metal enters a mold.

running gear [MECH ENG] The means employed to support a truck and its load and to provide rolling-friction contact with the running surface.

running ground [MIN ENG] Insecure, incoherent ground that may be semiplastic or plastic and deforms readily under pressure.

running head [GRAPHICS] A title (as of a chapter, of a section, or of the book itself) which appears at the top of almost every page of a book.

running-in [ENG] The process of operating new or repaired machinery or equipment in order to detect any faults and to ensure smooth, free operation of parts before delivery.

running ornament [ARCH] Any molding ornament in which the design is continuous, in intertwined or flowing lines.

running sand *See* quicksand.

running survey [MAP] A rough survey made by a vessel while coasting.

run-of-bank gravel *See* bank-run gravel.

runoff [HYD] **1.** Surface streams that appear after precipitation. **2.** The flow of water in a stream, usually expressed in cubic feet per second; the net effect of storms, accumulation, transpiration, meltage, seepage, evaporation, and percolation. [MIN ENG] Collapse of a coal pillar in a mine.

runoff coefficient [HYD] The percentage of precipitation that appears as runoff.

runoff cycle [HYD] The part of the hydrologic cycle involving water between the time it reaches the land as precipitation and its subsequent evapotranspiration or runoff.

runoff desert [ECOL] An arid region in which local rain is insufficient to support any perennial vegetation except in drainage or runoff channels.

runoff intensity [HYD] The excess of rainfall intensity over infiltration capacity, usually expressed in inches of rainfall per hour. Also known as runoff rate.

runoff pit [MIN ENG] Catchment area to which spillage from

RUNNING BIRD

A kiwi with typical furlike plumage, vestigial wings, and a long, slender slightly curved bill.

classifiers, thickeners, and slurry pumps can gravitate if it becomes necessary to dump their contents. Also known as spill pit.

runoff rate *See* runoff intensity.

run-of-mill [MIN ENG] Ore accepted for treatment, after waste and dense media rejection. Also known as mill-head ore.

run-of-mine *See* mine run.

run of the coast [GEOGR] The trend of the coast.

runout [HYD] The location where an avalanche slows down or stops, depositing the avalanche debris. [MET] **1.** Escape of molten metal from a casting mold, crucible, or furnace. **2.** Defect in a casting caused by escape of metal from a mold.

runout table [MET] A roll table used to receive a rolled or extruded member.

run-out time [IND ENG] Time required by machine tools after cutting time is finished before tool and material are completely free of interference and before the start of the next sequence of operation.

run-up *See* swash.

runway [CIV ENG] A straight path, often hard-surfaced, within a landing strip, normally used for landing and takeoff of aircraft. [GEOL] The channel of a stream.

runway environment [NAV] This term is used to indicate the presence of a runway threshold or lighting aids which identify the runway.

runway lights [NAV] Aeronautical ground lights arranged along a runway indicating its direction or boundaries.

runway observation [METEOROL] An evaluation of certain meteorological elements observed at a specified point on or near an airport runway; temperature, wind speed and direction, ceiling, and visibility are among the elements frequently observed at such locations, because of the importance of these data to aircraft landing and takeoff operations.

runway temperature [METEOROL] The temperature of the air just above the runway at an airport (usually at about 4 feet but ideally at engine or wing height), used in the determination of density altitude; therefore, runway temperature observations are made and reported at airports when critical values of density altitude prevail.

runway visibility [METEOROL] The visibility along an identified runway, determined from a specified point on the runway with the observer facing in the same direction as a pilot using the runway.

runway visual range [METEOROL] The maximum distance along the runway at which the runway lights are visible to a pilot after touchdown.

Rupelian [GEOL] A European stage of middle Oligocene geologic time, above the Tongrian and below the Chattian. Also known as Stampian.

rupicolous [ECOL] Living among or growing on rocks.

Rüping process [ENG] A system for preservative treatment of wood by using positive initial pressure, followed by introduction of the preservative and release of air, creating a vacuum.

rupture *See* fracture; hernia.

rupture disk *See* burst disk.

rupture disk device [MECH ENG] A nonreclosing pressure relief device which relieves the inlet static pressure in a system through the bursting of a disk.

rupture zone [GEOL] The region immediately adjacent to the boundary of an explosion crater, characterized by excessive in-place crushing and fracturing where the stresses produced by the explosion have exceeded the ultimate strength of the medium.

rural radio service [COMMUN] A radio service used to provide public message communication service between a central office and subscribers located in rural areas to which it is impracticable to run wire lines.

Rusa oil *See* palmarosa oil.

Rushton-Oldshue column [CHEM ENG] A mixing unit used for continuous pipeline blending in which two-phase contacting is desired; it is a column containing separation plates, baffles, and mixing impellers.

Russell bodies [PATH] Hyaline eosinophilic globules 4–5 micrometers in diameter, thought to be particles of antibody globulin, occurring in the cytoplasm of plasma cells in chronic inflammatory exudates.

Russell effect [GRAPHICS] The formation of latent developable images on a photographic film or paper by an agent other than electromagnetic radiation, such as a resin, metal, volatile liquid, or printing ink. Also known as Vogel-Colson-Russell effect.

Russell flask [PETRO ENG] Device for volumetric determination of the true volume of sand grains within a unit bulk volume of grains plus voids.

russellite [MINERAL] Bi_2WO_6 A pale yellow to greenish, tetragonal mineral consisting of an oxide of bismuth and tungsten; occurs as fine-grained compact masses.

Russell mixture [ASTROPHYS] A mixture of elements with the same relative proportions as are found in the sun and other stars.

Russell diagram *See* Hertzsprung-Russell diagram.

Russell movable-wall oven [CHEM ENG] An oven for coal carbonization which cokes a 400-pound (180-kilogram) charge in a horizontal, 12-inch-wide (30-centimeter-wide) chamber, heated from both sides, but with one side floating and balanced against scales.

Russell-Saunders coupling [PHYS] A process for building many-electron single-particle eigenfunctions of orbital angular momentum and spin; the orbital functions are combined to make an eigenfunction of the total orbital angular momentum, the spin functions are combined to make an eigenfunction of the total spin angular momentum, and then the results are combined into eigenfunctions of the total angular momentum of the system. Also known as LS coupling.

Russell's paradox [MATH] The paradox concerning the concept of all sets which are not members of themselves which forces distinctions in set theory between sets and classes.

Russell's viper *See* tic polonga.

rust [MET] The iron oxides formed on corroded ferrous metals and alloys. [PL PATH] Any plant disease caused by rust fungi (Uredinales) and characterized by reddish-brown lesions on the plant parts.

rusting [MET] The formation of rust on ferrous metals and alloys.

rust joint [ENG] A joint to which some oxidizing agent is applied either to cure a leak or to withstand high pressure.

rust prevention [ENG] Surface protection of ferrous structures or equipment to prevent formation of iron oxide; can be by coatings, surface treatment, plating, chemicals, cathodic arrangements, or other means.

rust preventive [MATER] One of a group of products, often with petroleum thinners, used to prevent corrosion to metal surfaces.

rusty blotch [PL PATH] A fungus disease of barley caused by *Helminthosporium californicum* and characterized by brown blotches on the foliage.

rusty gold [MET] Native gold that has a thin coat of iron oxide or silica that prevents it from amalgamating readily.

rusty mottle [PL PATH] A virus disease of cherry characterized by retarded development of blossoms and leaves in the spring, followed by necrotic spotting and shot-holing of the foliage with considerable defoliation.

rut [PHYSIO] The period during which the male animal has a heightened mating drive.

rutabaga [BOT] *Brassica napobrassica*. A biennial crucifer of the order Capparales probably resulting from the natural crossing of cabbage and turnip and characterized by a large, edible, yellowish fleshy root.

Rutaceae [BOT] A family of dicotyledonous plants in the order Sapindales distinguished by mostly free stamens and glandular-punctate leaves.

ruthenic chloride *See* ruthenium chloride.

ruthenium [CHEM] A chemical element, symbol Ru, atomic number 44, atomic weight 101.07. [MET] A hard, brittle, grayish-white metal used as a catalyst; workable only at high temperatures.

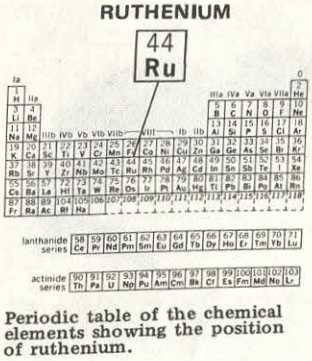
ruthenium chloride [INORG CHEM] $RuCl_3$ Black, deliquescent, water-insoluble solid that decomposes in hot water and above 500°C; used as a laboratory reagent. Also known as ruthenic chloride; ruthenium sesquichloride.

ruthenium halide [INORG CHEM] Halogen compound of ruthenium; examples are $RuCl_2$, $RuCl_3$, $RuCl_4$, $RuBr_3$, and RuF_5.

ruthenium red [INORG CHEM] $Ru_2(OH)_2Cl_4 \cdot 7NH_3 \cdot 3H_2O$ A water-soluble, brownish-red powder; used as an analytical reagent and stain. Also known as ammoniated ruthenium oxychloride.

ruthenium sesquichloride *See* ruthenium chloride.

RUTHENIUM

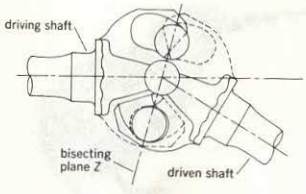


Periodic table of the chemical elements showing the position of ruthenium.

RYE

Spikes of Tetra Petkus, a variety of rye. *(Wisconsin Agricultural Experiment Station)*

RZEPPA JOINT



Drawing of Rzeppa joint showing the middle ball and two of the four transmitting elements.

ruthenium tetroxide [INORG CHEM] RuO_4 A yellow, toxic solid, melting at 25°C; used as an oxidizing agent.

rutherford [NUCLEO] Abbreviated rd. **1.** A unit used to express the decay rate of radioactive material, equal to 10^6 disintegrating atoms per second. **2.** That amount of a substance which is undergoing 10^6 disintegrations per second.

Rutherford backscattering spectrometry [SPECT] A method of determining the concentrations of various elements as a function of depth beneath the surface of a sample, by measuring the energy spectrum of ions which are backscattered out of a beam directed at the surface.

rutherfordine [MINERAL] $(UO_2)(CO_3)$ A yellow mineral composed of uranyl carbonate, occurring as masses of fibers.

Rutherford nuclear atom [ATOM PHYS] A theory of atomic structure in which nearly all the mass is concentrated in a small nucleus, electrons surrounding the nucleus fill nearly all the atom's volume, the number of these electrons equals the atomic number, and the positive charge on the nucleus is equal in magnitude to the negative charge of the electrons.

Rutherford scattering [ATOM PHYS] Scattering of heavy charged particles by the Coulomb field of an atomic nucleus.

rutilated quartz [MINERAL] Sagenitic quartz characterized by the presence of enclosed needlelike crystals of rutile. Also known as Venus hairstone.

rutile [MINERAL] TiO_2 A reddish-brown tetragonal mineral common in acid igneous rocks, in metamorphic rocks, and as residual grain in beach sand.

rutin [ORG CHEM] $C_{27}H_{32}O_{16}$ A hydroxyflavone glucorhamnoside derived from cowslip and other plants; yellow needles melting at 190°C; used to treat capillary disorders.

rutterite [PETR] A medium-grained, equigranular, dark-pink plutonic rock composed chiefly of microperthite, microcline, and albite, with small amounts of nepheline, biotite, amphibole, graphite, and magnetite.

RV Tauri stars [ASTRON] A class of stars; they are long-period pulsating variable types with periods from about 50 to 150 days; otherwise they are like the shorter-period W Virginis stars; they are found in both the Milky Way Galaxy and the globular clusters.

RW Aurigae stars [ASTRON] A class of stars that are variable, and whose light variations are rapid and irregular.

R wave *See* Rayleigh wave.

ry *See* rydberg.

rydberg [ATOM PHYS] A unit of energy used in atomic physics, equal to the square of the charge of the electron divided by twice the Bohr radius; equal to 13.60583 ± 0.00004 electron-volts. Symbolized ry. [SPECT] *See* kayser.

Rydberg atom [ATOM PHYS] An atom whose outer electron has been excited to very high energy states, far from the nucleus.

Rydberg constant [ATOM PHYS] **1.** An atomic constant which enters into the formulas for wave numbers of atomic spectra, equal to $2\pi^2me^4/ch^3$, where m and e are the rest mass and charge of the electron, c is the speed of light, and h is Planck's constant; equal to $109{,}737.31 \pm 0.01$ inverse centimeters. Symbolized R_∞. **2.** For any atom, the Rydberg constant (first definition) divided by $1+m/M$, where m and M are the masses of an electron and of the nucleus.

Rydberg correction [ATOM PHYS] A term inserted into a formula for the energy of a single electron in the outermost shell of an atom to take into account the failure of the inner electron shells to screen the nuclear charge completely.

Rydberg maser [PHYS] A maser that amplifies microwave radiation by means of stimulated emission of atoms whose outer electrons have been excited to very high energy states.

Rydberg series formula [SPECT] An empirical formula for the wave numbers of various lines of certain spectral series such as neutral hydrogen and alkali metals; it states that the wave number of the nth member of the series is $\lambda_\infty - R/(n+a)^2$, where λ_∞ is the series limit, R is the Rydberg constant of the atom, and a is an empirical constant.

rye [BOT] *Secale cereale*. A cereal plant of the order Cyperales cultivated for its grain, which contains the most desirable gluten, next to wheat.

rye buckwheat *See* tartary buckwheat.

rye whiskey [FOOD ENG] One of the potable alcoholic beverages, obtained by distilling the alcohol-containing liquid resulting from the fermentation of a rye mash by yeast; the distilled product is aged for a number of years in new-charred oak barrels.

Rynchopidae [VERT ZOO] The skimmers, a family of birds in the order Charadriiformes distinguished by a knifelike lower beak that is longer and narrower than the upper one.

Rytiodinae [VERT ZOO] A subfamily of trichechiform sirenians in the family Dugongidae.

Rzeppa joint [MECH ENG] A special application of the Bendix-Weiss universal joint in which four large balls are transmitting elements, while a center ball acts as a spacer; it transmits constant angular velocity through a single universal joint.

S

s *See* second; strange quark.

S *See* secondary winding; siemens; stoke; sulfur.

S-2 *See* Tracker.

Saalic orogeny [GEOL] A short-lived orogeny that occurred early in the Permian period, between the Autunian and Saxonian stages.

saba [BOT] A plant (*Musa sapientum* var. *compressa*) that is common in the Philippines; the fruit is a cooking banana. [TEXT] A textile made from fibers of the saba plant.

sabach *See* caliche.

sabadilla [MATER] Ripe seeds of the sabadilla plant (*Schoenocaulon officionale*) that have been dried; used as an insecticide on cattle. Also known as caustic barley; cevedilla.

Sabathé's cycle [MECH ENG] An internal combustion engine cycle in which part of the combustion is explosive and part at constant pressure.

Sabattier effect [GRAPHICS] Formation of a positive image on a developed photographic plate or film exposed to diffuse light; the image is formed by exposure of silver halide in undeveloped regions of the emulsion. Also known as solarization.

Sabellariidae [INV ZOO] The sand-cementing worms, a family of polychaete annelids belonging to the Sedentaria and characterized by a compact operculum formed of setae of the first several segments.

Sabellidae [INV ZOO] A family of sedentary polychaete annelids often occurring in intertidal depths but descending to great abyssal depths; one of two families that make up the feather-duster worms.

Sabellinae [INV ZOO] A subfamily of the Sabellidae including the most numerous and largest members.

saber saw [MECH ENG] A portable saw consisting of an electric motor, a straight saw blade with reciprocating mechanism, a handle, baseplate, and other essential parts.

sabin [ACOUS] A unit of sound absorption for a surface, equivalent to 1 square foot (0.09290304 square meter) of perfectly absorbing surface. Also known as absorption unit; open window unit (OW unit); square-foot unit of absorption.

Sabinas [GEOL] A North American (Gulf Coast) provincial series in Upper Jurassic geologic time, below the Coahuilan.

Sabine formula [ACOUS] An empirical equation for the reverberation time of sound in a room; its form is identical to that of the Franklin equation.

Sabin vaccine [IMMUNOL] A live-poliovirus vaccine that is administered orally.

sabkha *See* sebkha.

sable [VERT ZOO] *Martes zibellina*. A carnivore of the family Mustelidae; a valuable fur-bearing animal, quite similar to the American marten.

sable brush [GRAPHICS] A fine artist's brush, usually round and fairly long with tapered point, made from the hair of the Siberian mink.

sabot [ORD] Lightweight carrier in which a subcaliber projectile is centered to permit firing the projectile in the larger-caliber weapon; the sabot diameter fills the bore of the weapon from which the projectile is fired.

sabotage [ORD] Action by enemy agents or sympathizers with intent to stop or otherwise hinder a nation's war effort or to interfere with or obstruct the defense of a nation.

Sabouraud's agar [MICROBIO] A peptone-maltose agar used as a culture medium for pathogenic fungi, especially the dermatophytes.

sabrejet [AERO ENG] An airplane widely used by the U.S. Air National Guard and free world countries; it has a range of beyond 1000 miles (1600 kilometers) and a speed of over 650 miles (1050 kilometers) per hour, carries two 1000-pound (450-kilogram) bombs or sixteen 5-inch (12.7-centimeter) rockets, or a combination plus two additional 1000-pound bombs in lieu of fuel tanks; has a crew of one. Designated F-86.

sabulous *See* arenaceous.

sac [BIOL] A soft-walled cavity within a plant or animal, often containing a special fluid and usually having a narrow opening or none at all. [MAP] Indentation in the contour lines of equal depth showing submarine relief.

saccate [BOT] Having a saclike or pouchlike form.

saccharase [BIOCHEM] An enzyme that catalyzes the hydrolysis of disaccharide to monosaccharides, specifically of sucrose to dextrose and levulose. Also known as invertase; invertin; sucrase.

saccharimeter [ENG] An instrument for measuring the amount of sugar in a solution, often by determining the change in polarization produced by the solution.

saccharin [ORG CHEM] $C_6H_4COSO_2NH$ A sweet-tasting, white powder, soluble in acetates, benzene, and alcohol; slightly soluble in water and ether; melts at 228°C; used as a sugar substitute for syrups, and in medicines, foods, and beverages. Also known as benzosulfimide; gluside.

saccharoidal [PETR] The texture of a rock that is crystalline or granular. Also known as sucrosic; sugary.

saccharolactic acid *See* mucic acid.

saccharometer [ENG] An instrument for measuring the amount of sugar in a solution, by determining either the specific gravity or the gases produced by fermentation.

Saccharomyces [MYCOL] A genus of unicellular yeasts in the subfamily Saccharomycetoideae which have simple, budding cells, a pseudomycelium, or both, and one to four round to oval spores per ascus.

Saccharomycetaceae [MYCOL] The single family of the order Saccharomycetales.

Saccharomycetales [MYCOL] An order of the subclass Hemiascomycetidae comprising typical yeasts, characterized by the presence of naked asci in which spores are formed by free cells.

Saccharomycetoideae [MYCOL] A subfamily of Saccharomycetacae in which spores may be hat-, sickle-, or kidney-shaped, or round or oval.

saccharopinuria [MED] An inborn error of amino acid metabolism characterized by abnormally high levels of saccharopine in the urine.

saccharose *See* sucrose.

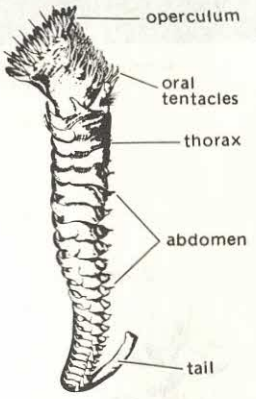
Saccoglossa [INV ZOO] An order of gastropod mollusks belonging to the Opisthobranchia.

Saccopharyngiformes [VERT ZOO] Formerly an order of actinopterygian fishes, the gulpers, now included in the Anguilliformes.

Saccopharyngoidei [VERT ZOO] The gulpers, a suborder of actinopterygian fishes in the order Anguilliformes having degenerative adaptations, including loss of swim bladder, opercle, branchiostegal ray, caudal fin, scales, and ribs.

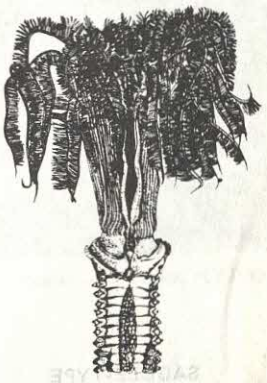
saccular aneurysm [MED] A saclike arterial dilation communicating with the artery by a relatively small opening.

SABELLARIIDAE



Sabellaria in right lateral view.

SABELLIDAE



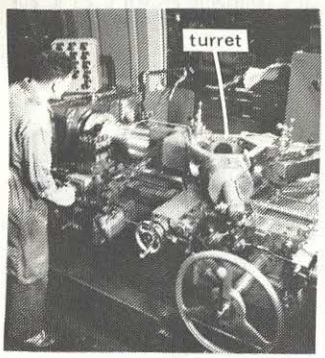
Anterior end of *Sabella* in dorsal view, showing crown used as gill and a collecting organ.

SABLE

The sable *(Martes zibellina)*, which has an elongated body reaching 25 inches (64 centimeters) in length, excluding the tail.

sacculus [ANAT] The smaller, lower saclike chamber of the membranous labyrinth of the vertebrate ear.
saccus *See* vesicle.
sac fungus [MYCOL] The common name for members of the class Ascomycetes.
sack cloth [TEXT] A coarse cloth made of animal hairs, cotton, flax, or hemp.
sackungen [GEOL] Deep-seated rock creep which has produced a ridge-top trench by gradual settlement of a slablike mass into an adjacent valley.
Sackur-Tetrode equation [STAT MECH] An equation for the translational entropy of an ideal gas made up of free fermions.
sacral block [MED] Anesthesia induced by injection of an anesthetic through the caudal hiatus.
sacral nerve [ANAT] Any of five pairs of spinal nerves in the sacral region which innervate muscles and skin of the lower back, lower extremities, and perineum, and branches to the hypogastric and pelvic plexuses.
sacral vertebrae [ANAT] Three to five fused vertebrae that form the sacrum in most mammals; amphibians have one sacral vertebra, reptiles usually have two, and birds have 10–23 fused in the synsacrum.
sacrificial metal [PHYS CHEM] A metal that can be used for a sacrificial anode.
sacrococcygeus [ANAT] One of two inconstant thin muscles extending from the lower sacral vertebrae to the coccyx.
sacroiliac [ANAT] Pertaining to the sacrum and the ilium.
sacrospinous [ANAT] Pertaining to the sacrum and the spine of the ischium.
sacrum [ANAT] A triangular bone, consisting in man of five fused vertebrae, located below the last lumbar vertebra, above the coccyx, and between the hipbones.
saddle [DES ENG] A support shaped to fit the object being held. [GEOL] **1.** A gap that is broad and gently sloping on both sides. **2.** A relatively flat ridge that connects the peaks of two higher elevations. **3.** That part along the surface axis or axial trend of an anticline that is a low point or depression.
saddleback [GEOL] A hill or ridge with a concave outline along its crest. [METEOROL] The cloudless air between the "towers" of two cumulus congestus or cumulonimbus clouds and above a lower cloud mass.
saddle fold [GEOL] A flexural fold perpendicular to the parent fold and having an additional flexure at its crest.
saddle leather [MATER] **1.** Tanned cattlehide used in furnishings for saddle horses. **2.** Leather resembling saddle leather used in handbags and other leather goods.
saddle point [GEOL] *See* col. [MATH] A point where all the first partial derivatives of a function vanish but which is not a local maximum or minimum.
saddle-point azeotrope [PHYS CHEM] A rarely occurring azeotrope which is formed in ternary systems and for which the boiling point is intermediate between the highest and lowest boiling mixture in the system.
saddle point method *See* steepest descent method.
saddle point theory [MATH] The study of differentiable functions and their derivatives from the viewpoint of saddle points, especially applicable to the calculus of variations.
saddle reef [GEOL] A mineral deposit associated with the crest of an anticlinal fold and following the bedding plane, usually found in vertical succession. Also known as saddle vein.
saddle stone *See* apex stone.
saddle-type turret lathe [MECH ENG] A turret lathe designed without a ram and with the turret mounted directly on a support (saddle) which slides on the bedways of the lathe.
saddle vein *See* saddle reef.
saddling [MET] Forming a seamless ring by forging a pierced disk over a mandrel (or saddle).
sadism [PSYCH] Sexual perversion in which pleasure is derived from inflicting physical or mental cruelty upon another.
SAE EP lubricant tester [ENG] A machine that tests the extreme pressure (EP) properties of a lubricant under a combined rolling and sliding action, in which the revolving members are two bearing cups that rotate at different speeds.
Saefftigen's pouch [INV ZOO] An elongated pouch inside the genital sheath in many acanthocephalans.
SAE number [ENG] A classification of motor, transmission, and differential lubricants to indicate viscosities, standardized by the Society of Automotive Engineers; SAE numbers do not connote quality of the lubricant.

SADDLE-TYPE TURRET LATHE

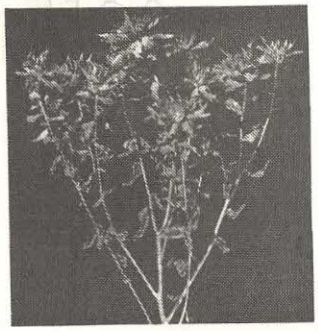


Saddle-type turret lathe, showing characteristic hexagon turret on the bedways of the lathe. *(Jones and Lamson Machine Co.)*

safe [ORD] Pertaining to ordnance constituted and set so as not to detonate or function accidentally.
safe burst height [ORD] The height of burst at or above which the level of fallout or damage to ground installations is at a predetermined level acceptable to the military commander.
safelight [GRAPHICS] A darkroom light of a particular color that will not affect the sensitive material being handled; for example, blue-sensitive materials require a red, orange, or yellow safelight.
safe load [MECH] The stress, usually expressed in tons per square foot, which a soil or foundation can safely support.
safety [ENG] Methods and techniques of avoiding accident or disease. [ORD] A locking or cut-off device that prevents a weapon or missile from being fired accidentally.
safety belt [ENG] A strong strap or harness used to fasten a person to an object, such as the seat of an airplane or automobile.
safety block [ORD] A block which, in the safe position, prevents functioning of the fuse by limiting the motion of the firing pin.
safety board [PETRO ENG] A board placed in a derrick for a man to stand on when handling drill rods at single, double, triple, or quadruple levels; the boards are placed at suitable heights to handle a stand of drill rods for that number of joints.
safety bolt [CIV ENG] A bolt that can be opened from only one side of the door or gate it fastens.
safety button [NUCLEO] A device worn by workers exposed to nuclear radiation to warn of excessive exposure.
safety cable [MIN ENG] A mining machine cable designed to cut off power when the positive conductor insulation is damaged.
safety cage [MIN ENG] A cage, box, or platform used for lowering and hoisting miners, tools, and equipment into and out of mines.
safety can [ENG] A cylindrical metal container used for temporary storage or handling of flammable liquids, such as gasoline, naphtha, and benzine, in buildings not provided with properly constructed storage rooms; these cans are also used to transport such liquids for filling and supply purposes within local areas.
safety car [MIN ENG] Any mine car or hoisting cage provided with safety stops, catches, or other precautionary devices.
safety chain [MIN ENG] A chain connecting the first and last cars of a trip to prevent separation, if a coupling breaks.
safety chuck [DES ENG] Any drill chuck on which the heads of the set screws do not protrude beyond the outer periphery of the chuck.
safety door [MIN ENG] An extra door ready for use in the event of damage to the existing ventilation door or in any emergency, for example, explosion or fire.
safety engineer [IND ENG] A person who inspects all possible danger spots in a factory, mine, or other industrial building or plant.
safety engineering [IND ENG] The testing and evaluating of equipment and procedures to prevent accidents.
safety explosive [MATER] An explosive which may be handled safely under ordinary conditions; it requires a powerful detonating force.
safety factor [ELEC] The amount of load, above the normal operating rating, that a device can handle without failure. [MECH] *See* factor of safety. [ORD] **1.** Increase in range or elevation that must be set on a gun so that friendly troops, over whose heads fire is to be delivered, will not be endangered. **2.** Overload factor in design to ensure safe operation.
safety film [GRAPHICS] Films made from cellulose acetate, polyester, and other plastics that are not readily flammable.
safety flange [DES ENG] A type of flange with tapered sides designed to keep a wheel intact in the event of accidental breakage.
safety fork [ORD] Metal clip that fits over the collar of the fuse in a land mine and prevents the mine from being set off accidentally; its function is the same as that of a safety pin.
safety fuse [ENG] A train of black powder which is enclosed in cotton, jute yarn, and waterproofing compounds, and which burns at the rate of 2 feet (60 centimeters) per minute; it is used mainly for small-scale blasting.
safety gate [MIN ENG] An automatically operated gate at the top of a mine shaft or at landings both to guard the entrance and to prevent falling into the shaft.

safety glass [MATER] **1.** A glass that resists shattering (such as a glass containing a net of wire or constructed of sheets separated by plastic film). **2.** A glass that has been tempered so that when it shatters, it breaks up into grains instead of jagged fragments.
safety groove [ORD] A groove incorporated in an item or component of ammunition to ensure that any possible failure will occur at a selected location and thereby will be of a less hazardous nature.
safety hoist [MECH ENG] A hoisting gear that does not continue running when tension is released.
safety hook [DES ENG] A hoisting hook with a spring-loaded latch that prevents the load from accidentally slipping off the hook.
safety lamp [MIN ENG] In coal mining, a lamp that is relatively safe to use in atmospheres which may contain flammable gas.
safety lanes [NAV] Specified sea lanes designated for use in transit by submarines and surface ships to prevent attack by friendly forces.
safety level of supply [IND ENG] The quantity of material, in addition to the operating level of supply, required to be on hand to permit continuous operations in the event of minor interruption of normal replenishment or unpredictable fluctuations in demand.
safety lever [ORD] **1.** A metal piece forming part of a grenade fuse that is restrained either by hand or by the projection adapter after the safety pin is removed; following the release of the grenade, the lever is discarded and the fuse train is initiated by the action of the released fuse firing pin. **2.** A lever that sets the safety mechanism on certain types of automatic weapons.
safety lock [ORD] Locking device that prevents a weapon from being fired accidentally.
safety match [ENG] A match that can be ignited only when struck against a specially made friction surface.
safety pin [ORD] **1.** A device designed to fit the mechanism of a fuse in order to prevent accidental arming or functioning of the fuse and to ensure transport safety; the device is removed just before employment of the fuse. **2.** *See* safety wire.
safety pinion [HOROL] A center pinion gear in a watch that protects delicate parts by unscrewing when the mainspring breaks, thereby preventing pressure from being applied to the train wheel teeth and arbor pivots.
safety plug [ENG] A protective device used on a heated pressure vessel (for example, a steam boiler), and containing a fusible element that melts at a predetermined safe temperature to prevent the buildup of excessive pressure. Also known as fusible plug.
safety post [MIN ENG] A timber placed near the face of workings to protect the workmen. Also known as safety prop.
safety prop *See* safety post.
safety rail *See* guard rail.
safety relief valve *See* safety valve.
safety rod [NUCLEO] A control rod capable of shutting down a reactor quickly in case of failure of the ordinary control system using regulating rods and shim rods; a safety rod may be suspended above the core by a magnetic coupling and allowed to fall in when power reaches a predetermined level. Also known as scram rod.
safety service [COMMUN] Radio communications service used permanently or temporarily for safeguarding human life and property.
safety shoe [ENG] A special shoe without spark-producing nails or plates, worn by personnel working around explosives.
safety stake [ORD] One of the stakes set in the ground to mark the right or left limit of safe fire of a weapon.
safety stop [MECH ENG] **1.** On a hoisting apparatus, a device by which the load may be prevented from falling. **2.** An automatic device on a hoisting engine designed to prevent overwinding.
safety valve [ENG] A spring-loaded, pressure-actuated valve that allows steam to escape from a boiler at a pressure slightly above the safe working level of the boiler; fitted by law to all boilers. Also known as safety relief valve.
safety wire [ORD] Wire set into the body of a fuse to lock all movable parts into safe positions so that the fuse will not be set off accidentally; it is pulled out just before firing. Also known as safety pin.
safe yield [CIV ENG] The maximum dependable draft that can be made continuously upon a source of water supply over a given period of time during which the probable driest period, and therefore period of greatest deficiency in water supply, is likely to occur.
safflorite [MINERAL] $CoAs_2$ A cobalt arsenide mineral that occurs in tin-white masses, and is dimorphous with smaltite; found in Canada, Morocco, and the United States.
safflower [BOT] *Carthamnus tinctorius*. An annual thistle-like herb belonging to the composite family (Compositae); the leaves are edible, flowers yield dye, and seeds yield a cooking oil.
safflower oil [MATER] Nonyellowing oil derived from safflower seed and similar to linseed oil; contains high proportion of linoleic acid; used as a drying oil and in food and medicine.
saffron [BOT] *Crocus sativus*. A crocus of the iris family (Iridaceae); the source of a yellow dye used for coloring food and medicine.
SAFI *See* semiautomatic flight inspection.
safing [ORD] As applied to weapons and ammunition, the changing from a state of readiness for initiation to a safe condition.
safranine [ORG CHEM] Any of a group of phenazine-based dyes; some are used as biological stains.
safrole [ORG CHEM] $C_3H_5C_6H_3O_2CH_2$ A toxic, water-insoluble, colorless oil that boils at 233°C; found in sassafras and camphorwood oils; used in medicine, perfumes, insecticides, and soaps, and as a chemical intermediate. Also known as 3,4-methylenedioxy-1-allyl benzene.
sag [ELEC] Slack introduced in an aerial cable or open-wire line to compensate for contraction during cold weather. [GEOL] **1.** A pass or gap in a ridge or mountain range shaped like a saddle. **2.** A shallow depression in a relatively flat land surface. **3.** A regional basin with gently sloping sides. [MET] Decrease in the section thickness of a casting caused by weakness of the sand mold.
sag-and-swell topography [GEOGR] An undulating surface characteristic of till sheets, for example, the landscape of the midwestern United States.
Sagartiidae [INV ZOO] A family of zoantharians in the order Actiniaria.
sagathy [TEXT] A fine twilled worsted fabric, used at one time for curtains and clothes.
sag bolt [MIN ENG] A device to measure roof sag; a 12-foot (3.7-meter) unit installed without a bearing plate and securely anchored with the aid of a heavy nut, extending about 2 inches (5 centimeters) from the hole; three ½-inch (1.3 centimeter) strips of colored tape wrapped around the extending section of the bolt, green at the roof line followed by yellow and then red, help detect roof sag at a glance.
sage [BOT] *Salvia officinalis*. A half-shrub of the mint family (Labiatae); the leaves are used as a spice.
SAGE [ORD] An air defense system in which air surveillance data are processed for transmission to computers at direction centers, where the data is further processed, evaluated, and analyzed automatically to produce weapon assignment and guidance orders. Derived from semiautomatic ground environment.
sagebrush [BOT] Any of various hoary undershrubs of the genus *Artemisia* found on the alkaline plains of the western United States.
sagenite [MINERAL] A variety of rutile that is acicular and occurs in reticulated twin groups of crystals crossing at 60°.
sagenitic [GEOL] Containing acicular minerals.
Sagenocrinida [PALEON] A large order of extinct, flexible crinoids that occurred from the Silurian to the Permian.
sage oil *See* oil of sage.
saggar clay [MATER] A fire clay of which the case is made that is used for the firing of porcelain and pottery. Also spelled sagger clay.
sagger clay *See* saggar clay.
sagging [NAV ARCH] Deflection of the hull of a ship in which the middle of the keel is bowed downward.
Saghathiinae [PALEON] An extinct subfamily of hyracoids in the family Procaviidae.
sagitta [MATH] The distance between the midpoint of an arc and the midpoint of its chord. [VERT ZOO] The larger of two otoliths in the ear of most fishes.
Sagitta [ASTRON] A small constellation; right ascension 20 hours, declination 10° north. Also known as Arrow.
sagittal [ZOO] In the median longitudinal plane of the body, or parallel to it.

SAFFLOWER

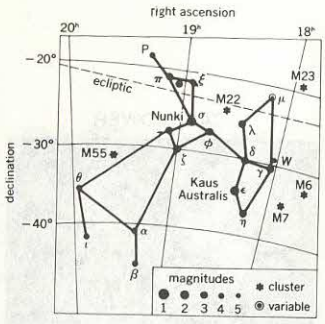


Safflower *(Carthamnus tinctorius)*. *(USDA)*

SAGE

Sage *(Salvia officinalis)*. *(USDA)*

SAGITTARIUS

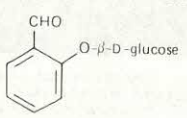


Line pattern of the constellation Sagittarius. The grid lines in the chart represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the sizes of the dots, which are graded by appropriate numbers as indicated.

SALICALES

Eastern American cottonwood (*Populus deltoides*), showing female catkins with ripening capsules and cottony seeds. Note characteristic three carpels in opened capsule at lower left; more common number in other species of the order is two. *(Photograph by John H. Gerard, from National Audubon Society)*

SALICYLALDEHYDE



Structural formula.

sagittal focus *See* secondary focus.

Sagittariidae [VERT ZOO] A family of birds in the order Falconiformes comprising a single species, the secretary bird, noted for its nuchal plumes resembling quill pens stuck behind an ear.

Sagittarius [ASTRON] A constellation whose major portion lies in the Milky Way; right ascension 19 hours, declination 25° south. Also known as Archer.

Sagittarius A [ASTRON] An intense radio source in the constellation Sagittarius, apparently comprising a gaseous envelope surrounding a small dense core that is believed to constitute the center of the Milky Way Galaxy.

Sagittarius star cloud [ASTRON] A large star cloud within the Milky Way; its extension is about 1500 to 6000 light-years (1.42×10^{19} to 5.68×10^{19} meters) from the sun.

sagittate [BOT] Shaped like an arrowhead, especially referring to leaves.

sagittocyst [INV ZOO] A cyst in the epidermis of certain turbellarians containing a single spindle-shaped needle.

sago [MATER] A starch obtained from the trunks of certain tropical palms, such as the sago; used as a thickening agent in food and as textile stiffening.

sag pond [GEOL] A small body of water occupying an enclosed depression or sag formed where active or recent fault movement has impounded drainage. Also known as fault-trough lake; rift lake; rift-valley lake.

Saha ionization [STAT MECH] The ionization of a gas which exists when the gas is in thermal equilibrium at a given temperature, in the absence of external influences; it increases with increasing temperature. Also known as thermal ionization.

Saha's equation [STAT MECH] An equation for Saha ionization of a monatomic gas in terms of the temperature and pressure of the gas, the ionization potential, and statistical weights of ion, electron, and atom.

sahel [METEOROL] A strong dust-bearing desert wind in Morocco.

sahlinite [MINERAL] $Pb_{14}(AsO_4)_2O_9Cl_4$ A pale sulfur yellow, monoclinic mineral consisting of a basic chloride-arsenate of lead; occurs in aggregates of small scales.

sahlite *See* salite.

sail [NAV ARCH] An article made of canvas and rope designed to be spread on spars in such a manner as to utilize the power of the wind in driving a vessel.

Sail *See* Vela.

sailboat [NAV ARCH] A boat fitted with one or more sails, and propelled by wind striking the sails.

sailcloth [TEXT] A generic term for heavy, durable fabrics with a strong canvas weave made of cotton, linen, jute, polyester, or nylon; used for sails as well as for other applications.

sailfish [VERT ZOO] Any of several large fishes of the genus *Istiophorus* characterized by a very large dorsal fin that is highest behind its middle.

sailing [NAV] A method of solving the various problems involving course, distance, difference of latitude, difference of longitude, and departure; the various methods are collectively termed the sailings.

sailing chart [NAV] A small-scale nautical chart for offshore navigation.

sailing directions *See* coast pilot.

sail plan [NAV ARCH] A plan drawn to show the number, arrangement, and dimensions of the sails for a sailing vessel.

Saint Elmo's fire [ELEC] A visible electric discharge, sometimes seen on the mast of a ship, on metal towers, and on projecting parts of aircraft, due to concentration of the atmospheric electric field at such projecting parts.

Saint Hilaire method [NAV] The establishing of a line of position by assuming an altitude for a celestial body and then comparing this assumed altitude with that which is measured; the difference between the observed and computed altitudes and the azimuth gives the line of position. Also known as the intercept method.

Saint Joseph retort process [MET] An electrothermic retort process for processing zinc ore and zinc from secondary sources into zinc; heat of reaction between the sintered zinc concentrate and the coke mixture is supplied by passage of heavy electric current through the resistance of the charge.

Saint Louis encephalitis [MED] A mosquito-borne arbovirus infection of the central nervous system, occurring in the central and western United States and in Florida.

Saint Peter sandstone [GEOL] An artesian aquifer of early Lower Paleozoic age which underlies part of Minnesota, Wisconsin, Iowa, Illinois, and Indiana.

Saint Vitus dance [MED] Chorea associated with rheumatic fever. Also known as Sydenham's chorea.

Sakata-Taketani equation [QUANT MECH] A relativistic wave equation for a particle with spin 1 whose form resembles that of the nonrelativistic Schrödinger equation.

Sakmarian [GEOL] A European stage of geologic time; the lowermost Permian, above Stephanian of Carboniferous and below Artinskian.

sal *See* sial.

salable coal [MIN ENG] Total output of a coal mine, less the tonnage rejected or consumed during preparation for market.

sal acetosella *See* potassium binoxalate.

Salado formation [GEOL] A red-bed formation from the Permian found in southeast New Mexico; contains rock salt and potash salts.

salamander [VERT ZOO] The common name for members of the order Urodela.

salamander stove [ENG] A small portable stove used for temporary or emergency heat; for example, on construction sites or in greenhouses.

Salamandridae [VERT ZOO] A family of urodele amphibians in the suborder Salamandroidea characterized by a long row of prevomerine teeth.

Salamandroidea [VERT ZOO] The largest suborder of the Urodela characterized by teeth on the roof of the mouth posterior to the openings of the nostrils.

salammoniac [MINERAL] NH_4Cl A white, isometric, crystalline mineral composed of native ammonium chloride.

salammoniac cell [ELEC] Cell in which the electrolyte consists primarily of a solution of ammonium chloride.

Salam-Weinberg theory *See* Weinberg-Salam theory.

Salangidae [VERT ZOO] A family of soft-rayed fishes, in the suborder Galaxioidei, which live in estuaries of eastern Asia.

salazosulfadimidine [ORG CHEM] $C_{19}H_{17}N_5O_5S$ A brown crystalline compound that melts at 207°C; used in medicine in cases of ulcerative colitis. Also known as salicylazosulfadimidine; salicylazosulfamethazine.

salband *See* selvage.

salcrete [GEOL] A thin, hard crust of salt-cemented sand grains, occurring on a marine beach that is occasionally or periodically saturated by saline water.

Saldidae [INV ZOO] The shore bugs, a family of predacious hemipteran insects in the superfamily Saldoidea.

Saldoidea [INV ZOO] A superfamily of the hemipteran group Leptopodoidea.

saléeite [MINERAL] $Mg(UO_2)_2(PO_4)_2 \cdot 10H_2O$ A lemon-yellow mineral composed of hydrous phosphate of magnesium and uranium.

Saleniidae [INV ZOO] A family of echinoderms in the order Salenioida distinguished by imperforate tubercles.

Salenioida [INV ZOO] An order of the Echinacea in which the apical system includes one or several large angular plates covering the periproct.

salesite [MINERAL] $Cu(IO_3)(OH)$ A bluish-green mineral composed of basic iodate of copper.

sal ethyl *See* ethyl salicylate.

salfemic rock [GEOL] An igneous rock in which the ratio of salic to femic minerals is greater than 3:5 and less than 5:3.

salic [GEOL] A soil horizon enriched with secondary salts, at least 2 percent, and measuring at least 15 centimeters in thickness. [MINERAL] Pertaining to certain light-colored minerals, such as quartz and feldspars, that are rich in silica or magnesium and commonly occur in igneous rock.

Salicaceae [BOT] The single family of the order Salicales.

Salicales [BOT] A monofamilial order of dicotyledonous plants in the subclass Dilleniidae; members are dioecious, woody plants, with alternate, simple, stipulate leaves and plumose-hairy mature seeds.

salicin [ORG CHEM] $C_{13}H_{18}O_7$ A glucoside; colorless crystals, soluble in water, alcohol, alkalies, and glacial acetic acid; melts at 199°C; used in medicine and as an analytical reagent.

salicylal *See* salicylaldehyde.

salicyl alcohol [ORG CHEM] $C_7H_8O_2$ A crystalline alcohol that forms plates or powder, melting at 86–87°C; used in medicine as a local anesthetic. Also known as *ortho*-hydroxybenzyl alcohol; saligenol.

salicylaldehyde [ORG CHEM] C_6H_4OHCHO Clear to dark-red oily liquid, with burning taste and almond aroma;

soluble in alcohol, benzene, and ether, very slightly soluble in water; boils at 196°C; used in analytical chemistry, in perfumery, and for synthesis of chemicals. Also known as helicin; *ortho*-hydroxybenzaldehyde; salicylal; salicylic aldehyde.

salicylamide [ORG CHEM] $C_6H_4(OH)CONH_2$ Pinkish or white crystals; soluble in alcohol, ether, chloroform, and hot water; melts at 193°C; used in medicine as an analgesic, antipyretic, and antirheumatic drug. Also known as ethbenzamide; 2-ethoxybenzene carbonamide; *ortho*-ethyl ether; *ortho*-hydroxybenzamide.

salicylanilide [PHARM] $C_{13}H_{11}NO_2$ A crystalline compound with a melting point of 135.8–136.2°C; freely soluble in alcohol, ether, chloroform, and benzene, slightly soluble in water; used as a topical antifungal agent in humans and animals and in medicine. Also known as *N*-phenylsalicylamide.

salicylate [ORG CHEM] A salt of salicylic acid with the formula $C_6H_4(OH)COOM$, where M is a monovalent metal; for example, $NaC_7H_5O_3$, sodium salicylate.

salicylated mercury *See* mercuric salicylate.

salicylazosulfadimidine *See* salazosulfadimidine.

salicylazosulfamethazine *See* salazosulfadimidine.

salicylic acid [ORG CHEM] $C_6H_4(OH)(COOH)$ White crystals with sweetish taste; soluble in alcohol, acetone, ether, benzene, and turpentine, slightly soluble in water; discolored by light; melts at 158°C; used as a chemical intermediate and in medicine, dyes, perfumes, and preservatives. Also known as *ortho*-hydroxybenzoic acid.

salicylic acid ethyl ether *See* ethyl salicylate.

salicylic acid phenyl ester *See* salol.

salicylic aldehyde *See* salicylaldehyde.

salicylic ether *See* ethyl salicylate.

salicylism [MED] A syndrome produced by excessive doses of salicylates; characterized by dizziness, headache, and nausea.

salicylsulfonic acid *See* sulfosalicylic acid.

salient [GEOL] **1.** A landform that projects or extends outward or upward from its surroundings. **2.** An area in which the axial traces of folds are convex toward the outer edge of the folded belt.

Salientia [VERT ZOO] The equivalent name for Anura.

salient pole [ELECTROMAG] A structure of magnetic material on which is mounted a field coil of a generator, motor, or similar device.

salient-pole field winding [ELEC] A type of field winding in electric machinery where the winding turns are concentrated around the pole core.

saliferous stratum [GEOL] A stratum that contains, produces, or is impregnated with salt. Also known as saliniferous stratum.

saligenol *See* salicyl alcohol.

salimeter [ENG] A hydrometer graduated to read directly the percentage of salt in a solution such as brine.

salina [ENG] *See* saltworks. [GEOL] An area, such as a salt flat, in which deposits of crystalline salts are formed or found. [HYD] A body of water containing high concentrations of salt.

salinastone [GEOL] A sedimentary rock composed mostly of saline minerals which are usually precipitated but may be fragmental.

saline-alkali soil [GEOL] A salt-affected soil with a content of exchangeable sodium greater than 15%, with much soluble salts, and with a pH value usually less than 9.5.

salinelle [GEOL] A mud volcano erupting saline mud.

saline soil [GEOL] A nonalkali, salt-affected soil with a high content of soluble salts, with exchangeable sodium of less than 15%, and with a pH value less than 8.5.

saline-water reclamation [CHEM ENG] Purification and removal of salts from brine or brackish water by ion exchange, crystallization, distillation, evaporation, and reverse osmosis.

saliniferous stratum *See* saliferous stratum.

salinity [OCEANOGR] The total quantity of dissolved salts in sea water, measured by weight in parts per thousand.

salinity current [OCEANOGR] A density current in the ocean whose flow is caused, controlled, or maintained by its relatively greater density due to excessive salinity.

salinity logging [PETRO ENG] Technique for measurement and recording of saltwater-bearing zones in an oil or gas reservoir; uses a combination of neutron logging with a chlorine curve.

salinity-temperature-depth recorder [ENG] An instrument consisting of sensing elements usually lowered from a stationary ship, and a recorder on board which simultaneously records measurements of temperature, salinity, and depth. Also known as CTD recorder; STD recorder.

salinization [GEOL] In a soil of an arid, poorly drained region, the accumulation of soluble salts by the evaporation of the waters that bore them to the soil zone.

salinometer [ENG] An instrument that measures water salinity by means of electrical conductivity or by a hydrometer calibrated to give percentage of salt directly.

Salisbury dark box [ELECTR] Isolating chamber used for test work in connection with radar equipment; the walls of the chamber are specially constructed to absorb all impinging microwave energy at a certain frequency.

salite [MINERAL] $(Mg,Fe)_2Si_2O_6$ A grayish-green to black mineral variety of diopside containing more magnesium than iron; member of the clinopyroxene group. Also spelled sahlite.

salitrite [PETR] A lamprophyre composed chiefly of titanite and diopside with acmite, accessory apatite, microcline, and occasionally anorthoclase and baddeleyite.

saliva [PHYSIO] The opalescent, tasteless secretions of the oral glands.

salivary amylase *See* ptyalin.

salivary diastase *See* ptyalin.

salivary gland [PHYSIO] A gland that secretes saliva, such as the sublingual or parotid.

salivary gland chromosomes [CYTOL] Polytene chromosomes found in the interphase nuclei of salivary glands in the larvae of Diptera; chromosomes in the larva undergo complete somatic pairing to form two homologous polytene chromosomes fused side by side.

salivation [MED] Mild mercury poisoning suffered by workmen in amalgamation plants. [PHYSIO] Excessive secretion of saliva.

Salk vaccine [IMMUNOL] A killed-virus vaccine administered for active immunization against poliomyelitis.

sallying ship [NAV ARCH] Producing rolling motion of a vessel by running a group of people in unison from side to side.

sally port [ORD] Large gate or passage in a fortified place.

salmon [VERT ZOO] The common name for a number of fish in the family Salmonidae which live in coastal waters of the North Atlantic and North Pacific and breed in rivers tributary to the oceans.

Salmonella [MICROBIO] A genus of pathogenic bacteria in the family Enterobacteriaceae; usually motile rods that lack proteolytic enzymes and can utilize citrate as a carbon source.

Salmonella aertrycke *See* Salmonella typhimurium.

Salmonella choleraesuis [MICROBIO] The organism that is a secondary invader of pigs in hog cholera; may cause localized lesions, enteric fever, or gastroenteritis in humans. Also known as *Salmonella suipestifer.*

Salmonella enteritidis [MICROBIO] An organism causing gastroenteritis in humans. Also known as *Bacterium enteritidis.*

Salmonella hirschfeldii [MICROBIO] An organism causing enteric fever in humans. Also known as *Bacterium paratyphosum* C; *Salmonella paratyphi* C.

Salmonella oranienburg [MICROBIO] An organism isolated from feces of normal carriers and of persons with food poisoning.

Salmonella paratyphi A [MICROBIO] An organism that causes gastroenteritis and enteric fever in humans. Also known as *Salmonella paratyphosa.*

Salmonella paratyphi B *See* Salmonella schottmülleri.

Salmonella paratyphi C *See* Salmonella hirschfeldii.

Salmonella paratyphosa *See* Salmonella paratyphi A.

Salmonella pullorum [MICROBIO] An organism causing pullorum disease or bacillary white diarrhea of chicks.

Salmonella schottmülleri [MICROBIO] An organism causing enteric fever in humans. Also known as *Bacterium paratyphosum* B; *Salmonella paratyphi* B.

Salmonella suipestifer *See* Salmonella choleraesuis.

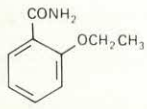
Salmonella typhi *See* Salmonella typhosa.

Salmonella typhimurium [MICROBIO] An organism causing diarrhea in mice, rats, and birds, and gastroenteritis in humans. Also known as *Salmonella aertrycke.*

Salmonella typhosa [MICROBIO] The organism that causes typhoid fever in humans. Also known as *Bacterium typhosum; Eberthella typhosa; Salmonella typhi.*

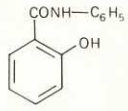
Salmonelleae [MICROBIO] Formerly a tribe of the Entero-

SALICYLAMIDE



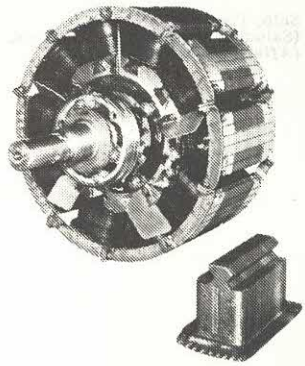
Structural formula.

SALICYLANILIDE



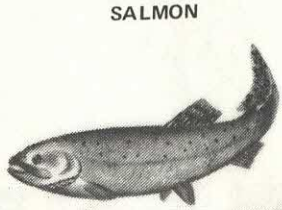
Structural formula.

SALIENT-POLE FIELD WINDING



Salient-pole field winding on rotor of synchronous motor showing the pole core, lower right. *(Allis-Chalmers)*

SALMON



Coho salmon *(Oncorhynchus kisutch).*

bacteriaceae comprising the pathogenic genera *Salmonella* and *Shigella*.

salmonellosis [MED] Infection with any species of *Salmonella*.

Salmonidae [VERT ZOO] A family of soft-rayed fishes in the suborder Salmonoidei including the trouts, salmons, whitefishes, and graylings.

Salmoniformes [VERT ZOO] An order of soft-rayed fishes comprising salmon and their allies; the stem group from which most higher teleostean fishes evolved.

Salmonoidei [VERT ZOO] A suborder of the Salmoniformes comprising forms having an adipose fin.

salmon oil [MATER] Combustible, pale golden-yellow liquid with sweet taste; soluble in alcohol, ether, chloroform, and carbon disulfide; obtained from the waste in the canning of salmon; used in pet foods, soaps, and leather dressing.

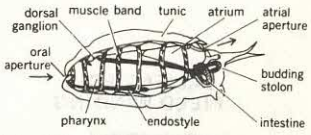
salmonsite [MINERAL] A buff-colored mineral composed of hydrous phosphate of manganese and iron occurring in cleavable masses.

Salmopercae [VERT ZOO] An equivalent name for Percopsiformes.

salol [ORG CHEM] $C_6H_4OHCOOC_6H_5$ White powder with aromatic taste and aroma; soluble in alcohol, ether, chloroform, and benzene; slightly soluble in water; melts at 42°C; used in medicinals and as a preservative. Also known as phenyl salicylate; salicylic acid phenyl ester.

Salpida [INV ZOO] An order of tunicates in the class Thaliacea including transparent forms ringed by muscular bands.

SALPIDA



Salp, *Thalia democratica* (Salpida), solitary asexual form. *(After Metcalf)*

Salpingidae [INV ZOO] The narrow-waisted bark beetles, a family of coleopteran insects in the superfamily Tenebrionoidea.

salpingitis [MED] **1.** Inflammation of the fallopian tube. **2.** Inflammation of the eustachian tube.

salpingo-oophoritis [MED] Inflammation of the fallopian tubes and ovaries.

sal prunella *See* niter balls.

sal soda [INORG CHEM] $Na_2CO_3 \cdot 10H_2O$ White, water-soluble crystals, insoluble in alcohol; melts and loses water at about 33°C; mild irritant to mucous membrane; used in cleansers and for washing textiles and bleaching linen and cotton. Also known as sodium carbonate decahydrate; washing soda.

salsoline [PHARM] $C_{11}H_{15}NO_2$ Compound that crystallizes from alcohol solution, melts at 221°C, soluble in hot alcohol and chloroform; used in medicine as an antihypertensive agent.

salt [CHEM] The reaction product when a metal displaces the hydrogen of an acid; for example, $H_2SO_4 + 2NaOH \rightarrow Na_2SO_4$ (a salt) + $2H_2O$. [ENG] To add an accelerator or retardant to cement. [MIN ENG] **1.** To introduce extra amounts of a valuable or waste mineral into a sample to be assayed. **2.** To artificially enrich, as a mine, usually with fraudulent intent.

salt-affected soil [GEOL] A general term for a soil that is not suitable for the growth of crops because of an excess of salts, exchangeable sodium, or both.

salt-and-pepper sand [GEOL] A sand composed of a mixture of light- and dark-colored grains.

salt anticline [GEOL] A structure like a salt dome but with a linear salt core. Also known as salt wall.

sal tartar *See* sodium tartrate.

saltation [GEOL] Transport of a sediment in which the particles are moved forward in a series of short intermittent bounces from a bottom surface.

saltation load [GEOL] The part of the bed load that is bouncing along the stream bed or is moved, directly or indirectly, by the impact of bouncing particles.

saltatorial [ZOO] Adapted for leaping.

salt bath [MET] Molten salts in which steel is heated for hardening and tempering.

salt bottom [GEOL] A flat piece of relatively low-lying ground encrusted with salt.

saltbox [ARCH] A type of house built in colonial New England, having a frame structure with two stories in the front and one in the rear and a double-sloping roof.

salt bridge [PHYS CHEM] A bridge of a salt solution, usually potassium chloride, placed between the two half-cells of a galvanic cell, either to reduce to a minimum the potential of the liquid junction between the solutions of the two half-cells or to isolate a solution under study from a reference half-cell and prevent chemical precipitations.

salt burst [GEOL] Rock destruction caused by crystallization of soluble salts that enter the pores.

salt cake [INORG CHEM] Impure sodium sulfate; used in soaps, paper pulping, detergents, glass, ceramic glaze, and dyes.

salt crust [HYD] A salt deposit formed on an ice surface by crystal growth forcing salt out of young sea ice and pushing it upward.

salt dome [GEOL] A diapiric or piercement structure in which there is a central, equidimensional salt plug.

salt-dome breccia [GEOL] A breccia found in deep shale sequences and occurring as a dome-shaped mass in a broad zone surrounding a salt plug.

salted weapon [ORD] A nuclear weapon which has, in addition to its normal components, certain elements or isotopes which capture neutrons at the time of the explosion and produce radioactive weapon debris.

saltern *See* salt garden; saltworks.

salt error [ANALY CHEM] An error introduced in an analytical determination of a saline liquid such as sea water; caused by the effect of the neutral ions in the solution on the color of the pH indicator, and hence upon the apparent pH.

salt field [GEOL] An area overlying a usually workable salt deposit of economic value.

salt flat [GEOL] The level, salt-encrusted bottom of a lake or pond that is temporarily or permanently dried up.

salt flowers *See* ice flowers.

salt-fog test [MET] An accelerated corrosion test in which a piece of metal is subjected to a fine spray of sodium chloride solution. Also known as salt-spray test.

salt garden [ENG] A large, shallow basin or pond where sea water is evaporated by solar heat. Also known as saltern.

salt glacier [GEOL] A gravitational flow of salt down the slopes of a salt plug, following the preexisting structure.

salt gland [VERT ZOO] A compound tubular gland, located around the eyes and nasal passages in certain marine turtles, snakes, and birds, which copiously secretes a watery fluid containing a high percentage of salt.

salt glaze [ENG] Glaze formed on the surface of stoneware by putting salt into the kiln during firing.

salt grainer [CHEM ENG] Type of evaporative crystallizer in which the solution is kept hot, and supersaturation is developed by evaporation rather than by cooling.

salt haze [METEOROL] A haze created by the presence of finely divided particles of sea salt in the air, usually derived from the evaporation of sea spray.

salt hill [GEOL] An abrupt hill of salt, with sinkholes and pinnacles at its summit.

Salticidea [INV ZOO] The jumping spiders, a family of predacious arachnids in the suborder Dipneumonomorphae having keen vision and rapid movements.

saltierra [GEOL] A deposit of salt left by evaporation of a shallow salt lake.

salting-out effect [CHEM ENG] The growth of crystals of a substance on heated, liquid-holding surfaces of a crystallizing evaporator as a result of the decrease in solubility of the substance with increase in temperature.

salt lake [HYD] A confined inland body of water having a high concentration of salts, principally sodium chloride.

saltmarsh [ECOL] A maritime habitat found in temperate regions, but typically associated with tropical and subtropical mangrove swamps, in which excess sodium chloride is the predominant environmental feature.

saltmarsh plain [ECOL] A salt marsh that has been raised above the level of the highest tide and has become dry land.

salt mine [MIN ENG] A mine containing deposits of rock salt.

salt-mud combination log [PETRO ENG] Record of electrical logging of the mud in oil well boreholes in the presence of sodium chloride incursions from adjacent formations.

salt of Lemery *See* potassium sulfate.

salt of sorrel *See* potassium binoxalate.

salt of tartar *See* potassium carbonate.

salt pan [CHEM] A pool used for obtaining salt by the natural evaporation of sea water. [GEOL] **1.** An undrained, usually small and shallow, natural depression or hollow in which water accumulates and evaporates, leaving a salt deposit. **2.** A shallow lake of brackish water occupying such a depression.

saltpeter *See* potassium nitrate.

saltpeter cave [GEOL] A cave in which there are deposits of saltpeter earth.

saltpeter earth [GEOL] A deposit containing calcium nitrate and found in caves.

salt pillow [GEOL] An embryonic salt dome rising from its source bed, still at depth.

salt pit [GEOL] A pit in which sea water is received and evaporated and from which salt is obtained.

salt plug [GEOL] The salt core of a salt dome.

salt polygon [GEOL] A surface of salt on a playa, having three to eight sides marked by ridges of material formed as a result of the expansive forces of crystallizing salt, and ranging in width from several centimeters to 30 meters.

salt-spray climax [ECOL] A climax community along exposed Atlantic and Gulf seacoasts composed of plants able to tolerate the harmful effects of salt picked up and carried by onshore winds from seawater.

salt-spray test *See* salt-fog test.

salt tectonics [GEOL] The study of the structure and mechanism of emplacement of salt domes. Also known as halokinesis.

saltus *See* oscillation of a function.

salt velocity meter [ENG] A rate-of-flow volume meter used to find the transit time of passage between two fixed points of a small quantity of salt or radioactive isotope in a flowing stream by measuring electrical conductivity or radiation level at those points.

salt wall *See* salt anticline.

salt water *See* seawater.

salt-water front [OCEANOGR] The interface between fresh and salt water in a coastal aquifer or in an estuary.

salt-water intrusion [HYD] Displacement of fresh surface water or groundwater by salt water due to its greater density.

salt-water underrun [OCEANOGR] A type of density current occurring in a tidal estuary, due to the greater salinity of the bottom water.

salt-water wedge [OCEANOGR] A wedge-shaped intrusion of salty ocean water into a fresh-water estuary or tidal river; it slopes downward in the upstream direction, and salinity increases with depth.

salt-water well [PETRO ENG] A well from which salt water flows after the petroleum contents are depleted.

salt weathering [GEOL] The granular disintegration or fragmentation of rock material produced by saline solutions or by salt-crystal growth.

salt wedge [OCEANOGR] A wedge-shaped mass of salt water from an ocean or sea which intrudes the mouth and lower course of a river.

salt well [ENG] A bored or driven well from which brine is obtained.

saltworks [ENG] A building or group of buildings where salt is produced commercially, as by extraction from sea water or from the brine of salt springs. Also known as salina; saltern.

saluting gun [ORD] Cannon used for firing salutes.

salvage procedure [ENG] The recovery, evacuation, and reclamation of damaged, discarded, condemned, or abandoned allied or enemy materiel, ships, craft, and floating equipment for reuse, repair, refabrication, or scrapping.

salvage value [ENG] The net worth of diamonds recovered from a used diamond-inset tool.

salvage vessel [NAV ARCH] A ship equipped to rescue or save ships or material that has been sunk, wrecked, damaged, or discarded.

Salvarsan [PHARM] A trademark for arsephenamine, an early antisyphilitic drug.

salvia [MATER] The dried leaves of the sage, *Salvia officinalis;* contains volatile oil, resin, and tannin; used in food engineering as a flavoring agent and condiment, and in medicine as an antisecretory agent.

salvia oil *See* oil of sage.

Salviniales [BOT] A small order of heterosporous, leptosporangiate ferns (division Polypodiophyta) which float on the surface of the water.

salvo [ORD] **1.** A simultaneous, or nearly simultaneous, discharge of shots from two or more closely placed guns or launchers against the same target. **2.** The release of several bombs or rocket missiles simultaneously, or in close train, from one or more aircraft, at a single target. **3.** The aggregate of shots, bombs, or rockets so discharged or released.

SAM *See* surface-to-air missile.

samara [BOT] A dry, indehiscent, winged fruit usually containing a single seed, such as sugar maple (*Acer saccharum*).

samarium [CHEM] Group III rare-earth metal, atomic number 62, symbol Sm; melts at 1350°C, tarnishes in air, ignites at 200–400°C.

samarium-cobalt magnet [ELECTROMAG] A rare-earth permanent magnet that is more efficient, has lower leakage and greater resistance to demagnetization, and can be magnetized to higher levels than conventional permanent magnets.

samarium oxide [INORG CHEM] Sm_2O_3 A cream-colored powder with a melting point of 2300°C; soluble in acids; used for infrared-absorbing glass and as a neutron absorber.

samarskite [MINERAL] $(Y,Ce,U,Ca,Fe,Pb,Th)(Nb,Ta,Ti,Sn)_2O_6$ A velvet-black to brown metamict orthorhombic mineral with splendent vitreous to resinous luster occurring in granite pegmatites. Also known as ampangabeite; uranotantalite.

Sambonidae [INV ZOO] A family of pentastomid arthropods in the suborder Porocephaloidea of the order Porocephalida.

SAMOS program [AERO ENG] A series of military reconnaissance satellites carrying cameras and other surveillance equipment; each satellite has a jettisonable camera package that is ejected from orbit and recovered in midair.

sample [SCI TECH] Representative fraction of material tested or analyzed in order to determine the nature, composition, and percentage of specified constituents, and possibly their reactivity. [STAT] A selection of a certain collection from a larger collection.

sample-and-hold circuit [ELECTR] A circuit that measures an input signal at a series of definite points in time, and whose output remains constant at a value corresponding to the most recent measurement until the next measurement is made.

sampled data [STAT] Data that are obtained at discrete rather than continuous intervals.

sampled-data control system [CONT SYS] A form of control system in which the signal appears at one or more points in the system as a sequence of pulses or numbers usually equally spaced in time.

sampled grade [MIN ENG] The amount of valuable metal in the ore in place as determined by underground, surface, or drill-hole sampling.

sample function [STAT] A function or procedure which, when applied repeatedly to a given population, produces a collection of samples.

sampleite [MINERAL] $NaCaCu_5(PO_4)_4Cl{\cdot}5H_2O$ A blue mineral composed of hydrous phosphate and chloride of sodium, calcium, and copper.

sample log [ENG] Record of core samples or drill cuttings; gives geological, visual, and hydrocarbon-content record versus depth of drilling.

sample path [MATH] If $\{X_t: t \text{ in } T\}$ is a stochastic process, a sample path for the process is the function on T to the range of the process which assigns to each t the value $X_t(w)$, where w is a previously given fixed point in the domain of the process.

sampler [CONT SYS] A device, used in sampled-data control systems, whose output is a series of impulses at regular intervals in time; the height of each impulse equals the value of the continuous input signal at the instant of the impulse. [ENG] A mechanical or other device designed to obtain small samples of materials for analysis; used in biology, chemistry, and geology.

sample size [STAT] The number of objects in the sample.

sample splitter [ENG] An instrument, generally constructed of acrylic resin, designed to subdivide a total sample of marine plankton while maintaining a quantitatively correct relationship between the various phyla in the sample.

sampling [ENG] Process of obtaining a sequence of instantaneous values of a wave. [SCI TECH] The obtaining of small representative quantities of materials (gas,, liquid, solid) for the purpose of analysis. [STAT] A drawing of a collection from a given population.

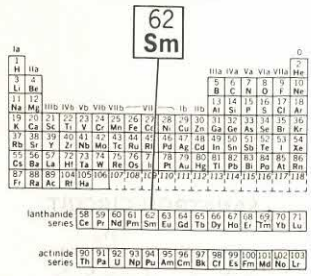
sampling area ratio [MIN ENG] The volume of the soil displaced in proportion to the volume of the sample; a well-designed tool has an area ratio of about 20 percent.

sampling bottle [ENG] A cylindrical container, usually closed at a chosen depth, to trap a water sample and transport it to the surface without introducing contamination.

sampling fraction [STAT] The ratio of the sample size to the population size.

sampling gate [ELECTR] A gate circuit that extracts information from the input waveform only when activated by a selector pulse.

SAMARIUM



Periodic table of the chemical elements showing the position of samarium.

SANATRON CIRCUIT

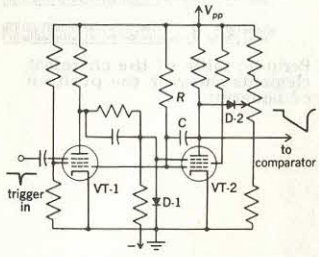


Diagram of a simple sanatron circuit. *VT*-1 and *VT*-2 = pentodes; *D*-1 and *D*-2 = diodes; V_{pp} = plate supply voltage with respect to cathode.

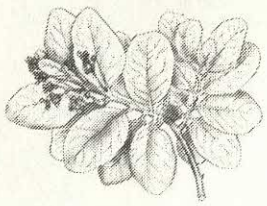
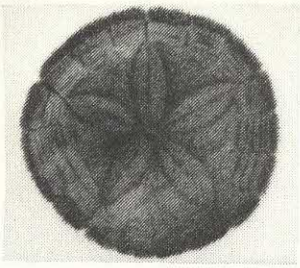
SANDALWOOD



Sandalwood branch with foliage and fruit.

SAND DOLLAR



Sand dollar. The nearly circular body may reach 3 inches (7.6 centimeters) in diameter. The characteristic pattern of a five-part flower is seen on the aboral surface.

sampling interval [CONT SYS] The time between successive sampling pulses in a sampled-data control system.

sampling pipe [MIN ENG] A small pipe built into a seal to take air samples in a sealed area.

sampling plan [IND ENG] A plan stating sample sizes and the criteria for accepting or rejecting items or taking another sample during inspection of a group of items.

sampling probe [ENG] A leak-testing probe which collects tracer gas from the test area of an object under pressure and feeds it to the leak detector at reduced pressure.

sampling process [ENG] The process of obtaining a sequence of instantaneous values of some quantity that varies continuously with time.

sampling rate [ENG] The rate at which measurements of physical quantities are made; for example, if it is desired to calculate the velocity of a missile and its position is measured each millisecond, then the sampling rate is 1000 measurements per second.

sampling risk [IND ENG] In inspection procedure, the probability, under the sampling plan used, that acceptable material will be rejected or that unsatisfactory material will be accepted.

sampling spark chamber [NUCLEO] A spark chamber that yields as output data the coordinates of a single point on the track (or tracks) in each gap; all narrow-gap chambers are of this type.

sampling spoon [MIN ENG] A cylinder with a spoonlike cutting edge for taking soil samples.

sampling switch *See* commutator switch.

sampling techniques [STAT] The methods used in drawing samples from a population usually in such a manner that the sample will facilitate determination of some hypothesis concerning the population.

sampling theorem [COMMUN] The theorem that a signal that varies continuously with time is completely determined by its values at an infinite sequence of equally spaced times if the frequency of these sampling times is greater than twice the highest frequency component of the signal. Also known as Shannon's sampling theorem.

sampling theory [STAT] The mathematical study of sampling techniques.

sampling time [ENG] The time between successive measurements of a physical quantity.

sampling voltmeter [ENG] A special type of voltmeter that detects the instantaneous value of an input signal at prescribed times by means of an electronic switch connecting the signal to a memory capacitor; it is particularly effective in detecting high-frequency signals (up to 12 gigahertz) or signals mixed with noise.

samsonite [MINERAL] $Ag_4MnSb_2S_6$ A black mineral composed of sulfide of silver, manganese, and antimony occurring in monoclinic prismatic crystals.

samson post *See* kingpost.

Samythinae [INV ZOO] A subfamily of sedentary polychaete annelids in the family Ampharetidae having a conspicuous dorsal membrane.

SAN *See* styrene-acrylonitrile resin.

sanakite [PETR] A glassy andesite composed of bronzite, augite, magnetite, and a few large plagioclase and garnet crystals.

sanatron circuit [ELECTR] A variable time-delay circuit having two pentodes and two diodes, used to produce very short gate waveforms having time durations that vary linearly with a reference voltage.

sanbornite [MINERAL] $BaSi_2O_5$ A white triclinic mineral composed of barium silicate.

sand [GEOL] A loose material consisting of small mineral particles, or rock and mineral particles, distinguishable by the naked eye; grains vary from almost spherical to angular, with a diameter range from 1/16 to 2 millimeters.

Sandalidae [INV ZOO] The equivalent name for Rhipiceridae.

sandal oil *See* sandalwood oil.

sandalwood [BOT] **1.** Any species of the genus *Santalum* of the sandalwood family (Santalaceae) characterized by a fragrant wood. **2.** *S. album*. A parasitic tree with hard, close-grained, aromatic heartwood used in ornamental carving and cabinetwork.

sandalwood oil [MATER] Pale-yellow essential oil with harsh taste and faint aromatic scent; soluble in fixed oils; insoluble in glycerin; derived from the sandalwood *Santalum album;* used in medicine, perfumes, and flavors. Also known as East Indian sandalwood oil; sandal oil; santal oil; santalwood oil.

sand apron [GEOL] A deposit of sand along the shore of a lagoon of a reef.

sandarac *See* realgar.

sandarac gum [MATER] Yellow, brittle, water-insoluble, natural resin obtained from the African sandarac tree of Morocco; used in varnishes and lacquers.

sand auger *See* dust whirl.

sand avalanche [GEOL] Movement of large masses of sand down a dune face when the angle of repose is exceeded or when the dune is disturbed.

sandbag [ENG] A bag filled with sand; used to build temporary protective walls. [GEOL] In the roof of a coal seam, a deposit of glacial debris formed by scour and fill subsequent to coal formation.

sandbank [GEOL] A deposit of sand forming a mound, hillside, bar, or shoal.

sandbar [GEOL] A bar or low ridge of sand bordering the shore and built up, or near, to the surface of the water by currents or wave action. Also known as sand reef.

sandblasting [ENG] *See* grit blasting. [GEOL] Abrasion affected by the action of hard, windblown mineral grains.

sandblow [ECOL] A patch of coarse, sandy soil denuded of vegetation by wind action.

sand boil *See* blowout.

sand-cast [MET] Made by pouring molten metal into a mold made of sand.

sand cay *See* sandkey.

sand cone [GEOL] **1.** A cone-shaped deposit of sand, produced especially in an alluvial cone. **2.** A low debris cone whose protective veneer consists of sand.

sand control [MET] A process to regulate the properties of foundry sand to produce defect-free castings.

sand count [PETRO ENG] Determination of the total thickness of an oil or gas reservoir's permeable section (excluding shale streaks and other impermeable zones); can be derived from electrical logs.

sand crystal [GEOL] A large crystal loaded up to 60% with detrital sand inclusions formed in a sandstone during or as a result of cementation.

sand devil *See* dust whirl.

sand dike [GEOL] A sedimentary dike consisting of sand that has been squeezed or injected upward into a fissure.

sand dollar [INV ZOO] The common name for the flat, disk-shaped echinoderms belonging to the order Clypeasteroida.

sand drain [CIV ENG] A vertical boring through a clay or silty soil filled with sand or gravel to facilitate drainage.

sand drift [GEOL] **1.** Movement of windblown sand along the surface of a desert or shore. **2.** An accumulation of sand against the leeward side of a fixed obstruction.

sand drip [GEOL] A rounded or crescentic surface form on a beach sand, resulting from the sudden absorption of overwash.

sand dune [GEOL] A mound of loose windblown sand commonly found along low-lying seashores above high-tide level.

sander [MECH ENG] **1.** An electric machine used to sand the surface of wood, metal, or other material. **2.** A device attached to a locomotive or electric rail car which sands the rails to increase friction on the driving wheels.

sandfall *See* slip face.

sand filter [CIV ENG] A filter consisting of graded layers of sand and aggregate for purifying domestic water.

sand finish [ENG] A smooth finish on a plaster surface made by rubbing the sand or mortar coat.

sand flat [GEOL] A sandy tidal flat barren of vegetation.

sand flood [GEOL] A vast body of sand moving or borne along a desert, as in the Arabian deserts.

sandfly [INV ZOO] Any of various small biting Diptera, especially of the genus *Phlebotomus*, which are vectors for phlebotomus (sandfly) fever.

sandfly fever *See* phlebotomus fever.

sand gall *See* sand pipe.

sand glacier [GEOL] **1.** An accumulation of sand that is blown up the side of a hill or mountain and through a pass or saddle, and then spread out on the opposite side to form a wide, fan-shaped plain. **2.** A horizontal plateau of sand terminated by a steep talus slope.

sand-grain volume [PETRO ENG] In oil reservoir porosity calculations, the actual volume filled by sand grains, without allowance for spaces (voids) between the grains.

sand hill [GEOL] A ridge of sand, especially a sand dune in a desert region.

sandhog [ENG] A worker in compressed-air environments, as in driving tunnels by means of pneumatic caissons.

sand hole [GEOL] A small pit (7–8 millimeters in depth and a little less wide than deep) with a raised margin, formed on a beach by waves expelling air from a formerly saturated mass of sand.

sand hopper [INV ZOO] The common name for gammaridean crustaceans found on beaches.

sand horn [GEOL] A pointed sand deposit extending from the shore into shallow water.

sanding [ENG] **1.** Covering or mixing with sand. **2.** Smoothing a surface with sandpaper or other abrasive paper or cloth.

sandkey [GEOL] A small sandy island parallel with the shore. Also known as sand cay.

sand levee *See* whaleback dune.

sand-lime brick [MATER] A clay building material made by molding a mixture of sand with 6% hydrated lime and water.

sand line [ENG] A wire line used to raise and lower a bailer or sand pump to remove cuttings from a borehole.

sand load [ELECTROMAG] An attenuator used as a power-dissipating terminating section for a coaxial line or waveguide; the dielectric space in the line is filled with a mixture of sand and graphite that acts as a matched-impedance load, preventing standing waves.

sand lobe [GEOL] A rounded sand deposit extending from the shore into shallow water.

Sandmeyer's reaction [CHEM] Conversion of diazo compounds (in the presence of cuprous halogen salts) into halogen compounds.

sand mill [MECH ENG] Variation of a ball-type size-reduction mill in which grains of sand serve as grinding balls.

sandpaper [MATER] Paper with abrasive glued to the surface.

sand pavement [GEOL] A sandy surface derived from coarse-grained sand ripples, developed on the lower, windward slope of a dune or rolling sand area during a period of intermittent light, variable winds.

sand pile [CIV ENG] A compacted filling of sand in a deep round hole formed by ramming the sand with a pile; used for foundations in soft soil.

sand pipe [GEOL] A pipe formed in sedimentary rocks, filled with considerable sand and some gravel. Also known as sand gall.

sandpiper [VERT ZOO] Any of various small birds that are related to plovers and that frequent sandy and muddy shores in temperate latitudes; bill is moderately long with a soft, sensitive tip, legs and neck are moderately long, and plumage is streaked brown, gray, or black above and is white below.

sandpit [CIV ENG] An excavation dug in sand, especially as a source of sand for construction materials.

sand plain [GEOL] A small outwash plain formed by deposition of sand transported by meltwater streams flowing from a glacier.

sand pump [MECH ENG] A pump, usually a centrifugal type, capable of handling sand- and gravel-laden liquids without clogging or wearing unduly; used to extract mud and cuttings from a borehole. Also known as sludge pump.

sand reef *See* sandbar.

sand reel [MECH ENG] A drum, operated by a band wheel, for raising or lowering the sand pump or bailer during drilling operations.

sand return [PETRO ENG] The return of injected sand to the wellbore following formation fracturing; it constitutes a problem.

sand ridge [GEOL] **1.** Any low ridge of sand formed at some distance from the shore, and either submerged or emergent, such as a longshore bar or a barrier beach. **2.** One of a series of long, wide, extremely low, parallel ridges believed to represent the eroded stumps of former longitudinal sand dunes. **3.** A crescent-shaped landform found on a sandy beach, such as a beach cusp. **4.** *See* sand wave.

sand river [GEOL] A river that deposits much of its sand load along its middle course, to be subsequently removed by the wind.

sandrock [GEOL] A field term for a sandstone that is not firmly cemented.

sand roll *See* pseudonodule.

sand run [GEOL] **1.** A fluidlike motion of dry sand. **2.** A mass of dry sand in motion.

sands [MIN ENG] The coarser and heavier particles of crushed ore, of such size that they settle readily in water and may be leached by allowing the solution to percolate.

sand sea [GEOL] **1.** An extensive assemblage of sand dunes of several types in an area where a great supply of sand is present; characterized by an absence of travel lines, or directional indicators, and by a wavelike appearance of dunes separated by troughs. **2.** The flat, rain-smoothed plain of volcanic ash and other pyroclastics on the floor of a caldera.

sandshale [GEOL] A sedimentary deposit consisting of thin alternating beds of sandstone and shale.

sand shadow [GEOL] A lee-side accumulation of sand, as a small turret-shaped dune, formed in the shelter of, and immediately behind, a fixed obstruction, such as clumps of vegetation.

sand-shale ratio [GEOL] The ratio between the thickness or percentage of sandstone and that of shale in a geologic section.

sand shark [VERT ZOO] Any of various shallow-water predatory elasmobranchs of the family Carchariidae. Also known as tiger shark.

sand sheet [GEOL] A thin accumulation of coarse sand or fine gravel having a flat surface.

sand slinger [MECH ENG] A machine which delivers sand to and fills molds at high speed by centrifugal force.

sand snow [HYD] Snow that has fallen at very cold temperatures (of the order of $-25°C$); as a surface cover, it has the consistency of dust or light dry sand.

sandspit [GEOL] A spit consisting principally of sand.

sand splay [GEOL] A floodplain splay consisting of coarse sand particles.

sandstone [PETR] A detrital sedimentary rock consisting of individual grains of sand-size particles 0.06 to 2 millimeters in diameter either set in a fine-grained matrix (silt or clay) or bonded by chemical cement.

sandstone dike [GEOL] A dike made of sandstone or lithified sand.

sandstone sill [GEOL] A tabular mass of sandstone that has been emplaced by sedimentary injection parallel to the structure or by bedding of preexisting rock in the manner of an igneous sill.

sandstorm [METEOROL] A strong wind carrying sand through the air, the diameter of most particles ranging from 0.08 to 1 millimeter; in contrast to a duststorm, the sand particles are mostly confined to the lowest 2 meters above ground, rarely rising more than 11 meters.

sand streak [GEOL] A low, linear ridge formed at the interface of sand and air or water, oriented parallel to the direction of flow, and having a symmetric cross section.

sand stream [GEOL] A small sand delta spread out at the mouth of a gully, or a deposit of sand along the bed of a small creek, formed by a torrential rain.

sand strip [GEOL] A long, narrow ridge of sand extending for a long distance downwind from each horn of a dune.

sand trap [ENG] A device in a conduit for trapping sand or soil particles carried by the water.

sandur *See* outwash plain.

sandwash [GEOL] A sandy or gravel stream bed, devoid of vegetation, containing water only during a sudden and heavy rainstorm.

sand wave [GEOL] A large, ridgelike primary structure resembling a water wave on the upper surface of a sedimentary bed that is formed by high-velocity air or water currents. Also known as sand ridge.

sand wedge [GEOL] A wedge-shaped accumulation of sand with the apex downward formed by the filling in of winter contraction cracks.

sand wheel [MECH ENG] A wheel fitted with steel buckets around the circumference for lifting sand or sludge out of a sump to stack it at a higher level.

sandwich braze [MET] A technique by which a shim is placed between materials to be brazed as a transition layer to decrease thermal stress.

sandwich construction [DES ENG] Composite construction of alloys, plastics, wood, or other materials consisting of a foam or honeycomb layer laminated and glued between two hard outer sheets. Also known as sandwich laminate.

sandwich heating [ENG] Method for heating both sides of a thermoplastic sheet simultaneously prior to forming or shaping.

sandwich laminate *See* sandwich construction.

sandwich rolling [MET] Rolling strips of metal together to form a metallurgically bonded composite sheet.

sandy bentonite *See* arkosic bentonite.

sandy chert [PETR] Chert formed in sandy beds by replacement of cement, or the filling of pore spaces, with silica.

sane [PSYCH] Of sound mind.

Sanfilippo's syndrome [MED] A hereditary metabolic disorder, transmitted as an autosomal recessive, characterized by excessive amounts of heparitin sulfate in the urine, and manifested by minor skeletal changes and slight hepatomegaly.

Sangamon [GEOL] The third interglacial stage of the Pleistocene epoch in North America, following the Illinoian glacial and preceding the Wisconsin.

Sanger's reagent *See* 1-fluoro-2,4-dinitrobenzene.

sanguivorous [ZOO] Feeding on blood.

sanidal [GEOL] Pertaining to the continental shelf.

sanidaster [INV ZOO] A rod-shaped spicule having spines at intervals along its length.

sanidine [MINERAL] $KAlSi_3O_8$ An alkali feldspar mineral occurring in clear, glassy crystals embedded in unaltered acid volcanic rocks; a high-temperature, disordered form. Also known as glassy feldspar; ice spar; rhyacolite.

sanidinite [PETR] A type of igneous rock composed chiefly of sanidine.

sanitary engineering [CIV ENG] A field of civil engineering concerned with works and projects for the protection and promotion of public health.

sanitary landfill [CIV ENG] The disposal of garbage by spreading it in layers covered with soil or ashes to a depth sufficient to control rats, flies, and odors.

sanitary nipper *See* latrine cleaner.

sanitary sewer [CIV ENG] A sewer which is restricted to carrying sewage and to which storm and surface waters are not admitted.

sanitation [CIV ENG] The act or process of making healthy environmental conditions.

sanitizer [MATER] Disinfectant formulated to clean food-processing equipment and dairy and eating utensils.

San Joaquin Valley fever *See* coccidioidomycosis.

sanmartinite [MINERAL] $ZnWO_4$ A mineral composed of zinc tungstate.

sannaite [PETR] An extrusive rock containing phenocrysts of barkevikite, pyroxene, and biotite (in order of decreasing abundance) in a fine-grained to dense groundmass of alkali feldspar, acmite, chlorite, calcite, and pseudomorphs of mica after nepheline.

SA node *See* sinoauricular node.

sansar [METEOROL] A northwest wind of Persia.

sansicl [GEOL] An unconsolidated sediment, consisting of a mixture of sand, silt, and clay, in which no component forms 50% or more of the whole aggregate.

SANTA *See* systematic analog network testing approach.

Santa Ana [METEOROL] A hot, dry, foehnlike desert wind, generally from the northeast or east, especially in the pass and river valley of Santa Ana, California, where it is further modified as a mountain-gap wind.

Santalaceae [BOT] A family of parasitic dicotyledonous plants in the order Santalales characterized by dry or fleshy indehiscent fruit, plants with chlorophyll, petals absent, and ovules without integument.

Santalales [BOT] An order of dicotyledonous plants in the subclass Rosidae characterized by progressive adaptation to parasitism, accompanied by progressive simplification of the ovules.

santal oil *See* sandalwood oil.

santalol [ORG CHEM] $C_{15}H_{24}O$ A colorless liquid with a boiling point of 300°C; derived from sandalwood oil and used for perfumes.

santalwood oil *See* sandalwood oil.

Santa Rosa storm [METEOROL] In Argentina, an annual storm near the end of August.

Santonian [GEOL] A European stage of geologic time in the Upper Cretaceous, above the Coniacian and below the Campanian.

santonin [ORG CHEM] $C_{15}H_{18}O_3$ A white powder with a melting point of 170–173°C; soluble in chloroform and alcohol; used in medicine.

santorinite [PETR] **1.** A light-colored extrusive rock containing approximately 60–65% silica and calcic plagioclase (labradorite to anorthite) as the only feldspar. **2.** A hypersthene andesite containing plagioclase crystals that have labradorite cores and sodic rims and a groundmass with microlites of sodic oligoclase.

sanukite [PETR] An andesite characterized by orthopyroxene as the mafic mineral, andesine as the plagioclase, and a glassy groundmass.

sap [BOT] The fluid part of a plant which circulates through the vascular system and is composed of water, gases, salts, and organic products of metabolism.

Sapele mahogany [MATER] A figured wood from *Entandrophragma cylindricum*, a big tree growing on the Ivory Coast, Ghana, and Nigeria. Also known as aboundikro; scented mahogany; West African cedar.

saphenous nerve [ANAT] A somatic sensory nerve arising from the femoral nerve and innervating the skin of the medial aspect of the leg, foot, and knee joint.

Sapindaceae [BOT] A family of dicotyledonous plants in the order Sapindales distinguished by mostly alternate leaves, usually one and less often two ovules per locule, and seeds lacking endosperm.

Sapindales [BOT] An order of mostly woody dicotyledonous plants in the subclass Rosidae with compound or lobed leaves and polypetalous, hypogynous to perigynous flowers with one or two sets of stamens.

sapling [BOT] A young tree with a trunk less than 4 inches (10 centimeters) in diameter at a point approximately 4 feet (1.2 meters) above the ground.

saponification [CHEM] The process of converting chemicals into soap; involves the alkaline hydrolysis of a fat or oil, or the neutralization of a fatty acid.

saponification equivalent [CHEM] The quantity of fat in grams that can be saponified by 1 liter of normal alkalies.

saponification number [ANALY CHEM] Milligrams of potassium hydroxide required to saponify the fat, oil, or wax in a 1-gram sample of a given material, using a specific ASTM test method.

saponin [ORG CHEM] Any of numerous plant glycosides characterized by foaming in water and by producing hemolysis when water solutions are injected into the bloodstream; used as beverage foam producer, textile detergent and sizing, soap substitute, and emulsifier.

saponite [MINERAL] A soft, soapy, white or light-buff to bluish or reddish trioctahedral montmorillonitic clay mineral consisting of hydrous magnesium aluminosilicate and occurring in masses in serpentine and basaltic rocks. Also known as bowlingite; mountain soap; piotine; soapstone.

Sapotaceae [BOT] A family of dicotyledonous plants in the order Ebenales characterized by a well-developed latex system.

sappare *See* kyanite.

sapphire [MINERAL] Any of the gem varieties of the mineral corundum, especially the blue variety, except those that have medium to dark tones of red that characterize ruby; hardness is 9 on Mohs scale, and specific gravity is near 4.00.

sapphire quartz [MINERAL] An indigo-blue opaque variety of quartz.

sapphire whiskers *See* alumina fibers.

sapphirine [MINERAL] $(MgFe)_{15}(Al,Fe)_{34}Si_7O_{80}$ A green or pale-blue mineral composed of silicate and oxide of magnesium, iron, and aluminum; usually occurs in granular form.

sapping [GEOL] Erosion along the base of a cliff by the wearing away of softer layers, thus removing the support for the upper mass which breaks off into large blocks and falls from the cliff face. Also known as undermining.

Saprist [GEOL] A suborder of the soil order Histosol consisting of residues in which plant structures have been largely obliterated by decay; saturated with water most of the time.

saprobic [BOT] Living on decaying organic matter; applied to plants and microorganisms.

saprogen [BIOL] An organism that lives on nonliving organic matter.

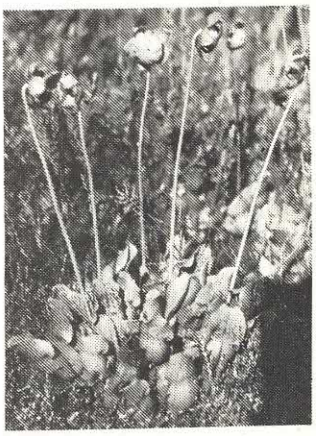
saprogenous ooze [GEOL] Ooze formed of putrefying organic matter.

Saprolegniales [MYCOL] An order of aquatic fungi belonging to the class Phycomycetes, having a mostly hyphal thallus and zoospores with two flagella.

saprolite [GEOL] A soft, earthy red or brown, decomposed igneous or metamorphic rock that is rich in clay and formed in place by chemical weathering. Also known as saprolith; sathrolith.

saprolith *See* saprolite.
sapropel [GEOL] A mud, slime, or ooze deposited in more or less open water.
sapropel-clay [GEOL] A sedimentary deposit in which the amount of clay is greater than that of sapropel.
sapropelic coal [GEOL] Coal formed by putrefaction of organic matter under anaerobic conditions in stagnant or standing bodies of water. Also known as sapropelite.
sapropelite *See* sapropelic coal.
sapropel-peat *See* peat-sapropel.
saprophage [BIOL] An organism that lives on decaying organic matter.
saprophyte [BOT] A plant that lives on decaying organic matter.
Saprospira [MICROBIO] A genus of bacteria in the family Cytophagaceae; cells are motile, unsheathed, unbranched, helical filaments; microcysts are not known.
saprovore [ZOO] A detritus-eating animal.
saprozoic [ZOO] Feeding on decaying organic matter; applied to animals.
sapwood [BOT] The younger, softer, outer layers of a woody stem, between the cambium and heartwood. Also known as alburnum.
Sapygidae [INV ZOO] A family of hymenopteran insects in the superfamily Scolioidea.
sarah [NAV] Radio homing device originally designed for personnel rescue and now used in spacecraft recovery operations at sea. Derived from search and rescue and homing.
sàrca [METEOROL] A violent north wind of Lake Garda in Italy.
Sarcina [MICROBIO] A genus of strictly anaerobic bacteria in the family Peptococcaceae; spherical cells occur in packets; ferment carbohydrates.
sarcochore [BOT] A plant dispersing minute, light diseminules.
Sarcodina [INV ZOO] A superclass of Protozoa in the subphylum Sarcomastigophora in which movement involves protoplasmic flow, often with recognizable pseudopodia.
sarcoglia [CYTOL] The protoplasm occurring at a myoneural junction.
sarcoidosis [MED] A disease of unknown etiology characterized by granulomatous lesions, somewhat resembling true tubercles, but showing little or no necrosis, affecting the lymph nodes, skin, liver, spleen, heart, skeletal muscles, lungs, bones in distal parts of the extremities (osteitis cystica of Jüngling), and other structures, and sometimes by hyperglobulinemia, cutaneous anergy, and hypercalcinuria.
sarcolemma [HISTOL] The thin connective tissue sheath enveloping a muscle fiber.
sarcoleukemia *See* leukosarcoma.
sarcoma [MED] A malignant tumor arising in connective tissue and composed principally of anaplastic cells that resemble those of supportive tissues.
sarcoma botryoides [MED] A malignant mesenchymoma that forms grapelike structures; most common in the vagina of infants.
Sarcomastigophora [INV ZOO] A subphylum of Protozoa comprising forms that possess flagella or pseudopodia or both.
sarcomatosis [MED] Multiple growths resembling a sarcoma and found in various parts of the body.
sarcomere [HISTOL] One of the segments defined by Z disks in a skeletal muscle fibril.
Sarcophagidae [INV ZOO] A family of the myodarian orthorrhaphous dipteran insects in the subsection Calyptratae comprising flesh flies, blowflies, and scavenger flies.
sarcoplasm [HISTOL] Hyaline, semifluid interfibrillar substance of striated muscle tissue.
sarcoplasmic reticulum [CYTOL] Collectively, the cysternae of a single muscle fiber.
sarcopside [MINERAL] $(Fe,Mn,Mg)_3(PO_4)_2$ A mineral composed of a phosphate of manganese, magnesium, and iron.
Sarcopterygii [VERT ZOO] A subclass of Osteichthyes, including Crossopterygii and Dipnoi in some systems of classification.
Sarcoptiformes [INV ZOO] A suborder of the Acarina including minute globular mites without stigmata.
sarcosine [ORG CHEM] CH_3NHCH_2COOH Sweet-tasting, deliquescent crystals; soluble in water, slightly soluble in alcohol; decomposes at 210–215°C; used in toothpaste manufacture. Also known as methyl aminoacetic acid; methyl glycocol.
sarcosoma [INV ZOO] The fleshy portion of an anthozoan.
Sarcosporida [INV ZOO] An order of Protozoa of the class Haplosporea which comprises parasites in skeletal and cardiac muscle of vertebrates.
sarcosporidiosis [VET MED] A disease of mammals other than man caused by muscle infestation by sporozoans of the order Sarcosporida.
sarcostyle [INV ZOO] A fibril or column of muscular tissue.
sarcotubule [CYTOL] A tubular invagination of a muscle fiber.
sard [MINERAL] A translucent brown, reddish-brown, or deep orange-red variety of chalcedony. Also known as sardine; sardius.
Sardic orogeny [GEOL] A short-lived orogeny that occurred near the end of the Cambrian period.
sardine [MINERAL] *See* sard. [VERT ZOO] **1.** *Sardina pilchardus*. The young of the pilchard, a herringlike fish in the family Clupeidae found in the Atlantic along the European coasts. **2.** The young of any of various similar and related forms which are processed and eaten as sardines.
sardine oil [MATER] Combustible, yellow liquid obtained from sardines; soluble in alcohol, ether, and chloroform; solidifies at about 30°C; used in soaps and pet foods, and as a lubricant.
sardius *See* sard.
sardonyx [MINERAL] An onyx characterized by parallel layers of sard, a deep orange-red variety of chalcedony, and a mineral of different color.
Sargasso Sea [GEOGR] A region of the North Atlantic Ocean; boundaries are defined in the west and north by the Gulf Stream, in the east by longitude 40°W, and in the south by latitude 20°N.
Sargassum [BOT] A genus of brown algae characterized by branching thalli with lateral outgrowths; they develop along tropical shores, then break away to drift in the ocean.
Sargent curve [NUC PHYS] A graph of logarithms of decay constants of radioisotopes subject to beta-decay against logarithms of the corresponding maximum beta-particle energies; most of the points fall on two straight lines.
Sargent cycle [THERMO] An ideal thermodynamic cycle consisting of four reversible processes: adiabatic compression, heating at constant volume, adiabatic expansion, and isobaric cooling.
sarking [BUILD] A layer of boards or bituminous felt placed beneath tiles or other roofing to provide thermal insulation or to prevent ingress of water.
sarkinite [MINERAL] $Mn_2(AsO_4)(OH)$ A flesh-red monoclinic mineral composed of hydrous manganese arsenate, occurring in crystals.
sarkomycin [MICROBIO] $C_7H_8O_3$ An antibiotic produced by an actinomycete which acts as a carcinolytic agent.
Sarmatian [GEOL] A European stage of geologic time: the upper Miocene, above Tortonian, below Pontian.
sarmentocymarin [BIOCHEM] A cardioactive, steroid glycoside from the seeds of *Strophanthus sarmentosus;* on hydrolysis it yields sarmentogenin and sarmentose.
sarmentogenin [BIOCHEM] $C_{23}H_{34}O_5$ The steroid aglycon of sarmentocymarin; isometric with digitoxigenin, and characterized by a hydroxyl group at carbon number 11.
sarmentose [BOT] Producing slender, prostrate stems or runners.
sarmientite [MINERAL] $Fe_2(AsO_4)(SO_4)(OH)\cdot 5H_2O$ A yellow mineral composed of basic hydrous arsenate and sulfate of iron; it is isomorphous with diadochite.
sarnaite [GEOL] A feldspathoid-bearing syenite composed of cancrinite and acmite.
saros [ASTRON] A cycle of time after which the centers of the sun and moon, and the nodes of the moon's orbit return to the same relative position; this period is 18 years 11⅓ days, or 18 years 10⅓ days if 5 rather than 4 leap years are included.
sarospatakite [GEOL] A micaceous clay mineral composed of mixed layers of illite and montmorillonite.
Sarothriidae [INV ZOO] The equivalent name for Jacobsoniidae.
Sarraceniaceae [BOT] A small family of dicotyledonous plants in the order Sarraceniales in which leaves are modified to form pitchers, placentation is axile, and flowers are perfect with distinct filaments.
Sarraceniales [BOT] An order of dicotyledonous herbs or shrubs in the subclass Dilleniidae; plants characteristically have

SARRACENIACEAE

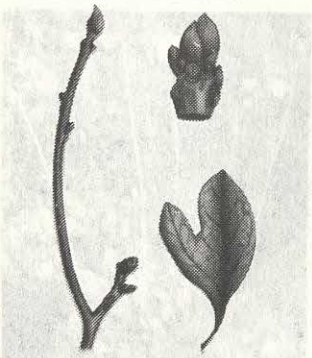


An eastern American species of the pitcher plant *(Sarracenia purpurea)*, in the family Sarraceniaceae. *(Photograph of Henry M. Mayer, from National Audubon Society)*

SARSAPARILLA

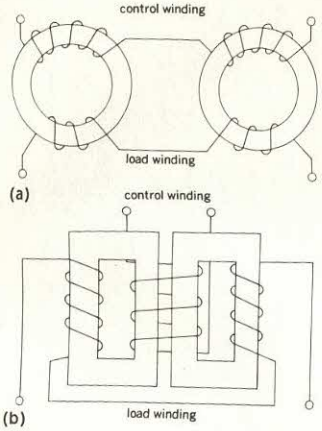
Smilax aristolochiaefolia, which yields a flavoring material known as Mexican sarsaparilla.

SASSAFRAS



Sassafras albidum, twig, terminal bud, and leaf.

SATURABLE REACTOR



Typical construction of saturable reactors. *(a)* Two separate two-legged cores. *(b)* Three-legged core formed by placing two two-legged cores together.

alternate, simple leaves that are modified for catching insects, and grow in waterlogged soils.

sarsaparilla [BOT] Any of various tropical American vines of the genus *Smilax* (family Liliaceae) found in dense, moist jungles; a flavoring material used in medicine and soft drinks is obtained from the dried roots of at least four species.

sartorite [MINERAL] $PbAs_2S_4$ A dark-gray monoclinic mineral, occurring in crystalline form.

sartorius [ANAT] A large muscle originating in the anterior superior iliac spine and inserting in the tibia; flexes the hip and knee joints, and rotates the femur laterally.

SAS *See* aluminum sodium sulfate; stability augmentation system.

sash [BUILD] A frame for window glass.

sash bars [BUILD] Strips of wood which separate the panes in a window composed of several panes. Also known as muntins.

sash cord [BUILD] A cord or chain used to attach a counterweight to the window sash.

Sa spiral [ASTRON] A class of spiral galaxy, including those galaxies that have the largest center sections and closely wound galactic arms.

sassafras [BOT] *Sassafras albidum*. A medium-sized tree of the order Magnoliales recognized by the bright-green color and aromatic odor of the leaves and twigs.

sassafras oil *See* oil of sassafras.

sassoline *See* sassolite.

sassolite [MINERAL] H_3BO_3 A white or gray mineral consisting of native boric acid usually occurring in small pearly scales as an incrustation or as tabular triclinic crystals. Also known as sassoline.

sastruga [HYD] A ridge of snow up to 2 inches (5 centimeters) high formed by wind erosion and aligned parallel to the wind. Also known as skavl; zastruga.

satchel charge [ORD] A number of blocks of explosive taped to a board fitted with a rope or wire loop for carrying and attaching.

sateen [TEXT] A satin-weave cloth, usually made of mercerized cotton and often treated with high-luster and crease-resistant finishes.

satellite [AERO ENG] *See* artificial satellite. [ASTRON] A small, solid body moving in an orbit around a planet; the moon is a satellite of earth. [CYTOL] A chromosome segment distant from but attached to the rest of the chromosome by an achromatic filament.

satellite and missile surveillance [ENG] The systematic observation of aerospace for the purpose of detecting, tracking, and characterizing objects, events, and phenomena associated with satellites and inflight missiles, friendly and enemy.

satellite antenna [ELECTROMAG] Antenna on an artificial satellite to receive command signals from earth, act as a beacon for tracking, or transmit scientific or other data to earth.

satellite band [MOL BIO] A fraction of the deoxyribonucleic acid (DNA) of an organism which has a different density from the rest and is therefore separable as a band in density gradient centrifugation; these bands are usually made up of highly repetitive sequences of DNA.

satellite cell [HISTOL] One of the neurilemmal cells surrounding nerve cells in the peripheral nervous system.

satellite communication [COMMUN] Communication that involves the use of an active or passive satellite to extend the range of a radio, television, or other transmitter by returning signals to earth from an orbiting satellite.

satellite computer [COMPUT SCI] A computer which, under control of the main computer, handles the input and output routines, thereby allowing the main computer to be fully dedicated to computations.

satellite infrared spectrometer [SPECT] A spectrometer carried aboard satellites in the Nimbus series which measures the radiation from carbon dioxide in the atmosphere at several different wavelengths in the infrared region, giving the vertical temperature structure of the atmosphere over a large part of the earth. Abbreviated SIRS.

satellite processor [COMPUT SCI] One of the outlying processors in a hierarchical distributed processing system, typically placed at or near point-of-transaction locations, and designed to serve the users at those locations.

satellite tracking [AERO ENG] Determination of the positions and velocities of satellites through radio and optical means.

satellitic crater *See* secondary crater.

satellitosis [MED] A condition, associated with inflammatory and degenerative diseases of the central nervous system, in which satellite cells increase around the nerve cells.

satelloid [AERO ENG] A vehicle that revolves about the earth or other celestial body, but at such altitudes as to require sustaining thrust to balance drag.

sathrolith *See* saprolite.

satin [TEXT] A closely woven fabric with a glossy face and a dull-finish back made by carrying the warp (or filling) uninterruptedly on the surface over many filling (or warp) yarns; made of silk, polyester, or other fibers.

satin finish [MET] A finish involving soft scratch-brushing of polished metal surfaces to produce a soft sheen. Also known as Butler finish; scratch-brush finish. [TEXT] A glossy finish on any fabric.

satin ice *See* acicular ice.

satin spar [MINERAL] A white, translucent, fine fibrous variety of gypsum having a silky luster. Also known as satin stone.

satin stone *See* satin spar.

saturable absorption [OPTICS] A decrease in the absorption coefficient of certain nonlinear materials at high intensities in the incident radiation.

saturable-core magnetometer [ENG] A magnetometer that depends for its operation on the changes in permeability of a ferromagnetic core as a function of the magnetic field to be measured.

saturable-core reactor *See* saturable reactor.

saturable reactor [ELECTROMAG] An iron-core reactor having an additional control winding that carries direct current whose value is adjusted to change the degree of saturation of the core, thereby changing the reactance that the alternating-current winding offers to the flow of alternating current; with appropriate external circuits, a saturable reactor can serve as a magnetic amplifier. Also known as saturable-core reactor; transductor.

saturable transformer [ELECTROMAG] A saturable reactor having additional windings to provide voltage transformation or isolation from the alternating-current supply.

saturated activity [NUCLEO] The maximum activity obtainable by activation in a definite flux in a nuclear reactor.

saturated air [METEOROL] Moist air in a state of equilibrium with a plane surface of pure water or ice at the same temperature and pressure; that is, air whose vapor pressure is the saturation vapor pressure and whose relative humidity is 100%.

saturated ammonia [CHEM] **1.** Liquid ammonia in a state in which adding heat at constant pressure causes the liquid to vaporize at constant temperature, and in which removing heat at constant pressure causes the temperature of the liquid to drop immediately. **2.** Ammonia vapor in a state in which adding heat at constant pressure causes an immediate temperature rise (superheating) and in which removing heat at constant pressure starts immediate condensation at constant temperature.

saturated calomel electrode [PHYS CHEM] A reference electrode of mercury topped by a layer of mercury (I) chloride paste with potassium chloride solution placed above; easier to assemble than the normal and the one-tenth normal (referring to the concentration of KCl) calomel electrodes.

saturated color [OPTICS] A pure color not contaminated by white.

saturated compound [ORG CHEM] An organic compound with all carbon bonds satisfied; it does not contain double or triple bonds and thus cannot add elements or compounds.

saturated diode [ELECTR] A diode that is passing the maximum possible current, so further increases in applied voltage have no effect on current.

saturated hydrocarbon [ORG CHEM] A saturated carbon-hydrogen compound with all carbon bonds filled; that is, there are no double or triple bonds as in olefins and acetylenics.

saturated interference spectroscopy [SPECT] A version of saturation spectroscopy in which the gas sample is placed inside an interferometer that splits a probe laser beam into parallel components in such a way that they cancel on recombination; intensity changes in the recombined probe beam resulting from changes in absorption or refractive index induced by a laser saturating beam are then measured.

saturated liquid [CHEM] A solution that contains enough of a dissolved solid, liquid, or gas so that no more will dissolve into the solution at a given temperature and pressure.

saturated mineral [MINERAL] A mineral that forms in the presence of free silica.
saturated permafrost [GEOL] Permafrost that contains no more ice than the ground could hold if the water were in the liquid state.
saturated rock [PETR] An igneous rock composed principally of saturated minerals.
saturated surface *See* water table.
saturated vapor [THERMO] A vapor whose temperature equals the temperature of boiling at the pressure existing on it.
saturated zone *See* zone of saturation.
saturating signal [ELECTR] In radar, a signal of an amplitude greater than the dynamic range of the receiving system.
saturation [ELECTR] **1.** The condition that occurs when a transistor is driven so that it becomes biased in the forward direction (the collector becomes positive with respect to the base, for example, in a *pnp* type of transistor). **2.** *See* anode saturation. **3.** *See* temperature saturation. [ELECTROMAG] *See* magnetic saturation. [NUCLEO] **1.** The condition in which the decay rate of a given radionuclide is equal to its rate of production in an induced nuclear reaction. **2.** The condition in which the voltage applied to an ionization chamber is high enough to collect all the ions formed by radiation but not high enough to produce ionization by collision. [OPTICS] *See* color saturation. [ORD] The striking of a target area with such numbers of missiles that no place in it remains untouched by destruction. [PHYS] The condition in which a further increase in some cause produces no further increase in the resultant effect. [PHYS CHEM] The condition in which the partial pressure of any fluid constituent is equal to its maximum possible partial pressure under the existing environmental conditions, such that any increase in the amount of that constituent will initiate within it a change to a more condensed state.
saturation adiabat [METEOROL] On a thermodynamic diagram, a line of constant wet-bulb potential temperatures; in practice, approximate computations are usually employed, and the resulting lines represent, ambiguously, saturation adiabats and pseudoadiabats. Also known as moist adiabat; wet adiabat.
saturation-adiabatic lapse rate [METEOROL] A special case of process lapse rate, defined as the rate of decrease of temperature with height of an air parcel lifted in a saturation-adiabatic process through an atmosphere in hydrostatic equilibrium. Also known as moist-adiabatic lapse rate.
saturation-adiabatic process [METEOROL] An adiabatic process in which the air is maintained at saturation by the evaporation or condensation of water substance, the latent heat being supplied by or to the air respectively; the ascent of cloudy air, for example, is often assumed to be such a process.
saturation bombing [ORD] Intense area bombing intended to leave no place in a given area free from destructive effects; it may be achieved by dropping many small bombs, or by dropping a medium number of large bombs, or by dropping a single massive bomb.
saturation current [ELECTR] **1.** In general, the maximum current which can be obtained under certain conditions. **2.** In a vacuum tube, the space-charge-limited current, such that further increase in filament temperature produces no specific increase in anode current. **3.** In a vacuum tube, the temperature-limited current, such that a further increase in anode-cathode potential difference produces only a relatively small increase in current. **4.** In a gaseous-discharge device, the maximum current which can be obtained for a given mode of discharge. **5.** In a semiconductor, the maximum current which just precedes a change in conduction mode. [NUCLEO] The ionization current in a gas tube when the applied potential is large enough to collect all ions produced by ionizing radiation.
saturation curve [GEOL] A curve showing the weight of solids per unit volume of a saturated soil mass as a function of water content.
saturation deficit [METEOROL] **1.** The difference between the actual vapor pressure and the saturation vapor pressure at the existing temperature. **2.** The additional amount of water vapor needed to produce saturation at the current temperature and pressure, expressed in grams per cubic meter. Also known as vapor-pressure deficit.
saturation diving [PHYSIO] Diving in which the tissues exposed to high pressure at great ocean depths for 24 hours become saturated with gases, especially inert gases, thereby reaching a new equilibrium state.
saturation flux density *See* saturation induction.
saturation induction [ELECTROMAG] The maximum intrinsic induction possible in a material. Also known as saturation flux density.
saturation limiting [ELECTR] Limiting the minimum output voltage of a vacuum-tube circuit by operating the tube in the region of plate-current saturation (not to be confused with emission saturation).
saturation line [PETR] The line, on a variation diagram of an igneous rock series, that represents saturation with respect to silica; rocks to the right of the line are oversaturated and those to the left, undersaturated.
saturation magnetization [ELECTROMAG] The maximum possible magnetization of a material.
saturation mixing ratio [METEOROL] A thermodynamic function of state; the value of the mixing ratio of saturated air at the given temperature and pressure; this value may be read directly from a thermodynamic diagram.
saturation of forces [PHYS] Property exhibited by forces between particles wherein each particle can interact strongly with only a limited number of other particles, as in the forces between atoms in a molecule, and between nucleons in a nucleus.
saturation ratio [METEOROL] The ratio of the actual specific humidity to the specific humidity of saturated air at the same temperature.
saturation scale [OPTICS] A series of colors which appear to have equal differences in color saturation.
saturation signal [ELECTROMAG] A radio signal (or radar echo) which exceeds a certain power level fixed by the design of the receiver equipment; when a receiver or indicator is "saturated," the limit of its power output has been reached.
saturation specific humidity [THERMO] A thermodynamic function of state; the value of the specific humidity of saturated air at the given temperature and pressure.
saturation spectroscopy [SPECT] A branch of spectroscopy in which the intense, monochromatic beam produced by a laser is used to alter the energy-level populations of a resonant medium over a narrow range of particle velocities, giving rise to extremely narrow spectral lines that are free from Doppler broadening; used to study atomic, molecular, and nuclear structure, and to establish accurate values for fundamental physical constants.
saturation vapor pressure [THERMO] The vapor pressure of a thermodynamic system, at a given temperature, wherein the vapor of a substance is in equilibrium with a plane surface of that substance's pure liquid or solid phase.
saturator [ENG] A device, equipment, or person that saturates one material with another; examples are a tank in which vapors become saturated with ammonia from coal (in carbonization of coal), a humidifier, and the operator of a machine for impregnating roofing felt with asphalt.
Saturn [AERO ENG] One of the very large launch vehicles built primarily for the Apollo program; begun by Army Ordnance but turned over to the National Aeronautics and Space Administration for the manned space flight program to the moon. [ASTRON] The second largest planet in the solar system (mass is 95.3 compared to earth's 1) and the sixth in the order of distance to the sun; it is visible to the naked eye as a yellowish first-magnitude star except during short periods near its conjunction with the sun; it is surrounded by a series of rings.
saturnicentric coordinates [ASTRON] Coordinates that indicate the position of a point on the surface of Saturn, determined by the direction of a line joining the center of Saturn to the point.
saturnigraphic coordinates [ASTRON] Coordinates that indicate the position of a point on the surface of Saturn, determined by the direction of a line perpendicular to the mean surface at the point.
Saturniidae [INV ZOO] A family of medium- to large-sized moths in the superfamily Saturnioidea including the giant silkworms, characterized by reduced, often vestigial, mouthparts and strongly bipectinate antennae.
Saturnioidea [INV ZOO] A superfamily of medium- to very-large-sized moths in the suborder Heteroneura having the frenulum reduced or absent, reduced mouthparts, no tympanum, and pectinate antennae.
Satyrinae [INV ZOO] A large, cosmopolitan subfamily of lepidopterans in the family Nymphalidae, containing the wood nymphs, meadow browns, graylings, and arctics, characterized by bladderlike swellings at the bases of the forewing veins.

saucer crater [ASTRON] A very shallow type of bowl crater on the moon.

Saucesian [GEOL] A North American stage of geologic time in the Oligocene and Miocene, above the Zemorrian and below the Relizian.

sauconite [MINERAL] The zinc-bearing end member of the montmorillonite group; a trioctahedral clay mineral.

saucyite [PETR] A glassy rhyolitic rock composed of large sanidine phenocrysts in a groundmass of orthoclase microlites and minute crystals of biotite, augite, sphene, zircon, and magnetite.

sault [HYD] A waterfall or rapids in a stream.

Saunders air-lift pump [MECH ENG] A device for raising water from a well by the introduction of compressed air below the water level in the well.

Sauria [VERT ZOO] The lizards, a suborder of the Squamata, characterized generally by two or four limbs but sometimes none, movable eyelids, external ear openings, and a pectoral girdle.

Saurichthyidae [PALEON] A family of extinct chondrostean fishes bearing a superficial resemblance to the Aspidorhynchiformes.

Saurischia [PALEON] The lizard-hipped dinosaurs, an order of extinct reptiles in the subclass Archosauria characterized by an unspecialized, three-pronged pelvis.

Sauropoda [PALEON] A group of fully quadrupedal, seemingly herbivorous dinosaurs from the Jurassic and Cretaceous periods in the suborder Sauropodomorpha; members had small heads, spoon-shaped teeth, long necks and tails, and columnar legs.

Sauropodomorpha [PALEON] A suborder of extinct reptiles in the order Saurischia, including large, solid-limbed forms.

Sauropterygia [PALEON] An order of Mesozoic marine reptiles in the subclass Euryapsida.

Saururaceae [BOT] A family of dicotyledonous plants in the order Piperales distinguished by mostly alternate leaves, two to ten ovules per carpel, and carpels distinct or united into a compound ovary.

sausage instability *See* kink instability.

saussurite [MINERAL] A white or grayish, tough, compact mineral aggregate composed chiefly of a mixture of albite or oligoclase and zoisite or epidote.

saussuritization [GEOL] A metamorphic process involving replacement of plagioclase in basalts and gabbros by a fine-grained aggregate of zoisite, epidote, albite, calcite, sericite, and zeolites.

sauterelle [ENG] A device used by masons for tracing and forming angles.

Savage principle [MATH] A technique used in decision theory; a criterion is used to construct a regret matrix in which each outcome entry represents a regret defined as the difference between best possible outcome and the given outcome; the matrix is then used as in decision making under risk with expected regret as the decision-determining quality. Also known as regret criterion.

savane armée *See* thornbush.

savane épineuse *See* thornbush.

savanna [ECOL] Any of a variety of physiognomically or environmentally similar vegetation types in tropical and extratropical regions; all contain grasses and one or more species of trees of the families Leguminosae, Bombacaceae, Bignoniaceae, or Dilleniaceae.

savanna climate *See* tropical savanna climate.

savanna-woodland *See* tropical woodland.

savart [ACOUS] A unit of pitch interval, such that the interval between two frequencies measured in savarts is equal to 1000 times the common logarithm of the ratio of the frequencies; one octave equals approximately 301.030 savarts.

Savart plate [OPTICS] A device consisting of a pair of calcite plates having the same thickness, cut along the natural cleavage faces, and mounted with corresponding faces perpendicular to each other; used to detect polarization of light by means of interference fringes.

Savart polariscope [OPTICS] A polariscope consisting of a specially constructed double-plate polarizer and a tourmaline plate analyzer; polarized light passing through the instrument is indicated by the presence of parallel colored fringes, while unpolarized light results in a uniform field.

savic orogeny [GEOL] A short-lived orogeny that occurred in late Oligocene geologic time, between the Chattian and Aquitanian stages.

savin oil [MATER] Pale-yellow, volatile oil, soluble in alcohol; derived from the fresh tops of the savin (*Juniperus sabina*); used in medicine.

Savonius rotor [MECH ENG] A rotor composed of two offset semicylindrical elements rotating about a vertical axis.

Savonius windmill [MECH ENG] A windmill composed of two semicylindrical offset cups rotating about a vertical axis.

savory oil [MATER] A yellow to brown essential oil derived from the whole dried plant *Satureia hortensis*; used for flavoring. Also known as summer savory oil.

saw [DES ENG] Any of various tools consisting of a thin, usually steel, blade with continuous cutting teeth on the edge.

SAW *See* surface acoustic wave.

saw bit [DES ENG] A bit having a cutting edge formed by teeth shaped like those in a handsaw.

saw-cut [GEOL] A large canyon that cuts abruptly across a terrace, so that it is visible only from locations near its edge.

sawdust [MATER] Wood fragments made by a saw in cutting.

sawdust concrete [MATER] Concrete containing sawdust as the principal aggregate.

sawfish [VERT ZOO] Any of several elongate viviparous fishes of the family Pristidae distinguished by a dorsoventrally flattened elongated snout with stout toothlike projections along each edge.

saw gumming [MECH ENG] Grinding away the punch marks in the spaces between the teeth in saw manufacture.

sawhorse [ENG] A wooden rack used to support wood that is being sawed.

sawing [ENG] Cutting with a saw.

sawmill [IND ENG] A plant that houses sawing machines. [MECH ENG] A machine for cutting logs with a saw or a series of saws.

sawtooth barrel *See* basket.

sawtooth blasting [MIN ENG] The cutting of a series of slabs which, in plan, resemble sawteeth by blasting oblique, horizontal holes along a face.

sawtooth crusher [MECH ENG] Solids crusher in which feed is broken down between two sawtoothed shafts rotating at different speeds.

sawtooth floor channeling [MIN ENG] A method of channeling inclined beds of marble by removing right-angle blocks in succession from the various beds, thus giving the floor a zigzag or sawtooth appearance.

sawtooth generator [ELECTR] A generator whose output voltage has a sawtooth waveform; used to produce sweep voltages for cathode-ray tubes.

sawtooth modulated jamming [ELECTR] Electronic countermeasure technique when a high level jamming signal is transmitted, thus causing large automatic gain control voltages to be developed at the radar receiver that, in turn, cause target pip and receiver noise to completely disappear.

sawtooth pulse [ELECTR] An electric pulse having a linear rise and a virtually instantaneous fall, or conversely, a virtually instantaneous rise and a linear fall.

sawtooth roof [ARCH] A roof form having a succession of monitors in sawtooth shape.

sawtooth stoping [MIN ENG] In the United States, overhand stoping in which the line of advance is up the dip, and benches are advanced in a line parallel with the drift.

sawtooth waveform [ELECTR] A waveform characterized by a slow rise time and a sharp fall, resembling a tooth of a saw.

sax [DES ENG] A tool for chopping away the edges of roof slates; it has a pick at one end for making nail holes.

saxicolous [ECOL] Living or growing among rocks.

Saxifragaceae [BOT] A family of dicotyledonous plants in the order Rosales which are scarcely or not at all succulent and have two to five carpels usually more or less united, and leaves not modified into pitchers.

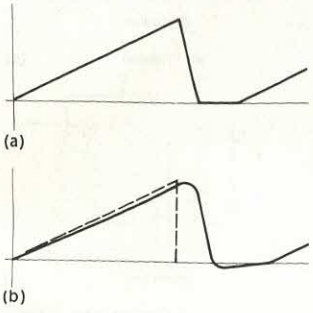
saxitoxin [BIOCHEM] A nonprotein toxin produced by the dinoflagellate *Gonyaulax catenella*.

Saxonian [GEOL] A European stage of geologic time in the Middle Permian, above the Autonian and below the Thuringian.

saxonite [PETR] A peridotite composed chiefly of olivine and orthopyroxene.

saxony [TEXT] A fine-quality woolen made of short-staple, botany wools of superior felting power.

SAWTOOTH WAVEFORM



Sawtooth waveforms.
(a) An ideal linear sawtooth.
(b) Approximate sawtooth generated by actual circuits.

saxophone [ELECTROMAG] Vertex-fed linear array antenna giving a cosecant-squared radiation pattern.

Saybolt chromometer [OPTICS] Device used to measure the color of undyed gasolines, jet fuels, naphthas, kerosines, petroleum waxes, and pharmaceutical white oils.

Saybolt color [ENG] A color standard for petroleum products determined with a Saybolt chromometer.

Saybolt Furol viscosimeter [ENG] An instrument for measuring viscosity of very thick fluids, for example, heavy oils; similar to the Saybolt Universal viscosimeter, but with a larger-diameter tube so that the efflux time is about one-tenth that of the Universal instrument.

Saybolt Furol viscosity [FL MECH] The time in seconds for 60 milliliters of fluid to flow through a capillary tube in a Saybolt Furol viscosimeter at specified temperatures between 70 and 210°F (21 and 99°C); used for high-viscosity petroleum oils, such as transmission and gear oils, and heavy fuel oils.

Saybolt Seconds Universal [FL MECH] A unit of measurement for Saybolt Universal viscosity. Abbreviated SSU.

Saybolt Universal viscosimeter [ENG] An instrument for measuring viscosity by the time it takes a fluid to flow through a calibrated tube; used for the lighter petroleum products and lubricating oils.

Saybolt Universal viscosity [FL MECH] The time in seconds for 60 milliliters of fluid to flow through a capillary tube in a Saybolt Universal viscosimeter at a given temperature.

sb *See* stilb.

Sb *See* antimony.

S band [COMMUN] A band of radio frequencies extending from 1550 to 5200 megahertz, corresponding to wavelengths of 19.37 to 5.77 centimeters.

S-band hiran *See* shiran.

SBK catalytic reforming [CHEM ENG] A proprietary petroleum refinery process using SBK (Sinclair-Baker-Kellogg) regenerable platinum catalyst; used for catalytic reforming of gasoline-range hydrocarbons to produce high octanes.

SBR *See* styrene-butadiene rubber.

Sb spiral galaxy [ASTRON] A class of spiral galaxy characterized by smaller central bodies and more open, larger arms.

Sc *See* scandium.

SC *See* sectional center.

scab [MED] Crusty exudate covering a wound or ulcer during the healing process. [MET] A defect consisting of a flat, partially detached piece of metal joined to the surface of a casting or piece of rolled metal.

scabbard [ORD] A sheath with an open top; it is usually made of leather or canvas and is designed to protect edged weapons, rifles, carbines, and submachine guns from the elements and rough usage.

scabbing [ORD] Breaking off of fragments in the inside of a wall of hard material due to the impact or explosion of a projectile on the outside.

scabies [MED] A contagious skin disorder caused by the mite *Sarcoptes scabiei* burrowing beneath the skin, causing the formation of multiform lesions with intense itching.

scabland [GEOL] Elevated land that is essentially flat-lying and covered with basalt and has only a thin soil cover, sparse vegetation, and usually deep, dry channels.

scabrock [GEOL] **1.** An outcropping of scabland. **2.** Weathered material of a scabland surface.

scabrous [BIOL] Having a rough surface covered with stiff hairs or scales.

scacchite [MINERAL] $MnCl_2$ A mineral composed of native manganese chloride, found in volcanic regions.

scaffold [CIV ENG] A temporary or movable platform supported on the ground or suspended; used for working at considerable heights above the ground.

scaglia [GEOL] A dark, very-fine-grained, somewhat calcareous shale usually developed in the Upper Cretaceous and Lower Tertiary periods of the northern Apennines.

scala media [ANAT] The middle channel of the cochlea, filled with endolymph and bounded above by Reissner's membrane and below by the basilar membrane. Also known as cochlear duct.

scalar [MATH] One of the algebraic quantities which form a field, usually the real or complex numbers, by which the vectors of a vector space are multiplied. [PHYS] **1.** A quantity which has magnitude only and no direction, in contrast to a vector. **2.** A quantity which has magnitude only, and has the same value in every coordinate system. Also known as scalar invariant.

scalar data type [COMPUT SCI] The manner in which a sequence of bits represents a single data item in a computer program.

scalar field [MATH] **1.** The field consisting of the scalars of a vector space. **2.** A function on a vector space into the scalars of the vector space. [PHYS] A field which is characterized by a function of position and time whose value at each point is a scalar.

scalar function [MATH] A function from a vector space to its scalar field. [PHYS] A function of position and time whose value at each point is a scalar.

scalar gradient [MATH] The gradient of a function.

scalariform [BIOL] Resembling a ladder; having transverse markings or bars.

scalar invariant *See* scalar.

scalar meson [PARTIC PHYS] A meson which has spin 0 and positive parity, and may be described by a scalar field.

scalar multiplication [MATH] The multiplication of a vector from a vector space by a scalar from the associated field; this usually contracts or expands the length of a vector.

scalar potential [PHYS] A scalar function whose negative gradient is equal to some vector field, at least when this field is time-independent; for example, the potential energy of a particle in a conservative force field, and the electrostatic potential.

scalar product *See* inner product.

scalar triple product [MATH] The scalar triple product of vectors $\mathbf{v}_1$, $\mathbf{v}_2$, and $\mathbf{v}_3$ from euclidean three-dimensional space determines the volume of the parallelepiped with these vectors as edges; it is given by the determinant of the 3×3 matrix whose rows are the components of $\mathbf{v}_1$, $\mathbf{v}_2$, and $\mathbf{v}_3$. Also known as triple scalar product.

scala tympani [ANAT] The lowest channel in the cochlea of the ear; filled with perilymph.

scala vestibuli [ANAT] The uppermost channel of the cochlea; filled with perilymph.

scale [ACOUS] A series of musical notes arranged from low to high by a specified scheme of intervals suitable for musical purposes. [BOT] The bract of a catkin. [ENG] **1.** A series of markings used for reading the value of a quantity or setting. **2.** To change the magnitude of a variable in a uniform way, as by multiplying or dividing by a constant factor, or the ratio of the real thing's magnitude to the magnitude of the model or analog of the model. **3.** A weighing device. **4.** A ruler or other measuring stick. An indication of represented to actual distances on a map, chart or drawing. [MET] A thick metallic oxide coating formed usually by heating metals in air. [PHYS] **1.** A one-to-one correspondence between numbers and the value of some physical quantity, such as the centigrade or Kelvin temperature scales on the API or Baumé scales of specific gravity. **2.** To determine a quantity at some order of magnitude by using data or relationships which are known to be valid at other (usually lower) orders of magnitude. [VERT ZOO] A flat calcified or cornified platelike structure on the skin of most fishes and of some tetrapods.

scaleboard [MATER] Thin sheets of wood used as veneer.

scale drawing [GRAPHICS] A drawing of an object or structure showing all parts in the same proportion of their true size.

scale effect [AERO ENG] The necessary corrections applied to measurements of a model in a wind tunnel to ascertain corresponding values for a full-sized object. [FL MECH] An effect in fluid flow that results from changing the scale, but not the shape, of a body around which the flow passes; this effect is relevant to wind tunnel experiments.

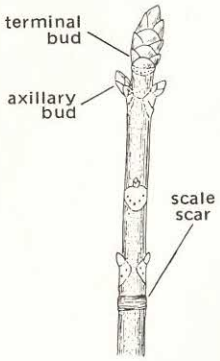
scale factor [ENG] The factor by which the reading of an instrument or the solution of a problem should be multiplied to give the true final value when a corresponding scale factor is used initially to bring the magnitude within the range of the instrument or computer.

scale height [GEOPHYS] A measure of the decrease of atmospheric pressure with height; when the atmospheric temperature is constant with height, the pressure varies exponentially with height, and the scale height is the height interval over which the pressure changes by a factor of $1/e$.

scale insect [INV ZOO] Any of various small, structurally degenerate homopteran insects in the superfamily Coccoidea which resemble scales on the surface of a host plant.

scale model [GRAPHICS] A three-dimensional representa-

SCALE SCAR

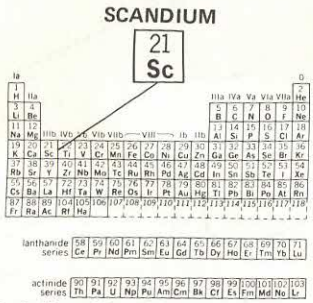


Position of scale scar on the twig of a buckeye tree.

SCALLOP

Typical ribbed valve of a scallop.

SCANDIUM



Periodic table of the chemical elements showing the position of scandium.

tion of an object or structure having all parts in the same proportion of their true size.

scalene triangle [MATH] A triangle where no two angles are equal.

scalenohedron [CRYSTAL] A closed crystal form whose faces are scalene triangles.

scalenus [ANAT] One of three muscles in the neck, arising from the transverse processes of the cervical vertebrae, and inserted on the first two ribs.

scale-of-ten circuit *See* decade scaler.

scale-of-two circuit *See* binary scaler.

scaler [ELECTR] A circuit that produces an output pulse when a prescribed number of input pulses is received. Also known as counter; scaling circuit.

scale scar [BOT] A mark left on a stem after bud scales have fallen off.

scales of motion [OCEANOGR] A series of increasing characteristic magnitudes of motion, ranging from tiny eddies of turbulence to oceanwide currents, each member of the series interacting with the adjacent members.

scale-up [DES ENG] Design process in which the data of an experimental-scale operation (model or pilot plant) is used for the design of a large (scaled-up) unit, usually of commercial size.

scale wax [MATER] The paraffin wax derived by sweating the greater part of the oil from slack wax; contains up to 6% oil. Also known as crude scale; paraffin scale.

Scalibregmidae [INV ZOO] A family of mud-swallowing worms belonging to the Sedentaria and found chiefly in sublittoral and great depths.

scaling [BIOL] The removing of scales from fishes. [ELECTR] Counting pulses with a scaler when the pulses occur too fast for direct counting by conventional means. [ENG] Removing scale (rust or salt) from a metal or other surface. [GRAPHICS] Using a scale to measure dimensions in a scale drawing. [MECH] Expressing the terms in an equation of motion in powers of nondimensional quantities (such as a Reynolds number), so that terms of significant magnitude under conditions specified in the problem can be identified, and terms of insignificant magnitude can be dropped. [MET] **1.** Forming of a thick layer of metallic oxide on metals at high temperatures. **2.** Depositing of solid inorganic solutes from water on a metal surface, such as a cooling tube or boiler. [MIN ENG] Removing loose rocks and coal from the roof, walls, or face after blasting.

scaling circuit *See* scaler.

scaling factor [ELECTR] The number of input pulses per output pulse of a scaling circuit. Also known as scaling ratio. [ENG] Factor used in heat-exchange calculations to allow for the loss in heat conductivity of a material because of the development of surface scale, as inside pipelines and heat-exchanger tubes. [PHYS] A constant of proportionality which appears in a scaling law.

scaling law [PHYS] A law, stating that two quantities are proportional, which is known to be valid at certain orders of magnitude and is used to calculate the value of one of the quantities at another order of magnitude.

scaling ratio [ELECTR] *See* scaling factor. [ENG] The ratio of a certain property of a laboratory model to the same property in the natural prototype.

scallion *See* shallot.

scallop [GEOL] *See* scalloping. [INV ZOO] Any of various bivalve mollusks in the family Pectinidae distinguished by radially ribbed valves with undulated margins.

scalloped upland [GEOL] The region near or at the divide of an upland into which glacial cirques have cut from opposite sides.

scalloping [GEOL] A sedimentary structure superficially resembling an oscillation ripple mark, and having a concave side that is always oriented toward the top of the bed. Also known as scallop. [NAV] Cyclical variations in the apparent guidance path generated by a four-course radio range or instrument landing system, at speeds greater than can be followed by the vehicle.

scalp [MET] To remove surface layers, and thereby defects, from ingots, billets, or slabs by machining. [MIN ENG] To remove undesirable fine material from broken ore, stone, or gravel.

scalped anticline *See* breached anticline.

scalped extrusion ingot [MET] A cast, solid, or hollow extrusion ingot which has been machined to remove outside surface layers.

scalpel [DES ENG] A small, straight, very sharp knife (or detachable blade for a knife), used for dissecting.

Scalpellidae [INV ZOO] A primitive family of barnacles in the suborder Lepadomorpha having more than five plates.

scaly bark *See* psorosis.

scaly leg [VET MED] A highly contagious disease of poultry caused by the sarcoptid mite *Knemidokoptes mutans*.

scan [ELECTR] The motion, usually periodic, given to the major lobe of an antenna; the process of directing the radio-frequency beam successively over all points in a given region of space. [ENG] **1.** To examine an area, a region in space, or a portion of the radio spectrum point by point in an ordered sequence; for example, conversion of a scene or image to an electric signal or use of radar to monitor an airspace for detection, navigation, or traffic control purposes. **2.** One complete circular, up-and-down, or left-to-right sweep of the radar, light, or other beam or device used in making a scan.

scan converter [ELECTR] **1.** Equipment that converts radar data images at a 3 kilohertz to 10 kilohertz sampling rate that can be sent over telephone line or narrow bandwidth radio circuits and converted into a slow-scan image, through a similar converter, at the receiving end. **2.** A cathode-ray tube that is capable of storing radar, television, and data displays for nondestructive readout over prolonged periods of time.

scandent [BOT] Climbing by stem-roots or tendrils.

scandia *See* scandium oxide.

scandium [CHEM] A metallic group III element, symbol Sc, atomic number 21; melts at 1200°C; found associated with rare-earth elements.

scandium halide [INORG CHEM] A compound of scandium and a halogen; for example, scandium chloride, $ScCl_3$.

scandium oxide [INORG CHEM] Sc_2O_3 White powder, soluble in hot acids; used to prepare scandium. Also known as scandia.

scandium sulfate [INORG CHEM] $Sc_2(SO_4)_3$ Water-soluble, colorless crystals.

scandium sulfide [INORG CHEM] Sc_3S_3 Yellowish powder; decomposes in dilute acids and boiling water to give off hydrogen sulfide.

scanistor [ELECTR] Integrated semiconductor optical-scanning device that converts images into electrical signals; the output analog signal represents both amount and position of light shining on its surface.

scanner [COMPUT SCI] In character recognition, a magnetic or photoelectric device which converts the input character into corresponding electric signals for processing by electronic apparatus. [COMMUN] That part of a facsimile transmitter which systematically translates the densities of the elemental areas of the subject copy into corresponding electric signals. [ENG] **1.** Any device that examines an area or region point by point in a continuous systematic manner, repeatedly sweeping across until the entire area or region is covered; for example, a flying-spot scanner. **2.** A device that automatically samples, measures, or checks a number of quantities or conditions in sequence, as in process control.

scanner selector [COMPUT SCI] An electronic device interfacing computer and multiplexers when more than one multiplexer is used.

scanning circuit *See* sweep circuit.

scanning electron microscope [ELECTR] A type of electron microscope in which a beam of electrons, a few hundred angstroms in diameter, systematically sweeps over the specimen; the intensity of secondary electrons generated at the point of impact of the beam on the specimen is measured, and the resulting signal is fed into a cathode-ray-tube display which is scanned in synchronism with the scanning of the specimen.

scanning frequency *See* stroke speed.

scanning head [ELECTR] Light source and phototube combined as a single unit for scanning a moving strip of paper, cloth, or metal in photoelectric side-register control systems.

scanning HEED [PHYS] A form of HEED in which the diffracted electrons are directly measured electronically with a sensitive detector, and the diffraction pattern is recorded either by moving the detector across it or by deflecting the diffracted electrons across a stationary detector. Abbreviated SHEED.

scanning line [COMMUN] **1.** In television, a single, continuous, narrow strip which is determined by the process of scan-

ning. **2.** Path traced by the scanning or recording spot in one sweep across the subject copy or record sheet.

scanning linearity [ELECTR] In television, the uniformity of scanning speed during the trace interval.

scanning line frequency *See* stroke speed.

scanning loss [ELECTROMAG] In a radar system employing a scanning antenna, the reduction in sensitivity (usually expressed in decibels) due to scanning across the target, compared with that obtained when the beam is directed constantly at the target.

scanning proton microprobe [ENG] An instrument used for determining the spatial distribution of trace elements in samples, in which a beam of energetic protons is focused on a narrow spot which is swept over the sample, and the characteristic x-rays emitted from the target are measured.

scanning radio [ELECTR] A radio receiver that automatically scans across public service, emergency service, or other radio bands and stops at the first preselected station which is on the air. Also known as radio scanner.

scanning radiometer [ENG] An image-forming system consisting of a radiometer which, by the use of a plane mirror rotating at 45° to the optical axis, can see a circular path normal to the instrument.

scanning sequence [ENG] The order in which the points in a region are scanned; for example, in television the picture is scanned horizontally from left to right and vertically from top to bottom.

scanning sonar [ENG] Sonar in which all targets of interest are shown simultaneously, as on a radar PPI (plan position indicator) display or sector display; the sound pulse may be transmitted in all directions simultaneously and picked up by a rotating receiving transducer, or transmitted and received in only one direction at a time by a scanning transducer.

scanning speed *See* spot speed.

scanning spot *See* picture element.

scanning switch *See* commutator switch.

scanning transmission electron microscope [ELECTR] A type of electron microscope which scans with an extremely narrow beam that is transmitted through the sample; the detection apparatus produces an image whose brightness depends on atomic number of the sample. Abbreviated STEM.

scanning yoke *See* deflection yoke.

scansorial [BOT] Adapted for climbing.

scantlings [BUILD] Sections of timber measuring less than 8 inches (20 centimeters) wide and from 2 to 6 inches (5.1 to 15 centimeters) thick; used for studding. [NAV ARCH] The dimensions and material thicknesses of frames, shell plating, deck plating, and other structures of a ship, together with the suitability of the means for protecting openings and making them sufficiently watertight or weathertight.

Scapanorhychidae [VERT ZOO] The goblin sharks, a family of deep-sea galeoids in the isurid line having long, sharp teeth and a long, pointed rostrum.

scapha [ANAT] The furrow of the auricle between the helix and the antihelix.

Scaphidiidae [INV ZOO] The shining fungus beetles, a family of coleopteran insects in the superfamily Staphylinoidea.

scaphocephaly [MED] A condition of the skull characterized by elongation and narrowing, and a projecting, keellike sagittal suture, caused by its premature closure.

scaphoid [ANAT] A boat-shaped bone of the carpus or of the tarsus.

Scaphopoda [INV ZOO] A class of the phylum Mollusca in which the soft body fits the external, curved and tapering, nonchambered, aragonitic shell which is open at both ends.

scapolite [MINERAL] A white, gray, or pale-green complex aluminosilicate of sodium and calcium belonging to the tectosilicate group of silicate minerals; crystallizes in the tetragonal system and is vitreous; hardness is 5–6 on Mohs scale, and specific gravity is 2.65–2.74. Also known as wernerite.

scapolitization [GEOL] Introduction of or replacement by scapolite.

scapula [ANAT] The large, flat, triangular bone forming the back of the shoulder. Also known as shoulder blade.

scapulet [INV ZOO] In some medusae, fringed outgrowths on the outer surfaces of the arms near the bell.

scapulus [INV ZOO] A modified submarginal region in some sea anemones.

scapus [BIOL] The stem, shaft, or column of a structure.

scar [GEOL] **1.** A steep, rocky eminence, such as a cliff or precipice, where bare rock is well exposed. Also known as scaur; scaw. **2.** *See* shore platform. [MED] A permanent mark on the skin or other tissue, formed from connective-tissue replacement of tissue destroyed by a wound or disease process.

Scarabaeidae [INV ZOO] The lamellicorn beetles, a large cosmopolitan family of coleopteran insects in the superfamily Scarabaeoidea including the Japanese beetle and other agricultural pests.

Scarabaeoidea [INV ZOO] A superfamily of Coleoptera belonging to the suborder Polyphaga.

scarabiasis [MED] Invasion of the intestine by the dung beetle, characterized by anorexia, emaciation, and disturbance of the gastrointestinal tract.

scarfing [MET] **1.** Cutting away of surface defects on metals by use of a gas torch. **2.** A forging process in which the ends of two pieces to be joined are tapered to avoid an enlarged joint.

scarf joint [DES ENG] A joint made by the cutting of overlapping mating parts so that the joint is not enlarged and the patterns are complementary, and securing them by glue, fasteners, welding, or other joining method.

Scaridae [VERT ZOO] The parrotfishes, a family of perciform fishes in the suborder Percoidei which have the teeth of the jaw generally coalescent.

scarification [MED] The operation of making numerous small, superficial incisions in skin or other tissue.

scarifier [ENG] An implement or machine with downward projecting tines for breaking down a road surface 2 feet (60 centimeters) or less.

scarious [BOT] Having a thin, membranous texture.

scarlet *See* scarlet red.

scarlet fever [MED] An acute, contagious bacterial disease caused by *Streptococcus hemolyticus;* characterized by a papular, or rough, bright-red rash over the body, with fever, sore throat, headache, and vomiting occurring 2–3 days after contact with a carrier.

scarlet fever streptococcus antitoxin [IMMUNOL] A sterile aqueous solution of antitoxins obtained from the blood of animals immunized against group A beta hemolytic streptococci toxin; formerly used in the treatment of, and to produce immunity against, scarlet fever.

scarlet fever streptococcus toxin [IMMUNOL] Toxic filtrate of cultures of *Streptococcus pyogenes* responsible for the characteristic rash of scarlet fever; the toxin is used in the Dick test.

scarlet red [ORG CHEM] $CH_3C_6H_4H{:}NC_6H_3CH_3N{:}NC_{10}H_{15}OH$ A brown, water-insoluble powder, used as a dye in ointments. Also known as Biebrich red; scarlet.

scarp *See* escarpment.

Scarpa's fascia [ANAT] The deep, membranous layer of the superficial fascia of the lower abdomen.

scarped plain [GEOL] A terrain characterized by a succession of faintly inclined or gently folded strata.

scarp face *See* scarp slope.

scarp-foot spring [HYD] A spring that flows onto the land surface at or near the foot of an escarpment.

scarpland [GEOGR] A region marked by a succession of nearly parallel cuestas separated by lowlands.

scarplet *See* piedmont scarp.

scarpline [GEOL] A relatively straight line of cliffs of considerable extent, produced by faulting or erosion along a fault.

scarp slope [GEOL] The steep face of a cuesta, or asymmetric ridge, facing in an opposite direction to the dip of the strata. Also known as front slope; inface; scarp face.

scarp stream [HYD] An obsequent stream flowing down a scarp, such as down the scarp slope of a cuesta.

scar tissue [MED] Contracted, dense connective tissue that is formed by the healing process of a wound or diseased tissue.

SC asphalt *See* slow-curing liquid asphaltic material.

Scatopsidae [INV ZOO] The minute black scavenger flies, a family of orthorrhaphous dipteran insects in the series Nematocera.

scatter angle *See* scattering angle.

scatter band [COMMUN] In pulse interrogation systems, the total bandwidth occupied by the frequency spread by numerous interrogations operating on the same nominal radio frequency.

scatter diagram [PETR] *See* point diagram. [STAT] A plot of the pairs of values of two variates in rectangular coordinates.

scattered [METEOROL] Descriptive of a sky cover of 0.1 to 0.5 (5 to 54%), applied only when clouds or obscuring phe-

SCAPOLITE

2.5 cm

Crystal of scapolite, a member of the tectosilicate minerals, taken from Pierrepont, New York. *(Specimen from Department of Geology, Bryn Mawr College)*

nomena aloft are present, not applied for surface-based obscuring phenomena.

scattering [ELECTROMAG] Diffusion of electromagnetic waves in a random manner by air masses in the upper atmosphere, permitting long-range reception, as in scatter propagation. Also known as radio scattering. [PHYS] **1.** The change in direction of a particle or photon because of a collision with another particle or a system. **2.** Diffusion of acoustic or electromagnetic waves caused by inhomogeneity or anisotropy of the transmitting medium. **3.** In general, causing a collection of entities to assume a less orderly arrangement.

scattering amplitude [QUANT MECH] A quantity, depending in general on the energy and scattering angle, which specifies the wave function of particles scattered in a collision, and whose squared modulus is proportional to the number of particles scattered in a given direction.

scattering angle [PHYS] The angle between the initial and final directions of motion of a scattered particle. Also known as scatter angle.

scattering coefficient [ELECTROMAG] One of the elements of the scattering matrix of a waveguide junction; that is, a transmission or reflection coefficient of the junction. [PHYS] The fractional decrease in intensity of a beam of electromagnetic radiation or particles per unit distance traversed, which results from scattering rather than absorption. Also known as dissipation coefficient.

scattering cross section [ELECTROMAG] The power of electromagnetic radiation scattered by an antenna divided by the incident power. [PHYS] The sum of the cross sections for elastic and inelastic scattering.

scattering function [ELECTROMAG] The intensity of scattered radiation in a given direction per lumen of flux incident upon the scattering material.

scattering layer [OCEANOGR] A layer of organisms in the sea which causes sound to scatter and to return echoes.

scattering length [NUC PHYS] A parameter used in analyzing nuclear scattering at low energies; as the energy of the bombarding particle becomes very small, the scattering cross section approaches that of an impenetrable sphere whose radius equals this length. Also known as scattering power.

scattering loss [ELECTROMAG] The portion of the transmission loss that is due to scattering within the medium or roughness of the reflecting surface.

scattering matrix [ELECTROMAG] A square array of complex numbers consisting of the transmission and reflection coefficients of a waveguide junction. [QUANT MECH] A matrix which expresses the initial state in a scattering experiment in terms of the possible final states. Also known as collision matrix; S matrix.

scattering-matrix theory *See* S-matrix theory.

scattering plane [PHYS CHEM] In a quasielastic light-scattering experiment performed with the use of polarizers, the plane containing the incident and scattered beams.

scattering power *See* scattering length.

scatter loading [COMPUT SCI] The process of loading a program into main memory such that each section or segment of the program occupies a single, connected memory area but the several sections of the program need not be adjacent to each other.

scatterometer [ENG] A microwave sensor that is essentially a radar without ranging circuits, used to measure only the reflection or scattering coefficient while scanning the surface of the earth from an aircraft or a satellite.

scatter propagation [ELECTROMAG] Transmission of radio waves far beyond line-of-sight distances by using high power and a large transmitting antenna to beam the signal upward into the atmosphere and by using a similar large receiving antenna to pick up the small portion of the signal that is scattered by the atmosphere. Also known as beyond-the-horizon communication; forward-scatter propagation; over-the-horizon propagation.

scatter read [COMPUT SCI] An input operation that places various segments of an input record into noncontiguous areas in central memory.

scatter reflections [ELECTROMAG] Reflections from portions of the ionosphere having different virtual heights, which mutually interfere and cause rapid fading.

scaur *See* scar.

scavenger [CHEM] A substance added to a mixture or other system to remove or inactivate impurities. [ECOL] An organism that feeds on carrion, refuse, and similar matter. [MET] A reactive metal added to a molten metal to combine with and remove dissolved gases.

scavenger system [ORD] A device for clearing smoke and gases from the chamber and bore of a firearm after firing.

scavenger well [HYD] A well located between a well (or group of wells), yielding usable water and a source of potential contamination, which is pumped (or allowed to flow) as waste to prevent the contaminated water from reaching the good wells.

scavenging [MECH ENG] Removal of spent gases from an internal combustion engine cylinder and replacement by a fresh charge or air. [MET] Removal of dissolved gases from molten metal. [ORD] The sweeping out, by a blast of air, of the gaseous products resulting from the firing of a gun.

scaw *See* scar.

Scelionidae [INV ZOO] A family of small, shining wasps in the superfamily Proctotrupoidea, characterized by elbowed, 11- or 12-segmented antennae.

scend [ENG] **1.** The upward motion of the bow and stern of a vessel associated with pitching. **2.** The lifting of the entire vessel by waves or swell. Also known as send.

scene analysis *See* picture segmentation.

scene paint [MATER] A paint used in theatrical scene painting; it is a dry pigment mixed with a glue-water mixture called size water.

scented mahogany *See* Sapele mahogany.

scent gland [VERT ZOO] A specialized skin gland of the tubuloalveolar or acinous variety which produces substances having peculiar odors; found in many mammals.

scfh [FL MECH] Cubic feet per hour of gas flow at specified standard conditions of temperature and pressure.

scfm [FL MECH] Cubic feet per minute of gas flow at specified standard conditions of temperature and pressure.

Schaeffer's salt [ORG CHEM] $HOC_{10}SO_3Na$ A light-yellow to pink, water-soluble powder; the sodium salt formed from 2-naphthol-6-sulfonic acid; used as an intermediate in synthesis of organic compounds.

schafarzikite [MINERAL] $Fe_5Sb_4O_{11}$ A red to brown mineral composed of iron antimony oxide.

schairerite [MINERAL] $Na_3(SO_4)(F,Cl)$ A colorless rhombohedral mineral composed of sodium sulfate with fluorine and chlorine, occurring in crystals.

schalstein [PETR] A slaty rock formed by shearing basaltic or andesitic tuff or lava.

schappe [TEXT] Yarn or fabric made of spun silk or synthetic yarn resembling silk.

Schardinger dextrin [BIOCHEM] Any of several water-soluble, nonreducing, dextrorotatory polysaccharides that have a low molecular weight and that are obtained by the action of *Bacillus macerans* on a starch solution.

scharnitzer [METEOROL] A cold, northerly wind of long duration in Tyrol, Austria.

Scheat [ASTRON] A red giant, irregular, variable star, in the constellation Pegasus.

scheduled target [ORD] A planned target on which a nuclear weapon is to be delivered at a specific time during the operation of the supported force.

schedule of fire [ORD] Groups of fires or series of fires fired in a definite sequence according to a definite program.

scheduling algorithm [COMPUT SCI] A systematic method of determining the order in which tasks will be performed by a computer system, generally incorporated into the operating system.

Scheele's green *See* copper arsenite.

scheelite [MINERAL] $CaWO_4$ A yellowish-white mineral crystallizing in the tetragonal system and occurring in tabular or massive form in pneumatolytic veins associated with quartz; an ore of tungsten.

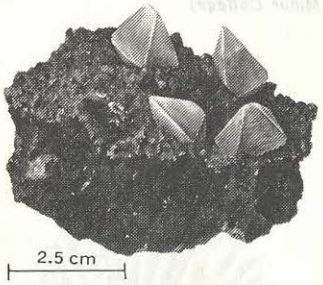
Scheffel engine [MECH ENG] A type of multirotor engine that uses nine approximately equal rotors turning in the same clockwise sense.

schefflerite [MINERAL] $(Ca,Mn)(Mg,Fe,Mn)Si_2O_6$ Brown to black variety of pyroxene that crystallizes in the monoclinic system and contains manganese and frequently iron.

Scheibel column *See* Scheibel extractor.

Scheibel extractor [CHEM ENG] Liquid-liquid contact vessel used in liquid-liquid extraction processes: a vertical cylinder with interspersed open spaces and wire-mesh packing along its

SCHEELITE



Scheelite crystals with chalcopyrite ore from Piedmont, Italy. *(Specimen from Department of Geology, Bryn Mawr College)*

SCHEIBEL EXTRACTOR

height, with liquid agitators in the open spaces, or a vertical cylinder fully filled with wire-mesh packing. Also known as Scheibel column; Scheibel-York extractor; York-Scheibel column.

Scheibel-York extractor *See* Scheibel extractor.

Scheie's syndrome [MED] A hereditary disease transmitted as an autosomal recessive and characterized by high levels of chondroitin sulfate B in the urine, mild distortion of the facies, hypertrichosis, clouding of the cornea, and aortic valve disease.

schema [COMPUT SCI] A model of the data in a data base.

schematic circuit diagram *See* circuit diagram.

schematic diagram [GRAPHICS] A presentation of the element-by-element relationship of all parts of a system.

scheme of maneuver [ORD] The tactical plan to be executed by a force in order to seize assigned objectives.

schemochrome [ZOO] A feather color that originates within the feather structures, through refraction of light independent of pigments.

Schenck's disease *See* sporotrichosis.

Schering bridge [ELEC] A four-arm alternating-current bridge used to measure capacitance and dissipation factor; bridge balance is independent of frequency.

scheteligite [MINERAL] $(Ca,Y,Sb,Mn)_2(Ti,Ta,Nb,W)_2O_6(O,OH)$ A mineral composed of oxide of calcium, rare-earth metals, antimony, manganese, titanium, columbium, and tantalum.

Scheuermann's disease *See* osteochondrosis.

Schick test [IMMUNOL] A skin test for determining susceptibility to diphtheria performed by the intradermal injection of diluted diphtheria toxin; a positive reaction, showing edema and scaling after 5 to 7 days, indicates lack of immunity.

Schiff base [ORG CHEM] $RR'C{=}NR''$ Any of a class of derivatives of the condensation of aldehydes or ketones with primary amines; colorless crystals, weakly basic; hydrolyzed by water and strong acids to form carbonyl compounds and amines; used as chemical intermediates and perfume bases, in dyes and rubber accelerators, and in liquid crystals for electronics.

schiffli [TEXT] A machine for putting embroidery and lace patterns on textiles.

Schiff's reagent [ANALY CHEM] An aqueous solution of rosaniline and sulfurous acid; used in the Schiff test.

Schiff test [ANALY CHEM] A test for aldehydes by using an aqueous solution of rosaniline and sulfurous acid.

Schilder's disease [MED] **1.** A retrogressive disease of the white matter in the central nervous system characterized by diffuse loss of myelin. **2.** Any of the progressive degenerative diseases of the white matter in the central nervous system.

schiller *See* play of color.

schillerization [OPTICS] Development of schiller in crystals due to the pattern of inclusions.

Schindleriidae [VERT ZOO] The single family of the order Schindlerioidei.

Schindlerioidei [VERT ZOO] A suborder of fishes in the order Perciformes composed of one monogeneric family comprising two tiny oceanic species that are transparent and neotenic.

schindylesis [ANAT] A synarthrosis in which a plate of one bone is fixed in a fissure of another.

schirmerite [MINERAL] $PbAg_4Bi_4S_9$ A mineral composed of lead, silver, and bismuth sulfide.

schist [GEOL] A large group of coarse-grained metamorphic rocks which readily split into thin plates or slabs as a result of the alignment of lamellar or prismatic minerals.

schist-arenite [PETR] A light-colored sandstone containing more than 20% rock fragments derived from an area of regionally metamorphosed rocks.

schistose [GEOL] Pertaining to rocks exhibiting schistosity.

schistosity [GEOL] A type of cleavage characteristic of metamorphic rocks, notably schists and phyllites, in which the rocks tend to split along parallel planes defined by the distribution and parallel arrangement of platy mineral crystals.

Schistosoma [INV ZOO] A genus of blood flukes infecting man.

schistosome dermatitis [MED] A dermatitis caused by penetration of the skin by certain schistosome cercariae. Also known as swamp itch; swimmer's itch.

schistosomiasis [MED] A disease in which humans are parasitized by any of three species of blood flukes: *Schistosoma mansoni*, *S. haematobium*, and *S. japonicum*; adult worms inhabit the blood vessels. Also known as snail fever.

Schistostegiales [BOT] A monospecific order of mosses; the small, slender, glaucous plants are distinguished by the luminous protonema.

schizaxon [ANAT] An axon that divides, in its course, into equal or nearly equal branches.

schizocarp [BOT] A dry fruit that separates at maturity into single-seeded indehiscent carpels.

Schizocoela [INV ZOO] A group of animal phyla, including Bryozoa, Brachiopoda, Phoronida, Sipunculoidea, Echiuroidea, Priapuloidea, Mollusca, Annelida, and Arthropoda, all characterized by the appearance of the coelom as a space in the embryonic mesoderm.

schizodont [INV ZOO] A multinucleate trophozoite that segments into merozoites.

schizogamy [BIOL] A form of reproduction involving division of an organism into a sexual and an asexual individual.

schizogenesis [BIOL] Reproduction by fission.

schizognathous [VERT ZOO] Descriptive of birds having a palate in which the vomer is small and pointed, the maxillopalatines are not united with each other or with the vomer, and the palatines articulate posteriorly with the rostrum.

Schizogoniales [BOT] A small order of the Chlorophyta containing algae that are either submicroscopic filaments or macroscopic ribbons or sheets a few centimeters wide and attached by rhizoids to rocks.

schizogony [INV ZOO] Asexual reproduction by multiple fission of a trophozoite; a characteristic of certain Sporozoa.

schizolite [MINERAL] A light-red variety of pectolite containing manganese.

Schizomeridaceae [BOT] A family of green algae in the order Ulvales.

Schizomycetes [MICROBIO] Formerly a class of the division Protophyta which included the bacteria.

Schizomycophyta [BOT] The designation for bacteria in those taxonomic systems that consider bacteria as plants.

schizont [INV ZOO] A multinucleate cell in certain members of the Sporozoa that is produced from a trophozoite in a cell of the host, and that segments into merozoites.

Schizopathidae [INV ZOO] A family of dimorphic zoantharians in the order Antipatharia.

schizopelmous [VERT ZOO] Having the two flexor tendons of the toes separate, as in certain birds.

Schizophora [INV ZOO] A series of the dipteran suborder Cyclorrhapha in which adults possess a frontal suture through which a distensible sac, or ptilinum, is pushed to help the organism escape from its pupal case.

schizophrenia [PSYCH] A group of mental disorders characterized by withdrawal from reality and by alterations in thinking, feeling, and concept formations. Also known as dementia praecox.

Schizophyceae [MICROBIO] The blue-green algae, a class of the division Protophyta.

Schizophyta [BOT] The prokaryotes, a division of the plant subkingdom Thallobionta; includes the bacteria and blue-green algae.

schizopod [INV ZOO] **1.** Having the limbs split so that each has an endopodite and an exopodite, as in certain crustaceans. **2.** A biramous appendage.

Schizopteridae [INV ZOO] A family of minute ground-inhabiting hemipterans in the group Dipsocoeoidea; individuals characteristically live in leaf mold.

schizorhinal [VERT ZOO] Having a deep cleft on the posterior margin of the osseous external nares, as in certain birds.

schizothecal [VERT ZOO] Having the horny envelope of the tarsus divided into scalelike plates; refers to most birds.

schizothoracic [INV ZOO] Having a prothorax that is large and loosely articulated with the thorax.

schlanite [MATER] The soluble resin extracted from anthracoxene by ether.

Schlemm's canal [ANAT] A space or series of spaces at the junction of the sclera and cornea in the eye; drains aqueous humor from the anterior chamber.

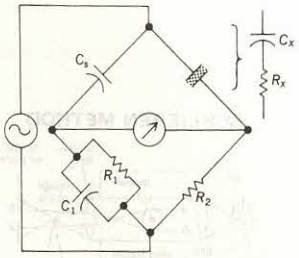
schlempe *See* vinasse.

Schlernwind [METEOROL] East wind blowing down from the Schlern near Bozen in Tyrol, Austria.

Schlick vibration formula [NAV ARCH] A formula for calculation of hull vibration in ships.

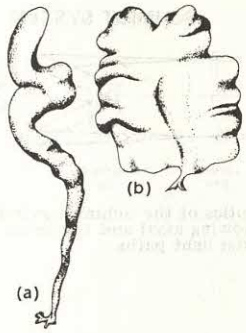
schlieren [OPTICS] In atmospheric optics, parcels or strata of air having densities sufficiently different from that of their surroundings so that they may be discerned by means of refrac-

SCHERING BRIDGE



Circuit diagram of Schering bridge used to measure capacitance C_x and resistance R_x of equivalent series-circuit representation of capacitor. Standard capacitor C_s is assumed free from loss. Bridge is balanced when $C_x R_1 = C_s R_1$; $R_x C_s = R_2 C_1$.

SCHIZOGONIALES



Thalli of *Prasiola* species: *(a)* ribbonlike; *(b)* sheetlike.

tion anomalies in transmitted light. [PETR] Irregular streaks with shaded borders in some igneous rocks, representing the segregation of light and dark minerals or altered inclusions, elongated by flow.

schlieren arch [GEOL] An intrusive igneous body with flow layers which occur along its borders but which are poorly developed or absent in its interior.

schlieren dome [GEOL] An intrusive body more or less completely outlined by flow layers which culminate in one central area.

schlieren method [OPTICS] An optical technique that detects density gradients occurring in a fluid flow; in its simplest form, light from a slit is collimated by a lens and focused onto a knife-edge by a second lens, the flow pattern is placed between these two lenses, and the diffraction pattern that results on a screen or photographic film placed behind the knife-edge is observed.

Schlumberger dipmeter [ENG] An instrument that measures both the amount and direction of dip by readings taken in the borehole; it consists of a long, cylindrical body with two telescoping parts and three long, springy metal strips, arranged symmetrically round the body, which press outward and make contact with the walls of the hole.

Schlumberger photoclinometer [ENG] An instrument that measures simultaneously the amount and direction of the deviation of a borehole; the sonde, designed to lie exactly parallel to the axis of the borehole, is fitted with a small camera on the axis of a graduated glass bowl, in which a steel ball rolls freely and a compass is mounted in gimbals; the camera is electrically operated from the surface and takes a photograph of the bowl, the steel ball marks the amount of deviation, the position in relation to the image of the compass needle gives the direction of deviation.

Schmidt camera *See* Schmidt system.

Schmidt-Cassegrain telescope [OPTICS] A variant of the Schmidt system which uses a Schmidt corrector plate together with a pair of spheroidal or slightly aspherical mirrors arranged as in a Cassegrain telescope.

Schmidt correction plate [OPTICS] In the Schmidt system, a glass plate with one face a plane and the other aspherical and deviating from a plane in such a way that it bends light, traveling to the system's spherical mirror, so as to correct for spherical aberration and coma. Also known as Schmidt lens.

Schmidt field balance [ENG] An instrument that operates as both a horizontal and vertical field balance and consists of a permanent magnet pivoted on a knife edge.

Schmidt lens *See* Schmidt correction plate.

Schmidt lines [NUC PHYS] Two lines, on a graph of nuclear magnetic moment versus nuclear spin, on which points describing all nuclides should lie, according to the independent particle model; experimentally, however, points describing nuclides are scattered between the lines.

Schmidt-Maksutov telescope *See* meniscus-Schmidt telescope.

Schmidt net [GEOL] A coordinate or reference system used to plot a Schmidt projection.

Schmidt number 1 *See* Prandtl number.

Schmidt number 2 *See* Semenov number 1.

Schmidt number 3 [PHYS CHEM] A dimensionless number used in electrochemistry, equal to the product of the dielectric susceptibility and the dynamic viscosity of a fluid divided by the product of the fluid density, electrical conductivity, and the square of a characteristic length. Symbolized Sc_3.

Schmidt objective *See* Schmidt system.

Schmidt optics *See* Schmidt system.

Schmidt projection [GEOL] A Lambert azimuthal equal-area projection of the lower hemisphere of a sphere onto the plane of a meridian; used in structural geology.

Schmidt reflector [OPTICS] A telescope employing the Schmidt system.

Schmidt system [OPTICS] An optical system designed to eliminate spherical aberration and coma, which, in its original form, consists of a spherical mirror, a Schmidt correction plate near the focus of the mirror, and usually a curved reflecting plate at the focus of the mirror; used in astronomical telescopes with unusually wide fields of view and in spectroscopes, and to project a television image from a cathode-ray tube onto a screen. Also known as projection optics; Schmidt camera; Schmidt objective; Schmidt optics.

Schmitt circuit [ELECTR] A bistable pulse generator in which an output pulse of constant amplitude exists only as long as the input voltage exceeds a certain value. Also known as Schmitt limiter; Schmitt trigger.

Schmitt limiter *See* Schmitt circuit.

Schmitt trigger *See* Schmitt circuit.

Schmitz bacillus [MICROBIO] The common name for the dysentery bacillus *Shigella ambigua*.

Schneiderian membrane [ANAT] The mucosa lining the nasal cavities and paranasal sinuses.

Schneider recoil system [MECH ENG] A recoil system for artillery, employing the hydropneumatic principle without a floating piston.

Schneider's index [MED] A test of general physical and circulatory efficiency, consisting of pulse and blood pressure observations under standard conditions of rest and exercise.

Schoelkopf's acid [ORG CHEM] A dye of the following types: 1-naphthol-4,8-disulfonic acid, 1-naphthylamine-4,8-disulfonic acid, and 1-naphthylamine-8-sulfonic acid; may be toxic.

Schoenbiinae [INV ZOO] A subfamily of moths in the family Pyralididae, including the genus *Acentropus*, the most completely aquatic Lepidoptera.

Schoenherr-Hessberger process [CHEM ENG] A nitrogen-fixation process used in Norway; employs a very long (7 meters) alternating-current arc around which air moves in a helical path in a 746-kilowatt furnace.

schoepite [MINERAL] $UO_3 \cdot 2H_2O$ A yellow secondary mineral composed of hydrous uranium oxide.

schönfelsite [PETR] A form of basalt containing embedded crystals of olivine and augite in a complex, dense fine-grained groundmass.

Schönflies crystal symbols [CRYSTAL] Symbols denoting the 32 crystal point groups or symmetry classes; capital letters indicate the general type of class, and subscripts the multiplicity of rotation axes and the existence of additional symmetries.

schooner [NAV ARCH] A sailing vessel with two or more masts rigged fore and aft.

Schoop process [ENG] A process for coating surfaces by spraying with high-velocity molten metal particles.

schorl *See* schorlite.

schorlite [MINERAL] The black, iron-rich, opaque variety of tourmaline. Also known as schorl.

schorlomite [MINERAL] $Ca_3(Fe,Ti)_2(Si,Ti)_3O_{12}$ Black mineral of the garnet group that has a vitreous luster and usually occurs in masses; hardness is 7–7.5 on Mohs scale, and specific gravity is 3.81–3.88.

schott [GEOGR] A shallow saline lake in southern Tunisia or on the plateaus of northern Algeria, which is usually dry during the summer.

Schotten-Baumann reaction [ORG CHEM] An acylation reaction that uses an acid chloride in the presence of dilute alkali to acylate the hydroxyl and amino group of organic compounds.

Schottky barrier [ELECTR] A transition region formed within a semiconductor surface to serve as a rectifying barrier at a junction with a layer of metal.

Schottky barrier diode [ELECTR] A semiconductor diode formed by contact between a semiconductor layer and a metal coating; it has a nonlinear rectifying characteristic; hot carriers (electrons for *n*-type material or holes for *p*-type material) are emitted from the Schottky barrier of the semiconductor and move to the metal coating that is the diode base; since majority carriers predominate, there is essentially no injection or storage of minority carriers to limit switching speeds. Also known as hot-carrier diode; Schottky diode.

Schottky defect [SOLID STATE] **1.** A defect in an ionic crystal in which a single ion is removed from its interior lattice site and relocated in a lattice site at the surface of the crystal. **2.** A defect in an ionic crystal consisting of the smallest number of positive-ion vacancies and negative-ion vacancies which leave the crystal electrically neutral.

Schottky diode *See* Schottky barrier diode.

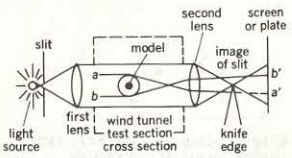
Schottky effect [SOLID STATE] The enhancement of the thermionic emission of a conductor resulting from an electric field at the conductor surface.

Schottky line [SOLID STATE] A graph of the logarithm of the saturation current from a thermionic cathode as a function of the square root of anode voltage; it is a straight line according to the Schottky theory.

Schottky noise *See* shot noise.

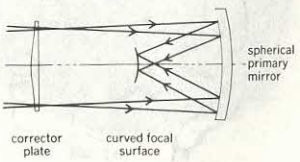
Schottky theory [SOLID STATE] A theory describing the rec-

SCHLIEREN METHOD



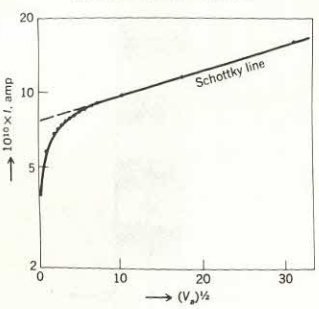
Optical system used in the schlieren method. Light rays from *a* and *b* are bent by density gradients in test section. Ray from *a* is interrupted by knife-edge so that a dark spot occurs on the screen at *a'*; ray from *b* escapes knife-edge so that light spot occurs on screen at *b'*.

SCHMIDT SYSTEM



Optics of the Schmidt system showing axial and the extra-axial light paths.

SCHOTTKY LINE



Graph of the logarithm of thermionic emission current I of tungsten as function of square root of anode voltage V_a. *(After W. B. Nottingham, Phys. Rev., 58:927–928, 1940)*

tification properties of the junction between a semiconductor and a metal that result from formation of a depletion layer at the surface of contact.

Schottky transistor-transistor logic [ELECTR] A transistor-transistor logic circuit in which a Schottky diode with forward diode voltage is placed across the base-collector junction of the output transistor in order to improve the speed of the circuit.

Schrage motor [ELEC] A type of alternating-current commutator motor whose speed is controlled by varying the position of sets of brushes on the commutator.

schreibersite [MINERAL] $(Fe,Ni)_3P$ A silver-white to tin-white magnetic meteorite mineral crystallizing in the tetragonal system and occurring in tables or plates as oriented inclusions in iron meteorites. Also known as rhabdite.

schreinerize [TEXT] To give a lustrous finish to a cotton fabric by passing it under rollers engraved with fine lines.

schriesheimite [PETR] An amphibole peridotite that contains diopside.

Schrödinger equation [QUANT MECH] A partial differential equation governing the Schrödinger wave function ψ of a system of one or more nonrelativistic particles; $\hbar\,(\partial\psi/\partial t) = H\psi$, where H is a linear operator, the Hamiltonian, which depends on the dynamics of the system, and $\hbar$ is Planck's constant divided by 2π.

Schrödinger-Klein-Gordon equation *See* Klein-Gordon equation.

Schrödinger-Pauli equation [QUANT MECH] A modification of the Schrödinger equation to describe a particle with spin of $\frac{1}{2}\hbar$, where $\hbar$ is Planck's constant divided by 2π; the wave function has two components, corresponding to the particle's spin pointing in either of two opposite directions.

Schrödinger picture [QUANT MECH] A mode of description of a quantum-mechanical system in which dynamical states are represented by vectors which evolve in the course of time, and physical quantities are represented by stationary operators, in contrast to the Heisenberg picture.

Schrödinger representation *See* position representation.

Schrödinger's wave mechanics [QUANT MECH] The version of nonrelativistic quantum mechanics in which a system is characterized by a wave function which is a function of the coordinates of all the particles of the system and time, and obeys a differential equation, the Schrödinger equation; physical quantities are represented by differential operators which may act on the wave function, and expectation values of measurements are equal to integrals involving the corresponding operator and the wave function. Also known as wave mechanics.

Schrödinger wave function [QUANT MECH] A function of the coordinates of the particles of a system and of time which is a solution of the Schrödinger equation and which determines the average result of every conceivable experiment on the system. Also known as probability amplitude; psi function; wave function.

schroeckingerite [MINERAL] $NaCa_3(UO_2)(CO_3)(SO_4)F\cdot 10H_2O$ A yellowish secondary mineral composed of hydrous sodium calcium uranyl carbonate, sulfate, and fluoride.

Schroeder-Bernstein theorem [MATH] If a set A has at least as many elements as another set B and B has at least as many elements as A, then A and B have the same number of elements.

Schroter effect [ASTRON] The occurrence of the dichotomy of Venus earlier than theoretically predicted when it is waning, and later than theoretically predicted when waxing.

schrötterite [MINERAL] An opaline variety of allophane that is rich in aluminum.

schrund line [GEOL] The base of the bergschrund, or deep crevasse, at a late stage in the excavation of a cirque; the schrund line separates the steep slope of the cirque wall from the gentler slope below.

Schubertellidae [PALEON] An extinct family of marine protozoans in the superfamily Fusulinacea.

Schuermann series [CHEM] A list of metals so arranged that the sulfide of one is precipitated at the expense of the sulfide of any lower metal in the series.

Schuler pendulum [MECH] Any apparatus which swings, because of gravity, with a natural period of 84.4 minutes, that is, with the same period as a hypothetical simple pendulum whose length is the earth's radius; the pendulum arm remains vertical despite any motion of its pivot, and the apparatus is therefore useful in navigation.

Schuler tuning [ENG] The designing of gyroscopic devices so that their periods of oscillation will be about 84.4 minutes.

schultenite [MINERAL] $PbHAsO_4$ A colorless mineral composed of lead hydrogen arsenate occurring in tabular orthorhombic crystals.

Schultz-Charlton test [IMMUNOL] A skin test for the diagnosis of scarlet fever, performed by the intradermal injection of human scarlet fever immune serum; a positive reaction consists of blanching of the rash in the area surrounding the point of injection.

Schultz-Dale reaction [IMMUNOL] A method for demonstrating anaphylactic hypersensitivity outside the body by suspending an excised intestinal loop or uterine strip from a sensitized animal in an oxygenated, physiological salt solution; addition of the proper allergen causes contraction of the smooth muscle.

Schultze powder [MATER] A smokeless powder propellant, consisting of wood pellets impregnated with barium nitrate and potassium nitrate.

Schultz-Hardy rule [CHEM] The sensitivity of lyophobic colloids to coagulating electrolytes is governed by the charge of the ion opposite that of the colloid, and the sensitivity increases more rapidly than the charge of the ion.

Schulze's reagent [ANALY CHEM] An oxidizing mixture consisting of a saturated aqueous solution of $KClO_3$ and varying amounts of concentrated HNO_3; commonly used in palynologic macerations.

Schumann plate [GRAPHICS] A type of photographic plate in which the silver halide is held to the glass, using a special method, by a layer of gelatin so thin that it is transparent to ultraviolet light with wavelengths as short as 1200 angstroms (120 nanometers), in contrast to the limit of about 2200 angstroms (220 nanometers) in a conventional photographic plate.

Schumann region [OPTICS] The most extreme ultraviolet portion of the electromagnetic spectrum that will affect a photographic plate.

schungite [GEOL] Amorphous carbon-rich material occurring in Precambrian schists.

schuppen structure *See* imbricate structure.

Schur-Cohn test [MATH] A test to determine whether all the coefficients of a polynomial have magnitude less than one; the polynomial has this property only if each of a series of determinants formed from the coefficients of the polynomial in a specified manner is positive for determinants of even degree and negative for determinants of odd degree.

Schur's lemma [MATH] For certain types of modules M, the ring consisting of all homomorphisms of M to itself will be a division ring.

Schuster method [SPECT] A method for focusing a prism spectroscope without using a distant object or a Gauss eyepiece.

Schwagerinidae [PALEON] A family of fusulinacean protozoans that flourished during the Early and Middle Pennsylvanian and became extinct during the Late Permian.

Schwann cell [HISTOL] One of the cells that surround peripheral axons forming sheaths of the neurilemma.

schwannoma *See* neurilemmoma.

schwartzembergite [MINERAL] $Pb_5(IO_3)Cl_3O_3$ A mineral composed of lead iodate, chloride, and oxide.

Schwarz-Christoffel transformations [MATH] Those complex transformations which conformally map the interior of a given polygon onto the portion of the complex plane above the real axis.

Schwarz' inequality *See* Cauchy-Schwarz inequality.

Schwarz-reflection principle [MATH] To obtain the analytic continuation of a given function $f(z)$ analytic in a region R, whose boundary contains a segment of the real axis, into a region reflected from R through this segment, one takes the complex conjugate function $f(\bar{z})$.

Schwarzschild anastigmat [OPTICS] A Gregorian telescope whose surfaces are altered to reduce astigmatism.

Schwarzschild radius [RELAT] Conventionally taken to be twice the black hole mass appearing in the general relativistic Schwarzschild solution times the gravitational constant divided by the square of the speed of light; the event horizon in a Schwarzschild solution is at the Schwarzschild radius.

Schwarzschild solution [RELAT] The unique solution of general relativity theory describing a nonrotating black hole in empty space.

Schwarz's lemma [MATH] If an analytic function of the unit

SCINTILLATION COUNTER

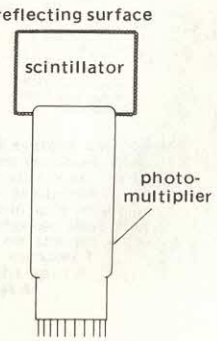


Diagram of a scintillation counter.

SCLERACTINIA

Solitary coral polyps, *Oulangia* species. *(After S. Hickson)*

disk to itself sends the origin to the origin then it must be distance-decreasing.

Schwassman-Wachmann comet [ASTRON] A variable cometlike asteroid whose period is 16 years; its orbit is very nearly circular and lies between the orbits of Saturn and Jupiter.

Schweitzer's reagent [CHEM] An ammoniacal solution of cupric hydroxide; used to dissolve cellulose, silk, and linen, and to test for wool.

Schweydar mechanical detector [ENG] A seismic detector that senses and records refracted waves; a lead sphere is suspended by a flat spring, the sphere's motion is magnified by an aluminum cone that moves a bow around a spindle carrying a mirror, and this motion is then photographically recorded.

Schwinger's variational principle [PHYS] A method used in electromagnetic theory, or similar disciplines, to calculate an approximate value or a linear of quadratic functional, such as a scattering amplitude or reflection coefficient, when the function for which the functional is evaluated is the solution of an integral equation.

Sciaenidae [VERT ZOO] A family of perciform fishes in the suborder Percoidei, which includes the drums.

sciatica [MED] Neuralgic pain in the lower extremities, hips, and back caused by inflammation or injury to the sciatic nerve.

sciatic nerve [ANAT] Either of a pair of long nerves that originate in the lower spinal cord and send fibers to the upper thigh muscles and the joints, skin, and muscles of the leg.

science [SCI TECH] A branch of study in which facts are observed and classified, and, usually, quantitative laws are formulated and verified; involves the application of mathematical reasoning and data analysis to natural phenomena.

scientific calculator [COMPUT SCI] An electronic calculator that has provisions for handling exponential, trigonometric, and sometimes other special functions in addition to performing arithmetic operations.

scientific computer [COMPUT SCI] A computer which has a very large memory and is capable of handling extremely high-speed arithmetic and a very large variety of floating-point arithmetic commands.

scientific information [SCI TECH] That part of technical information concerned with the study of natural phenomena.

scientific method [SCI TECH] The systematic collection and classification of data and, usually, the formulation and testing of hypotheses based on the data.

scientific system [COMPUT SCI] A system devoted principally to computations as opposed to business and data-processing systems, the main emphasis of which is on the updating of data records and files rather than the performance of calculations.

scientist [SCI TECH] A person having the training, ability, and desire to seek new knowledge, new principles, and new materials in some field of science.

scillarenin [PHARM] $C_{24}H_{32}O_4$ A crystalline compound that forms prisms from a methanol solution and melts at 232–238°C; used in medicine for cardiac disease.

Scincidae [VERT ZOO] The skinks, a family of the reptilian suborder Sauria which have reduced limbs and snakelike bodies.

Scinidae [INV ZOO] A family of bathypelagic, amphipod crustaceans in the suborder Hyperiidea.

scintillation [ELECTROMAG] **1.** A rapid apparent displacement of a target indication from its mean position on a radar display; one cause is shifting of the effective reflection point on the target. Also known as target glint; target scintillation; wander. **2.** Random fluctuation, in radio propagation, of the received field about its mean value, the deviations usually being relatively small. [LAP] The flashing, twinkling, or sparkling of light, or the alternating display of reflections, from the polished facets of a gemstone. [NUCLEO] A flash of light produced in a phosphor by an ionizing particle or photon. [OPTICS] Rapid changes of brightness of stars or other distant, celestial objects caused by variations in the density of the air through which the light passes.

scintillation camera [NUCLEO] A camera that gives a complete image of radionuclide distribution in a particular area of the human body in one exposure, in contrast to line-scanning techniques.

scintillation counter [NUCLEO] A device in which the scintillations produced in a fluorescent material by an ionizing radiation are detected and counted by a multiplier phototube and associated circuits; used in medical and nuclear research and in prospecting for radioactive ores. Also known as scintillation detector; scintillometer.

scintillation counter crystal [NUCLEO] A substance (a fluor, such as thallium-activated calcium tungstate) that emits a flash of light (scintillation) when contacted by a high-energy particle, for example, an alpha, beta, or gamma ray.

scintillation detector *See* scintillation counter.

scintillation spectrometer [NUCLEO] A scintillation counter adapted to measuring the energy and intensity of gamma rays from radioactive elements.

scintillator [NUCLEO] A material that emits optical photons in response to ionizing radiation.

scintillometer *See* scintillation counter.

Sciomyzidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

scion [BOT] A section of a plant, usually a stem or bud, which is attached to the stock in grafting.

sciophilous [ECOL] Capable of thriving in shade.

sciophyte [BOT] A plant that thrives at lowered light intensity.

scirrhous carcinoma [MED] A hard, poorly differentiated adenocarcinoma in which the anaplastic cells are surrounded by dense bundles of collagenous fibers.

scissor engine *See* cat-and-mouse engine.

scissor jack [MECH ENG] A lifting jack driven by a horizontal screw; the linkages of the jack are parallelograms whose horizontal diagonals are lengthened or shortened by the screw.

scissors bridge [CIV ENG] A light metal bridge that can be folded and carried by a military tank.

scissors crossover [CIV ENG] A scissor-shaped junction between two parallel railway tracks. Also called double crossover.

scissors fault [GEOL] A fault on which the offset or separation along the strike increases in one direction from an initial point and decreases in the other direction. Also known as differential fault.

scissors truss [BUILD] A roof truss in which the braces cross like scissors blades.

Scitaminales [BOT] An equivalent name for Zingiberales.

Scitamineae [BOT] An equivalent name for Zingiberales.

Sciuridae [VERT ZOO] A family of rodents including squirrels, chipmunks, marmots, and related forms.

Sciuromorpha [VERT ZOO] A suborder of Rodentia according to the classical arrangement of the order.

sclera [ANAT] The hard outer coat of the eye, continuous with the cornea in front and with the sheath of the optic nerve behind.

Scleractinia [INV ZOO] An order of the subclass Zoantharia which comprises the true, or stony, corals; these are solitary or colonial anthozoans which attach to a firm substrate.

Scleraxonia [INV ZOO] A suborder of coelenterates in the order Gorgonacea in which the axial skeleton has calcareous spicules.

sclereid [BOT] A thick-walled, lignified plant cell typically found in sclerenchyma.

sclerema neonatorum [MED] A disease of the newborn, particularly the premature or the undernourished, dehydrated, and debilitated, characterized by waxy-white hardening of subcutaneous tissue.

sclerenchyma [BOT] A supporting plant tissue composed principally of sclereids whose walls are often mineralized.

scleriasis *See* scleroderma.

sclerite [INV ZOO] One of the sclerotized plates of the integument of an arthropod.

scleroblast [INV ZOO] A spicule-secreting cell in Porifera.

scleroblastema [EMBRYO] Embryonic tissue from which bones are formed.

sclerocaulous [BOT] Having a hard, dry stem because of exceptional development of sclerenchyma.

sclerochore [BOT] A plant that disperses disseminules without apparent morphological adaptations.

Sclerodactylidae [INV ZOO] A family of echinoderms in the order Dendrochirotida having a complex calcareous ring.

scleroderma [MED] An abnormal increase in collagenous connective tissue in the skin. Also known as chorionitis; dermatosclerosis; scleriasis.

sclerodermatous [INV ZOO] Having a skeleton that is composed of scleroderm, as certain corals. [VERT ZOO] Having a hard outer covering, for example, hard plate or horny scale.

Sclerogibbidae [INV ZOO] A monospecific family of the hymenopteran superfamily Bethyloidea.

sclerometer [ENG] An instrument used to determine the hardness of a material by measuring the pressure needed to scratch or indent a surface with a diamond point.

sclerophyllous [BOT] Characterized by thick, hard foliage due to well-developed sclerenchymatous tissue.

scleroprotein [BIOCHEM] Any one of a class of proteins, such as keratin, fibroin, and the collagens, which occur in hard parts of the animal body and serve to support or protect. Also known as albuminoid.

scleroscope [ENG] An instrument used to determine the hardness of a material by measuring the height to which a standard ball rebounds from its surface when dropped from a standard height.

scleroscope hardness test *See* Shore scleroscope hardness test.

scleroseptum [INV ZOO] A calcareous radial septum in certain corals.

sclerosing adenomatosis [MED] A form of mammary dysplasia in which ductular structures are encased in fibrous tissue, simulating invading cancerous ductular structures. Also known as fibrosing adenomatosis.

sclerosing hemangioma [MED] A type of benign histiocytoma marked by prominence of the capillary channels.

sclerosis [PATH] Hardening of a tissue, especially by proliferation of fibrous connective tissue.

sclerotic [ANAT] Pertaining to the sclera. [MED] **1.** Hard. **2.** Of or pertaining to sclerosis.

sclerotinite [GEOL] A variety of inertinite composed of fungal sclerotia.

sclerotium [MICROBIO] The hardened, resting or encysted condition of the plasmodium of Myxomycetes. [MYCOL] A hardened, resting mass of hyphae, usually black on the outside, from which fructifications may develop.

sclerotome [EMBRYO] The part of a mesodermal somite which enters into the formation of the vertebrae. [MED] A knife used in sclerotomy. [VERT ZOO] The fibrous tissue separating successive myotomes in certain lower vertebrates.

sclerotomy [MED] Surgical incision of the sclera.

scobiform [BOT] Resembling sawdust.

scolecite [MINERAL] $CaAl_2Si_3O_{10}$ A zeolite mineral that occurs in delicate, radiating groups of white fibrous or acicular crystals; sometimes shows wormlike motion upon heating.

scolecodont [PALEON] Any of the paired, pincerlike jaws occurring as fossils of annelid worms.

Scolecosporae [MYCOL] A spore group of Fungi Imperfecti characterized by filiform spores.

scolex [INV ZOO] The head of certain tapeworms, typically having a muscular pad with hooks, and two pairs of lateral suckers.

Scoliidae [INV ZOO] A family of the Hymenoptera in the superfamily Scolioidea.

Scolioidea [INV ZOO] A superfamily of hymenopteran insects in the suborder Apocrita.

scoliosis [MED] Lateral curvature of the spine.

scolite [GEOL] Any of the small tubes in rock believed to be the fossilized burrows of worms.

scolop [INV ZOO] The thickened, distal tip of a vibration-sensitive organ in insects.

Scolopacidea [VERT ZOO] A large, cosmopolitan family of birds of the order Charadriiformes including snipes, sandpipers, curlews, and godwits.

Scolopendridae [INV ZOO] A family of centipedes in the order Scolopendromorpha which characteristically possess eyes.

Scolopendromorpha [INV ZOO] An order of the chilopod subclass Pleurostigmophora containing the dominant tropical forms, and also the largest of the centipedes.

scolophore *See* scolopophore.

scolopophore [INV ZOO] A spindle-shaped, bipolar nerve ending in the integument of insects, believed to be auditory in function. Also known as scolophore.

Scolytidae [INV ZOO] The bark beetles, a large family of coleopteran insects in the superfamily Curculionoidea characterized by a short beak and clubbed antennae.

Scombridae [VERT ZOO] A family of perciform fishes in the suborder Scombroidei including the mackerels and tunas.

Scombroidei [VERT ZOO] A suborder of fishes in the order Perciformes; all are moderate- to large-sized shore and oceanic fishes having fixed premaxillae.

scoop [DES ENG] **1.** Any of various ladle-, shovel-, or bucketlike utensils or containers for moving liquid or loose materials. **2.** A funnel-shaped opening for channeling a fluid into a desired path. [ELEC] *See* ellipsoidal floodlight. [MECH ENG] A large shovel with a scoop-shaped blade.

scoopfish *See* underway sampler.

scopa [INV ZOO] A brushlike arrangement of short stiff hairs on the body surface of certain insects.

scope *See* cathode-ray oscilloscope; radarscope.

scope of a variable [COMPUT SCI] The portion of a computer program within which the variable can be accessed (used or changed).

Scopeumatidae [INV ZOO] The dung flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Calyptratae.

Scopidae [VERT ZOO] A family of birds in the order Ciconiiformes containing a single species, the hammerhead (*Scopus umbretta*) of tropical Africa.

scopolamine [PHARM] $C_{17}H_{21}O_4N$ An alkaloid derivative of several plants in the family Solanaceae, used as an anticholinergic drug; its hydrobromide salt is used as a sedative.

scopoline [ORG CHEM] $C_8H_{13}O_2H$ A white crystalline alkaloid that melts at 108–109°C, soluble in water and ethanol; used in medicine. Also known as oscine.

scopometer [OPTICS] An instrument used to measure the absorption or scattering of light in a solution containing solid particles by measuring the contrast between an illuminated line placed behind the solution and a field of constant brightness.

scopophilia [PSYCH] Sexual stimulation from looking at the unclad human figure; observed chiefly in normal adolescent and adult males where it takes the aim-inhibited form of "girl watching" or looking at nude or seminude females in magazines or as part of some stage performance, or where it may be sublimated as scientific curiosity; when present to a pathologic degree, it is deviant and called voyeurism.

scopula [ZOO] A tuft of hair, as on the feet and chelicerae of certain spiders.

scopulite [GEOL] A crystallite in the form of a rod with terminal brush or plume.

scorching [CHEM ENG] Premature vulcanization caused by heat during the processing of rubber. [ENG] **1.** Burning an exposed surface so as to change color, texture, or flavor without consuming. **2.** Destroying by fire. [PL PATH] Browning of plant tissues caused by heat or parasites; may also be symptomatic of disease.

score [GEOL] *See* scoring. [GRAPHICS] Indent or impress mark on paper which facilitates folding.

scoria [GEOL] Vesicular, cindery, dark lava formed by the escape and expansion of gases in basaltic or andesitic magma; generally denser and darker than pumice. [MATER] Refuse after melting metals or reducing ore.

scoria cone [GEOL] A volcanic cone composed of a vesicular, cindery crust on the surface of lava that is basaltic or andesitic in nature.

scoria mound [GEOL] A volcanic knoll composed of vesicular, cindery crust on the surface of lava that is basaltic or andesitic in nature.

scoria tuff [GEOL] A deposit of fragmented scoria in a fine-grained tuff matrix.

scorification [MET] Concentration of precious metals, such as gold and silver, in molten lead by oxidation employing appropriate fluxes.

scoring [ENG] Scratching the surface of a material. [GEOL] **1.** The formation of parallel scratches, lines, or grooves in a bedrock surface by the abrasive action of rock fragments transported by a moving glacier. **2.** A scratch, line, or groove produced by this process. Also known as score. [MATER] *See* attrition.

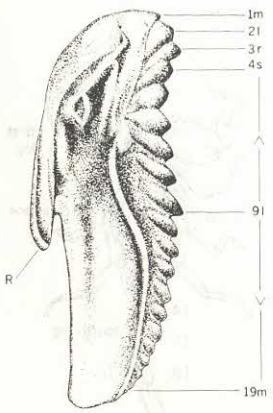
scoring test *See* L-2 test.

scorodite [MINERAL] $FeAsO_4 \cdot 2H_2O$ A pale leek-green or liver-brown orthorhombic mineral consisting of ferric arsenate; isomorphous with mansfieldite and represents a minor ore of arsenic.

Scorpaenidae [VERT ZOO] The scorpion fishes, a family of Perciformes in the suborder Cottoidei, including many tropical shorefishes, some of which are venomous.

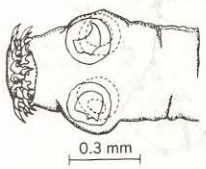
Scorpaeniformes [VERT ZOO] An order of fishes coexten-

SCOLECODONT



Dental formula for a large typical scolecodont. R = ramus, r = roder or largest denticle, l = large, s = small, m = minute. Teeth are numbered in sequence from anterior to posterior, and range in size from 1 to 2 millimeters.

SCOLEX

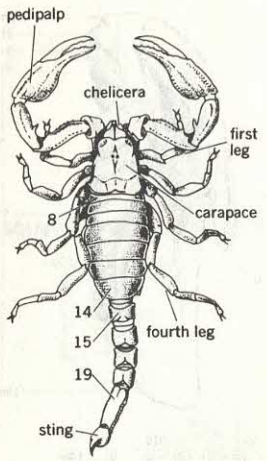


Scolex of tapeworm showing the hooks and lateral suckers.

SCOLYTIDAE

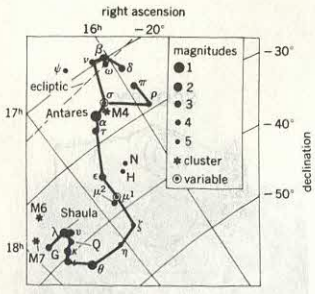
Drawing of a bark beetle. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

SCORPIONIDA



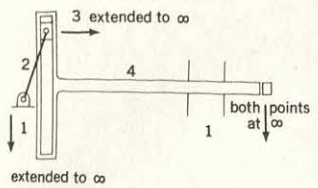
Dorsal aspect of a scorpion, *Chactas vanbenedein*. Some of the body segments have been numbered. *(From R. E. Snodgrass, A Textbook of Arthropod Anatomy, copyright 1952 by Cornell University Press; used by permission)*

SCORPIUS



Line pattern of the constellation Scorpius. The grid lines represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the sizes of the dots, which are graded by appropriate numbers as indicated.

SCOTCH YOKE



Scotch yoke, a type of four-bar linkage; the numbers indicate the linkage.

SCRAMJET

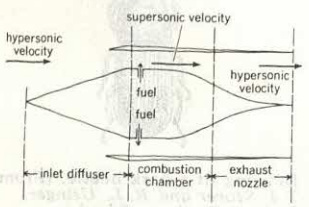


Diagram of scramjet engine.

sive with the perciform suborder Cottoidei in some systems of classification.

scorpioid cyme [BOT] A cyme with a curved axis and flowers arising two-ranked on alternate sides of the axis.

scorpion [INV ZOO] The common name for arachnids constituting the order Scorpionida.

Scorpion [AERO ENG] An all-weather interceptor aircraft with twin turbojet engines; its armament consists of air-to-air rockets with nuclear or nonnuclear warheads. Designated F-89. [ASTRON] *See* Scorpius.

Scorpionida [VERT ZOO] The scorpions, an order of arachnids characterized by a shieldlike carapace covering the cephalothorax and by large pedipalps armed with chelae.

Scorpio X-1 [ASTROPHYS] The most intense celestial source of x-rays known, associated with a highly variable radio source and a variable optical source, ranging from the twelfth to fourteenth magnitude. Abbreviated Sco X-1.

Scorpius [ASTRON] A southern constellation, right ascension 16 hours, declination 40° south; the bright-red star Antares is located in it. Also known as Scorpion.

scorzalite [MINERAL] $FeAl_2(PO_4)_2(OH)_2$ A blue mineral composed of basic iron aluminum phosphate; it is isomorphous with lazulite.

scotch [ENG] A wooden stopblock or iron catch placed under a wheel or other curved object to prevent slipping or rolling.

scotch boiler [MECH ENG] A fire-tube boiler with one or more cylindrical internal furnaces enveloped by a boiler shell equipped with five tubes in its upper part; heat is transferred to water partly in the furnace area and partly in passage of hot gases through the tubes. Also known as dry-back boiler; scotch marine boiler (marine usage).

Scotch bond *See* American bond.

Scotch derrick *See* stiffleg derrick.

scotch marine boiler *See* scotch boiler.

Scotch mist [METEOROL] A combination of thick mist (or fog) and heavy drizzle occurring frequently in Scotland and in parts of England.

Scotch pine [BOT] *Pinus sylvestris*. A hard pine of North America having two short, bluish needles in a cluster.

Scotch-type volcano [GEOL] A volcanic form characterized by concentric cuestas and produced by cauldron subsidence.

Scotch whisky [FOOD ENG] A distilled spirit made in Scotland primarily from malted barley.

Scotch yoke [MECH ENG] A type of four-bar linkage; it is employed to convert a steady rotation into a simple harmonic motion.

scotochromogen [MICROBIO] **1.** Any microorganism which produces pigment when grown without light as well as with light. **2.** A member of group II of the atypical mycobacteria.

scotodinia [MED] Dizziness and headache associated with the appearance of black spots before the eyes.

scotoma [MED] A blind spot or area of depressed vision in the visual field.

scotophor [MATER] A solid that exhibits reversible darkening and bleaching actions of tenebrescence under suitable irradiation.

scotopic vision [PHYSIO] Vision that is due to the activity of the rods of the retina only; it is the type of vision that occurs at very low levels of illumination, and it can detect differences of brightness but not of hue.

scotoscope [ELECTR] A telescope which employs an image intensifier to see in the dark.

Scott connection [ELECTR] A type of transformer which transmits power from two-phase to three-phase systems, or vice versa.

Scott-Darey process [CIV ENG] A chemical precipitation method used for fine solids removal in sewage plants; employs ferric chloride solution made by treating scrap iron with chlorine.

Scott top [ELEC] Transformers arranged in the Scott connection for converting electrical power from two-phase to three-phase, or vice versa.

scour *See* tidal scour.

scour and fill [GEOL] The process of first digging out and then refilling a channel instigated by the action of a stream or tide; refers particularly to the process that occurs during a period of flood.

scour channel [GEOL] A large, groovelike erosional feature produced in sediments by scour.

scour depression [GEOL] A crescent-shaped hollow in the stream bed near the outside of the stream's bend, caused by water that scours below the grade of the stream.

scouring [ENG] Physical or chemical attack on process equipment surfaces, as in a furnace or fluid catalytic cracker. [GEOL] **1.** An erosion process resulting from the action of the flow of air, ice, or water. **2.** *See* glacial scour. [MATER] *See* attrition. [MECH ENG] Mechanical finishing or cleaning of a hard surface by using an abrasive and low pressure. [TEXT] **1.** Removal of grease and dirt from wool. **2.** The cleaning of fabric before the dyeing step.

scouring agent [TEXT] A cleaner used to remove oily substances from textile fibers; for example, natural oils and fats from raw wool, or lubricants from rayon yarns or fabrics during an operation such as winding or weaving.

scouring basin [CIV ENG] A basin containing impounded water which is released at about low water in order to maintain the desired depth in the entrance channel. Also known as sluicing pond.

scouring velocity [GEOL] The velocity of water which is necessary to dislodge stranded solids from the stream bed.

scour lineation [GEOL] A smooth, low, narrow (2–5 centimeters or 5–12.5 inches wide) ridge formed on a sedimentary surface and believed to result from the scouring action of a current of water.

scour mark [GEOL] A mark produced by the cutting or scouring action of a current flowing over the bottom of a river or body of water.

scourway [GEOL] A channel created by a powerful water current, particularly the temporary channels formed by streams on the edge of a Pleistocene ice sheet.

scout [ENG] An engineer who makes a preliminary examination of promising oil and mining claims and prospects. [NAV] **1.** To search an area by following an orderly pattern of courses. **2.** A craft engaged in search.

Scout [AERO ENG] A four-stage all-solid-propellant rocket, used as a space probe and orbital test vehicle; first launched July 1, 1960, with a 150-pound (68-kilogram) payload.

scout boring [MIN ENG] A bore made to test a geologic formation being prospected.

scout car [ORD] Lightly armed and armored reconnaissance vehicle, either wheel or half-track, without turrets, adapted for high-speed operation on hard roads and for cross-country missions.

scout hole [MIN ENG] **1.** A borehole penetrating only the uppermost part of an ore body in order to delineate the surface configuration. **2.** A shallow borehole used to ascertain the presence of ore or to explore an area in a preliminary manner.

scouting distance [NAV] The distance between adjacent scouts on a scouting line.

scouting front [NAV] The distance along the scouting line between the outer limits of visibility of the two outboard scouts on the scouting line.

scouting interval [NAV] The distance between consecutive scouts following the same track.

scouting line [NAV] A line on which scouts are located while scouting in a formation suitable to cover a definite pattern.

Sco X-1 *See* Scorpio X-1.

SCR *See* silicon controlled rectifier.

scram [NUCLEO] **1.** A sudden shutting down of a nuclear reactor, usually by dropping safety rods, when a predetermined neutron flux or other dangerous condition occurs. **2.** To close down a reactor by bringing about a scram.

scramble [AERO ENG] To take off as quickly as possible (usually followed by course and altitude instructions). [COMMUN] To mix, in cryptography, in random or quasi-random fashion.

scrambler [ELECTR] A circuit that divides speech frequencies into several ranges by means of filters, then inverts and displaces the frequencies in each range so that the resulting reproduced sounds are unintelligible; the process is reversed at the receiving apparatus to restore intelligible speech. Also known as speech inverter; speech scrambler.

scram drive [MIN ENG] Underground drive above the tramming level, along which scrapers move ore to a discharge chute.

scramjet [AERO ENG] Essentially a ramjet engine, intended

for flight at hypersonic speeds. Derived from supersonic combustion ramjet.

scram rod *See* safety rod.

scram system [NUCLEO] A system which causes a scram in a nuclear reactor when dangerous conditions arise.

scrap [ENG] Any solid material cutting or reject of a manufacturing operation, which may be suitable for recycling as feedstock to the primary operation; for example, scrap from plastic or glass molding or metalworking.

scraped-surface exchanger [CHEM ENG] A liquid-liquid heat-exchange device that has a rotating element with spring-loaded scraper blades to wipe the process-fluid exchange surfaces clean of crystals or other foulants; used in paraffin-wax processing.

scraper conveyor [MECH ENG] A type of flight conveyor in which the element (chain and flight) for moving materials rests on a trough.

scraper hoist [MECH ENG] A drum hoist that operates the scraper of a scraper loader.

scraper loader [MECH ENG] A machine used for loading coal or rock by pulling a scoop through the material to an apron or ramp, where the load is discharged onto a car or conveyor.

scraper ring [MECH ENG] A piston ring that scrapes oil from a cylinder wall to prevent it from being burnt.

scraper ripper [MIN ENG] A piece of strip-mine equipment with teeth on the lip to rip or break the coal and with a flight conveyor to remove the broken coal.

scraper trap [ENG] A device for the insertion or recovery of pigs, or scrapers, that are used to clean the inside surfaces of pipelines.

scrapie [VET MED] A transmissible, usually fatal, virus disease of sheep, characterized by degeneration of the central nervous system.

scrap mica [MATER] Mica whose size, color, or quality is below specifications for sheet mica.

Scraptidae [INV ZOO] An equivalent name for Melandryidae.

scratchboard [GRAPHICS] A plain, white-coated drawing board, covered with india ink, which, when dry, is scratched with a scratch knife to produce a snow-white line; brilliant, contrasty black-and-white drawings can thus be made.

scratch-brush finish *See* satin finish.

scratch coat [ENG] The first layer of plaster applied to a surface; the surface is scratched to improve the bond with the next coat.

scratch file [COMPUT SCI] A temporary file for future use, created by copying all or part of a data set to an auxiliary memory device.

scratch filter [ENG ACOUS] A low-pass filter circuit inserted in the circuit of a phonograph pickup to suppress higher audio frequencies and thereby minimize needle-scratch noise.

scratch hardness [MATER] A measure of the resistance of minerals or metals to scratching; for minerals it is defined by comparison with 10 selected minerals which are numbered in order of increasing hardness according to the Mohs scale.

scratch hardness test [MET] A hardness test in which a cutting point under given pressure is drawn across the surface of a metal, and the width of the scratch is measured. [MINERAL] A determination of the resistance of a mineral to scratching by testing it with minerals on the Mohs scale.

scratch knife [GRAPHICS] A knife point that fits in a standard penholder and makes a fine to broad line on a scratchboard; used in the graphic arts for cutting, erasing, and retouching.

scratch-pad memory [COMPUT SCI] A very fast intermediate storage (in the form of flip-flop register or semiconductor memory) which often supplements main core memory.

scratch tape [COMPUT SCI] A reel of magnetic tape containing data that may now be destroyed.

screaming [AERO ENG] A form of combustion instability, especially in a liquid-propellant rocket engine, of relatively high frequency, characterized by a high-pitched noise.

scree [GEOL] **1.** A mound of loose, angular material, less than 10 centimeters. **2.** *See* talus.

screeching [AERO ENG] A form of combustion instability, especially in an afterburner, of relatively high frequency, characterized by a harsh, shrill noise.

screed [CIV ENG] **1.** A straight-edged wood or metal template, fixed temporarily to a surface as a guide when plastering or concreting. **2.** An oscillating metal bar mounted on wheels and spanning a freshly placed road slab, used to strike off and smooth the surface.

screed wire *See* ground wire.

screen [COMPUT SCI] To make a preliminary selection from a set of entities, selection criteria being based on a given set of rules or conditions. [ELECTR] **1.** The surface on which a television, radar, x-ray, or cathode-ray oscilloscope image is made visible for viewing; it may be a fluorescent screen with a phosphor layer that converts the energy of an electron beam to visible light, or a translucent or opaque screen on which the optical image is projected. Also known as viewing screen. **2.** *See* screen grid. [ELECTROMAG] Metal partition or shield which isolates a device from external magnetic or electric fields. [ENG] **1.** A large sieve of suitably mounted wire cloth, grate bars, or perforated sheet iron used to sort rock, ore, or aggregate according to size. **2.** A covering to give physical protection from light, noise, heat, or flying particles. **3.** A filter medium for liquid-solid separation.

screen analysis [ENG] A method for finding the particle-size distribution of any loose, flowing, conglomerate material by measuring the percentage of particles that pass through a series of standard screens with holes of various sizes.

screen angle [ELECTROMAG] Vertical angle bounded by a straight line from the radar antenna to the horizon and the horizontal at the antenna assuming a 4/3 earth's radius. [GRAPHICS] The angle used for a halftone screen in relation to another screen to avoid an undesirable moiré pattern in a color reproduction process.

screen cloth [MATER] A woven material suitable for use in a screen deck.

screen deck [DES ENG] A surface provided with apertures of specified size, used for screening purposes.

screen dissipation [ELECTR] Power dissipated in the form of heat on the screen grid as the result of bombardment by the electron stream.

screen dryer *See* traveling-screen dryer.

screened pan [METEOROL] An evaporation pan the top of which is covered by wire-mesh screening (¼-inch or 6-millimeter mesh); the screening reduces air circulation and insolation, and results in a pan coefficient nearer to unity than that for unscreened pans.

screened trailing cable [ELEC] A flexible cable provided with a protective screen of conducting material, so applied as to enclose each power core separately or to enclose together all the cores of the cable.

screen grid [ELECTR] A grid placed between a control grid and an anode of an electron tube, and usually maintained at a fixed positive potential, to reduce the electrostatic influence of the anode in the space between the screen grid and the cathode. Also known as screen.

screening [ATOM PHYS] The reduction of the electric field about a nucleus by the space charge of the surrounding electrons. [ELECTROMAG] *See* electric shielding. [ENG] **1.** The separation of a mixture of grains of various sizes into two or more size-range portions by means of a porous or woven-mesh screening media. **2.** The removal of solid particles from a liquid-solid mixture by means of a screen. **3.** The material that has passed through a screen. [IND ENG] The elimination of defective pieces from a lot by inspection for specified defects. Also known as detailing.

screening agent [ANALY CHEM] A nonchelating dye used to improve the colorimetric end point of a complexometric titration; a dye addition forms a complementary pair of colors with the metalized and unmetalized forms of the end-point indicator.

screening constant [ATOM PHYS] The difference between the atomic number of an element and the apparent atomic number for a given process; this difference results from screening.

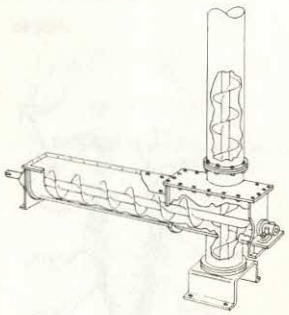
screening smoke [ORD] A smoke cloud produced by chemical agents or smoke generators; used to conceal friendly troops or to deny observation to enemy troops.

screen memory [PSYCH] A consciously tolerable but usually unimportant memory recalled in place of an associated important one, which would be painful and disturbing.

screen mesh [ENG] A wire network or cloth mounted in a frame for separating and classifying materials.

screen pipe [ENG] Perforated pipe with a straining device in the form of closely wound wire coils wrapped around it to admit well fluids while excluding sand.

SCREW CONVEYOR



A combination of a horizontal and vertical screw conveyor.

SCREW THREAD

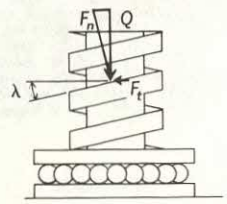


Diagram of a frictionless screw with square threads mounted on a ball thrust bearing, used to raise load Q. Here λ = screw lead angle, F_t = tangential force required to turn screw, F_n = normal force.

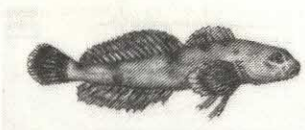
SCREW-THREAD GAGE

A plug gage, a type of screw-thread gage.

SCULPIN



The sculpin *Cottus cognatus*, with large mouth, winglike pectoral fins, and large anal and second dorsal fins.

screen printing [GRAPHICS] A method of printing in which ink is forced by a rubber squeegee through a silk, paint, or stencil screen (as through a sieve or strainer) onto a paper or a fabric. Also known as stencil printing.

screen process [GRAPHICS] A color photography process in which analysis and synthesis of color are accomplished by use of a screen containing a mosaic of very small color filters.

screen ruling [GRAPHICS] On a contact screen or ruled glass halftone screen, the total number of lines or dots per inch.

screen size [MIN ENG] A standard for determining the size of diamond particles; the size of the screened particle is determined by the size of the opening through which the diamond particle will not pass.

screw [DES ENG] **1.** A cylindrical body with a helical groove cut into its surface. **2.** A fastener with continuous ribs on a cylindrical or conical shank and a slotted, recessed, flat, or rounded head. Also known as screw fastener.

screw axis [CRYSTAL] A symmetry element of some crystal lattices, in which the lattice is unaltered by a rotation about the axis combined with a translation parallel to the axis and equal to a fraction of the unit lattice distance in this direction.

screw compressor [MECH ENG] A rotary-element gas compressor in which compression is accomplished between two intermeshing, counterrotating screws.

screw conveyor [MECH ENG] A conveyor consisting of a helical screw that rotates upon a single shaft within a stationary trough or casing, and which can move bulk material along a horizontal, inclined, or vertical plane. Also known as auger conveyor; spiral conveyor; worm conveyor.

screw dislocation [CRYSTAL] A dislocation in which atomic planes form a spiral ramp winding around the line of the dislocation.

screw displacement [MECH] A rotation of a rigid body about an axis accompanied by a translation of the body along the same axis.

screwdriver [DES ENG] A tool for turning and driving screws in place; a thin, wedge-shaped or fluted end enters the slot or recess in the head of the screw.

screw elevator [MECH ENG] A type of screw conveyor for vertical delivery of pulverized materials.

screw fastener *See* screw.

screwfeed [MECH ENG] A system or combination of gears, ratchets, and friction devices in the swivel head of a diamond drill, which controls the rate at which a bit penetrates a rock formation.

screw feeder [MECH ENG] A mechanism for handling bulk (pulverized or granulated solids) materials, in which a rotating helicoid screw moves the material forward, toward and into a process unit.

screw ice [HYD] **1.** Small ice fragments in heaps or ridges, produced by the collision of ice cakes. **2.** A small formation of pressure ice.

screw jack *See* jackscrew.

screw machine [MECH ENG] A lathe for making relatively small, turned metal parts in large quantities.

screw pile [CIV ENG] A pile having a wide helical blade at the foot which is twisted into position, for use in soft ground or other location requiring a large supporting surface.

screw plasticating injection molding [ENG] A plastic-molding technique in which plastic is converted from pellets to a viscous (plasticated) melt by an extruder screw that is an integral part of the molding machine.

screw press [MECH ENG] A press having the slide operated by a screw mechanism.

screw propeller [MECH ENG] A marine and airplane propeller consisting of a streamlined hub attached outboard to a rotating engine shaft on which are mounted two to six blades; the blades form helicoidal surfaces in such a way as to advance along the axis about which they revolve.

screw pump [MECH ENG] A pump that raises water by means of helical impellers in the pump casing.

screw rivet [DES ENG] A short rod threaded along the length of the shaft that is set without access to the point.

screw spike [DES ENG] A large nail with a helical thread on the upper portion of the shank; used to fasten railroad rails to the ties.

screwstock [MECH ENG] Free-machining bar, rod, or wire.

screw thread [DES ENG] A helical ridge formed on a cylindrical core, as on fasteners and pipes.

screw-thread gage [DES ENG] Any of several devices for determining the pitch, major, and minor diameters, and the lead, straightness, and thread angles of a screw thread.

screw-thread micrometer [DES ENG] A micrometer used to measure pitch diameter of a screw thread.

scribe projection [COMMUN] Method of automatic information presentation; information is placed on a small metallic-coated glass slide by removing the coating with a movable fine-pointed scribe controlled by a servo system; light passing through the scribed area projects on the screen.

scriber [DES ENG] A sharp-pointed tool used for drawing lines on metal workpieces.

scribing [ELECTR] Cutting a grid pattern of deep grooves with a diamond-tipped tool in a slice of semiconductor material containing a number of devices, so that the slice can be easily broken into individual chips. [GRAPHICS] A method of preparing a map or chart by cutting the lines into a prepared coating.

Scribner log rule [FOR] A method of scaling logs to derive board-foot calculations; uses a table showing expected log output in board feet that originated from diagrams of 1-inch boards drawn to scale within cylinders of various sizes.

scrim [TEXT] A loose plain-woven fabric, generally cotton, with fine to coarse meshes; used in various finishes in clothing, curtains, and industry.

scrod [VERT ZOO] A young fish, especially cod.

scrofula [MED] Tuberculosis of cervical lymph nodes.

scroll [ARCH] An ornament consisting of a spirally wound band, either as a running ornament or a terminal. [GEOL] One of a series of crescent-shaped sediments on the inner bank of a moving channel, deposited there by the stream.

scroll gear [DES ENG] A variable gear resembling a scroll with teeth on one face.

scrolling [COMPUT SCI] The continuous movement of information either vertically or horizontally on a video screen.

scroll meander [GEOL] A type of forced-cut meander, in which the scrolls built on the inner bank cause erosion of the outer bank.

scroll saw [ENG] A saw with a narrow blade, used for cutting curves or irregular designs.

Scrophulariaceae [BOT] A large family of dicotyledonous plants in the order Scrophulariales, characterized by a usually herbaceous habit, irregular flowers, axile placentation, and dry, dehiscent fruit.

Scrophulariales [BOT] An order of flowering plants in the subclass Asteridae distinguished by a usually superior ovary and, generally, either by an irregular corolla or by fewer stamens than corolla lobes, or commonly both.

scrotum [ANAT] The pouch containing the testes.

scrub [AERO ENG] To cancel a scheduled firing, either before or during countdown. [ECOL] A tract of land covered with a generally thick growth of dwarf or stunted trees and shrubs and a poor soil.

scrubber [ENG] A device for the removal, or washing out, of entrained liquid droplets or dust, or for the removal of an undesired gas component from process gas streams. Also known as wet collector. [MIN ENG] A device, such as a wash screen, wash trommel, log washer, and hydraulic jet or monitor, in which a coarse and sticky material, for example, ore or clay, is either washed free of adherents or mildly disintegrated.

scrubbing oil *See* absorption oil.

scrub typhus *See* tsutsugamushi disease.

scruff [MET] A mixture of tin oxide and iron-tin alloy formed as dross on a molten tin-coating bath.

scruple [PHARM] A unit of mass in apothecaries' measure, equal to 20 grains or to 1.2959782 grams.

SCS *See* silicon controlled switch.

Sc spiral galaxy [ASTRON] A class of spiral galaxy characterized by spirals with the largest and most loosely coiled arms and the smallest central portion.

scuba diving [ENG] Any of various diving techniques using self-contained underwater breathing apparatus.

scud [METEOROL] Ragged low clouds, usually stratus fractus; most often applied when such clouds are moving rapidly beneath a layer of nimbostratus.

scuffing [ENG] The dull mark, sometimes the result of abrasion, on the surface of glazed ceramic or glassware.

scuffle hoe [DES ENG] A hoe having two sharp edges so that it can be pushed and pulled.

sculpin [VERT ZOO] Any of several species of small fishes in

the family Cottidae characterized by a large head that sometimes has spines, spiny fins, broad mouth, and smooth, scaleless skin.

Sculptor [ASTRON] A southern constellation, right ascension 0 hours, declination 30° south. Also known as Sculptor's Apparatus; Workshop.

Sculptor's Apparatus *See* Sculptor.

sculpture [GRAPHICS] The art of carving or shaping stone, wood, metal, or other materials into figures, or of modeling figures in wax or clay to be cast in plaster, or bronze or other metals.

scum [MATER] **1.** A film of impurities that rises to or is formed on the surface of a liquid. **2.** A slimy film formed on the surface of a solid object.

scum chamber [CIV ENG] An enclosed compartment in an Imhoff tank, in which gas escapes from the scum which rises to the surface of sludge during sewage digestion.

scupper [NAV ARCH] A drain on or below the deck of a ship that guides water over or through the side.

scupper pipe [NAV ARCH] A pipe leading from the scuppers to the fitting in the ship's side, for draining water from the deckhouse roof.

scurf [MED] A branlike desquamation of the epidermis, especially from the scalp; dandruff.

S curve *See* reverse curve.

scurvy [MED] An acute or chronic nutritional disorder due to vitamin C deficiency; characterized by weakness, subcutaneous hemorrhages, and alterations of any tissue containing collagen, ground substance, dentine, intercellular cement, or osteoid.

scutch [ENG] A small, picklike tool which has flat cutting edges for trimming bricks.

scutching [TEXT] The breaking up and separating of the woody portions of flax stems from the retted fiber by means of rollers.

scute [INV ZOO] A cornified, epithelial, scalelike structure in lizards and snakes.

Scutechiniscidae [INV ZOO] A family of heterotardigrades in the suborder Echiniscoidea, with segmental and intersegmental thickenings of cuticle.

Scutelleridae [INV ZOO] The shield bugs, a family of Hemiptera in the superfamily Pentatomoidea.

scutellum [BOT] **1.** A rounded apothecium with an elevated rim found in certain lichens. **2.** The flattened cotyledon of a monocotyledonous plant embryo, such as a grass. [INV ZOO] The third of four pieces forming the upper part of the thoracic segment in certain insects. [VERT ZOO] One of the scales on the tarsi and toes of birds.

Scutigeromorpha [INV ZOO] The single order of notostigmophorous centipedes; members are distinguished by a dorsal respiratory opening, compound-type eyes, long flagellate multisegmental antennae, and long thin legs with multisegmental tarsi.

scuttle [BUILD] An opening in the ceiling to provide access to the attic or roof.

scuttlebutt [NAV ARCH] **1.** A cask on shipboard which holds a day's supply of drinking water. **2.** A drinking fountain on shipboard or at a marine installation.

scutum [INV ZOO] **1.** A bony, horny, or chitinous plate. **2.** The second of four pieces forming the upper part of the thoracic segment in certain insects. **3.** One or two lower opercular valves in certain barnacles.

Scutum [ASTRON] A southern constellation, right ascension 19 hours, declination 10° south. Also known as Shield.

Scydmaenidae [INV ZOO] The antlike stone beetles, a large cosmopolitan family of the Coleoptera in the superfamily Staphylinoidea.

scyelite [PETR] A coarse-grained ultramafic igneous rock characterized by poikilitic texture resulting from the inclusion of olivine crystals in crystals of other minerals, especially amphiboles.

Scyllaridae [INV ZOO] The Spanish, or shovel-nosed, lobsters, a family of the Scyllaridea.

Scyllaridea [INV ZOO] A superfamily of decapod crustaceans in the section Macrura including the heavily armored spiny lobsters and the Spanish lobsters, distinguished by the absence of a rostrum and chelae.

Scylliorhinidae [VERT ZOO] The catsharks, a family of the cacharinid group of galeoids; members exhibit the most exotic color patterns of all sharks.

scyphistoma [INV ZOO] A sessile, polyploid larva of many Scyphozoa which may produce either more scyphistomae or free-swimming medusae.

scyphomedusa [INV ZOO] A medusa of the scyphozoans.

Scyphomedusae [INV ZOO] A subclass of the class Scyphozoa characterized by reduced marginal tentacles, tetramerous medusae, and medusalike polyploids.

scyphopolyp [INV ZOO] A polyp of the scyphozoans.

Scyphozoa [INV ZOO] A class of the phylum Coelenterata; all members are marine and are characterized by large, well-developed medusae and by small, fairly well-organized polyps.

scythe [DES ENG] A tool with a long curved blade attached at a more or less right angle to a long handle with grips for both hands; used for cutting grass as well as grain and other crops.

Scythian stage [GEOL] A stage in the lesser Triassic series of the alpine facies. Also known as Werfenian stage.

SDA *See* automation source data.

SDDC *See* sodium dimethyldithiocarbamate.

Se *See* selenium.

sea [GEOGR] A usually salty lake lacking an outlet to the ocean. [OCEANOGR] **1.** A major subdivision of the ocean. **2.** A heavy swell or ocean wave still under the influence of the wind that produced it. **3.** *See* ocean.

sea-air temperature difference correction [NAV] A correction to sextant altitude readings made necessary by abnormal terrestrial refraction occurring when there is a nonstandard density lapse rate in the atmosphere due to a difference in the temperature of the water and of the air at the surface.

sea anchor [NAV ARCH] An object towed by a usually small vessel to keep the vessel end-on to a heavy sea or surf or to reduce drift; the usual form is a conical canvas bag whose large end is open, and, when towed with the large end in the forward position, the bag offers considerable resistance.

sea anemone [INV ZOO] Any of the 1000 marine coelenterates that constitute the order Actiniaria; the adult is a cylindrical polyp or hydroid stage with the free end bearing tentacles that surround the mouth.

sea arch [GEOL] An opening through a headland, formed by wave erosion or solution (as by the enlargement of a sea cave, or by the meeting of two sea caves from opposite sides), which leaves a bridge of rock over the water. Also known as marine arch; marine bridge; sea bridge.

sea ball [OCEANOGR] A spherical mass of somewhat fibrous material of living or fossil vegetation (especially algae), produced mechanically in shallow waters along a seashore by the compacting effect of wave movement.

sea bank *See* seawall.

Sea Bat [AERO ENG] An antisubmarine warfare helicopter equipped with active-passive sonar, acoustic homing torpedoes, and instrument–night flight capability. Designated SH-34G.

seabeach [GEOL] A beach along the margin of the sea.

seabed *See* sea floor.

sea bottom *See* sea floor.

sea breeze [METEOROL] A coastal, local wind that blows from sea to land, caused by the temperature difference when the sea surface is colder than the adjacent land; it usually blows on relatively calm, sunny summer days, and alternates with the oppositely directed, usually weaker, nighttime land breeze.

sea breeze of the second kind *See* cold-front-like sea breeze.

sea bridge *See* sea arch.

sea buoy [NAV] The outermost buoy marking the entrance to a channel or harbor. Also known as farewell buoy, since it is the last buoy passed by a vessel proceeding out to sea.

sea-captured stream [HYD] A stream, flowing parallel to the seashore, that is cut in two as a result of marine erosion and that may enter the sea by way of a waterfall.

sea cave [GEOL] A split or hollow opening, usually at sea level, in the base of a sea cliff, formed by waves acting on weak parts of the weathered rock. Also known as marine cave; sea chasm.

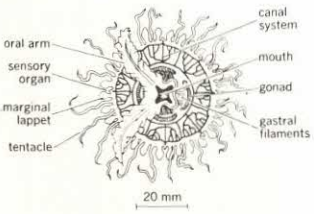
sea channel [GEOL] A long, narrow, U-shaped or V-shaped shallow depression of the sea floor, usually occurring on a gently sloping plain or fan.

sea chasm *See* sea cave.

sea chest [NAV ARCH] **1.** A trunk in which a sailor stores his personal property. **2.** A pipe between a ship's side and a valve in the hull for draining water.

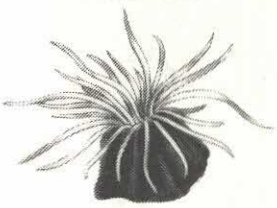
sea cliff [GEOL] An erosional landform, produced by wave action, which is either at the seaward edge of the coast or at the landward side of a wave-cut platform and which denotes the inner limit of the beach erosion.

SCYPHOMEDUSA



Schema of scyphomedusa, oral view.

SEA ANEMONE



Sea anemone *(Sagartia)*, a translucent, sessile species that has retractile tentacles.

sea clutter [ELECTROMAG] A clutter on an airborne radar due to reflection of signals from the sea. Also known as sea return; wave clutter.

seacoast [GEOGR] The land adjacent to the sea.

seacoast artillery [ORD] Class of artillery formerly used for seacoast defense; consisted of fixed guns, howitzers, and mortars defending the harbors.

sea-control operations [ORD] The employment of naval forces, supported by land and air forces, as appropriate, to achieve military objectives in vital sea areas; such operations include destruction of enemy naval forces, suppression of enemy sea commerce, protection of vital sea lanes, and establishment of local military superiority in areas of naval operations.

sea cucumber [INV ZOO] The common name for the echinoderms that make up the class Holothuroidea.

seadrome [CIV ENG] **1.** A designated area for landing and takeoff of seaplanes. **2.** A platform at sea for landing and takeoff of land planes.

sea echelon [ORD] A portion of the assault shipping which withdraws from or remains out of the transport area during an amphibious landing and operates in designated areas to seaward in an on-call or unscheduled status.

sea fan [GEOL] *See* submarine fan. [INV ZOO] A form of horny coral that branches like a fan.

sea floor [GEOL] The bottom of the ocean. Also known as seabed; sea bottom.

sea floor spreading [GEOL] The hypothesis that the ocean floor is spreading away from the midoceanic ridges and is being conveyed landward by convective cells in the earth's mantle, carrying the continental blocks as passive passengers; the ocean floor moves away from the midoceanic ridge at the rate of 1 to 10 centimeters per year and provides the source of power in the hypothesis of plate tectonics. Also known as ocean floor spreading; spreading concept; spreading floor hypothesis.

sea-foam *See* sepiolite.

sea fog [METEOROL] A type of advection fog formed over the ocean as a result of any of a variety of processes, as when air that has been lying over a warm water surface is transported over a colder water surface, resulting in a cooling of the lower layer of air below its dew point.

sea front [GEOGR] An area partly bounded by the sea.

sea frontier [ORD] The naval command of a coastal frontier, including the coastal zone in addition to the land area of the coastal frontier and the adjacent sea areas.

sea gate [CIV ENG] A gate which serves to protect a harbor or tidal basin from the sea, such as one of a pair of supplementary gates at the entrance to a tidal basin exposed to the sea. [GEOGR] A way giving access to the sea such as a gate, channel, or beach.

sea glow [OCEANOGR] The luminous, cobalt-blue appearance of very clear water in the open ocean, caused by upward-scattered light from which much of the red has been absorbed.

seagoing barge [NAV ARCH] A barge capable of sailing on the open sea.

seagoing tug [NAV ARCH] A tugboat capable of sailing on the open sea.

sea grass [BOT] Marine plants which are found in shallow brackish or marine waters, are more highly organized than algae, are seed-bearing, and attain lengths of up to 8 feet (2.4 meters).

sea gully *See* slope gully.

sea horse [INV ZOO] Any of about 50 species of tropical and subtropical marine fishes constituting the genus *Hippocampus* in the family Syngnathidae; the body is compressed, the head is bent ventrally and has a tubiform snout, and the tail is tapering and prehensile.

Sea Horse *See* Capricornus.

sea ice [OCEANOGR] **1.** Ice formed from seawater. **2.** Any ice floating in the sea.

sea-ice shelf [OCEANOGR] Sea ice floating in the vicinity of its formation and separated from fast ice, of which it may have been a part, by a tide crack or a family of such cracks.

seakeeping [NAV ARCH] The ability of a vessel to navigate safely at sea during heavy storms.

sea kindliness [NAV ARCH] Property of a vessel which is well adapted to being handled safely at sea in heavy weather.

sea knoll *See* knoll.

seal [ENG] **1.** Any device or system that creates a nonleaking union between two mechanical or process-system elements; for example, gaskets for pipe connection seals, mechanical seals for rotating members such as pump shafts, and liquid seals to prevent gas entry to or loss from a gas-liquid processing sequence. **2.** A tight, perfect closure or joint. [VERT ZOO] Any of various carnivorous mammals of the suborder Pinnipedia, especially the families Phoridae, containing true seals, and Otariidae, containing the eared and fur seals.

sea-lane *See* seaway.

sea-launched ballistic missile [ORD] A missile launched from a submarine or surface ship.

seal coat [MATER] A layer of bituminous material applied to bituminous macadam or concrete to seal the surface.

sealed cabin [AERO ENG] The occupied space of an aircraft or spacecraft characterized by walls which do not allow gaseous exchange between the inner atmosphere and its surrounding atmosphere, and containing its own mechanisms for maintenance of the inside atmosphere.

sealed tube [ELECTR] Electron tube which is hermetically sealed.

sealer [MATER] A preliminary coating applied to seal the pores in a porous, uncoated surface, such as wood.

Seale rope [DES ENG] A wire rope with six or eight strands, each having a large wire core covered by nine small wires, which, in turn, are covered by nine large wires.

sea level [GEOL] The level of the surface of the ocean; especially, the mean level halfway between high and low tide, used as a standard in reckoning land elevation or sea depths.

sea-level chart *See* surface chart.

sea-level datum [ENG] A determination of mean sea level that has been adopted as a standard datum for heights or elevations, based on tidal observations over many years at various tide stations along the coasts.

sea-level pressure [METEOROL] The atmospheric pressure at mean sea level, either directly measured or, most commonly, empirically determined from the observed station pressure.

sea-level pressure chart *See* surface chart.

sea lily [INV ZOO] The common name for those crinoids in which the body is flower-shaped and is carried at the tip of an anchored stem.

sealing [MET] **1.** Impregnation of porous castings with resins to overcome porosity. **2.** Reducing porosity of an anodic oxide film on aluminum and aluminum alloys by immersion in boiling water.

sealing compound [ELEC] A compound used in dry batteries, capacitor blocks, transformers, and other components to keep out air and moisture.

sealing tape [MATER] Gummed tape for sealing packages.

sealing wax [MATER] A colored, scented mixture of resins and shellac; used for sealing containers and documents.

sealing-wax structure [GEOL] A primary sedimentary flow structure produced by slumping, characterized by the lack of a sharply defined slip plane at the base or a contemporaneous erosion plane at the top, and occupying a zone of highly fluid contortion in an otherwise normal sedimentary succession.

sea lion [VERT ZOO] Any of several large, eared seals of the Pacific Ocean; related to fur seals but lack a valuable coat.

seal off [ENG] To close off, as a tube or borehole, by using a cement or other sealant to eliminate ingress or egress. [PETRO ENG] Penetration of a drilling fluid into a formation so that the formation is prevented from producing.

seal oil [MATER] A yellowish, liquid, fatty oil obtained from seal blubber; soluble in ether and chloroform; melts at 22–33°C; used in soapmaking, in dressing animal skins, and as a lubricant.

seal weld [MET] A weld designed primarily for preventing leakage.

seam [ENG] **1.** A mechanical or welded joint. **2.** A mark on ceramic or glassware where matching mold parts join. [GEOL] **1.** A stratum or bed of coal or other mineral. **2.** A thin layer or stratum of rock. **3.** A very narrow coal vein. [MET] An unwelded fold or lap which appears as a crack on the surface of a casting or wrought product.

seamanite [MINERAL] $Mn_3(PO_4)(BO_3)\cdot 3H_2O$ A pale- to wine-yellow orthorhombic mineral that is a phosphate and borate of manganese; occurs in crystals.

sea manners [NAV] A consideration for the other ship or craft and the exercise of good judgment under certain conditions when ships or craft meet.

seamanship [NAV] The ability to handle, manage, and navigate a ship at sea.

SEA HORSE

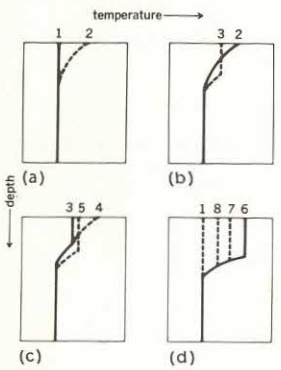
The sea horse *Hippocampus hudsonius*, which has gill tufts and 11 trunk rings and grows to a length of 6 inches (15 centimeters).

SEAL

Alaska fur seal *(Callorhinus ursinus)*.

seamark [NAV] An object designed as an aid to navigation and located with the express purpose of being visible from a distance to seaward; it is often erected in shoal water rather than on land.
sea marker [ENG] A patch of color on the ocean surface produced by releasing dye; used, for example, to attract the attention of the crew of a rescue airplane.
sea marsh [ECOL] A salt marsh periodically overflowed or flooded by the sea. Also known as sea meadow.
seam blast [MIN ENG] A blast made by placing powdered or other explosive along and in a seam or crack between the solid wall and the stone or coal to be removed.
sea meadow [ECOL] *See* sea marsh. [OCEANOGR] Any of the upper layers of the open ocean that have such an abundance of phytoplankton that they provide food for marine organisms.
sea mile [NAV] An approximate mean value of the nautical mile equal to 6080 feet (1853.184 meters) or the length of a minute of arc along the meridian at latitude 48°.
seaming [MET] The joining of the edges of sheet-metal parts by interlocking folds.
sea mist *See* steam fog.
seamless ring rolling [MET] The hot-rolling of a circular blank, with a hole in the center, to form a seamless ring.
seamless tubing [MET] A tubing made by extrusion or by piercing and rolling a billet.
seamount [GEOL] An elevation of the sea floor that is either flat-topped or peaked, rising to about 3000–1000 feet (900–300 meters) or more, with the summit approximately 1000–6000 feet (300–1800 meters) below sea level.
seamount chain [GEOL] Several seamounts in a line with bases separated by a relatively flat sea floor.
seamount group [GEOL] Several closely spaced seamounts not in a line.
seamount range [GEOL] Three or more seamounts having connected bases and aligned along a ridge or rise.
sea mud [GEOL] A rich, slimy deposit in a salt marsh or along a seashore, sometimes used as a manure. Also known as sea ooze.
seam weld [MET] **1.** A longitudinal weld joining of sheet-metal parts or in making tubing. **2.** Arc or resistance welding in which a series of overlapping spot welds is produced.
sea ooze *See* sea mud.
sea otter [VERT ZOO] *Enhydra lutris*. A large marine otter found close to the shoreline in the North Pacific; these animals are diurnally active and live in herds.
sea peak [GEOL] A peaked elevation of the sea floor, rising 1000 meters or more from the floor.
sea pen [INV ZOO] The common name for coelenterates constituting the order Pennatulacea.
seaplane [AERO ENG] An airplane that takes off from and alights on the water; it is supported on the water by pontoons, or floats, or by a hull which is a specially designed fuselage. Also known as airboat.
seaport [CIV ENG] A harbor or town that has facilities for seagoing ships and is active in marine activities.
seaquake [GEOPHYS] An earth tremor whose epicenter is beneath the ocean and can be felt only by ships in the vicinity of the epicenter. Also known as submarine earthquake.
sear [ORD] **1.** An item that retains the firing mechanism of a gun in the cocked position. **2.** A variety of lockwork in the firing mechanism of a propellant-actuated device which prevents motion of the firing pin until released.
sea rainbow *See* marine rainbow.
search [COMPUT SCI] To seek a desired item or condition in a set of related or similar items or conditions, especially a sequentially organized or nonorganized set, rather than a multidimensional set. [ENG] To explore a region in space with radar. [NAV] An orderly arrangement of course lines used in searching an area.
search and rescue [ENG] The use of aircraft, surface craft, submarines, specialized rescue teams and equipment to search for and rescue personnel in distress on land or at sea.
search and rescue coordination center [COMMUN] A primary search and rescue facility suitably staffed by supervisory personnel and equipped for coordinating and controlling search and rescue operations.
search antenna [ELECTROMAG] A radar antenna or antenna system designed for search.
search attack unit [ORD] The designation given to one or more ships separately organized or detached from a formation as a tactical unit to search for and destroy submarines.
search coil *See* exploring coil.
search gate [ELECTR] A gate pulse used to search back and forth over a certain range.
searching control [ENG] A mechanism that changes the azimuth and elevation settings on a searchlight automatically and constantly, so that its beam is swept back and forth within certain limits.
searching fire [ORD] Fire distributed in depth by successive changes in the elevation of the gun.
searching lighting *See* horizontal scanning.
searchlight [OPTICS] A type of light projector designed to produce a beam of high intensity and minimum divergence; it usually employs a specular paraboloidal reflector to produce parallel rays from a light source located at the focus.
searchlight-control radar [ENG] A ground-based radar used to direct searchlights at aircraft.
searchlighting [NAV] The directing of a beam of radiant energy in an oscillatory manner but continuously at a single target.
searchlight-type sonar [ENG] A sonar system in which both transmission and reception are effected by the same narrow beam pattern.
search radar [ENG] A radar intended primarily to cover a large region of space and to display targets as soon as possible after they enter the region; used for early warning, in connection with ground-controlled approach and interception, and in air-traffic control.
search time [COMPUT SCI] Time required to locate a particular field of data in a computer storage device; requires a comparison of each field with a predetermined standard until an identity is obtained.
search unit [ENG] The portion of an ultrasonic testing system which incorporates sending and in some cases receiving transducers to scan the workpiece.
sea return *See* sea clutter.
sea rim [ASTRON] The apparent horizon as actually observed at sea.
searlesite [MINERAL] $NaB(SiO_3)_2 \cdot H_2O$ A white mineral composed of hydrous sodium borosilicate occurring as spherulites.
sea room [NAV] Space in which to maneuver without danger of grounding or colliding.
sea-run [VERT ZOO] Having the habit of ascending a river from the sea, especially to spawn, as salmon and brook trout.
sea salt [OCEANOGR] The salt remaining after the evaporation of seawater, containing sodium and magnesium chlorides and magnesium and calcium sulfates.
sea-salt nucleus [OCEANOGR] A condensation nucleus of a highly hygroscopic nature produced by partial or complete desiccation of particles of sea spray or of seawater droplets derived from breaking bubbles.
seascape [OCEANOGR] The surrounding sea as it appears to an observer.
seascarp [GEOL] A submarine cliff that is relatively long, high, and straight.
seashell [INV ZOO] The shell of a marine invertebrate, especially a mollusk.
seashore [GEOL] **1.** The strip of land that borders a sea or ocean. Also known as seaside; shore. **2.** The ground between the usual tide levels. Also known as seastrand.
seashore lake [GEOGR] A lake, containing either fresh or salt water, which lies along a seashore; it is separated from the sea by a river, a delta, or a wall of sediment.
seasickness [MED] Motion sickness occurring at sea. Also known as pelagism.
seaside *See* seashore.
sea slope [GEOL] The slope of land toward the sea.
sea slug [INV ZOO] The common name for the naked gastropods composing the suborder Nudibranchia.
sea smoke *See* steam fog.
season [CLIMATOL] A division of the year according to some regularly recurrent phenomena, usually astronomical or climatic.
seasonal balancing [CHEM ENG] A seasonal adjustment of the front-end boiling range (volatility) of a motor gasoline to control engine starting characteristics by compensating for seasonal temperature changes.

SEASONAL THERMOCLINE

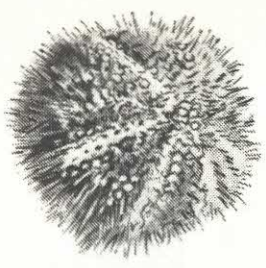


Diagrams showing temperature structure of seasonal thermocline during *(a)* first stage, *(b)* second stage, and *(c)* third stage of formation, and *(d)* breakup. Numbers 1–8 indicate sequence in this process.

SEA SQUIRT

Sea squirts; these saclike tunicates serve as scavengers and as food for higher forms.

SEA URCHIN



The sea urchin shell, which protects the soft internal organs, is covered with spines arranged in five broad areas that are separated by narrow unprotected areas.

seasonal current [OCEANOGR] An ocean current which has large changes in speed or direction due to seasonal winds.

seasonal factors [COMMUN] Factors that are used to adjust skywave absorption data for seasonal variations; these variations are due primarily to seasonal fluctuations in the heights of the ionospheric layers.

seasonally frozen ground [GEOL] Ground that is frozen during low temperatures and remains so only during the winter season. Also known as frost zone.

seasonal recovery [HYD] Recharge of groundwater during and after a wet season, with a rise in the level of the water table.

seasonal stream [HYD] A stream whose flow is not constant because it has water in its course only during certain seasons.

seasonal thermocline [OCEANOGR] A thermocline which develops in the oceans in summer at relatively shallow depths due to surface heating and downward transport of heat caused by mixing of water generated by summer winds.

seasonal variation [GEOPHYS] The variation of any parameter of the upper atmosphere with season; for example, the variation of ion densities of different parts of the ionosphere, and the resulting variation in transmission of radio signals over large distances.

season check [MATER] A longitudinal crack in wood, caused by uneven seasoning.

season crack [MET] A stress-corrosion crack produced in a copper-base alloy subject to a residual or applied tensile stress and exposed to a specific environment such as moist air containing traces of ammonia.

season cracking [ORD] An occurrence in brass cartridge cases and other brass parts in which cracking occurs because of residual internal strains from the manufacturing operations.

seasoned lumber [MATER] Lumber which has been cured by drying to ensure a uniform moisture content.

seasoning [ELECTR] Overcoming a temporary unsteadiness of a component that may appear when it is first installed.

sea spider [INV ZOO] The common name for arthropods in the subphylum Pycnogonida.

sea squirt [INV ZOO] A sessile, marine tunicate of the class Ascidiacea; it squirts water from two openings in the unattached end when touched or disturbed.

sea state [OCEANOGR] The numerical or written description of ocean-surface roughness.

seastrand *See* seashore.

sea supremacy [ORD] That degree of sea superiority wherein the opposing force is incapable of effective interference.

sea-surface slope [OCEANOGR] A gradual change in the level of the sea surface with distance, caused by Coriolis and wind forces.

sea surveillance [ENG] The systematic observation of surface and subsurface sea areas by all available and practicable means primarily for the purpose of locating, identifying, and determining the movements of ships, submarines, and other vehicles, friendly and enemy, proceeding on or under the surface of seas and oceans.

seat [MECH ENG] The fixed, pressure-containing portion of a valve which comes into contact with the moving portions of that valve. [ORD] **1.** Support or holder for a mechanism, or for a part of one. **2.** To fit correctly in or on a holder, or prepared position, such as to seat a fuse in a bomb, a projectile in the bore of a gun, or a cartridge in a chamber.

seat clay *See* underclay.

seat earth *See* underclay.

sea terrace *See* marine terrace.

seating [ORD] The distance to which a projectile is rammed into the bore of a cannon, usually measured from the base of the projectile to the rear face of the breech.

seating-lock locking fastener [DES ENG] A locking fastener that locks only when firmly seated and is therefore free-running on the bolt.

sea turn [METEOROL] A wind coming from the sea, often bringing mist; the term is limited mainly to New England, United States.

sea turtle [VERT ZOO] Any of various marine turtles, principally of the families Cheloniidae and Dermochelidae, having paddle-shaped feet.

seatworm *See* pinworm.

sea urchin [INV ZOO] A marine echinoderm of the class Echinoidea; the soft internal organs are enclosed in and protected by a test or shell consisting of a number of close-fitting plates beneath the skin.

sea valley [GEOL] A relatively shallow, wide depression with gentle slopes in the sea floor, the bottom of which grades continuously downward.

sea van [IND ENG] Commercial or government-owned (or leased) shipping containers which are moved via ocean transportation; since wheels are not attached, they must be lifted on and off the ship.

seawall [CIV ENG] A concrete, stone, or metal wall or embankment constructed along a shore to reduce wave erosion and encroachment by the sea. Also known as sea bank. [GEOL] A steep-faced, long embankment situated by powerful storm waves along a seacoast at high-water mark.

seaward [NAV] The direction or side in which the sea is located; the direction or side away from the land.

seawater [OCEANOGR] Water of the seas, distinguished by high salinity. Also known as salt water.

seawater thermometer [ENG] A specially designed thermometer to measure the temperature of a sample of seawater; an instrument consisting of a mercury-in-glass thermometer protected by a perforated metal case.

seaway [NAV] **1.** The motion or rate of motion of a vessel. **2.** Headway of a vessel. **3.** The sea as a route of travel from one place to another; a shipping lane. Also known as sea-lane.

seaweed [BOT] A marine plant, especially algae.

seaworthiness [NAV ARCH] The fitness of a ship to sail on the sea and meet any usual condition, or to sail on a specific voyage.

sebaceous gland [PHYSIO] A gland, arising in association with a hair follicle, which produces and liberates sebum.

sebacic acid [ORG CHEM] $COOH(CH_2)_8COOH$ Combustible, white crystals; slightly soluble in water, soluble in alcohol and ether; melts at 133°C; used in perfumes, paints, and hydraulic fluids and to stabilize synthetic resins. Also known as decanedioic acid; sebacylic acid.

sebacylic acid *See* sebacic acid.

sebastianite [PETR] A plutonic rock composed of euhedral anorthite, biotite, and some augite and apatite, but without feldspathoids and quartz.

sebcha *See* sebkha.

Sebekidae [INV ZOO] A family of pentastomid arthropods in the suborder Porocephaloidea.

sebka *See* sebkha.

sebkha [GEOL] A geologic feature, in North Africa, which is a smooth, flat, plain usually high in salt; after a rain the plain may become a marsh or a shallow lake until the water evaporates. Also known as sabkha; sebcha; sebka; sibjet.

seborrheic dermatitis [MED] An acute inflammation of the skin, occurring usually on oily skin; characterized by scales, crusting yellowish patches, and itching.

sebum [PHYSIO] The secretion of sebaceous glands, composed of fat, cellular debris, and keratin.

sec *See* secant; second; secondary winding.

SEC *See* secondary electron conduction.

seca [METEOROL] A drought, or dry wind, in Brazil.

secalose [BIOCHEM] A polysaccharide consisting of fructose units; occurs in green rye and oats, and in rye flour.

SECAM [COMMUN] A line-sequential color television system used in France and the Soviet Union. Derived from sequential couleur à memoire.

secant [MATH] **1.** The function given by the reciprocal of the cosine function. Abreviated sec. **2.** The secant of an angle A is $1/\cos A$.

secant conic chart *See* conic chart with two standard parallels.

secant conic projection *See* conic projection with two standard parallels.

secbumeton [ORG CHEM] $C_{10}H_{19}N_5O$ A white solid with a melting point of 86–88°C; used as an herbicide for alfalfa. Also known as 2-*sec*-butylamino-4-ethylamino-6-methoxy-*S*-triazine.

Secchi disk [ENG] An opaque white disk used to measure the transparency or clarity of seawater by lowering the disk into the water horizontally and noting the greatest depth at which it can be visually detected.

Secernentea [INV ZOO] A class of the phylum Nematoda in which the primary excretory system consists of intracellular tubular canals joined anteriorly and ventrally in an excretory sinus, into which two ventral excretory gland cells may also open.

sech *See* hyperbolic secant.

sechard [METEOROL] A dry, warm foehn wind over Lake Geneva in Switzerland.

seclusion [METEOROL] A special case of the process of occlusion, where the point at which the cold front first overtakes the warm front (or quasi-stationary front) is at some distance from the apex of the wave cyclone.

secobarbital [PHARM] $C_{12}H_{18}N_2O_3$ 5-Allyl-5 (1-methylbutyl) barbituric acid, a short-acting barbiturate; white powder with bitterish taste; very soluble in alcohol and ether, slightly soluble in water; melts at 82°C; used as a sedative and hypnotic, frequently as the sodium derivative. Also known as quinalbarbitone.

secodont [VERT ZOO] Having teeth adapted for cutting.

secohm *See* international henry.

Seconal [PHARM] A trade name for secobarbital.

second [MATH] A unit of plane angle, equal to 1/60 minute, or 1/3,600 degree, or $\pi/648{,}000$ radian. [MECH] The fundamental unit of time equal to 9,192,631,770 periods of the radiation corresponding to the transition between the two hyperfine levels of the ground state of an atom of cesium-133. Abbreviated s: sec.

secondary [ELEC] Low-voltage conductors of a power distributing system. [ELECTROMAG] *See* secondary winding. [GEOL] A term with meanings that changed from early to late in the 19th century, when the term was confined to the entire Mesozoic era; it was finally replaced by Mesozoic era.

secondary air [MECH ENG] Combustion air introduced over the burner flame to enhance completeness of combustion.

secondary alcohol [ORG CHEM] An organic alcohol with molecular structure R_1R_2CHOH, where R_1 and R_2 designate either identical or different groups.

secondary amine [ORG CHEM] An organic compound that may be written R_1R_2NH, where R_1 and R_2 designate either identical or different groups.

secondary amyloidosis [MED] Amyloidosis that usually follows chronic suppurative, inflammatory diseases, such as tuberculosis, osteomyelitis, and bronchiectasis.

secondary area [NAV] In air operations, that area within a segment in which ROC (required obstacle clearance) is reduced as distance from the prescribed course is increased.

secondary armament [ORD] In ships with multiple-size guns installed, that battery consisting of guns next largest to those of the main battery.

secondary battery *See* storage battery.

secondary blast injuries [ORD] Those injuries sustained from the indirect effects, such as falling rubble from a collapsed building, or missiles (debris or objects) which have been picked up by the generated winds and hurled against an individual; also includes injuries resulting from individuals being hurled against stationary objects.

secondary bomb damage [ORD] Nonphysical bomb damage.

secondary bow *See* secondary rainbow.

secondary cambium [BOT] One of the tissue layers formed after the initial cambial layers in certain plant roots, and that produce a ring of tissue.

secondary carbon atom [ORG CHEM] A carbon atom that is singly bonded to two other carbon atoms.

secondary cell *See* storage cell.

secondary circle *See* secondary great circle.

secondary circuit [MET] The part of a welding machine which conducts secondary current between transformer and electrodes or between electrodes and workpiece.

secondary clay [GEOL] A clay that has been transported from its place of formation and redeposited elsewhere.

secondary coast [GEOL] A relatively stable seacoast or shoreline whose features are the result of present-day marine processes.

secondary cold front [METEOROL] A front which forms behind a frontal cyclone and within a cold air mass, characterized by an appreciable horizontal temperature gradient.

secondary consequent stream [HYD] A tributary of a subsequent stream, flowing parallel to or down the same slope as the original consequent stream; it is usually developed after the formation of a subsequent stream, but in a direction consistent with that of the original consequent stream. Also known as subconsequent stream.

secondary consolidation [GEOL] Consolidation of sedimentary material, at essentially constant pressure, resulting from internal processes such as recrystallization.

secondary cosmic rays [GEOPHYS] Radiation produced when primary cosmic rays enter the atmosphere and collide with atomic nuclei and electrons.

secondary crater [GEOL] An impact crater produced by the relatively low-velocity impact of fragments ejected from a large primary crater. Also known as satellitic crater.

secondary creep [MECH] The change in shape of a substance under a minimum and almost constant differential stress, with the strain-time relationship a constant. Also known as steady-state creep.

secondary crusher [MECH ENG] Any of a group of crushing and pulverizing machines used after the primary treatment to further reduce the particle size of shale or other rock.

secondary cyclone [METEOROL] A cyclone which forms near or in association with a primary cyclone. Also known as secondary low.

secondary drilling [MIN ENG] The process of drilling the so-called popholes for the purpose of breaking the larger masses of rock thrown down by the primary blast.

secondary electron [ELECTR] **1.** An electron emitted as a result of bombardment of a material by an incident electron. **2.** An electron whose motion is due to a transfer of momentum from primary radiation.

secondary electron conduction [ELECTR] Transport of charge by secondary electrons moving through the interstices of a porous material under the influence of an externally applied electric field. Abbreviated SEC.

secondary emission [ELECTR] The emission of electrons from the surface of a solid or liquid into a vacuum as a result of bombardment by electrons or other charged particles.

secondary enlargement [MINERAL] Overgrowth by chemical deposition on a mineral grain of additional material of identical composition in optical and crystallographic continuity with the original grain; crystal faces characteristic of the original mineral often result. Also known as secondary growth.

secondary enrichment [GEOL] The addition to a vein or ore body of material that originated later in time from the oxidation of decomposed ore masses that overlie the vein.

secondary fermentation [FOOD ENG] A fermentation process produced by adding sugar to wine and used to create natural carbonation in, for example, champagne.

secondary flow [FL MECH] A field of fluid motion which can be considered as superposed on a primary field of motion through the action of friction usually in the vicinity of solid boundaries. Also known as frictional secondary flow.

secondary focus [OPTICS] In an astigmatic system, a line at which some of the bundle of rays from an off-axis point meet; this line lies in a plane which contains the point and the optical axis, and has a greater image distance than the primary focus. Also known as sagittal focus.

secondary fragment [ORD] Secondary fragmentation resulting from either breakup of controlled or uncontrolled fragments upon impact or from the creation of fragments from the target material when it is impacted by a projectile; an example is the spalling of armor plate when it is pierced by armor-piercing shot; the fragments or spalls are broken off the back of the plate and become significant kill mechanisms within the armored enclosure.

secondary front [METEOROL] A front which may form within a baroclinic cold air mass which itself is separated from a warm air mass by a primary frontal system; the most common type is the secondary cold front.

secondary geosyncline [GEOL] A geosyncline appearing at the culmination of or after geosynclinal orogeny.

secondary glacier [HYD] A small valley glacier that joins a larger trunk glacier as a tributary glacier.

secondary great circle [GEOD] A great circle perpendicular to a primary great circle, as a meridian. Also known as secondary circle.

secondary grid emission [ELECTR] Electron emission from a grid resulting directly from bombardment of its surface by electrons or other charged particles.

secondary grinding [MECH ENG] A further grinding of material previously reduced to sand size.

secondary growth *See* secondary enlargement.

secondary hardening [MET] The hardening of certain alloy steels at moderate temperatures (250–650°C) by the precipitation of carbides; the resultant hardness is greater than that

obtained by tempering the steel at some lower temperature for the same time.

secondary haulage [MIN ENG] That portion of the haulage system which collects coal from gathering-haulage delivery points and delivers it to the main portion of the system.

secondary high explosive [MATER] A high explosive which is relatively insensitive to heat and shock and is usually initiated by a primary high explosive; used for boosters and bursting charges.

secondary hydrogen atom [ORG CHEM] A hydrogen atom that is bonded to a secondary carbon atom.

secondary interstices [GEOL] Openings in a rock that formed after the enclosing rock was formed.

secondary ion mass analyzer [ENG] A type of secondary ion mass spectrometer that provides general surface analysis and depth-profiling capabilities.

secondary ion mass spectrometer [ENG] An instrument for microscopic chemical analysis, in which a beam of primary ions with an energy in the range 5–20 kiloelectronvolts bombards a small spot on the surface of a sample, and positive and negative secondary ions sputtered from the surface are analyzed in a mass spectrometer. Abbreviated SIMS. Also known as ion microprobe; ion probe.

secondary item [ORD] Any item, including end items, components, and spare parts, which has not been classified as a principal item.

secondary limestone [PETR] Limestone deposited from solution in cracks and cavities of other rocks.

secondary lobe *See* minor lobe.

secondary low *See* secondary cyclone.

secondary manganous phosphate *See* acid manganous phosphate.

secondary metal [MET] Metal recovered from scrap by remelting and refining.

secondary mineral [MINERAL] A mineral produced in an enclosing rock after the rock was formed as a result of weathering or metamorphic or solution activity, and usually at the expense of a primary material that came into existence earlier.

secondary oil recovery [PETRO ENG] Procedures used to increase the flow of oil from depleted or nearly depleted wells; includes fracturing, acidizing, waterflood, and gas injection.

secondary optic axis [OPTICS] One of two optic axes in a crystal along which all light rays travel with equal velocity.

secondary periderm [BOT] Any layer of the periderm except the first and outermost layer.

secondary phloem [BOT] Phloem produced by the cambium, consisting of two interpenetrating systems, the vertical or axial and the horizontal or ray.

secondary photocurrent [ELECTR] A photocurrent resulting from ohmic contacts that are able to replenish charge carriers which pass out of the opposite contact in order to maintain charge neutrality, and whose maximum gain is much greater than unity.

secondary plasticizer [MATER] A plastics plasticizer that has insufficient affinity for a resin for it to be the sole plasticizer, and must be blended with a primary plasticizer. Also known as extender plasticizer.

secondary porosity [GEOL] The interstices that appear in a rock formation after it has formed, because of dissolution or stress distortion taking place naturally or artificially as a result of the effect of acid treatment or the injection of coarse sand.

secondary port [CIV ENG] A port with one or more berths, normally at quays, which can accommodate oceangoing ships for discharge.

secondary radar [ELECTR] Radar which receives pulses transmitted by an interrogator and makes a return transmission (usually on a different frequency) by its transponder, as opposed to a primary radar which receives pulses returned from illuminated objects.

secondary radiation [PHYS] Particles or photons produced by the action of primary radiation on matter, such as Compton recoil electrons, delta rays, secondary cosmic rays, and secondary electrons.

secondary rainbow [OPTICS] A faint rainbow of angular radius about 50° which may appear outside the primary rainbow of 42° radius, and which has its colors in reverse order to those of the primary. Also known as secondary bow.

secondary reference fuel [MATER] A commercially produced internal combustion engine fuel which is acceptable for knock testing or cetane rating, and which has been calibrated against primary reference fuels by engine tests.

secondary reflection *See* multiple reflection; shoot.

secondary rescue facilities [ENG] Local airbase-ready aircraft, crash boats, and other air, surface, subsurface, and ground elements suitable for rescue missions, including government and privately operated units and facilities.

secondary reserves [PETRO ENG] Reserves recoverable commercially at current prices and costs as a result of artificial supplementation of the reserve's natural (gas-drive) energy.

secondary sewage sludge [CIV ENG] Sludge that includes activated sludge, mixed sludge, and chemically precipitated sludge.

secondary shaft [MIN ENG] The shaft which extends a mine downward from the bottom of, but not in line with, the primary shaft.

secondary splits [MIN ENG] Splits formed by separation of the main air splits.

secondary standard [PHYS] **1.** A unit, as of length, capacitance, or weight, used as a standard of comparison in individual countries or localities, but checked against the one primary standard in existence somewhere. **2.** A unit defined as a specified multiple or submultiple of a primary standard, such as the centimeter.

secondary station [COMMUN] Any station in a radio net other than the net control station. [ORD] Observation post at the end of a base line farthest from the gun or directing point.

secondary storage [COMPUT SCI] Any means of storing and retrieving data external to the main computer itself but accessible to the program.

secondary stratification [GEOL] The layering that occurs when sediments that were at one time deposited are resuspended and redeposited. Also known as indirect stratification.

secondary stratigraphic trap *See* stratigraphic trap.

secondary stress [MECH] A self-limiting normal or shear stress which is caused by the constraint of a structure and which is expected to cause minor distortions that would not result in a failure of the structure.

secondary structure [GEOL] A structure such as a fault, fold, or joint resulting from tectonic movement that started after the rock in which it is found was emplaced. [PALEON] A coarse structure usually between the thin sheets in the protective wall of a tintinnid.

secondary surveillance radar [NAV] The secondary radar that operates in conjunction with the ATCRBS airborne transponder.

secondary target [ORD] The target against which fire is directed when the main fire mission has been accomplished, or when it has become impossible or impracticable for the gun or battery to carry out the main fire mission.

secondary tectonite [GEOL] A tectonite having a deformation fabric.

secondary tide station [ENG] A place at which tide observations are made over a short period to obtain data for a specific purpose.

secondary twinning [CRYSTAL] Twinning of a crystal caused by an external influence, such as pressure in rock.

secondary tympanic membrane [ANAT] The membrane closing the fenestra cochleae.

secondary voltage [ELECTROMAG] The voltage across the secondary winding of a transformer.

secondary wall [BOT] The portion of a plant cell wall produced internal to and following deposition of the primary wall; usually consists of several anisotropic layers, and often has prominent internal rings, spirals, bars, or reticulations.

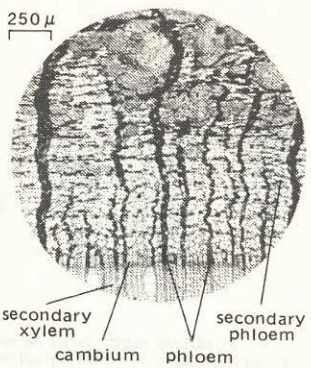
secondary wave [GEOPHYS] *See* S wave. [OPTICS] One of the waves that radiate from each point on a wavefront, according to Huygens' principle.

secondary weapon [ORD] A supporting or auxiliary weapon of a unit, vehicle, position, or aircraft; generally, it is a gun of smaller caliber than the primary weapon, and its purpose is to protect or supplement the fire of the primary weapon.

secondary winding [ELECTROMAG] A transformer winding that receives energy by electromagnetic induction from the primary winding; a transformer may have several secondary windings, and they may provide alternating-current voltages that are higher, lower, or the same as that applied to the primary winding. Abbreviated sec. Also known as secondary.

secondary xylem [BOT] Xylem produced by cambium,

SECONDARY PHLOEM



Photomicrograph of cross section of the secondary phloem of paper birch *(Betula papyrifera)*. *(Forest Products Laboratory, USDA)*

composed of two interpenetrating systems, the horizontal (ray) and vertical (axial).

second boiling point [PHYS CHEM] In certain mixtures, the temperature at which a gas phase develops from a liquid phase upon cooling.

second bottom [GEOL] The first terrace rising over a floodplain.

second breakdown [ELECTR] Destructive breakdown in a transistor, wherein structural imperfections cause localized current concentrations and uncontrollable generation and multiplication of current carriers; reaction occurs so suddenly that the thermal time constant of the collector regions is exceeded, and the transistor is irreversibly damaged.

second-channel interference *See* alternate-channel interference.

second-class ore [MIN ENG] An ore that needs some preliminary treatment before it is of a sufficiently high grade to be acceptable for market. Also known as milling ore.

second crop [AGR] A crop succeeding one already harvested during a growing season; either a regrowth of the harvested crop, or a newly planted crop.

second-degree burn [MED] A burn that is more severe than a first-degree burn and is characterized by blistering as well as reddening of the skin, edema, and destruction of the superficial underlying tissues.

second-derivative map [GEOPHYS] A map of the second vertical derivative of a potential field such as the earth's gravity or magnetic field.

second detector [ELECTR] The detector that separates the intelligence signal from the intermediate-frequency signal in a superheterodyne receiver.

second-foot [HYD] A contraction of cubic foot per second (cfs), the unit of stream discharge commonly used in the United States.

second-foot day [HYD] The volume of water represented by a flow of 1 cubic foot per second for 24 hours; equal to 86,400 cubic feet (approximately 2446.58 cubic meters); used extensively as a unit of runoff volume or reservoir capacity, particularly in the eastern United States.

second generation *See* F_2.

second-generation computer [COMPUT SCI] A computer characterized by the use of transistors rather than vacuum tubes, the execution of input/output operations simultaneously with calculations, and the use of operating systems.

second growth [FOR] New trees that naturally replace trees which have been removed from a forest by cutting or by fire.

second hand [HOROL] The hand that indicates seconds on a timepiece.

second law of motion *See* Newton's second law.

second law of thermodynamics [THERMO] A general statement of the idea that there is a preferred direction for any process; there are many equivalent statements of the law, the best known being those of Clausius and of Kelvin.

second-level controller [CONT SYS] A controller which influences the actions of first-level controllers, in a large-scale control system partitioned by plant decomposition, to compensate for subsystem interactions so that overall objectives and constraints of the system are satisfied. Also known as coordinator.

second-order climatological station [CLIMATOL] A station at which observations of atmospheric pressure, temperature, humidity, winds, clouds, and weather are made at least twice daily at fixed hours, and at which the daily maximum and minimum of temperature, the daily amount of precipitation, and the duration of bright sunshine are observed.

second-order equation [MATH] A differential equation where some term includes the second derivative of the unknown function and no derivative of higher order is present.

second-order leveling [ENG] Spirit leveling that has less stringent requirements than those of first-order leveling, in which lines between benchmarks established by first-order leveling are run in only one direction.

second-order reaction [PHYS CHEM] A reaction whose rate of reaction is determined by the concentration of two chemical species.

second-order station [METEOROL] After U.S. Weather Bureau practice, a station manned by personnel certified to make aviation weather observations or synoptic weather observations.

second-order subroutine [COMPUT SCI] A subroutine that is entered from another subroutine, in contrast to a first-order subroutine; it constitutes the second level of a two-level or higher-level routine. Also known as second-remove subroutine.

second-order transition [THERMO] A change of state through which the free energy of a substance and its first derivatives are continuous functions of temperature and pressure, or other corresponding variables.

second pilot [AERO ENG] A pilot, not necessarily qualified on type, who is responsible for assisting the first pilot to fly the aircraft and is authorized as second pilot.

second quantization [QUANT MECH] A procedure in which the dependent variables of a classical field or a quantum-mechanical wave function are regarded as operators on which commutation rules are imposed; this produces a formalism in which particles may be created and destroyed.

second radiation constant [STAT MECH] A constant appearing in the Planck radiation formula, equal to the speed of light times Planck's constant divided by Boltzmann's constant, or approximately 1.4388 degree-centimeters. Symbolized c_2; C_2.

second-remove subroutine *See* second-order subroutine.

second sound [ACOUS] A transverse sound wave which propagates in smectic liquid crystals, and whose behavior resembles mathematically that of second sound in superfluid helium. [CRYO] A type of wave propagated in the superfluid phase of liquid helium (helium II), in which temperature and entropy variations propagate with no appreciable variation in density or pressure.

seconds pendulum [HOROL] A pendulum measuring 99.353 centimeters between its center of suspension and center of oscillation, and which requires exactly 1 second to swing from one side to another at sea level and 45° latitude.

second strike [ORD] The first counterblow of a war (generally associated with nuclear operations).

second-strike capability [ORD] The ability to survive a first strike with sufficient resources to deliver an effective counterblow (generally associated with nuclear weapons).

second-time-around echo [ELECTR] A radar echo received after an interval exceeding the pulse interval. Also known as second-trip echo.

second-trip echo *See* second-time-around echo.

second water [LAP] The quality or luster of a gemstone which is one grade below first water, such as that of a diamond that contains slight flaws or turbid patches.

second-year ice [OCEANOGR] Sea ice that has survived only one summer's melt. Also known as two-year ice.

secrecy system *See* privacy system.

secretin [BIOCHEM] A basic polypeptide hormone produced by the duodenum in response to the presence of acid; acts to excite the pancreas to activity.

secretion [GEOL] A secondary structure formed of material deposited (from solution) within an empty cavity in any rock, especially a deposit formed on or parallel to the walls of the cavity, the first layer being the outer one. [PHYSIO] **1.** The act or process of producing a substance which is specialized to perform a certain function within the organism or is excreted from the body. **2.** The material produced by such a process.

secretor gene [GEN] A dominant autosomal gene in man which controls secretion of A and B antigenic material in saliva, urine, plasma, and other body fluids; it is not linked to the ABO genes.

secretory granules [CYTOL] Accumulations of material produced within a cell for secretion outside the cell.

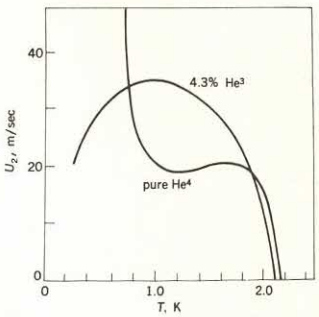
secretory structure [BOT] Plant cells or organizations of plant cells which produce a variety of secretions.

secret weapon [ORD] A weapon closely guarded or kept under concealment so as to be used with advantage before countermeasures can be taken against it.

sectile [MINERAL] Pertaining to a mineral whose texture is tenacious enough to be cut with a knife.

section [CIV ENG] A piece of land usually 1 mile square (640 acres or approximately 2.58999 square kilometers) with boundaries conforming to meridians and parallels within established limits; 1 of 36 units of subdivision of a township in the U.S. Public Land survey system. [COMMUN] Each individual transmission span in a radio relay system; a system has one more section than it has repeaters. [GEOL] **1.** An inclined or vertical surface that is uncovered either naturally (as a sea cliff or stream bank) or artificially (as a strip mine or road cut)

SECOND SOUND



Velocity of second sound U_2 as a function of temperature (kelvins) for pure He^4 and a 4.3% He^3 mixture. *(From J. C. King and H. A. Fairbank, Second sound in He^3–He^4 mixtures below 1° K, Phys. Rev., 93:21, 1954)*

through a part of the earth's crust. **2.** A description or scale drawing of the successive rock units or geologic structures shown by the exposed surface, or their appearance if cut through by any intersecting plane. **3.** *See* columnar section. **4.** *See* geologic section. **5.** *See* type section. **6.** *See* thin section.

sectional center [COMMUN] A long-distance telephone office which connects several primary centers and which is in class number 2; only a regional center has greater importance in routing telephone calls. Abbreviated SC.

sectional conveyor [MECH ENG] A belt conveyor that can be lengthened or shortened by the addition or the removal of interchangeable sections.

sectional core barrel [DES ENG] A core barrel whose length can be increased by coupling unit sections together.

sectional header boiler [MECH ENG] A horizontal boiler in which tubes are assembled in sections into front and rear headers; the latter, in turn, are connected to the boiler drum by vertical tubes.

sectionalized vertical antenna [ELECTROMAG] Vertical antenna that is insulated at one or more points along its length; the insertion of suitable reactances or applications of a driving voltage across the insulated points results in a modified current distribution giving a more desired radiation pattern in the vertical plane.

sectional radiography [ELECTR] The technique of making radiographs of plane sections of a body or an object; its purpose is to show detail in a predetermined plane of the body, while blurring the images of structures in other planes. Also known as laminography; planigraphy; tomography.

section house [CIV ENG] A building near a railroad section for housing railroad workers, or for storing maintenance equipment for the section.

section line [CIV ENG] A line representing the boundary of a section of land. [GRAPHICS] One of a series of parallel lines indicating a cut surface in a mechanical or architectural drawing.

section modulus [MECH] The ratio of the moment of inertia of the cross section of a beam undergoing flexure to the greatest distance of an element of the beam from the neutral axis.

sector [COMPUT SCI] **1.** A portion of a track on a magnetic disk or a band on a magnetic drum. **2.** A unit of data stored in such a portion. [CIV ENG] A clearly defined area or airspace designated for a particular purpose. [ELECTROMAG] Coverage of a radar as measured in azimuth. [MATH] A portion of a circle bounded by two radii and an arc joining their end points. [METEOROL] Something resembling the sector of a circle, as a warm sector between the warm and cold fronts of a cyclone.

sectoral horn [ELECTROMAG] Horn with two opposite sides parallel and the two remaining sides which diverge.

sector boundary [ASTROPHYS] The rapid transition from one polarity to another in the interplanetary magnetic field.

sector disk [PHYS] A device used to reduce the intensity of a beam of light or other electromagnetic radiation by an accurately known amount; in its simplest form, it consists of a circular, opaque disk with one or more sectors cut out of it, rapidly rotating in the path of the beam.

sector display [ELECTR] A display in which only a sector of the total service area of a radar system is shown; usually the sector is selectable.

sectored light [NAV] A light having sectors of different colors or of the same color in specific sectors separated by dark sectors.

sector gate [CIV ENG] A horizontal gate with a pie-slice cross section used to regulate the level of water at the crest of a dam; it is raised and lowered by a rack and pinion mechanism.

sector gear [DES ENG] **1.** A toothed device resembling a portion of a gear wheel containing the center bearing and a part of the rim with its teeth. **2.** A gear having such a device as its chief essential feature. [MECH ENG] A gear system employing such a gear as a principal part.

sector of fire [ORD] An area which is required to be covered by fire by an individual, a weapon, or a unit.

sector scan [ELECTR] A radar scan through a limited angle, as distinguished from complete rotation.

sector search [NAV] A flight or sailing plan of three legs, the turning points being at equal distances along radial lines from a fixed or moving point.

sector structure [ASTROPHYS] The polarity pattern of the interplanetary magnetic field observed during a solar rotation.

sector wind [METEOROL] The average observed or computed wind (direction and speed) at flight level for a given sector of an air route; sectors for over-ocean flights usually consist of 10° of longitude.

secular [ENG] Of or pertaining to a long indefinite period of time.

secular acceleration [ASTRON] An apparent gradual acceleration of the moon's motion in its orbit, as measured relative to mean solar time.

secular equilibrium [NUCLEO] Radioactive equilibrium in which the parent has such a small decay constant that there has been no appreciable change in the quantity of parent present by the time the decay products have reached radioactive equilibrium.

secular parallax [ASTRON] An apparent angular displacement of a star, resulting from the sun's motion.

secular perturbations [ASTROPHYS] Changes in the orbit of a planet, or of a satellite, that operates in extremely long cycles.

secular variable [ASTRON] A star whose brightness appears to have slowly lessened or increased over a time period of centuries.

secular variation [ASTRON] A perturbation of the moon's motion caused by variations in the effect of the sun's gravitational attraction on the earth and moon as their relative distances from the sun vary during the synodic month. [GEOPHYS] The changes, measured in hundreds of years, in the magnetic field of the earth. Also known as geomagnetic secular variation.

secund [BOT] Having lateral members arranged on one side only.

secundine dike [GEOL] A dike which has been intruded into hot country rock.

secure [ORD] To gain possession of a position or terrain feature, with or without force, and to make such disposition as will prevent, as far as possible, its destruction or loss by enemy action.

secure visual communications [COMMUN] The transmission of an encrypted digital signal consisting of animated visual and audio information; the distance may vary from a few hundred feet to thousands of miles.

secure voice [COMMUN] Voice message that is scrambled or coded, therefore not transmitted in the clear.

securinine [PHARM] $C_{13}H_{15}NO_2$ A crystalline compound that forms yellow crystals from a methanol solution and melts at 142–143°C; used to make the nitrate compound for cardiac insufficiency.

securite explosive [MATER] A type of plastic explosive with a balanced oxygen content; it is built up on a nonexplosive, hydrophilic gel and contains oxygen-emitting salts, solid high explosive, and water.

security [COMPUT SCI] The existence and enforcement of techniques which restrict access to data, and the conditions under which data may be obtained. [ORD] **1.** Measures taken by a command to protect itself from espionage, observation, sabotage, annoyance, or surprise. **2.** A condition which results from the establishment and maintenance of protective measures which ensure a state of inviolability from hostile acts or influences. **3.** Protection of supplies or supply establishments against enemy attack, fire, theft, and sabotage.

security classification [ORD] A category or grade assigned to defense information or materiel to indicate the degree of danger to national security that would result from its unauthorized disclosure and the standard of protection required to guard against unauthorized disclosure.

security clearance [ORD] A clearance given to a person to permit access to classified material, equipment, or information up to and including a given classification, provided the person can establish a need-to-know.

security control officer [ORD] In the United States, an officer, warrant officer, or responsible civilian official appointed in each command or agency to exercise staff supervision over the safeguarding of defense information.

security reporting/alerting system [COMMUN] A rapid communications procedure that integrates all U.S. Air Force bases and commands, so that a significant happening at one location, or a pattern of seemingly unrelated happenings at several locations, can serve as a basis for swift security alerting or warning throughout the system.

SED *See* skin erythema dose.

sedation [MED] A state of lessened activity.
sedative [PHARM] An agent or drug that has a quieting effect on the central nervous system.
Sedentaria [INV ZOO] A group of families of polychaete annelids in which the anterior, or cephalic, region is more or less completely concealed by overhanging peristomial structures, or the body is divided into an anterior thoracic and a posterior abdominal region.
sedentary soil [GEOL] Soil that still lies on the rock from which it was formed.
sedifluction [GEOL] The subaquatic or subaerial movement of material in unconsolidated sediments, occurring in the primary stages of diagenesis.
sediment [GEOL] **1.** A mass of organic or inorganic solid fragmented material, or the solid fragment itself, that comes from weathering of rock and is carried by, suspended in, or dropped by air, water, or ice; or a mass that is accumulated by any other natural agent and that forms in layers on the earth's surface such as sand, gravel, silt, mud, fill, or loess. **2.** A solid material that is not in solution and either is distributed through the liquid or has settled out of the liquid.
sedimentary breccia [PETR] A rock composed of fragments that are larger than 2 millimeters in diameter and are the result of sedimentary processes; characterized by imperfect mechanical sorting of its materials and by a higher concentration of fragments from one local source or by a wide variety of materials mixed together in no particular pattern. Also known as sharpstone conglomerate.
sedimentary cycle *See* cycle of sedimentation.
sedimentary differentiation [GEOL] The progressive separation (by erosion and transportation) of a well-defined rock mass into physically and chemically unlike products that are resorted and deposited as sediments in more or less separate areas.
sedimentary dike [GEOL] A tabular mass of sedimentary material that cuts across the structure or bedding of preexisting rock in the manner of an igneous dike and that is formed by the filling of a crack or fissure by forcible injection or intrusion of sediments under abnormal pressure, or by simple infilling of sediments.
sedimentary facies [GEOL] A stratigraphic facies differing from another part or parts of the same unit in both lithologic and paleontologic characters.
sedimentary injection *See* injection.
sedimentary insertion [GEOL] The emplacement of sedimentary material among deposits or rocks already formed, such as by infilling, injection, or intrusion, or through localized subsidence due to solution of underlying rock.
sedimentary intrusion *See* intrusion.
sedimentary laccolith [GEOL] An intrusion of plastic sedimentary material (such as clayey salt breccia) forced up under high pressure and penetrating parallel or nearly parallel to the bedding planes of the invaded formation; characterized by a very irregular thickness.
sedimentary lag [GEOL] Delay between the formation of potential sediment by weathering and its removal and deposition.
sedimentary petrography [PETR] The description and classification of sedimentary rocks. Also known as sedimentography.
sedimentary petrology [PETR] The study of the composition, characteristics, and origin of sediments and sedimentary rocks.
sedimentary quartzite *See* orthoquartzite.
sedimentary rock [PETR] A rock formed by consolidated sediment deposited in layers. Also known as derivative rock; neptunic rock, stratified rock.
sedimentary structure [GEOL] A structure in sedimentary rocks, such as cross-bedding, ripple marks, and sandstone dikes, produced either contemporaneously with deposition (primary sedimentary structures) or shortly after deposition (secondary sedimentary structures).
sedimentary tectonics [GEOL] Folding and deformation in geosynclinal basins caused by subsidence and buckling of strata.
sedimentary trap [GEOL] An area in which sedimentary material accumulates instead of being transported farther, as in an area between high-energy and low-energy environments.
sedimentary tuff [GEOL] A tuff containing a small amount of nonvolcanic detrital material.
sedimentary volcanism [GEOL] The expelling, extruding, or breaking through of overlying formations by a mixture of sediment, water, and gas, driven by the gas under pressure.
sedimentation [GEOL] **1.** The act or process of accumulating sediment in layers. **2.** The process of deposition of sediment. [MET] Classification of metal powders by the rate of settling in a fluid.
sedimentation balance [ANALY CHEM] A device to measure and record the weight of sediment (solid particles settled out of a liquid) versus time; used to determine particle sizes of fine solids.
sedimentation basin [GEOL] A depression in the ocean floor with a wide, flat bottom in which sediment accumulates.
sedimentation coefficient [PHYS CHEM] In the sedimentation of molecules in an accelerating field, such as that of a centrifuge, the velocity of the boundary between the solution containing the molecules and the solvent divided by the accelerating field. (In the case of a centrifuge, the accelerating field equals the distance of the boundary from the axis of rotation multiplied by the square of the angular velocity in radians per second.)
sedimentation constant [PHYS CHEM] A quantity used in studying the behavior of colloidal particles subject to forces, especially centrifugal forces; it is equal to $2r^2(\rho - \rho')/9\eta$, where r is the particle's radius, ρ and ρ' are reciprocals of partial specific volumes of particle and medium respectively, and η is the medium's viscosity.
sedimentation curve [GEOL] A curve showing cumulatively, and in successive units of time, the amount of sediment accumulated or removed from an originally uniform suspension.
sedimentation diameter [GEOL] The diameter of a sedimentary particle, determined from the measurement of a hypothetical sphere of the same gravity and settling velocity as those of a given sedimentary particle in the same fluid.
sedimentation equilibrium [ANALY CHEM] The equilibrium between the forward movement of a sample's liquid-sediment boundary and reverse diffusion during centrifugation; used in molecular-weight determinations.
sedimentation radius [GEOL] One-half of the sedimentation diameter.
sedimentation rate [GEOL] *See* rate of sedimentation. [PATH] The rate at which red blood cells settle out of anticoagulated blood.
sedimentation tank [ENG] A tank in which suspended matter is removed either by quiescent settlement or by continuous flow at high velocity and extended retention time to allow deposition.
sedimentation trend [GEOL] The direction in which sediments were laid down.
sedimentation trough [GEOL] A depression in the ocean floor with a narrow U- or V-shaped bottom in which sediment accumulates.
sedimentation unit [GEOL] A sedimentary deposit formed during one distinct act of sedimentation.
sedimentation velocity [ANALY CHEM] The rate of movement of the liquid-sediment boundary in the sample holder during centrifugation; used in molecular-weight determinations.
sediment bulb [ENG] A bulb for holding sediment that settles from the liquid in a tank.
sediment charge [HYD] In a stream, the ratio of the weight or volume of sediment to the weight or volume of water passing a given cross section per unit of time.
sediment concentration [HYD] The ratio of the dry weight of the sediment in a water-sediment mixture (obtained from a stream or other body of water) to the total weight of the mixture.
sediment corer [ENG] A heavy coring tube which punches out a cylindrical sediment section from the ocean bottom.
sediment-delivery ratio [GEOL] The ratio of sediment yield of a drainage basin to the total amount of sediment moved by sheet erosion and channel erosion.
sediment discharge [HYD] The amount of sediment moved by a stream in a given time, measured by dry weight or by volume. Also known as sediment-transport rate.
sediment discharge rating [HYD] A relationship between the discharge of sediment and the total discharge of the stream. Also known as silt discharge rating.
sediment load [HYD] The solid material that is transported by a natural agent, especially by a stream.

sedimentography *See* sedimentary petrography.

sedimentology [GEOL] The science concerned with the description, classification, origin, and interpretation of sediments and sedimentary rock.

sediment-production rate [GEOL] Sediment yield per unit of drainage area, derived by dividing the annual sediment yield by the area of the drainage basin.

sediment station [HYD] A vertical cross-sectional plane of a stream, usually normal to the mean direction of flow, where samples of suspended load are collected on a systematic basis for determining concentration, particle-size distribution, and other characteristics.

sediment-transport rate *See* sediment discharge.

sediment trap [ENG] A device for measuring the accumulation rate of sediment on the floor of a body of water.

sediment vein [GEOL] A sedimentary dike formed by the filling of a fissure from above with sedimentary material.

sediment yield [GEOL] The amount of material eroded from the land surface by runoff and delivered to a stream system.

sedoheptulose [BIOCHEM] A seven-carbon ketose sugar widely distributed in plants of the Crassulaceae family; a significant intermediary compound in the cyclic regeneration of D-ribulose.

Seebeck coefficient [ELECTR] The ratio of the open-circuit voltage to the temperature difference between the hot and cold junctions of a circuit exhibiting the Seebeck effect.

Seebeck effect [ELECTR] The development of a voltage due to differences in temperature between two junctions of dissimilar metals in the same circuit. [GRAPHICS] A photographic emulsion that is exposed until a faint visible image appears, and is then exposed to colored light and takes on the color of the light to which it is exposed.

seed [BOT] A fertilized ovule containing an embryo which forms a new plant upon germination. [CHEM] A small, single crystal of a desired substance added to a solution to induce crystallization. [SOLID STATE] A small, single crystal of semiconductor material used to start the growth of a large, single crystal for use in cutting semiconductor wafers.

seed charge [CHEM] A small amount of material added to a supersaturated solution to initiate precipitation.

seed coat [BOT] The envelope which encloses the seed except for a tiny pore, the micropyle.

seed core [NUCLEO] A reactor core that includes a relatively small volume of highly enriched uranium, surrounded by a much larger volume of natural uranium or thorium in a blanket; as a result of fission in the seed uranium, neutrons are supplied to the blanket, which is made to furnish a substantial fraction of the core power. Also known as spiked core.

seed cotton [AGR] The material in mature bolls containing both cotton fiber and seeds.

seed down [AGR] To sow seeds for grass or forage legumes.

seed fern [PALEOBOT] The common name for the extinct plants classified as Pteridospermae, characterized by naked seeds borne on large, fernlike fronds.

seeding [AGR] The planting of seed. [CHEM] The adding of a seed charge to a supersaturated solution, or a single crystal of a desired substance to a solution of the substance to induce crystallization.

seedling [BOT] **1.** A plant grown from seed. **2.** A tree younger and smaller than a sapling. **3.** A tree grown from a seed.

seeing [ASTRON] The clarity and steadiness of an image of a star in a telescope. [ELECTR] The introduction of atoms with a low ionization potential into a hot gas to increase electrical conductivity.

seek [COMPUT SCI] **1.** To position the access mechanism of a random-access storage device at a designated location or position. **2.** The command that directs the positioning to take place. [ORD] To go toward a target or other object in reaction to some influence such as heat, light, sound, or other radiation emitted by the target or object.

seek area [COMPUT SCI] An area of a direct-access storage device, such as a magnetic disk file, assigned to hold records to which rapid access is needed, and located so that the physical characteristics of the device permit such access. Also known as cylinder.

seeker [ORD] **1.** Any moving object, especially a missile, that finds its target by means of a device attracted to light, heat, radio waves, sound, or other radiation emitted by the target. **2.** The device used in such an object.

SEGMENTAL METER

Orifice plate used in a segmental meter.

Seelandian [GEOL] A European stage of geologic time in the lowermost Paleocene.

seen fire [ORD] Fire which is continuously aimed at the future position of an aircraft, the aim being derived from visual observation.

seep [GEOL] An area, generally small, where water, or another liquid such as oil, percolates slowly to the land surface. [PETRO ENG] An oil spring whose daily yield ranges from a few drops to several barrels of oil; usually located at low elevations where water has accumulated.

seepage [FL MECH] The slow movement of water or other fluid through a porous medium. [HYD] The slow movement of water through small openings and spaces in the surface of unsaturated soil into or out of a body of surface or subsurface water.

seepage face [GEOL] A belt on a slope, such as the bank of a stream, along which water emerges at atmospheric pressure and flows down the slope.

seepage lake [HYD] **1.** A closed lake that loses water mainly by seepage through the walls and floor of its basin. **2.** A lake that receives its water mainly from seepage.

seersucker [TEXT] A washable fabric with crinkled stripes made by altering the tension of the warp threads during weaving.

Segas process [CHEM ENG] A process for the production of low-Btu gas by the catalytic method using a fixed bed catalyst, lime-bauxite mixture bonded with bentonite.

Seger cone [MATER] Any of a series of conical shaped thermometric devices made of materials that deform at specified temperatures; consists of mixtures of clay, salt, and other materials in such proportions that their softening temperatures vary progressively through the series; used to indicate temperatures of furnaces, particularly in ceramic industries. Also known as pyrometric cone.

segment [COMPUT SCI] **1.** A single section of an overlay program structure, which can be loaded into the main memory when and as needed. **2.** In some direct-access storage devices, a hardware-defined portion of a track having fixed data capacity. [MATH] **1.** A segment of a line or curve is any connected piece. **2.** A segment of a circle is a portion of the circle bounded by a chord and an arc subtended by the chord. [NAV] In air operations, a basic functional division of an instrument approach procedure; it bears a fixed orientation with respect to the course to be flown; it is assigned specific geometric coordinates which uniquely determine its position; the location of the segment is assigned with respect to the obstacles in the operations area.

segmental arch [ARCH] A round arch whose curved surface is less than a semicircle.

segmental gate *See* tainter gate.

segmental meter [ENG] A variable head meter whose orifice plate has an opening in the shape of a half circle.

segmental reflex [PHYSIO] A reflex arc having afferent inputs by way of the spinal dorsal roots, and efferent outputs over spinal ventral roots of the same or adjacent segments.

segmentation [COMPUT SCI] The division of virtual storage into identifiable functional regions, each having enough addresses so that programs or data stored in them will not assign the same addresses more than once. [ZOO] *See* metamerism.

segmentation cavity *See* blastocoele.

segment die [MET] A die made of parts that can be disassembled to facilitate removal of the workpiece. Also known as split die.

segment mark [COMPUT SCI] A special character written on tape to separate one section of a tape file from another.

segment saw [MECH ENG] A saw consisting of steel segments attached around the edge of a flange and used for cutting veneer.

Segrè chart [NUC PHYS] A chart of the nuclides which is laid off in squares, each square displaying data about a nuclide; each column contains nuclides with a given neutron number and each row contains nuclides with a given atomic number; successive columns and rows represent successively higher numbers of neutrons and protons.

segregated ice [HYD] Ice films, seams, lenses, rods, or layers generally 1 to 150 millimeters thick that grow in permafrost by drawing in water as the ground freezes. Also known as Taber ice.

segregated vein [GEOL] A fissure filled with mineral matter

derived from country rock by the action of percolating water. Also known as exudation vein.

segregating unit [COMPUT SCI] A punched-card machine that selects from a group of punched cards those cards satisfying certain criteria; it has only two output hoppers, one for cards satisfying the criteria and one for those that do not, in contrast with a card sorter which has multiple outputs.

segregation [ENG] **1.** The keeping apart of process streams. **2.** In plastics molding, a close succession of parallel, relatively narrow, and sharply defined wavy lines of color on the surface of a plastic that differ in shade from surrounding areas and create the impression that the components have separated. [GEN] The separation of alleles and homologous chromosomes during meiosis in the formation of gametes. [GEOL] The formation of a secondary feature within a sediment after deposition due to chemical rearrangement of minor constituents. [MET] The nonuniform distribution of alloying elements, impurities, or microphases, resulting in localized concentrations.

segregation banding [PETR] A compositional band in gneisses that is the result of segregation of material from an originally homogeneous rock.

segregation distorter [GEN] An abnormality of meiosis which produces a distortion of the 1:1 segregation ratio in a heterozygote.

seiche [FL MECH] An oscillation of a fluid body in response to the disturbing force having the same frequency as the natural frequency of the fluid system. [OCEANOGR] A standing-wave oscillation of an enclosed or semienclosed water body, continuing pendulum-fashion after cessation of the originating force, which is usually considered to be strong winds or barometric pressure changes.

Seidel aberrations [OPTICS] The five types of aberration of monochromatic light deduced from the Seidel theory, namely, spherical aberration, coma, astigmatism, curvature of field, and distortion.

Seidel method [MATH] A basic iterative procedure for solving a system of linear equations by reducing it to triangular form. Also known as Gauss-Seidel method.

Seidel theory [OPTICS] A theory of aberrations in which the sine of the angle which a ray makes with the optical axis is approximated by the first two terms in the sine's Taylor expansion (the first- and third-order terms), rather than the first term alone, as in a first-order theory.

seif dune [GEOL] A large, tapering, longitudinal dune or chain of sand dunes with a sharp crest that in profile consists of a succession of peaks and cols.

seignette-electric *See* ferroelectric.

seine net [ENG] A net used to catch fish by encirclement, usually by closure of the two ends and the bottom.

seismic activity *See* seismicity.

seismic anisotropy [GEOPHYS] The dependence of seismic velocity on the direction of propagation.

seismic area *See* earthquake zone.

seismic belt [GEOPHYS] An elongate seismic zone, such as that in the Circum-Pacific.

seismic constant [CIV ENG] In building codes dealing with earthquake hazards, an arbitrarily set quantity of steady acceleration, in units of acceleration of gravity, that a building must withstand.

seismic detector [ENG] An instrument that receives seismic impulses.

seismic discontinuity [GEOPHYS] **1.** A surface at which velocities of seismic waves change abruptly. **2.** A boundary between seismic layers of the earth. Also known as interface; velocity discontinuity.

seismic efficiency [GEOPHYS] The proportion of the total available strain energy which is radiated as seismic waves.

seismic-electric effect [GEOPHYS] The variation of resistivity with elastic deformation of rocks.

seismic event [GEOPHYS] An earthquake or a somewhat similar transient earth motion caused by an explosion.

seismic exploration [ENG] The exploration for economic deposits by using seismic techniques, usually involving explosions, to map subsurface structures.

seismic gradient [GEOPHYS] The variation of seismic velocity with distance in a specified direction. Also known as velocity gradient.

seismic hazard [GEOPHYS] Any physical phenomenon, such as ground shaking or ground failure, that is associated with an earthquake and that may produce adverse effects on human activities.

seismic intensity [GEOPHYS] The average rate of flow of seismic-wave energy through a unit section perpendicular to the direction of propagation.

seismicity [GEOPHYS] The phenomena of earth movements. Also known as seismic activity.

seismic map [GEOPHYS] A contour map constructed from seismic data, the z coordinate of which could be either time or depth.

seismic profiler [ENG] A continuous seismic reflection system used to study the structure beneath the sea floor to depths of 10,000 feet (3000 meters) or more, using a rotating drum to record reflections.

seismic prospecting [GEOPHYS] Geophysical prospecting based on the analysis of elastic waves generated in the earth by artificial means.

seismic ray [GEOL] The path along which seismic energy travels.

seismic risk [GEOPHYS] **1.** An assortment of earthquake effects that range from ground shaking, surface faulting, and landsliding to economic loss and casualties. **2.** The probability that social or economic consequences of earthquakes will equal or exceed specified values at a site, at several sites, or in an area, during a specified exposure time.

seismic sea wave *See* tsunami.

seismic shooting [ENG] A method of geophysical prospecting in which elastic waves are produced in the earth by the firing of explosives.

seismic survey *See* reflection survey.

seismic velocity [GEOPHYS] The rate of propagation of an elastic wave, usually measured in kilometers per second.

seismic vertical [GEOL] **1.** The point on the earth's surface directly over the point within the earth from which an earthquake impulse originates. **2.** The vertical line between the surface point and the point of origin.

seismochronograph [ENG] A chronograph for determining the time at which an earthquake shock appears.

seismogram [ENG] The record made by a seismograph.

seismograph [ENG] An instrument that records vibrations in the earth, especially earthquakes.

seismology [GEOPHYS] **1.** The study of earthquakes. **2.** The science of strain-wave propagation in the earth.

seismometer [ENG] An instrument that detects movements in the earth.

seismoscope [ENG] An instrument for recording only the occurrence or time of occurrence (not the magnitude) of an earthquake.

Seisonacea [INV ZOO] A monofamiliar order of the class Rotifera characterized by an elongated jointed body with a small head, a long slender neck region, a thick fusiform trunk, and an elongated foot terminating in a perforated disk.

Seisonidea [INV ZOO] The equivalent name for Seisonacea.

seistan [METEOROL] A strong wind of monsoon origin which blows from between the northwest and north-northwest and sets in about the end of May or early June in the historic Seistan district of eastern Iran and Afghanistan; it continues almost without cessation until about the end of September; because of its duration it is known as the wind of 120 days (bad-i-sad-o-bistroz).

Seitz filter [MICROBIO] A bacterial filter made of asbestos and used to sterilize solutions without the use of heat.

seizure [MED] **1.** The sudden onset or recurrence of a disease or an attack. **2.** Specifically, an epileptic attack, fit, or convulsion.

Sejournet process [MET] During hot extrusion, the lubrication and insulation of a metal billet with molten glass. Also known as Ugine Sejournet process.

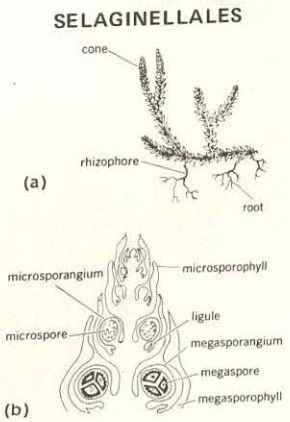
sejunction water [HYD] Capillary water bounded by menisci, and in static equilibrium in the soil above the capillary fringe.

sekaninaite [MINERAL] A violet variety of cordierite in which magnesium is largely replaced by ferrous iron. Also known as iron cordierite.

Selachii [VERT ZOO] An order of elasmobranchs including all fossil sharks, except Cladoselachii and Pleuracanthodii.

Selaginellales [BOT] The plant order of small club mosses, containing one living genus, *Selaginella;* distinguished from other lycopods in being heterosporous and in having a ligule borne on the upper base of the leaf.

Primitive selachian *Hybodus hauffianus*, a Mesozoic shark about 7½ feet (2.3 meters) long, showing claspers and the constricted base for paired fins that differentiates the Selachii from Cladoselachii. *(After Smith Woodward)*



Selaginella, or small club moss. *(a)* Plant with creeping, dichotomous stems bearing numerous, tiny leaves and leafless branches, or rhizophores *(from H. J. Fuller and O. Tippo, College Botany, Holt, 1949).* *(b)* Diagram of a longitudinal section through a cone *(after Lyon from H. J. Fuller and O. Tippo, College Botany, rev. ed., Holt, 1954).*

selagite [PETR] A mica trachyte characterized by abundant tabular biotite crystals in a holocrystalline groundmass of orthoclase and diopside, and possibly quartz and olivine.

selatan [METEOROL] Strong, dry, southerly winds of the southeast monsoon in the Netherlands East Indies and the Celebes.

select [COMPUT SCI] **1.** To choose a needed subroutine from a file of subroutines. **2.** To take one alternative if the report on a condition is of one state, and another alternative if the report on the condition is of another state. **3.** To pull from a mass of data certain items that require special attention; selection of individual cards is accomplished automatically by either the sorter or collator, according to the type of selection.

select bit [COMPUT SCI] The bit (or bits) in an input/output instruction word which selects the function of a specified device. Also known as subdevice bit.

selected areas *See* Kapetyn selected areas.

selected mine [ORD] A controlled underwater mine which has been connected, through the selector assembly, to the control equipment at the shore station; it is exclusive of all other mines in its group and may be fired, tested, or disarmed independently of the remainder of the group.

selected time [IND ENG] An observed actual time value for an element, measured by time study, which is identified as being the most representative of the situation observed.

selecting circuit [ELEC] A simple switching circuit that receives the identity (the address) of a particular item and selects that item from among a number of similar ones.

selection [COMMUN] The process of addressing a call to a specific station in a selective calling system. [GEN] Any natural or artificial process which favors the survival and propagation of individuals of a given genotype in a population.

selection bias [STAT] A bias built into an experiment by the method used to select the subjects which are to undergo treatment.

selection check [COMPUT SCI] Electronic computer check, usually automatic, to verify that the correct register, or other device, is selected in the performance of an instruction.

selection coefficient [GEN] A measure of the rate of transmission through successive generations of a given allele compared to the rate of transmission of another (usually the wild-type) allele.

selection pressure [EVOL] Those factors that influence the direction of natural selection.

selection rules [PHYS] Rules summarizing the changes that must take place in the quantum numbers of a quantum-mechanical system for a transition between two states to take place with appreciable probability; transitions that do not agree with the selection rules are called forbidden and have considerably lower probability.

selective absorption [ELECTROMAG] A greater absorption of electromagnetic radiation at some wavelengths (or frequencies) than at others.

selective acidizing [PETRO ENG] Oil-reservoir acid treatment (acidizing) in which the acid is injected into specific reservoir zones; contrasted with uncontrolled acidizing in which the acid solution is simply pumped down the casing and is forced into adjacent rock.

selective adsorbent [CHEM ENG] Material that will selectively adsorb (or reject) one or more specific components from a multicomponent mixture of gases or liquids; common adsorbents are silica gel, carbon and activated carbon, activated alumina, and synthetic or natural zeolites (molecular sieves).

selective breeding [BIOL] Breeding of animals or plants having desirable characters.

selective calling system [COMMUN] A radio communications system in which the central station transmits a coded call that activates only the receiver to which that code is assigned.

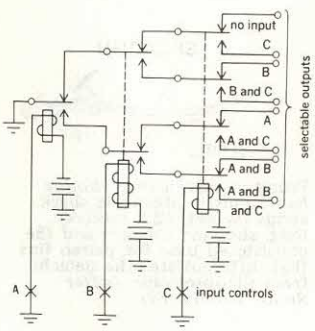
selective circuit [ELEC] A circuit that transmits certain types of signals and fails to transmit or attenuates others.

selective cracking [CHEM ENG] A refinery process in which recycled stock is distilled in equipment kept separate from that used for distillation of original stock.

selective dump [COMPUT SCI] An edited or nonedited listing of the contents of selected areas of memory or auxiliary storage.

selective fading [COMMUN] Fading that is different at different frequencies in a frequency band occupied by a modulated wave, causing distortion that varies in nature from instant to instant.

SELECTING CIRCUIT



Circuit diagram of a simple relay selecting circuit. Three relays (A, B, C) are used by the circuit to select one of eight outputs according to the combination in which the three relays are operated or not operated.

selective filling [MIN ENG] Filling by hand so that stone or dirt is rejected and only clean coal or ore is loaded.

selective flotation [MIN ENG] The surface or froth selecting of the valuable minerals rather than the gangue.

selective fracturing [PETRO ENG] Procedures for obtaining multiple formation fractures in a specific reservoir zone by plugging casing perforations or by isolating (with packers) the desired zone prior to fracturing operations.

selective fusion [GEOL] The fusion of only a portion of a mixture, such as a rock.

selective heating [MET] Heating only certain portions of a workpiece to impart desired properties.

selective identification feature [ELECTR] Airborne pulse-type transponder which provides automatic selective identification of aircraft in which it is installed to ground, shipboard, or airborne identification, friend or foe–selective identification feature recognition installations.

selective interference [COMMUN] Interference whose energy is concentrated in a narrow band of frequencies.

selective jamming [ELECTR] Jamming in which only a single radio channel is jammed.

selective loading [NAV ARCH] The arrangement and stowage of equipment and supplies aboard ship in a manner designed to facilitate issues to units.

selective medium [MICROBIO] A bacterial culture medium containing an individual organic compound as the sole source of carbon, nitrogen, or sulfur for growth of an organism.

selective mining [MIN ENG] A method of mining whereby ore of unwarranted high value is mined in such manner as to make the low-grade ore left in the mine incapable of future profitable extraction; in other words, the best ore is selected in order to make good mill returns, leaving the low-grade ore in the mine.

selective permeability [PHYS] The property of a membrane or other material that allows some substances to pass through it more easily than others.

selective plating [MET] An electrochemical process in which the base metal is masked, except the area to receive the plate, with a nonconductive material; the masked metal, with an electric current running through it, is then sprayed with a solution of plating metal which adheres only to the unmasked section.

selective polymerization [CHEM ENG] The polymerization of a single type of molecule in a mixture of monomers; for example, the production of diisobutylene from a mixture of butylenes.

selective quenching [MET] Quenching only certain portions of a piece of metal.

selective radiator [PHYS] An object that emits electromagnetic radiation whose spectral energy distribution differs from that of a blackbody with the same temperature.

selective reflection [ELECTROMAG] Reflection of electromagnetic radiation more strongly at some wavelengths (or frequencies) than at others.

selective replacement [GEOL] The replacement of one mineral by another, preferentially within an altered rock mass.

selective ringing [COMMUN] Telephone arrangement on party lines, in which only the bell of the called subscriber rings, with other bells on the party line remaining silent.

selective scattering [ELECTROMAG] Scattering of electromagnetic radiation more strongly at some wavelengths than at others.

selective solubility diffusion [CHEM ENG] The transmission of fluids through a nonporous, polymeric barrier (membrane) by an adsorption-solution-diffusion-desorption sequence.

selective solvent [CHEM ENG] A solvent that, at certain temperatures and ratios with other materials, preferentially dissolves more of one component of a liquid or solids mixture than of another, thereby permitting partial separation.

selective trace [COMPUT SCI] A tracing routine wherein only instructions satisfying certain specified criteria are subject to tracing.

selective transmission [MECH ENG] A gear transmission with a single lever for changing from one gear ratio to another; used in automotive vehicles.

selectivity [ELECTR] The ability of a radio receiver to separate a desired signal frequency from other signal frequencies, some of which may differ only slightly from the desired value.

selectivity coefficient [ANALY CHEM] Ion equilibria relationship formula for ion-exchange-resin systems.

selectivity diagram [CHEM ENG] A triangular plot of solubilities in a ternary liquid system; used to calculate the ability of a solvent to extract a component from a mixture (its selectivity) at various concentration combinations.

selector [COMPUT SCI] Computer device which interrogates a condition and initiates a particular operation dependent upon the report. [CIV ENG] A device that automatically connects the appropriate railroad signal to control the track selected. [ELEC] An automatic or other device for making connections to any one of a number of circuits, such as a selector relay or selector switch. [ENG] **1.** A device for selecting objects or materials according to predetermined properties. **2.** A device for starting or stopping at predetermined positions. [MECH ENG] **1.** The part of the gearshift in an automotive transmission that selects the required gearshift bar. **2.** The lever with which a driver operates an automatic gearshift. [MET] A converter that separates purified copper from residue in a single operation.

selector channel [COMPUT SCI] A unit which connects high-speed input/output devices, such as magnetic tapes, disks, and drums, to a computer memory.

selector switch [ELEC] A manually operated multiposition switch. Also called multiple-contact switch.

s-electron [ATOM PHYS] An atomic electron that is described by a wave function with orbital angular momentum quantum number of zero in the independent particle approximation.

selenic acid [INORG CHEM] H_2SeO_4 A highly toxic, water-soluble, white solid, melting point 58°C, decomposing at 260°C.

selenide [INORG CHEM] M_2Se A binary compound of divalent selenium, such as Ag_2Se, silver selenide. [ORG CHEM] An organic compound containing divalent selenium, such as $(C_2H_5)_2Se$, ethyl selenide.

selenious acid *See* selenous acid.

selenite [MINERAL] The clear, colorless variety of gypsum crystallizing in the monoclinic system and occurring in crystals or in crystal mass. Also known as spectacle stone.

selenite butte [GEOL] A small tabular mound, rising 1–3 meters above a playa, composed of lake sediments capped with a veneer of selenite formed by deflation of the playa or by the effects of rising groundwater.

selenium [CHEM] A highly toxic, nonmetallic element in group VI, symbol Se, atomic number 34; steel-gray color; soluble in carbon disulfide, insoluble in water and alcohol; melts at 217°C; and boils at 690°C; used in analytical chemistry, metallurgy, and photoelectric cells, and as a lube-oil stabilizer and chemicals intermediate.

selenium bromide [INORG CHEM] Any of three compounds of selenium and bromine: Se_2Br_2, a red liquid that melts at −46°C, also known as selenium monobromide; $SeBr_2$, a brown liquid, also known as selenium dibromide; and $SeBr_4$, orange, carbon-disulfide-soluble crystals, also known as selenium tetrabromide.

selenium cell [ELECTR] A photoconductive cell in which a thin film of selenium is used between suitable electrodes; the resistance of the cell decreases when the illumination is increased.

selenium dibromide *See* selenium bromide.

selenium diode [ELECTR] A small area selenium rectifier which has characteristics similar to those of selenium rectifiers used in power systems.

selenium dioxide [INORG CHEM] SeO_2 Water- and alcohol-soluble, white to reddish, lustrous crystals; melts at 340°C; used in medicine, and as an oxidizing agent and catalyst. Also known as selenous acid anhydride; selenous anhydride; selenium oxide.

selenium disulfide *See* selenium sulfide.

selenium halide [INORG CHEM] A compound of selenium and a halogen, for example, Se_2Br_2, $SeBr_2$, $SeBr_4$; Se_2Cl_2, $SeCl_2$, $SeCl_4$; Se_2I_2, SeI_4.

selenium monobromide *See* selenium bromide.

selenium nitride [INORG CHEM] Se_2N_2 A water-insoluble, yellow solid that explodes at 200°C.

selenium oxide *See* selenium dioxide.

selenium rectifier [ELECTR] A metallic rectifier in which a thin layer of selenium is deposited on one side of an aluminum plate and a conductive metal coating is deposited on the selenium.

selenium stainless steel [MET] Stainless steel to which about 0.1 percent or more selenium is added to improve machinability.

selenium sulfide [PHARM] SeS_2 A bright orange powder with a melting point of 100°C; used in medicine. Also known as selenium disulfide.

selenium tetrabromide *See* selenium bromide.

selenocentric [ASTRON] Pertaining to the moon's center.

selenodesy [ASTRON] The branch of applied mathematics that determines, by observation and measurement, the exact positions of points on the moon's surface, as well as the shape and size of the moon.

selenodetic [ASTRON] Of, or pertaining to, or determined by selenodesy.

selenodont [VERT ZOO] **1.** Being or pertaining to molars having crescentic ridges on the crown. **2.** A mammal with selenodont dentition.

selenofault [ASTRON] A geological fault in the lunar surface.

selenographic coordinates [ASTRON] A coordinate system for specifying positions on the moon's surface relative to the moon's center, consisting of selenographic latitude and longitude, or of a cartesian coordinate system.

selenographic latitude [ASTRON] The angular distance, measured along a meridian, between a point on the moon's surface and the moon's equator.

selenographic longitude [ASTRON] The angular distance, measured along the moon's equator, between the meridian passing through a point on the moon's surface and the first lunar meridian.

selenography [ASTRON] Studies pertaining to the physical geography of the moon; specifically, referring to positions on the moon measured in latitude from the moon's equator and in longitude from a reference meridian.

selenology [ASTRON] A branch of astronomy that treats of the moon, including such attributes as magnitude, motion and constitution. Also known as lunar geology.

Selenomonas [MICROBIO] A genus of gram-negative, strictly anaerobic bacteria of uncertain affiliation; short, crescent-shaped, motile cells with a tuft of up to 16 flagella; ferment carbohydrates and some amino acids.

selenomorphology [ASTRON] The study of landforms on the moon, including their origin, evolution, and distribution.

selenone [ORG CHEM] A group of organic selenium compounds with the general formula R_2SeO_2.

selenonic acid [ORG CHEM] Any organic acid containing the radical $—SeO_3H$; analogous to a sulfonic acid.

selenosis [MED] Selenium poisoning.

selenotrope [ENG] A device used in geodetic surveying for reflecting the moon's rays to a distant point, to aid in long-distance observations.

selenous acid [INORG CHEM] H_2SeO_3 Colorless, transparent crystals; soluble in water and alcohol, insoluble in ammonia; decomposes when heated; used as an analytical reagent. Also spelled selenious acid.

selenous acid anhydride *See* selenium dioxide.

selenous anhydride *See* selenium dioxide.

selenoxide [ORG CHEM] A group of organic selenium compounds with the general formula R_2SeO.

self-absorption [NUCLEO] Absorption of ionizing radiation by the material that emits the radiation, thus reducing the radiation level against which further shielding must be provided. Also known as self-shielding. [SPECT] Reduction of the intensity of the center of an emission line caused by selective absorption by the cooler portions of the source of radiation. Also known as self-reduction; self-reversal.

self-acting door [MIN ENG] A ventilation door that is constructed of two halves which move on small pulleys and which are forced apart centrally as the trams come in contact with the converging beams that operate the door.

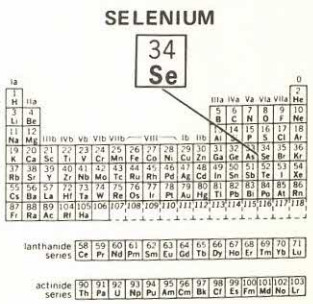
self-acting incline *See* gravity haulage.

self-adapting system [SYS ENG] A system which has the ability to modify itself in response to changes in its environment.

self-adjoint operator [MATH] A linear operator which is identical with its adjoint operator.

self-adjusting communications *See* adaptive communications.

self-advancing supports [MIN ENG] An assembly of hydraulically operated steel hydraulic supports, on a long-wall



Periodic table of the chemical elements showing the position of selenium.

face, which are moved forward as a unit. Also known as walking props.

self-analysis [PSYCH] The attempt to gain insight into one's own psychic state and behavior.

self-bias [ELECTR] A grid bias provided automatically by the resistor in the cathode or grid circuit of an electron tube; the resulting voltage drop across the resistor serves as the grid bias. Also known as automatic C bias; automatic grid bias.

self-bias transistor circuit [ELECTR] A transistor with a resistance in the emitter lead that gives rise to a voltage drop which is in the direction to reverse-bias the emitter junction; the circuit can be used even if there is zero direct-current resistance in series with the collector terminal.

self-centering chuck [MECH ENG] A drill chuck that, when closed, automatically positions the drill rod in the center of the drive rod of a diamond-drill swivel head.

self-chambering [ORD] Ability of a weapon to chamber cartridges without manual aid.

self-charge [QUANT MECH] A contribution to a particle's electric charge arising from the vacuum polarization in the neighborhood of the bare charge.

self-checking code [COMPUT SCI] An encoding of data so designed and constructed that an invalid code can be rapidly detected; this permits the detection, but not the correction, of almost all errors. Also known as error-checking code; error-detecting code.

self-checking number [COMPUT SCI] A number with a suffix figure related to the figure of the number, used to check the number after it has been transferred from one medium or device to another.

self-cleaning [ENG] Pertaining to any device that is designed to clean itself without disassembly, for example, a filter in which accumulated filter cake or sludge is removed by an internal scraper or by a blowdown or backwash action.

self-cleaning contact *See* wiping contact.

self-complementing code [COMPUT SCI] A binary-coded-decimal code in which the combination for the complement of a digit is the complement of the combination for that digit.

self-conjugate particle [PARTIC PHYS] An elementary particle which is identical to its antiparticle; it must have zero charge, lepton number, baryon number, and hypercharge.

self-consistent field method *See* Hartree method.

self-contained base-line system [ORD] System of target location whereby the target is located in azimuth and range by using a self-contained range finder.

self-contained breathing apparatus [ENG] A portable breathing unit which permits freedom of movement.

self-contained data-base management system [COMPUT SCI] A data-base management system that is in no way an extension of any programming language, and is usually quite independent of any language.

self-contained night attack [ORD] The capability of a single aircraft to accurately navigate to a target area, acquire and strike a designated target, and return to the operating base during the hours of darkness.

self-contained portable electric lamp [MIN ENG] An electric lamp which is operated by an electric battery and is specifically designed to be carried about by its user.

self-contained range finder [ENG] Instrument used for measuring range by direct observation, without using a base line; the two types are the coincidence range finder and the stereoscopic range finder.

self-defocusing [OPTICS] The action of a medium whose index of refraction decreases with increasing optical intensity on a laser beam that is more intense in the center than at the edges, whereby the profile of the refractive index corresponds to that of a negative lens, causing the beam to defocus.

self-destroying [ORD] In connection with a fuse or tracer, indicating that the projectile, rocket, or missile with which it is used will be destroyed (functioned) in flight prior to ground impact in case the target is missed.

self-destroying fuse [ORD] A fuse designed to burst a projectile before the end of its flight.

self-destruct charge [ORD] An explosive element which operates in conjunction with that part of the guided missile which, of itself or by command, senses a catastrophic flight malfunction and destroys the missile.

self-destruction [ORD] The event, due to fuse or tracer action without outside stimulus when provided for in the design, in which the fuse or tracer effects projectile or missile destruction, after flight to a range greater than that of the target.

self-destruction equipment [ORD] Any equipment that may be destroyed by a self-contained explosive.

self-differentiation [PHYSIO] The differentiation of a tissue, even when isolated, solely as a result of intrinsic factors after determination.

self-diffusion [SOLID STATE] The spontaneous movement of an atom to a new site in a crystal of its own species.

self-dumping cage [MIN ENG] A cage in which the deck is pivoted so that as the cage is lifted, toward the end of the lift, the deck tilts and the end door is lifted, discharging the coal.

self-dumping car [MIN ENG] A mine car which can be side-tipped while in motion on the rail track; it is fitted with a spherically contoured wheel which engages a ramp structure and gradually tilts the car.

self-energizing brake [MECH ENG] A brake designed to reinforce the power applied to it, such as a hand brake.

self-energy [PHYS] **1.** Classically, the contribution to the energy of a particle that arises from the interaction between different parts of the particle. **2.** In a quantized field theory, the contribution to the energy of a particle due to virtual emission and absorption of other particles, in particular, mesons and photons.

self-excited [ELEC] Operating without an external source of alternating-current power.

self-excited oscillator [ELECTR] An oscillator that depends on its own resonant circuits for initiation of oscillation and frequency determination.

self-excited vibration *See* self-induced vibration.

self-extinguishing [MATER] The ability of a material to cease burning once the source of the flame has been removed.

self-fields [ELECTROMAG] The electric and magnetic fields generated by an intense beam of charged particles, which act on the beam itself; they limit the beam intensities which can be achieved in storage rings.

self-fluxing alloy [MET] Any alloy used in thermal spraying which does not require the addition of a flux in order to wet the substrate and coalesce when heated.

self-focusing [OPTICS] The action of a medium whose index of refraction increases with increasing optical intensity on a laser beam that is more intense in the center than at the edges, whereby the profile of the refractive index corresponds to that of a positive lens, causing the beam to focus.

self-focusing fiber [OPTICS] A type of optical fiber in which the refractive index decreases continuously along the radius, but progressively more rapidly with distance from the radius, so that light rays which travel longer distances are speeded up, and nearly all light rays travel with the same net axial velocity.

self-hardening steel *See* air-hardening steel.

self-impedance *See* mesh impedance.

self-induced transparency [OPTICS] A phenomenon in which a pulse of coherent light, with a certain frequency, amplitude, and duration, is transmitted by a normally opaque medium; energy absorbed from the first half of the pulse, whose frequency is at or near the average resonance peak of a band of coherent atomic two-quantum-level optical oscillators, is returned to the last half of the pulse by the medium in the form of coherently emitted light. Abbreviated SIT.

self-induced vibration [MECH] The vibration of a mechanical system resulting from conversion, within the system, of nonoscillatory excitation to oscillatory excitation. Also known as self-excited vibration.

self-inductance [ELECTROMAG] **1.** The property of an electric circuit whereby an electromotive force is produced in the circuit by a change of current in the circuit itself. **2.** Quantitatively, the ratio of the electromotive force produced to the rate of change of current in the circuit.

self-induction [ELECTROMAG] The production of a voltage in a circuit by a varying current in that same circuit.

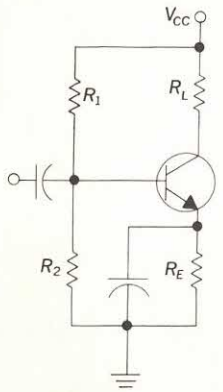
self-loading [ORD] Pertaining to a firearm or gun that utilizes either the explosive gases or recoil to extract the empty case and to chamber the next round; self-loading firearms or guns include both semiautomatic and full-automatic types.

self-locking nut [DES ENG] A nut having an inherent locking action, so that it cannot readily be loosened by vibration.

self-optimizing communications *See* adaptive communications.

self-organizing function [CONT SYS] That level in the functional decomposition of a large-scale control system which

SELF-BIAS TRANSISTOR CIRCUIT



Circuit diagram of a self-bias transistor circuit. R_L = load resistance; R_E = resistance in emitter lead; V_{CC} = collector supply voltage with respect to emitter.

modifies the modes of control action or the structure of the control system in response to changes in system objectives, contingency events, and so forth.

self-organizing system [SYS ENG] A system that is able to affect or determine its own internal structure.

self-pollination [BOT] Transfer of pollen from the anther to the stigma of the same flower or of another flower on the same plant.

self-propelled [MECH ENG] Pertaining to a vehicle given motion by means of a self-contained motor. [ORD] **1.** Pertaining to a gun mounted on a vehicle that has its own motive power. **2.** Pertaining to a missile that is propelled by fuel carried by the missile itself, as in the case of a rocket. **3.** Pertaining to a military unit having self-propelled guns.

self-propelled artillery [ORD] Artillery weapons permanently installed on vehicles, which provide motive power for the piece; these weapons are fired from the vehicle.

self-pulsing [ELECTR] Special type of grid pulsing which automatically stops and starts the oscillations at the pulsing rate by a special circuit.

self-quenched detector [ELECTR] Superregenerative detector in which the time constant of the grid leak and grid capacitor is sufficiently large to cause intermittent oscillation above audio frequencies, serving to stop normal regeneration each time just before it spills over into a squealing condition.

self-quenching oscillator [ELECTR] Oscillator producing a series of short trains of radio-frequency oscillations separated by intervals of quietness.

self-reduction *See* self-absorption.

self-repair [COMPUT SCI] Any type of hardware redundancy in which faults are selectively masked and are detected, located, and subsequently corrected by the replacement of the failed unit by an unfailed replica.

self-rescuer [MIN ENG] A small filtering device carried by a miner underground to provide immediate protection against carbon monoxide and smoke in case of a mine fire or explosion; used for escape purposes only, because it does not sustain life in atmospheres containing deficient oxygen.

self-reset [ELEC] Automatically returning to the original position when normal conditions are resumed; applied chiefly to relays and circuit breakers.

self-resetting loop [COMPUT SCI] A loop whose termination causes the numbers stored in all locations affected by the loop to be returned to the original values which they had upon entry into the loop.

self-reversal [GEOPHYS] Acquisition by a rock of a natural remanent magnetization opposite to the ambient magnetic field direction at the time of rock formation. [SPECT] *See* self-absorption.

self-rising ground [GEOL] The puffy, irregular, surface or near-surface zone of certain playas, formed by the effects of capillary rise of groundwater.

self-saturation [ELECTR] The connection of half-wave rectifiers in series with the output windings of the saturable reactors of a magnetic amplifier, to give higher gain and faster response.

self-scanned image sensor [ELECTR] A solid-state device, still in the early stages of development, which converts an optical image into a television signal without the use of an electron beam; it consists of an array of photoconductor diodes, each located at the intersection of mutually perpendicular address strips respectively connected to horizontal and vertical scan generators and video coupling circuits.

self-screening range [ELECTROMAG] Range at which a target can be detected by a radar in the midst of its jamming mask, with a certain specified probability.

self-sealing [ENG] A fluid container, such as a fuel tank or a tire, lined with a substance that allows it to close immediately over any small puncture or rupture.

self-selection bias [STAT] Bias introduced into an experiment by having the subjects decide themselves whether or not they will receive treatment.

self-shielding [NUCLEO] **1.** Shielding of the inner portion of the fuel in a nuclear reactor by the outer portion of the fuel. **2.** *See* self-absorption.

self-starter [MECH ENG] An attachment for automatically starting an internal combustion engine.

self-starting synchronous motor [ELEC] A synchronous motor provided with the equivalent of a squirrel-cage winding, to permit starting as an induction motor.

self-steering microwave array [ELECTROMAG] An antenna array used with electronic circuitry that senses the phase of incoming pilot signals and positions the antenna beam in their direction of arrival.

self-synchronous device *See* synchro.

self-synchronous repeater *See* synchro.

self-tapping screw [DES ENG] A screw with a specially hardened thread that makes it possible for the screw to form its own internal thread in sheet metal and soft materials when driven into a hole. Also known as sheet-metal screw; tapping screw.

self-timer [ENG] A device that delays the tripping of a camera shutter so that the photographer can be included in the photograph.

self-triggering program [COMPUT SCI] A computer program which automatically commences execution as soon as it is fed into the central processing unit.

self-tuning regulator [CONT SYS] A type of adaptive control system composed of two loops, an inner loop which consists of the process and an ordinary linear feedback regulator, and an outer loop which is composed of a recursive parameter estimator and a design calculation, and which adjusts the parameters of the regulator. Abbreviated STR.

self-unloading ship [NAV ARCH] A ship equipped with endless belt or chain devices or with swinging booms, which enable it to be unloaded without the use of harbor facilities.

Seliberia [MICROBIO] A genus of budding bacteria; spirally twisted, rod-shaped cells form rosettes; reproduce by transverse fission and by budding.

seligmannite [MINERAL] $PbCuAsS_3$ A metallic gray orthorhombic mineral, occurring in crystals.

Seliwanoff's test [ANALY CHEM] A color test helpful in the identification of ketoses, which develop a red color with resorcinol in hydrochloric acid.

sellaite [MINERAL] MgF_2 A colorless mineral composed of magnesium fluoride occurring in tetragonal prismatic crystals.

sella turcica [ANAT] A depression in the upper surface of the sphenoid bone in which the pituitary gland rests in vertebrates.

sellers hob [MECH ENG] A hob that turns on the centers of a lathe, the work being fed to it by the lathe carriage.

sellite [INORG CHEM] A solution of sodium sulfate that is used during the manufacture of trinitrotoluene.

Sellmeier's equation [ELECTROMAG] An equation for the index of refraction of electromagnetic radiation as a function of wavelength in a medium whose molecules have oscillators of different frequencies.

selsyn *See* synchro.

selsyn generator *See* synchro transmitter.

selsyn motor *See* synchro receiver.

selsyn receiver *See* synchro receiver.

selsyn system *See* synchro system.

selva *See* tropical rainforest.

selvage [PETR] The marginal zone of an igneous mass, generally characterized by a fine-grain, or sometimes glassy, texture. Also known as salband. [TEXT] Heavy reinforced outside woven edges of cloth. Also spelled selvedge.

selvedge *See* selvage.

Selwood engine [MECH ENG] A revolving-block engine in which two curved pistons opposed 180° run in toroidal tracks, forcing the entire engine block to rotate.

selysn transmitter *See* synchro transmitter.

Semaeostomeae [INV ZOO] An order of the class Scyphozoa including most of the common medusae, characterized by a flat, domelike umbrella whose margin is divided into many lappets.

semanteme [COMMUN] A language element that expresses a definite idea or image, such as a word, base of a word, or data element. Also known as lexeme.

semantic extension [COMPUT SCI] An extension mechanism which introduces new kinds of objects into an extensible language, such as additional data types or operations.

semantics [COMMUN] The branch of semiotics that deals with the relations between symbols and what they stand for, and defines the meaning that is prescribed for a statement by its originator.

semaphore [COMPUT SCI] A memory cell that is shared by two parallel processes which rely on each other for their continued operation, and that provides an elementary form of communication between them by indicating when significant events have taken place.

SELF-TAPPING SCREW

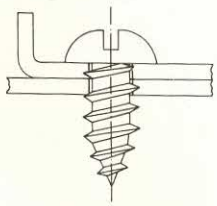


Diagram of a type of self-tapping screw.

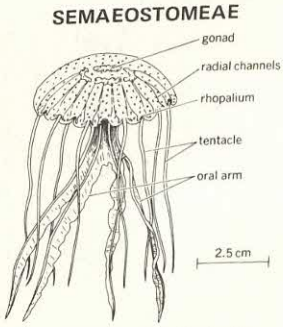
SEMAEOSTOMEAE



Pelagia, showing the tentacles arising between the lappets on the umbrella. *(From L. Hyman, The Invertebrates, vol. 1, McGraw-Hill, 1940)*

sematic *See* aposematic.

semeiography [MED] Description of the signs and symptoms of a disease.

semen [PHYSIO] The fluid that carries the male germ cells.

Semenov number 1 [PHYS CHEM] A dimensionless number used in reaction kinetics, equal to a mass transfer constant divided by a reaction rate constant. Symbolized S_m. Formerly known as Schmidt number 2.

Semenov number 2 [PHYS] The reciprocal of the Lewis number.

semiactive homing guidance [NAV] Guidance in which a craft or vehicle is directed toward a target by illuminating the target with radiation from a ground-based or shipborne radar; the missile or other vehicle is equipped with a direction-finding receiver which enables it to home on the target by use of the radar signal reflected from it.

semiactive tracking system [NAV] A tracking system used for semiactive homing guidance.

semialgorithm [COMPUT SCI] A procedure for solving a problem that will continue endlessly if the problem has no solution.

semianechoic room [ACOUS] A room having surfaces which reduce the reflection of sound to less than normal, although not to as great an extent as an anechoic room.

semianthracite [GEOL] Coal which is between bituminous coal and anthracite in metamorphic rank, and which has a fixed-carbon content of 86–92%.

semiarid climate *See* steppe climate.

semiautomatic [ORD] Pertaining to a firearm or gun that utilizes a part of the force of an exploding cartridge to extract the empty case and to chamber the next round, but requires a separate pull on the trigger to fire each round; examples are the semiautomatic rifle and the semiautomatic pistol.

semiautomatic flight inspection [NAV] Airborne equipment that systematically records significant parameters as an aircraft flies along a previously determined route, in order to check the performance of ground-based navigation aids. Abbreviated SAFI.

semiautomatic ground environment *See* SAGE.

semiautomatic keying circuits [COMMUN] Mechanization providing torn tape switching systems in teleprinter links; incoming and outgoing messages are converted to tapes and manually inserted into a teletypewriter distributor that mechanically keys the circuit automatically.

semiautomatic supply [ORD] System by which certain specified items of supplies needed by units, activities, or forces are shipped by the agencies responsible for supply on the basis of periodic reports of the status of stocks on hand and en route to the using agency; all other supplies are furnished on the basis of requisitions initiated by the using agency.

semiautomatic tape relay [COMMUN] Method of communication whereby messages are received and retransmitted in teletypewriter tape form involving manual intervention in transfer of the tape from receiving reperforator to automatic transmitter.

semiautomatic telephone system [COMMUN] Telephone system that limits automatic dialing to only those subscribers who are served by the same exchange as the calling subscriber.

semiautomatic transmission [MECH ENG] An automobile transmission that assists the driver to shift from one gear to another.

semiautomatic welding [MET] An arc-welding method in which the electrode, a long length of small-diameter bare wire, usually in coil form, is positioned and advanced by the operator from a hand-held welding gun which feeds the electrode through the nozzle.

semibatch chemical reactor [CHEM ENG] A reactor in which a constant liquid volume is maintained without any overflow, and with the continuous addition of one reactant, usually a gas.

semibituminous coal [GEOL] Coal that is harder and more brittle than bituminous coal, has a high fuel ratio, contains 10–20% volatile matter, and burns without smoke; ranks between bituminous and semianthracite coals.

semibolson [GEOL] A wide desert basin or valley whose central playa is absent or poorly developed, and which is drained by an intermittent stream that flows through canyons at each end and reaches a surface outlet.

semibright coal [GEOL] A type of banded coal defined microscopically as consisting of between 80 and 61% bright ingredients such as vitrain, clarain, and fusain, with clarodurain and durain composing the remainder.

semicarbazide hydrochloride [ORG CHEM] $CH_5ON_3 \cdot HCl$ Colorless prisms, soluble in water, decomposing at 175°C; used as an analytical reagent for aldehydes and ketones, and to recover constituents of essential oils. Also known as aminourea hydrochloride; carbamylhydrazine hydrochloride.

semicarbazone [ORG CHEM] $R_2C{:}N_2HCONH_2$ A condensation product of an aldehyde or ketone with semicarbazide.

semichemical pulp [MATER] Wood which has been pulped by the process of semichemical pulping.

semichemical pulping [CHEM ENG] A method of producing wood-fiber products in which the wood chips are merely softened by chemical treatment (neutral sodium sulfite solution), while the remainder of the pulping action is supplied by a disk attrition mill or by some similar mechanical device for separating the fibers.

semicircular canal [ANAT] Any of three loop-shaped tubular structures of the vertebrate labyrinth; they are arranged in three different spatial planes at right angles to each other, and function in the maintenance of body equilibrium.

semicircular deviation [NAV] A deviation of a magnetic compass which changes sign east or west approximately each 180° change of heading.

semiclosed-cycle gas turbine [MECH ENG] A heat engine in which a portion of the expanded gas is recirculated.

semicoma [MED] A mildly or partially comatose state in which the patient can be roused and responds to strong stimuli with some purposeful movements.

semicompreg [MATER] Resin-impregnated wood compressed to a density not exceeding 1.25.

semiconducting compound [SOLID STATE] A compound which is a semiconductor, such as copper oxide, mercury indium telluride, zinc sulfide, cadmium selenide, and magnesium iodide.

semiconducting crystal [SOLID STATE] A crystal of a semiconductor, such as silicon, germanium, or gray tin.

semiconductive loading tube [ENG] A loading tube for blasthole explosives which dissipates static electric charges to prevent premature blasts.

semiconductor [SOLID STATE] A solid crystalline material whose electrical conductivity is intermediate between that of a conductor and an insulator, ranging from about 10^5 mhos to 10^{-7} mho per meter, and is usually strongly temperature-dependent.

semiconductor detector [NUCLEO] A particle detector which detects ionization produced by energetic charged particles in the depletion layer of a reverse-biased *pn* junction in a semiconductor, usually a very pure single crystal of silicon or germanium.

semiconductor device [ELECTR] Electronic device in which the characteristic distinguishing electronic conduction takes place within a semiconductor.

semiconductor diode [ELECTR] Also known as crystal diode; crystal rectifier; diode. **1.** A two-electrode semiconductor device that utilizes the rectifying properties of a *pn* junction or a point contact. **2.** More generally, any two-terminal electronic device that utilizes the properties of the semiconductor from which it is constructed.

semiconductor-diode parametric amplifier [ELECTR] Parametric amplifier using one or more varactors.

semiconductor doping *See* doping.

semiconductor heterostructure [ELECTR] A structure of two different semiconductors in junction contact having useful electrical or electrooptical characteristics not achievable in either conductor separately; used in certain types of lasers and solar cells.

semiconductor intrinsic properties [SOLID STATE] Properties of a semiconductor that are characteristic of the ideal crystal.

semiconductor junction [ELECTR] Region of transition between semiconducting regions of different electrical properties, usually between *p*-type and *n*-type material.

semiconductor laser [OPTICS] A laser in which stimulated emission of coherent light occurs at a *pn* junction when electrons and holes are driven into the junction by carrier injection, electron-beam excitation, impact ionization, optical excitation, or other means. Also known as diode laser; laser diode.

semiconductor memory [COMPUT SCI] A device for storing digital information that is fabricated by using integrated

circuit technology. Also known as integrated circuit memory; large-scale integrated memory; transistor memory.

semiconductor rectifier *See* metallic rectifier.

semiconductor thermocouple [ELECTR] A thermocouple made of a semiconductor, which offers the prospect of operation with high-temperature gradients, because semiconductors are good electrical conductors but poor heat conductors.

semiconductor trap *See* trap.

semiconservative replication [MOL BIO] Replication of deoxyribonucleic acid by longitudinal separation of the two complementary strands of the molecule, each being conserved and acting as a template for synthesis of a new complementary strand.

semicontrolled mosaic [MAP] A mosaic which is composed of photographs of approximately the same scale laid so that major ground features match their geographical coordinates.

semicratonic *See* quasicratonic.

semicrystalline *See* hypocrystalline.

semidense list [COMPUT SCI] A list that can be divided into two contiguous portions, with all the cells in the larger portion filled and all the other cells empty.

semidesert [ECOL] An area intermediate in character and often located between a desert and a grassland or woodland.

semidiameter [ASTRON] Measured at the observer, half the angle subtended by the visible disk of a celestial body.

semidiameter correction [NAV] The sextant altitude correction that, when applied to the observation of the upper or lower limb of a celestial body, determines the altitude of the center of that body.

semidiesel engine [MECH ENG] **1.** An internal combustion engine of a type resembling the diesel engine in using heavy oil as fuel but employing a lower compression pressure and spraying it under pressure, against a hot (uncooled) surface or spot, or igniting it by the precombustion or supercompression of a portion of the charge in a separate member or uncooled portion of the combustion chamber. **2.** A true diesel engine that uses a means other than compressed air for fuel injection.

semidiurnal [ASTRON] Having a period of, occurring in, or related to approximately half a day.

semidiurnal current [OCEANOGR] A tidal current in which the tidal-day current cycle consists of two flood currents and two ebb currents, separated by slack water, or of two changes in direction of 360° of a rotary current; this is the most common type of tidal current throughout the world.

semidiurnal tide [OCEANOGR] A tide having two high waters and two low waters during a tidal day.

semidormancy [BOT] Decrease in plant growth rate; may be seasonal or associated with unfavorable environmental conditions.

semidouble [BOT] Pertaining to a flower that has more than the usual number of petals or disk florets while it retains some pollen-bearing stamens or some perfect disk florets.

semidull coal [GEOL] A type of banded coal consisting mainly of clarodurain and durain, with from 40 to 21% bright ingredients such as vitrain, clarain, and fusain.

semifinishing [MET] The preliminary finishing operations.

semifixed ammunition [ORD] Ammunition in which the cartridge case is not permanently fixed to the projectile, so that the zone charge within the cartridge case can be adjusted to obtain the desired range; it is loaded into the weapon as a unit.

semifloating axle [MECH ENG] A supporting member in motor vehicles which carries torque and wheel loads at its outer end.

semifusinite [GEOL] A coal maceral with a well-defined woody structure and optical properties intermediate between those of nitrinite and those of fusinite.

semigel [MATER] A cohesive powder used as an explosive.

semigloss [MATER] Pertaining to a surface finish intermediate between flat and glossy; used especially of paint and varnish.

semigroup [MATH] A set which is closed with respect to a given associative binary operation.

semigroup theory [MATH] The formal algebraic study of the structure of semigroups.

semi-invariants *See* cumulants.

semikilled steel [MET] Incompletely deoxidized steel containing enough dissolved oxygen to react with the carbon it contains to form carbon monoxide, the latter offsetting solidification shrinkage.

semilate [BOT] Pertaining to a plant whose growing season is intermediate between midseason forms and late forms.

semilethal gene [GEN] A mutant causing the death of some of the individuals of the relevant genotype, but never 100%. Also known as sublethal gene.

semilive skid [ENG] A platform having two fixed legs at one end and two wheels at the other; used for moving bulk materials.

semilogarithmic coordinate paper [MATH] Paper ruled with two sets of mutually perpendicular, parallel lines, one set being spaced according to the logarithms of consecutive numbers, and the other set uniformly spaced.

semilunar cartilage [ANAT] One of the two interarticular knee cartilages.

semilunar ganglion *See* Gasserian ganglion.

semilunar valve [ANAT] Either of two tricuspid valves in the heart, one at the orifice of the pulmonary artery and the other at the orifice of the aorta.

semimagnetic controller [ELEC] Electrical controller having only part of its basic functions performed by devices that are operated by electromagnets.

semimat [MATER] Intermediate between glossy and mat, as photographic paper.

semimember [CIV ENG] A part in a frame or truss that ceases to bear a load when the stress in it starts to reverse.

semimembranosus [ANAT] One of the hamstring muscles, arising from the ischial tuber, and inserted into the tibia.

semimetric [MATH] A real valued function $d(x,y)$ on pairs of points from a topological space which has all the same properties as a metric save that $d(x,y)$ may be zero even if x and y are distinct points. Also known as pseudometric.

semimicroanalysis [ANALY CHEM] A chemical analysis procedure in which the weight of the sample is between 10 and 100 milligrams.

semimobile artillery [ORD] Artillery weapons designed for movement but which require partial disassembly to be placed in a firing position; wheels or other suspension devices are removed from the mount so that it may rest on the ground.

semimonocoque [AERO ENG] A fuselage structure in which longitudinal members (stringers) as well as rings or frames which run circumferentially around the fuselage reinforce the skin and help carry the stress. Also known as stiffened-shell fuselage.

seminal bursa [INV ZOO] A sac which retains sperm for a period of time in turbellarians.

seminal groove [ZOO] A passage in many animals providing a pathway for sperm.

seminal receptacle *See* spermatheca.

seminal vesicle [ANAT] A saclike, glandular diverticulum on each ductus deferens in male vertebrates; it is united with the excretory duct and serves for temporary storage of semen.

seminiferous tubule [ANAT] Any of the tubercles of the testes which produce spermatozoa.

seminivorous [ZOO] Feeding on seeds.

seminoma [MED] A malignant tumor of the testes composed of large, uniform cells with clear cytoplasm.

seminumerical algebraic manipulation language [COMPUT SCI] The most elementary type of algebraic manipulation language, constructed to manipulate data from rigid classes of mathematical objects possessing strictly canonical forms.

semiochemical [PHYSIO] Any of a class of substances produced by organisms, especially insects, that participate in regulation of their behavior in such activities as aggregation of both sexes, sexual stimulation, and trail following.

Semionotiformes [VERT ZOO] An order of actinopterygian fishes represented by the single living genus *Lepisosteus*, the gars; the body is characteristically encased in a heavy armor of interlocking ganoid scales.

semiotics [COMMUN] The theory of signs and symbols, entities that represent some other thing; it includes syntactics, pragmatics, and semantics.

semioxamazide [ORG CHEM] $H_2NCOCONHNH_2$ A crystalline compound that decomposes at 220°C; soluble in hot water, acids, and alkalies; used as a reagent for aldehydes and ketones. Also known as aminooxamide; oxamic acid hydrazide.

semipalmate [VERT ZOO] Having a web halfway down the toes.

semiparasite *See* hemiparasite.

semipermanent mold [MET] A reusable metal mold with expendable sand cores.

semipermeable membrane [PHYS] A membrane which allows a solvent to pass through it, but not certain dissolved or colloidal substances.

semiplastic explosive [MATER] An explosive in which the quantities of liquid products are insufficient to render the mixture compressible.

semipositive mold [ENG] A plastics mold that allows a small amount of excess material to escape when it is closed.

semiprecious [LAP] Pertaining to gemstones whose value is lower than that of precious stones; in particular, stones whose hardness is less than 8.

semirefined wax [MATER] Commercial grades of petroleum wax which are inferior to fully refined grades but which meet specified requirements as to color and oil content.

semiregular variables [ASTRON] Red giant stars with absolute magnitude of about 0 or −1 that are variable and have quasi periods of from about 40 to 150 days.

semiregular variable star [ASTRON] A variable star whose variation in brightness is repeated, but whose period and light curve may vary considerably from one cycle to the next.

semirigid plastic [MATER] A plastic that has a stiffness or apparent modulus of elasticity of between 10,000 and 100,000 psi (6.895×10^7 and 6.895×10^8 newtons per square meter) under prescribed test conditions.

semischist [PETR] A partly metamorphosed sedimentary rock, exhibiting some foliation.

semiselective ringing [COMMUN] In telephone service, party line ringing wherein the bells of two stations are rung simultaneously; the differentiation is made by the number of rings.

semisilica refractory [MATER] A silica refractory made from clay with a high silica (sand) content (over 70% total silica); characterized by dimensional stability when heated or fired.

semispecies [SYST] **1.** The species that compose a superspecies. **2.** Populations that have acquired some attributes of species rank. **3.** Organisms that are borderline between species and subspecies.

semispinalis [ANAT] One of the deep longitudinal muscles of the back, attached to the vertebrae.

semisplint coal [GEOL] Banded coal that is intermediate between bright-banded and splint coal, and has 20–30% opaque attritus and more than 5% anthraxylon.

semistable elementary particle *See* quasistable elementary particle.

semisteel [MET] Low-carbon steel made by replacing about one-fourth of the pig iron in the cupola with steel scrap.

semitendinosus [ANAT] One of the hamstring muscles, arising from the ischium and inserted into the tibia.

semitone [ACOUS] The interval between two sounds whose frequencies have a ratio approximately equal to the twelfth root of 2. Also known as half step.

semitrailer [ENG] A cargo-carrying piece of equipment that has one or two axles at the rear; the load is carried on these axles and on the fifth wheel of the tractor that supplies motive power to the semitrailer.

semitransparent photocathode [ELECTR] Photocathode in which radiant flux incident on one side produces photoelectric emission from the opposite side.

semivitreous [MATER] Pertaining to ceramics whose glassy content is not sufficient to reduce porosity below 0.2%.

Semper's larva [INV ZOO] A cylindrical larva in the life history of certain zoanthid corals, characterized by a hole at each end and an annular or longitudinal band of long cilia.

Semple plunger [ORD] A centrifugal plunger which operates to maintain a fuse in a safe condition until centrifugal force unlocks and moves the firing pin into the armed position.

sems [DES ENG] A preassembled screw and washer combination.

semseyite [MINERAL] $Pb_9Sb_8S_{21}$ A gray to black mineral composed of lead antimony sulfide.

senaite [MINERAL] $(Fe,Mn,Pb)TiO_3$ A black mineral consisting of a lead- and manganese-bearing ilmenite; occurs as rough crystals and rounded fragments.

senarmontite [MINERAL] Sb_2O_3 A colorless or grayish mineral composed of native antimony trioxide occurring in masses or as octahedral crystals.

send *See* scend.

sender [COMMUN] Part of an automatic-switching telephone system that receives pulses from a dial or other source and, in accordance with them, controls the further operations necessary in establishing a telephone connection.

sending-end impedance [ELEC] Ratio of an applied potential difference to the resultant current at the point where the potential difference is applied; the sending-end impedance of a line is synonymous with the driving-point impedance of the line.

Sendust [MET] A magnetic alloy composed of 85% iron, 9.5% silicon, and 5.5% aluminum; used in high-frequency powders.

Sendzimir mill [MET] A mill having small-diameter working rolls, each backed by a pair of supporting rolls, and each pair of these supported by a cluster of three rolls; used for cold-rolling wide sheets of metal to close tolerance.

Senecan [GEOL] A North American provincial series of geologic time, forming the lower part of the Upper Devonian, above the Erian and below the Chautauquan.

senescence [BIOL] The study of the biological changes related to aging, with special emphasis on plant, animal, and clinical observations which may apply to man. [GEOL] The part of the erosion cycle at which the stage of old age begins.

senescent arthritis *See* degenerative joint disease.

senescent lake [HYD] A lake that is approaching extinction—for example, from filling by remains of aquatic vegetation.

senesland [GEOL] A land surface intermediate between a matureland and a peneplain.

sengierite [MINERAL] $Cu(UO_2)_2(VO_4)_2 \cdot 8\text{–}10H_2O$ A yellowish-green mineral composed of hydrous copper uranyl vanadate.

senile [GEOL] Pertaining to the stage of senility of the cycle or erosion. [MED] Of, pertaining to, or caused by the aging process or by the infirmities of old age.

senile dementia [PSYCH] A chronic, organic brain syndrome associated with old age, characterized by intellectual deterioration, impairment of judgment, and gross emotional instability.

senile eczema [MED] A form of eczema associated with aging and caused by factors such as dryness of skin, soap sensitivity, or poor hygiene or diet.

senile emphysema [MED] Degenerative changes in the lungs and thoracic cage associated with aging.

senile gangrene [MED] A form of tissue death caused by deterioration of the blood supply to the extremities in the elderly.

senile psychosis [PSYCH] A severe form of senile dementia characterized by personality deterioration, progressive memory loss, eccentricity, irritability, and sometimes delusions and hallucinations.

senile vaginitis [MED] Inflammation of the vagina occurring in elderly women following the chronic irritation of the thinned, atrophic mucosa.

senility [GEOL] The stage of the cycle of erosion in which erosion of a land surface has reached a minimum, most of the hills have disappeared, and base level has been approached.

senna [PHARM] The dried leaflets of plants of the *Cassia* genus; used in medicine as a cathartic.

Senn process [FOOD ENG] A butter-making process in which the cream is subjected to rapid agitation at 1500 revolutions per minute, decreasing to 20 revolutions per minute in the presence of 2–4 atmospheres ($2\text{–}4 \times 10^5$ newtons per square meter) of carbon dioxide.

Senonian [GEOL] A European stage of geologic time, forming the Upper Cretaceous, above the Turonian and below the Danian.

sensation [PHYSIO] The subjective experience that results from the stimulation of a sense organ.

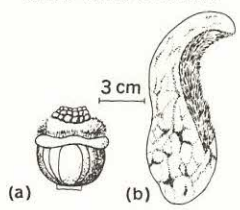
sensation level *See* level above threshold.

sensation unit [ACOUS] A unit of loudness, no longer in use; the loudness of a sound is 20 $\log_{10}(p/p_0)$ sensation units above threshold, where p is the pressure level of the sound, and p_0 is the pressure of a sound which can just be detected by the ear.

sense [COMPUT SCI] To read punched holes in tape or cards. [ENG] To determine the arrangement or position of a device or the value of a quantity. [NAV] The general direction from which a radio signal arrives; if a radio bearing is received by a simple loop antenna, there are two possible readings approximately 180° apart; the resolving of this ambiguity is called sensing of the bearing.

sense amplifier [ELECTR] Circuit used to determine either a

SEMPER'S LARVA



Two types of pelagic Semper's larva. *(a) Zoanthina tentaculata. (b) Zoanthella galapagoensis. (After Senna)*

phase or voltage change in communications-electronics equipment and to provide automatic control function.

sense antenna [ELECTROMAG] An auxiliary antenna used with a directional receiving antenna to resolve a 180° ambiguity in the directional indication. Also known as sensing antenna.

sense finder [NAV] Portion of a direction finder which permits resolution of the 180° ambiguity.

sense indicator *See* to-from indicator.

sense light [COMPUT SCI] A light which can be turned on or off, its status being the determinant as to which path a program will select.

sense organ [PHYSIO] A structure which is a receptor for external or internal stimulation.

sense strand [MOL BIO] The strand of a double-stranded deoxyribonucleic acid molecule that is complementary to the ribonucleic acid formed by transcription.

sense switch *See* alteration switch.

sensibility [PHYS] The ability of a magnetic compass card to align itself with the magnetic meridian after deflection.

sensible atmosphere [METEOROL] That part of the atmosphere that offers resistance to a body passing through it.

sensible heat *See* enthalpy.

sensible-heat factor [THERMO] The ratio of space sensible heat to space total heat; used for air-conditioning calculations. Abbreviated SHF.

sensible heat flow [METEOROL] In the atmosphere, the poleward transport of sensible heat (enthalpy) across a given latitude belt by fluid flow. [THERMO] The heat given up or absorbed by a body upon being cooled or heated, as the result of the body's ability to hold heat; excludes latent heats of fusion and vaporization.

sensible horizon [ASTRON] That circle of the celestial sphere formed by the intersection of the celestial sphere and a plane through any point, such as the eye of an observer, and perpendicular to the zenith-nadir line.

sensible temperature [METEOROL] The temperature at which air with some standard humidity, motion, and radiation would provide the same sensation of human comfort as existing atmospheric conditions.

sensillum [ZOO] A simple, epithelial sense organ composed of one cell or of a few cells.

sensing [NAV] The process of eliminating ambiguity in direction-finder bearings. [ORD] The direction of a point of burst or impact, or centers of burst or impact with respect to the target, such as over, short, air, or graze.

sensing antenna *See* sense antenna.

sensing element *See* sensor.

sensing station *See* reading station.

sensing zone technique [ANALY CHEM] Particle-size measurement in a dilute solution, with fine particles passed through a small zone (opening) so that individual particles may be observed and measured by electrolytic, photic, or sonic methods.

sensistor [ELECTR] Silicon resistor whose resistance varies with temperature, power, and time.

sensitive altimeter [ENG] An aneroid altimeter constructed to respond to pressure changes (altitude changes) with a high degree of sensitivity; it contains two or more pointers to refer to different scales, calibrated in hundreds of feet, thousands of feet, and so on.

sensitive clay [GEOL] A clay whose shear strength is reduced to a very small fraction of its former value on remolding at constant moisture content.

sensitive switch *See* snap-action switch.

sensitive time [NUCLEO] The duration of supersaturation, sufficient for track formation, following expansion in a cloud chamber.

sensitive volume [NUCLEO] The portion of a radiation-counter tube that responds to a specific radiation.

sensitivity [ELECTR] **1.** The minimum input signal required to produce a specified output signal, for a radio receiver or similar device. **2.** Of a camera tube, the signal current developed per unit incident radiation, that is, per watt per unit area. [ENG] **1.** A measure of the ease with which a substance can be caused to explode. **2.** A measure of the effect of a change in severity of engine-operating conditions on the antiknock performance of a fuel; expressed as the difference between research and motor octane numbers. Also known as spread. [GEOL] The effect of remolding on the consistency of a clay or cohesive soil, regardless of the physical nature of the causes of the change. [PHYSIO] The capacity for receiving sensory impressions from the environment. [SCI TECH] **1.** The ability of the output of a device, system, or organism to respond to an input stimulus. **2.** Mathematically, the ratio of the response or change induced in the output to a stimulus or change in the input.

sensitivity function [CONT SYS] The ratio of the fractional change in the system response of a feedback-compensated feedback control system to the fractional change in an open-loop parameter, for some specified parameter variation.

sensitivity time control [ELECTR] In a radar receiver a circuit which greatly reduces the gain at the time that the transmitter emits a pulse; following the pulse, the circuit increases the sensitivity; thus reflection from distant objects will be received and those from nearby objects will be prevented from saturating the receiver.

sensitization *See* activation.

sensitometer [ENG] An instrument for measuring the sensitivity of light-sensitive materials.

sensor [ENG] The generic name for a device that senses either the absolute value or a change in a physical quantity such as temperature, pressure, flow rate, or pH, or the intensity of light, sound, or radio waves and converts that change into a useful input signal for an information-gathering system; a television camera is therefore a sensor, and a transducer is a special type of sensor. Also known as primary detector; sensing element.

sensorineural deafness [MED] Deafness caused by an abnormality of the sense organ in the inner ear or the auditory nerve (cranial nerve VIII).

sensorium [PHYSIO] **1.** A center, especially in the brain, for receiving and integrating sensations. **2.** The entire sensory apparatus of an individual.

sensory aphasia [MED] A form of aphasia in which the perception of sounds as language is partially preserved, but the patient is unable to comprehend the meaning of words, and in speaking, words are evoked with difficulty, are used incorrectly, and do not convey ideas correctly, resulting frequently in other forms of language impairment, particularly in agrammatism. Also known as receptive aphasia.

sensory area [PHYSIO] Any area of the cerebral cortex associated with the perception of sensations.

sensory cell [PHYSIO] **1.** A neuron having its terminal processes connected with sensory nerve endings. **2.** A modified epithelial or connective tissue cell adapted for the reception and transmission of sensations.

sensory learning [PSYCH] Learning situations in which a person or animal is trained to respond to changes in or differences between some aspects of a physical stimulus presented to one of the sense organs.

sensory nerve [PHYSIO] A nerve that conducts afferent impulses from the periphery to the central nervous system.

sentential calculus *See* propositional calculus.

sentinel [COMPUT SCI] Symbol marking the beginning or end of an element of computer information such as an item or a tape.

sepal [BOT] One of the leaves composing the calyx.

separable extension [MATH] A field extension K of a field F is separable if every element of K is a root of a separable polynomial whose coefficients are elements of F.

separable polynomial [MATH] A polynomial with no multiple roots.

separable space [MATH] A topological space which has a countable subset that is dense.

separated aggregate [MATER] Aggregate for concrete that has been separated into fine and coarse constituents.

separated ammunition [ORD] Ammunition characterized by the arrangement of the propelling charge and the projectile for loading into the gun; the propelling charge, contained in a primed cartridge case that is sealed with a closing plug, and the projectile are loaded into the gun in one operation; separated ammunition is used when the ammunition is too large to handle as fixed ammunition.

separated-function synchrotron [NUCLEO] A proton synchrotron in which separate groups of magnets are used to focus and deflect the beam so that it follows a circular path.

separated sets [MATH] Sets A and B in a topological space are separated if both the closure of A intersected with B and the closure of B intersected with A are disjoint.

separate loading ammunition [ORD] Ammunition in

which the projectile, propellant charge (bag-loaded), and primer are loaded separately into the gun; no cartridge case is utilized in this type of ammunition.

separately excited [ELEC] Obtaining excitation from a source other than the machine or device itself.

separate sewage system [CIV ENG] A drainage system in which sewage and groundwater are carried in separate sewers.

separating calorimeter [PHYS] A device for measuring the moisture content of steam.

separating power [CHEM ENG] The measure of the ability of a system (such as a rectifying system) to separate the components of a mixture, when the components have increasingly close boiling points.

separation [AERO ENG] The action of a fallaway section or companion body as it casts off from the remaining body of a vehicle, or the action of the remaining body as it leaves a fallaway section behind it. [CHEM ENG] The separation of liquids or gases in a mixture, as by distillation or extraction. [ENG] **1.** The action segregating phases, such as gas-liquid, gas-solid, liquid-solid. **2.** The segregation of solid particles by size range, as in screening. [ENG ACOUS] The degree, expressed in decibels, to which left and right stereo channels are isolated from each other. [GEOL] The apparent relative displacement on a fault, measured in any given direction. [MIN ENG] The removal of gangue from raw ores, as in frothing.

separation axioms [MATH] Properties of topological spaces such as Hansdorff, regular, and normal which reflect how points and closed sets may be enclosed in disjoint neighborhoods.

separation disk [BOT] A layer of gelatinous material between two adjacent negative cells in some blue-green algae; associated with hormogonium formation.

separation energy [NUC PHYS] The energy needed to remove a proton, neutron, or alpha particle from a nucleus.

separation factor [NUCLEO] The abundance ratio of two isotopes after processing, divided by their abundance ratio before processing.

separation filter [ELECTR] Combination of filters used to separate one band of frequencies from another.

separation layer [BOT] A structurally distinct layer of the abscission zone of a plant containing abundant starch and dense cytoplasm.

separation negatives [GRAPHICS] The negatives made from full-color originals and used in the preparation of color-plates; four negatives are made, for yellow, magenta, cyan, and black printing plates.

separation of variables [MATH] A technique where certain differential equations are rewritten in the form $f(x)dx = g(y)dy$ which is then solvable by integrating both sides of the equation.

separation theorem [CONT SYS] A theorem in optimal control theory which states that the solution to the linear quadratic Gaussian problem separates into the optimal deterministic controller (that is, the optimal controller for the corresponding problem without noise) in which the state used is obtained as the output of an optimal state estimator.

separative work unit [NUC PHYS] A fundamental measure of work required to separate a quantity of isotopic mixture into two component parts, one having a higher percentage of concentration of the desired isotope and one having a lower percentage.

separator [COMPUT SCI] A datum or character that denotes the beginning or ending of a unit of data. [ELEC] A porous insulating sheet used between the plates of a storage battery. [ELECTR] A circuit that separates one type of signal from another by clipping, differentiating, or integrating action. [ENG] **1.** A machine for separating materials of different specific gravity by means of water or air. **2.** Any machine for separating materials, as the magnetic separator. [MECH ENG] *See* cage. [PETRO ENG] *See* gas-oil separator.

separator-filter [ENG] A vessel that removes solids and entrained liquid from a liquid or gas stream, using a combination of a baffle or coalescer with a screening (filtering) element.

Separator-Nobel dewaxing *See* S-N dewaxing.

separatory funnel [CHEM] A funnel-shaped device used for the careful and accurate separation of two immiscible liquids; a stopcock on the funnel stem controls the rate and amount of outflow of the lower liquid.

sepatrix [CONT SYS] A curve in the phase plane of a control system representing the solution to the equations of motion of the system which would cause the system to move to an unstable point.

sepia [MATER] A brown pigment prepared from the dried, inky exudation of a cuttlefish; used as a dye and in watercolors and ink.

sepia negative *See* vandyke.

Sepioidea [INV ZOO] An order of the molluscan subclass Coleoidea having a well-developed eye, an internal shell, fins separated posteriorly, and chromatophores in the dermis.

sepiolite [MINERAL] $Mg_4(Si_2O_5)_3(OH)_2 \cdot 6H_2O$ A soft, lightweight, absorbent, white to light-gray or light-yellow clay mineral, found principally in Asia Minor; used for tobacco pipe bowls and ornamental carvings. Also known as meerschaum; sea-foam.

Sepsidae [INV ZOO] The spiny-legged flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae; development takes place in decaying organic matter.

sepsis [MED] **1.** Poisoning by products of putrefaction. **2.** The severe toxic, febrile state resulting from infection with pyogenic microorganisms, with or without associated septicemia.

septal filament [INV ZOO] In anthozoans, the free edges of the septum containing gland cells and nematocysts.

septal ostium [INV ZOO] Any of the openings in septa of anthozoans.

septarian [GEOL] Pertaining to the irregular polygonal pattern of internal cracks developed in septaria.

septarian boulder *See* septarium.

septarian nodule *See* septarium.

septarium [GEOL] A large (80–90 centimeters in diameter), spheroidal concretion, usually composed of argillaceous carbonate, characterized by internal cracking into irregular polygonal blocks that become cemented together by crystalline minerals. Also known as beetle stone; septarian boulder; septarian nodule; turtle stone.

septate [BIOL] Having a septum.

septate coaxial cavity [ELECTROMAG] Coaxial cavity having a vane or septum, added between the inner and outer conductors, so that it acts as a cavity of a rectangular cross section bent transversely.

septate waveguide [ELECTROMAG] Waveguide with one or more septa placed across it to control microwave power transmission.

Septibranchia [INV ZOO] A small order of bivalve mollusks in which the anterior and posterior abductor muscles are about equal in size, the foot is long and slender, and the gills have been transformed into a muscular septum.

septic [MED] Of or pertaining to sepsis.

septic abortion [MED] An abortion complicated by acute infection of the endometrium.

septic embolus [MED] An embolus formed by bacteria.

septicemia [MED] A clinical syndrome in which infection is disseminated through the body in the bloodstream. Also known as blood poisoning.

septic tank [CIV ENG] A settling tank in which settled sludge is in immediate contact with sewage flowing through the tank while solids are decomposed by anaerobic bacterial action.

septillion [MATH] **1.** The number 10^{24}. **2.** In British and German usage, the number 10^{42}.

septinary number [MATH] A number in which the quantity represented by each figure is based on a radix of 7.

septulum [ANAT] A small septum.

septum [BIOL] A partition or dividing wall between two cavities. [ELECTROMAG] A metal plate placed across a waveguide and attached to the walls by highly conducting joints; the plate usually has one or more windows, or irises, designed to give inductive, capacitive, or resistive characteristics.

septum pellucidum [ANAT] A thin translucent septum forming the internal boundary of the lateral ventricles of the brain and enclosing between its two laminas the so-called fifth ventricle.

septum primum [EMBRYO] The first incomplete interatrial septum of the embryo.

septum secundum [EMBRYO] The second incomplete interatrial septum of the embryo, containing the foramen ovale; it develops to the right of the septum primum and fuses with it to form the adult interatrial septum.

Sequanian [GEOL] Upper Lower Jurassic (Upper Lusitanian) geologic time. Also known as Astartian.

sequence [COMPUT SCI] To put a set of symbols into an arbitrarily defined order; that is, to select A if A is greater than or

equal to B, or to select B if A is less than B. [ENG] An orderly progression of items of information or of operations in accordance with some rule. [GEOL] **1.** A sequence of geologic events, processes, or rocks, arranged in chronological order. **2.** A geographically discrete, major informal rock-stratigraphic unit of greater than group or supergroup rank. Also known as stratigraphic sequence. [MATH] A listing of mathematical entities x_1, x_2 ... which is indexed by the positive integers; more precisely, a function whose domain is an infinite subset of the positive integers. Also known as infinite sequence. [METEOROL] *See* collective.

sequence calling [COMPUT SCI] The instructions used for linking a closed subroutine with a main routine; that is, standard linkage and a list of the parameters.

sequence check [COMPUT SCI] To verify that correct precedence relationships are obeyed, usually by checking for ascending sequence numbers.

sequence-checking routine [COMPUT SCI] In computers, a checking routine which records specified data regarding the operations resulting from each instruction.

sequence counter *See* instruction counter.

sequence error [COMPUT SCI] An error that arises when the arrangement of items in a set, for example, a deck of punch cards, does not follow some specified order.

sequence monitor [COMPUT SCI] The automatic step-by-step check by a computer of the manual actions required for the starting and shutdown of a computer.

sequence number [COMPUT SCI] A number assigned to an item to indicate its relative position in a series of related items.

sequence of current [OCEANOGR] The order of occurrence of the tidal current strengths of a day, with special reference to whether the greater flood immediately precedes or follows the greater ebb.

sequence of tide [OCEANOGR] The order in which the tides of a day occur, with special reference to whether the higher high water immediately precedes or follows the lower low water.

sequencer [COMPUT SCI] A machine which puts items of information into a particular order, for example, it will determine whether A is greater than, equal to, or less than B, and sort or order accordingly. Also known as sorter. [ENG] A mechanical or electronic device that may be set to initiate a series of events and to make the events follow in a given sequence.

sequence register [COMPUT SCI] A counter which contains the address of the next instruction to be carried out.

sequence timer [MET] A device used in resistance welding to control the sequence and duration of all elements of the weld cycle, except weld time or heat time.

sequence weld timer [MET] A sequence timer which also controls weld time or heat time.

sequencing [IND ENG] Designating the order of performance of tasks to assure optimal utilization of available production facilities.

sequencing equipment [COMMUN] Special selecting device that permits messages received from several teletypewriter circuits to be subsequently selected and retransmitted over a reduced number of trunks or circuits.

sequential access [COMPUT SCI] A process that involves reading or writing data serially and, by extension, a data-recording medium that must be read serially, as a magnetic tape.

sequential analysis [STAT] The continuous analysis of data, obtained via sampling, performed as the amount of sampling increases.

sequential batch operating system [COMPUT SCI] Software equipment that automatically begins running a new job on a computer system as soon as the current job is completed.

sequential circuit [ELEC] A switching circuit whose output depends not only upon the present state of its input, but also on what its input conditions have been in the past.

sequential collation of range [ENG] Spherical, long-baseline, phase-comparison trajectory-measuring system using three or more ground stations, time-sharing a single transponder, to provide nonambiguous range measurements to determine the instantaneous position of a vehicle in flight.

sequential color television [COMMUN] A color television system in which the primary color components of a picture are transmitted one after the other; the three basic types are the line-sequential, dot-sequential, and field-sequential color television systems. Also known as sequential system.

sequential compactness [MATH] A topological space is sequentially compact if every sequence formed from its points has a convergent sequence contained in it.

sequential control [COMPUT SCI] Manner of operating a computer by feeding orders into the computer in a given order during the solution of a problem.

sequential cropping [AGR] A form of multiple cropping in which crops are grown in sequence on the same field, with the succeeding crop planted after the preceding crop is harvested.

sequential landform [GEOL] One of an orderly succession of smaller landforms that are developed by the erosion, weathering, and mass wasting of larger initial landforms.

sequential lobing [NAV] A direction-finding technique that utilizes the signal derived from partially overlapped lobes which occur in sequence.

sequential logic element [ELECTR] A circuit element having at least one input channel, at least one output channel, and at least one internal state variable, so designed and constructed that the output signals depend on the past and present states of the inputs.

sequential machine [COMPUT SCI] A mathematical model of a certain type of sequential circuit, which has inputs and outputs that can each take on any value from a finite set and are of interest only at certain instants of time, and in which the output depends on previous inputs as well as the concurrent input.

sequential network [COMPUT SCI] An idealized model of a sequential circuit that reflects its logical but not its electronic properties.

sequential operation [COMPUT SCI] The consecutive or serial execution of operations, without any simultaneity or overlap.

sequential organization [COMPUT SCI] The write and read of records in a physical rather than a logical sequence.

sequential processing [COMPUT SCI] Processing items in a collection of data according to some specified sequence of keys, in contrast to serial processing.

sequential sampling [IND ENG] A sampling plan in which an undetermined number of samples are tested one by one, accumulating the results until a decision can be made.

sequential scanning *See* progressive scanning.

sequential scheduling system [COMPUT SCI] A first-come, first-served method of selecting jobs to be run.

sequential search [COMPUT SCI] A procedure for searching a table that consists of starting at some table position (usually the beginning) and comparing the file-record key in hand with each table-record key, one at a time, until either a match is found or all sequential positions have been searched.

sequential selection [COMMUN] The selection of the elements of a message (such as letters) from a set of possible elements (such as the alphabet), one after another.

sequential system *See* sequential color television.

sequential trials [STAT] The outcome of each trial is known before the next trial is performed.

sequestering agent [CHEM] A substance that removes a metal ion from a solution system by forming a complex ion that does not have the chemical reactions of the ion that is removed; can be a chelating or a complexing agent.

sequestrum [MED] A piece of dead or detached bone within a cavity, abscess, or wound.

Sequoia [BOT] A genus of conifers having overlapping, scalelike evergreen leaves and vertical grooves in the trunk; the giant sequoia (*Sequoia gigantea*) is the largest and oldest of all living things.

serac [HYD] A sharp ridge or pinnacle of ice among the crevasses of a glacier.

serandite [MINERAL] $Na(Mn,Ca)_2Si_3O_8(OH)$ A rose-red mineral composed of a basic silicate of manganese, lime, potash, and soda occurring in monoclinic crystals.

Serber potential [NUC PHYS] A potential between nucleons, equal to $\frac{1}{2}(1 + M)V(r)$, where $V(r)$ is a function of the distance between the nucleons, and M is an operator which exchanges the spatial coordinates of the particles but not their spins (corresponding to the Majorana force).

sere [ECOL] A temporary community which occurs during a successional sequence on a given site.

serein [METEOROL] The doubtful phenomenon of fine rain falling from an apparently clear sky, the clouds, if any, being too thin to be visible; frequently, fine rain is observed with a clear sky overhead, but clouds to windward clearly indicate the source of the drops.

SEQUOIA

The giant sequoia tree, *Sequoia gigantea*, showing relative size of man at base.

serge [TEXT] Twill weave with the diagonal prominent on both sides of the cloth.

Sergestidae [INV ZOO] A family of decapod crustaceans including several species of prawns.

serial [COMPUT SCI] Pertaining to the internal handling of data in sequential fashion. [IND ENG] An element or a group of elements within a series which is given a numerical or alphabetical designation for convenience in planning, scheduling, and control.

serial-access [COMPUT SCI] **1.** Pertaining to memory devices having structures such that data storage sites become accessible for read/write in time-sequential order; circulating memories and magnetic tapes are examples of serial-access memories. **2.** Pertaining to a particular process or program that accesses data items sequentially, without regard to the capability of the memory hardware. **3.** Pertaining to character-by-character transmission from an on-line real-time keyboard.

serial bit [COMPUT SCI] Digital computer storage in which the individual bits that make up a computer word appear in time sequence.

serial digital computer [COMPUT SCI] A digital computer in which the digits are handled serially, although the bits that make up a digit may be handled either serially or in parallel.

serial dot character printer [COMPUT SCI] A computer printer in which the dot matrix technique is used to print characters, one at a time, with a movable print head that is driven back and forth across the page.

serial feed [COMPUT SCI] The method of placing cards in the feed hopper of a punched-card machine in which one of the short edges of the card enters the machine first, so that the columns of the card are read sequentially.

serial file [COMPUT SCI] The simplest type of file organization, in which no subsets are defined, no directories are provided, no particular file order is specified, and a search is performed by sequential comparison of the query with identifiers of all stored items.

serial homology [ZOO] The similarity between the members of a single series of structures, such as vertebrae, in an organism.

serial learning [PSYCH] The type of association in verbal learning involved in learning the alphabet; studied in the laboratory by giving the subject serial lists to learn, where each list would consist of a number of unrelated items.

serially reusable [COMPUT SCI] An attribute possessed by a program that can be used for several tasks in sequence without having to be reloaded into main memory for each additional use.

serial memory [COMPUT SCI] A computer memory in which data are available only in the same sequence as originally stored.

serial observation [OCEANOGR] The procurement of water samples and temperature readings at a number of levels between the surface and the bottom of an ocean.

serial operation [COMPUT SCI] The flow of information through a computer in time sequence, using only one digit, word, line, or channel at a time.

serial parallel [COMPUT SCI] **1.** A combination of serial and parallel; for example, serial by character, parallel by bits comprising the character. **2.** Descriptive of a device which converts a serial input into a parallel output.

serial-parallel conversion [COMPUT SCI] The transformation of a serial data representation as found on a disk or drum into the parallel data representation as exists in core.

serial printer [GRAPHICS] A typewriter, or similar device, in which the paper or printing device moves back and forth, step by step to successive positions, to print one character at a time. Also known as character printer.

serial processing [COMPUT SCI] Processing items in a collection of data in the order that they appear in a storage device, in contrast to sequential processing.

serial processor [COMPUT SCI] A computer in which data are handled sequentially by separate units of the system.

serial programming [COMPUT SCI] In computers, programming in which only one operation is executed at one time.

serial sampling [STAT] A method of gathering samples by a set pattern, such as a grid, to ensure randomness.

serial station [OCEANOGR] An oceanographic station consisting of one or more Nansen casts.

serial storage [COMPUT SCI] Computer storage in which time is one of the coordinates used to locate any given bit, character, or word; access time, therefore, includes a variable waiting time, ranging from zero to many word times.

serial transfer [COMPUT SCI] Transfer of the characters of an element of information in sequence over a single path in a digital computer.

serial transmission [COMMUN] Transmission of groups of elements of a signal in time intervals that follow each other without overlapping.

seriate [GEOL] Having crystals that vary gradually in size.

sericeous [BOT] Of, pertaining to, or consisting of silk.

sericite [MINERAL] A white, fine-grained potassium mica, usually muscovite in composition, having a silky luster and found as small flakes in various metamorphic rocks.

sericitic sandstone [PETR] A sandstone in which sericite (derived by decomposition of feldspar) intermingles with finely divided quartz and fills the voids between quartz grains.

sericitization [GEOL] A hydrothermal or metamorphic process involving the introduction of or replacement by sericite.

sericulture [AGR] The raising of silkworms to produce raw silk.

series [ELEC] An arrangement of circuit components end to end to form a single path for current. [GEOL] **1.** A number of rocks, minerals, or fossils that can be arranged in a natural sequence due to certain characteristics, such as succession, composition, or occurrence. **2.** A time-stratigraphic unit, below system and above stage, composed of rocks formed during an epoch of geologic time. [MATH] An expression of the form $x_1 + x_2 + x_3 + \ldots$, where x_i are real or complex numbers.

series circuit [ELEC] A circuit in which all parts are connected end to end to provide a single path for current.

series compensation *See* cascade compensation.

series connection [ELEC] A connection that forms a series circuit.

series decay *See* radioactive series.

series disintegration [NUC PHYS] The successive radioactive transformations in a radioactive series. Also known as chain decay; chain disintegration.

series excitation [ELEC] The obtaining of field excitation in a motor or generator by allowing the armature current to flow through the field winding.

series-fed vertical antenna [ELECTROMAG] Vertical antenna which is insulated from the ground and energized at the base.

series feed [ELECTR] Application of the direct-current voltage to the plate or grid of a vacuum tube through the same impedance in which the alternating-current flows.

series firing [ENG] The firing of detonators in a round of shots by passing the total supply current through each of the detonators.

series generator [ELEC] A generator whose armature winding and field winding are connected in series. Also known as series-wound generator.

series loading [ELECTR] Loading in which reactances are inserted in series with the conductors of a transmission circuit.

series modulation [ELECTR] Modulation in which the plate circuits of a modulating tube and a modulated amplifier tube are in series with the same plate voltage supply.

series motor [ELEC] A commutator-type motor having armature and field windings in series; characteristics are high starting torque, variation of speed with load, and dangerously high speed on no-load. Also known as series-wound motor.

series multiple [ELEC] Type of switchboard jack arrangement in which a single line circuit appears before two or more operators, all appearances being connected in series.

series of lines [SPECT] A collection of spectral lines of an atom or ion for a set of transitions, with the same selection rules, to a single final state; often the frequencies have a general formula of the form $[R/(a + c_1)^2] - [R/(n + c_2)^2]$, where R is the Rydberg constant for the atom, a and c_1 and c_2 are constants, and n takes on the values of the integers greater than a for the various lines in the series.

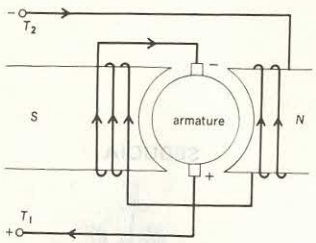
series-parallel circuit [ELEC] A circuit in which some of the components or elements are connected in parallel, and one or more of these parallel combinations are in series with other components of the circuit.

series-parallel control [ELEC] A method of controlling the speed of electric motors in which the motors, or groups of motors, are connected in series at some times and in parallel at other times.

series-parallel firing [ENG] The firing of detonators in a round of shots by dividing the total supply current into branches, each containing a certain number of detonators wired in series.

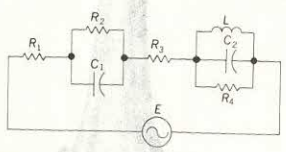
series-parallel switch [ELEC] A switch used to change the

SERIES GENERATOR



Armature and field winding in a series generator. N = north; S = south; T_1, T_2 = terminals connected to external load.

SERIES-PARALLEL CIRCUIT



Circuit diagram of a typical series-parallel circuit. E = source of electromotive force; C_1, C_2 = capacitors; L = inductor; R_1, R_2, R_3 = resistors.

connections of lamps or other devices from series to parallel, or vice versa.

series peaking [ELECTR] Use of a peaking coil and resistor in series as the load for a video amplifier to produce peaking at some desired frequency in the passband, such as to compensate for previous loss of gain at the high-frequency end of the passband.

series production [IND ENG] The manufacture of a product or service by a group of operations sequenced so that all materials will be routed successively through each production state. Also known as batch production.

series radio tap [COMMUN] A telephone tapping procedure in which a miniature radio transmitter is inserted in series with one wire of the target pair so that the transmitter derives its power from the telephone central battery.

series reactor [ELEC] A reactor used in alternating-current power systems for protection against excessively large currents under short-circuit or transient conditions; it consists of coils of heavy insulated cable either cast in concrete columns or supported in rigid frames and mounted on insulators. Also known as current-limiting reactor.

series regulator [ELEC] A regulator that controls output voltage or current by automatically varying a resistance in series with the voltage source.

series reliability [SYS ENG] Property of a system composed of elements in such a way that failure of any one element causes a failure of the system.

series repeater [ELEC] A type of negative impedance telephone repeater which is stable when terminated in an open circuit and oscillates when it is connected to a low impedance, in contrast to a shunt repeater.

series resonance [ELEC] Resonance in a series resonant circuit, wherein the inductive and capacitive reactances are equal at the frequency of the applied voltage; the reactances then cancel each other, reducing the impedance of the circuit to a minimum, purely resistive value.

series resonant circuit [ELEC] A resonant circuit in which the capacitor and coil are in series with the applied alternating-current voltage.

series shots [ENG] The connecting and firing of a number of loaded holes one after the other.

series-shunt network *See* ladder network.

series T junction *See* E-plane T junction.

series transistor regulator [ELECTR] A voltage regulator whose circuit has a transistor in series with the output voltage, a Zener diode, and a resistor chosen so that the Zener diode is approximately in the middle of its operating range.

series-tuned circuit [ELEC] A simple resonant circuit consisting of an inductance and a capacitance connected in series.

series ventilation [MIN ENG] A system of ventilating a number of faces consecutively by the same air current.

series welding [MET] Making two or more resistance welds simultaneously by using a single welding transformer with three or more electrodes forming a series circuit.

series winding [ELEC] A winding in which the armature circuit and the field circuit are connected in series with the external circuit.

series-wound generator *See* series generator.

series-wound motor *See* series motor.

serif [GRAPHICS] Any of the short crosslines placed at the ends of the strokes of many letters appearing in some typefaces.

serigraph [GRAPHICS] The silk-screen process when it is used as a fine-art reproduction method.

serine [BIOCHEM] $C_3H_7O_3N$ An amino acid obtained by hydrolysis of many proteins; a biosynthetic precursor of several metabolites, including cysteine, glycine, and choline.

serioscopy [NUCLEO] A radiographic technique enabling three-dimensional exploration by moving two of the three components of the system (tube, subject, film) in order to register the radiographic image of one plane in the object while images outside this slice have a continuous relative displacement and are blurred.

seritinous [ECOL] Of, pertaining to, or occurring during the latter, drier half of the summer.

seroche *See* mountain sickness.

serodiagnosis [MED] Diagnosis based upon the reaction of blood serum of a patient.

serofibrinous [PHYSIO] Composed of serum and fibrin.

Serolidae [INV ZOO] A family of isopod crustaceans which contains greatly flattened forms that live partially buried on sandy bottoms.

serology [BIOL] The branch of science dealing with the properties and reactions of blood sera.

Seromycin [MICROBIO] A trade name for cycloserine.

seronegative [PATH] **1.** Having a negative serologic test for some condition. **2.** Specifically, having a negative serologic test for syphilis.

seropositive [PATH] **1.** Having a positive serologic test for some condition. **2.** Specifically, having a positive serologic test for syphilis.

seropurulent [MED] Composed of serum and pus, as a seropurulent exudate.

seroresistance [PATH] Persistent positive serologic reaction for syphilis despite prolonged intensive treatment; the patient is said to be Wassermann-fast.

serosa [ANAT] The serous membrane lining the pleural, peritoneal, and pericardial cavities. [EMBRYO] The chorion of reptile and bird embryos.

serotherapy [MED] The treatment of disease by means of human or animal serum containing antibodies. Also known as immunotherapy.

serotinous [BOT] Plants which flower or develop late in a season.

serotonin [BIOCHEM] $C_{10}H_{12}ON_2$ A compound derived from tryptophan which functions as a local vasoconstrictor, plays a role in neurotransmission, and has pharmacologic properties. Also known as 5-hydroxytryptamine.

serotype [MICROBIO] A serological type of intimately related microorganisms, distinguished on the basis of antigenic composition.

serous cystadenoma [MED] A benign cystic tumor of the ovary, made up of cylindrical cells resembling those of the uterine tube; psammoma bodies often appear in the wall of the cyst. Also known as endosalpingioma; papillary adenoma of ovary; papillary cystadenoma of ovary; papillocystoma; psammomatus papilloma; serous cystoma.

serous cystoma *See* serous cystadenoma.

serous gland [PHYSIO] A structure that secretes a watery, albuminous fluid.

serous membrane [HISTOL] A delicate membrane covered with flat, mesothelial cells lining closed cavities of the body.

serous plethora [MED] An increase in the watery part of the blood.

Serpens [ASTRON] A constellation, right ascension 17 hours, declination 0°. Also known as Serpent.

Serpent *See* Serpens.

Serpentes [VERT ZOO] The snakes, a suborder of the Squamata characterized by the lack of limbs and pectoral girdle and external ear openings, immovable eyelids, and a braincase that is completely bony anteriorly.

serpentine [MINERAL] $(Mg,Fe)_3Si_2O_5(OH)_4$ A group of green, greenish-yellow, or greenish-gray ferromagnesian hydrous silicate rock-forming minerals having greasy or silky luster and a slightly soapy feel; translucent varieties are used for gemstones as substitutes for jade.

serpentine cooler *See* cascade cooler.

serpentine crepe [TEXT] A crepe fabric woven with a lengthwise crinkled effect.

serpentine curve [MATH] The curve given by the equation $x^2y + b^2y - a^2x = 0$, passing through and having symmetry about the origin while being asymptotic to the x axis in both directions.

serpentine jade [MINERAL] A variety of the mineral serpentine resembling jade in appearance and used as an ornamental stone.

serpentine locomotion [VERT ZOO] The wavelike or undulating movements characteristic of snakes.

serpentine rock *See* serpentinite.

serpentine spit [GEOGR] A spit that is extended in more than one direction due to variable or periodically shifting currents.

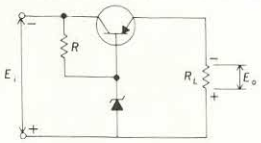
serpentinite [PETR] A rock composed almost entirely of serpentine minerals. Also known as serpentine rock.

serpentinization [GEOL] A hydrothermal process by which magnesium-rich silicate minerals are converted into or replaced by serpentine minerals.

serpent kame *See* esker.

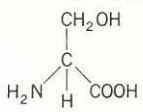
serpierite [MINERAL] $(Cu,Zn,Ca)_5(SO_4)_2(OH)_6 \cdot 3H_2O$ A

SERIES TRANSISTOR REGULATOR



Circuit diagram of a series transistor regulator. E_O = output voltage; E_i = input voltage; R = resistor; R_L = load resistance.

SERINE



Structural formula of serine.

SERPENTINE

Serpentine, variety chrystile, taken from the Thetford Mines, Quebec, Canada. *(American Museum of Natural History Specimen)*

SERPULIDAE

Serpula in right lateral view.

bluish-green mineral composed of hydrous basic sulfate of copper, zinc, and calcium; occurs in tabular crystals and tufts.

Serpulidae [INV ZOO] A family of polychaete annelids belonging to the Sedentaria including many of the feather-duster worms which construct calcareous tubes in the earth, sometimes in such abundance as to clog drains and waterways.

Serranidae [VERT ZOO] A family of perciform fishes in the suborder Percoidei including the sea basses and groupers.

serrate [BIOL] Possessing a notched or toothed edge. [GEOL] Pertaining to topographic features having a notched or toothed edge, or a saw-edge profile.

serrated pulse [ELECTR] Vertical and horizontal synchronizing pulse divided into a number of small pulses, each of which acts for the duration of half a line in a television system.

serrate ridge *See* arête.

Serratia [MICROBIO] A genus of bacteria in the family Enterobacteriaceae; motile rods; many strains produce prodigiosin, a bright orange to deep red pigment.

Serratieae [MICROBIO] Formerly a tribe of the Enterobacteriaceae containing the genus *Serratia*, with soil and water forms characterized by the production of a bright-orange to deep-red pigment, prodigiosin.

Serret-Frenet formulas *See* Frenet-Serret formulas.

Serridentinae [PALEON] An extinct subfamily of elephantoids in the family Gomphotheriidae.

Serritermitidae [INV ZOO] A family of the Isoptera which contains the single monotypic genus *Serritermes*.

serrodyne [ELECTR] Phase modulator using transit time modulation of a traveling-wave tube or klystron.

Serropalpidae [INV ZOO] An equivalent name for Melandryidae.

serrulate [BIOL] Finely serrate.

Sertoli cell [HISTOL] One of the sustentacular cells of the seminiferous tubules.

serum [PHYSIO] The liquid portion that remains when blood clots spontaneously and the formed and clotting elements are removed by centrifugation; it differs from plasma by the absence of fibrinogen.

serum accident [IMMUNOL] A serious allergic reaction which immediately follows the introduction of a foreign serum into a hypersensitive individual; dyspnea and flushing occur, soon followed by shock and occasionally by fatal termination.

serum albumin [BIOCHEM] The principal protein fraction of blood serum and serous fluids.

serum globulin [BIOCHEM] The globulin fraction of blood serum.

serum hepatitis [MED] A form of viral hepatitis transmitted by parenteral injection of human blood or blood products contaminated with the type B virus.

serum shock [MED] An anaphylactic reaction following the injection of foreign serum into a sensitized individual.

serum sickness [MED] A syndrome manifested in 8–12 days after the administration of serum by an urticarial rash, edema, enlargement of lymph nodes, arthralgia, and fever.

service [ENG] To perform services of maintenance, supply, repair, installation, distribution, and so on, for or upon an instrument, installation, vehicle, or territory.

serviceability [IND ENG] The reliability of equipment according to some objective criterion such as serviceability ratio, utilization ratio, or operating ratio.

serviceability ratio [IND ENG] The ratio of up time to the sum of up time and down time.

service agreement [ENG] A contract which agrees to provide mechanical maintenance of a machine for a fixed period of time at a stated charge.

service area [COMMUN] The area that is effectively served by a given radio or television transmitter, navigation aid, or other type of transmitter. Also known as coverage.

service band [COMMUN] Band of frequencies allocated to a given class of radio service.

service bit [COMMUN] A bit used in data transmission to monitor the transmission rather than to convey information, such as a request that part of a message be repeated.

service brake [MECH ENG] The brake used for ordinary driving in an automotive vehicle; usually foot-operated.

service bureau [COMPUT SCI] An organization that offers time sharing and software services to its users who communicate with a computer in the bureau from terminals on their premises.

service ceiling [AERO ENG] The height at which, under standard atmospheric conditions, an aircraft is unable to climb faster than a specified rate (100 feet or 30 meters per minute in the United States, Great Britain, and Canada).

service compartment [MIN ENG] The section of a mine shaft that houses water pipes, compressed-air pipeline, cables and telephone wires, and signaling and similar arrangements.

service engineering [ENG] The function of determining the integrity of material and services in order to measure and maintain operational reliability, approve design changes, and assure their conformance with established specifications and standards.

service factor [ENG] For a chemical or a petroleum processing plant or its equipment, the measure of the continuity of an operation, computed by dividing the time on-stream (actual running time) by the total elapsed time.

service life [ENG] The length of time during which a machine, tool, or other apparatus or device can be operated or used economically or before breakdown.

service oscillator *See* radio-frequency signal generator.

service pipe [CIV ENG] A pipe linking a building to a main pipe.

service road [CIV ENG] A small road parallel to the main road for convenient access to shops and houses.

service routine [COMPUT SCI] A section of a computer code that is used in so many different jobs that it cannot belong to any one job.

service shaft [MIN ENG] A shaft used only for hoisting men and materials to and from underground.

service test [ORD] A test of an item, system of materiel, or technique conducted under simulated or actual operational conditions to determine whether the specified military requirements or characteristics are satisfied.

service velocity [ORD] The muzzle velocity established as the velocity to be attained by a projectile of standard weight and under standard conditions of temperature, when fired from a new gun of the designated type; the range tables are computed on the basis of this velocity.

service volume [NAV] That volume in airspace surrounding a VOR, Tacan, or Vortac facility within which a signal of usable strength exists and is free of interchannel and cochannel interference; the advertised service volume is defined as a simple cylinder of airspace, usually smaller than theoretical maximum, and is used in planning areas of air operations.

service wires [ELEC] The conductors that bring the electric power into a building.

servicing time [COMPUT SCI] Machine down-time necessary for routine testing, for machine servicing due to breakdown, or for preventive servicing measures; includes all test time (good or bad) following breakdown and subsequent repair or preventive servicing.

serving [ELEC] A covering, such as thread or tape, that protects a winding from mechanical damage. Also known as coil serving.

servo *See* servomotor.

servo amplifier [ELECTR] An amplifier used in a servomechanism.

servo brake [MECH ENG] **1.** A brake in which the motion of the vehicle is used to increase the pressure on one of the shoes. **2.** A brake in which the force applied by the operator is augmented by a power-driven mechanism.

servolink [CONT SYS] A power amplifier, usually mechanical, by which signals at a low power level are made to operate control surfaces requiring relatively large power inputs, for example, a relay and motor-driven actuator.

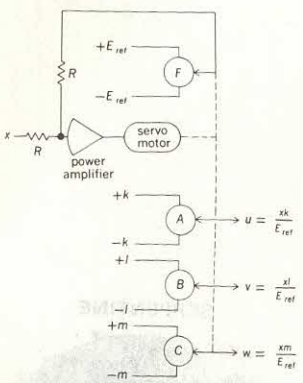
servo loop *See* single-loop servomechanism.

servomechanism [CONT SYS] An automatic feedback control system for mechanical motion; it applies only to those systems in which the controlled quantity or output is mechanical position or one of its derivatives (velocity, acceleration, and so on). Also known as servo system.

servomotor [CONT SYS] The electric, hydraulic, or other type of motor that serves as the final control element in a servomechanism; it receives power from the amplifier element and drives the load with a linear or rotary motion. Also known as servo.

servomultiplier [ELECTR] An electromechanical multiplier in which one variable is used to position one or more ganged potentiometers across which the other variable voltages are applied.

SERVOMULTIPLIER



Circuit diagram of servomultiplier. Feedback control loop is used to make the shaft angle of servomotor proportional to drive signal x. Motor shaft is linked to potentiometers A, B, and C so that their output voltages u, v, and w are also proportional to x. In feedback loop servomotor moves slider shaft of an attenuator until signal from the feedback potentiometer F is equal (but opposite in sign) to x so that there is a zero error signal at the input of the power amplifier.

servonoise [ENG] Hunting action of the tracking servomechanism of a radar, which results from backlash and compliance in the gears, shafts, and structures of the mount.

servo system *See* servomechanism.

sesame oil [MATER] A combustible, yellow, optically active, semidrying fatty oil obtained from sesame seeds; soluble in ether, benzene, and carbon disulfide, slightly soluble in alcohol; melts at 20–25°C; used in edible food products, such as shortenings, salad oils, and margarine. Also known as benne oil; gingelly oil; teel oil.

sesamoid bone [MED] A small bone developed in a tendon subjected to much pressure.

sesquioxide [CHEM] A compound composed of a metal and oxygen in the ratio 2:3; for example, Al_2O_3.

sesquisideband transmission [COMMUN] Transmission of a carrier modulated by one full sideband and half of the other sideband.

sesquiterpene [ORG CHEM] Any terpene with the formula $C_{15}H_{24}$; that is, 1½ times the terpene formula.

sessile [BOT] Attached directly to a branch or stem without an intervening stalk. [ZOO] Permanently attached to the substrate.

sessile dislocation [MET] A dislocation in a metal lattice that is relatively immobile, offering an obstacle to the movement of other dislocations.

sessile drop method [FL MECH] A method of measuring surface tension in which the depth and mass of a drop resting on a surface that it does not wet are measured; from this, the shape of the drop and, in turn, the surface tension are determined.

Sessilina [INV ZOO] A suborder of ciliates in the order Peritrichida.

sessoblast [INV ZOO] A statoblast that attaches to zooecial tubes or to the substratum.

seston [OCEANOGR] Minute living organisms and particles of nonliving matter which float in water and contribute to turbidity.

set [ASTRON] Of a celestial body, to cross the visible western horizon while descending. [CHEM] The hardening or solidifying of a plastic or liquid substance. [COMMUN] A radio or television receiver. [COMPUT SCI] A collection of record types. [ELECTR] The placement of a storage device in a prescribed state, for example, a binary storage cell in the high or 1 state. [ENG] **1.** A combination of units, assemblies, and parts connected or otherwise used together to perform an operational function, such as a radar set. **2.** In plastics processing, the conversion of a liquid resin or adhesive into a solid state by curing or evaporation of solvent or suspending medium, or by gelling. **3.** Saw teeth bent out of the plane of the saw body, resulting in a wide cut in the workpiece. [GEOL] A group of essentially conformable strata or cross-strata, separated from other sedimentary units by surfaces of erosion, nondeposition, or abrupt change in character. [GRAPHICS] The fixing or drying of a printing ink on a printed sheet, so that, though not completely dry, the sheet can be handled without smudging. [MATER] **1.** The hardening or firmness displayed by some materials when left undisturbed. **2.** Permanent deformation of a material, such as metal or plastic, when stressed beyond the elastic limit. [MATH] A collection of objects which has the property that, given any thing, it can be determined whether or not the thing is in the collection. [MECH] *See* permanent set. [MIN ENG] *See* frame set. [NAV] The establishment of a course. [OCEANOGR] The direction toward which an oceanic current flows.

seta [BIOL] A slender, usually rigid bristle or hair. Also known as chaeta.

set analyzer *See* analyzer.

setback [MECH] The relative rearward movement of component parts in a projectile, missile, or fuse undergoing forward acceleration during its launching; these movements, and the setback force which causes them, are used to promote events which participate in the arming and eventual functioning of the fuse.

setback force [MECH] The rearward force of inertia which is created by the forward acceleration of a projectile or missile during its launching phase; the forces are directly proportional to the acceleration and mass of the parts being accelerated.

set bit [DES ENG] A bit insert with diamonds or other cutting media.

set casing [ENG] Introducing cement between the casing and the wall of the hole to seal off intermediate formations and prevent fluids from entering the hole.

set class [COMPUT SCI] The collection of set occurrences that have been or may be created in accordance with a particular set description.

set composite [ELEC] Signaling circuit in which two signaling or telegraph legs may be superimposed on a two-wire, interoffice trunk by means of one of a balanced pair of high-impedance coils connected to each side of the line with an 0ssociated capacitor network.

set condition [ELECTR] Condition of a flip-flop circuit in which the internal state of the flip-flop is set to 1.

set copper [MET] An intermediate copper product obtained at the end of the oxidizing portion of the fire-refining cycle and containing about 3–4% cuprous oxide.

set description [COMPUT SCI] For a specified data set, a definition of the set class name, set-owner selection criteria, set-member eligibility rules, and set-member ordering rules.

set forward [MECH] Relative forward movement of component parts which occurs in a projectile, missile, or bomb in flight when impact occurs; the effect is due to inertia and is opposite in direction to setback.

set forward force [MECH] The forward force of inertia which is created by the deceleration of a projectile, missile, or bomb when impact occurs; the forces are directly proportional to the deceleration and mass of the parts being decelerated. Also known as impact force.

set forward point [MECH] A point on the expected course of the target at which it is predicted the target will arrive at the end of the time of flight.

set grease soap [MATER] A soap made at room temperature by saponifying slack lime with resin oil; used to make a cold-set grease such as axle grease.

set hammer [DES ENG] **1.** A hammer used as a shaping tool by blacksmiths. **2.** A hollow-face tool used in setting rivets.

set mark [TEXT] A weaving defect in cloth; in particular, a transverse mark resulting from an improperly set loom or from an interruption in the operation of the loom.

set occurrence [COMPUT SCI] An instance of a set created in accordance with a set description.

set off [GRAPHICS] In presswork, the undesirable rubbing off or marking of a printed sheet with the ink from the next sheet as it is being delivered.

setover [ENG] A device which helps move a lathe tailstock or headstock on its base so that a taper on a turned piece can be obtained.

set point [CONT SYS] The value selected to be maintained by an automatic controller.

set pressure [MECH ENG] The inlet pressure at which a relief valve begins to open as required by the code or standard applicable to the pressure vessel to be protected.

set pulse [ELECTR] An electronic pulse designed to place a memory cell in a specified state.

set screw [DES ENG] A small headless machine screw, usually having a point at one end and a recessed hexagonal socket or a slot at the other end, used for such purposes as holding a knob or gear on a shaft.

set theory [MATH] The study of the structure and size of sets from the viewpoint of the axioms imposed.

setting angle [MECH ENG] The angle, usually 90°, between the straight portion of the tool shank of the machined portion of the work.

setting circle [ENG] A coordinate scale on an optical pointing instrument, such as a telescope or surveyor's transit.

setting gage [ENG] A standard gage for testing a limit gage or setting an adjustable limit gage.

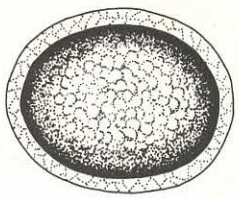
setting ring [ORD] Part of a mechanical fuse setter that takes hold of a fixed ring on the fuse of a projectile; it then rotates the entire projectile except a small ring, or setting element, in the fuse; this setting element is kept from turning by the adjusting ring in the fuse setter just long enough to make the desired change in the setting of the fuse.

setting temperature [ENG] The temperature at which a liquid resin or adhesive, or an assembly involving them, will set, that is, harden, gel, or cure.

setting time [ENG] The length of time that a resin or adhesive must be subjected to heat or pressure to cause them to set, that is, harden, gel, or cure.

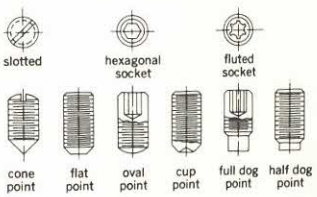
settleable solids test [CIV ENG] A test used in examination of sewage to help determine the sludge-producing characteris-

SESSOBLAST



Sessoblast of *Stolella indica.*

SET SCREW



Types of set screws, with end views of three showing slot or socket. *(From W. J. Luzadder, Fundamentals of Engineering Drawing, 6th ed., Prentice-Hall, 1965)*

tics of sewage; a measurement of the part of the suspended solids heavy enough to settle is made in an Imhoff cone.

settled [METEOROL] Pertaining to weather, devoid of storms for a considerable period.

settled ground [MIN ENG] Ground which has ceased to subside over the waste area of a mine, having reached a state of full subsidence.

settled snow [HYD] An old snow that has been strongly metamorphosed and compacted.

settlement [CIV ENG] The gradual downward movement of an engineering structure, due to compression of the soil below the foundation. [GEOL] The subsidence of surficial material (such as coastal sediments) due to compaction. [MIN ENG] The gradual lowering of the overlying strata in a mine, due to extraction of the mined material.

settler [ENG] A separator, such as a tub, pan, vat, or tank in which the partial separation of a mixture is made by density difference; used to separate solids from liquid or gas, immiscible liquid from liquid, or liquid from gas.

settling [ENG] The gravity separation of heavy from light materials; for example, the settling out of dense solids or heavy liquid droplets from a liquid carrier, or the settling out of heavy solid grains from a mixture of solid grains of different densities. [GEOL] The sag in outcrops of layered strata, caused by rock creep. Also known as outcrop curvature.

settling basin [CIV ENG] An artificial trap designed to collect suspended stream sediment before discharge of the stream into a reservoir. [IND ENG] A sedimentation area designed to remove pollutants from factory effluents.

settling chamber [ENG] A vessel in which solids or heavy liquid droplets settle out of a liquid carrier by gravity during processing or storage.

settling pond [MIN ENG] A natural or artificial pond for recovering the solids from an effluent.

settling reservoir [CIV ENG] A reservoir consisting of a series of basins connected in steps by long weirs; only the clear top layer of each basin is drawn off.

settling rounds [ORD] Rounds fired at varying angles of elevation to seat the spade and base plate of a gun mount firmly in the ground.

settling tank [ENG] A tank into which a two-phase mixture is fed and the entrained solids settle by gravity during storage.

settling time *See* correction time.

settling velocity [FL MECH] The rate at which suspended solids subside and are deposited. Also known as fall velocity. [MECH] The velocity reached by a particle as it falls through a fluid, dependent on its size and shape, and the difference between its specific gravity and that of the settling medium; used to sort particles by grain size.

setup [ELECTR] The ratio between the reference black level and the reference white level in television, both measured from the blanking level; usually expressed as a percentage. [IND ENG] The preparation of a facility or a machine for a specific work method, activity, or process.

setup time [COMPUT SCI] The time before, after, and between computer machine runs, in which manual tasks are carried out, such as changing tape reels or transporting tapes, cards, or supplies to and from the computer equipment, to prepare for a new run. [MATER] The time required for a cement or a gelatin to harden.

seven-eighths rule [NAV] A thumb rule which states that the approximate distance to an object broad on the beam equals 7/8 of the distance traveled by a craft while the relative bearing (right or left) changes from 30 to 60° or from 120 to 150°, neglecting current and wind.

seven-tenths rule [NAV] A thumb rule which states that the approximate distance to an object broad on the beam equals 7/10 of the distance traveled by a craft while the relative bearing (right or left) changes from 22°5 to 45° or from 135° to 157°5, neglecting current and wind.

seven-thirds rule [NAV] A thumb rule which states that the approximate distance to an object broad on the beam equals 7/3 of the distance traveled by a craft while the relative bearing (right or left) changes from 22°5 to 26°5, 67°5 to 90°, 90° to 112°5, or 153°5 to 157°5, neglecting current and wind.

seventy-five-degree line [ORD] Imaginary line between the final bomb release line and the vulnerable area upon which antiaircraft artillery guns are located; from such positions the guns at an elevation of 75° can still engage and deliver effective fire on the final bomb release line.

severe storm [METEOROL] In general, any destructive storm, but usually applied to a severe local storm, that is, an intense thunderstorm, hail storm, or tornado.

severe-storm observation [METEOROL] An observation (and report) of the occurrence, location, time, and direction of movement of severe local storms.

severe weather [METEOROL] A more general term for severe storm.

severity factor [CHEM ENG] A measure of the severeness or intensity of overall reaction conditions in a chemical reaction; for example, the temperature, pressure, or conversion in a catalytic cracker or reformer.

sevier orogeny [GEOL] The deformation that occurred along the eastern edge of the Great Basin in Utah (eastern edge of the Cordilleran miogeosyncline) during times intermediate between the Nevadan orogeny to the west and the Laramide orogeny to the east, culminating early in the Late Cretaceous.

sewage [CIV ENG] The fluid discharge from medical, domestic, and industrial sanitary appliances.

sewage disposal plant [CIV ENG] The land, building, and apparatus employed in the treatment of sewage by chemical precipitation or filtration, bacterial action, or some other method.

sewage farm [AGR] A farm in which sewage is used for irrigation and fertilizer.

sewage sludge [CIV ENG] A semiliquid waste with a solid concentration in excess of 2500 parts per million, obtained from the purification of municipal sewage. Also known as sludge.

sewage system [CIV ENG] Any of several drainage systems for carrying surface water and sewage for disposal.

sewage treatment [CIV ENG] A process for the purification of mixtures of human and other domestic wastes; the process can be aerobic or anaerobic.

sewer [CIV ENG] An underground pipe or open channel in a sewage system for carrying water or sewage to a disposal area.

sewerage [CIV ENG] The sewage system in a particular district.

sewer gas [MATER] The gas evolved from the decomposition of municipal sewage; it has a high content of methane and hydrogen sulfide, and can be used as a fuel gas.

sewing machine [MECH ENG] A mechanism that stitches cloth, leather, book pages, or other material by means of a double-pointed or eye-pointed needle.

sewing press [GRAPHICS] A wooden fixture used to stretch cords used in hand-sewn book bindings.

sex [BIOL] The state of condition of an organism which comes to expression in the production of germ cells.

sexadecimal *See* hexadecimal.

sexadecimal number system *See* hexadecimal number system.

sexagesimal [MATH] Pertaining to a multiplicity of 60 distinct alternative states or conditions or, simply, a positional numeration system to radix (or base) 60.

sexagesimal counting table [MATH] A table for converting numbers using the 60 system into decimals, for example, minutes and seconds.

sexagesimal measure of angles [MATH] A system of angular units in which a complete revolution is divided into 360 degrees, a degree into 60 minutes, and a minute into 60 seconds.

sex chromosome [GEN] Either member of a pair of chromosomes responsible for sex determination of an organism.

sex cords [EMBRYO] Cordlike masses of epithelial tissue that invaginate from germinal epithelium of the gonad and give rise to seminiferous tubules and rete testes in the male, and primary ovarian follicles and rete ovarii in the female.

sex determination [GEN] The mechanisms by which sex is determined in a species.

sex factor *See* fertility factor.

sex hormone [BIOCHEM] Any hormone secreted by a gonad, but also found in other tissues.

sex-influenced inheritance [GEN] That part of the inheritance pattern on which sex differences operate to promote character differences.

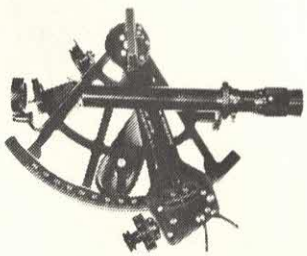
sexless connector *See* hermaphroditic connector.

sex-limited inheritance [GEN] Expression of a phenotype in only one sex; may be due to either a sex-linked or autosomal gene.

sex-linked inheritance [GEN] The transmission to successive generations of differences that are due to genes located in the sex chromosomes.

sex organs [ANAT] The organs pertaining entirely to the sex of an individual, both physiologically and anatomically.
sex ratio [BIOL] The relative proportion of males and females in a population.
Sextans [ASTRON] A constellation in the southern hemisphere, right ascension 10 hours, declination 0°. Also known as Sextant.
sextant [MATH] A unit of plane angle, equal to 60° or $\pi/3$ radians. [NAV] An optical instrument; a double reflecting instrument used in navigation for measuring angles, primarily altitudes of celestial bodies.
Sextant *See* Sextans.
sextant adjustment [NAV] In celestial navigation, the process of checking the accuracy of a sextant and removing or reducing its error.
sextant altitude [NAV] Altitude as indicated by a sextant or similar instrument before corrections are applied.
sextant altitude corrections [NAV] Corrections applied to sextant altitude readings which are made necessary by external physical phenomena, such as sea-air temperature difference, wave height, and sea tilt, personal errors such as tilt and height of eye, and sextant errors.
sextant error [NAV] The error in sextant readings caused by sources other than its operator or physical phenomena; some of these errors are prismatic, collimation, perpendicularity of horizon glass, and perpendicularity of index mirror. Also known as octant error.
sextic [MATH] Having the sixth degree or order.
sextile aspect [ASTRON] The position of two celestial bodies when they are 60° apart.
sextillion [MATH] **1.** The number 10^{21}. **2.** In British and German usage, the number 10^{36}.
sexual cycle [PHYSIO] A cycle of physiological and structural changes associated with sex; examples are the estrous cycle and the menstrual cycle.
sexual dimorphism [BIOL] Diagnostic morphological differences between the sexes.
sexuality [BIOL] **1.** The sum of a person's sexual attributes, behavior, and tendencies. **2.** The psychological and physiological sexual impulses whose satisfaction affords pleasure. [PSYCH] The quality of being sexual, or the degree of a person's sexual attributes, attractiveness, and drives.
sexual reproduction [BIOL] Reproduction involving the paired union of special cells (gametes) from two individuals.
sexual spore [BIOL] A spore resulting from conjugation of gametes or nuclei of opposite sex.
seybertite *See* clintonite.
Seyfert galaxy [ASTRON] A galaxy that has a small, bright nucleus from which violent explosions may occur.
Seymouriamorpha [PALEON] An extinct group of labyrinthodont Amphibia of the Upper Carboniferous and Permian in which the intercentra were reduced.
Sezary syndrome [MED] Exfoliative erythroderma with a cutaneous infiltrate of atypical mononuclear cells; similar cells are also present in the peripheral blood.
S factor [ORD] The deflection change in mils required to keep the burst on the observer target line when the range is changed 100 yards (91.44 meters) along that line.
SFC *See* specific fuel consumption.
sferics *See* atmospheric interference.
sferics fix [METEOROL] The estimated location of a source of atmospherics, presumably a lightning discharge.
sferics observation [METEOROL] An evaluation, from one or more sferics receivers, of the location of weather conditions with which lightning is associated; such observations are more commonly obtained from networks of two or three widely spaced stations; simultaneous observations of the azimuth of the discharge are made at all stations, and the location of the storm is determined by triangulation.
sferics receiver [ELECTR] An instrument which measures, electronically, the direction of arrival, intensity, and rate of occurrence of atmospherics; in its simplest form, the instrument consists of two orthogonally crossed antennas, whose output signals are connected to an oscillograph so that one loop measures the north-south component while the other measures the east-west component; the signals are combined vertically to give the azimuth. Also known as lightning recorder.
SFS *See* sodium formaldehyde sulfoxylate.
shackle [DES ENG] An open or closed link of various shapes with extended legs; each leg has a transverse hole to accommodate a pin, bolt, or the like, which may or may not be furnished.
shackle bolt [DES ENG] A cylindrically shaped metal bar for connecting the ends of a shackle.
shade [OPTICS] The color of a mixture of pigments or dyes which has some black pigment or dye in it.
shaded-pole motor [ELEC] A single-phase induction motor having one or more auxiliary short-circuited windings acting on only a portion of the magnetic circuit; generally, the winding is a closed copper ring embedded in the face of a pole; the shaded pole provides the required rotating field for starting purposes.
shaded-relief map [MAP] A map of an area whose relief is made to appear three-dimensional by the hill-shading method.
shade error [NAV] That error of a sextant due to refraction in the shade glasses.
shade glass [OPTICS] A darkened transparency that can be moved into the line of sight of an optical instrument, such as a sextant, to reduce the intensity of light reaching the eye.
shading [ELECTR] Television process of compensating for the spurious signal generated in a camera tube during trace intervals. [MAP] *See* hill shading.
shading coil *See* shading ring.
shading ring [ELECTROMAG] The copper ring used in a shaded-pole motor to produce a rotating magnetic field for starting purposes, or used around a part of the core of an alternating-current relay to prevent contact chatter. Also known as shading coil. [ENG ACOUS] A heavy copper ring sometimes placed around the central pole of an electrodynamic loudspeaker to serve as a shorted turn that suppresses the hum voltage produced by the field coil.
shading signal [ELECTR] Television camera signal that serves to increase the gain of the amplifier in the camera during those intervals of time when the electron beam is on an area corresponding to a dark portion of the scene being televised.
shadow [OPTICS] A region of darkness caused by the presence of an opaque object interposed between such a region and a source of light. [PHYS] A region which some type of radiation, such as sound or x-rays, does not reach because of the presence of an object, which the radiation cannot penetrate, interposed between the region and the source of radiation.
shadow attenuation [ELECTROMAG] Attenuation of radio waves over a sphere in excess of that over a plane when the distance over the surface and other factors are the same.
shadow bands [ASTRON] Rippling bands of shadow that appear on every white surface of flat terrestrial objects a few minutes before the total eclipse of the sun.
shadow effect [COMMUN] Reduction in the strength of an ultra-high-frequency signal caused by some object (such as a mountain or a tall building) between the points of transmission and reception.
shadow factor [ELECTROMAG] The ratio of the electric-field strength that would result from propagation of waves over a sphere to that which would result from propagation over a plane under comparable conditions. [OPTICS] A multiplication factor derived from the sun's declination, the latitude of the target and the time of photography, used in determining the heights of objects from shadow length. Also known as tan alt.
shadowgram [GRAPHICS] An x-ray photograph. [PHYS] A plot or display of a shadow.
shadowgraph [GRAPHICS] **1.** A photographic image in the form of a shadow. **2.** *See* radiograph. [OPTICS] A simple method of making visible the disturbances that occur in fluid flow at high velocity, in which light passing through a flowing fluid is refracted by density gradients in the fluid, resulting in bright and dark areas on a screen placed behind the fluid.
shadow line [GRAPHICS] A thick line in a line drawing of an object illuminated by light; indicates the edge farthest from the source of light.
shadow mask [ELECTR] A thin, perforated metal mask mounted just back of the phosphor-dot faceplate in a three-gun color picture tube; the holes in the mask are positioned to ensure that each of the three electron beams strikes only its intended color phosphor dot. Also known as aperture mask.
shadow microscopy *See* projection microradiography.
shadow region [ELECTROMAG] Region in which, under normal propagation conditions, the field strength from a given transmitter is reduced by some obstruction which renders effective radio reception of signals or radar detection of objects in this region improbable.
shadow zone [ACOUS] A region, usually under water or in

SEXTANT



A marine sextant.

SHADED-POLE MOTOR

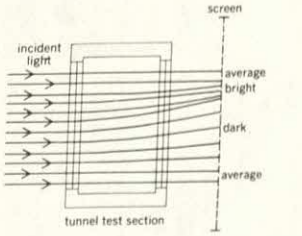
SHADOWGRAPH



Shadowgraph produced by light passing through fluid in test section indicates flow pattern.

the atmosphere, which sound waves will not reach, according to ray acoustics. [GEOPHYS] The zone, between 103 and 143° from the epicenter of an earthquake, in which direct seismic waves do not arrive because of refraction and absorption by the earth's core.

shadscale [BOT] *Atriplex confertifolia*. A small shiny shrub found in the Great Basin Desert.

shaft [GEOL] A passage in a cave that is vertical or nearly vertical. [MECH ENG] A cylindrical piece of metal used to carry rotating machine parts, such as pulleys and gears, to transmit power or motion. [MIN ENG] An excavation of limited area compared with its depth, made for finding or mining ore or coal, raising water, ore, rock, or coal, hoisting and lowering men and material, or ventilating underground workings; the term is often specifically applied to approximately vertical shafts as distinguished from an incline or an inclined shaft. [SCI TECH] A long, slender, usually cylindrical part.

shaft alley [NAV ARCH] The watertight trunk in a ship through which pass the propeller shafts between the propellers and the engine room.

shaft allowance [MIN ENG] The extra space between the excavation diameter and the finished diameter to accommodate the permanent shaft lining.

shaft balancing [DES ENG] The process of redistributing the mass attached to a rotating body in order to reduce vibrations arising from centrifugal force. Also known as rotor balancing.

shaft cable [MIN ENG] A specially armored cable of great mechanical strength running down a mine shaft.

shaft capacity [MIN ENG] The output of ore or coal that can be expected to be raised regularly and in normal circumstances.

shaft column [MIN ENG] A length of pipes installed in a mine shaft for pumping, for hydraulic stowing, or for compressed air.

shaft coupling *See* coupling.

shaft crusher [MIN ENG] A hard-rock crusher in a shaft, set to reduce large lumps of ore to a convenient size for delivery to the skip.

shaft deformation bar [MIN ENG] A length of 1½-inch (3.8-centimeter) pipe fitted at one end with a micrometer and at the other end with a hard-steel cone for measuring the deformation in the cross section of a shaft.

shaft drilling [MIN ENG] The drilling of small shafts up to about 5 feet (1.5 meters) in diameter with the shot drill.

shaft furnace [ENG] A vertical, refractory-lined cylinder in which a fixed bed (or descending column) of solids is maintained, and through which an ascending stream of hot gas is forced; for example, the pig-iron blast furnace and the phosphors-from-phosphate-rock furnace.

shaft hopper [MECH ENG] A hopper that feeds shafts or tubes to grinders, threaders, screw machines, and tube benders.

shaft horsepower [MECH ENG] The output power of an engine, motor, or other prime mover; or the input power to a compressor or pump.

shaft house [MIN ENG] A building at the mouth of a shaft, where ore or rock is received from the mine.

shafting [MECH ENG] The cylindrical machine element used to transmit rotary motion and power from a driver to a driven element; for example, a steam turbine driving a ship's propeller.

shaft kiln [ENG] A kiln in which raw material fed into the top, moves down through hot gases flowing up from burners on either side at the bottom, and emerges as a product from the bottom; used for calcining operations.

shaft lining [MIN ENG] The timber, steel, brick, or concrete structure fixed around a shaft to support the walls.

shaft pillar [MIN ENG] A large area of a coal or ore seam which is left unworked around the shaft bottom to protect the shaft from damage by subsidence.

shaft plumbing [MIN ENG] The operation of orienting two plumb bobs, both at surface and at depth in order to transfer the bearing underground.

shaft pocket [MIN ENG] Ore storage pocket, of one or more compartments, cut into the wall on one or both sides of a vertical shaft or in the hanging wall of an inclined shaft.

shaft-position encoder [ELECTR] An analog-to-digital converter in which the exact angular position of a shaft is sensed and converted to digital form.

shaft siding [MIN ENG] The station or landing place arranged for buckets or tubs at the bottom of the winding shaft.

shaft signaling [MIN ENG] The transmission of visible and audible signals between the onsetter or hitcher at the pit bottom and the banksman or hoistman at the pit top.

shaft sinking [MIN ENG] Excavating a shaft downward, usually from the surface, to the workable coal or ore.

shaft sinking drill [MIN ENG] A large-diameter drill with multiple rotary cones or cutting bits, used for shaft sinking.

shaft spillway [CIV ENG] A vertical shaft which has a funnel-shaped mouth and ends in an outlet tunnel, providing an overflow duct for a reservoir. Also known as morning glory spillway.

shaft station [MIN ENG] An enlargement of a level near a shaft from which ore, coal, or rock may be hoisted and supplies unloaded.

shaft strut [NAV ARCH] A term applied to a bracket supporting the after propeller shaft bearing external to the hull.

shagreen [MATER] **1.** A leather made by pressing grains into the hide to create indentations. **2.** The skin of certain sharks and rays containing small knobs.

shake [MATER] **1.** Separation between adjoining layers of wood, due to causes other than drying. **2.** A thick hand-cut shingle.

shake culture [MICROBIO] **1.** A method for isolating anaerobic bacteria by shaking a deep liquid culture of an agar or gelatin to distribute the inoculum before solidification of the medium. **2.** A liquid medium in a flask that has been inoculated with an aerobic microorganism and placed on a shaking machine; action of the machine continually aerates the culture.

shakedown test [ENG] An equipment test made during the installation work.

shakeout [MET] Removing a casting from a sand mold.

shaker [ELECTROMAG] An electromagnetic device capable of imparting known and usually controlled vibratory acceleration to a given object. Also known as electrodynamic shaker; shake table.

shaker conveyor [MIN ENG] A conveyor consisting of a length of metal troughs, with suitable supports, to which a reciprocating motion is imparted by drives.

shake table *See* shaker; vibration machine.

shake-table test [ENG] A laboratory test for vibration tolerance, in which the device to be tested is placed on a shake table.

shake wave *See* S wave.

shaking-out [CHEM ENG] A procedure in which a sample of crude oil is centrifuged at high speed to separate its components; used to determine sediment and water content.

shaking screen [MECH ENG] A screen used in separating material into desired sizes; has an eccentric drive or an unbalanced rotating weight to produce shaking.

shaking table *See* Wilfley table.

shale [PETR] A fine-grained laminated or fissile sedimentary rock made up of silt- or clay-size particles; generally consists of about one-third quartz, one-third clay materials, and one-third miscellaneous minerals, including carbonates, iron oxides, feldspars, and organic matter.

shale ball [GEOL] A meteorite partly or wholly converted to iron oxides by weathering. Also known as oxidite.

shale break [GEOL] A thin layer or parting of shale between harder strata or within a bed of sandstone or limestone.

shale clay [MATER] A clay made from ground shale.

shale crescent [GEOL] A crescent formed by the filling of a ripple-mark trough by shale.

shale ice [HYD] A mass of thin and brittle plates of river or lake ice formed when sheets of skim ice break up into small pieces.

shale naphtha [MATER] Naphtha derived from shale oil, usually containing 60–70% olefins and other hydrocarbons.

shale oil [MATER] Liquid obtained from the destructive distillation of kerogens in oil shale; further processing is needed to convert shale oil into products similar to petroleum oils.

shale reservoir [GEOL] Underground hydrocarbon reservoir in which the reservoir rock is a brittle, siliceous, fractured shale.

shale shaker [PETRO ENG] A vibrating screen over which drilling fluid is passed to trap the drill cuttings as the fluid passes through.

shalification [GEOL] The formation of shale.

shallot [BOT] *Allium ascalonicum*. A bulbous onionlike herb. Also known as scallion.

shallow-focus earthquake [GEOPHYS] An earthquake whose focus is located within 70 kilometers of the earth's surface.

shallow fog [METEOROL] In weather-observing terminology, low-lying fog that does not obstruct horizontal visibility at a level 6 feet (1.8 meters) or more above the surface of the earth; this is, almost invariably, a form of radiation fog.

shallow fording [ORD] The ability of a vehicle or gun, equipped with built-in waterproofing with its suspension in contact with the ground, to negotiate a water obstacle without the use of a special waterproofing.

shallow inland seas [GEOL] Epeiric seas which periodically cover cratonic areas as a result of continental subsidence or eustatic rises in sea level.

shallow marginal seas [GEOL] Epeiric seas along the cratonic margins.

shallows [HYD] A shallow place or area in a body of water, or an expanse of shallow water.

shallow water [HYD] Water of such a depth that bottom topography affects surface waves.

shallow-water wave [HYD] A progressive gravity wave in water whose depth is much less than the wavelength.

shallow well [HYD] **1.** A water well, generally dug up by hand or by excavating machinery, or put down by driving or boring, that taps the shallowest aquifer in the vicinity. **2.** A well whose water level is shallow enough to permit use of a suction pump, the practical lift of which is taken as 22 feet (6.7 meters).

shaluk [METEOROL] Any hot desert wind other than simoom.

shaly [GEOL] Pertaining to, composed of, containing, or having the properties of shale, especially readily split along close-spaced bedding planes.

shaly bedding [GEOL] Laminated bedding varying between 2 and 10 millimeters in thickness.

shamal [METEOROL] The northwest wind in the lower valley of the Tigris and Euphrates and the Persian Gulf; it may set in suddenly at any time, and generally lasts from 1 to 5 days, dying down at night and freshening again by day; but in June and early July it continues almost without cessation (the great or 40-day shamal).

shandite [MINERAL] $Ni_3Pb_2S_2$ A rhombohedral mineral composed of nickel lead sulfide, occurring in crystals.

shank [DES ENG] **1.** The end of a tool which fits into a drawing holder, as on a drill. **2.** *See* bit blank.

shank-type cutter [DES ENG] A cutter having a shank to fit into the machine tool spindle or adapter.

shannon [COMMUN] A unit of information content, equal to the designation of one of two possible and equally likely values or states of anything used to store or convey information.

Shannon formula [COMMUN] A theorem in information theory which states that the highest number of binary digits per second which can be transmitted with arbitrarily small frequency of error is equal to the product of the bandwidth and $\log_2 (1 + R)$, where R is the signal-to-noise ratio.

Shannon limit [COMMUN] Maximum signal-to-noise ratio improvement which can be achieved by the best modulation technique as implied by Shannon's theorem relating channel capacity to signal-to-noise ratio.

Shannon-McMillian-Breiman theorem [MATH] Given an ergodic measure preserving transformation T on a probability space and a finite partition ζ of that space the limit as $n \to \infty$ of $1/n$ times the information function of the common refinement of $\zeta, T^{-1}\zeta, \ldots, T^{-n+1}\zeta$ converges almost everywhere and in the L_1 metric to the entropy of T given ζ.

Shannon's sampling theorem *See* sampling theorem.

Shannon's theorems [MATH] These results are foundational to the mathematical study of information; mathematically they link the concept of entropy with the amount of efficient transmittal and reception of information.

shantung [GEOL] A monadnock in the process of burial by huangho deposits. [TEXT] A fabric with a plain silk weave characterized by a rough, nubbed surface.

Shantung soil *See* Noncalcic Brown soil.

shape coding [DES ENG] The use of special shapes for control knobs, to permit recognition and sometimes also position monitoring by sense of touch.

shaped-beam antenna [ELECTROMAG] Antenna with a directional pattern which, over a certain angular range, is of special shape for some particular use.

shaped-chamber manometer [ENG] A flow measurement device that measures differential pressure with a uniform flow-rate scale with a specially shaped chamber.

shaped charge [ORD] An explosive charge with a shaped cavity that forces the impact of the explosion to the front so that there is an armor-piercing force. Also known as cavity charge.

shape factor [ELEC] *See* form factor. [FL MECH] The quotient of the area of a sphere equivalent to the volume of a solid particle divided by the actual surface of the particle; used in calculations of gas flow through beds of granular solids. [OPTICS] For a lens, the quantity $(R_2 + R_1)/(R_2 - R_1)$, where R_1 and R_2 are the radii of the first and second surface of the lens. Also known as Coddington shape factor.

shape isomer [NUC PHYS] An excited nuclear state which has an unusually long lifetime because of its deformed shape, which differs drastically from that of the lower energy states into which it is permitted to decay.

shaper [MECH ENG] A machine tool for cutting flat-on-flat, contoured surfaces by reciprocating a single-point tool across the workpiece.

shaping [ELECTROMAG] The adjustment of a plan-position-indicator pattern set up by a rotating magnetic field. [MECH ENG] A machining process in which a reciprocating single-point tool moves over the work in straight, parallel lines to produce a flat surface.

shaping circuit *See* corrective network.

shaping dies [MECH ENG] A set of dies for bending, pressing, or otherwise shaping a material to a desired form.

shaping network *See* corrective network.

shapometer [ENG] A device used to measure the shape of sedimentary particles.

shard [GEOL] A vitric fragment in pyroclastics, having a characteristically curved surface of fracture.

shared control unit [COMPUT SCI] A control unit which controls several devices with similar characteristics, such as tape devices.

shared file [COMPUT SCI] A direct-access storage device that is used by more than one computer or data-processing system.

shared logic [COMPUT SCI] The simultaneous use of a single computer by multiple users.

shared resource [COMPUT SCI] Peripheral equipment that is simultaneously shared by several users.

shark [VERT ZOO] Any of about 225 species of carnivorous elasmobranchs which occur principally in tropical and subtropical oceans; the body is fusiform with a heterocercal tail and a tough, usually gray, skin roughened by tubercles, and the snout extends beyond the mouth.

sharki *See* kaus.

shark liver oil [MATER] A yellow to brown oil with strong aroma, obtained from the livers of various sharks; insoluble in water, soluble in ether, benzene, and carbon disulfide; used as a vitamin A source, in biochemical research. Also known as dogfish oil; shark oil.

shark oil *See* shark liver oil.

sharkskin [TEXT] **1.** A smooth wool or worsted fabric with a basketweave or twill pattern in two tones. **2.** A smooth, dull-finished rayon fabric in a basketweave pattern used for dresses.

sharkskin pahoehoe [GEOL] A type of pahoehoe displaying numerous tiny spines or spicules on the surface.

shark-tooth projection [GEOL] Sharp pointed projections several centimeters in length, formed by the pulling apart of plastic lava.

sharp-crested weir [CIV ENG] A weir in which the water flows over a thin, sharp edge.

sharp-cutoff tube [ELECTR] An electron tube in which the control-grid openings are uniformly spaced; the anode current then decreases linearly as the grid voltage is made more negative, and cuts off sharply at a particular grid voltage.

sharp-edged gust [METEOROL] A gust that represents an instantaneous change in wind direction or speed.

sharpen [ENG] To give a thin keen edge or a sharp acute point to. [GRAPHICS] To decrease the size of the dots on a screened halftone.

sharpening stone [ENG] A device such as a whetstone used for sharpening by hand.

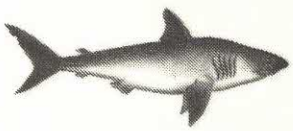
sharp iron [ENG] A tool used to open seams for caulking.

sharpite [MINERAL] $(UO_2)(CO_3)\cdot H_2O$ A greenish-yellow mineral composed of hydrous basic uranyl carbonate.

sharpness function technique [OPTICS] An adaptive optics technique in which a deformable mirror or other corrective element is dithered to maximize a given function, such as the integral of the square of the irradiance in the image plane or the amount of energy within a certain region.

sharpness of resonance [ELEC] The narrowness of the fre-

SHARK



The mackerel shark *(Lamnia nasus)*.

quency band around the resonance at which the response of an electric circuit exceeds an arbitrary fraction of its maximum response, often 70.7%.

sharps [FOOD ENG] The bran from wheat kernels; used as cattle feed. Also known as middlings; wheat middlings.

sharp sand [GEOL] An angular-grain sand free of clay, loam, and other foreign particles.

sharp series [SPECT] A series occurring in the line spectra of many atoms and ions with one, two, or three electrons in the outer shell, in which the total orbital angular momentum quantum number changes from 0 to 1.

sharpstone [GEOL] Any rock fragment having angular edges and corners and being more than 2 millimeters in diameter.

sharpstone conglomerate *See* sedimentary breccia.

sharp tuning [ELEC] Having high selectivity; responding only to a desired narrow range of frequencies.

sharp V thread [DES ENG] A screw thread having a sharp crest and root; the included angle is usually 60°.

shatter breccia [PETR] A tectonic breccia composed of angular fragments that show little rotation.

shatter cone [GEOL] A striated conical rock fragment along which fracturing has occurred.

shattercrack *See* flake.

shattering [FL MECH] One theory to explain homogenization or globule fractionation in milk; it is the effect that occurs when whole milk under high velocity strikes a flat surface, such as an impact ring. [MECH] The breaking up into highly irregular, angular blocks of a very hard material that has been subjected to severe stresses.

shatterproof glass *See* nonshattering glass.

shatter zone [GEOL] An area of randomly fissured or cracked rock that may be filled by mineral deposits, forming a network pattern of veins.

shattuckite [MINERAL] $Cu_5(SiO_3)_4H_2O$ A blue mineral composed of basic copper silicate, occurring in fibrous masses.

Shaula [ASTRON] A blue-white subgiant star of stellar magnitude 1.7, spectral classification B2-IV, in the constellation Scorpius; the star 6 Scorpii.

shave hook [DES ENG] A plumber's or metalworker's tool composed of a sharp-edged steel plate on a shank; used for scraping metal.

shaving [ENG ACOUS] Removing material from the surface of a disk recording medium to obtain a new recording surface. [MECH ENG] **1.** Cutting off a thin layer from the surface of a workpiece. **2.** Trimming uneven edges from stampings, forgings, and tubing.

Shaw process [MET] A foundry molding process which makes use of wood or metal patterns and a refractory mold bonded with an ethyl silicate base material.

sheaf [MATH] A fiber bundle with algebraic and topological structure usually associated to a differentiable manifold M which reflects the local behavior of differentiable functions on M. [ORD] Planned planes of fire which produce a desired pattern of bursts with rounds fired by two or more weapons.

sheaf of planes [MATH] All the planes passing through a given point.

sheaf structure [GEOL] A bundled arrangement of crystals that is characteristic of certain fibrous minerals, such as stibnite.

shear [DES ENG] A cutting tool having two opposing blades between which a material is cut. [MECH] *See* shear strain. [MIN ENG] To make vertical cuts in a coal seam that has been undercut.

shear angle [MECH ENG] The angle made by the shear plane with the work surface.

shear burst [MIN ENG] The explosive breaking of wall rock in a deep mining field by the occurrence of a single shear crack parallel to the face in one of the walls, causing rock behind the shear plane to expand freely into the stope and then to disrupt and fill the place with debris.

shear center *See* center of twist.

shear cleavage *See* slip cleavage.

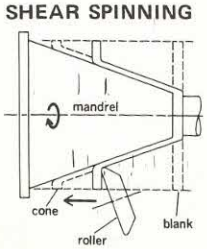
shear diagram [MECH] A diagram in which the shear at every point along a beam is plotted as an ordinate.

shear drag *See* shear resistance.

shear fold [GEOL] A similar fold whose mechanism is shearing or slipping along closely spaced planes that are parallel to the fold's axial surface. Also known as glide fold; slip fold.

shear fracture [MECH] A fracture resulting from shear stress.

SHEAR SPINNING



Schematic of shear spinning showing the blank in three positions.

shear-gravity wave [GEOPHYS] A combination of gravity waves and a Helmholtz wave on a surface of discontinuity of density and velocity.

shearing [MECH ENG] Separation of material by the cutting action of shears. [MIN ENG] The vertical side cutting which, together with holing or horizontal undercutting, constitutes the attack upon a face of coal. [TEXT] A process to remove surface irregularities in a napped fabric by passing it through a cylindrical machine with rotating spiral blades.

shearing die [MECH ENG] A die with a punch for shearing the work from the stock.

shearing field [PL PHYS] A special type of magnetic field, used to confine a plasma whose rotational transform angle changes with distance from the magnetic axis.

shearing instability *See* Helmholtz instability.

shearing interferometer [OPTICS] An interferometer in which a wavefront is interfered with a version of itself that has been modified in some manner; includes lateral shear interferometers and radial shear interferometers.

shearing machine [MECH ENG] A machine for cutting cloth or bars, sheets, or plates of metal or other material.

shear moraine [GEOL] A debris-laden surface or zone found along the margin of any ice sheet or ice cap, dipping in toward the center of the ice sheet but becoming parallel to the bed at the base.

shearing punch [MECH ENG] A punch that cuts material by shearing it, with minimal crushing effect.

shearing stress [MECH] A stress in which the material on one side of a surface pushes on the material on the other side of the surface with a force which is parallel to the surface. Also known as shear stress; tangential stress.

shearing tool [DES ENG] A cutting tool (for a lathe, for example) with a considerable angle between its face and a line perpendicular to the surface being cut.

shear joint [GEOL] A joint that is a shear fracture; it is a potential plane of shear. Also known as slip joint.

shear line [METEOROL] A line or narrow zone across which there is an abrupt change in the horizontal wind component parallel to this line; a line of maximum horizontal wind shear.

shear lip [MET] An area or ridge at the edge of a shear fracture surface.

shear mark [ENG] A crease on a piece of pressed glass; results when the piece is sheared off for pressing.

shear modulus *See* modulus of elasticity in shear.

shear pin [DES ENG] **1.** A pin or wire provided in a fuse design to hold parts in a fixed relationship until forces are exerted on one or more of the parts which cause shearing of the pin or wire; the shearing is usually accomplished by setback or set forward (impact) forces; the shear member may be augmented during transportation by an additional safety device. **2.** In a propellant-actuated device, a locking member which is released by shearing. **3.** In a power train, such as a winch, any pin, as through a gear and shaft, which is designed to fail at a predetermined force in order to protect a mechanism.

shear plane [GEOL] *See* shear surface. [HYD] A planar surface in a glacier, usually laden with rock debris, attributed to discontinuous shearing or overthrusting. [MECH] A confined zone along which fracture occurs in metal cutting.

shear rate [FL MECH] The relative velocities in laminar flow of parallel adjacent layers of a fluid body under shear force.

shear resistance [FL MECH] A tangential stress caused by fluid viscosity and taking place along a boundary of a flow in the tangential direction of local motion. Also known as shear drag.

shear slide [GEOL] A landslide, especially a slump, produced by shear failure usually along a plane of weakness such as a bedding or cleavage plane.

shear sorting [GEOL] Sorting of sediments in which the smaller grains tend to move toward the zone of greatest shear strain, and the larger grains toward the zone of least shear.

shear spinning [MECH ENG] A sheet-metal-forming process which forms parts with rotational symmetry over a mandrel with the use of a tool or roller in which deformation is carried out with a roller in such a manner that the diameter of the original blank does not change but the thickness of the part decreases by an amount dependent on the mandrel angle.

shear steel [MET] A cutlery steel made from short sheared lengths of blister steel; the lengths are heated, joined by rolling or hammering, and finished by hammering.

shear strain [MECH] Also known as shear. **1.** A deformation of a solid body in which a plane in the body is displaced

parallel to itself relative to parallel planes in the body; quantitatively, it is the displacement of any plane relative to a second plane, divided by the perpendicular distance between planes. **2.** The force causing such deformation.

shear strength [MECH] **1.** The maximum shear stress which a material can withstand without rupture. **2.** The ability of a material to withstand shear stress.

shear stress *See* shearing stress.

shear structure [GEOL] A local structure in which earth stresses have been relieved by many small, closely spaced fractures.

shear surface [GEOL] A surface along which differential movement has taken place parallel to the surface. Also known as shear plane.

shear test [ENG] Any of various tests to determine shear strength of soil samples.

shear thickening [FL MECH] Viscosity increase of non-Newtonian fluids (for example, complex polymers, proteins, protoplasm) that undergo viscosity increases under conditions of shear stress (that is, viscometric flow).

shear thinning [FL MECH] Viscosity reduction of non-Newtonian fluids (for example, polymers and their solutions, most slurries and suspensions, lube oils with viscosity-index improvers) that undergo viscosity reductions under conditions of shear stress (that is, viscometric flow).

shear transformation *See* martensitic transformation.

shear-viscosity function [FL MECH] The expression of the viscometric flow of a purely viscous, non-Newtonian fluid in terms of velocity gradient and shear stress of the flowing fluid.

shearwater [VERT ZOO] Any of various species of oceanic birds of the genus *Puffinus* having tubular nostrils and long wings.

shear wave [GEOPHYS] *See* S wave. [MECH] A wave that causes an element of an elastic medium to change its shape without changing its volume. Also known as rotational wave.

shear zone [GEOL] A tabular area of rock that has been crushed and brecciated by many parallel fractures resulting from shear strain; often becomes a channel for underground solutions and the seat of ore deposition.

sheath [ELEC] A protective outside covering on a cable. [ELECTR] A space charge formed by ions near an electrode in a gas tube. [ELECTROMAG] The metal wall of a waveguide. [SCI TECH] A protective case or cover.

sheathed bacteria [MICROBIO] Chains of bacterial cells, usually rod-shaped, enclosed in a hyaline envelope or sheath.

sheathed explosive [ENG] A permitted explosive enveloped by a sheath containing a noncombustible powder which reduces the temperature of the resultant gases of the explosion and, therefore, reduces the risk of these hot gases causing a firedamp ignition.

sheathing board [MATER] A composition board (for example, of fiber or gypsum cement) used instead of wood sheathing.

sheathing paper [MATER] A paper that is heavier and of better quality than the usual building paper.

sheath-reshaping converter [ELECTROMAG] In a waveguide, a mode converter in which the change of wave pattern is achieved by gradual reshaping of the sheath of the waveguide and of conducting metal sheets mounted longitudinally in the guide.

sheave [DES ENG] A grooved wheel or pulley.

shed [NUC PHYS] A unit of cross section, used in studying collisions of nuclei and particles, equal to 10^{-24} barn, or 10^{-48} square centimeter.

SHED *See* solar heat exchanger drive.

shedding [TEXT] A process performed by the heddle frame and heddles of a loom to raise and lower certain groups of alternate warp yarns so that the filling yarns alternate in passing under one group of warp yarns and over another.

shed dormer [ARCH] A dormer window which (unlike a gabled dormer) has a horizontal eave line.

shed roof [ARCH] A flat roof that slopes in one direction and may lean against another wall or building. Also known as lean-to roof.

SHEED *See* scanning HEED.

Sheehan's syndrome [MED] Hypopituitarism resulting from postpartum adenohypophyseal necrosis.

sheen [OPTICS] A subdued and often iridescent or metallic glitter which approaches, but is just short of, optical reflection and which modifies the surface luster of a mineral.

sheep [VERT ZOO] Any of various mammals of the genus *Ovis* in the family Bovidae characterized by a stocky build and horns, when present, which tend to curl in a spiral.

sheepsfoot roller [DES ENG] A cylindrical steel drum to which knob-headed spikes are fastened; used for compacting earth.

sheep's-head clock [HOROL] A lantern clock having one hand, a crown escapement, and large dials overlapping the clock movement.

sheepskin wheel [DES ENG] A polishing wheel made of sheepskin disks or wedges either quilted or glued together.

sheer [GEOL] A steep face of a cliff. [NAV] To swerve off course to avoid collision. [NAV ARCH] The curvature of a ship's deck from bow to stern, with the lowest point of the deck usually amidships.

sheering batten [NAV ARCH] One of the long strips of wood attached to the frames of a ship to locate the strakes of the shell plating in relation to the sheer of the deck.

sheer line [NAV ARCH] The longitudinal curve of the rail or decks, which shows the variation in height above water or freeboard throughout the vessel's entire length.

sheer strake [NAV ARCH] The uppermost line of planking of a wooden ship, or the upper strake of plating at a steel ship's main deck.

sheer-strake plate [NAV ARCH] A plate forming part of a sheer strake.

sheet [GEOL] **1.** A thin flowstone coating of calcite in a cave. **2.** A tabular igneous intrusion, especially when concordant or only slightly discordant. [HYD] *See* sheetflood. [MATER] A material in a configuration similar to a film except that its thickness is greater than 0.25 millimeter. [NAV ARCH] A rope or chain used to haul the clew of a sail out toward the yard arm or downward toward the deck and aft.

sheet asphalt [MATER] Asphalt which provides a smooth surface and is used for continuous road surfacing.

sheet cavitation [FL MECH] A type of cavitation in which cavities form on a solid boundary and remain attached as long as the conditions that led to their formation remain unaltered. Also known as steady-state cavitation.

sheet composting [AGR] Addition of large amounts of organic residue to a soil; extra nitrogen is usually added for faster decomposition.

sheet copper [MET] Copper rolled into sheets; for roofing sometimes used as it leaves the rolls, but for other purposes it is commonly employed after it has been cold-rolled to increase hardness and strength.

sheet crack [GEOL] A planar crack attributed to shrinkage of sediment due to dewatering.

sheet deposit [GEOL] A stratiform mineral deposit that is more or less horizontal and extensive relative to its thickness.

sheet drift [GEOL] An evenly spread deposit of glacial drift that did not significantly alter the form of the underlying rock surface.

sheeted fissure [GEOL] A closely spaced fissure.

sheeted vein [GEOL] A vein filling a shear zone.

sheeted zone [GEOL] An area of mineral deposits consisting of sheeted veins.

sheet erosion [GEOL] Erosion of thin layers of surface materials by continuous sheets of running water. Also known as sheetflood erosion; sheetwash; surface wash; unconcentrated wash.

sheet-fed press [GRAPHICS] A printing press that accepts paper in the form of sheets.

sheet film [GRAPHICS] Film that consists of a negative material with its emulsion coated on a base of plastic rather than glass.

sheetflood [HYD] A broad expanse of moving, storm-borne water that spreads as a thin, continuous, relatively uniform film over a large area for a short distance and duration. Also known as sheet; sheetwash.

sheetflood erosion *See* sheet erosion.

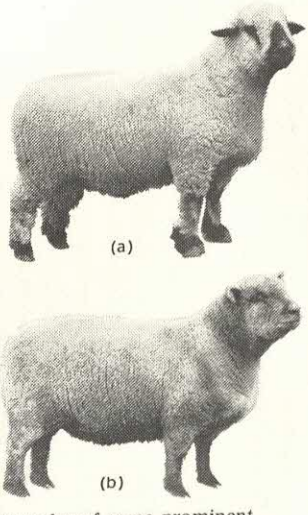
sheet flow [HYD] An overland flow or downslope movement of water taking the form of a thin, continuous film over relatively smooth soil or rock surfaces and not concentrated into channels larger than rills.

sheet forming [ENG] The process of producing thin, flat sections of solid materials; for example, sheet metal, sheet plastic, or sheet glass.

sheet frost [HYD] A thick coating of rime formed on windows and other surfaces.

sheet glass [MATER] Flat sections of glass made by drawing

SHEEP



Examples of some prominent breeds of sheep. *(a)* Hampshire ram. *(b)* Southdown ram *(Southdown Association)*.

a continuous thin film of glass from a molten bath, then cooling and cutting it; used for common glazing.

sheet grating [ELECTROMAG] Three-dimensional grating consisting of thin, longitudinal, metal sheets extending along the inside of a waveguide for a distance of about a wavelength, and used to stop all waves except one predetermined wave that passes unimpeded.

sheet ice [HYD] A smooth, thin layer of ice formed by rapid freezing of the surface layer of a body of water.

sheeting [GEOL] The process by which thin sheets, slabs, scales, plates, or flakes of rock are successively broken loose or stripped from the outer surface of a large rock mass in response to release of load. Also known as exfoliation. [MATER] **1.** A continuous film of a material such as plastic. **2.** Steel or wood members used to face the walls of an excavation such as a basement or a trench.

sheeting caps [MIN ENG] A row of caps put on blocks about 14 inches (36 centimeters) high which are placed on top of the drift sets when constructing the permanent floor in the stope.

sheeting plane [PETR] In igneous rocks, the primary cleavage plane or parting.

sheeting structure [GEOL] A fracture or joint formed by pressure-release jointing or exfoliation. Also known as exfoliation joint; expansion joint; pseudostratification; release joint; sheet joint; sheet structure.

sheet joint *See* sheeting structure.

sheet lightning [GEOPHYS] A diffuse, but sometimes fairly bright, illumination of those parts of a thundercloud that surround the path of a lightning flash, particularly a cloud discharge or cloud-to-cloud discharge. Also known as luminous cloud.

sheet line [MAP] The outermost border line of a map or chart.

sheet metal [MET] Thin sections of metal formed by rolling hot metal and usually less than 0.25 inch (6.35 millimeters) thick; when thicker than 0.25 inch, called plate.

sheet-metal gage [MET] A standard for expressing the thickness of metal sheets; some manufacturers, for example, Brown & Sharpe (B&S), Birmingham (BG), and Imperial, use code numbers with actual thickness in inches or millimeters.

sheet-metal screw *See* self-tapping screw.

sheet mica [MATER] Mica that is relatively flat and sufficiently free from structural defects to enable it to be punched or stamped into specified shapes for use by the electronic and electrical industries.

sheet mineral *See* phyllosilicate.

sheet piling [CIV ENG] Closely spaced piles of wood, steel, or concrete driven vertically into the ground to obstruct lateral movement of earth or water, and often to form an integral part of the permanent structure.

sheet plastic [MATER] Flat sections of extruded, molded, or cast plastic, with a thickness greater than that for film, that is, greater than 0.05 inch (1.3 millimeters).

sheet polarizer [OPTICS] A mechanism for obtaining linear polarized light; there are several types, one of which is a microcrystalline polarizer in which small crystals of a dichroic material (quinine iodosulfate), oriented parallel to each other in a plastic medium, absorb one polarization and transmit the other.

Sheetrock [MATER] A plasterboard, usually made of two sheets of heavy paper separated by a layer of gypsum.

sheet rubber [MATER] Latex that has been rolled into sheets, either smooth or ribbed.

sheet sand *See* blanket sand.

sheet sandstone [GEOL] A thin, blanket-shaped deposit of sandstone of regional extent.

sheet separation [MET] The gap between faying surfaces surrounding the weld in spot, seam, or projection welding.

sheet silicate *See* phyllosilicate.

sheet spar [GEOL] A sheet crack filled with spar.

sheet steel [MET] Steel rolled in the form of sheet, usually used for deep-drawing applications.

sheet structure *See* sheeting structure.

sheet train [ENG] The entire assembly needed to produce plastic sheet; includes the extruder, die, polish rolls, conveyor, draw rolls, cutter, and stacker.

sheetwash [GEOL] **1.** The detritus deposited by a sheetflood. **2.** *See* sheet erosion. [HYD] **1.** A wide, moving expanse of water on an arid plain; the combined result of many streams issuing from the mountains. **2.** *See* sheetflood.

sheffer stroke *See* NAND.

Sheffield plate [MET] A cladding of silver rolled and fused on both sides of a copper sheet.

Shelby tube [ENG] A thin-shelled tube used to take deep-soil samples; the tube is pushed into the undisturbed soil at the bottom of the casting of the borehole driven into the ground.

shelf [GEOL] **1.** Solid rock beneath alluvial deposits. **2.** A flat, projecting ledge of rock. **3.** *See* continental shelf.

shelf angle [CIV ENG] A mild steel angle section, riveted or welded to the web of an I beam to support the formwork for hollow tiles or the floor or roof units, or to form a seat for precast concrete.

shelf break [GEOL] An obvious steepening of the gradient between the continental shelf and the continental slope.

shelf channel [GEOL] A valley formed in a shelf by erosion.

shelf edge [GEOL] The demarcation, without dramatic change in gradient, between continental shelf and continental slope.

shelf facies [GEOL] A sedimentary facies characterized by carbonate rocks and fossil shells and produced in the neritic environments of marginal shelf seas. Also known as foreland facies; platform facies.

shelf ice [HYD] The ice of an ice shelf. Also known as barrier ice.

shelf life [ENG] The time that elapses before stored food, chemicals, batteries, and other materials or devices become inoperative or unusable due to age or deterioration.

shelf sea [OCEANOGR] A shallow marginal sea located on the continental shelf, usually less than 150 fathoms (275 meters) in depth; an example is the North Sea.

shelfstone [GEOL] A speleothem formed at the water's edge as a horizontally projecting ledge.

shell [ARCH] A reinforced concrete arched or domed roof used over unpartitioned areas. [BUILD] A building without internal partitions or furnishings. [DES ENG] **1.** The case of a pulley block. **2.** A thin hollow cylinder. **3.** A hollow hemispherical structure. **4.** The outer wall of a vessel or tank. [GEOL] **1.** The crust of the earth. **2.** A thin hard layer of rock. [GRAPHICS] An engraved roller made of copper and used in calico printing. [MET] **1.** The outer wall of a metal mold. **2.** The hard layer of sand and thermosetting plastic formed over a pattern and used as a mold wall in shell molding. **3.** The metal sleeve remaining when a billet is extruded with a dummy block at smaller diameter. **4.** A tubular casting used in preparing seamless drawn tubes. **5.** A pierced forging. [ORD] **1.** A hollow metal projectile designed to be projected from a gun, containing or intended to contain, a high-explosive, chemical, atomic, or other charge. **2.** A shotgun cartridge or a cartridge for artillery of small arms. [ZOO] **1.** A hard, usually calcareous, outer covering on an animal body, as of bivalves and turtles. **2.** The hard covering of an egg. **3.** Chitinous exoskeleton of certain arthropods.

shellac [MATER] A natural, alcohol-soluble, water-insoluble, flammable resin; made from lac resin deposited on tree twigs in India by the lac insect (*Laccifer lecca*) used as an ingredient of wood coatings.

shellac varnish [MATER] A solution of shellac in denatured alcohol; used in wood finishing where a fast-drying, light-colored, hard finish is desired.

shellac wax [MATER] A hard wax with 3% shellac, from which it is extracted, and used in polishes and insulating materials.

shellac wheel [DES ENG] A grinding wheel having the abrasive bonded with shellac.

shell-and-tube exchanger [ENG] A device for the transfer of heat from a hot fluid to a cooler fluid; one fluid passes through a group (bundle) of tubes, the other passes around the tubes, through a surrounding shell.

shell capacity [ENG] The amount of liquid that a tank car or tank truck will hold when the liquid just touches the underside of the top of the tank shell.

shell clearance [DES ENG] The difference between the outside diameter of a bit or core barrel and the outside set or gage diameter of a reaming shell.

shell core [MET] A sand core formed by shell molding.

shell-destroying tracer [ORD] A tracer that includes an explosive element beyond the tracer element and that is designed to cause activation of the explosive by the tracer after the antiaircraft projectile has passed the target point, thus destroying the projectile to avoid impact in friendly territory.

shell filler [ORD] Explosive or other material used to make up the filler or charge in a projectile.

shellfish [INV ZOO] An aquatic invertebrate, such as a mollusk or crustacean, that has a shell or exoskeleton.

Shell fluid catalytic cracking [CHEM ENG] A two-stage, proprietary petroleum-refining process for catalytic cracking of gas oils; the catalyst is regenerated in one of the stages.

shell gland [INV ZOO] An organ that secretes the embryonic shell in many mollusks. [VERT ZOO] A specialized structure attached to the oviduct in certain animals that secretes the eggshell material.

shell ice [HYD] Ice, on a body of water, that remains as an unbroken surface when the water level drops so that a cavity is formed between the water surface and the ice.

shell innage [ENG] The depth of a liquid in a tank car or tank truck shell.

shell knocker [ENG] A device to strike the external surface of a horizontally rotating process vessel (for example, a kiln or a dryer) to loosen accumulations of solid materials from the inner walls or flights of the shell. Also known as knocker.

shell marl [GEOL] A light-colored calcareous deposit formed on the bottoms of small fresh-water lakes, composed largely of uncemented mollusk shells and precipitated calcium carbonate, along with the hard parts of minute organisms.

shell membrane [CYTOL] Either of a pair of membranes lining the inner surface of an egg shell; they allow free entry of oxygen but prevent rapid evaporation of moisture.

shell model [NUC PHYS] A model of the nucleus in which the shell structure is either postulated or is a consequence of other postulates; especially the model in which the nucleons act as independent particles filling a preassigned set of energy levels as permitted by the quantum numbers and Pauli principle.

shell molding [MET] Forming a rigid, porous, self-supporting refractory mold by sprinkling molding sand blended with thermosetting plastic or resin over a preheated metal pattern and then curing in an oven.

shell outage [ENG] The unfilled portion of a tank car or tank truck shell; the distance from the underside of the top of the shell to the level of the liquid in the shell.

shell plating [NAV ARCH] The plating forming the outer skin of a vessel; in addition to providing a watertight boundary, it contributes largely to the strength of the vessel.

shell pump [MECH ENG] A simple pump for removing wet sand or mud; consists of a hollow cylinder with a ball or clack valve at the bottom.

shell reamer [DES ENG] A machine reamer consisting of two parts, the arbor and the replaceable reamer, with straight or spiral flutes; designed as a sizing or finishing reamer.

shell roof [BUILD] A roof made of a thin, curved, platelike structure, usually of concrete but lumber and steel are also used.

shell room [ORD] A large room for the storage of projectiles.

shell sand [GEOL] A loose aggregate that is largely composed of shell fragments of sand size.

shell star [ASTRON] A type of star which is believed to be surrounded by a tenuous envelope of gas, as indicated by bright emission lines in its spectrum.

shell still [CHEM ENG] A distillation device formerly used in petroleum refineries; oil was charged into a closed, cylindrical shell and heat was applied to the outside of the bottom by a firebox.

shell structure [NUC PHYS] Structure of the nucleus in which nucleons of each kind occupy quantum states which are in groups of approximately the same energy, called shells, the number of nucleons in each shell being limited by the Pauli exclusion principle.

shell-type transformer [ELECTROMAG] Transformer in which the magnetic circuit completely surrounds the windings.

shelly [GEOL] **1.** Pertaining to a sediment or sedimentary rock containing the shells of animals. **2.** Pertaining to land abounding in or covered with shells.

shelly facies [GEOL] A nongeosynclinal sedimentary facies that is commonly characterized by abundant calcareous fossil shells, dominant carbonate rocks (limestones and dolomites), mature orthoquartzitic sandstones, and a paucity of shales.

shelly pahoehoe [GEOL] A type of pahoehoe characterized by open tubes and blisters on the surface.

shelterbelt [ECOL] A natural or planned barrier of trees or shrubs to reduce erosion and provide shelter from wind and storm activity.

shelter cave [GEOL] A cave which extends only a short way underground, and whose roof of overlying rock usually extends beyond its sides. Also known as rock cave.

shelter deck [NAV ARCH] A ship's deck which is above the principal deck and is continuous and of light construction.

shelter porosity [GEOL] A type of primary interparticle porosity created by the sheltering effect of relatively large sedimentary particles which prevent the infilling of pore space by finer clastic particles.

shelterwood method [FOR] A method for ensuring tree reproduction; older trees are removed by successive cuttings so that the amount of light reaching the seedlings is gradually increased.

Shelton loader [MIN ENG] A modified coal-cutting machine in which the picks of the cutter chain are replaced by loading flights, which push the prepared coal up a ramp on to the face conveyor.

sherardizing [MET] Coating iron with zinc by tumbling the article in powdered zinc at about 250–375°C.

shergottite [GEOL] An achondritic stony meteorite that is composed chiefly of pigeonite and maskelynite.

sheridanite [MINERAL] $(Mg,Al)_6(Al,Si)_4O_{10}(OH)_8$ A pale-green to colorless talclike mineral composed of basic magnesium aluminum silicate.

Sheridan tank [ORD] The United States' light tank, M551, introduced into limited service in 1967; it can be transported by air and dropped by parachute, has a crew of four, weighs 15 tons (13,600 kilograms), and is armed with a 152-millimeter gun launcher and two machine guns.

sherry [FOOD ENG] A dry to sweet fortified wine with nutty flavor and ranging from pale to dark amber in color.

sherry topaz [MINERAL] A brownish-yellow to yellow-brown variety of topaz resembling sherry wine in color.

Sherwood number *See* Nusselt number.

Sherwood project [NUCLEO] The overall research program in the United States for producing useful power from nuclear fusion.

shetland [TEXT] A fabric made of shetland wool with a raised finish and soft hand.

Shetland sheep [VERT ZOO] A breed of sheep raised in the Shetland Isles of Scotland.

SHF *See* sensible-heat factor; superhigh frequency.

shield [ENG] An iron, steel, or wood framework used to support the ground ahead of the lining in tunneling and mining. [GEOL] *See* palette. [NUCLEO] The material placed around a nuclear reactor, or other source of radiation, to reduce escaping radiation or particles to a permissible level. Also known as shielding. [ORD] Armor plate mounted on a gun carriage to protect the operating mechanism and gun crew from enemy fire.

Shield *See* Scutum.

shield basalt [GEOL] A basaltic lava flow from a group of small, close-spaced shield-volcano vents that coalesced to form a single unit.

shield cone [GEOL] A cone or dome-shaped volcano built up by successive outpourings of lava.

shielded arc welding [MET] Arc welding in which the electric arc and the weld metal are protected by gas, decomposition products of the electrode covering, or a blanket of fusible flux.

shielded-conductor cable [ELEC] Cable in which the insulated conductor or conductors are enclosed in a conducting envelope or envelopes, constructed so that substantially every point on the surface of the insulation is at ground potential or at some predetermined potential with respect to ground.

shielded joint [ELEC] Cable joint having its insulation so enveloped by a conducting shield that substantially every point on the surface of the insulation is at ground potential, or at some predetermined potential with respect to ground.

shielded line [ELECTROMAG] Transmission line, the elements of which confine the propagated waves to an essentially finite space; the external conducting surface is called the sheath.

shielded metal-arc welding [MET] Arc welding in which heating with an electric arc between the electrode and the work produces fusion of the electrode covering which shields the work.

shielded wire [ELEC] Insulated wire covered with a metal shield, usually of tinned braided copper wire.

shield factor [COMMUN] Ratio of noise (or induced current or voltage) in a telephone circuit when a source of shielding is

present to the corresponding quantity when the shielding is absent.

shield grid [ELECTR] A grid that shields the control grid of a gas tube from electrostatic fields, thermal radiation, and deposition of thermionic emissive material; it may also be used as an additional control electrode.

shield-grid thyratron [ELECTR] A thyratron having a shield grid, usually operated at cathode potential.

shielding [ELECTROMAG] *See* electric shielding. [MET] Placing a nonconducting object in an electrolytic bath during plating to alter the current distribution. [NUCLEO] **1.** Reducing the ionizing radiation reaching one region of space from another region by using a shield or other device. **2.** *See* shield.

shielding distance *See* Debye shielding length.

shielding factor [GEOPHYS] The ratio of the strength of the magnetic field at a directional compass to its strength if there were no disturbing material; usually expressed as a decimal.

shielding gas [MET] Gas, such as nitrogen, oxygen, and carbon dioxide, used in shielded arc welding to protect molten weld from contamination and damage by the atmosphere.

shielding layer [METEOROL] The layer of air nearest the earth, with reference to the manner in which this layer shields the earth from activity in the free atmosphere above, or vice versa.

shielding ratio [ELECTROMAG] The ratio of a field in a specified region when electrical shielding is in place to the field in that region when the shielding is removed.

shield volcano [GEOL] A broad, low volcano shaped like a flattened dome and built of basaltic lava. Also known as basaltic dome; lava dome.

shift [COMPUT SCI] A movement of data to the right or left, in a digital-computer location, usually with the loss of characters shifted beyond a boundary. [GEOL] The relative displacement of the units affected by a fault but outside the fault zone itself. [IND ENG] The number of hours or the part of any day worked. Also known as tour. [MECH ENG] To change the ratio of the driving to the driven gears to obtain the desired rotational speed or to avoid overloading and stalling an engine or a motor. [MET] A casting defect caused by malalignment of the mold parts.

shifting [GEOL] The movement of the crest of a divide away from a more actively eroding stream (as on the steeper slope of an asymmetric ridge) toward a weaker stream on the gentler slope.

shifting theorem [MATH] **1.** If the Fourier transform of $f(t)$ is $F(x)$, then the Fourier transform of $f(t-a)$ is $\exp(iax)F(x)$. **2.** If the Laplace transform of $f(x)$ is $F(y)$, then the Laplace transform of $f(x-a)$ is $\exp(-ay)F(y)$.

shift joint [BUILD] A vertical joint placed on a solid member of the course below.

shift of butts [NAV ARCH] The arrangement of butt joints in plating.

shift of spectral line [SPECT] A small change in the position of a spectral line that is due to a corresponding change in frequency which, in turn, results from one or more of several causes, such as the Doppler effect.

shift register [COMPUT SCI] A computer hardware element constructed to perform shifting of its contained data.

shift-register generator [COMPUT SCI] A random-number generator which consists of a sequence of shift operations and other operations, such as no-carry addition.

shift work [IND ENG] Work paid for by day wage.

Shiga's bacillus [MICROBIO] Type A1 of *Shigella dysenteriae*.

Shigella [MICROBIO] The dysentery bacilli, a genus of the family Enterobacteriaceae; nonmotile rods that ferment glucose and other carbohydrates, with acid production.

Shigella dysenteriae [MICROBIO] The organism that causes dysentery in humans and monkeys; found only in the feces of the sick.

shikimic acid [BIOCHEM] $C_7H_{10}O_5$ A crystalline acid that is a plant constituent, and an intermediate in the biochemical pathway from phosphoenolpyruvic acid to tyrosine.

Shillelagh [ORD] A United States weapon system including a gun launcher and a fire-control system mounted on the main battle tank and assault reconnaissance vehicle for employment against enemy armor, troops, and field fortifications; it is guided by an infrared command link.

shim [ENG] **1.** In the manufacture of plywood, a long, narrow patch glued into the panel or cemented into the lumber core itself. **2.** A thin piece of material placed between two surfaces to obtain a proper fit, adjustment, or alignment.

shimmer [METEOROL] To appear tremulous or wavering, due to varying atmospheric refraction in the line of sight.

shimmy [MECH] Excessive vibration of the front wheels of a wheeled vehicle causing a jerking motion of the steering wheel.

shim rod [NUCLEO] A control rod used for making occasional coarse adjustments in the reactivity of a nuclear reactor.

shingle [GEOL] Pebbles, cobble, and other beach material, coarser than ordinary gravel but roughly the same size and occurring typically on the higher parts of a beach. [MATER] A rectangular piece of wood, metal, or other material that is used like a tile and arranged in overlapping rows for covering roofs and walls.

shingle barchan [GEOL] A dunelike ridge formed of shingle perpendicular to the beach in shallow water.

shingle beach [GEOL] A narrow beach composed of shingle and commonly having a steep slope on both its landward and seaward sides. Also known as cobble beach.

shingle-block structure *See* imbricate structure.

shingle lap [DES ENG] A lap joint of tapered sections, the bottom of each section overlapping the top of the section below it.

shingle nail [DES ENG] A nail about a half to a full gage thicker than a common nail of the same length.

shingle rampart [GEOL] A rampart of shingle built along a reef on the seaward edge.

shingle ridge [GEOL] A steeply sloping bank of shingle heaped upon and parallel with the shore.

shingles *See* herpes zoster.

shingle structure *See* imbricate structure.

shingling *See* imbrication.

shin splints [MED] An injury and an inflammation of the lower leg muscles and bones of the lower and middle third of the tibia and fibula, seen in athletes such as runners or basketball and football players.

ship [NAV ARCH] Any large vessel which travels over the seas, rivers, or lakes.

Ship *See* Argo.

ship auger [DES ENG] An auger consisting of a spiral body having a single cutting edge, with or without a screw; there is no spur at the outer end of the cutting edge.

shipbuilding [CIV ENG] The construction of ships.

ship drift [OCEANOGR] A method of measuring ocean currents; the ship itself is used as a current tracer, its motions being measured by navigating equipment on board.

shipfitter [CIV ENG] A worker who builds the steel structure of a ship, including laying-off and fabricating the individual members, subassembly, and erection on the shipway.

ship heading marker [NAV] A mark on a direction compass which indicates the position of the ship's head, such as a lubber's line, or an electronic radial sweep line on a PPI (plan position indicator).

ship motion [ENG] Translational and rotational motions of a ship in a wave system which cause the center of gravity to deviate from simple straight-line motion; these motions are heave, surge, sway, roll, pitch, and yaw.

shipping [NAV ARCH] A term applied collectively to those ships which are used to transport personnel or cargo, or both; often modified to denote type, use, or force to which assigned.

shipping and storage container [IND ENG] A reusable noncollapsible container of any configuration designed to provide protection for a specific item against impact, vibration, climatic conditions, and the like, during handling, shipment, and storage.

shipping control [ORD] All matters pertaining to convoy organization, routing, reporting, and diversion of shipping of all nations under charter thereto; it does not include cognizance over the general employment and allocation of shipping, harbor movements, and loading and unloading, which are functions of other agencies.

shipping designator [COMMUN] A code word assigned to a particular overseas base, port, or area, for specific use as an address on shipments to the overseas location concerned; the code word is usually four letters and may be followed by a number to indicate a particular addressee.

shipping document [IND ENG] A document listing the items in a shipment, and showing other supply and transporta-

tion information that is required by agencies concerned in the movement of material.

shipping fever [VET MED] An acute, occasionally subacute, septicemic disease in cattle and sheep, probably caused by a combination of virus and *Pasteurella multocida* or *P. hemolytica*.

shipping lane [NAV] An established route traversed by ocean shipping.

shipping time [ENG] The time elapsing between the shipment of material by the supplying activity and receipt of material by the requiring activity.

shipping ton *See* ton.

ship report [METEOROL] The encoded and transmitted report of a marine weather observation.

ship's clock [HOROL] A clock that rings to indicate the time according to the system of bells used on shipboard.

ship's field error [NAV] That error in radio direction finder bearings due to the ship's directional antenna being located where the main component of the ship's field is not parallel to the ship's center line.

ship's head [NAV] The heading of a vessel in degrees.

ship's lines *See* lines.

ship synoptic code [METEOROL] A synoptic code for communicating marine weather observations; it is a modification of the international synoptic code.

ship-tended acoustic relay [NAV] An acoustic navigation system that employs ocean bottom transponders and determines the distance of the ship from these transponders by measuring the time required for a signal broadcast by an acoustic transducer below the hull of the ship to travel to the transponder, be rebroadcast there, and travel back to the ship. Abbreviated STAR.

ship-to-shore movement [ORD] That portion of the assault phase of an amphibious operation which includes the deployment of the landing force from the assault shipping to designated landing areas.

shipway [CIV ENG] **1.** The ways on which a ship is constructed. **2.** The supports placed underneath a ship in dry dock. [NAV] A channel through which ships pass.

shipworm [INV ZOO] Any of several bivalve mollusk species belonging to the family Teredinidae and which superficially resemble earthworms because the two valves are reduced to a pair of plates at the anterior of the animal or are used for boring into wood.

shipwright [CIV ENG] A worker whose responsibility is to ensure that the structure of a ship is straight and true and to the designed dimensions; the work starts with the laying down of the keel blocks and continues throughout the steelwork; applicable also to wood ship builders.

shipyard [CIV ENG] A facility adjacent to deep water where ships are constructed or repaired.

shipyard eye *See* keratoconjunctivitis.

shiran [ELECTR] Specially designed frequency-modulation continuous-wave distance-measuring equipment used for performing distance measurements of an accuracy comparable to first-order triangulation. Derived from S-band hiran.

Shirley-Ferranti viscometer [ENG] An instrument used to determine an ink's resistance to flow.

shivering [MATER] Cracks and scales on a pottery glaze caused by unequal contraction during cooling.

SHM *See* harmonic motion.

shoal [GEOL] A submerged elevation rising from the bed of a shallow body of water and consisting of, or covered by, unconsolidated material, and may be exposed at low water.

shoal breccia [PETR] A breccia formed by the action of waves and tides on a shoal, and resulting from diastrophism or aggradation.

shoaling [OCEANOGR] The bottom effect which influences the height of waves moving from deep to shallow water.

shoal patches [OCEANOGR] Individual and scattered elevations of the bottom, with depths of 10 fathoms (18 meters) or less, but composed of any material except rock or coral.

shoal reef [GEOL] A reef formed in irregular masses amid submerged shoals of calcareous reef detritus.

shoal water [OCEANOGR] Shallow water; over a shoal.

shock [MECH] A pulse or transient motion or force lasting thousandths to tenths of a second which is capable of exciting mechanical resonances; for example, a blast produced by explosives. [MED] Clinical manifestations of circulatory insufficiency, including hypotension, weak pulse, tachycardia, pallor, and diminished urinary output.

shock absorber [MECH ENG] A spring, a dashpot, or a combination of the two, arranged to minimize the acceleration of the mass of a mechanism or portion thereof with respect to its frame or support.

shock action [ORD] A method of attack by mobile units in which the suddenness, violence, and massed weight of the first impact produce the main effect; tank attacks usually rely on shock action.

shock breccia [PETR] A fragmental rock formed by the action of shock waves, such as suevite formed by meteorite impact.

shock bump [MIN ENG] A rock bump resulting from the sudden collapse of a strong deposit.

shock diamonds [PHYS] The shock waves that appear in the exhaust stream of a rocket; they are made visible by their luminosity and describe an approximate diamond configuration in side view.

shock excitation [ELEC] Excitation produced by a voltage or current variation of relatively short duration; used to initiate oscillation in the resonant circuit of an oscillator. Also known as impulse excitation.

shock front [PHYS] The outer side of a shock wave whose pressure rises from zero up to its peak value. Also known as pressure front.

shock heating [PHYS] The nonisentropic heating of a fluid which takes place when a shock wave passes through it.

shock isolation [MECH ENG] The application of isolators to alleviate the effects of shock on a mechanical device or system.

Shockley diode [ELECTR] A *pnpn* silicon controlled switch having characteristics that permit operation as a unidirectional diode switch.

Shockley partial dislocation [SOLID STATE] A partial dislocation in which the Burger's vector lies in the fault plane, so that it is able to glide, in contrast to a Frank partial dislocation. Also known as glissile dislocation.

shock lithification [GEOL] The conversion of originally loose fragmental materials into coherent aggregates by the action of shock waves, such as those generated by explosions or meteorite impacts.

shock loading [GEOPHYS] The process of subjecting material to the action of high-pressure shock waves generated by artificial explosions or by meteorite impact.

shock melting [GEOPHYS] Fusion of material as a result of the high temperatures produced by the action of high-pressure shock waves.

shock metamorphism [PETR] The complete permanent changes (physical, chemical, mineralogic, morphologic) in rocks caused by transient high-pressure shock waves that act over short-time intervals, ranging from a few microseconds to a fraction of a minute.

shock mount [MECH ENG] A mount used with sensitive equipment to reduce or prevent transmission of shock motion to the equipment.

shock organ [IMMUNOL] The organ or tissue that exhibits the most marked response to the antigen-antibody interaction in hypersensitivity, as the lungs in allergic asthma or the skin in allergic contact dermatitis.

shock resistance [ENG] The property which prevents cracking or general rupture when impacted.

shock strut [AERO ENG] The primary working part of any landing gear, which supplies the force as the airplane sinks toward the ground, turning the flight path from one intersecting the ground to one parallel to the ground.

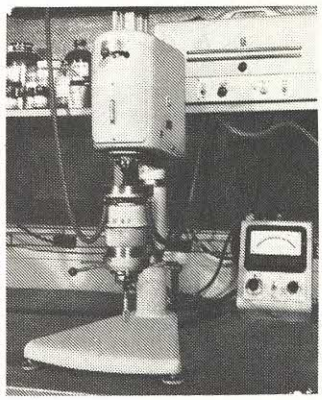
shock test [ENG] The test to determine whether the armor sample will crack or spall under impact by kinetic energy or high-explosive projectiles.

shock therapy [PSYCH] The use of drugs, carbon dioxide, insulin, or electric current to induce coma in the treatment of psychiatric disorders.

shock tube [FL MECH] A long tube divided into two parts by a diaphragm; the volume on one side of the diaphragm constitutes the compression chamber, the other side is the expansion chamber; a high pressure is developed by suitable means in the compression chamber, and the diaphragm ruptured; the shock wave produced in the expansion chamber can be used for the calibration of air blast gages, or the chamber can be instrumented for the study of the characteristics of the shock wave.

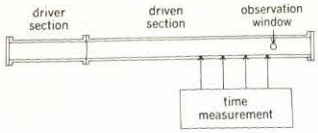
shock tunnel [ENG] A hypervelocity wind tunnel in which a

SHIRLEY-FERRANTI VISCOMETER



A Shirley-Ferranti viscometer.

SHOCK TUBE



Schematic representation of a shock tube.

shock wave generated in a shock tube ruptures a second diaphragm in the throat of a nozzle at the end of the tube, and gases emerge from the nozzle into a vacuum tank with Mach numbers of 6 to 25.

shock wave [PHYS] A fully developed compression wave of large amplitude, across which density, pressure, and particle velocity change drastically.

shock-wave lip [PHYS] The shock wave obtained from the lip of a free jet nozzle, because of failure to match the stream pressure and the ambient exhaust pressure.

shock zone [GEOL] A volume of rock in or around an impact or explosion crater in which a distinctive shock-metamorphic deformation or transformation effect is present.

shoe [ENG] In glassmaking, an open-ended crucible placed in a furnace for heating the blowing irons. [MECH ENG] **1.** A metal block used as a form or support in various bending operations. **2.** A replaceable piece used to break rock in certain crushing machines. **3.** *See* brake shoe. [MIN ENG] **1.** Pieces of steel fastened to a mine cage and formed to fit over the guides to guide it when it is in motion. **2.** The bottom wedge-shaped piece attached to tubbing when sinking through quicksand. **3.** A trough to convey ore to a crusher. **4.** A coupling of rolled, cast, or forged steel to protect the lower end of the casting or drivepipe in overburden, or the bottom end of a sampler when pressed into a formation being sampled.

shoe brake [MECH ENG] A type of brake in which friction is applied by a long shoe, extending over a large portion of the rotating drum; the shoe may be external or internal to the drum.

shoestring [GEOL] A long, relatively straight and narrow sedimentary body having a width/thickness ratio of less than 5:1, usually 1:1.

shoestring rill [GEOL] One of several long, narrow, uniform channels, closely spaced and roughly parallel with one another, that merely score the homogeneous surface of a relatively steep slope of bare soil or weak, clay-rich bedrock, and that develop wherever overland flow is intense.

shoestring sand [GEOL] A shoestring composed of sand and usually buried in mud or shale, usually a sandbar or channel fill.

shonkinite [PETR] A dark-colored syenite composed principally of augite and orthoclase with some olivine, hornblende, biotite, and nepheline.

shoofly *See* slant.

shoot [BOT] **1.** The aerial portion of a plant, including stem, branches, and leaves. **2.** A new, immature growth on a plant. [ENG] To detonate an explosive, used to break coal loose from a seam or in blasting operation or in a borehole. [GEOL] *See* ore shoot. [GEOPHYS] The energy that goes up through the strata from a seismic profiling shot and is reflected downward at the surface or at the base of the weathering; appears either as a single wave or unites with a wave train that is traveling downward. Also known as secondary reflection. [HYD] **1.** A place where a stream flows or descends swiftly. **2.** A natural or artificial channel, passage, or trough through which water is moved to a lower level. **3.** A rush of water down a steep place or a rapids. [ORD] To project a missile with force; to fire a weapon, as a gun or cannon; to strike or hit something with a missile.

shooting board [ENG] **1.** A fixture used as a guide in planing boards; it is more accurate than a miter. **2.** A table and plane used for trimming printing plates.

shooting star [ASTRON] A small meteor that has the brief appearance of a darting, starlike object.

shop drawing [GRAPHICS] A scale drawing to be used as a design guide in the workshop of a manufacturer.

Shope papilloma [VET MED] A transmissible, virus-induced papilloma occurring naturally on the skin of rabbits.

shop fabrication [ENG] Making parts and materials in the shop rather than at the work site.

shop lumber [MATER] Softwood lumber graded and used in the factory for general cut-up purposes; similar to factory lumber but of a lower grade.

shop supplies [ENG] Expendable items consumed in operation and maintenance (for example, waste, oils, solvents, tape, packing, flux, or welding rod).

shop typhus *See* murine typhus.

shop weld [ENG] A weld made in the workshop prior to delivery to the construction site.

shoran *See* short-range navigation.

shore [ENG] Timber or other material used as a temporary prop for excavations or buildings; may be sloping, vertical, or horizontal. [GEOL] **1.** The narrow strip of land immediately bordering a body of water. **2.** *See* seashore.

shore bird [VERT ZOO] A general term applied to a large number of birds in 12 families of the suborder Charadrii which are always found near water, although the habitat and morphology is varied. Also known as wader.

shore current [HYD] A water current near a shoreline, often flowing parallel to the shore.

shore drift *See* littoral drift.

shore effect [ELECTROMAG] Bending of waves toward the shoreline when traveling over water near a shoreline, due to the slightly greater velocity of radio waves over water than over land; this effect causes errors in radio-direction-finder indications.

shoreface [GEOL] The narrow, steeply sloping zone between the seaward limit of the shore at low water and the nearly horizontal offshore zone.

shoreface terrace [GEOL] A wave-built terrace in the shoreface region, composed of gravel and coarse sand swept from the wave-cut bench into deeper water.

shore fire-control party [ORD] A specially trained unit for control of naval gunfire in support of troops ashore, consisting of a spotting team to adjust fire and a naval gunfire liaison team to perform liaison functions for the supported battalion commander.

Shore hardness [ENG] A method of rating the hardness of a metal or of a plastic or rubber material.

shore ice [OCEANOGR] Sea ice that has been beached by wind, tides, currents, or ice pressure; it is a type of fast ice, and may sometimes be rafted ice.

shore lead [OCEANOGR] A lead between pack ice and fast ice or between floating ice and the shore; it may be closed by wind or currents so that only a tide crack remains.

shoreline [GEOL] The intersection of a specified plane of water, especially mean high water, with the shore; a limit which changes with the tide or water level. Also known as strandline; waterline.

shoreline cycle [GEOL] The cycle of changes through which sequential forms of coastal features pass during shoreline development, from the establishment of a water level to the time when the water can do no more work.

shoreline-development ratio [GEOL] A ratio indicating the degree of irregularity of a lake shoreline, given as the length of the shoreline to the circumference of a circle whose area is equal to that of the lake.

shoreline of depression [GEOL] A shoreline of submergence that implies an absolute subsidence of the land.

shoreline of elevation [GEOL] A shoreline of emergence that implies an absolute rise of the land.

shoreline of emergence [GEOL] A straight or gently curving shoreline formed by the dominant relative emergence of the floor of an ocean or a lake. Also known as emerged shoreline; negative shoreline.

shoreline of submergence [GEOL] A shoreline, characterized by bays, promontories, and other minor features, formed by the dominant relative submergence of a landmass. Also known as positive shoreline; submerged shoreline.

shore party [ORD] A task organization of the landing force, formed for the purpose of facilitating the landing and movement off the beaches of troops, equipment, and supplies; for the evacuation from the beaches of casualties and prisoners of war; and for facilitating the beaching, retraction, and salvaging of landing ships and craft; it comprises elements of both the naval and landing forces.

shore platform [GEOL] The horizontal or gently sloping surface produced along a shore by wave erosion. Also known as scar.

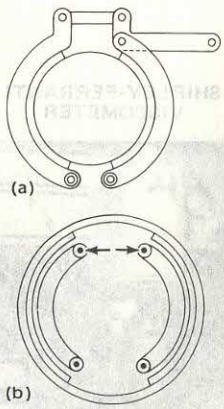
shore polyn'ya [OCEANOGR] A polyn'ya between pack ice and the coast, or between pack ice and an ice front, formed by a current or by wind.

shore protection [CIV ENG] Preventing erosion of the ground bordering a body of water.

Shore scleroscope [ENG] A device used in rebound hardness testing of rubber, metal, and plastic; consists of a small, conical hammer fitted with a diamond point and acting in a glass tube.

Shore scleroscope hardness test [MET] A rebound hardness test in which a metal body is dropped vertically down a glass tube onto the surface of the material being tested; the

SHOE BRAKE



Two types of shoe brake. *(a)* External shoe brake; shoes are lined with frictional material. *(b)* Internal shoe brake with lining.

height of the rebound is a measure of the hardness. Also known as scleroscope hardness test.

shoreside *See* onshore.

shore tank [PETRO ENG] A shoreside storage tank for liquid petroleum products discharged by tankers.

shore terrace [GEOL] **1.** A terrace produced along the shore by wave and current action. **2.** *See* marine terrace.

shore-to-shore movement [ORD] The assault movement of personnel and materiel directly from a shore staging area to the objective, involving no further transfers between types of craft or ships incident to the assault movement.

shoring [ENG] Providing temporary support with shores to a building or an excavation.

short [ELEC] *See* short circuit. [ENG] In plastics injection molding, the failure to fill the mold completely. Also known as short shot. [ORD] A bomb or projectile hit short of the target.

short antenna [ELECTROMAG] An antenna shorter than about one-tenth of a wavelength, so that the current may be assumed to have constant magnitude along its length, and the antenna may be treated as an elementary dipole.

short-baseline system [AERO ENG] A trajectory measuring system using a baseline the length of which is very small compared with the distance of the object being tracked.

short circuit [ELEC] A low-resistance connection across a voltage source or between both sides of a circuit or line, usually accidental and usually resulting in excessive current flow that may cause damage. Also known as short.

short-circuit impedance [ELEC] Of a line or four-terminal network, the driving point impedance when the far-end is short-circuited.

short-circuiting transfer [ENG] Transfer of melted material from a consumable electrode during short circuits.

short-circuit transition *See* shunt transition.

short column [CIV ENG] A column in which both compression and bending is significant, generally having a slenderness ratio between 30 and 120–150.

shortcoming [DES ENG] An imperfection or malfunction occurring during the life cycle of equipment, which should be reported and which must be corrected to increase efficiency and to render the equipment completely serviceable.

short-contact switch [ELEC] Selector switch in which the width of the movable contact is greater than the distance between contact clips, so that the new circuit is contacted before the old one is broken; this avoids noise during switching.

short-crested wave [OCEANOGR] An ocean wave whose crest is of finite length; that is, the type actually found in nature.

short-delay blasting [ENG] A method of blasting by which explosive charges are detonated in a given sequence with short time intervals.

short-delay detonator *See* millisecond delay cap.

short-distance navigation [NAV] **1.** Navigation (air) served by aids located less than 200-miles (322-kilometers) distance (International Civil Aviation Organization). **2.** Navigation (marine) at distances less than 3 miles (4.8 kilometers) (International Meeting on Marine Navigation, 1958).

short flashing light [NAV] A flashing light having individual flashes of less than 2-seconds duration.

short fuse [ENG] **1.** Any fuse that is cut too short. **2.** The practice of firing a blast, the fuse on the primer of which is not sufficiently long to reach from the top of the charge to the collar of the borehole; the primer, with fuse attached, is dropped into the charge while burning.

short-gate gain [ELECTR] Video gain on short-range gate.

short-haul convoy [ORD] A convoy whose voyage lies in general in coastal waters and whose terminals of departure and arrival lie in different countries.

short hundredweight *See* hundredweight.

short ink [GRAPHICS] A type of printing ink with a butterlike viscosity that is therefore not free-flowing.

shortite [MINERAL] $Na_2Ca_2(CO_3)_3$ A mineral composed of sodium and calcium carbonate.

short leg [ENG] One of the wires on an electric blasting cap, which has been shortened so that when placed in the borehole, the two splices or connections will not come opposite each other and make a short circuit.

short-long flashing light [NAV] A light showing a short flash of about 0.4 second, and a long flash of four times that duration, this combination recurring about six to eight times per minute.

shortness [MET] A form of brittleness in metal, designated as hot, cold, or red to indicate the temperature range in which brittleness occurs.

short oil [MATER] Varnish containing a small percentage of oil.

short-path principle *See* Hittorf principle.

short-period comet [ASTRON] A comet whose period is short enough for observations at two or more apparitions to be interrelated; usually taken to be a comet whose period is shorter than 200 years.

short-pulse laser [OPTICS] A laser designed to generate a pulse of light lasting on the order of nanoseconds or less, and having very high power, such as by Q switching or mode-locking.

short-range attack missile [ORD] An air-to-surface and air-to-air solid-fuel guided missile that uses inertial guidance for complete immunity to jamming; target coordinates are fed into the missile by a computer on the aircraft just before launch. Abbreviated SRAM.

short-range ballistic missile [ORD] A ballistic missile with a range capability up to about 600 nautical miles (1100 kilometers).

short-range force [PHYS] A force between two particles which is negligible when the distance between the particles is greater than a certain amount; in particular, nuclear forces whose range is several times 10^{-15} meter.

short-range forecast [METEOROL] A weather forecast made for a time period generally not greater than 48 hours in advance.

short-range navigation [NAV] Navigation employing only aids usable at short ranges. Also known as shoran.

short-range order [PHYS] A regularity in the arrangement of atoms in a disordered solid or a liquid in which the probability of a given type of atom having neighbors of a given type is greater than one would expect on a purely random basis.

short-range radar [ENG] Radar whose maximum line-of-sight range, for a reflecting target having 1 square meter of area perpendicular to the beam, is between 50 and 150 miles (80 and 240 kilometers).

short residuum [CHEM ENG] A petroleum refinery term for residual oil from crude-oil distillation operations in which neutral oils are taken overhead with the distillate.

short round [ORD] **1.** Defective cartridge in which the bullet has been seated too deeply. **2.** A projectile which fails to travel the expected distance or range.

short run [MET] Pertaining to a mold or casting filled only partially with molten metal.

shorts [ENG] Oversize particles held on a screen after sieving the fines through the screen. [FOOD ENG] Wheat-husk parts that are finer than bran; used in flour milling.

short shipment [ENG] Freight listed or manifested but not received.

short shot *See* short.

short-slot coupler *See* three-decibel coupler.

short stop [CHEM ENG] A substance added during a polymerization process to terminate the reaction.

short supply [IND ENG] An item is in short supply when the total of stock on hand and anticipated receipts during a given period is less than the total estimated demand during that period.

short takeoff and landing [AERO ENG] The ability of an aircraft to clear a 50-foot (15-meter) obstacle within 1500 feet (450 meters) of commencing takeoff, or in landing, to stop within 1500 feet after passing over a 50-foot obstacle. Abbreviated STOL.

Shortt clock [HOROL] An accurate clock manufactured by the Shortt-Synchronome Corporation; it is a pendulum clock in which the master pendulum is enclosed in an airtight, nearly evacuated chamber; this pendulum receives a small impulse to maintain its swing. Also known as free-pendulum clock.

short-time rating [ELEC] A rating defining the load that a machine, apparatus, or device can carry for a specified short time.

short ton *See* ton.

short-tube vertical evaporator [CHEM ENG] A liquid evaporation process unit with a vertical bundle of tubes 2–3 inches (5–8 centimeters) in diameter and 4–6 feet (1.2–1.8 meters) long; the heating fluid is inside the tubes, and the liquid to be evaporated is in the shell area outside the tubes; used mainly to evaporate cane-sugar juice. Also known as calandria evaporator; Roberts evaporator; standard evaporator.

shortwall [MIN ENG] **1.** A method of mining in which comparatively small areas are worked separately. **2.** A length of coal face between about 5 and 30 yards (4.6 and 27 meters), generally employed in pillar methods of working.

shortwall coal cutter [MIN ENG] A machine for undercutting coal which has a long, rigid chain jib fixed in relation to the main body of the machine and which cuts across a heading from right to left, being drawn across by means of a steel-wire rope.

shortwave broadcasting [COMMUN] Radio broadcasting at frequencies in the range from about 1600 to 30,000 kilohertz, above the standard broadcast band.

shortwave converter [ELECTR] Electronic unit designed to be connected between a receiver and its antenna system to permit reception of frequencies higher than those the receiver ordinarily handles.

shortwave propagation [COMMUN] Propagation of radio waves at frequencies in the range from about 1600 to 30,000 kilohertz.

shortwave radiation [ELECTROMAG] A term used loosely to distinguish radiation in the visible and near-visible portions of the electromagnetic spectrum (roughly 0.4 to 1.0 micrometer in wavelength) from long-wave radiation (infrared radiation).

short word [COMPUT SCI] The fixed word of lesser length in computers capable of handling words of two different lengths; in many computers this is referred to as a half-word because the length is exactly the half-length of the full word.

shoshonite [PETR] A basaltic rock composed of olivine and augite phenocrysts in a groundmass of labradorite with orthoclase rims, olivine, augite, a small amount of leucite, and some dark-colored glass.

shot [AERO ENG] An act or instance of firing a rocket, especially from the earth's surface. [ENG] **1.** A charge of some kind of explosive. **2.** Small spherical particles of steel. **3.** Small steel balls used as the cutting agent of a shot drill. **4.** The firing of a blast. **5.** In plastics molding, the yield from one complete molding cycle, including scrap. [MIN ENG] Coal broken by blasting or other methods. [ORD] **1.** A solid projectile for cannon, without a bursting charge; the term projectile is preferred for uniformity in nomenclature. **2.** A mass or load of numerous, relatively small, lead pellets used in a shotgun, as birdshot or buckshot.

shot bit [DES ENG] A short length of heavy-wall steel tubing with diagonal slots cut in the flat-faced bottom edge.

shot blasting [MET] Cleaning and descaling metal by shot peening or by means of a stream of abrasive powder blown through a nozzle under air pressure in the range 30–150 pounds per square inch (2×10^5 to 1.0×10^6 newtons per square meter).

shot boring [ENG] The act or process of producing a borehole with a shot drill.

shot break [ENG] In seismic prospecting, the electrical impulse which records the instant of explosion.

shot capacity [ENG] The maximum weight of molten resin that an accumulator can push out with one forward stroke of the ram during plastics forming operations.

shot copper [GEOL] Small, rounded particles of native copper, molded by the shape of vesicles in basaltic host rock, and resembling shot in size and shape.

shotcreting [ENG] A process of conveying mortar or concrete through a hose at high velocity onto a surface; the material bonds tenaciously to a properly prepared concrete surface and to a number of other materials.

shot depth [ENG] The distance from the surface to the charge.

shot drill *See* calyx drill.

shot effect *See* shot noise.

shot elevation [ENG] Elevation of the dynamite charge in the shot hole.

shot feed [MECH ENG] A device to introduce chilled-steel shot, at a uniform rate and in the proper quantities, into the circulating fluid flowing downward through the rods or pipe connected to the core barrel and bit of a shot drill.

shot-firing cable [ELEC] A two-conductor cable which leads from the exploder to the detonator wires. Also known as firing cable.

shot-firing circuit [ELEC] The path taken by the electric current from the exploder along the shot-firing cable, the detonator wires, and finally the detonator when a shot is detonated.

shot-firing curtain [MIN ENG] A steel frame with chains about 6 inches (15 centimeters) apart suspended from the roof about 9 to 12 feet (2.7 to 3.7 meters) from the face of an advancing tunnel to intercept flying debris when shot-firing at the face.

shot group *See* shot pattern.

shotgun [ORD] A smooth-bore shoulder weapon; the usual classes are riot gun, skeet gun, and sporting gun.

shotgun cartridge [ORD] A container or capsule, usually of stiff paper with a brass base, containing primer, powder, wadding, and shot for use in a shotgun.

shothole [ENG] The borehole in which an explosive is placed for blasting.

shothole casing [ENG] A lightweight pipe, usually about 4 inches (10 centimeters) in diameter and 10 feet (3 meters) long, with threaded connections on both ends, used to prevent the shothole from caving and bridging.

shothole drill [MECH ENG] A rotary or churn drill for drilling shotholes.

shot noise [ELECTR] Noise voltage developed in a thermionic tube because of the random variations in the number and the velocity of electrons emitted by the heated cathode; the effect causes sputtering or popping sounds in radio receivers and snow effects in television pictures. Also known as Schottky noise; shot effect.

shot pattern [ORD] Design made on a surface by all the impacts of a series of shots fired under similar conditions. Also known as shot group.

shot peening [MET] Shot blasting with small steel balls driven by a blast of air.

shot point [ENG] The point at which an explosion (such as in seismic prospecting) originates, generating vibrations in the ground.

shot rock [ENG] Blasted rock.

shotting [MET] Making shot by pouring molten metal in finely divided streams; the particles solidify during descent and are cooled in a tank of water.

shot tongs [ORD] Device used to lift and convey heavy projectiles in a horizontal position.

shoulder [ANAT] **1.** The area of union between the upper limb and the trunk in humans. **2.** The corresponding region in other vertebrates. [DES ENG] The portion of a shaft, a stepped object, or a flanged object that shows an increase of diameter. [ENG] A projection made on a piece of shaped wood, metal, or stone, where its width or thickness is suddenly changed. [GEOL] **1.** A short, rounded spur protruding laterally from the slope of a mountain or hill. **2.** The sloping segment below the summit of a mountain or hill. **3.** A bench on the flanks of a glaciated valley, located at the sharp change of slope where the steep sides of the inner glaciated valley meet the more gradual slope above the level of glaciation. **4.** A joint structure on a joint face produced by the intersection of plume-structure ridges with fringe joints.

shoulder blade *See* scapula.

shoulder-elbow height [ANTHRO] A measure of the distance taken from the top of the acromion to the tip of the elbow, as the subject sits erect, with the upper arm vertical and the forearm horizontal.

shoulder girdle *See* pectoral girdle.

shoulder guard [ORD] Any shield over the firing mechanism of a gun designed to protect the gunner from contact; particularly, such a shield on cannon mounted in tanks and in other cramped quarters.

shoulder-hand syndrome [MED] A syndrome characterized by severe constant intractable pain in the shoulder and arm, limited joint motion, diffuse swelling of the distal part of the upper extremity, fibrosis and atrophy of muscles, and decalcification of underlying bones; the cause is not well understood; it is similar to, or may be a form of, causalgia. Also known as hand-shoulder syndrome.

shoulder harness [ENG] A harness in a vehicle that fastens over the shoulders to prevent a person's being thrown forward in the seat.

shoulder screw [DES ENG] A screw with an unthreaded cylindrical section, or shoulder, between threads and screwhead; the shoulder is larger in diameter than the threaded section and provides an axis around which close-fitting moving parts operate.

shoulder stock [ORD] An item usually made of hardwood to which the barrel assembly and other parts of a shoulder-fired gun are attached; usually designed in one piece.

shoulder weapon [ORD] Any firearm designed to be braced

on or against the shoulder when firing, as a rifle, carbine, or bazooka launcher.

shoved moraine *See* push moraine.

shovel [DES ENG] A hand tool having a flattened scoop at the end of a long handle for moving soil, aggregate, cement, or other similar material. [MECH ENG] A mechanical excavator.

shovel dozer *See* tractor loader.

shovel loader [MECH ENG] A loading machine mounted on wheels, with a bucket hinged to the chassis which scoops up loose material, elevates it, and discharges it behind the machine.

Showalter stability index [METEOROL] A measure of the local static stability of the atmosphere, expressed as a numerical index.

show-card color *See* poster paint.

shower [METEOROL] Precipitation from a convective cloud; characterized by the suddenness with which it starts and stops, by the rapid changes of intensity, and usually by rapid changes in the appearance of the sky. [NUC PHYS] *See* cosmic-ray shower.

shower meteor [ASTRON] A meteor whose direction of arrival is approximately parallel to others belonging to the same meteor shower.

shower unit [NUCLEO] The mean path length required to reduce the energy of relativistic charged particles to half value as they pass through matter; one shower unit is equal to 0.693 radiation length.

show-through [GRAPHICS] In printing, an undesirable result in which the printing is visible through the sheet under normal lighting conditions. Also known as strike-through.

shrapnel [ORD] Small lead or steel balls contained in a shrapnel case which is fired from an artillery piece; the balls are projected in a forward direction upon the functioning of the fuse.

shrew [VERT ZOO] Any of more than 250 species of insectivorous mammals of the family Soricidae; individuals are small with a moderately long tail, minute eyes, a sharp-pointed snout, and small ears.

Shrike [ORD] An air-to-surface solid-fuel guided missile that homes in on enemy radar installations.

shrimp [INV ZOO] The common name for a number of crustaceans, principally in the decapod suborder Natantia, characterized by having well-developed pleopods and by having the abdomen sharply bent in most species, producing a humped appearance.

shrinkage [ENG] **1.** Contraction of a molded material, such as metal or resin, upon cooling. **2.** Contraction of a plastics casting upon polymerizing. [GEOL] The decrease in volume of soil, sediment, fill, or excavated earth due to the reduction of voids by mechanical compaction, superimposed loads, natural consolidation, or drying.

shrinkage cavity [MET] A cavity resulting from shrinkage during casting.

shrinkage crack [GEOL] A small crack produced in fine-grained sediment or rock by the loss of contained water during drying or dehydration. [MET] An irregular interdendritic crack in a casting caused by unequal contraction or inadequate feeding.

shrinkage index [GEOL] The numerical difference between the plastic limit of a material and its shrikage limit.

shrinkage limit [GEOL] That moisture content of a soil below which a decrease in moisture content will not cause a decrease in volume, but above which an increase in moisture will cause an increase in volume.

shrinkage pore [GEOL] An irregular pore formed in muddy sediment by shrinkage.

shrinkage ratio [GEOL] The ratio of a volume change to the moisture-content change above the shrinkage limit.

shrinkage rule *See* contraction rule.

shrinkage stoping [MIN ENG] A modification of overhead stoping, involving the use of a part of the ore for the purpose of support and as a working platform. Also known as back stoping.

shrink fit [DES ENG] A tight interference fit between mating parts made by shrinking-on, that is, by heating the outer member to expand the bore for easy assembly and then cooling so that the outer member contracts.

shrink forming [DES ENG] Forming metal wherein the piece undergoes shrinkage during cooling following the application of heat, cold upset, or pressure.

shrink-mixed concrete [MATER] Concrete that is partially mixed before being put in a truck mixer.

shrink ring [DES ENG] A heated ring placed on an assembly of parts, which on subsequent cooling fixes them in position by contraction.

shrink rule *See* contraction rule.

shrink wrapping [ENG] A technique of packaging with plastics in which the strains in plastics film are released by raising the temperature of the film, causing it to shrink-fit over the object being packaged.

shroud [ENG] A protective covering, usually of metal plate or sheet. [HOROL] The ends of lantern clock pinions that hold the pins. [NAV ARCH] A principal member of the standing rigging consisting of hemp or wire ropes which extend from or near a masthead to a vessel's side or to the rim of the top of the mast to afford lateral support for the mast.

shrouded propeller *See* ducted fan.

shrub [BOT] A low woody plant with several stems.

shrub-coppice dune [GEOL] A small dune formed on the leeward side of bush-and-clump vegetation.

Shubnikov–de Haas effect [SOLID STATE] Oscillations of the resistance or Hall coefficient of a metal or semiconductor as a function of a strong magnetic field, due to the quantization of the electron's energy.

Shubnikov groups [SOLID STATE] The point groups and space groups of crystals having magnetic moments. Also known as black-and-white groups; magnetic groups.

shuga [OCEANOGR] A spongy, rather opaque, whitish chunk of ice which forms instead of pancake ice if the freezing takes place in sea water which is considerably agitated.

shungite [GEOL] A hard, black, amorphous, coallike material composed of more than 98% carbon.

shunt [ELEC] **1.** A precision low-value resistor placed across the terminals of an ammeter to increase its range by allowing a known fraction of the circuit current to go around the meter. Also known as electric shunt. **2.** To place one part in parallel with another. **3.** *See* parallel. [ELECTROMAG] A piece of iron that provides a parallel path for magnetic flux around an air gap in a magnetic circuit. [MED] A vascular passage by which blood is diverted from its normal circulatory path; frequently it is a surgical passage created between two blood vessels, but it may also be an anatomical feature. [MIN ENG] To shove or turn off to one side, as a car or train from one track to another.

shunt-excited [ELECTROMAG] Having field windings connected across the armature terminals, as in a direct-current generator.

shunt-excited antenna [ELECTROMAG] A tower antenna, not insulated from the ground at the base, whose feeder is connected at a point about one-fifth of the way up the antenna and usually slopes up to this point from a point some distance from the antenna's base.

shunt-fed vertical antenna [ELECTROMAG] Vertical antenna connected to the ground at the base and energized at a point suitably positioned above the grounding point.

shunt feed *See* parallel feed.

shunt generator [ELEC] A generator whose field winding and armature winding are connected in parallel, and in which the armature supplies both the load current and the field current.

shunting [ELEC] The act of connecting one device to the terminals of another so that the current is divided between the two devices in proportion to their respective admittances.

shunt loading [ELEC] Loading in which reactances are applied in shunt across the conductors.

shunt motor [ELEC] A direct-current motor whose field circuit and armature circuit are connected in parallel.

shunt neutralization *See* inductive neutralization.

shunt peaking [ELECTR] The use of a peaking coil in a parallel circuit branch connecting the output load of one stage to the input load of the following stage, to compensate for high-frequency loss due to the distributed capacitances of the two stages.

shunt reactor [ELEC] A reactor that has a relatively high inductance and is wound on a magnetic core containing an air gap; used to neutralize the charging current of the line to which it is connected.

shunt regulator [ELEC] A regulator that maintains a constant output voltage by controlling the current through a dropping resistance in series with the load.

shunt repeater [ELEC] A type of negative impedance tele-

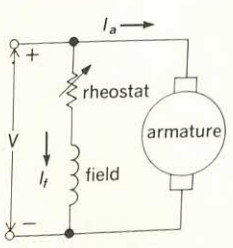
SHREW

The Eurasian common shrew *(Sorex araneus)* has the soft, velvetlike fur characteristic of all shrews.

SHRIMP

Common shrimp *(Crangon vulgaris)*, with a laterally compressed body and curved abdomen.

SHUNT MOTOR



Circuit diagram showing connections of shunt motor. V = total impressed voltage from line; I_a = total armature current; I_f = field current.

phone repeater which is stable when it is short-circuited, but oscillates when terminated by a high impedance, in contrast to a series repeater; it can be thought of as a negative admittance.

shunt T junction *See* H-plane T junction.

shunt transition [ELEC] A method of changing the connection of motors from series to parallel in which one motor, or group of motors, is first short-circuited, then disconnected, and finally connected in parallel with the other motor or motors. Also known as short-circuit transition.

shunt valve [ENG] A valve that gives a fluid under pressure a more readily available escape route than the normal route.

shunt wound [ELEC] Having armature and field windings in parallel, as in a direct-current generator or motor.

shut-down circuit [ENG] An electronic, electric, or pneumatic system designed to shut off and close down process systems or equipment; can be used for routine or emergency situations.

shut height [MECH ENG] The distance in a press between the bottom of the slide and the top of the bed, indicating the maximum die height that can be accommodated.

shut-in pressure [PETRO ENG] The equilibrated reservoir pressure measured when all the gas or oil outflow has been shut off.

shut-in well [PETRO ENG] An oil or gas well that is closed off; the well is shut so that it does not produce a fluid product of any kind.

shutoff [AERO ENG] In rocket propulsion, the intentional termination of burning by command from the ground or from a self-contained guidance system.

shutoff head [MECH ENG] The pressure developed in a centrifugal or axial flow pump when there is zero flow through the system.

shutter [NUCLEO] A movable plate of absorbing material used to cover a window or a beam hole in a reactor when radiation is not desired, or used to shut off a flow of slow neutrons. [OPTICS] A mechanical device that cuts off a beam of light by opening and closing at different rates of speed to expose film or plates; used in cameras and motion picture projectors. [ORD] A barrier in an explosive train used to stop a detonation wave; an interrupter which opens or closes as a shutter; often used to obtain fuse safety.

shutter dam [CIV ENG] A dam consisting of a series of pieces that can be lowered or raised by revolving them about their horizontal axis.

shuttered fuse [ORD] A fuse in which inadvertent initiation of the detonator will not initiate either the booster or the burst charge.

shuttering *See* formwork.

shutterridge [GEOL] A ridge formed by vertical, lateral, or oblique displacement of a fault traversing a ridge-and-valley topography with the dispalced part of a ridge shutting in the adjacent ravine or canyon.

shuttle [MECH ENG] A back-and-forth motion of a machine which continues to face in one direction. [NUCLEO] *See* rabbit. [TEXT] A device on a loom that moves filling yarns between the warp yarns during weaving.

shuttle bombing [ORD] Bombing of objectives, utilizing two bases; a bomber formation bombs its target, flies on to its second base, reloads, and returns to its home base, again bombing a target if required.

shuttle box [TEXT] **1.** A case on a loom at either end of the lay; holds the shutter after it has been moved through the shed. **2.** A compartment for quick-access storage of shuttles containing threads of various colors.

shuttle car [MIN ENG] An electrically propelled vehicle on rubber tires or caterpillar treads used to transfer raw materials, such as coal and ore, from loading machines in trackless areas of a mine to the main transportation system.

shuttle conveyor [MECH ENG] Any conveyor in a self-contained structure movable in a defined path parallel to the flow of the material.

shuttling [ENG] A movement involving two or more trips or partial trips by the same motor vehicles between two points.

Shwartzman phenomenon [IMMUNOL] A type of local tissue reactivity in the skin in which a preparatory injection of the endotoxin is followed by an intravenous injection of the same or another endotoxin 24 hours later, producing immediate neutropenia and thrombopenia with the development of leukocyte-platelet thrombi with subsequent hemorrhage.

Si *See* silicon.

SI *See* International System of units.

Siacci method [MECH] An accurate and useful method for calculation of trajectories of high-velocity missiles with low quadrant angles of departure; basic assumptions are that the atmospheric density anywhere on the trajectory is approximately constant, and the angle of departure is less than about 15°.

sial [PETR] A petrologic term for the silica- and alumina-rich upper rock layers of the earth's crust; gives rise to granite magma; the bulk of the continental blocks is sialic. Also known as granitic layer; sal.

sialadenitis [MED] Inflammation of a salivary gland.

sialagogue [PHARM] A drug producing a flow of saliva.

sialic acid [BIOCHEM] Any of a family of amino sugars, containing nine or more carbon atoms, that are nitrogen- and oxygen-substituted acyl derivatives of neuraminic acid; as components of lipids, polysaccharides, and mucoproteins, they are widely distributed in bacteria and in animal tissues.

sialogram [MED] Roentgenogram of a salivary duct system after the injection of an opaque medium.

sialography [MED] Radiographic examination of a salivary gland following injection of an opaque substance into its duct.

sialolith [PATH] A salivary calculus.

sialolithiasis [MED] The presence of salivary calculi.

sialomucin [BIOCHEM] An acid mucopolysaccharide containing sialic acid as the acid component.

Siamese blow [ENG] In the plastics industry, the blow molding of two or more parts of a product in a single blow, then cutting them apart.

Siamese twins [MED] Viable conjoined twins.

Siberian anticyclone *See* Siberian high.

Siberian high [METEOROL] An area of high pressure which forms over Siberia in winter, and which is particularly apparent on mean charts of sea-level pressure; centered near lake Baikal. Also known as Siberian anticyclone.

Siberian tick typhus [MED] A relatively benign, rash- and eschar-producing spotted-fever-like disease in northern Asia, caused by *Rickettsia siberica;* transmitted by four species of *Dermacentor* and two of *Haemaphysalis*.

siberite [MINERAL] A violet-red or purplish lithian variety of tourmaline.

sibjet *See* sebkha.

sibling rivalry [PSYCH] Competition between siblings for parental love, or for some other recognition.

Siboglinidae [INV ZOO] A family of pogonophores in the order Athecanephria.

SIC *See* dielectric constant.

sickle [AGR] The cutting mechanism of a binder, reaper, or combine. [DES ENG] A hand tool consisting of a hooked metal blade with a short handle, used for cutting grain or other agricultural products. [TEXT] A hooked arm for guiding the thread in a spinning mule.

Sickle [ASTRON] A group of six stars in the constellation Leo that outline the head of the lion.

sickle-cell anemia [MED] A chronic, hereditary hemolytic and thrombotic disorder in which hypoxia causes the erythrocyte to assume a sickle shape; occurs in individuals homozygous for sickle-cell hemoglobin trait.

sickle-cell hemoglobin [PATH] The hemoglobin found in sickle-cell anemia, differing in electrophoretic mobility and other physiochemical properties from normal adult hemoglobin. Also known as hemoglobin S.

sicklerite [MINERAL] $(Li,Mn)(PO_4)$ A dark-brown mineral composed of hydrous lithium manganese phosphate occurring in cleavable masses.

sicula [INV ZOO] The cone-shaped chitinous skeleton of the first zooid of a graptolite colony.

SID *See* sudden ionospheric disturbance.

side arms [ORD] Weapons that are worn at the side or in the belt when not in use; examples are the bayonet, automatic pistol, and revolver.

sideband [ELECTROMAG] **1.** The frequency band located either above or below the carrier frequency, within which fall the frequency components of the wave produced by the process of modulation. **2.** The wave components lying within such bands.

sideband interference *See* adjacent-channel interference.

sideband splash *See* adjacent-channel interference.

side bar [ENG] A bar on which molding pins are carried; operated from outside the mold.

side-boom dredge [NAV ARCH] A dredge that carries the

discharge in a discharge pipe hung from a boom, a distance of from 200 to 500 feet (60 to 150 meters) directly to port or starboard of the vessel, and there discharges into the atmosphere, dropping vertically from a height of about 50 feet (15 meters) onto the surface of the sea.

side canyon [GEOL] A ravine or other valley smaller than a canyon, through which a tributary flows into the main stream.

side-centered lattice [CRYSTAL] A type of centered lattice that is centered on the side faces only.

side chain [ORG CHEM] A grouping of similar atoms (two or more, generally carbons, as in the ethyl radical, C_2H_5—) that branches off from a straight-chain or cyclic (for example, benzene) molecule.

side-channel spillway [CIV ENG] A dam spillway in which the initial and final flow are approximately perpendicular to each other. Also known as lateral flow spillway.

side circuit [COMMUN] One of the circuits arranged to derive a phantom circuit.

side-construction tile [MATER] A type of structural clay tile designed to receive its principal stress at right angles to the axis of the cells.

side-cut brick [MATER] Brick cut by taut wire along the long side, as opposed to the edge.

side direction [MECH] In stress analysis, the direction perpendicular to the plane of symmetry of an object.

side-discharge shovel [MIN ENG] A shovel loader having a 21-cubic-foot (0.59-cubic-meter) bucket, hinged to the chassis to dig, lift, and discharge the material sideways onto a scraper or a belt conveyor.

side draw pin [ENG] Projection used to core a hole in a molded article at an angle other than the line of mold closing; must be withdrawn before the article is ejected.

side drift *See* adit.

side dumper [MIN ENG] An ore, rock, or coal car that can be tilted sidewise and thus emptied.

side echo [ELECTROMAG] Echo due to a side lobe of an antenna.

side effect [COMPUT SCI] A consistent result of a procedure that is in addition to or peripheral to the basic result.

side-end lines [MIN ENG] Limits of a mining claim looked on as boundary lines, especially in the case of veins originating within but extending outside the claim.

side error [NAV] That error in the reading of a marine sextant due to nonperpendicularity of the horizon glass to the frame.

side-facing tool [ENG] A single-point cutting tool having a nose angle of less than 60° and used for finishing the tailstock end of work being machined between centers or the face of a workpiece mounted in a chuck.

side frequency [COMMUN] The frequency of one of the sidebands produced by modulation of a carrier wave.

sidehill bit [DES ENG] A drill bit which is set off-center so that it cuts a hole of larger diameter than that of the bit.

side hook *See* bench hook.

side keelson [NAV ARCH] The fore and aft girders running along the bottom of the ship parallel, or nearly so, to the keel.

side lobe *See* minor lobe.

side-lobe blanking [ELECTR] Radar technique which compares relative signal strengths between an omnidirectional antenna and the radar antenna.

side-lobe cancellation [ORD] Jamming countermeasure technique which is designed to exclude or greatly reduce the strength of jamming signals introduced through the side or back lobes of a receiving system.

side-looking radar [ENG] A high-resolution airborne radar having antennas aimed to the right and left of the flight path; used to provide high-resolution strip maps with photographlike detail, to map unfriendly territory while flying along its perimeter, and to detect submarine snorkels against a background of sea clutter.

side milling [MECH ENG] Milling with a side-milling cutter to machine one vertical surface.

side-milling cutter [DES ENG] A milling cutter with teeth on one or both sides as well as around the periphery.

side oblique air photograph [GRAPHICS] An oblique photograph taken with the camera axis at right angles to the longitudinal axis of the aircraft.

side pinacoid [CRYSTAL] A pinacoid with Miller indices (010) in an orthorhombic, monoclinic, or triclinic crystal.

side plates [MIN ENG] In timbering, where both a cap and a sill are used, and the posts act as spreaders, the cap and the sill are termed side plates.

sideraerolite *See* stony-iron meteorite.

side rake [MECH ENG] The angle between the tool face and a reference plane for a single-point turning tool.

side reaction [CHEM] A secondary or subsidiary reaction that takes place simultaneously with the reaction of primary interest.

sidereal [ASTRON] Referring to a quantity, such as time, to indicate that it is measured in relation to the apparent motion or position of the stars.

sidereal clock [HOROL] A clock set at 0 hours 0 minutes 0 seconds (midnight) as the vernal equinox crosses the meridian; it is the astronomical clock.

sidereal day [ASTRON] The time between two successive upper transits of the vernal equinox; this period measures one sidereal day.

sidereal hour angle [ASTRON] The angle along the celestial equator formed between the hour circle of a celestial body and the hour circle of the vernal equinox, measuring westward from the vernal equinox through 360°.

sidereal month [ASTRON] The time period of one revolution of the moon about the earth relative to the stars; this period varies because of perturbations, but it is a little less than 27 1/3 days.

sidereal noon [ASTRON] The instant in time that the vernal equinox is on the meridian.

sidereal period [ASTRON] The length of time required for one revolution of a celestial body about its primary, with respect to the stars.

sidereal table [ORD] A device for artillery; a servo-driven table which is used to cancel out earth's rotation; the axis of the table is aligned for the particular latitude of location.

sidereal time [ASTRON] Time based on diurnal motion of stars; it is used by astronomers but is not convenient for ordinary purposes.

sidereal year [ASTRON] The time period relative to the stars of one revolution of the earth around the sun; it is about 365.2564 mean solar days.

side relief angle [DES ENG] The angle that the portion of the flanks of a cutting tool below the cutting edge makes with a plane normal to the base.

siderite [MINERAL] $FeCO_3$ A brownish, gray, or greenish rhombohedral mineral composed of ferrous carbonate; hardness is 4 on Mohs scale, and specific gravity is 3.9. Also known as chalybite; iron spar; rhombohedral iron ore; siderose; sparry iron; spathic iron; white iron ore.

Siderocapsa [MICROBIO] A genus of bacteria in the family Siderocapsaceae; cells are spherical to ovoid, and one to many are embedded in a common capsule; deposit oxides of iron or magnesium on or in the capsule.

Siderocapsaceae [MICROBIO] A family of gram-negative, chemolithotrophic bacteria; characterized by the ability to deposit iron or manganese compounds on or around the cells.

Siderococcus [MICROBIO] A genus of bacteria in the family Siderocapsaceae; coccoid cells deposit iron but not manganese oxides.

siderocyte [CYTOL] An erythrocyte which contains granules staining blue with the Prussian blue reaction.

side rod [MECH ENG] **1.** A rod linking the crankpins of two adjoining driving wheels on the same side of a locomotive; distributes power from the main rod to the driving wheels. **2.** One of the rods linking the piston-rod crossheads and the side levers of a side-lever engine.

sideroferrite [GEOL] A variety of native iron occurring as grains in petrified wood.

siderofibrosis [MED] Fibrosis associated with deposits of iron-bearing pigment.

siderogel [MINERAL] A mineral consisting of truly amorphous FeO(OH) and occurring in some bog iron ores.

siderograph [ENG] An instrument that keeps the time of the Greenwich longitude; consists of a clock and a navigation instrument.

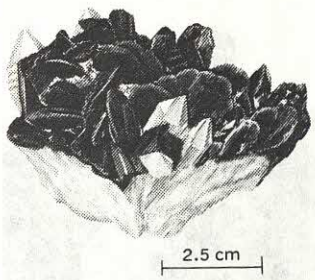
siderolite *See* stony-iron meteorite.

sideromelane [MINERAL] Any iron-rich mafic mineral.

sideronatrite [MINERAL] $Na_2Fe(SO_4)(OH)\cdot 3H_2O$ A yellow mineral composed of basic hydrous sodium iron sulfate occurring in fibrous masses.

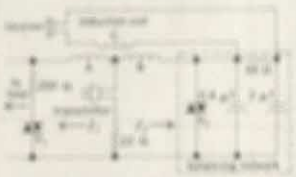
sideronitic texture [GEOL] In mineral deposits, a mesh of

SIDERITE



Dark-brown rhombohedral siderite crystals with quartz from Cornwall, England. *(Specimen from Department of Geology, Bryn Mawr College)*

SIDETONE

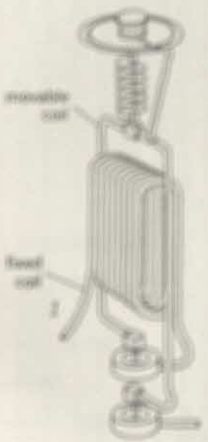


Circuit diagram of transmission circuit of a telephone set illustrating methods of eliminating sidetone. Voltage developed at transmitter is divided in windings A and B so that voltages induced in winding C are opposing. Voltage across network resistance arising from current in B opposes sidetone voltages induced in C. Silicon carbide varistors V, and V_2 help to balance impedances Z_1 and Z_2.

SIDEWINDER

Sidewinder missile, shown with a jet pilot. (Official U.S. Navy photograph)

SIEMENS' ELECTRODYNAMOMETER



Drawing of Siemens' electrodynamometer, which can be used as ammeter. Current I flows through fixed and movable coils in series. (Weston Instruments, Division of Sangamo Weston, Inc.)

silicate minerals so shattered and pressed as to force out solutions and other volatiles.

sideropenic dysphagia *See* Plummer-Vinson syndrome.

siderophile element [CHEM] An element with a weak affinity for oxygen and sulfur and that is readily soluble in molten iron; includes iron, nickel, cobalt, platinum, gold, tin, and tungsten.

siderophyllite [MINERAL] An iron-rich variety of biotite.

siderophyre [GEOL] A stony-iron meteorite containing bronzite and tridymite crystals in a nickel-iron network. Also known as siderophyry.

siderophyry *See* siderophyre.

siderose *See* siderite.

siderosilicosis [MED] A pneumoconiosis resulting from prolonged inhalation of silica and iron dusts.

siderosis [MED] Pneumoconiosis due to prolonged inhalation of dust containing iron salt. Also known as arc-welder's disease. [PATH] The presence or concentration of stainable iron pigment in a tissue or organ.

siderosphere *See* inner core.

siderostat [OPTICS] A more precise model of a heliostat; the siderostat uses a modified mirror mounting so that the image of a star is kept steady while the rest of the field is in rotation about the center.

sideroti [MINERAL] $(Cu,Fe)SO_4 \cdot 5H_2O$ A white to yellowish or pale greenish-white mineral consisting of ferrous sulfate pentahydrate; occurs as fibrous crusts and groups of needlelike crystals.

side shot [ENG] A reading or measurement from a survey station to locate a point that is off the traverse or that is not intended to be used as a base for the extension of the survey.

side slope [ENG] A test course used to determine lateral stability of a vehicle as well as steering, carburetion, and other functions.

side spray [ORD] Fragments of a bursting projectile thrown sideways from the line of flight, in contrast with base spray, thrown to the rear, and nose spray, thrown to the front.

sidestream [CHEM ENG] A liquid stream taken from an intermediate point of a liquids-processing unit, for example, a distillation or extraction tower.

side stream *See* tributary.

sidestream stripper [CHEM ENG] A device used to perform further distillation on a liquid stream (sidestream) from any one of the plates of a bubble tower, usually with the use of steam.

sideswipe [GEOPHYS] **1.** A phenomenon wherein two cross reflections come from a single seismograph, due to the almost simultaneous arrival of reflection energy from both limbs of a syncline or from two nearby, steeply dipping fault scarps. **2.** In refraction shooting, the lateral deflection of a minimum-time path to include a nearby, steeply dipping, high-velocity boundary such as a flank of a salt dome.

side-tipping loader [MIN ENG] A front-end loading machine which discharges the bucket load by tipping it sideways.

sidetone [COMMUN] The sound of the speaker's own voice as heard in his telephone receiver; the effect is undesirable and is usually suppressed by special circuits.

sidetone level [COMMUN] The ratio of the volume of the sidetone to the volume of the speaker's voice, usually expressed in decibels.

sidetone ranging [COMMUN] A method of introducing a time marker in a radio signal broadcast by a satellite for tracking or navigation, in which several audio tones of different frequencies are broadcast, and the phases of the tones transmitted from the satellite are compared with the tone phases received from the ground station or ship craft.

sidetrack [RY ENG] **1.** To move railroad cars onto a siding. **2.** *See* siding.

sidetracking [ENG] The deliberate act or process of deflecting and drilling a borehole away from a normal, straight course. [PETRO ENG] Drilling procedure to bypass a broken drill or casing permanently lodged in the hole being drilled for an oil well, usually by using a whipstock.

sidewalk [CIV ENG] **1.** A walkway for pedestrians on the side of a street or road. **2.** A fine pavement.

side-wall sampling [PETRO ENG] A technique for taking rock or sand samples from the sides of oil well boreholes.

sideways feed [COMPUT SCI] The method of placing cards in the feed hopper of a punched-card machine in which one of the long edges of the card enters the machine first, so that the columns of the card are read simultaneously. Also known as parallel feed.

Sidewinder [ORD] A Navy air-to-air missile having infrared homing guidance and a speed of over Mach 2, when launched from an airplane, the missile seeks and hits an enemy bomber or fighter target by homing on the heat emitted by the target.

siding [CIV ENG] A short railroad track connected to the main track at one or more points and used to move railroad cars in order to free traffic on the main line or for temporary storage of cars. Also known as sidetrack. [MATER] Any wall cladding, except masonry or brick.

siduron [ORG CHEM] $C_{14}H_{20}N_2O$ A colorless, crystalline solid with a melting point of 135–138°C; used as a preemergence control of grass in turf. Also known as 1-(2-methylcyclohexyl)-3-phenylurea.

siegbahn [SPECT] A unit of length, formerly used to express wavelengths of x-rays, equal to exactly 1/3029.45 of the spacing of the (200) planes of calcite at 18°C, or to $(1.00202 \pm 0.00003) \times 10^{-13}$ meter. Also known as x-ray unit; X-unit. Symbolized X; XU.

siege howitzer [ORD] A short, heavy gun of large caliber, used for destruction of fortresses.

siegenite [MINERAL] $(Co,Ni)_3S_4$ A mineral composed of nickel-cobalt sulfide.

siemens [ELEC] A unit of conductance, admittance, and susceptance, equal to the conductance between two points of a conductor such that a potential difference of 1 volt between these points produces a current of 1 ampere; the conductance of a conductor in siemens is the reciprocal of its resistance in ohms. Formerly known as mho (℧); reciprocal ohm. Symbolized S.

Siemens' electrodynamometer [ELECTROMAG] An early type of electromagnetic instrument in which current flows through all the coils in series.

sienna [MATER] Any of various yellowish-brown earthy substances consisting of hydrated iron oxide occurring in limonite, becomes orange-brown when burnt and is generally darker and more transparent in oils than is ocher, used as pigment for oil paints and stains.

Sierolomorphidae [INV ZOO] A small family of hymenopteran insects in the superfamily Scolioidea.

sierozem [GEOL] A soil found in cool to temperate arid regions, characterized by a brownish-gray surface on a lighter layer based on a carbonate or hardpan layer.

Sierpinski gasket [MATH] A fractal which can be constructed by a recursive procedure; at each step a triangle is divided into four new triangles, only three of which are kept for further iterations.

sierra [GEOGR] A high range of hills or mountains with a regular peaks that give a sawtooth profile.

sieve [ENG] **1.** A meshed or perforated device or sheet through which dry loose material is refined, liquid is strained, and soft solids are comminuted. **2.** A meshed sheet with apertures of uniform size used for sizing granular materials.

sieve analysis [ENG] The size distribution of solid particles on a series of standard sieves of decreasing size, expressed as a weight percent. Also known as sieve classification; sieving.

sieve area [BOT] An area in the wall of a sieve-tube element, sieve cell, or parenchyma cell characterized by clusters of pores through which strands of cytoplasm pass to adjoining cells.

sieve cell [BOT] A long, tapering cell that is characteristic of phloem in gymnosperms and lower vascular plants, in which all the sieve areas are of equal specialization.

sieve classification *See* sieve analysis.

sieve deposition [GEOL] The formation of coarse-grained lobate masses on an alluvial fan whose material is sufficiently coarse and permeable to permit complete infiltration of water before it reaches the toe of the fan.

sieve diameter [ENG] The size of a sieve opening through which a given particle will just pass.

sieve fraction [ENG] That portion of solid particles which pass through a standard sieve of given number and is retained by a finer sieve of a different number.

sieve lobe [GEOL] A coarse-grained lobate mass produced by sieve deposition on an alluvial fan.

sieve mesh [RES ENG] The standard opening in sieve or screen, defined by four boundary wires (warp and woof); for laboratory mesh is square and is defined by the shortest distance between two parallel wires as regards aperture (quoted in micrometers or millimeters), and by the number of parallel wires

per linear inch as regards mesh; 60-mesh equals 60 wires per inch.

sieve of Eratosthenes [MATH] An iterative procedure which determines all the primes less than a given number.

sieve plate [CHEM ENG] A distillation tower tray that is perforated so that the vapor emerges vertically through the tray, passing through the liquid holdup on top of the tray; used as a replacement for bubble-cap trays in distillation. Also known as sieve tray.

sievert [NUCLEO] A unit of radiation dose, equal to the dose delivered by a point source of 1 milligram of radium, enclosed in a platinum container with walls ½ millimeter thick, to a sample at a distance of 1 centimeter over a period of 1 hour; equal to approximately 8.38 roentgens. Also known as millicurie-of-intensity-hour.

sieve shaker [CHEM ENG] A device used to shake a stacked column of standard sieve-test trays to cause solids to sift progressively from the top (large openings) to the bottom (small openings and a final pan), according to particle size.

sieve texture See poikiloblastic.

sieve tissue See phloem.

sieve tray See sieve plate.

sieve tube [BOT] A phloem element consisting of a series of thin-walled cells arranged end to end, in which some sieve areas are more specialized than others.

sieving See sieve analysis.

sifflento [METEOROL] A southwest wind of the Adriatic Sea; it is often violent.

Sigillariidae [INV ZOO] A family of scale-bearing polychaete annelids belonging to the Errantia.

Sigmodon [VERT ZOO] A small family of herbivorous percoform fishes in the suborder Acanthuroidei having minute concealed scales embedded in the skin and strong, sharp fin spines.

Sigatoka [PL PATH] Leaf-spot disease of bananas caused by the fungus *Mycosphaerella musicola*.

sight [NAV] See celestial observation. [ORD] **1.** Mechanical or optical device for aiming a firearm or for laying a gun or launcher in position. **2.** To aim at a target or aiming point. [PHYSIO] See vision.

sight aperture [ORD] An irregularly shaped, adjustable, mechanical iris usually integral to a rear sight; it functions as a peephole through which the sight at the opposite end of a gun is brought into view in aiming at a target or object.

sight base [ORD] **1.** In gunnery, the distance between the eye and the rings of an optical ring sight. **2.** Mount for a gunsight.

sight bracket [ORD] Clamp used to hold a detachable sight in position when mounted on a gun.

sight check [COMPUT SCI] A check that holes are punched in the same positions in two or more punched cards by superimposing the cards and looking through the holes.

sight distance [OPTICS] The distance from which an object at eye level remains visible to an observer.

sight extension [ORD] Any device which raises the normal base or mount of a gunsight to provide improved or unobstructed sighting.

sight feed [ENG] Pertaining to piping in which the flowing liquid can be observed through a transparent tube or wall.

sight glass [ENG] A glass tube or a glass-faced section on a process line or vessel, used for visual reading of liquid levels or of manometer pressures.

sighting [OPTICS] **1.** The act or procedure of aiming with the aid of a sight. **2.** The action of bringing something into view; the action of seeing something.

sighting angle [ORD] In bombing, the angle between the line of sight to the aiming point and the vertical.

sighting bar [ORD] Wooden device with enlarged front and rear sight, eyepiece, and a movable target, used for training in the proper method of aiming a small-arms weapon; the eyepiece forces the student to hold the eye in proper position, because of the size of the sights, errors of aiming are very apparent.

sighting instrument [ORD] A device or an instrument designed to aid in the pointing of a weapon.

sighting shot [ORD] Trial shot, fired to find out whether the sights are properly adjusted.

sighting station [ORD] A place from which remote-controlled weapons are sighted.

sighting system [ORD] A mechanical or optical device for aiming a firearm or for laying a gun in position.

sighting tube [ENG] A tube, usually ceramic, inserted into a hot chamber whose temperature is to be measured; an optical pyrometer is sighted into the tube to observe the interior end of the tube to give a temperature reading.

sight leaf [ORD] The movable hinged part of a rear sight of a gun that can be raised and set to a desired range, or snapped down when not in use.

sight reduction [NAV] The information needed for establishing a line of position, derived from the use of a sextant or an octant.

sight reduction tables [NAV] Tables for performing sight reduction obtained by the use of a sextant or octant, particularly those tables for determining computed altitude for comparison with the observed altitude of a celestial body to determine the altitude difference for establishing a line of position.

sight rod See range rod.

sight tracking line [ORD] The line of sight from a computing gunsight reticle image to the target.

sight unit [OPTICS] A compact sighting device composed of an elbow or panoramic telescope, mount, or adapter, usually used for pointing a weapon for direct or indirect fire; it may be attached to, or used in conjunction with, a weapon rocket launcher, or the like.

sigma [INV ZOO] A C-shaped spicule.

sigma algebra [MATH] A collection of subsets of a given set which contains the empty set and is closed under countable union and complementation of sets. Also known as sigma field.

sigma bond [PHYS CHEM] The chemical bond resulting from the formation of a molecular orbital by the end-on overlap of atomic orbitals.

sigma field See sigma algebra.

sigma finite [MATH] A measure is sigma finite on a space X if X is a countable disjoint union of sets each of which is measurable and has finite measure.

sigma function [THERMO] A property of a mixture of air and water vapor, equal to the difference between the enthalpy and the product of the specific humidity and the enthalpy of water (liquid) at the thermodynamic wet-bulb temperature; it is constant for constant barometric pressure and thermodynamic wet-bulb temperature.

sigma hyperon [NUCLEAR PHYS] **1.** The collective name for three unstable baryons with charges of $+1$, 0, and -1 times the proton charge, designated Σ^+, Σ^0, Σ^-, all having masses of approximately 1193 megaelectronvolts, spin of ½, and positive parity; they form an isotopic spin multiplet with a total isotopic spin of 1 and a hypercharge of 0. **2.** Any baryon belonging to an isotopic spin multiplet having a total isotopic spin of 1 and a hypercharge of 0; designated $\Sigma(m)$, where m is the mass of the baryon in million electron volts, and I and P are its spin and parity; the Σ_{1385}(1385) is sometimes designated Σ^*.

sigma-minus hyperonic atom [ATOM PHYS] An atom consisting of a negatively charged sigma hyperon orbiting around an ordinary nucleus. Designated Σ^- hyperonic atom.

sigma phase [MET] A brittle, nonmagnetic phase of tetragonal structure occurring in many transition-metal alloys, frequently encountered in high chromium stainless steels.

sigma pile [NUCLEAR] An assembly of moderating material containing a neutron source, used to study the absorption cross sections and other neutron properties of the material.

sigma ring [MATH] A ring of sets whose any countable union of its members is also a member.

sigmaspire [INV ZOO] An S-shaped sponge spicule.

sigma-t [OCEANOGR] An abbreviated value of the density of a sea-water sample of temperature T and salinity S: $\sigma T = [\rho(S,T) - 1] \times 10^3$, where $\rho(S,T)$ is the value of the sea-water density in continuous gram-second units at standard atmospheric pressure.

sigmatron [NUCLEO] A cyclotron and betatron operating in tandem to produce billion-volt x-rays.

sigmoid [MICR] S-shaped.

sigmoidal dune [OCEAN] A dune with an S-shaped ridge crest formed by the merger of crescentic dunes.

sigmoidal fold [GEOL] A recumbent fold having an axial surface which resembles the Greek letter sigma.

sigmoid colon [ANAT] The S-shaped portion of the colon between the descending colon and the rectum.

sigmoid distortion [OPTICS] A distortion present in fan-scan imagers, causing straight lines on obliquely to appear as sigmoid curves.

SIGATOKA

Sigatoka disease; banana with spotting, and enlarged diagram of spotted area on leaves of Gros Michel variety. (Courtesy of Fruit Research, United Fruit Co.)

sigmoiditis [MED] Inflammation of the sigmoid flexure of the colon.

sigmoidoscope [MED] An appliance for the inspection, by artificial light, of the sigmoid colon; it differs from the proctoscope in its greater length and diameter.

sign [COMMUN] In semiotics, an entity that signifies some other thing, and may be interpreted. [MATH] **1.** A symbol which indicates whether a quantity is greater than zero or less than zero; the signs are often the marks + and − respectively, but other arbitrarily selected symbols are used, especially in automatic data processing. **2.** A unit of plane angle, equal to 30° or $\pi/6$ radians.

signage [GRAPHICS] Environmental graphic communications whose functions include direction, identification, information or orientation, regulation, warning, or restriction.

signal [COMMUN] **1.** A visual, aural, or other indication used to convey information. **2.** The intelligence, message, or effect to be conveyed over a communication system. **3.** *See* signal wave.

signal area [NAV] That part of an airport used for the display of visual ground signals for the benefit of aircraft in flight.

signal bias [COMMUN] Form of teletypewriter signal distortion brought about by the lengthening or shortening of pulses during transmission; when marking pulses are all lengthened, a marking signal bias results; when marking pulses are all shortened, a spacing signal bias results.

signal carrier *See* carrier.

signal center [COMMUN] A combination of signal communication facilities operated by the U.S. Army in the field and consisting of a communications center, telephone switching central, and appropriate means of signal communications.

signal channel [COMMUN] A signal path for transmitting electric signals; such paths may be separated by frequency division or time division.

signal conditioning [COMMUN] Processing the form or mode of a signal so as to make it intelligible to or compatible with a given device, such as a data transmission line, including such manipulation as pulse shaping, pulse clipping, digitizing, and linearizing.

Signal Corps [COMMUN] A technical service of the U.S. Army, charged with the development, maintenance, and operation of communications systems within the army.

signal correction [ENG] In seismic analysis, a correction to eliminate the time differences between reflection times, resulting from changes in the outgoing signal from shot to shot.

signal detection theory [PSYCH] A theory which characterizes not only the acuity of an individual's discrimination but also the psychological factors that bias his judgment.

signal distance [COMPUT SCI] The number of bits that are not the same in two binary words of equal length. Also known as hamming distance.

signal distortion generator [ELECTR] Instrument designed to apply known amounts of distortion on a signal for the purpose of testing and adjusting communications equipment such as teletypewriters.

signal effect [ENG] In seismology, variation in arrival times of reflections recorded with identical filter settings, as a result of changes in the outgoing signal.

signal flare [ENG] A pyrotechnic flare of distinct color and character used as a signal.

signal-flow graph [SYS ENG] An abbreviated block diagram in which small circles, called nodes, represent variables of the system, and the nodes are connected by lines, called branches, which represent one-way signal multipliers; an arrow on the line indicates direction of signal flow, and a letter near the arrow indicates the multiplication factor. Also known as flow graph.

signal generator [ENG] An electronic test instrument that delivers a sinusoidal output at an accurately calibrated frequency that may be anywhere from the audio to the microwave range; the frequency and amplitude are adjustable over a wide range, and the output usually may be amplitude- or frequency-modulated. Also known as test oscillator.

signaling key *See* key.

signaling rate [COMMUN] The rate at which signals are transmitted.

signal intensity [COMMUN] The electric-field strength of the electromagnetic wave transmitting a signal.

signal level [COMMUN] The difference between the level of a signal at a point in a transmission system and the level of an arbitrarily specified reference signal.

signal light [COMMUN] A light specifically designed for the transmission of code messages by means of visible light rays that are interrupted or deflected by electric or mechanical means. [ENG] A signal, illumination, or any pyrotechnic light used as a sign.

signal normalization *See* signal standardization.

signal regeneration [COMMUN] The restoration of a waveform representing a signal to its original amplitude and shape. Also known as signal reshaping.

signal reporting code *See* radio-signal reporting code.

signal reshaping *See* signal regeneration.

signal rocket [ORD] A rocket that gives off some characteristic color or display which has a meaning according to an established code.

signal-shaping network [ELECTR] Network inserted in a telegraph circuit, usually at the receiving end, to improve the waveform of the code signals.

signal speed [COMMUN] The rate at which code elements are transmitted by a communications system.

signal standardization [COMMUN] The use of one signal to generate another which meets specified requirements for shape, amplitude, and timing. Also known as signal normalization.

signal station [COMMUN] A place on shore at which signals are made to ships at sea.

signal strength [ELECTROMAG] The strength of the signal produced by a radio transmitter at a particular location, usually expressed as microvolts or millivolts per meter of effective receiving antenna height.

signal-strength meter [ELECTR] A meter that is connected to the automatic volume-control circuit of a communication receiver and calibrated in decibels or arbitrary S units to read the strength of a received signal. Also known as S meter; S-unit meter.

signal-to-interference ratio [ELECTR] The relative magnitude of signal waves and waves which interfere with signal-wave reception.

signal-to-noise improvement factor *See* noise improvement factor.

signal-to-noise ratio [ELECTR] The ratio of the amplitude of a desired signal at any point to the amplitude of noise signals at that same point; often expressed in decibels; the peak value is usually used for pulse noise, while the root-mean-square (rms) value is used for random noise. Abbreviated S/N; SNR.

signal tower [CIV ENG] A switch tower from which railroad signals are displayed or controlled.

signal tracer [ELECTR] An instrument used for tracing the progress of a signal through a radio receiver or an audio amplifier to locate a faulty stage.

signal voltage [ELEC] Effective (root-mean-square) voltage value of a signal.

signal wave [COMMUN] A wave whose characteristics permit some intelligence, message, or effect to be conveyed. Also known as signal.

signal-wave envelope [COMMUN] Contour of a signal wave which is composed of a series of wave cycles.

signal winding [ELEC] Control winding, of a saturable reactor, to which the independent variable (signal wave) is applied.

sign-and-magnitude code [COMPUT SCI] The representation of an integer X by $(-1)^{a_0}(2^{n-2}a_1 + 2^{n-3}a_2 + \ldots + a_{n-1})$, where a_0 is 0 for X positive, and a_0 is 1 for X negative, and any a_j is either 0 or 1.

signature [ELECTR] The characteristic pattern of a target as displayed by detection and classification equipment. [GRAPHICS] A folded, printed sheet, usually consisting of 16 or 32 pages, that forms a section of a book or a pamphlet; the sheet may have fewer pages, but is always in multiples of four. [NAV ARCH] The graphic record of the magnetic properties of a vessel automatically traced as the vessel passes over the sensitive element of a recording instrument; more accurately called magnetic signature. [ORD] The identifying characteristics peculiar to each type of target which enable detecting apparatus, such as certain fuses, to sense and differentiate targets.

sign bit [COMPUT SCI] A sign digit consisting of one bit.

sign check indicator [COMPUT SCI] An error checking device, indicating no sign or improper signing of a field used for arithmetic processes; the machine can, upon interrogation, be made to stop or enter into a correction routine.

sign-control flip-flop [COMPUT SCI] In computers, a flip-

flop in the arithmetic unit used for storing the sign of the result of an operation.

sign convention [OPTICS] A convention as to which quantities, such as angles, distances, and radii of curvature, are positive and which are negative in computations involving a lens or a mirror.

sign digit [COMPUT SCI] A digit containing one to four binary bits, associated with a data item and used to denote an algebraic sign.

signed field [COMPUT SCI] A field of data that contains a number which includes a sign digit indicating the number's sign.

signet-ring cell [HISTOL] A cell with a large fat- or carbohydrate-filled vacuole that pushes the nucleus against the cell membrane.

significance [MATH] The arbitrary rank, priority, or order of relative magnitude assigned to a given position in a number.

significance arithmetic [COMPUT SCI] A rough technique for estimating the numbers and positions of the significant digits of the radix approximation that results when an arithmetic operation is applied to operands in radix approximation form.

significance level *See* level of significance of a test.

significance probability [STAT] The probability of observing a value of a test statistic as significant as, or even more significant than, the value actually observed.

significant digit *See* significant figure.

significant figure [MATH] A prescribed decimal place which determines the amount of rounding off to be done; this is usually based upon the degree of accuracy in measurement. Also known as significant digit.

significant wave [OCEANOGR] Statistically, a wave with the average height of the highest third of the waves of a given wave group.

sign of the zodiac [ASTRON] The zodiac is divided into 12 sections, called signs, in each of which the sun is situated for 1 month of the year; each sign, 30° in length, is named from a constellation with which the sign once coincided.

sign position [COMPUT SCI] That position, always at or near the left or right end of a numeral, in which the algebraic sign of the number is represented.

sign test [STAT] A test which can be used whenever an experiment is conducted to compare a treatment with a control on a number of matched pairs, provided the two treatments are assigned to the members of each pair at random.

signum [MATH] The real function $\operatorname{sgn}(x)$ defined for all x different from zero, where $\operatorname{sgn}(x) = 1$ if $x > 0$ and $\operatorname{sgn}(x) = -1$ if $x < 0$.

sigua [METEOROL] A straight-blowing monsoon gale of the Philippines.

silicon dioxide [INORG CHEM] SiO_2 Colorless, transparent crystals, soluble in molten alkalies and hydrofluoric acid; melts at 1710°C; used to make glass, ceramic products, abrasives, foundry molds, and concrete.

sikussak [OCEANOGR] Very old sea ice trapped in fjords; it resembles glacier ice because snowfall and snow drifts contribute to its formation.

SIL *See* speech interference level.

silage [AGR] Green or mature fodder that is fermented to retard spoilage and produce a succulent winter feed for livestock.

silane [INORG CHEM] Si_nH_{2n+2} A class of silicon-based compounds analogous to alkanes, that is, straight-chain, saturated paraffin hydrocarbons; they can be gaseous or liquid. Also known as silicon hydride.

Silastic [MATER] A trade name for any of several heat-resistant silicone rubbers.

silcrete [GEOL] A conglomerate of sand and gravel cemented by silica.

silent mutation [GEN] A mutation that does not result in amino acid sequence change.

silent period [COMMUN] Period during each hour in which ship and shore radio stations must remain silent and listen for distress calls.

silent speed [ENG] The speed at which silent motion pictures are fed through a projector, equal to 16 frames per second (sound-film speed is 24 frames per second).

silent stock support [MECH ENG] A flexible metal guide tube in which the stock tube of an automatic screw machine rotates; it is covered with a casing which deadens sound and prevents transfer of noise and vibration.

silex [MATER] Heat- and shock-resistant glass containing about 98% quartz. [MINERAL] A pure or finely ground quartz.

silexite [GEOL] Chert occurring in calcareous beds. [PETR] Igneous rock composed mainly of primary quartz.

silhouette target [ORD] **1.** Target whose shape is outlined against a light background, although its body features cannot be clearly seen. **2.** Practice target consisting of the dark image of a person or object outlined against a light background.

silica [MINERAL] SiO_2 Naturally occurring silicon dioxide; occurs in five crystalline polymorphs (quartz, tridymite, cristobalite, coesite, and stishovite), in cryptocrystalline form (as chalcedony), in amorphous and hydrated forms (as opal), and combined in silicates.

silica aerogel [MATER] A colloidal silica powder whose grains have small pores; used as a low-temperature insulator.

silica brick [MATER] A type of refractory brick formed of at least 90% silica cemented with, for example, slurried lime; used to line furnace roofs.

silica cement [MATER] A mortar used with silica cement; it is a refractory material.

silica flour [MET] A sand additive for casting produced by pulverizing quartz sand.

silica gel [INORG CHEM] A colloidal, highly absorbent silica used as a dehumidifying and dehydrating agent, as a catalyst carrier, and sometimes as a catalyst.

silica glass [MATER] A translucent or transparent vitreous material consisting almost entirely of silica. Also known as fused silica; vitreous silica.

silica sand [GEOL] Sand having a very high percentage of silicon dioxide; a source of silicon.

silica stone [PETR] A sedimentary rock composed of siliceous minerals.

silicate [INORG CHEM] The generic term for a compound that contains silicon, oxygen, and one or more metals, and may contain hydrogen. [MINERAL] Any of a large group of minerals whose crystal lattice contains SiO_4 tetrahedra, either isolated or joined through one or more of the oxygen atoms.

silicate cement [MATER] The silicate of soda glue, used as an adhesive in cardboard and plywood boxes.

silicate cotton *See* mineral wool.

silicate grinding wheel [DES ENG] A mild-acting grinding wheel where the abrasive grain is bonded with sodium silicate and fillers.

silicate of soda *See* sodium silicate.

silicate paint [MATER] A paint in which the vehicle is water-soluble sodium silicate; used for painting mortar.

silication [GEOL] The conversion to or the replacement by silicates.

silicatization [MIN ENG] The sealing off of water by the injection of calcium silicate under pressure; sometimes used to reduce the leakage of water through defective lengths of tubing in a shaft.

siliceous [PETR] Describing a rock containing abundant silica, especially free silica.

siliceous dust [MIN ENG] The dust arising from the dry-working of sand, sandstone, trap, granite, and other igneous rocks; the dust is not soluble in the body fluids, and often results in a form of pneumoconiosis, known as silicosis.

siliceous earth [GEOL] A loose, friable, soft, porous, lightweight, fine-grained, and usually white siliceous sediment, usually derived from the remains of organisms.

siliceous limestone [PETR] **1.** A dense, dark, commonly thin-bedded limestone representing an intimate admixture of calcium carbonate and chemically precipitated silica that are believed to have accumulated simultaneously. **2.** A silicified limestone, bearing evidence of replacement of calcite by silica.

siliceous ooze [GEOL] An ooze composed of siliceous skeletal remains of organisms, such as radiolarians.

siliceous sediment [GEOL] A sediment composed of fragmental, concretionary, or precipitated siliceous materials.

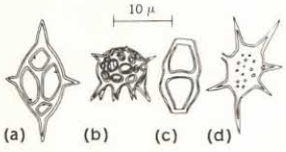
siliceous shale [PETR] A hard, fine-grained rock with the texture of shale and with as much as 85% silica.

siliceous sinter [MINERAL] A white, lightweight, porous, opaline variety of silica, deposited by a geyser or hot spring. Also known as fiorite; geyserite; pearl sinter; sinter.

silicic [PETR] Sard of magma or igneous rock rich in silica (usually at least 65%); granite is a silicic rock. Also known as oversaturated; persilicic.

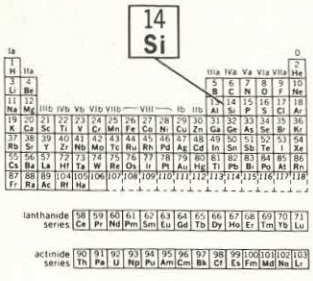
silicic acid [INORG CHEM] $SiO_2 \cdot nH_2O$ A white, amor-

SILICOFLAGELLATA



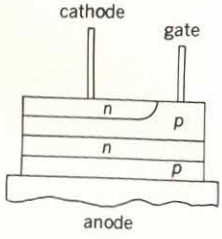
Examples of fossil and modern Silicoflagellata. *(a) Dictyocha*, Cretaceous to Recent; *(b) Cannopilus*, Miocene; *(c) Naviculopsis*, Eocene to Miocene; and *(d) Vallacerta*, Upper Cretaceous.

SILICON



Periodic table of the chemical elements showing the position of silicon.

SILICON CONTROLLED RECTIFIER



Diagrammatic view of typical silicon controlled rectifier showing four alternate layers of *p*-type and *n*-type material.

phous precipitate; used to bleach fats, waxes, and oils. Also known as hydrated silica.

silicide resistor [ELECTR] A thin-film resistor that uses a silicide of molybdenum or chromium, deposited by direct-current sputtering in an integrated circuit when radiation hardness or high resistance values are required.

silicification [GEOL] Introduction of or replacement by silica. Also known as silification.

silicified wood [GEOL] A material formed by the silicification of wood, generally in the form of opal or chalcedony, in such a manner as to preserve the original form and structure of the wood. Also known as agatized wood; opalized wood; petrified wood; woodstone.

silicinate [GEOL] Pertaining to the silica cement of a sedimentary rock.

siliclastic [PETR] Pertaining to clastic noncarbonate rocks which are almost exclusively silicon-bearing, either as forms of quartz or as silicates.

silicle [BOT] A many-seeded capsule formed from two united carpels, usually of equal length and width, and divided on the inside by a replum.

silicoblast [INV ZOO] Poriferan amebocytes involved in formation of siliceous spicules.

Silicoflagellata [BOT] A class of unicellular flagellates of the plant division Chrysophyta represented by a single living genus, *Dictyocha*.

Silicoflagellida [INV ZOO] An order of marine flagellates in the class Phytamastigophorea which have an internal, siliceous, tubular skeleton, numerous yellow chromatophores, and a single flagellum.

silicomagnesiofluorite [MINERAL] $Ca_4Mg_3Si_2O_5(OH)_2F_{10}$ A mineral composed of basic calcium magnesium fluoride and silicate.

silicomanganese [MET] A crude alloy made up of 65–70% manganese, 16–25% silicon, and 1–2.5% carbon; used in the manufacture of low-carbon steel.

silicon [CHEM] A group IV nonmetallic element, symbol Si, with atomic number 14, atomic weight 28.086; dark-brown crystals that burn in air when ignited; soluble in hydrofluoric acid and alkalies; melts at 1410°C; used to make silicon-containing alloys, as an intermediate for silicon-containing compounds, and in rectifiers and transistors.

silicon bromide *See* silicon tetrabromide.

silicon bronze [MET] An alloy of copper with 1–5% silicon; it is corrosion-resistant and has good mechanical properties.

silicon burning [NUC PHYS] The synthesis, in stars, of elements, chiefly in the iron group, resulting from the photodisintegration of silicon-28 and other intermediate-mass nuclei; copious suplies of protons, alpha particles, and neutrons are produced, followed by the capture of these particles by other intermediate-mass nuclei.

silicon capacitor [ELECTR] A capacitor in which a pure silicon-crystal slab serves as the dielectric; when the crystal is grown to have a *p* zone, a depletion zone, and an *n* zone, the capacitance varies with the externally applied bias voltage, as in a varactor.

silicon carbide [INORG CHEM] SiC Water-insoluble, bluish-black crystals, very hard and iridescent; soluble in fused alkalies; sublimes at 2210°C; used as an abrasive and a heat refractory, and in light-emitting diodes to produce green or yellow light.

silicon chloride *See* silicon tetrachloride.

silicon controlled rectifier [ELECTR] A semiconductor rectifier that can be controlled; it is a *pnpn* four-layer semiconductor device that normally acts as an open circuit, but switches rapidly to a conducting state when an appropriate gate signal is applied to the gate terminal. Abbreviated SCR. Also known as reverse-blocking triode thyristor.

silicon controlled switch [ELECTR] A four-terminal switching device having four semiconductor layers, all of which are accessible; it can be used as a silicon controlled rectifier, gate-turnoff switch, complementary silicon controlled rectifier, or conventional silicon transistor. Abbreviated SCS. Also known as reverse-blocking tetrode thyristor.

silicon copper [MET] An alloy containing 70–80% copper and 20–30% silicon, used as an addition to molten copper or brass.

silicon detector *See* silicon diode.

silicon diode [ELECTR] A crystal diode that uses silicon as a semiconductor; used as a detector in ultra-high- and super-high-frequency circuits. Also known as silicon detector.

silicon dioxide [INORG CHEM] SiO_2 Colorless, transparent crystals, soluble in molten alkalies and hydrofluoric acid; melts at 1710°C; used to make glass, ceramic products, abrasives, foundry molds, and concrete.

silicone [MATER] A fluid, resin, or elastomer; can be a grease, a rubber, or a foamable powder; the group name for heat-stable, water repellent, semiorganic polymers of organic radicals attached to the silicones, for example, dimethyl silicone; used in adhesives, cosmetics, and elastomers.

silicon fluoride *See* silicon tetrafluoride.

silicon halide [INORG CHEM] A compound of silicon and a halogen; for example, $SiBr_4$, Si_2Br_6, $SiCl_4$, Si_2Cl_6, Si_3Cl_8, SiF_4, Si_2F_6, SiI_4, and Si_2F_6.

silicon hydride *See* silane.

silicon image sensor [ELECTR] A solid-state television camera in which the image is focused on an array of individual light-sensitive elements formed from a charged-coupled-device semiconductor chip. Also known as silicon imaging device.

silicon imaging device *See* silicon image sensor.

siliconizing [MET] Diffusing silicon into solid metal at an elevated temperature.

silicon monoxide [INORG CHEM] SiO A hard, abrasive, amorphous solid used as thin surface films to protect optical parts, mirrors, and aluminum coatings.

silicon nitride [INORG CHEM] Si_3N_4 A white, water-insoluble powder, resistant to thermal shock and to chemical reagents; used as a catalyst support and for stator blades of high-temperature gas turbines.

silicon-on-sapphire [ELECTR] A semiconductor manufacturing technology in which metal oxide semiconductor devices are constructed in a thin single-crystal silicon film grown on an electrically insulating synthetic sapphire substrate. Abbreviated SOS.

silicon pn junction detector [NUCLEO] A type of junction detector made by diffusing an *n*-type dopant, usually phosphorus, about 2 micrometers into the surface of a *p*-type silicon base.

silicon rectifier [ELECTR] A metallic rectifier in which rectifying action is provided by an alloy junction formed in a high-purity silicon slab.

silicon resistor [ELECTR] A resistor using silicon semiconductor material as a resistance element, to obtain a positive temperature coefficient of resistance that does not appreciably change with temperature; used as a temperature-sensing element.

silicon solar cell [ELECTR] A solar cell consisting of *p* and *n* silicon layers placed one above the other to form a *pn* junction at which radiant energy is converted into electricity.

silicon steel [MET] A steel that contains 0.5–4.5% silicon, used in electric transformer coils.

silicon surface barrier detector [NUCLEO] A type of junction detector made from a wafer of *n*-type silicon which is subjected to etching and surface treatments to create a thin layer of *p*-type material and then receives a thin layer of gold evaporated onto the surface.

silicon-symmetrical switch [ELECTR] Thyristor modified by adding a semiconductor layer so that the device becomes a bidirectional switch; used as an alternating-current phase control, for synchronous switching and motor speed control.

silicon tetrabromide [INORG CHEM] $SiBr_4$ A fuming, colorless liquid that yellows in air; disagreeable aroma; boils at 153°C. Also known as silicon bromide.

silicon tetrachloride [INORG CHEM] $SiCl_4$ A clear, corrosive, fuming liquid with suffocating aroma; decomposes in water and alcohol; boils at 57.6°C; used in warfare smoke screens, to make ethyl silicate and silicones, and as a source of pure silicon and silica. Also known as silicon chloride.

silicon tetrafluoride [INORG CHEM] SiF_4 A colorless, suffocating gas absorbed readily by water, in which it decomposes; boiling point, −86°C; used in chemical analysis and to make fluosilicic acid. Also known as silicon fluoride.

silicon transistor [ELECTR] A transistor in which silicon is used as the semiconducting material.

silicosiderosis [MED] Pneumoconiosis caused by inhalation of silicate- and iron-containing dust.

silicosis [MED] Pneumoconiosis due to the inhalation of silica (SiO_2) particles.

silicospiegel [MET] A spiegeleisen pig iron containing

15–20% manganese and 8–15% silicon and up to 4% carbon with the balance iron; used in making steel.

silicothermic process *See* Pidgeon process.

silification *See* silicification.

silique [BOT] A silicle-like capsule, but usually at least four times as long as it is wide, which opens by sutures at either margin and has parietal placentation.

silk [GEOL] Microscopic needle-shaped crystalline inclusions of rutile in a natural gem from which subsurface reflections produce a whitish sheen resembling that of a silk fabric. [INV ZOO] A continuous protein fiber consisting principally of fibroin and secreted by various insects and arachnids, especially the silkworm, for use in spinning cocoons, webs, egg cases, and other structures. [TEXT] A thread or fabric made from silk secretions of the silkworm.

silk cotton *See* kapok.

silk cotton tree *See* kapok tree.

silk gland [INV ZOO] A gland in certain insects which secretes a viscous fluid in the form of filaments known as silk; it is a salivary gland in insects and an abdominal gland in spiders.

silk paper [MATER] **1.** A paper containing a small amount of silk fibers which give a mottled appearance. **2.** A safety paper sometimes used for postage and revenue stamps.

silk-screen printing [GRAPHICS] The process of printing a flat color design through a piece of silk; the silk is tightly stretched on a wooden frame and a design is transferred to the silk; the parts of the design not to be printed are stopped out with a resist medium; the ink is pushed through the open mesh of the design area with a rubber-edged squeegee; only one color can be printed at a time.

silkworm [INV ZOO] The larva of various moths, especially *Bombyx mori*, that produces a large amount of silk for building its cocoon.

silky fracture [MET] A metal fracture in which the broken surface is fine in texture and dull in appearance; characteristic of tough, strong metals.

sill [BUILD] The lowest horizontal member of a framed partition or of a window or door frame. [CIV ENG] **1.** A timber laid across the foot of a trench or a heading under the side truss. **2.** The horizontal overflow line of a dam spillway or other weir structure. **3.** A horizontal member on which a lift gate rests when closed. **4.** A low concrete or masonry dam in a small stream to retard bottom erosion. [GEOL] **1.** Submarine ridge in relatively shallow water that separates a partly closed basin from another basin or from an adjacent sea. **2.** A tabular igneous intrusion that is oriented parallel to the planar structure of surrounding rock. [MIN ENG] **1.** A piece of wood laid across a drift to constitute a frame to support uprights of timber sets and to carry the track of the tramway. **2.** The floor of a gallery or passage in a mine.

sill anchor [BUILD] A fastener projecting from a foundation wall or foundation slab to secure the sill to the foundation.

sill depth [OCEANOGR] The maximum depth at which there is horizontal communication between an ocean basin and the open ocean. Also known as threshold depth.

silled basin *See* restricted basin.

sillenite [MINERAL] Bi_2O_3 A mineral composed of native bismuth oxide, is polymorphous with bismite, and occurs as earthy masses.

sillimanite [MINERAL] Al_2SiO_5 A brown, pale-green, or white neosilicate mineral with vitreous luster crystallizing in the orthorhombic system; commonly occurs in slender crystals, often in fibrous aggregates; hardness is 6–7 on Mohs scale, and specific gravity is 3.23. Also known as fibrolite.

silo [AERO ENG] A missile shelter that consists of a hardened vertical hole in the ground with facilities either for lifting the missile to a launch position, or for direct launch from the shelter. [CIV ENG] A large vertical, cylindrical structure, made of reinforced concrete, steel, or timber, and used for storing grain, cement, or other materials.

siloxane [ORG CHEM] R_2SiO Any of a family of silica-based polymers in which R is an alkyl group, usually methyl; these polymers exist as oily liquids, greases, rubbers, resins, or plastics. Also known as oxosilane.

Silphidae [INV ZOO] The carrion beetles, a family of coleopteran insects in the superfamily Staphylinoidea.

Silsbee effect [CRYO] The ability of an electric current to destroy superconductivity by means of the magnetic field that it generates, without raising the cryogenic temperature.

silt [GEOL] **1.** A rock fragment or a mineral or detrital particle in the soil having a diameter of 0.002–0.05 millimeter that is, smaller than fine sand and larger than coarse clay. **2.** Sediment carried or deposited by water. **3.** Soil containing at least 80% silt and less than 12% clay.

silt discharge rating *See* sediment discharge rating.

silting [CIV ENG] The filling up or raising of the bed of a body of water by depositing silt. [GEOL] The deposition or accumulation of stream-deposited silt that is suspended in a body of standing water.

silting index [ENG] The measurement of the tendency of a solids- or gel-carrying fluid to cause silting in close-tolerance devices, such as valves or other process-line flow constrictions.

siltite *See* siltstone.

silt loam [GEOL] A soil containing 50–88% silt, 0–27% clay, and 0–50% sand.

silt shale [PETR] A consolidated sediment consisting of no more than 10% sand and having a silt/clay ratio greater than 2:1.

silt soil [GEOL] A soil containing 80% or more of silt, and not more than 12% of clay and 20% of sand.

siltstone [GEOL] Indurated silt having a shalelike texture and composition. Also known as siltite.

silttil [GEOL] A chemically decomposed and eluviated till consisting of a friable, brownish, open-textured silt that contains a few small siliceous pebbles.

Silurian [GEOL] **1.** A period of geologic time of the Paleozoic era, covering a time span of between 430–440 and 395 million years ago. **2.** The rock system of this period.

Siluridae [VERT ZOO] A family of European catfish in the suborder Siluroidei in which the adipose dorsal fin is rudimentary or lacking.

Siluriformes [VERT ZOO] The catfishes, a distinctive order of actinopterygian fishes in the superorder Ostariophysi, distinguished by a complex Weberian apparatus that involves the fifth vertebrae and one to four pair of barbels.

Siluroidei [VERT ZOO] A suborder of the Siluriformes.

Silvanidae [INV ZOO] An equivalent name for Cucujidae.

silver [CHEM] A white metallic element in group I, symbol Ag, with atomic number 47; soluble in acids and alkalies, insoluble in water; melts at 961°C, boils at 2212°C; used in photographic chemicals, alloys, conductors, and plating. [MET] A sonorous, ductile, malleable metal that is capable of a high degree of polish and that has high thermal and electric conductivity.

silver acetate [ORG CHEM] CH_3COOAg A white powder, moderately soluble in water and nitric acid; used in medicine.

silver acetylide [INORG CHEM] Ag_2C_2 A white explosive powder used in detonators.

silver alloy [MET] A metal consisting of silver and one or more additional metallic components.

silver arsenite [INORG CHEM] Ag_3AsO_3 A poisonous, light-sensitive, yellow powder; soluble in acids and alkalies, insoluble in water and alcohol; decomposes at 150°C; used in medicine.

silver arsphenamine [PHARM] A brownish-black powder soluble in water; used in medicine.

silver battery [ELEC] A solid-state battery based on an Ag_4RbI_5 electrolyte that conducts positive silver ions.

silver brazing [MET] Brazing in which silver-base alloys are used as the filler metal.

silver-brazing alloy *See* silver solder.

silver bromate [INORG CHEM] $AgBrO_3$ A poisonous, light- and heat-sensitive, white powder; soluble in ammonium hydroxide, slightly soluble in hot water; decomposed by heat.

silver bromide [INORG CHEM] AgBr Yellowish, light-sensitive crystals; soluble in potassium bromide and potassium cyanide, slightly soluble in water; melts at 432°C; used in photographic films and plates.

silver-cadmium storage battery [ELEC] A storage battery that combines the excellent space and weight characteristics of silver-zinc batteries with long shelf life and other desirable properties of nickel-cadmium batteries.

silver carbonate [INORG CHEM] Ag_2CO_3 Yellowish, light-sensitive crystals; insoluble in water and alcohol, soluble in alkalies and acids; decomposes at 220°C; used as a reagent.

silver chloride [INORG CHEM] AgCl A white, poisonous, light-sensitive powder; slightly soluble in water, soluble in alkalies and acids; melts at 445°C; used in photography, photometry, silver plating, and medicine.

silver chromate [INORG CHEM] Ag_2CrO_4 Dark-colored

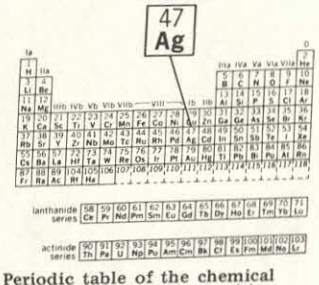
SILVER



Periodic table of the chemical elements showing the position of silver.

crystals insoluble in water, soluble in acids and in solutions of alkali chromates; used as an analytical reagent.

silver coating *See* silver plating.

silver cyanide [INORG CHEM] AgCN A poisonous, white, light-sensitive powder; insoluble in water, soluble in alkalies and acids; decomposes at 320°C; used in medicine and in silver plating.

silver-disk pyrheliometer [ENG] An instrument used for the measurement of direct solar radiation; it consists of a silver disk located at the lower end of a diaphragmed tube which serves as the radiation receiver for a calorimeter; radiation falling on the silver disk is periodically intercepted by means of a shutter located in the tube, causing temperature fluctuations of the calorimeter which are proportional to the intensity of the radiation.

silvered mica capacitor [ELECTR] A mica capacitor in which a coating of silver is deposited directly on the mica sheets to serve in place of conducting metal foil.

silverfish [INV ZOO] Any of over 350 species of insects of the order Thysanura; they are small, wingless forms with biting mouthparts.

silver fluoride [INORG CHEM] $AgF \cdot H_2O$ A light-sensitive, yellow or brownish solid, soluble in water; dehydrated form melts at 435°C; used in medicine. Also known as tachiol.

silver foil [MET] Silver or a silver-colored metal in very thin sheets.

silver frost [METEOROL] A deposit of glaze built up on trees, shrubs, and other exposed objects during a fall of freezing precipitation; the product of an ice storm. Also known as silver thaw.

silver glance *See* argentite.

silver halide [INORG CHEM] A compound of silver and a halogen; for example, silver bromide (AgBr), silver chloride (AgCl), silver fluoride (AgF), and silver iodide (AgI).

silver iodate [INORG CHEM] $AgIO_3$ A white powder, soluble in ammonium hydroxide and nitric acid, slightly soluble in water; melts above 200°C; used in medicine.

silver iodide [INORG CHEM] AgI A pale-yellow powder, insoluble in water, soluble in potassium iodide–sodium chloride solutions and ammonium hydroxide; melts at 556°C; used in medicine, photography, and artificial rainmaking.

silver lactate [ORG CHEM] $CH_3CHOHCOOAg \cdot H_2O$ Gray-to-white, light-sensitive crystals; slightly soluble in water and in alcohol; used in medicine. Also known as actol.

silverline system [INV ZOO] A series of superficial argentophilic lines in many protozoans, especially ciliates.

silver metallurgy [MET] The art and science of extracting silver metal economically from ores, and the reclamation of silver from industrial processes or from scrap metal.

silver methylarsonate [ORG CHEM] $CH_3AsO_3Ag_2$ A toxic compound used in algicides. Also known as disilver salt; methanearsonic acid.

silver migration [ELEC] A process, causing reduction in insulation resistance and dielectric failure; silver, in contact with an insulator, at high humidity, and subjected to an electrical potential, is transported ionically from one location to another.

silver nitrate [INORG CHEM] $AgNO_3$ Poisonous, corrosive, colorless crystals; soluble in glycerol, water, and hot alcohol; melts at 212°C; used in external medicine, photography, hair dyeing, silver plating, ink manufacture, and mirror silvering, and as a chemical reagent.

silver nitrite [INORG CHEM] $AgNO_2$ Yellow or grayish-yellow needles which decompose at 140°C; soluble in hot water; used in organic synthesis and in testing for alcohols.

silver orthophosphate *See* silver phosphate.

silver oxide [INORG CHEM] Ag_2O An odorless, dark-brown powder with a metallic taste; soluble in nitric acid and ammonium hydroxide, insoluble in alcohol; decomposes above 300°C; used in medicine and in glass polishing and coloring, as a catalyst, and to purify drinking water.

silver oxide cell [ELEC] A primary cell in which depolarization is accomplished by an oxide of silver.

silver permanganate [INORG CHEM] $AgMnO_4$ Water-soluble, violet crystals that decompose in alcohol; used in medicine and in gas masks.

silver phosphate [INORG CHEM] Ag_3PO_4 A poisonous, yellow powder; darkens when heated or exposed to light; soluble in acids and in ammonium carbonate, very slightly soluble in water; melts at 849°C; used in photographic emulsions and in pharmaceuticals, and as a catalyst. Also known as silver orthophosphate.

silver picrate [ORG CHEM] $C_6H_2O(NO_2)_3Ag \cdot H_2O$ Yellow crystals, soluble in water, insoluble in ether and chloroform; used in medicine.

silver plating [MET] Electrolytically depositing a coating of metallic silver on a base metal. Also known as silver coating.

silver potassium cyanide [ORG CHEM] $KAg(CN)_2$ Toxic, white crystals soluble in water and alcohol; used in silver plating and as a bactericide and antiseptic. Also known as potassium argentocyanide; potassium cyanoargentate.

silverprint [GRAPHICS] A print made from photographic paper treated with silver halides.

silver protein [ORG CHEM] A brown, hygroscopic powder containing 7.5–8.5% silver; made by reaction of a silver compound with gelatin in the presence of an alkali; used as an antibacterial.

silver selenide [INORG CHEM] Ag_2Se A gray powder, insoluble in water, soluble in ammonium hydroxide; melts at 880°C.

silver solder [MET] A solder composed of silver, copper, and zinc, having a melting point lower than silver but higher than lead-tin solder. Also known as silver-brazing alloy.

silverstat regulator [ELEC] Multitapped resistor, the taps of which are connected to single-leaf silver contacts; variation of voltage causes a solenoid to open or close these contacts, shorting out more or less of the resistance in the exciter circuit as a means of regulating the output voltage to the desired value.

silver storm *See* ice storm.

silver suboxide [INORG CHEM] AgO A charcoal-gray powder that crystallizes in the cubic or orthorhombic system, and has diamagnetic properties; used in making silver oxide-zinc alkali batteries. Also known as argentic oxide.

silver sulfate [INORG CHEM] Ag_2SO_4 Light-sensitive, colorless, lustrous crystals; soluble in alkalies and acids, insoluble in alcohol; melts at 652°C; used as an analytical reagent. Also known as normal silver sulfate.

silver sulfide [INORG CHEM] Ag_2S A dark, heavy powder, insoluble in water, soluble in concentrated sulfuric and nitric acids; melts at 825°C; used in ceramics and in inlay metalwork.

silver thaw *See* silver frost.

silvery iron [MET] A variety of cast iron with a high silicon content, a light-gray color, and a fine grain.

silver-zinc storage battery [ELEC] A storage battery that gives higher current output and greater watt-hour capacity per unit of weight and volume than most other types, even at high discharge rates; used in missiles and torpedoes, where its high cost can be tolerated.

silvex [ORG CHEM] $C_9H_7Cl_3O_3$ A colorless powder with a melting point of 178.2°C; used to promote ripening in apples and to control turf weeds, aquatic plant pests, and weeds in food crops. Also known as 2-(2,4,5-trichlorophenoxy)propionic acid.

silviculture [FOR] The theory and practice of controlling the establishment, composition, and growth of stands of trees for any of the goods and benefits that they may be called upon to produce.

sima [PETR] A petrologic term for the lower layer of the earth's crust, composed of silica- and magnesia-rich rocks; source of basaltic magma; sima is equivalent to the lower part of the continental crust and the bulk of the oceanic crust. Also known as intermediate layer.

simazine [ORG CHEM] $C_7H_{12}ClN_5$ A colorless, crystalline compound with a melting point of 225–227°C; slight solubility in water; used as an herbicide to control weeds in corn, alfalfa, and fruit trees, and in industrial areas. Also known as 2-chloro-4,6-bis(ethylamino)-*S*-triazine.

similar figures [MATH] Two figures or bodies that are identical except for size; similar figures can be placed in perspective, so that straight lines joining corresponding parts of the two figures will pass through a common point.

similar fold [GEOL] A fold in deformed beds in which the successive folds resemble each other.

similarity coefficient [SYST] In numerical taxonomy, a factor S used to calculate the similarity between organisms, according to the formula $S = n_s/(n_s + n_d)$, where n_s represents the number of positive features shared by two strains, and n_d represents the number of features positive for one strain and negative for the other.

similarity transformation [MATH] A transformation of a

euclidean space obtained from such transformations as translations, rotations, and those which either shrink or expand the length of vectors.

similitude [ENG] A likeness or resemblance; for example, the scale-up of a chemical process from a laboratory or pilot-plant scale to a commercial scale. [PHYS] The use in scientific studies and engineering designs of the corresponding behavior between large and small objects or systems which are of similar nature and, more precisely, have geometrical, kinematic, and dynamical similarity.

simmer [ENG] The detectable leakage of fluid in a safety valve below the popping pressure.

Simmonds' disease [MED] Hypopituitarism with marked insufficiency of the target glands and profound cachexia. Also known as hypophyseal cachexia; hypopituitary cachexia.

simo chart [IND ENG] A basic motion-time chart used to show the simultaneous nature of motions; commonly a therblig chart for two-hand work with motion symbols plotted vertically with respect to time, showing the therblig abbreviation and a brief description for each activity, and individual times values and body-member detail. Also known as simultaneous motion-cycle chart.

Simonsiella [MICROBIO] A genus of bacteria in the family Simonsiellaceae; cells are closely apposed, with free faces of terminal cells rounded.

Simonsiellaceae [MICROBIO] A family of bacteria in the order Cytophagales; cells are arranged to form flat filaments capable of gliding motility when the flat surface is in contact with the substrate.

Simon's theory [ENG] A theory of drilling which includes the effects of drilling by percussion and by vibration with a rotary (oil well) bit, cable tool, and pneumatic hammer; the rate of penetration of a chisel-shaped bit into brittle rock may be defined as follows: $R = NAf_v/\pi D$, where R equals the rate of advance of bit, N equals the number of wings of bit, f_v equals the number of impacts per unit time, D equals the diameter of the bit, and A equals the cross-sectional area of the crater at the periphery of the drill hole.

simoom [METEOROL] A strong, dry, dust-laden desert wind which blows in the Sahara, Israel, Syria, and the desert of Arabia; its temperature may exceed 130°F (54°C), and the humidity may fall below 10%.

simple [BIOL] **1.** Made up of one piece. **2.** Unbranched. **3.** Consisting of identical units, as a simple tissue.

simple alternative [STAT] An alternative to the null hypothesis which completely specifies the distribution of the observed random variables.

simple balance [ENG] An instrument for measuring weight in which a beam can rotate about a knife-edge or other point of support, the unknown weight is placed in one of two pans suspended from the ends of the beam and the known weights are placed in the other pan, and a small weight is slid along the beam until the beam is horizontal.

simple branched tubular gland [ANAT] A structure consisting of two or more unbranched, tubular secreting units joining a common outlet duct.

simple buffering [COMPUT SCI] A technique for obtaining simultaneous performance of input/output operations and computing; it involves associating a buffer with only one input or output file (or data set) for the entire duration of the activity on that file (or data set).

simple closed curve [MATH] A closed curve which never crosses itself.

simple conic chart [MAP] A chart on a simple conic projection.

simple conic projection [MAP] A conic map projection in which the surface of a sphere or spheroid, such as the earth, is developed on a tangent cone which is then spread out to form a plane.

simple continuous distillation *See* equilibrium flash vaporization.

simple crater [GEOL] A meteorite impact crater of relatively small diameter, characterized by a uniformly concave-upward shape and a maximum depth in the center, and lacking a central uplift.

simple cross-bedding [GEOL] Cross-bedding in which the lower bounding surfaces are nonerosional surfaces.

simple cubic lattice [CRYSTAL] A crystal lattice whose unit cell is a cube, and whose lattice points are located at the vertices of the cube.

simple dike [PETR] An igneous dike emplaced in a single episode.

simple engine [MECH ENG] An engine (such as a steam engine) in which expansion occurs in a single phase, after which the working fluid is exhausted.

simple function *See* step function.

simple gland [ANAT] A gland having a single duct.

simple goiter [MED] Diffuse enlargement of the thyroid gland, usually not associated with constitutional features.

simple harmonic current [ELEC] Alternating current, the instantaneous value of which is equal to the product of a constant, and the cosine of an angle varying linearly with time. Also known as sinusoidal current.

simple harmonic electromotive force [ELEC] An alternating electromotive force which is equal to the product of a constant and the cosine or sine of an angle which varies linearly with time.

simple harmonic motion *See* harmonic motion.

simple hypothesis [STAT] A hypothesis which completely specifies the distribution of the observed random variables.

simple lattice *See* primitive lattice.

simple leaf [BOT] A leaf having one blade, or a lobed leaf in which the separate parts do not reach down to the midrib.

simple lens [OPTICS] A lens consisting of a single element. Also known as single lens.

simple machine [MECH ENG] Any of several elementary machines, one or more being incorporated in every mechanical machine; usually, only the lever, wheel and axle, pulley (or block and tackle), inclined plane, and screw are included, although the gear drive and hydraulic press may also be considered simple machines.

simple microscope [OPTICS] A diverging lens system, which can form an enlarged image of a small object. Also known as hand lens; magnifier; magnifying glass.

simple order *See* linear order.

simple ore [GEOL] An ore of a single metal.

simple oscillator *See* harmonic oscillator.

simple path *See* path.

simple pendulum [MECH] A device consisting of a small, massive body suspended by an inextensible object of negligible mass from a fixed horizontal axis about which the body and suspension are free to rotate.

simple protein [BIOCHEM] One of a group of proteins which, upon hydrolysis, yield exclusively amino acids; included are globulins, glutelins, histones, prolamines, and protamines.

simple results [STAT] Results of observations such that on each trial of an experiment one and only one of these results will occur.

simple ring *See* elementary ring structure.

simple salt [CHEM] One of four classes of salts in a classification system that depends on the character of completeness of the ionization; examples are NaCl, $NaHCO_3$, and Pb(OH)Cl.

simple shear [GEOPHYS] Strain caused by differential movements on one set of parallel planes which results in internal rotation of fabric elements.

simple sound source [ACOUS] Under free-field conditions, a source that emits sound uniformly in every direction.

simple spit [GEOGR] A spit, either straight or recurved, without the development of minor spits at its end or along its inner side.

simple stomach [ANAT] A stomach consisting of a single dilation of the alimentary canal, as found in man, the dog, and many higher and lower vertebrates.

simple tone [ACOUS] Also known as pure tone. **1.** A sound wave whose instantaneous sound pressure is a simple sinusoidal function of time. **2.** A sound sensation characterized by singleness of pitch.

simple tubular gland [ANAT] A gland consisting of a single, tubular secreting unit.

simple twin [CRYSTAL] A twinned crystal composed of only two individuals in twin relation.

simple valley [GEOL] A valley that maintains a constant relation to the general structure of the underlying strata.

simplex [MATH] An n-dimensional simplex in a euclidean space consists of $n + 1$ linearly independent points $p_0, p_1, \ldots, p_n$ together with all line segments $a_0p_0 + a_1p_1 + \ldots + a_np_n$ where the $a_i \geq 0$ and $a_0 + a_1 + \ldots + a_n = 1$; a triangle with its interior and a tetrahedron with its interior are examples.

SIMPLE LEAF

The one-blade type of simple leaf.

simplex channel [COMMUN] A channel which permits transmission in one direction only.

simplex concrete pile [CIV ENG] A molded-in-place pile made by using a hollow cylindrical mandrel which is filled with concrete after having been driven to the desired depth and raised a few feet at a time, the concrete flowing out at the bottom and filling the hole in the earth.

simplex machine [TEXT] A warp knitting machine that is similar to a tricot machine, but employs two sets of needles and knits a double fabric.

simplex method [MATH] A finite iterative algorithm used in linear programming whereby successive solutions are obtained and tested for optimality.

simplex pump [MECH ENG] A pump with only one steam cylinder and one water cylinder.

simplex structure [COMPUT SCI] The structure of an information processing system designed in such a way that only the minimum amount of hardware is utilized to implement its function.

simplex transmission [COMMUN] A mode of radio transmission in which communication takes place between two stations in only one direction at a time.

simplex uterus [ANAT] A uterus consisting of a single cavity, representing the greatest degree of fusion of the Müllerian ducts; found in man and apes.

simplicial complex [MATH] A set consisting of finitely many simplices where either two simplices are disjoint or intersect in a simplex which is a face common to each.

simplicial graph [MATH] A graph in which no line starts and ends at the same point, and in which no two lines have the same pair of end points.

simplicial homology [MATH] A homology for a topological space where the nth group reflects how the space may be filled out by n-dimensional simplicial complexes and detects the presence of analogs of n-dimensional holes.

simplicial subdivision [MATH] A decomposition of the simplices composing a simplicial complex which results in a simplicial complex with a larger number of simplices.

simply connected region [MATH] A region having no holes; all closed curves can be shrunk to a point without passing through points in the complement of the region.

simply connected space [MATH] A topological space whose fundamental group consists of only one element; equivalently, all closed curves can be shrunk to a point.

simpsonite [MINERAL] $AlTaO_4$ A hexagonal mineral composed of aluminum tantalum oxide and occurring in short crystals.

Simpson's rule [MATH] Also known as parabolic rule. **1.** A basic approximation formula for definite integrals which states that the integral of a real-valued function f on an interval $[a,b]$ is approximated by $h[f(a) + 4f(g + h) + f(b)]/3$, where $h = (b - a)/2$; this is the area under a parabola which coincides with the graph of f at the abscissas a, $a + h$, and b. **2.** A method of approximating a definite integral over an interval which is equivalent to dividing the interval into equal subintervals and applying the formula in the first definition to each subinterval. [PETRO ENG] A mathematical relationship for calculating the oil- or gas-bearing net-pay volume of a reservoir; uses the contour lines from a subsurface geological map of the reservoir, including gas-oil and gas-water contacts.

SIMS *See* secondary ion mass spectrometer.

simulate [ENG] To mimic some or all of the behavior of one system with a different, dissimilar system, particularly with computers, models, or other equipment.

simulation language [COMPUT SCI] A computer language used to write programs for the simulation of the behavior through time of such things as transportation and manufacturing systems; SIMSCRIPT is an example.

simulator [COMPUT SCI] A routine which is executed by one computer but which imitates the operations of another computer. [ENG] A computer or other piece of equipment that simulates a desired system or condition and shows the effects of various applied changes, such as a flight simulator.

Simuliidae [INV ZOO] The black flies, a family of orthorrhaphous dipteran insects in the series Nematocera.

simultaneity [MECH] Two events have simultaneity, relative to an observer, if they take place at the same time according to a clock which is fixed relative to the observer.

simultaneous access *See* parallel access.

simultaneous altitudes [ASTRON] Altitudes of two or more celestial bodies observed at the same time.

simultaneous color television [ELECTR] A color television system in which the phosphors for the three primary colors are excited at the same time, not one after another; the shadow-mask color picture tube gives a simultaneous display.

simultaneous computer [COMPUT SCI] A computer, usually of the analog or hybrid type, in which separate units of hardware are used to carry out the various parts of a computation, the execution of different parts usually overlap in time, and the various hardware units are interconnected in a manner determined by the computation.

simultaneous equations [MATH] A collection of equations considered to be a set of joint conditions imposed on the variables involved.

simultaneous lobing [ELECTR] A radar direction-finding technique in which the signals received by two partly overlapping antenna lobes are compared in phase or power to obtain a measure of the angular displacement of a target from the equisignal direction.

simultaneous motion-cycle chart *See* simo chart.

simultaneous peripheral operations on line *See* spooling.

sin A *See* sine.

Sinclair-Baker reforming [CHEM ENG] A proprietary petroleum-refinery catalytic-reforming process, using platinum-on-alumina as the catalyst.

Sinclair hydrogen treating [CHEM ENG] A proprietary petroleum-refinery hydrodesulfurization process, using cobalt-molybdenum-on-alumina as the catalyst.

sincosite [MINERAL] $Ca(VO)_2(PO_4)_2 \cdot 5H_2O$ A leek-green mineral composed of hydrous calcium vanadyl phosphate and occurring in tetragonal scales or plates.

sine [MATH] The sine of an angle A in a right triangle with hypotenuse of length c given by the ratio a/c, where a is the length of the side opposite A; more generally, the sine function assigns to any real number A the ordinate of the point on the unit circle obtained by moving from (1,0) counterclockwise A units along the circle, or clockwise $|A|$ units if A is less than 0. Denoted sin A.

sine bar [DES ENG] A device consisting of a steel straight edge with two cylinders of equal diameter attached near the ends with their centers equidistant from the straightedge; used to measure angles accurately and to lay out work at a desired angle in relationship to a surface.

sine-cosine encoder [ELECTR] A shaft-position encoder having a special type of angle-reading code disk that gives an output which is a binary representation of the sine of the shaft angle.

sine-cosine generator *See* resolver.

sine galvanometer [ENG] A type of magnetometer in which a small magnet is suspended in the center of a pair of Helmholtz coils, and the rest position of the magnet is measured when various known currents are sent through the coils.

Sinemurian [GEOL] A European stage of geologic time; Lower Jurassic, above Hattangian and below Pliensbachian.

sine potentiometer [ELECTR] A potentiometer whose direct-current output voltage is proportional to the sine of the shaft angle; used as a resolver in computer and radar systems.

sine wave [PHYS] A wave whose amplitude varies as the sine of a linear function of time. Also known as sinusoidal wave.

sine-wave modulated jamming [ELECTR] Jamming signal produced by modulating a continuous wave signal with one or more sine waves.

sine-wave oscillator *See* sinusoidal oscillator.

sine-wave response *See* frequency response.

singeing [TEXT] Passing a fabric over heated plates or gas flames during finishing to remove lint or loose threads from the surface. Also known as gassing.

singing [CONT SYS] An undesired, self-sustained oscillation in a system or component, at a frequency in or above the passband of the system or component; generally due to excessive positive feedback.

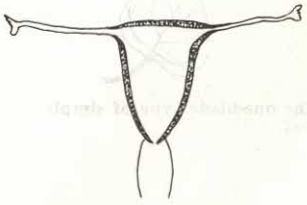
singing margin [CONT SYS] The difference in level, usually expressed in decibels, between the singing point and the operating gain of a system or component.

singing point [CONT SYS] The minimum value of gain of a system or component that will result in singing.

singing sand *See* sounding sand.

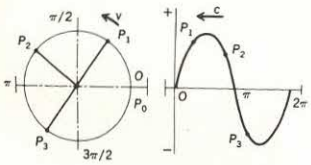
singing-stovepipe effect [ELEC] Reception and reproduction of radio signals by ordinary pieces of metal in contact with

SIMPLEX UTERUS



The simplex uterus of the human. *(From C. K. Weichert, Elements of Chordate Anatomy, 3d ed., McGraw-Hill, 1967)*

SINE WAVE



Relation of sine wave, simple harmonic motion, and uniform circular motion. Point P moves around the circle at constant tangential speed v; projection of P on vertical line moves up and down, executing simple harmonic motion. Plane on which the projection is plotted travels to the left at speed c, generating a sine wave.

each other, such as sections of stovepipe; it occurs when rusty bolts, faulty welds, or mechanically loose connections within strong radiated fields near transmitters produce intermodulation interference; the mechanically poor connections serve as nonlinear diodes.

single acting [MECH ENG] Acting in one direction only, as a single-acting plunger, or a single-acting engine (admitting the working fluid on one side of the piston only).

single action [ORD] A method of fire in some revolvers and shoulder arms in which the hammer must be cocked by hand, in contrast to double action in which a single pull of the trigger both cocks and fires the weapon.

single-action press [MECH ENG] A press having a single slide.

single-address instruction *See* one-address instruction.

single axis gyroscope [ENG] A gyroscope suspended in just one gimbal whose bearings form its output axis; an example is a rate gyroscope.

single-base powder [MATER] An explosive or propellant powder in which nitrocellulose is the only active ingredient.

single-bevel groove weld [MET] A groove weld in which one member has a joint edge beveled from one side.

single-blind technique [BIOL] A method in which the subjects of a drug experiment do not know whether or not they have received the drug.

single-block brake [MECH ENG] A friction brake consisting of a short block fitted to the contour of a wheel or drum and pressed up against the surface by means of a lever on a fulcrum; used on railroad cars.

single-board computer [COMPUT SCI] A computer consisting of a processor and memory on a single printed circuit board.

single bus [ELEC] A substation switching arrangement that involves one common bus for all connections and one breaker per connection.

single-button carbon microphone [ENG ACOUS] Microphone having a carbon-filled buttonlike container on only one side of its flexible diaphragm.

single-carrier theory [SOLID STATE] A theory of the behavior of a rectifying barrier which assumes that conduction is due to the motion of carriers of only one type; it can be applied to the contact between a metal and a semiconductor.

single-channel multiplier [ELECTR] A type of photomultiplier tube in which electrons travel down a cylindrical channel coated on the inside with a resistive secondary-emitting layer, and gain is achieved by multiple electron impacts on the inner surface as the electrons are directed down the channel by an applied voltage over the length of the channel.

single-channel simplex [COMMUN] Simplex operation that provides nonsimultaneous radio communications between stations using the same frequency channel.

single-column punch [COMPUT SCI] A system of coding whereby any one of the numerical values 0 to 11 can be represented by a single punch in a column.

single completion [PETRO ENG] An oil or gas well drilled to produce fluids from a single reservoir level or zone, and using a single tubing string.

single compound explosive [MATER] Explosive composed of a single chemical compound.

single crystal [CRYSTAL] A crystal, usually grown artificially, in which all parts have the same crystallographic orientation.

single-current transmission [COMMUN] Telegraph transmission in which a current flows, in only one direction, during marking intervals, and no current flows during spacing intervals.

single-cut file [DES ENG] A file with one set of parallel teeth, extending diagonally across the face of the file.

single-cycle mountain [GEOL] A fold mountain that has been destroyed without reelevation of any of its important parts.

single-degree-of-freedom gyro [MECH] A gyro the spin reference axis of which is free to rotate about only one of the orthogonal axes, such as the input or output axis.

single drift flight [NAV] A flight made by using a single drift correction angle based upon net drift between the point of departure and the point of destination.

single-edged push-pull amplifier circuit [ELECTR] Amplifier circuit having two transmission paths designed to operate in a complementary manner and connected to provide a single unbalanced output without the use of an output transformer.

single-effect evaporation [CHEM ENG] An evaporation process completed entirely in one vessel or by means of a single heating unit.

single-end amplifier [ELECTR] Amplifier stage which normally employs only one tube or semiconductor or, if more than one tube or semiconductor is used, they are connected in parallel so that operation is asymmetric with respect to ground. Also known as single-sided amplifier.

single-ended [ELEC] Unbalanced, as when one side of a transmission line or circuit is grounded.

single-ended spread [ENG] A spread of geophones in which the shot point is located at one end of the arrangement.

single-frequency duplex [COMMUN] Duplex carrier communications that provide communications in opposite directions, but not simultaneously, over a single-frequency carrier channel, the transfer between transmitting and receiving conditions being automatically controlled by the voices of the communicating parties.

single-frequency simplex [COMMUN] Single-frequency carrier communications in which manual rather than automatic switching is used to change over from transmission to reception.

single-gun color tube [ELECTR] A color television picture tube having only one electron gun and one electron beam; the beam is sequentially deflected across phosphors for the three primary colors to form each color picture element, as in the chromatron.

single-hand drilling [ENG] A method of rock drilling in which the drill steel, which is held in the hand, is struck with a 4-pound (1.8-kilogram) hammer, the drill being turned between the blows.

single heading flight *See* aerologation.

single-hop transmission [COMMUN] Radio transmission in which radio waves are reflected from the ionosphere only once along their path from the transmitter to the receiver.

single-impulse welding [MET] Spot, projection, or upset welding by means of a single current impulse.

single in-line package [ELECTR] A packaged resistor network or other assembly that has a single row of terminals or lead wires along one edge of the package. Abbreviated SIP.

single-J groove weld [MET] A groove weld in which one member has a joint edge in the form of a J from one side.

single-keyboard point-of-sale system [COMPUT SCI] A point-of-sale system based upon electronic cash registers as stand-alone units, each equipped with a few internal registers and some programming capability.

single knock-on [SOLID STATE] A sputtering event in which target atoms are ejected either directly by the bombarding projectiles or after a small number of collisions.

single-layer bit *See* surface-set bit.

single-layer solenoid [ELECTROMAG] A solenoid which has only one layer of wire, wound in a cylindrical helix.

single-length [COMPUT SCI] Pertaining to the expression of numbers in binary form in such a way that they can be included in a single computer word.

single lens *See* simple lens.

single-loop feedback [CONT SYS] A system in which feedback may occur through only one electrical path.

single-loop servomechanism [CONT SYS] A servomechanism which has only one feedback loop. Also known as servo loop.

single packing [MIN ENG] Strip packing on a longwall face in which the widest pack is along the roadside.

single-pass weld [MET] A weld made by depositing the filler metal with a single pass.

single-path system [NAV] An electronic navigation system in which a measurement is made on the delay incurred in transmission of electromagnetic energy from a radio transmitter to a radio receiver; the single-path system measures absolute transmission time and produces a circular line of position.

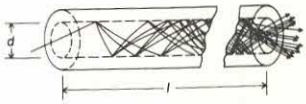
single-perforated grain [MATER] A cylindrical propellant grain with a single perforation located in its axis; this type of granulation is used in propelling charges for several calibers of guns, and in rockets.

single-phase [ELEC] Energized by a single alternating voltage.

single-phase circuit [ELEC] Either an alternating-current circuit which has only two points of entry, or one which, having more than two points of entry, is intended to be so energized that the potential differences between all pairs of points of entry are either in phase or differ in phase by 180°.

single-phase flow [CHEM ENG] The flow of a material, as a

SINGLE-CHANNEL MULTIPLIER



Continuous-channel multiplier structure.

gas, single-phase liquid, or a solid, but not in any combination of the three.

single-phase meter [ENG] A type of power-factor meter that contains a fixed coil that carries the load current, and crossed coils that are connected to the load voltage; there is no spring to restrain the moving system, which takes a position to indicate the angle between the current and voltage.

single-phase motor [ELEC] A motor energized by a single alternating voltage.

single-phase rectifier [ELECTR] A rectifier whose input voltage is a single sinusoidal voltage, in contrast to a polyphase rectifier.

single-piece milling [MECH ENG] A milling method whereby one part is held and milled in one machine cycle.

single-point grounding [ELEC] Grounding system that attempts to confine all return currents to a network that serves as the circuit reference; to be effective, no appreciable current is allowed to flow in the circuit reference, that is, the sum of the return currents is zero.

single-point tool [ENG] A cutting tool having one face and one continuous cutting edge.

single-polarity pulse [ELEC] Pulse in which the sense of the departure from normal is in one direction only.

single-polarity pulse amplitude modulation *See* unidirectional pulse amplitude modulation.

single-pole double-throw [ELEC] A three-terminal switch or relay contact arrangement that connects one terminal to either of two other terminals. Abbreviated SPDT.

single-pole single-throw [ELEC] A two-terminal switch or relay contact arrangement that opens or closes one circuit. Abbreviated SPST.

single-precision number [COMPUT SCI] A number having as many digits as are ordinarily used in a given computer, in contrast to a double-precision number.

single reference *See* random access.

single refraction [OPTICS] Any refraction that occurs in an isotropic crystal.

single sampling [IND ENG] A sampling inspection in which the lot is accepted or rejected on the basis of one sample.

single shot [ORD] Semiautomatic operation of an automatic gun, in which the trigger must be pulled for each shot fired.

single-shot blocking oscillator [ELECTR] Blocking oscillator modified to operate as a single-shot trigger circuit.

single-shot camera [OPTICS] An underwater camera that takes one picture on each lowering when the camera shutter is tripped by contact with the bottom.

single-shot exploder [ENG] A magneto exploder operated by the twist action given by a half turn of the firing key.

single-shot multivibrator *See* monostable multivibrator.

single-shot operation *See* single-step operation.

single-shot probability [ORD] Probability that a single projectile fired against a target will hit that target under a given set of conditions.

single-shot survey [PETRO ENG] An oil well directional log or record with a single-reading device that is either run down into the drill pipe or positioned in a nonmagnetic drill collar.

single-shot trigger circuit [ELECTR] Trigger circuit in which one triggering pulse initiates one complete cycle of conditions ending with a stable condition. Also known as single-trip trigger circuit.

single-sideband [COMMUN] Pertaining to single-sideband communication. Abbreviated SSB.

single-sideband communication [COMMUN] A communication system in which one of the two sidebands used in amplitude-modulation is suppressed; the carrier wave may be either transmitted or suppressed.

single-sideband modulation [COMMUN] Modulation resulting from elimination of all components of one sideband from an amplitude-modulated wave.

single-sideband transmission [COMMUN] Transmission of a carrier and substantially only one sideband of modulation frequencies, as in television where only the upper sideband is transmitted completely for the picture signal; the carrier wave may be either transmitted or suppressed.

single-sided amplifier *See* single-end amplifier.

single-signal receiver [ELECTR] A highly selective superheterodyne receiver for code reception, having a crystal filter in the intermediate-frequency amplifier.

single-sized aggregate [MATER] Aggregate in which most of the particles lie between narrow size limits.

single-stage compressor [MECH ENG] A machine that effects overall compression of a gas or vapor from suction to discharge conditions without any sequential multiplicity of elements, such as cylinders or rotors.

single-stage pump [MECH ENG] A pump in which the head is developed by a single impeller.

single-stage rocket [AERO ENG] A rocket or rocket missile to which the total thrust is imparted in a single phase, by either a single or multiple thrust unit.

single-stand mill [MET] A rolling mill in which the product is in contact with only two rolls at a time.

single-station analysis [METEOROL] The analysis or reconstruction of the weather pattern from more or less continuous meteorological observations made at a single geographic location, or the body of techniques employed in such an analysis.

single-step operation [COMPUT SCI] A method of computer operation, used in debugging or detecting computer malfunctions, in which a program is carried out one instruction at a time, each instruction being performed in response to a manual control device such as a switch or button. Also known as one-shot operation; one-step operation; single-shot operation; step-by-step operation.

single-stub transformer [ELECTROMAG] Shorted section of a coaxial line that is connected to a main coaxial line near a discontinuity to provide impedance matching at the discontinuity.

single-stub tuner [ELECTROMAG] Section of transmission line terminated by a movable short-circuiting plunger or bar, attached to a main transmission line for impedance-matching purposes.

single-theodolite observation [METEOROL] The usual type of pilot-balloon observation, that is, using one theodolite.

single thread [DES ENG] A screw thread having a single helix in which the lead and pitch are equal.

single-throw switch [ELEC] A switch in which the same pair of contacts is always opened or closed.

single-tone keying [COMMUN] Form of keying in which the modulating function causes the carrier to be modulated with a single tone for one condition, which may be either marking or spacing, and the carrier is unmodulated for the other condition.

single-trip trigger circuit *See* single-shot trigger circuit.

single-tuned amplifier [ELECTR] An amplifier characterized by resonance at a single frequency.

single tuned circuit [ELEC] A circuit whose behavior is the same as that of a circuit with a single inductance and a single capacitance, together with associated resistances.

single tuned interstage [ELECTR] An interstage circuit which is resonant at a single frequency.

single-U groove weld [MET] A groove weld in which the joint edge of both members is prepared in the form of a J from one side, giving a final U form to the completed weld.

single-unit semiconductor device [ELECTR] Semiconductor device having one set of electrodes associated with a single carrier stream.

single-V groove weld [MET] A groove weld in which the joint edge of each member is beveled from the same side.

single welded joint [MET] A joint welded from one side only.

single-wire line [ELEC] **1.** Transmission line that uses the ground as one side of the circuit. **2.** A surface-wave transmission line that consists of a single conductor which has a dielectric coating or other treatment that confines the propagated energy close to the wire.

singly linked ring [COMPUT SCI] A cyclic arrangement of data elements in which searches may be performed in either a clockwise or a counterclockwise direction, but not both.

singular arc [CONT SYS] In an optimal control problem, that portion of the optimal trajectory in which the Hamiltonian is not an explicit function of the control inputs, requiring higher-order necessary conditions to be applied in the process of solution.

singular corresponding point [METEOROL] A center of elevation or depression on a constant-pressure chart (or a center of high or low pressure on a constant-height chart) considered as a reappearing characteristic of successive charts.

singular integral equation [MATH] An integral equation where the integral appearing either has infinite limits of integration or the kernel function has points where it is infinite.

singular integral of a differential equation *See* singular solution of a differential equation.

singularity [MATH] A point where a function of real or com-

plex variables is not differentiable or analytic. Also known as singular point of a function. [METEOROL] A characteristic meteorological condition which tends to occur on or near a specific calendar date more frequently than chance would indicate; an example is the January thaw.

singular matrix [MATH] A matrix which has no inverse; equivalently, its determinant is zero.

singular point of a differential equation [MATH] A point which is a singularity for at least one of the known functions appearing in the equation.

singular point of a function *See* singularity.

singular solution of a differential equation [MATH] A solution which is not generic, that is, not obtainable from the general solution. Also known as singular integral of a differential equation.

singular transformation [MATH] A linear transformation which has no corresponding inverse transformation.

singular values of a matrix [MATH] For a matrix A these are the positive square roots of the eigenvalues of A^*A, where A^* denotes the adjoint matrix of A.

singultus [MED] A repeated involuntary spasmodic contraction of the diaphragm followed by sudden closures of the glottis. Also known as hiccup.

sinh *See* hyperbolic sine.

sinhalite [MINERAL] $MgAl(BO_4)$ A mineral composed of magnesium aluminum borate; sometimes used as a gem.

sinistral fault *See* left lateral fault.

sinistral fold [GEOL] An asymmetric fold whose long limb, when viewed along its dip, appears to have a leftward offset.

sinistrorse [BIOL] Twisting or coiling counterclockwise.

sink [ELECTROMAG] The region of a Rieke diagram where the rate of change of frequency with respect to phase of the reflection coefficient is maximum for an oscillator; operation in this region may lead to unsatisfactory performance by reason of cessation or instability of oscillations. [GEOL] **1.** A circular or ellipsoidal depression formed by collapse on the flank of or near to a volcano. **2.** A slight, low-lying desert depression containing a central playa or saline lake with no outlet, as where a desert stream comes to an end or disappears by evaporation. [MIN ENG] **1.** To excavate strata downward in a vertical line for the purpose of winning and working minerals. **2.** To drill or put down a shaft or borehole. [PHYS] A device or system where some extensive entity is absorbed, such as a heat sink, a sink flow, a load in an electrical circuit, or a region in a nuclear reactor where neutrons are strongly absorbed.

sinker [MIN ENG] **1.** A person who sinks mine shafts and puts in framing. **2.** A special movable pump used in shaft sinking. **3.** *See* sinker drill.

sinker bar [MIN ENG] A short, heavy rod placed above the drill jars to increase the effect of the upward sliding jars in well-drilling with cable tools.

sinker drill [MIN ENG] A jackhammer type of rock drill used in shaft sinkings. Also known as sinker.

sink-float separation process [ENG] A simple gravity process used in ore dressing that separates particles of different sizes or composition on the basis of differences in specific gravity.

sink flow [FL MECH] **1.** In three-dimensional flow, a point into which fluid flows uniformly from all directions. **2.** In two-dimensional flow, a straight line into which fluid flows uniformly from all directions at right angles to the line.

sinkhead *See* feedhead.

sinkhole [GEOL] Closed surface depressions in regions of karst topography produced by solution of surface limestone or the collapse of cavern roofs.

sinkhole plain [GEOL] A regionally extensive plain or plateau characterized by well-developed karst features.

sinking [OCEANOGR] The downward movement of surface water generally caused by converging currents or when a water mass becomes denser than the surrounding water. Also known as downwelling. [OPTICS] In atmospheric optics, a refraction phenomenon, the opposite of looming, in which an object on, or slightly above, the geographic horizon apparently sinks below it.

sinking and walling scaffold [MIN ENG] A platform designed for use in shaft sinking to enable sinking and walling to be performed simultaneously. Also known as Galloway sinking and walling stage.

sinking bucket *See* hoppit.

sinking fund [IND ENG] A fund established by periodically depositing funds at compound interest in order to accumulate a given sum at a given future time for some specific purpose.

sinking pump [MIN ENG] A long, narrow, electrically driven centrifugal-type pump designed for keeping a shaft dry during sinking operations.

sinking tubing [MET] Drawing tubing through a die or passing it through rolls without the use of a tool in the bore to control the inside diameter.

sink mark [ENG] A shallow depression or dimple on the surface of an injection-molded plastic part due to collapsing of the surface following local internal shrinkage after the gate seals.

sinoatrial node [ANAT] A bundle of Purkinje fibers located near the junction of the superior vena cava with the right atrium which acts as a pacemaker for cardiac excitation. Abbreviated SA node. Also known as sinoauricular node.

sinoauricular node *See* sinoatrial node.

sinoite [MINERAL] Si_2N_2O A nitride mineral known only in meteorites.

Sinope [ASTRON] A small satellite of Jupiter with a diameter of about 17 miles (27 kilometers), orbiting with retrograde motion at a mean distance of about 1.47×10^7 miles (2.37×10^7 kilometers). Also known as Jupiter IX.

sinople [MINERAL] A blood-red or brownish-red (with a tinge of yellow) variety of quartz containing inclusions of hematite.

sinter [MET] **1.** The product of a sintering operation. **2.** A shaped body composed of metal powders and produced by sintering with or without previous compacting. [MINERAL] *See* siliceous sinter. [PETR] A chemical sedimentary rock deposited by precipitation from mineral waters, especially siliceous sinter and calcareous sinter.

sintered copper [MET] Copper prepared by heating a compressed powder of the metal to form a solid mass.

sintered steel [MET] Steel prepared by heating compressed iron powder and graphite to form a solid.

sintering [MET] Forming a coherent bonded mass by heating metal powders without melting; used mostly in powder metallurgy.

sintering furnace [MET] A furnace in which presintering and sintering operations are carried out.

sinter setting *See* mechanical setting.

sinuate [BOT] Having a wavy margin with strong indentations.

sinus [BIOL] A cavity, recess, or depression in an organ, tissue, or other part of an animal body.

sinus gland [INV ZOO] An endocrine gland in higher crustaceans, lying in the eyestalk in most stalk-eyed species, which is the site of storage and release of a molt-inhibiting hormone.

sinus hairs *See* vibrissae.

sinusitis [MED] Inflammation of a paranasal sinus.

sinus of Morgagni [ANAT] The space between the upper border of the levator veli palatini muscle and the base of the skull.

sinusoid [ANAT] Any of the relatively large spaces comprising part of the venous circulation in certain organs, such as the liver.

sinusoidal angular modulation *See* angle modulation.

sinusoidal current *See* simple harmonic current.

sinusoidal function [MATH] The real or complex function $\sin(u)$ or any function with analogous continuous periodic behavior.

sinusoidal oscillator [ELECTR] An oscillator circuit whose output voltage is a sine-wave function of time. Also known as harmonic oscillator; sine-wave oscillator.

sinusoidal projection [MAP] An equal-area map projection in which the parallels are equally spaced, straight lines drawn to scale, the central meridian is a straight line perpendicular to the equator along which the scale is true, and the other meridians are sine curves, concaving toward the central meridian.

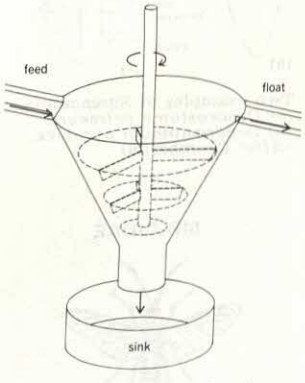
sinusoidal wave *See* sine wave.

sinus venosus [EMBRYO] The vessel in the transverse septum of the embryonic mammalian heart into which open the vitelline, allantoic, and common cardinal veins. [VERT ZOO] The chamber of the lower vertebrate heart to which the veins return blood from the body.

SIP *See* single in-line package.

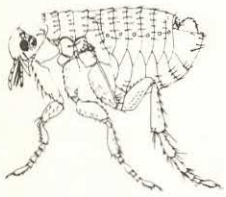
Siphinodentallidae [INV ZOO] A family of mollusks in the class Scaphopoda characterized by a subterminal epipodial

SINK-FLOAT SEPARATION PROCESS



Feed particles are introduced into suspension, whose specific gravity is between that of mineral and gangue particles; particles of higher specific gravity sink while those of lower specific gravity float; stirrer prevents suspension from settling out on the walls.

SIPHONAPTERA

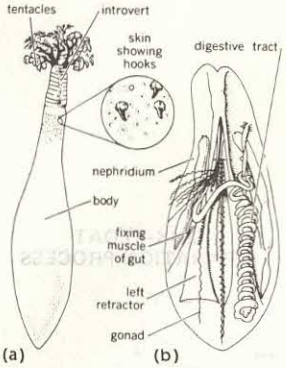


Human flea, *Pulex irritans.* *(From E. O. Essig, College Entomology, Macmillan, 1942)*

SIPHONOCLADALES

Anadyomene, habit of thallus, showing expanded blades.

SIPUNCULIDA



Two examples of Sipunculida. *(a) Dendrostoma petraeum. (b) Dendrostomum pyroides. (After Chamberlin)*

SIRICIDAE

Drawing of a horntail. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

ridge which is not slit dorsally and which terminates with a crenulated disk.

siphon [BOT] A tubular element in various algae. [ENG] A tube, pipe, or hose through which a liquid can be moved from a higher to a lower level by atmospheric pressure forcing it up the shorter leg while the weight of the liquid in the longer leg causes continuous downward flow. [GEOL] A passage in a cave system that connects with a water trap. [INV ZOO] **1.** A tubular structure for intake or output of water in bivalves and other mollusks. **2.** The sucking-type of proboscis in many arthropods.

Siphonales [BOT] A large order of green algae (Chlorophyta) which are coenocytic, nonseptate, and mostly marine.

Siphonaptera [INV ZOO] The fleas, an order of insects characterized by a small, laterally compressed, oval body armed with spines and setae, three pairs of legs modified for jumping, and sucking mouthparts.

siphon barograph [ENG] A recording siphon barometer.

siphon barometer [ENG] A J-shaped mercury barometer in which the stem of the J is capped and the cusp is open to the atmosphere.

Siphonocladaceae [BOT] A family of green algae in the order Siphonocladales.

Siphonocladales [BOT] An order of green algae in the division Chlorophyta including marine, mostly tropical forms.

siphonogamous [BOT] In plants, especially seed plants, the accomplishment of fertilization by means of a pollen tube.

siphonoglyph [INV ZOO] A ciliated groove leading from the mouth to the gullet in certain anthozoans.

Siphonolaimidae [INV ZOO] A family of nematodes in the superfamily Monhysteroidea in which the stoma is modified into a narrow, elongate, hollow, spearlike apparatus.

Siphonophora [INV ZOO] An order of the coelenterate class Hydrozoa characterized by the complex organization of components which may be connected by a stemlike region or may be more closely united into a compact organism.

siphonosome [INV ZOO] The lower part of a siphonophore colony, bearing the nutritive and reproductive zooids.

siphonostele [BOT] A type of stele consisting of pith surrounded by xylem and phloem.

Siphonotretacea [PALEON] A superfamily of extinct, inarticulate brachiopods in the suborder Acrotretidina of the order Acrotretida having an enlarged, tear-shaped, apical pedicle valve.

siphonozooid [INV ZOO] A zooid of certain alcyonarians that lacks tentacles and gonads.

siphon recorder [ENG] A recorder in which a small siphon discharges ink to make the record; used in submarine telegraphy.

siphon spillway [CIV ENG] An enclosed spillway passing over the crest of a dam in which flow is maintained by atmospheric pressure.

siphuncle [INV ZOO] **1.** A honeydew-secreting tube (cornicle) in aphids. **2.** A tubular extension of the mantle extending through all the chambers to the apex of a shelled cephalopod.

Siphunculata [INV ZOO] The equivalent name for Anoplura.

siporex [MATER] A building material composed of sand, lime or cement, and aluminum powder which are mixed and cast into molds to be made into roof slabs, door lintels, and wall blocks which give excellent heat and sound insulation.

Sipunculida [INV ZOO] A phylum of marine worms which dwell in burrows, secreted tubes, or adopted shells; the mouth and anus occur close together at one end of the elongated body, and the jawless mouth, surrounded by tentacles, is situated in an eversible proboscis.

Sipunculoidea [INV ZOO] An equivalent name for Sipunculida.

siren [ENG ACOUS] An apparatus for generating sound by the mechanical interruption of the flow of fluid (usually air) by a perforated disk or cylinder.

Sirenia [VERT ZOO] An order of aquatic placental mammals which include the living manatees and dugongs; these are nearly hairless, thick-skinned mammals without hindlimbs and with paddlelike forelimbs.

Siricidae [INV ZOO] The horntails, a family of the Hymenoptera in the superfamily Siricoidea; females use a stout, hornlike ovipositor to deposit eggs in wood.

Siricoidea [INV ZOO] A superfamily of wasps of the suborder Symphala in the order Hymenoptera.

siriometer [ASTRON] A unit of length, formerly used in astronomical measurement, equal to 10^6 astronomical units, or 1.496×10^{17} meters.

Sirius [ASTRON] The brightest-appearing star in the sky; 8.7 light-years from the sun, spectral class A1V; it has a white dwarf companion. Also known as Dog Star.

sirocco [METEOROL] A warm south or southeast wind in advance of a depression moving eastward across the southern Mediterranean Sea or North Africa.

SIRS *See* satellite infrared spectrometer.

sisal [BOT] *Agave sisalina.* An agave of the family Amaryllidaceae indigenous to Mexico and Central America; a coarse, stiff yellow fiber produced from the leaves is used for making twine and brush bristles.

sisal-hemp wax [MATER] A hard wax derived from sisal waste; melts at 63°C, decomposes at 95°C. Also known as sisal wax.

sisal wax *See* sisal-hemp wax.

siserskite [MINERAL] A light steel gray mineral consisting of an alloy of osmium and iridium; occurs in tabular form.

sister chromatids [CYTOL] The two daughter strands of a chromosome after it has duplicated.

sister hook [DES ENG] **1.** Either of a pair of hooks which can be fitted together to form a closed ring. **2.** A pair of such hooks.

SIT [ELECTR] *See* static induction transistor. [OPTICS] *See* self-induced transparency.

sitaparite *See* bixbyite.

site [COMPUT SCI] **1.** A position available for the symbols of an inscription, for example, a digital place. **2.** A location on a tally that can bear either a mark or a blank; for example, a location that can be punched or left unpunched on a card. [ENG] Position of anything; for example, the position of a gun emplacement.

Sitka cypress *See* Alaska cedar.

sitting height [ANTHRO] A measure of the vertical distance (taken along the back) from the table surface to the crest of the head as the subject sits erectly on the table, knees pressed against the table edge and head in the eye-ear horizontal plane.

situation-display tube [ELECTR] Large cathode-ray tube used to display tabular and vector messages pertinent to the various functions of an air defense mission.

situation map [MAP] A map showing the tactical or the administrative situation at a particular time.

situation therapy *See* milieu therapy.

situs inversus [MED] Reversed location or position.

six-j-symbol [QUANT MECH] A coefficient that appears in the transformation between various modes of coupling eigenfunctions of three angular momenta; it is equal to the Racah coefficient, except perhaps in sign, and has greater symmetry than the Racah coefficient.

six-phase circuit [ELEC] Combination of circuits energized by alternating electromotive forces which differ in phase by one-sixth of a cycle (60°).

six-phase rectifier [ELECTR] A rectifier in which transformers are used to produce six alternating electromotive forces which differ in phase by one-sixth of a cycle, and which feed six diodes.

Six's thermometer [ENG] A combination maximum thermometer and minimum thermometer; the tube is shaped in the form of a U with a bulb at either end; one bulb is filled with creosote which expands or contracts with temperature variation, forcing before it a short column of mercury having iron indexes at either end; the indexes remain at the extreme positions reached by the mercury column, thus indicating the maximum and minimum temperatures; the indexes can be reset with the aid of a magnet.

six-tenths factor [IND ENG] An empirical relationship between the cost and the size of a manufacturing facility; as size increases, cost increases by an exponent of six-tenths, that is $\text{cost}_1/\text{cost}_2 = (\text{size}_1/\text{size}_2)^{0.6}$.

sixth-power law [FL MECH] A law stating that the size of particles that can be carried by a stream is proportional to the sixth power of its velocity.

sixty degrees Fahrenheit British thermal unit *See* British thermal unit.

six-vector [RELAT] An antisymmetrical, second-rank tensor in Minkowski space; that is, a tensor whose components, $T_{\mu\nu}$, with $\mu,\nu = 1,2,3,4$ satisfy $T_{\mu\nu} = -T_{\nu\mu}$; it has six independent components.

size [MATER] Materials used to surface-treat textiles, papers,

and leathers; examples are starch, gelatins, casein, water-soluble gums, and waxes.

size analysis *See* particle-size analysis.

size block *See* gage block.

size classification *See* sizing.

size control [ELECTR] A control provided on a television receiver for changing the size of a picture either horizontally or vertically.

size dimension [DES ENG] In dimensioning, a specified value of a diameter, width, length, or other geometrical characteristic directly related to the size of an object.

size effect [MET] The effect of the size of a piece of metal on its properties and manufacturing variables; in general, mechanical properties are lower for a larger size.

size enlargement [CHEM ENG] Making large particles out of small ones by crystallization, particle cementation, tableting, briquetting, agglomeration, flocculation, melting, casting, compaction and extrusion, and sintering or nodulizing.

size-frequency analysis *See* particle-size analysis.

size of weld [MET] **1.** The joint penetration in a groove weld. **2.** The lengths of the nominal legs of a fillet weld.

size reduction [MECH ENG] The breaking of large pieces of coal, ore, or stone by a primary breaker, or of small pieces by grinding equipment.

sizing [ENG] **1.** Separating an aggregate of mixed particles into groups according to size, using a series of screens. Also known as size classification. **2.** *See* sizing treatment. [MECH ENG] A finishing operation to correct surfaces and shapes to meet specified dimensions and tolerances. [MET] Final pressing of a metal powder compact after sintering.

sizing screen [DES ENG] A mesh sheet with standard-size apertures used to separate granular material into classes according to size; the Tyler standard screen is an example.

sizing treatment [ENG] Also known as sizing; surface sizing. **1.** Application of material to a surface to fill pores and thus reduce the absorption of subsequently applied adhesive or coating; used for textiles, paper, and other porous materials. **2.** Surface-treatment applied to glass fibers used in reinforced plastics.

sjogrenite [MINERAL] $Mg_6Fe_2(OH)_{16}(CO_3)\cdot 4H_2O$ A hexagonal mineral composed of hydrous basic magnesium iron carbonate.

Sjögren's syndrome [MED] A complex of symptoms including keratoconjunctivitis sicca, laryngopharyngitis sicca, rhinitis sicca, enlargement of the parotid gland, and polyarthritis. Also known as xerodermosteosis.

Sk *See* Stefan number.

skarn [GEOL] A lime-bearing silicate derived from nearly pure limestone and dolomite with the introduction of large amounts of silicon, aluminum, iron, and magnesium.

skate [VERT ZOO] Any of various batoid elasmobranchs in the family Rajidae which have flat bodies with winglike pectoral fins and a slender tail with two small dorsal fins.

skatole [ORG CHEM] C_9H_9N A white, crystalline compound that melts at 93–95°C, dissolves in hot water, and has an unpleasant feceslike odor. Also known as 3-methylindole.

skauk [HYD] An extensive field of crevasses in a glacier.

skavl *See* sastruga.

skeet gun [ORD] A classification of shotguns which includes those with 26-inch (66 centimeter) improved cylinder barrels.

skeg [NAV ARCH] An extension of the stern end of the keel, which in some cases passes under the propeller and supports the rudder post.

skeletal coding [COMPUT SCI] A set of incomplete instructions in symbolic form, intended to be completed and specialized by a processing program written for that purpose.

skeletal muscle [ANAT] A striated, voluntary muscle attached to a bone and concerned with body movements.

skeletal system [ANAT] Structures composed of bone or cartilage or a combination of both which provide a framework for the vertebrate body and serve as attachment for muscles.

skeleton crystal [CRYSTAL] A crystal formed in microscopic outline with incomplete filling in of the faces.

skeleton framing [BUILD] Framing in which steel framework supports all the gravity loading of the structure; this system is used for skyscrapers.

skeleton grain [GEOL] A relatively stable and not readily translocated grain of soil material, concentrated or reorganized by soil-forming processes.

skeleton layer [OCEANOGR] The structure that is formed at the bottom of sea ice while freezing, and consists of vertically oriented platelets of ice separated by layers of brine.

skeleton texture [PETR] Descriptive of the texture of limestone that consists of an in-place accumulation of skeletal material, that is, the hard parts secreted by organisms.

skelic index [ANTHRO] The ratio, multiplied by 100, of the length of the leg to that of the trunk.

skelp [MET] A strip or sheet of steel which will be rolled and welded to form a tube.

skerry [GEOL] A low, small, rugged and rocky island or reef.

skew [COMPUT SCI] In character recognition, a condition arising at the read station whereby a character or a line of characters appears in a "twisted" manner in relation to a real or imaginary horizontal baseline. [ELECTR] **1.** The deviation of a received facsimile frame from rectangularity due to lack of synchronism between scanner and recorder; expressed numerically as the tangent of the angle of this deviation. **2.** The degree of nonsynchronism of supposedly parallel bits when bit-coded characters are read from magnetic tape. [MECH ENG] Gearing whose shafts are neither interesecting nor parallel. [SCI TECH] Deviating from rectangularity or a straight line.

skew back [CIV ENG] The beveled or inclined support at each end of a segmental arch.

skew bridge [CIV ENG] A bridge which spans a gap obliquely and is therefore longer than the width of the gap.

skewed bridge [CIV ENG] A bridge for which the deck in plan is a parallelogram.

skewed density function [STAT] A density function which is not symmetrical, and which depends not only on the magnitude of the difference between the average value and the variate, but also on the sign of this difference.

skew failure [COMPUT SCI] In character recognition, the condition that exists during document alignment whereby the document reference edge is not parallel to that of the read station.

skew field [MATH] A ring whose nonzero elements form a non-Abelian group with respect to the multiplicative operation.

skew Hermitian matrix [MATH] A square matrix which equals the negative of its adjoint.

skew level gear [DES ENG] A level gear whose axes are not in the same place.

skew lines [MATH] Lines which do not lie in the same plane in euclidean three-dimensional space.

skew product [MATH] A multiplicative operation or structure induced upon a cartesian product of sets, where each has some algebraic structure.

skew surface [MATH] A ruled surface whose total curvature vanishes everywhere.

skew-symmetric matrix *See* antisymmetric matrix.

skew-symmetric tensor [MATH] A tensor where interchanging two indices will only change the sign of the corresponding component.

skialith [PETR] A vague remnant of country rock assimilated in granite.

skiascope [OPTICS] An instrument used to study optical refraction within the eye.

skiatron *See* dark-trace tube.

skid [AERO ENG] The metal bar or runner used as part of the landing gear of helicopters and planes. [ENG] **1.** A device attached to a chain and placed under a wheel to prevent its turning when descending a steep hill. **2.** A timber, bar, rail, or log placed under a heavy object when it is being moved over bare ground. **3.** A wood or metal platform support on wheels, legs, or runners used for handling and moving material. Also known as skid platform. [MECH ENG] A brake for a power machine. [MIN ENG] An arrangement upon which certain coal-cutting machines travel along the working faces.

skid boulder [GEOL] An isolated angular block of stone resting on the floor of a playa, derived from an outcrop near the playa margin, and associated with a trail or mark indicating that the boulder has recently slid across the mud surface.

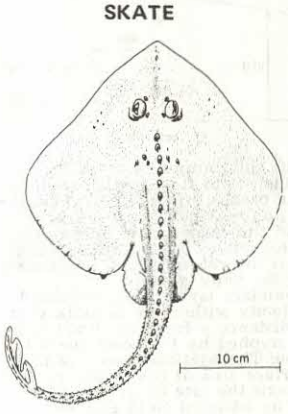
Skiddavin *See* Arenigian.

skidding [FOR] The short distance movement of tree lengths or segments over unimproved terrain to loading points on transportation routes.

skid-mounted [ENG] Equipment or processing systems mounted on a portable platform.

skid platform *See* skid.

skidway [FOR] A platform, usually inclined, for mounting logs for loading and sawing.



Skate *(Raja). (From H. B. Bigelow and W. C. Schroeder, Fishes of the Western North Atlantic, pt. 2, 1953)*

skill score [METEOROL] In synoptic meteorology, an index of the degree of skill of a set of forecasts, expressed with reference to some standard such as forecasts based upon chance, persistence, or climatology.

skim coat [BUILD] A finish coat of plaster composed of lime putty and fine white sand.

skim gate [MET] A gate used to prevent slag and other undesirable materials from passing into the casting.

skim ice [HYD] First formation of a thin layer of ice on the water surface.

skimmer [VERT ZOO] Any of various ternlike birds, members of the Rhynchopidae, that inhabit tropical waters around the world and are unique in having the knifelike lower mandible substantially longer than the wider upper mandible.

skimming [HYD] **1.** Diversion of water from a stream or conduit by shallow overflow in order to avoid diverting sand, silt, or other debris carried as bottom load. **2.** Withdrawal of fresh groundwater from a thin body or lens floating on salt water by means of shallow wells or infiltration galleries.

skimming plant [CHEM ENG] A petroleum refinery designed to remove and finish only the lighter constituents of crude oil, such as gasoline and kerosine; the heavy ends are sold as fuel oil or for further processing elsewhere.

skin [AERO ENG] The covering of a body, such as the covering of a fuselage, a wing, a hull, or an entire aircraft. [ANAT] The external covering of the vertebrate body, consisting of two layers, the outer epidermis and the inner dermis. [BUILD] The exterior wall of a building. [ENG] In flexible bag molding, a protective covering for the mold; it may consist of a thin piece of plywood or a thin hardwood. [MET] A thin outside layer of metal differing in composition, structure, or other characteristics from the main mass of metal but not formed by bonding or electroplating.

skin antenna [ELECTROMAG] Flush-mounted aircraft antenna made by using insulating material to isolate a portion of the metal skin of the aircraft.

skin depth [ELECTROMAG] The depth beneath the surface of a conductor, which is carrying current at a given frequency due to electromagnetic waves incident on its surface, at which the current density drops to one neper below the current density at the surface.

skin diving [ENG] Diving without breathing apparatus, using fins and faceplate only.

skin effect [ELEC] The tendency of alternating currents to flow near the surface of a conductor thus being restricted to a small part of the total sectional area and producing the effect of increasing the resistance. Also known as conductor skin effect; Kelvin skin effect. [PETRO ENG] The restriction to fluid flow through a reservoir adjacent to the borehole; calculated as a factor of reservoir pressure, product rate, formation volume and thickness, porosity, and other related parameters.

skin erythema dose [NUCLEO] A unit of radioactive dose resulting from exposure to electromagnetic radiation, equal to the dose that slightly reddens or browns the skin of 80% of all persons within 3 weeks after exposure; it is approximately 1000 roentgens for gamma rays, 600 roentgens for x-rays. Abbreviated SED.

skin friction [FL MECH] A type of friction force which exists at the surface of a solid body immersed in a much larger volume of fluid which is in motion relative to the body.

skin-friction coefficient [METEOROL] A dimensionless drag coefficient expressing the proportionality between the frictional force per unit area, or the shearing stress exerted by the wind at the earth's surface, and the square of the surface wind speed.

skink [VERT ZOO] Any of numerous small- to medium-sized lizards comprising the family Scincidae with a cylindrical body; short, sometimes vestigial, legs; cores of bone in the body scales; and pleurodont dentition.

skin lamination [MET] Surface rupture in flat-rolled metals due to exposure of a subsurface lamination.

skin resistance [ELEC] For alternating current of a given frequency, the direct-current resistance of a layer at the surface of a conductor whose thickness equals the skin depth. [NAV ARCH] The frictional resistance existing between the shell or skin of a ship and the water flowing over it.

skin test [IMMUNOL] A procedure for evaluating immunity status involving the introduction of a reagent into or under the skin.

skintle [CIV ENG] To set bricks in an irregular fashion so that they are out of alignment with the face by ¼ inch (6 millimeters) or more.

skin tracking [ELECTROMAG] Tracking of an object by means of radar without using a beacon or other signal device on board the object being tracked.

skiograph [ELECTR] An instrument used to measure the intensity of x-rays.

skiou *See* morvan.

skip [COMPUT SCI] **1.** In fixed-instruction-length digital computers, to bypass or ignore one or more instructions in an otherwise sequential process. **2.** A device on a card punch that causes columns on a punch in fields where no punching is desired to move rapidly past the punching station. [MECH ENG] *See* skip hoist.

skip bombing [ORD] Releasing one or more bombs from a plane flying at a low altitude, so that the bomb or bombs glance off the surface of the water or ground and strike the target.

skip cast [GEOL] The cast of a skip mark.

skip chain [COMPUT SCI] A programming technique which matches a word against a set of test words; if there is a match, control is transferred (skipped) to a routine, otherwise the word is matched with the next test word in sequence.

skip-dent [TEXT] A type of weaving in which holes are produced as a design in a fabric, usually massed in a patterned effect such as stripes.

skip distance [ELECTROMAG] The minimum distance that radio waves can be transmitted between two points on the earth by reflection from the ionosphere, at a specified time and frequency. [ENG] In angle-beam ultrasonic testing, the distance between the point of entry on the workpiece and the point of first reflection.

skip effect [COMMUN] The existence of a ring-shaped area around a radio transmitter within which no radio signals are received, because ground signals are received only inside the ring and sky-wave signals are received only outside the ring.

skip-fading [ELECTROMAG] Fading due to fluctuations of ionization density at the place in the ionosphere where the wave is reflected which causes the skip distance to increase or decrease.

skip flag [COMPUT SCI] The thirty-fifth bit of a channel command word which suppresses the transfer of data to main storage.

skip hoist [MECH ENG] A basket, bucket, or open car mounted vertically or on an incline on wheels, rails, or shafts and hoisted by a cable; used to raise materials. Also known as skip.

skipjack *See* bluefish.

skip-keying [ELECTR] Reduction of radar pulse repetition frequency to submultiple of that normally used, to reduce mutual interference between radar or to increase the length of radar time base.

skip logging [ENG] A phenomenon during acoustical (sonic) logging in which the acoustical energy is attenuated by low-elasticity formations and lacks the energy to trip the second sonic receiver (skips a cycle). Also known as cycle skip.

skip mark [GEOL] A crescent-shaped mark that is one of a linear pattern of regularly spaced marks made by an object that skipped along the bottom of a stream.

skip-searched chain [COMPUT SCI] A chain which has pointers and can therefore be searched without examining each link.

skip shaft [MIN ENG] A mine shaft prepared for hauling a skip.

skip trajectory [MECH] A trajectory made up of ballistic phases alternating with skipping phases; one of the basic trajectories for the unpowered portion of the flight of a reentry vehicle or spacecraft reentering earth's atmosphere.

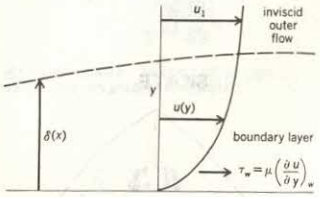
skip vehicle [AERO ENG] A reentry body which climbs after striking the sensible atmosphere in order to cool the body and to increase its range.

skip zone [ACOUS] A region in the air surrounding a source of sound in which no sound is heard, although the sound becomes audible at greater distances. Also known as zone of silence. [COMMUN] The area between the outer limit of reception of radio high-frequency ground waves and the inner limit of reception of sky waves, where no signal is received.

skiron [METEOROL] The Greek name for the northwest wind, which is cold in winter but hot and dry in summer.

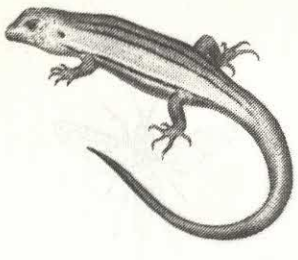
skirting block [BUILD] Also known as base block; plinth block. **1.** A corner block where a base strip and vertical en-

SKIN FRICTION



The thin boundary layer, in which fluid flow is distorted by the passage of the body, fills the region between the body skin and the dashed line. $\delta(x)$ is the thickness of the boundary layer; u_i is the velocity of fluid relative to the body outside the boundary layer; $u(y)$, the fluid velocity within the boundary at a distance y from the body skin, is graphed by the solid curved line. The friction force per unit surface area of the body, τ_w, equals the rate of deformation of an adjacent fluid element, $(\partial u/\partial y)_w$, times the dynamic viscosity μ.

SKINK



The blue-tailed skink *(Eumeces fasciatus)*, a moderately stout species, is light green with four dorsal black stripes and one on each side between white ones.

framement meet. **2.** A concealed block to which a baseboard is anchored.

skirting plate [ORD] A thin plate which is placed a considerable distance in front of the main armor plate and which acts as a passive form of resistance to the jet of shaped-charge ammunition.

skirt roof [BUILD] A false band of roofing projecting from between the stories of a building.

skiver [MATER] Thin, soft leather made from the grain side of a split sheepskin.

skiving [MECH ENG] **1.** Removal of material in thin layers or chips with a high degree of shear or slippage of the cutting tool. **2.** A machining operation in which the cut is made with a form tool with its face at an angle allowing the cutting edge to progress from one end of the work to the other as the tool feeds tangentially past ten rotating workpieces.

skleropelite [PETR] An argillaceous or allied rock which has been indurated by low-grade metamorphism, is more massive and dense than shale, and differs from slate by the absence of cleavage.

skolite [MINERAL] A scaly, dark-green variety of glauconite rich in aluminum and calcium and deficient in ferric iron.

skomerite [PETR] A fine-grained, compact extrusive rock containing microscopic grains and crystals of augite, olivine, and phenocrysts of decomposed plagioclase (probably albite) in a groundmass of plagioclase, thought to be more calcic than the phenocrysts.

skot [OPTICS] A unit of luminance, used particularly to measure low-level luminance, equal to 10^{-3} apostilb, or $10^{-3}/\pi$ nit.

Skraup synthesis [ORG CHEM] A method for the preparation of commercial synthetic quinoline by heating aniline and glycerol in the presence of sulfuric acid and an oxidizing agent to form pyridine unsubstituted quinolines.

skull [ANAT] The bones and cartilages of the vertebrate head which form the cranium and the face. [MET] A layer of solidified metal or dross left in the pouring vessel after the molten metal has been poured.

skull cracker [ENG] A heavy iron or steel ball that can be swung freely or dropped by a derrick to raze buildings or to compress bulky scrap. Also known as wrecking ball.

skull crucible [MET] A consumable-electrode vacuum arc melting and casting furnace; used in the production of turbine buckets for aircraft jet engines using a nickel-base high-temperature alloy.

skunk [VERT ZOO] Any one of a group of carnivores in the family Mustelidae characterized by a glossy black and white coat and two musk glands at the base of the tail.

skutterudite [MINERAL] $(Co,Ni)As_3$ A tin-white mineral with metallic luster composed of cobalt and nickel arsenides; crystallizes in the isometric system but commonly is massive; hardness is 5.5–6 on Mohs scale, and specific gravity is 6.6; it is a minor ore of cobalt and nickel.

sky [ASTRON] In the daytime the apparent blue dome resting on the earth along the horizon circle; at night the blue becomes nearly black.

Skybolt [ORD] United States air-to-ground air-launched ballistic missile; designed for a range of 1000 miles (1600 kilometers); it is a two-stage, solid-propellant missile with hypersonic velocity.

sky compass [NAV] A type of astro compass, designed for use in the Arctic during long periods of twilight, which utilizes the polarization of sunlight in the sky; it operates whenever the zenith is clear whether or not the sun is visible; when the sun is more than 6°5 below or 10° above the horizon, readings are uncertain.

sky cover [METEOROL] In surface weather observations, the amount of sky covered but not necessarily concealed by clouds or by obscuring phenomena aloft, the amount of sky concealed by obscuring phenomena that reach the ground, or the amount of sky covered or concealed by a combination of the two phenomena.

sky diagram [ASTRON] A diagram of the heavens, indicating the apparent positions of various celestial bodies with reference to the horizon system of coordinates.

Skyhawk [AERO ENG] A United States single-engine, turbojet attack aircraft designed to operate from aircraft carriers, and capable of delivering nuclear or nonnuclear weapons, providing troop support, or conducting reconnaissance missions; it can act as a tanker, and can itself be air refueled; it possesses a limited all-weather attack capability, and can operate from short, unprepared fields.

skyhook [MIN ENG] To drive bolts into the overhead rock of a mine in order to reinforce the ceiling.

skyhook balloon [AERO ENG] A large plastic constant-level balloon for duration flying at very high altitudes, used for determining wind fields and measuring upper-atmospheric parameters.

Skylab [AERO ENG] The first United States space station, attended by three separate flight crews of three astronauts each in 1973 and 1974.

skylight [ASTROPHYS] *See* diffuse sky radiation. [ENG] An opening in a roof or ship deck that is covered with glass or plastic and designed to admit daylight.

skyline yarding [FOR] A technique that uses a skyline cable system to transport logs from a forest to a clear space along a road for trucking to a sawmill; it requires fewer roads than older cable systems, suspends logs off the ground to reduce erosion, and reduces damage to young trees that are left.

sky map [ASTRON] A planar representation of areas of the sky showing positions of celestial bodies. [METEOROL] A pattern of variable brightness observable on the underside of a cloud layer, and caused by the different reflectivities of material on the earth's surface immediately beneath the clouds; this term is used mainly in polar regions.

sky noise [ELECTROMAG] Noise produced by radio energy from stars.

sky radiation *See* diffuse sky radiation.

Skyraider [AERO ENG] A United States single reciprocating-engine, general-purpose attack aircraft designed to operate from aircraft carriers; it is capable of relatively long-range, low-level nuclear and nonnuclear weapons delivery, minelaying, reconnaissance, torpedo delivery, and troop support. Designated A-1.

Skyray [AERO ENG] A United States single-engine, single-pilot, supersonic, limited all-weather jet fighter designed for operating from aircraft carriers for interception and destruction of enemy aircraft; armament includes the Sidewinder. Designated F-6.

skyscraper [BUILD] A very tall, multistory building.

Skywarrior [AERO ENG] A United States twin-engine, turbojet, tactical, all-weather attack aircraft designed to operate from aircraft carriers, and capable of delivering nuclear or nonnuclear weapons, conducting reconnaissance, or minelaying missions; its range can be extended by in-flight refueling, and it has a crew of four. Designated A-3.

sky wave [ELECTROMAG] A radio wave that travels upward into space and may or may not be returned to earth by reflection from the ionosphere. Also known as ionospheric wave.

sky-wave correction [ELECTR] The correction to be applied to the time difference readings of received sky waves to convert them to an equivalent ground-wave reading.

sky-wave-synchronized loran [NAV] A type of loran in which the transmitting stations are synchronized by signals reflected from the ionosphere; used to obtain greater range and more accurate nighttime navigation. Abbreviated ss loran.

sky-wave transmission delay [ELECTROMAG] Amount by which the time of transit from transmitter to receiver of a pulse carried by sky waves reflected once from the E layer exceeds the time of transit of the same pulse carried by ground waves.

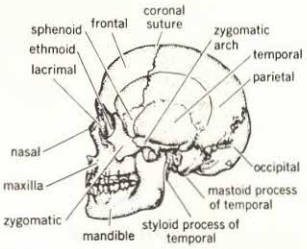
slab [CIV ENG] That part of a reinforced concrete floor, roof, or platform which spans beams, columns, walls, or piers. [ELECTR] A relatively thick-cut crystal from which blanks are obtained by subsequent transverse cutting. [ENG] The outside piece cut from a log when sawing it into boards. [GEOL] A cleaved or finely parallel jointed rock, which splits into tabular plates from 1 to 4 inches (2.5 to 10 centimeters) thick. Also known as slabstone. [HYD] A layer in, or the whole-thickness of, a snowpack that is very hard and has the ability to sustain elastic deformation under stress. [MATER] A thin piece of concrete or stone. [MET] A piece of metal, intermediate between ingot and plate, with the width at least twice the thickness. [MIN ENG] A slice taken off the rib of an entry or room in a mine.

slabbing cutter [MECH ENG] A face-milling cutter used to make wide, rough cuts.

slabbing machine [MIN ENG] A coal-cutting machine designed to make cuts in the side of a room or entry pillar preparatory to slabbing.

slabbing method [MIN ENG] A method of mining pillars in

SKULL

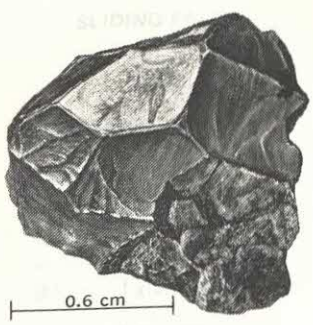


Lateral view of human skull. *(From W. T. Foster, Anatomy, Foster Art Service)*

SKUNK

The spotted skunk *(Spilogale putorius)*.

SKUTTERUDITE



Skutterudite crystal from Scutterude, Norway. *(Specimen from Department of Geology, Bryn Mawr College)*

which successive slabs are cut from one side or rib of the pillar after a room is finished, until as much of the pillar is removed as can safely be recovered.

slabbing mill [MET] A steel rolling mill for making slabs.

slab cutter *See* plain milling cutter.

slab entry [MIN ENG] An entry which is widened or slabbed to provide a working place for a second miner.

slab jointing [GEOL] Jointing produced in rock by the formation of numerous cleaved or closely spaced parallel fissures dividing the rock into thin slabs.

slab oil [MATER] White petroleum-based oil used by candymakers and bakers to oil the slab or surface on which the candy or pastry is worked.

slab pahoehoe [GEOL] A pahoehoe whose surface consists of a jumbled arrangement of slabs of flow crust.

slabstone *See* slab.

slack [ENG] Looseness or play in a mechanism, as the play in the trigger of a small-arms weapon. [GEOL] A hollow or depression between lines of shore dunes or in a sandbank or mudbank on a shore.

slack barrel [PETRO ENG] A petroleum-industry container used for shipment of petroleum paraffin; generally contains 235 to 245 pounds (107 to 111 kilograms) net, and is of lighter construction than the ordinary oil barrel but of the same general shape.

slack ice [HYD] Ice fragments on still or slow-moving water.

slackline cableway [MECH ENG] A machine, widely used in sand-and-gravel plants, employing an open-ended dragline bucket suspended from a carrier that runs upon a track cable, which can dig, elevate, and convey materials in one continuous operation.

slack quenching [MET] Formation of transformation products other than martensite as a result of quenching at a rate slower than the critical cooling rate.

slack time [ENG] For an activity in a PERT or critical-path-method network, the difference between the latest possible completion time of each activity which will not delay the completion of the overall project, and the earliest possible completion time, based on all predecessor activities.

slack water [OCEANOGR] The interval when the speed of the tidal current is very weak or zero; usually refers to the period of reversal between ebb and flood currents.

slack wax [MATER] A soft, oily, crude wax obtained from the pressing of petroleum paraffin distillate or wax distillate.

slag [MET] A nonmetallic product resulting from the interaction of flux and impurities in the smelting and refining of metals.

slag cement [MATER] Cement produced by grinding blast-furnace slag and mixing it with lime, portland cement, or dehydrated gypsum.

slagging [MET] Freeing from or converting into slag.

slag inclusion [MET] Slag entrapped in solidified metal.

slag sand [MATER] Slag that has been finely crushed for use in mortar and concrete.

slag wool *See* mineral wool.

slaked lime *See* calcium hydroxide.

slaking [GEOL] **1.** Crumbling and disintegration of earth materials when exposed to air or moisture. **2.** The breaking up of dried clay when saturated with water.

slamming [NAV ARCH] The impact of the bottom of a ship's bow hitting the water during a severe downward pitch.

slamming stile [BUILD] The vertical strip that a closed door abuts; it receives the bolt when the lock engages.

slant [MIN ENG] **1.** Any short, inclined crosscut connecting the entry with its air course to facilitate the hauling of coal. Also known as shoofly. **2.** A heading driven diagonally between the dip and the strike of a coal seam. Also known as run.

slant culture [MICROBIO] A method for maintaining bacteria in which the inoculum is streaked on the surface of agar that has solidified in inclined glass tubes.

slant depth [DES ENG] The distance between the crest and root of a screw thread measured along the angle forming the flank of the thread.

slant distance [NAV] The straight-line distance between two points not at the same elevation as contrasted with ground distance, ground range, or the great-circle distance between the two positions. Also known as slant range.

slant drilling [ENG] The drilling of a borehole or well at an angle to the vertical.

slant plane [ORD] In antiaircraft artillery, the plane containing the target course line and the pintle center of the gun.

slant range *See* slant distance.

slant visibility *See* oblique visual range.

slash [FOREST] Debris, such as logs, chunks of wood, bark, and branches, in an open forest tract.

slashing [TEXT] The stiffening of warp yarn before the spinning operation, using a solution of oil and starch.

slash-sawing *See* backsawing.

slat [AERO ENG] A movable auxiliary airfoil running along the leading edge of a wing, remaining against the leading edge in normal flight conditions, but lifting away from the wing to form a slot at certain angles of attack.

slat conveyor [MECH ENG] A conveyor consisting of horizontal slats on an endless chain.

slate [PETR] A group name for various very-fine-grained rocks derived from mudstone, siltstone, and other clayey sediment as a result of low-degree regional metamorphism; characterized by perfect fissility or slaty cleavage which is a regular or perfect planar schistosity.

Slater determinant [QUANT MECH] A quantum-mechanical wave function for n fermions, which is an $n \times n$ determinant whose entries are n different one-particle wave functions depending on the coordinates of each of the particles in the system.

slate ribbon [GEOL] A relict ribbon sructure on the cleavage surface of slate, in which varicolored and straight, wavy, or crumpled stripes cross the cleavage surface.

Slater's rule [ELECTR] The ratio of the cathode radius to the anode radius of a magnetron is approximately equal to $(N - 4)/(N + 4)$, where N is the number of resonators.

slaty cleavage *See* flow cleavage.

slave [COMPUT SCI] A terminal or computer that is controlled by another computer.

slave antenna [ELECTROMAG] A directional antenna positioned in azimuth and elevation by a servo system; the information controlling the servo system is supplied by a tracking or positioning system.

slave clock [HOROL] The part of a Shortt clock which consists of a complete clock with pendulum and indicating mechanism, and which receives trigger pulses from a master clock as synchronizing signals.

slaved gyro magnetic compass [NAV] A directional gyro compass with an input from a flux valve to keep the gyro oriented to magnetic north.

slave mode *See* user mode.

slavery [INV ZOO] An interspecific association among ants in which members of one species bring pupae of another species to their nest, which, when adult, become slave workers in the colony.

slave station [NAV] In a radio navigation system such as loran, the transmitting station controlled or triggered by the signal received from the master station.

slavikite [MINERAL] $MgFe_3^{3+}(SO_4)_4(OH)_3 \cdot 18H_2O$ A greenish-yellow mineral composed of hydrous basic magnesium ferric sulfate and occurring as rhombohedral crystals.

sled [ENG] An item equipped with runners and a suitable body designed to transport loads over ice and snow.

sledgehammer [DES ENG] A large heavy hammer that is usually wielded with two hands; used for driving stakes or breaking stone.

sleep [PHYSIO] A state of rest in which consciousness and activity are diminished.

sleeper [CIV ENG] A timber, steel, or precast concrete beam placed under rails to hold them at the correct gage.

sleeping sickness *See* African sleeping sickness; encephalitis lethargica.

sleep paralysis [MED] Transient paralysis with spontaneous recovery occurring on falling asleep or on awakening.

sleep therapy *See* narcosis therapy.

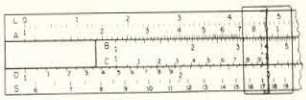
sleet [METEOROL] Colloquially in some parts of the United States, precipitation in the form of a mixture of snow and rain.

sleeve [ELEC] **1.** The cylindrical contact that is farthest from the tip of a phone plug. **2.** Insulating tubing used over wires or components. Also known as sleeving. [ENG] A cylindrical part designed to fit over another part.

sleeve antenna [ELECTROMAG] A single vertical half-wave radiator, the lower half of which is a metallic sleeve through which the concentric feed line runs; the upper radiating portion, one quarter-wavelength long, connects to the center of the line.

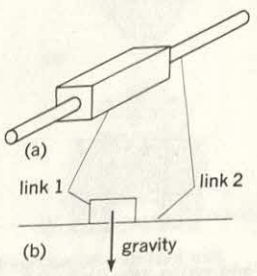
sleeve bearing [MECH ENG] A machine bearing in which the shaft turns and is lubricated by a sleeve.
sleeve brick [MATER] Tube-shaped firebrick for lining slag vents.
sleeve burner [ENG] A type of oil burner for domestic heating.
sleeve coupling [DES ENG] A hollow cylinder which fits over the ends of two shafts or pipes, thereby joining them.
sleeve dipole antenna [ELECTROMAG] Dipole antenna surrounded in its central portion by a coaxial cable.
sleeve valve [MECH ENG] An admission and exhaust valve on an internal-combustion engine consisting of one or two hollow sleeves that fit around the inside of the cylinder and move with the piston so that their openings align with the inlet and exhaust ports in the cylinder at proper stages in the cycle.
sleeving *See* sleeve.
sleigh [ORD] Part of a gun carriage which supports the recoil mechanism and barrel of the gun and slides with the gun on recoil, guiding it in runways in the cradle.
slenderness ratio [AERO ENG] A configuration factor expressing the ratio of a missile's length to its diameter. [CIV ENG] The ratio of the length of a column L to the radius of gyration r about the principal axes of the section.
slewing [ENG] Moving a radar antenna or a sonar transducer rapidly in a horizontal or vertical direction, or both. [NAV] In sea ice navigation, the act of forcing a ship through ice by pushing apart adjoining ice floes.
slewing mechanism [ENG] Device which permits rapid traverse or change in elevation of a weapon or instrument.
slewing motor [ELEC] A motor used to drive a radar antenna at high speed for slewing to pick up or track a target.
slew rate [ELECTR] The maximum rate at which the output voltage of an operational amplifier changes for a square-wave or step-signal input; usually specified in volts per microsecond.
slice [GEOL] An arbitrary section of some uniform standard, such as thickness of a stratigraphic unit that is otherwise indivisible for purposes of analytic study. [MIN ENG] **1.** A thin broad piece cut off, as a portion of ore cut from a pillar or face. **2.** To remove ore by successive slices.
slice bar [ENG] A broad, flat steel blade used for chipping and scraping.
slice drift [MIN ENG] In sublevel caving, the crosscuts driven between every other slice from 18 to 36 feet (5.5 to 11.0 meters) apart.
slice method [METEOROL] A method of evaluating the static stability over a limited area at any reference level in the atmosphere; unlike the parcel method, the slice method takes into account continuity of mass by considering both upward and downward motion.
slicer *See* amplitude gate; slitting mill.
slicer amplifier *See* amplitude gate.
slicing [ELECTR] Transmission of only those portions of a waveform lying between two amplitude values.
slicing method [MIN ENG] Removal of a horizontal layer from a massive ore body.
slick [OCEANOGR] Area in which capillary waves are absent or suppressed.
slickens [GEOL] A layer of fine silt deposited by a flooding stream. [MIN ENG] The light earth removed by sluicing in hydraulic mining.
slickenside [GEOL] A surface that is polished and smoothly striated and results from slippage along a fault plane.
slickolite [GEOL] A vertically discontinuous slip-scratch surface made by slippage and shearing and developed on sharply dipping bedding planes of limestone that shapes the wall of a solution cavity.
slick paper proof *See* reproduction proof.
slide [ENG] **1.** A sloping chute with a flat bed. **2.** A sliding mechanism. [GEOL] **1.** A vein of clay intersecting and dislocating a vein vertically, or the vertical dislocation itself. **2.** A rotational or planar mass movement of earth, snow, or rock resulting from failure under shear stress along one or more surfaces. [MECH ENG] The main reciprocating member of a mechanical press, guided in a press frame, to which the punch or upper die is fastened. [MIN ENG] **1.** An upright rail fixed in a shaft with corresponding grooves for steadying the cages. **2.** A trough used to guide and to support rods in a tripod when drilling an angle hole. Also known as rod slide. [ORD] **1.** Sliding part of the receiver of certain automatic weapons. **2.** Sliding catch on the breech mechanism of certain weapons.
slide-back voltmeter [ELECTR] An electronic voltmeter in which an unknown voltage is measured indirectly by adjusting a calibrated voltage source until its voltage equals the unknown voltage.
slide conveyor [ENG] A slanted, gravity slide for the forward downward movement of flowable solids, slurries, liquids, or small objects.
slide gate [CIV ENG] A crest gate which has high frictional resistance to opening because it slides on its bearings in opening and closing.
slide projector *See* optical lantern.
slider [ELEC] Sliding type of movable contact. [ORD] A fuse or exploder component that interrupts the explosive train when the device is in the unarmed condition, and that moves during arming in such a way as to render the explosive train operative.
slide rail *See* guard rail.
slider coupling [MECH ENG] A device for connecting shafts that are laterally misaligned. Also known as double-slider coupling; Oldham coupling.
slide rest [MECH ENG] An adjustable slide for holding a cutting tool, as on an engine lathe.
slide rule [MATH] A mechanical device, composed of a ruler with sliding insert, marked with various number scales, which facilitates such calculations as division, multiplication, finding roots, and finding logarithms.
slide-rule dial [ENG] A dial in which a pointer moves in a straight line over long straight scales resembling the scales of a slide rule.
slide valve [MECH ENG] A sliding mechanism to cover and uncover ports for the admission of fluid, as in some steam engines.
slide-wire bridge [ELEC] A bridge circuit in which the resistance in one or more branches is controlled by the position of a sliding contact on a length of resistance wire stretched along a linear scale.
slide-wire potentiometer [ELEC] A potentiometer (variable resistor) which employs a movable sliding connection on a length of resistance wire.
sliding *See* gravitational sliding.
sliding-block linkage [MECH ENG] A mechanism in which a crank and sliding block serve to convert rotary motion into translation, or vice versa.
sliding-chain conveyor [MECH ENG] A conveying machine to handle cases, cans, pipes, or similar products on the plain or modified links of a set of parallel chains.
sliding contact *See* wiping contact.
sliding fit [DES ENG] A fit between two parts that slide together.
sliding friction [MECH] Rubbing of bodies in sliding contact.
sliding gear [DES ENG] A change gear in which speed changes are made by sliding gears along their axes, so as to place them in or out of mesh.
sliding-gear transmission [MECH ENG] A transmission system utilizing a pair of sliding gears.
sliding pair [MECH ENG] Two adjacent links, one of which is constrained to move in a particular path with respect to the other; the lower, or closed, pair is completely constrained by the design of the links of the pair.
sliding scale [METEOROL] A set of combinations of ceilings and visibilities which constitute the operational weather limits at an airport; as the observed value of one element increases, the limiting value of the other element decreases, and vice versa.
sliding-vane compressor [CHEM ENG] A rotary-element gas compressor in which spring-loaded sliding vanes (evenly spaced around a cylinder off-center in a surrounding chamber) pick up, compress, and discharge gas as the cylinder revolves.
sliding vector [MECH] A vector whose direction and line of application are prescribed, but whose point of application is not prescribed.
sliding way [CIV ENG] One of the timbers which form the upper part of the cradle supporting a ship during its construction, and which slide over the ground ways with the ship when it is launched.
slime [ENG] Liquid slurry of very fine solids with slime- or mudlike appearance. Also known as mud; pulp; sludge.
slime bacteria [MICROBIO] The common name for bacteria in the order Myxobacterales, so named for the layer of slime deposited behind cells as they glide on a surface.

SLIDE RULE



Left end of slide rule, showing position of sliding insert for multiplication of 1.5 by 2.

SLIDING PAIR



Two types of sliding pair. *(a)* Motion of link 1 is constrained by the design of the links. *(b)* Motion of link 1 is constrained by gravity.

slime disease [PL PATH] Any of several diseases of plants characterized by slimy rot of the parts.
slime flux [PL PATH] The fluid or viscous outflow from the bark or wood of a deciduous tree that is indicative of injury or disease.
slime fungus *See* slime mold.
slime gland [ZOO] A glandular structure in many animals producing a mucous material.
slime mold [MYCOL] The common name for members of the Myxomycetes. Also known as slime fungus.
slim hole [ENG] A drill hole of the smallest practicable size, drilled with less-than normal-diameter tools, used primarily as a seismic shothole and for structure tests and sometimes for stratigraphic tests. [PETRO ENG] A diamond-drill borehole having a diameter of 5 inches (12.7 centimeters) or less.
sliming [OCEANOGR] The formation of films of algae on submerged structures.
sling [ENG] A length of rope, wire rope, or chain used for attaching a load to a crane hook.
sling psychrometer [ENG] A psychrometer in which the wet- and dry-bulb thermometers are mounted upon a frame connected to a handle at one end by means of a bearing or a length of chain; the psychrometer may be whirled in the air for the simultaneous measurement of wet- and dry-bulb temperatures.
sling thermometer [ENG] A thermometer mounted upon a frame connected to a handle at one end by means of a bearing or length of chain, so that the thermometer may be whirled by hand.
slip [CIV ENG] A narrow body of water between two piers. [CRYSTAL] The movement of one atomic plane over another in a crystal; it is one of the ways that plastic deformation occurs in a solid. Also known as glide. [ELEC] **1.** The difference between synchronous and operating speeds of an induction machine. Also known as slip speed. **2.** Method of interconnecting multiple wiring between switching units by which trunk number 1 becomes the first choice for the first switch, trunk number 2 first choice for the second switch, and trunk number 3 first choice for the third switch, and so on. [ELECTR] Distortion produced in the recorded facsimile image which is similar to that produced by skew but is caused by slippage in the mechanical drive system. [FL MECH] The difference between the velocity of a solid surface and the mean velocity of a fluid at a point just outside the surface. [GEOL] The actual relative displacement along a fault plane of two points which were formerly adjacent on either side of the fault. Also known as actual relative movement; total displacement. [MATER] A suspension of fine clay in water with a creamy consistency, used in the casting process and in decorating ceramic ware. Also known as slurry. [NAV ARCH] **1.** To part from an anchor by releasing the shackles from the anchor chain. **2.** The reduction in the distance a propeller advances, per unit time, due to yielding of the fluid.
slip additive [MATER] A plastics modifier that acts as an internal lubricant by exuding to the surface of the plastic during and immediately after processing to reduce friction and improve slip.
slipband [CRYSTAL] One of the microscopic parallel lines (Lüders' lines) on the surface of a crystalline material stretched beyond its elastic limit, located at the intersection of the surface with intracrystalline slip planes in the grains of the material. Also known as slip line.
slip bedding [GEOL] Convolute bedding formed as the result of subaqueous sliding.
slip block [GEOL] A separate rock mass that has slid away from its original position and come to rest down the slope without undergoing much deformation.
slip casting [ENG] A process in the manufacture of shaped refractories, cermets, and other materials in which the slip is poured into porous plaster molds.
slip clay [MATER] Clay containing a high percentage of fluxing impurities; easily fusible and used in clayware to produce a natural glaze.
slip cleavage [GEOL] Cleavage that is superposed on slaty cleavage or schistosity, characterized by spaced cleavage with thin tabular bodies of rock between the cleavage planes. Also known as close-joints cleavage; crenulation cleavage; shear cleavage; strain-slip cleavage.
slip direction [CRYSTAL] The crystallographic direction in which the translation of slip occurs.
slip face [GEOL] The steeply sloping leeward surface of a sand dune. Also known as sandfall.
slip flow [FL MECH] A situation in which the mean free path of a gas is between 1 and 65% of the channel diameter; the gas layer next to the channel wall assumes a velocity of slip past the liquid, known as slip flow.
slip fold *See* shear fold.
slip form [CIV ENG] A narrow section of formwork that can be easily removed as concrete placing progresses.
slip forming [ENG] A plastics-sheet forming technique in which some of the sheet is allowed to slip through the mechanically operated clamping rings during stretch-forming operations.
slip friction clutch [MECH ENG] A friction clutch designed to slip when too much power is applied to it.
slip joint [CIV ENG] **1.** Contraction joint between two adjoining wall sections, or at the horizontal bearing of beams, slabs, or precast units, consisting of a vertical tongue fitted into a groove which allows independent movement of the two sections. **2.** A telescoping joint between two parts. [ENG] **1.** A method of laying-up plastic veneers in flexible-bag molding, wherein edges are beveled and allowed to overlap part or all of the scarfed area. **2.** A mechanical union that allows limited endwise movement of two solid items for example, pipe, rod, or duct with relation to each other. [GEOL] *See* shear joint.
slip line *See* slipband.
slip-off slope [GEOL] The long, low, gentle slope on the inside of the downstream face of a stream meander.
slippage [ENG] The leakage of fluid between the plunger and the bore of a pump piston. Also known as slippage loss. [PETRO ENG] The movement of gas past or through a liquid-phase reservoir front; this movement occurs instead of driving the liquid forward; it can exist in gas-drive reservoirs or in gas-lift oil-well bores. [TEXT] A fabric defect on which warp threads slip over filling threads or vice versa as a result of loose weaving or of unevenly matched yarns.
slippage loss [ENG] **1.** Unintentional movement between the faces of two solid objects. **2.** *See* slippage.
slipped disk *See* herniated disk.
slipper brake [MECH ENG] **1.** A plate placed against a moving part to slow or stop it. **2.** A plate applied to the wheel of a vehicle or to the track roadway to slow or stop the vehicle.
slipping [MIN ENG] Enlarging an excavation by breaking one or more walls.
slipping cut [MIN ENG] A drill-hole pattern used in a wide tunnel face, in which each successive vertical line of shots breaks to the face made by the previous round, so that the relieving cut moves across the end being blasted. Also known as slabbing cut; swing cut.
slip plane [CRYSTAL] *See* glide plane. [GEOL] A planar slip surface. [ENG] A plane visible by reflected light in a transparent material; caused by poor welding and shrinkage during cooling.
slip ratio [MECH ENG] For a screw propeller, relates the actual advance to the theoretic advance determined by pitch and spin.
slip ring [ELEC] A conductive rotating ring which, in combination with a stationary brush, provides a continuous electrical connection between rotating and stationary conductors; used in electric rotating machinery, synchros, gyroscopes, and scanning radar antennas.
slips [ENG] A wedge-shaped steel collar fabricated in two sections, designed to hold a string of casing between various portions of the drilling operation.
slip sheet [GEOL] A stratum or rock on the limb of an anticline that has slid down and away from the anticline; a gravity collapse structure.
slip speed *See* slip.
slip surface [GEOL] The displacement surface of a landslide.
slip tongue [ENG] A pole on a horse-drawn wagon that is fastened by slipping it between two plates connected to the forecarriage.
slip velocity [FL MECH] The difference in velocities between liquids and solids (or gases and liquids) in the vertical flow of two-phase mixtures through a pipe because of the slip between the two phases.
slipway [CIV ENG] The space in a shipyard where a foundation for launching ways and keel blocks exists and which is occupied by a ship while under construction. [NAV ARCH]

1. One of the timbers over which the cradle of a marine railway travels. **2.** A sloping passage in a whaling ship's stern, through which whales are hauled in.

slip-weld hanger [PETRO ENG] A type of hanger used to suspend the lower strings of an oil-well casing pipe.

slit [DES ENG] A long, narrow opening through which radiation or streams of particles enter or leave certain instruments.

slitless spectrograph [OPTICS] A type of astronomical spectrograph that does not use a slit, sufficient resolution being obtained from the small image sizes of individual stars, and through the use of an objective prism in front of the telescope.

slit scan [COMPUT SCI] In character recognition, a magnetic or photoelectric device that obtains the horizontal structure of an inputted character by vertically projecting its component elements at given intervals.

slit spectrograph [OPTICS] A type of astronomical spectrograph that uses a slit to provide resolution.

slitter [MECH ENG] A synchronized feeder-knife variation of a rotary cutter; used for precision cutting of sheet material, such as metal, rubber, plastics, or paper, into strips.

slitting [MECH ENG] The passing of sheet or strip material (metal, plastic, paper, or cloth) through rotary knives.

slitting mill [LAP] A rotating disk used by gem cutters in slitting. Also known as slicer.

sliver [MATER] A piece of propellant grain of triangular cross section which remains unburned when the web of multiperforated grains has been burned through. [MET] A thin, elongated fragment of metal that has been rolled onto the surface of the parent metal and is attached by only one end. [TEXT] A round, untwisted strand of fiber removed from the carding or combing machine and used to spin yarn.

slop [CHEM ENG] A petroleum-refinery term for odds and ends of oil produced in the refinery; the slop must be rerun or further processed to make it suitable for use. Also known as slop oil.

slop culture [BOT] A method of growing plants in which surplus nutrient fluid is allowed to run through the sand or other medium in which the plants are growing.

slope [GEOL] The inclined surface of any part of the earth's surface. [MATH] **1.** The slope of a line through the points (x_1,y_1) and (x_2,y_2) is the number $(y_2 - y_1)/(x_2 - x_1)$. **2.** The slope of a curve at a point p is the slope of the tangent line to the curve at p. [NAV] The projection of a flight path in the vertical plane.

slope angle [MATH] The angle of inclination of a line in the plane, where this angle is measured from the positive x-axis to the line in the counterclockwise direction.

slope control [MET] Electronic production of a change in the welding current within set limits and a selected interval of time.

slope conveyor [MECH ENG] A troughed belt conveyor used for transporting material on steep grades.

slope correction [GEOL] A tape correction applied to a distance measured on a slope in order to reduce it to a horizontal distance, between the vertical lines through its end points. Also known as grade correction.

slope course [ENG] A proving ground facility consisting of a large mound of earth with various sloping sides on which are roads having different grades; this slope course is used to measure the slope performance of military and other vehicles, including maximum speed on various grades, the most suitable gear for best performance, traction, and the holding ability of brakes.

slope current *See* gradient current.

slope deviation [AERO ENG] The difference between planned and actual slopes of aircraft travel, expressed in either angular or linear measurement.

slope engineer [MIN ENG] In anthracite and bituminous coal mining, one who operates a hoisting engine to haul loaded and empty mine cars along a haulage road in a mine.

slope failure [GEOL] The downward and outward movement of a mass of soil beneath a natural slope or other inclined surface; four types of slope failure are rockfall, rock flow, plane shear, and rotational shear.

slope gully [GEOL] A small, discontinuous submarine valley, usually formed by slumping along a fault scarp or the slope of a river delta. Also known as sea gully.

slope mine [MIN ENG] A mine opened by a slope or an incline.

slope of fall [MECH] Ratio between the drop of a projectile and its horizontal movement; tangent of the angle of fall.

slope stability [GEOL] The resistance of an inclined surface to failure by sliding or collapsing.

slope stake [MIN ENG] Stake set at the point where the finished side slope of an excavation or embankment meets the original grade.

slope wash [GEOL] **1.** The mass-wasting process, assisted by nonchanneled running water, by which rock and soil is transported down a slope, specifically, sheet erosion. **2.** The material that is or has been transported.

slop oil *See* slop.

slosh test [ENG] A test to determine the ability of the control system of a liquid-propelled missile to withstand or overcome the dynamic movement of the liquid within its fuel tanks.

slot [AERO ENG] **1.** An air gap between a wing and the length of a slat or certain other auxiliary airfoils, the gap providing space for airflow or room for the auxiliary airfoil to be depressed in such a manner as to make for smooth air passage on the surface. **2.** Any of certain narrow apertures made through a wing to improve aerodynamic characteristics. [COMPUT SCI] A punched-out area of a hand-sorted card to connect two or more guide holes; slots can be extended to the outside edge with notches. [DES ENG] A narrow, vertical opening. [ELEC] One of the conductor-holding grooves in the face of the rotor or stator of an electric rotating machine. [MIN ENG] To hole; to undercut or channel.

slot antenna [ELECTROMAG] An antenna formed by cutting one or more narrow slots in a large metal surface fed by a coaxial line or waveguide.

slot coupling [ELECTROMAG] Coupling between a coaxial cable and a waveguide by means of two coincident narrow slots, one in a waveguide wall and the other in the sheath of the coaxial cable.

slot distributor [ENG] A long, narrow discharge opening (slot) in a pipe or conduit; used for the extrusion of sheet material, such as plastics.

slot dozing [ENG] A method of moving large quantities of material with a bulldozer using the same path for each trip so that the spillage from the sides of the blade builds up along each side; afterward all material pushed into the slot is retained in front of the blade.

slot extrusion [ENG] A method of extruding plastics-film sheet in which the molten thermoplastic compound is forced through a straight slot.

sloth [VERT ZOO] Any of several edentate mammals in the family Bradypodidae found exclusively in Central and South America; all are slow-moving, arboreal species that cling to branches upside down by means of long, curved claws.

slot-mask picture tube [ELECTR] An in-line gun-type picture tube in which the shadow mask is perforated by short, vertical slots, and the screen is painted with vertical phosphor stripes.

slot radiator [ELECTROMAG] Primary radiating element in the form of a slot cut in the walls of a metal waveguide or cavity resonator or in a metal plate.

slotted-head screw [DES ENG] A screw fastener with a single groove across the diameter of the head.

slotted line *See* slotted section.

slotted nut [DES ENG] A regular hexagon nut with slots cut across the flats of the hexagon so that a cotter pin or safety wire can hold it in place.

slotted section [ELECTROMAG] A section of waveguide or shielded transmission line in which the shield is slotted to permit the use of a traveling probe for examination of standing waves. Also known as slotted line; slotted waveguide.

slotted waveguide *See* slotted section.

slotter [MECH ENG] A machine tool used for making a mortise or shaping the sides of an aperture.

slotting [MECH ENG] Cutting a mortise or a similar narrow aperture in a material using a machine with a vertically reciprocating tool.

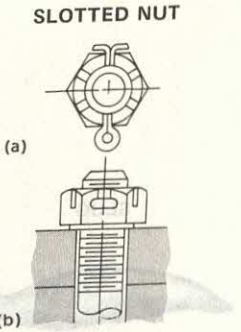
slotting machine [MECH ENG] A vertically reciprocating planing machine, used for making mortises and for shaping the sides of openings.

slot washer [DES ENG] **1.** A lock washer with an indentation on its edge through which a nail or screw can be driven to hold it in place. **2.** A washer with a slot extending from its edge to the center hole to allow the washer to be removed without first removing the bolt.

SLOTH

The three-toed sloth *(Bradypus tridactylus)* in characteristic hanging position in which it spends most of its life.

SLOTTED NUT



Diagrams of a slotted nut. *(a)* End view with cotter pin inserted. *(b)* Side view.

slot wedge [ELEC] The wedge that holds the windings in a slot in the rotor or stator core of an electrical machine.
slot weld [MET] Similar to plug weld, but the hole is elongated and may extend to the edge of a member without closing.
slough [ENG] The fragments of rocky material from the wall of a borehole. [HYD] A minor marshland or tidal waterway which usually connects other tidal areas; often more or less equivalent to a bayou. [MED] A necrotic mass of tissue in, or separating from, healthy tissue.
slough ice [HYD] Slushy ice or snow.
slow-acting relay [ELECTROMAG] A time-delay relay in which an interval of several seconds may exist between energizing of the coil and pulling up of the armature; the delay can be obtained electrically by placing a solid copper ring on the core of the relay. Also known as slow-operate relay.
slow-blow fuse [ELEC] A fuse that can withstand up to 10 times its normal operating current for a brief period, as required for circuits and devices which draw a very heavy starting current.
slow-curing liquid asphaltic material [MATER] An asphalt cement blended with slow-volatilizing gas oil. Also known as SC asphalt.
slow death [ELECTR] The gradual change of transistor characteristics with time; this change is attributed to ions which collect on the surface of the transistor.
slowed-down video [ELECTR] Technique or method of transmitting radar data over narrow-bandwidth circuits; the procedure involves storing the radar video over the time required for the antenna to move through the beam width, and the subsequent sampling of this stored video at some periodic rate at which all of the range intervals of interest are sampled at least once each beam width or per azimuth quantum; the radar returns are quantized at the gap-filler radar site.
slow fire [ORD] Type of firing used in instructing beginners and in record practice, in which no time limit for completing a score is set.
slow igniter cord [ENG] An igniter cord made with a central copper wire around which is extruded a plastic incendiary material with an iron wire embedded to give greater strength; the whole is enclosed in a thin extruded plastic coating.
slowing-down [NUCLEO] A decrease in the energy of a particle as a result of collisions with nuclei.
slowing-down density [NUCLEO] A measure of the rate at which neutrons lose energy in a nuclear reactor through collisions; equal to the number of neutrons that fall below a given energy per unit volume per unit time.
slowing of clocks [RELAT] According to the special theory of relativity, a clock appears to tick less rapidly to an observer moving relative to the clock than to an observer who is at rest with respect to the clock. Also known as time dilation effect.
slow ion *See* large ion.
slow match [ENG] A match or fuse that burns at a known slow rate; used for igniting explosive charges.
slow memory *See* slow storage.
slow-motion video disk recorder [ELECTR] A magnetic disk recorder that stores one field of video information per revolution, for instant replay at normal speed or any degree of slow motion down to complete stopping of action.
slow neutron [NUC PHYS] **1.** A neutron having low-kinetic energy, up to about 100 electron volts. **2.** *See* thermal neutron.
slow nova [ASTRON] A nova whose brightness takes a month or more to reach a maximum, and many years to decrease to the original value.
slow-operate relay *See* slow-acting relay.
slow ray [OPTICS] In crystal optics, that component of light in any birefringent crystal section which travels with the lesser velocity and has the higher index of refraction.
slow reactor [NUCLEO] A nuclear reactor in which fission is induced primarily by slow neutrons, as in a thermal reactor.
slow-release relay [ELECTROMAG] A time-delay relay in which there is an appreciable delay between deenergizing of the coil and release of the armature.
slow sand filter [CIV ENG] A bed of fine sand 20–48 inches (151–122 centimeters) deep through which water, being made suitable for human consumption and other purposes, is passed at a fairly low rate, 2,500,000 to 10,000,000 gallons per acre (23,000 to 94,000 cubic meters per hectare); an underdrain system of graded gravel and perforated pipes carries the water from the filters to the point of discharge.
slow-scan television [COMMUN] Television system that uses a slow rate of horizontal scanning, requiring about 8 seconds for each complete scan of the scene; suitable for transmitting printed matter, photographs, and illustrations. Abbreviated SSTV.
slow-spiral drill *See* low-helix drill.
slow storage [COMPUT SCI] In computers, storage with a relatively long access time. Also known as slow memory.
slow time scale [COMPUT SCI] Pertaining to simulation by an analog computer in which the time duration of a simulated event is greater than the actual time duration of the event in the physical system under study. Also known as extended time scale.
slow-vibration direction [OPTICS] The direction of the electric field vector of the ray of light that travels with the smallest velocity in an anisotropic crystal and therefore corresponds to the maximum refractive index.
slow virus [VIROL] Any member of a group of animal viruses characterized by prolonged periods of incubation and an extended clinical course lasting months or years.
slow wave [ELECTROMAG] A wave having a phase velocity less than the velocity of light, as in a ridge wave guide.
slow wave sleep *See* deep sleep.
slub [TEXT] A planned irregularity in yarn produced by alternately tightening and relaxing tensions during spinning.
slud [GEOL] **1.** Muddy material which has moved downslope by solifluction. **2.** Ground that behaves as a viscous fluid, including material moved by solifluction and by mechanisms not limited to gravitational flow.
sludge [CHEM ENG] **1.** Residue left after acid treatment of petroleum oils. **2.** Any semisolid waste from a chemical process. [CIV ENG] *See* sewage sludge. [ENG] **1.** Mud from a drill hole in boring. **2.** Sediment in a steam boiler. **3.** A precipitate from oils, such as the products from crankcase oils in engines. **4.** *See* slime. [GEOL] A soft or muddy bottom deposit as on tideland or in a stream bed. [OCEANOGR] A dense, soupy accumulation of new sea ice consisting of incoherent floating frazil crystals. Also known as cream ice; sludge ice; slush.
sludge acid [MATER] The residue from the sulfuric-acid treatment of petroleum lubricants. Also known as spent acid; waste acid.
sludge assay [MIN ENG] The chemical assaying of drill cuttings for a specific metal or group of metals.
sludge barrel *See* calyx.
sludge box [MIN ENG] A wooden box in which sludge settles from the mud flush.
sludge bucket *See* calyx.
sludge cake [OCEANOGR] An accumulation of sludge hardened into a cake strong enough to bear the weight of a man.
sludge coking [CHEM ENG] The recovery of sulfuric acid from dry acid sludge.
sludged blood [MED] The intracapillary aggregation of erythrocytes associated with decreased blood flow in the involved capillary bed.
sludge floe [OCEANOGR] Sludge that is hardened into a floe strong enough to bear the weight of a person.
sludge ice *See* sludge.
sludge lump [OCEANOGR] An irregular mass of sludge formed as a result of strong winds.
sludge pit *See* slushpit.
sludge pond *See* slushpit.
sludge pump [MECH ENG] *See* sand pump. [MIN ENG] A short iron pipe or tube fitted with a valve at the lower end, with which the sludge is extracted from a borehole.
sludging *See* solifluction.
sluff [ENG] The mud cake detached from the wall of a borehole. [MIN ENG] The falling of decomposed, soft rocks from the roof or walls of mine openings.
slug [ELECTROMAG] **1.** A heavy copper ring placed on the core of a relay to delay operation of the relay. **2.** A movable iron core for a coil. **3.** A movable piece of metal or dielectric material used in a wave guide for tuning or impedance-matching purposes. [GRAPHICS] A strip of metal used to space between lines of type. [INV ZOO] Any of a number of pulmonate gastropods which have a rudimentary shell and the body elevated toward the middle and front end where the mantle covers the lung region. [MECH] A unit of mass in the British gravitational system of units, equal to the mass which experiences an acceleration of 1 foot per second per second when a force of 1 pound acts on it; equal to approximately

SLUG

Field gray slug *(Deroceras agreste)* has a thin, white-bordered shell; body length is about 1½ inches (4 centimeters). Eyes are borne at tips of the longer pair of feelers.

32.1740 pound mass or 14.5939 kilograms. Also known as geepound. [MET] **1.** A small, roughly shaped piece of metal for subsequent processing, as by forging or extruding. **2.** The piece of material produced by piercing a hole in a sheet. [MIN ENG] To inject a borehole with cement, slurry, or various liquids containing shredded materials in an attempt to restore lost circulation by sealing off the openings in the borehole-wall rocks. [NUCLEO] A short fuel rod inserted in a hole or channel in the active lattice of a nuclear reactor. [ORD] **1.** As pertains to shaped charge ammunition, massive and relatively slow-moving remnant of the collapsed metal liner, as distinguished from the jet. **2.** A solid cast iron projectile used in test firing.

slug bit *See* insert bit.

slug flow *See* piston flow.

slugging [MET] Adding a separate piece of material to a weld joint, resulting in a joint which does not meet specifications.

SLUG junction [CRYO] A Josephson junction consisting of a drop of lead-tin solder solidified around a niobium wire.

slug tuner [ELECTROMAG] Waveguide tuner containing one or more longitudinally adjustable pieces of metal or dielectric.

slug tuning [ELECTROMAG] Means of varying the frequency of a resonant circuit by introducing a slug of material into either the electric field or magnetic field, or both.

sluice [CIV ENG] **1.** A passage fitted with a vertical sliding gate or valve to regulate the flow of water in a channel or lock. **2.** A body of water retained by a floodgate. **3.** A channel serving to drain surplus water.

sluice box [MIN ENG] A long, inclined trough or launder with riffles in the bottom that provide a lodging place for heavy minerals in ore concentration.

sluice gate [CIV ENG] The vertical slide gate of a sluice.

sluice tender [MIN ENG] In metal mining, a laborer who tends sluice boxes.

sluicing [MIN ENG] **1.** Washing auriferous earth through sluices provided with riffles and other gold-saving appliances. **2.** Separation of minerals in a flowing stream of water. **3.** Moving earth, sand, gravel, or other rock or mineral materials by flowing water.

sluicing pond *See* scouring basin.

slump [GEOL] A type of landslide characterized by the downward slipping of a mass of rock or unconsolidated debris, moving as a unit or several subsidiary units, characteristically with backward rotation on a horizontal axis parallel to the slope; common on natural cliffs and banks and on the sides of artificial cuts and fills.

slump ball [GEOL] A relatively flattened mass of sandstone resembling a large concretion, measuring from 2 centimeters to 3 meters across, commonly thinly laminated with internal contortions and a smooth or lumpy external form, and formed by subaqueous slumping.

slump basin [GEOL] A shallow basin near the base of a canyon wall and on a shale hill or ridge, formed by small, irregular slumps.

slump bedding [GEOL] Also known as slurry bedding. **1.** Any disturbed bedding. **2.** Convolute bedding produced by subaqueous slumping or lateral movement of newly deposited sediment.

slump fault *See* normal fault.

slump fold [GEOL] An intraformational fold produced by slumping of soft sediments, as at the edge of the continental shelf.

slump overfold [GEOL] A fold consisting of hook-shaped masses of sandstone produced during slumping.

slump scarp [GEOL] A low cliff or rim of thin solidified lava occurring along the margins of a lava flow and against the valley walls or around steptoes after the central part of the lava crust collapsed due to outflow of still-molten underlying layers.

slump sheet [GEOL] A well-defined bed of limited thickness and wide horizontal extent, containing slump structures.

slump structure [GEOL] Any sedimentary structure produced by subaqueous slumping.

slump test [ENG] Determining the consistency of concrete by filling a conical mold with a sample of concrete, then inverting it over a flat plate and removing the mold; the amount by which the concrete drops below the mold height is measured and this represents the slump.

slurry [MATER] **1.** A semiliquid refractory material, such as clay, used to repair furnace refractories. **2.** A free-flowing, pumpable suspension of fine solid material in liquid. **3.** An emulsion of a sulfonated soluble oil in water used to cool and lubricate metal during cutting operations. **4.** A plastic mixture of portland cement and water pumped into an oil well; after hardening, it provides support for the casing and a seal for the well bore. **5.** *See* slip.

slurry bedding *See* slump bedding.

slurry bed reactor *See* ebullating-bed reactor.

slurry blasting agent [MATER] A dense, insensitive, high-velocity explosive of great power and very high water resistance used principally for blasting hard rock or where blastholes are wet.

slurrying [ENG] The formation of a mud or a suspension from a liquid and nonsoluble solid particles.

slurry mining [MIN ENG] The hydraulic breakdown of a subsurface ore matrix with drill-hole equipment, and the eduction of the resulting slurry to the surface for processing.

slurry preforming [ENG] The preparation of reinforced plastics preforms by wet-processing techniques; similar to pulp molding.

slurry slump [GEOL] A slump in which the incoherent sliding mass is mixed with water and disintegrates into a quasiliquid slurry.

slurry truck [ENG] A mobile unit that transports dry blasting ingredients, and mixes them in required proportions for introduction as explosive slurry into blastholes.

slush [HYD] Snow or ice on the ground that has been reduced to a soft, watery mixture by rain, warm temperature, or chemical treatment. [OCEANOGR] *See* sludge.

slush avalanche [GEOL] A rapid and far-reaching downslope transport of rock debris released by snow supersaturated with meltwater and marking the catastrophic opening of ice- and snow-dammed brooks to the spring flood.

slush ball [HYD] An extremely compact accretion of snow, frazil, and ice particles.

slush casting [MET] Producing a hollow casting without a core in the mold by rotating a liquid alloy in a hollow metal mold until a solid layer chills onto the mold, and then pouring off the remaining liquid.

slusher [ENG] A method for the application of vitreous enamel slip to ware by dashing it on the ware to cover all its parts, excess then being removed by shaking the ware.

slush field [HYD] An area of water-saturated snow having a soupy consistency. Also known as snow swamp.

slushflow [HYD] **1.** A mudflow-like outburst of water-saturated snow along a stream course, commonly occurring in the Arctic Zone after intense thawing has produced more meltwater than can drain through the snow, and having a width generally several times greater than that of the stream channel. **2.** A flow of clear slush on a glacier, as in Greenland.

slush icing [METEOROL] The accumulation of ice and water on exposed surfaces of aircraft when the craft is flown through wet snow or snow and liquid drops at temperatures near 0°C.

slushing compound [MATER] A temporary, corrosion-protective coating for metals; made of nondrying oil, grease, or other similar material.

slushing grease [MATER] A special grade of grease used as a metal coating to prevent corrosion.

slushing oil [MATER] A nondrying oil which is strongly adhesive to metal and is applied to metal surfaces to minimize corrosion.

slush molding [ENG] A thermoplastic casting in which a liquid resin is poured into a hot, hollow mold where a viscous skin forms; excess slush is drained off, the mold is cooled, and the molded product is stripped out.

slushpit [ENG] An excavation or diked area to hold water, mud, sludge, and other discharged matter from an oil well. Also known as mud pit; sludge pit; sludge pond.

slush pond [HYD] A pool or lake containing slush, on the ablation surface of a glacier.

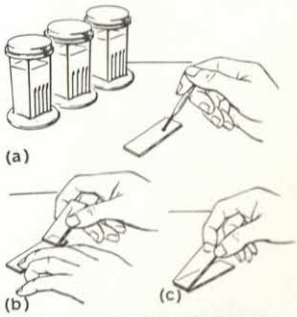
slush pump [PETRO ENG] A pump used to circulate the drilling fluid during rotary drilling.

Sm *See* samarium.

Smalian's formula [FOR] A cubic volume formula used in log scaling, expressed cubic volume $= (B + b)/2L$, where $B =$ the cross-sectional area at the large end of the log, $b =$ the cross-sectional area at the small end of the log, and $L =$ log length.

small arm [ORD] A gun of small character; includes such hand and shoulder weapons as pistols, carbines, rifles, and shotguns.

SMEAR



Making a smear preparation. (a) Place the drop about 1 inch (2.5 centimeters) from end of slide. (b) Apply a second slide just in front of the drop. (c) Push slide smoothly forward to spread the smear. (*From P. Gray, Handbook of Basic Microtechnique, 3d ed., McGraw-Hill, 1964*)

small-arms ammunition [ORD] Ammunition for use in small arms.

small-arms sling [ORD] An item made of leather, webbing, or other material, designed to be attached to a carbine, mortar, rifle, rocket launcher, shotgun, or submachine gun; used as a means of carrying a small-arms weapon or to steady the weapon for firing.

small-bore practice [ORD] Practice in firing with small arms using caliber-.22 ammunition instead of the standard service rounds.

small calorie *See* calorie.

small circle [GEOD] A circle on the surface of the earth, the plane of which does not pass through the earth's center. [NAV] A planned or accomplished route of travel which is generated by the intersection of a sphere and a plane which does not pass through the center of the sphere.

small-craft warning [METEOROL] A warning, for marine interests, of impending winds up to 28 knots (32 miles per hour or 52 kilometers per hour).

small-diameter blasthole [ENG] A blast hole 1½ to 3 inches (3.8 to 7.6 centimeters) in diameter, in low-face quarries.

small diurnal range [OCEANOGR] The difference in height between mean lower high water and mean higher low water.

small hail [METEOROL] Frozen precipitation consisting of small, semitransparent, roundish grains, each grain consisting of a snow pellet surrounded by a very thin ice covering, giving it a glazed appearance.

small ice floe [OCEANOGR] An ice floe of sea ice 30 to 600 feet (9 to 180 meters) across.

small intestine [ANAT] The anterior portion of the intestine in man and other mammals; it is divided into three parts, the duodenum, the jejunum, and the ileum.

small ion [METEOROL] An atmospheric ion of the type that has the greatest mobility; and hence, collectively, it is the principal agent of atmospheric conduction; evidence indicates that each ion is a singly-charged atmospheric molecule (or, rarely, an atom) about which a few other neutral molecules are held by the electrical attraction of the central ionized molecule; estimates of the number of satellite molecules range as high as 12. Also known as fast ion; light ion.

small-ion combination [METEOROL] Either of two processes by which small ions disappear: the union of a small ion and a neutral Aitken nucleus to form a new large ion, or the neutralization of a large ion by the small ion.

small-lot storage [IND ENG] Generally, a quantity of less than one pallet stack, stacked to maximum storage height; thus, the term refers to a lot consisting of from one container to two or more pallet loads, but is not of sufficient quantity to form a complete pallet column.

Small Magellanic Cloud [ASTRON] The smaller of the two star clouds near the south celestial pole; it is about 170,000 light-years away and contains a wide assortment of giant and variable stars, star clusters, and nebulae. Also known as Nubecula Minor.

small of the stock [ORD] The part of the stock of a small-arms weapon ordinarily gripped by the right hand, and located immediately behind the receiver and trigger assembly.

small perturbation [PHYS] A disturbance imposed on a system in steady state, with amplitude assumed small of the first order; that is, the square of the amplitude is negligible in comparison with the amplitude, and the derivatives of the perturbation are assumed to be of the same order of magnitude as the perturbation.

smallpox [MED] An acute, infectious, viral disease characterized by severe systemic involvement and a single crop of skin lesions which proceeds through macular, papular, vesicular, and pustular stages. Also known as variola.

smallpox vaccine [IMMUNOL] A vaccine prepared from a glycerinated suspension of the exudate from cowpox vesicles obtained from healthy vaccinated calves or sheep. Also known as antismallpox vaccine; glycerinated vaccine virus; Jennerian vaccine; virus vaccinium.

small scale [GRAPHICS] A scale involving a large reduction in size, for example, 1:1,000,000; small-scale chart covers a large area.

small-scale integration [ELECTR] Integration in which a complete major subsystem or system is fabricated on a single integrated-circuit chip that contains integrated circuits which have appreciably less complexity than for medium-scale integration. Abbreviated SSI.

small-signal parameter [ELECTR] One of the parameters characterizing the behavior of an electronic device at small values of input, for which the device can be represented by an equivalent linear circuit.

small tropic range [OCEANOGR] The difference in height between tropic lower high water and tropic higher low water.

smalt [MATER] A blue glass made by fusing silica and potash with cobalt oxides; used as a pigment for glass, ceramics, paints, and dyes.

smaltite [MINERAL] $(Co,Ni)AS_{3-x}$ A metallic-gray isometric mineral composed of nickel cobalt arsenide.

smaragd *See* emerald.

smaragdite [MINERAL] A green amphibole mineral that is pseudomorphous after pyroxene in rocks such as eclogite.

smart terminal *See* intelligent terminal.

S matrix *See* scattering matrix.

S-matrix theory [PARTIC PHYS] A theory of elementary particles based on the scattering matrix, and on its properties such as unitarity and analyticity. Also known as scattering-matrix theory.

smear [BIOL] A preparation for microscopic examination made by spreading a drop of fluid, such as blood, across a slide and using the edge of another slide to leave a uniform film. [ELECTR] A television-picture defect in which objects appear to be extended horizontally beyond their normal boundaries in a blurred or smeared manner; one cause is excessive attenuation of high video frequencies in the television receiver.

smectic-A [PHYS CHEM] A subclass of smectic liquid crystals in which molecules are free to move within layers and are oriented perpendicular to the layers.

smectic-B [PHYS CHEM] A subclass of smectic liquid crystals in which molecules in each layer are arranged in a close-packed lattice and are oriented perpendicular to the layers.

smectic-C [PHYS CHEM] A subclass of smectic liquid crystals in which molecules are free to move within layers and are oriented with their axes tilted with respect to the normal to the layers.

smectic phase [PHYS CHEM] A form of the liquid crystal (mesomorphic) state in which molecules are arranged in layers that are free to glide over each other with relatively small viscosity.

smectite [MINERAL] Dioctahedral (montmorillonite) and trioctahedral (saponite) clay minerals, and their chemical varieties characterized by swelling properties and high cation-exchange capacities.

smectogenic solid [PHYS CHEM] A solid which will form a smectic liquid crystal when heated.

smegma [PHYSIO] The sebaceous secretion that accumulates around the glans penis and the clitoris.

smell [PHYSIO] To perceive by olfaction.

smelling salts [PHARM] A preparation containing ammonium carbonate and ammonia water, usually scented with aromatic substances.

smell prism [PSYCH] A diagram that attempts to systematize an odor classification system that has six main odor qualities: fruity, flowery, resinous, spicy, foul, and burnt.

smell the bottom *See* feel the bottom.

smelter [MET] A furnace used for smelting.

smelting [MET] The heating of ore mixtures accompanied by a chemical change resulting in liquid metal.

S meter *See* signal-strength meter.

Smilacaceae [BOT] A family of monocotyledonous plants in the order Liliales; members are usually climbing, leafy-stemmed plants with tendrils, trimerous flowers, and a superior ovary.

Sminthuridae [INV ZOO] A family of insects in the order Collembola which have simple tracheal systems.

Smith-Baker microscope [OPTICS] A type of interference microscope in which a beam of polarized light is split by a birefringent calcite plate cemented to the front lens of the condenser, and reunited by another such plate cemented to the objective.

Smith chart [ELECTROMAG] A special polar diagram containing constant-resistance circles, constant-reactance circles, circles of constant standing-wave ratio, and radius lines representing constant line-angle loci; used in solving transmission-line and waveguide problems.

Smithell's burner [ENG] Two concentric tubes that can be added to a bunsen burner to separate the inner and outer flame cones.

Smitherm process [FOOD ENG] A direct heating process employing fat as the heating medium and used for deep-fat cooking of potato chips.

smith forging [MET] Manual forging of small, hot metal parts with flat or simple-shaped dies, as with a hammer and anvil.

Smith-Helmholtz law [OPTICS] For a single refracting surface of sufficiently small aperture, the product of the index of refraction, distance from the optical axis, and the angle which a light ray makes with the optical axis at the object point is equal to the corresponding product at the image point.

smithite [MINERAL] $AgAsS_2$ A red monoclinic mineral composed of silver arsenic sulfide and occurring as small crystals.

Smith-McIntyre sampler [MECH ENG] A device for taking samples of sediment from the ocean bottom; the digging and hoisting mechanisms are independent: the digging bucket is forced into the sediment before the hoisting action occurs.

Smith-Petersen nail [MED] A three-flanged nail used to fix fractures of the neck of the femur; it is inserted from just below the greater trochanter, through the neck, and into the head of the femur.

Smith-Recklinghausen's disease *See* neurofibromatosis.

smithsonite [MINERAL] $ZnCO_3$ White, yellow, gray, brown, or green secondary carbonate mineral associated with sphalerite and commonly reniform, botryoidal, stalactitic, or granular; hardness is 5 on Mohs scale, and specific gravity is 4.30–4.45; it is an ore of zinc. Also known as calamine; drybone ore; szaskaite; zinc spar.

smog [METEOROL] Air pollution consisting of smoke and fog.

smoke [ENG] Dispersions of finely divided (0.01–5.0 micrometers) solids or liquids in a gaseous medium.

smokebox [MECH ENG] A chamber external to a boiler for trapping the unburned products of combustion.

smoke candle [ORD] Munition which produces smoke by vaporizing an oil.

smoke chamber [ENG] That area in a fireplace directly above the smoke shelf.

smoke detector [ENG] A photoelectric system for an alarm when smoke in a chimney or other location exceeds a predetermined density.

smoke grenade [ORD] Hand grenade or rifle grenade containing a smoke-producing mixture, used for screening or signaling; sometimes charged with colored smoke such as red, green, yellow, or violet.

smoke horizon [METEOROL] The top of a smoke layer which is confined by a low-level temperature inversion in such a way as to give the appearance of the horizon when viewed from above against the sky; in such instances the true horizon is usually obscured by the smoke layer.

smokehouse [FOOD ENG] A building with cabinets generally built of sanitary stainless steel with excellent temperature and humidity control, in which volatilization and redeposition on food of certain components of hardwoods from burning of hardwood sawdust are accomplished.

smokeless [ORD] Indicating that ammunition is relatively smokeless when used in the weapon for which it is intended.

smokeless powder [MATER] Nitrocellulose containing 13.1 percent nitrogen with small amounts of stabilizers (amines) and plasticizers usually present, as well as various modifying agents (nitrotoluene and nitroglycerin salts); used in ammunition.

smoke point [ENG] The maximum flame height in millimeters at which kerosine will burn without smoking, tested under standard conditions; used as a measure of the burning cleanliness of jet fuel and kerosine.

smoke pot [ORD] A cylindrical metal munition designed to produce smoke for screening or signaling purposes, either by combustion of a smoke-producing mixture, or by combustion of a fuel mixture to vaporize a smoke-producing oil; it may be with or without an igniting device and a filling, and it is not intended for throwing or for firing from weapons.

smoke printing [GRAPHICS] A photocopy process in which electrically charged particles are deposited on paper or other material; the paper is held behind a sheet of glass which is backed with a thin metallic coating; the mist of particles is dispensed from behind the paper by an electrode which gives it a charge; a positive or negative print can be made.

smoke projectile [ORD] Any projectile containing a smoke-producing chemical agent with means for properly dispersing the agent.

smoke rocket [ORD] A rocket with a warhead which contains material to produce a smoke cloud on functioning.

smokes [METEOROL] Dense white haze and dust clouds common in the dry season on the Guinea coast of Africa, particularly at the approach of the harmattan.

smoke screen [ORD] A screen of smoke used to hide a maneuver, force, place, or activity.

smoke shelf [ENG] A horizontal surface directly behind the throat of a fireplace to prevent downdrafts.

smoke signal [ORD] A pyrotechnic item designed to produce a sign by means of smoke and used, for example, to provide identification, location, or warning.

smokestack [ENG] A chimney for the discharge of flue gases from a furnace operation such as in a steam boiler, powerhouse, heating plant, ship, locomotive, or foundry.

smokestone *See* smoky quartz.

smoke technique [FL MECH] A technique used to measure only very-low-speed air velocity; smoke enables the fluid motion to be observed with the eye, and the smoke is timed over a measured distance along an airway of constant cross section to determine the velocity of flow.

smoke test [ENG] A test used on kerosine to determine the highest point to which the flame can be turned before smoking occurs.

smoke washer [ENG] A device for removing particles from smoke by forcing it through a spray of water.

smoky quartz [MINERAL] A smoky-yellow, smoky-brown, or brownish-gray, often transparent variety of crystalline quartz containing inclusions of carbon dioxide; may be used as a semiprecious stone. Also known as cairngorm; smokestone.

S Monel [MET] An alloy similar to H Monel but containing 4% silicon.

smooth [OCEANOGR] Comparatively calm water between heavy seas. [STAT] To modify a sequential set of numerical data items in a manner designed to reduce the differences in value between adjacent items.

smooth blasting [ENG] Blasting to ensure even faces without cracks in the rock.

smooth bore [ORD] A bore that is smooth and without rifling, for example, in shotguns and mortars.

smooth chert [GEOL] A hard, dense, homogeneous chert (insoluble residue) characterized by a conchoidal-to-even fracture surface that is devoid of roughness and by a lack of crystallinity, granularity, or other distinctive structure.

smooth drilling [ENG] Drilling in a rock formation in which a fast rotation of the drill stem, a fast rate of penetration, and a high recovery of core can be achieved with vibration-free rotation of the drill stem.

smoothing [ENG] Making a level, or continuously even, surface. [MATH] Approximating or perturbing a function by one which has a higher degree of differentiability.

smoothing choke [ELECTR] Iron-core choke coil employed as a filter to remove fluctuations in the output current of a vacuum-tube rectifier or direct-current generator.

smoothing circuit *See* ripple filter.

smoothing filter *See* ripple filter.

smoothing mill [MECH ENG] A revolving stone wheel used to cut and bevel glass or stone.

smoothing plane [DES ENG] A finely set hand tool, usually 5.5–10 inches (14.0–25.4 centimeters) long, for finishing small areas on wood.

smooth manifold [MATH] A differentiable manifold whose local coordinate systems depend upon those of euclidean space in an infinitely differentiable manner.

smooth map [MATH] An infinitely differentiable function.

smooth muscle [ANAT] The involuntary muscle tissue found in the walls of viscera and blood vessels, consisting of smooth muscle fibers.

smooth muscle fiber [HISTOL] Any of the elongated, nucleated, spindle-shaped cells comprising smooth muscles. Also known as involuntary fiber; nonstriated fiber; unstriated fiber.

smooth phase [GEOL] The part of stream traction whereby a mass of sediment travels as a sheet with gradually increasing density from the surface downward.

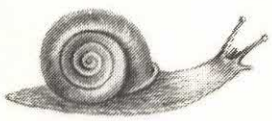
smooth sea [OCEANOGR] Sea with waves no higher than ripples or small wavelets.

smothered bottom [GEOL] A sedimentary surface on which

SMITHSONITE

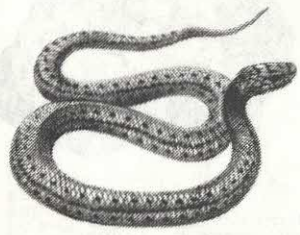
Botryoidal aggregate of smithsonite in limestone, Larium, Greece. *(Specimen from Department of Geology, Bryn Mawr College)*

SNAIL



The white-lipped sand snail *(Triodopsis albalabris)*; eyes are on the longer tentacles.

SNAKE



Garter snake *(Thamnophis ordinoides)*.

complete, well-preserved, and commonly very fragile and delicate fossils were saved by an influx of mud that buried them instantly.

smother kiln [ENG] A kiln into which smoke can be introduced for blackening pottery.

smudge [PL PATH] Any of several fungus diseases of cereals and other plants characterized by dark, sooty discolorations.

smudge oil [MATER] A dark petroleum distillate or gas oil that is burned in citrus fruit-growing areas to prevent frost damage.

smudging [ENG] A frost-preventive measure used in orchards; properly, it means the production of heavy smoke, supposed to prevent radiational cooling, but it is generally applied to both heating and smoke production.

smut [MET] A reaction product left on the surface of a metal after pickling. [PL PATH] Any of various destructive fungus diseases of cereals and other plants characterized by large dusty masses of dark spores on the plant organs.

smut fungus [MYCOL] The common name for members of the Ustilaginales.

Sn *See* tin.

S/N *See* signal-to-noise ratio.

snagging [MECH ENG] Removing surplus metal or large surface defects by using a grinding wheel.

snail [INV ZOO] Any of a large number of gastropod mollusks distinguished by a spiral shell that encloses the body, a head, a foot, and a mantle.

snail fever *See* schistosomiasis.

snake [MET] **1.** A twisted and bent hod rod formed before subsequent rolling operations. **2.** A flexible mandrel used to prevent collapse of a shaped piece during bending operations. [VERT ZOO] Any of about 3000 species of reptiles which belong to the 13 living families composing the suborder Serpentes in the order Squamata.

snake hole [ENG] **1.** A blasting hole bored directly under a boulder. **2.** A drill hole used in quarrying or bench blasting.

snaking [ENG] Towing a load with a long cable.

snaking stream *See* meandering stream.

snap [METEOROL] A brief period of extreme (generally cold) weather setting in suddenly, as in a "cold snap."

SNAP [NUCLEO] A small nuclear power plant in which heat from radioisotope decay in a fuel such as strontium-90 is converted into electric energy, to provide power for spacecraft instrumentation, telemetry, and other applications. Derived from systems for nuclear auxiliary power.

snap-action switch [ELEC] A switch that responds to very small movements of its actuating button or lever and changes rapidly and positively from one contact position to the other; the trademark of one version is Micro Switch. Also known as sensitive switch.

snap-back forming [ENG] A plastic-sheet-forming technique in which an extended, heated, plastic sheet is allowed to contract over a form shaped to the desired final contour.

snapback method *See* repetitive time method.

snap fastener [DES ENG] A fastener consisting of a ball on one edge of an article that fits in a socket on an opposed edge, and used to hold edges together, such as those of a garment.

snap flask [MET] A foundry flask having its sides latched on one corner to allow removal of the flask from around the sand mold.

snap gage [DES ENG] A device with two flat, parallel surfaces spaced to control one limit of tolerance of an outside diameter or a length.

snap hook *See* spring hook.

snap-off diode [ELECTR] Planar epitaxial passivated silicon diode that is processed so a charge is stored close to the junction when the diode is conducting; when reverse voltage is applied, the stored charge then forces the diode to snap off or switch rapidly to its blocking state.

snap-on ammeter [ELEC] An ac ammeter having a magnetic core in the form of hinged jaws that can be snapped around the current-carrying wire. Also known as clamp-on ammeter.

snapper [ENG] A device for collecting samples from the ocean bottom, and which closes to prevent the sample from dropping out as it is raised to the surface.

snap ring [DES ENG] A form of spring used as a fastener; the ring is elastically deformed, put in place, and allowed to snap back toward its unstressed position into a groove or recess.

snapshot dump [COMPUT SCI] An edited printout of selected parts of the contents of main memory, performed at one or more times during the execution of a program without materially affecting the operation of the program.

snatch block [DES ENG] A pulley frame or sheave with an eye through which lashing can be passed to fasten it to a scaffold or pole.

snatch plate [ENG] A thick steel plate through which a hole about one-sixteenth of an inch larger than the outside diameter of the drill rod on which it is to be used is drilled; the plate is slipped over the drill rod and one edge is fastened to a securely anchored chain, and if rods must be pulled because high-pressure water is encountered, the eccentric pull of the chain causes the outside of the rods to be gripped and held against the pressure of water; the rod is moved a short distance out of the hole each time the plate is tapped.

S-N dewaxing [CHEM ENG] A proprietary, petroleum-refinery solvent process for removal of wax from petroleum oils. Also known as Separator-Nobel dewaxing.

S-N diagram [ENG] In fatigue testing, a graphic representation of the relationship of stress S and the number of cycles N before failure of the material.

sneak path [COMPUT SCI] In computers, an undesired circuit through a series-parallel configuration.

sneeze [PHYSIO] A sudden, noisy, spasmodic expiration through the mouth and nose.

Snellen test [MED] A test for visual acuity presenting letters, numbers, or letter E's in various positions, with the symbols varying in size; if the smallest are read at a distance of 20 feet (6 meters), vision is recorded as 20/20, or normal.

Snell laws of refraction [OPTICS] When light travels from one medium into another the incident and refracted rays lie in one plane with the normal to the surface; are on opposite sides of the normal; and make angles with the normal whose sines have a constant ratio to one another. Also known as Descartes laws of refraction; laws of refraction.

snezhura *See* snow slush.

snifter valve [ENG] A valve on a pump that allows air to enter or escape, and accumulated water to be released.

sniperscope [ORD] A snooperscope which, when combined with a carbine or other firearm, enables the operator to see and shoot at targets in the dark.

snivet [ELECTR] Straight, jagged, or broken vertical black line appearing near the right-hand edge of a television receiver screen.

sno *See* elvegust.

SNOBOL [COMPUT SCI] A computer programming language that has significant applications in program compilation and generation of symbolic equations. Derived from String-Oriented-Symbolic Language.

snooperscope [ELECTR] An infrared source, an infrared image converter, and a battery-operated high-voltage direct-current source constructed in portable form to permit a foot soldier or other user to see objects in total darkness; infrared radiation sent out by the infrared source is reflected back to the snooperscope and converted into a visible image on the fluorescent screen of the image tube.

snorkel [ENG] Any tube which supplies air for an underwater operation, whether it be for material or personnel. [NAV ARCH] A tube or pair of tubes for air intake and exhaust that can be extended above the surface of the water for operating submerged submarines.

snout [GEOGR] A promontory or protruding mass of rock. [HYD] The protruding lower extremity of a glacier. [VERT ZOO] The elongated nose of various mammals.

snow [ELECTR] Small, random, white spots produced on a television or radar screen by inherent noise signals originating in the receiver. [METEOROL] The most common form of frozen precipitation, usually flakes of starlike crystals, matted ice needles, or combinations, and often rime-coated.

snow accumulation [METEOROL] The actual depth of snow on the ground at any instant during a storm, or after any single snowstorm or series of snowstorms.

snow avalanche [HYD] An avalanche of relatively pure snow; some rock and earth material may also be carried downward. Also known as snowslide.

snowbank glacier *See* nivation glacier.

snow banner [METEOROL] Snow being blown from a mountain crest. Also known as snow plume; snow smoke.

snow barchan [HYD] A crescentic or horseshoe-shaped snow dune of windblown snow with the ends pointing downwind. Also known as snow medano.

snow bin [ENG] A box for measuring the amount of snowfall; a type of snow gage.
snow blindness [MED] A transient visual impairment and actinic keratoconjunctivitis caused by exposure of the eyes to ultraviolet rays reflected from snow. Also known as solar photophthalmia.
snow blink [METEOROL] A bright, white glare on the underside of clouds, produced by the reflection of light from a snow-covered surface; this term is used in polar regions with reference to the sky map. Also known as snow sky.
snow blower [MECH ENG] A machine that removes snow from a road surface or pavement using a screw-type blade to push the snow into the machine and from which it is ejected at some distance.
snowbreak [CIV ENG] Any barrier designed to shelter an object or area from snow.
snowbridge [HYD] Snow bridging a crevasse in a glacier.
snow cap [HYD] **1.** Snow covering a mountain peak when no snow exists at lower elevations. **2.** Snow on the surface of a frozen lake.
snow climate *See* polar climate.
snow cloud [METEOROL] A popular term for any cloud from which snow falls.
snow concrete [HYD] Snow that is compacted at low temperatures by heavy objects (as by a vehicle) and that sets into a tough substance of considerably greater strength than uncompressed snow. Also known as snowcrete.
snow course [HYD] An established line, usually from several hundred feet to as much as a mile long, traversing representative terrain in a mountainous region of appreciable snow accumulation; along this course, measurements of snow cover are made to determine its water equivalent.
snow cover [HYD] **1.** All accumulated snow on the ground, including that derived from snowfall, snowslides, and drifting snow. Also known as snow mantle. **2.** The extent, expressed as a percentage, of snow cover in a particular area.
snow-cover chart [METEOROL] A synoptic chart showing areas covered by snow and contour lines of snow depth.
snowcreep [HYD] The slow internal deformation of a snowpack resulting from the stress of its own weight and metamorphism of snow crystals.
snowcrete *See* snow concrete.
snow crust [HYD] A crisp, firm, outer surface upon snow.
snow crystal [METEOROL] Any of several types of ice crystal found in snow; a snow crystal is a single crystal, in contrast to a snowflake which is usually an aggregate of many single snow crystals.
snow cushion [HYD] An accumulation of snow, commonly deep, soft, and unstable, deposited in the lee of a cornice on a steep mountain slope.
snow density [HYD] The ratio of the volume of meltwater that can be derived from a sample of snow to the original volume of the sample; strictly speaking, this is the specific gravity of the snow sample.
snowdrift [HYD] Snow deposited on the lee of obstacles, lodged in irregularities of a surface, or collected in heaps by eddies in the wind.
snowdrift glacier [HYD] A semipermanent mass of firn, formed by drifted snow in depressions in the ground or behind obstructions. Also known as catchment glacier; drift glacier.
snowdrift ice [HYD] Permanent or semipermanent masses of ice, formed by the accumulation of drifted snow in the lee of projections, or in depressions of the ground. Also known as glacieret.
snow dune [HYD] An accumulation of wind-transported snow resembling the forms of sand dunes.
snow dust [METEOROL] Fine snow crystals fragmented or driven by the wind.
snow eater [METEOROL] **1.** Any warm wind blowing over a snow surface; usually applied to a foehn wind. **2.** A fog over a snow surface; so called because of the frequently observed rapidity with which a snow cover disappears after a fog sets in.
snowfall [METEOROL] **1.** The rate at which snow falls; in surface weather observations, this is usually expressed as inches of snow depth per 6-hour period. **2.** A snow storm.
snow fence [CIV ENG] An open-slatted board fence usually 4 to 10 feet (1.2 to 3.0 meters) high, placed about 50 feet (15 meters) on the windward side of a railroad track or highway; the fence serves to disrupt the flow of the wind so that the snow is deposited close to the fence on the leeward side, leaving a comparatively clear, protected strip parallel to the fence and slightly farther downwind.
snowfield [HYD] **1.** A broad, level, relatively smooth and uniform snow cover on ground or ice at high altitudes or in mountainous regions above the snow line. **2.** The accumulation area of a glacier. **3.** A small glacier or accumulation of perennial ice and snow too small to be designated a glacier.
snowflake [MET] *See* flake. [METEOROL] An ice crystal or, much more commonly, an aggregation of many crystals which falls from a cloud; simple snowflakes (single crystal) exhibit beautiful variety of form, but the symmetrical shapes reproduced so often in photomicrographs are not actually found frequently in snowfalls; broken single crystals, fragments, or clusters of such elements are much more typical of actual snows.
snowflake obsidian [PETR] An obsidian that contains white, gray, or reddish spherulites ranging in size from microscopic to a meter or more in diameter.
snow flurry [METEOROL] Popular term for snow shower, particularly of a very light and brief nature.
snowflush [GEOL] An accumulation of drifted snow, windblown soil, and wind-transported seeds on a lee slope, characteristically marked during the winter by a dark patch of soil.
snow forest climate [CLIMATOL] A major category in W. Koppen's climatic classification, defined by a coldest-month mean temperature of less than 26.6°F (3°C) and a warmest-month mean temperature of greater than 50°F (10°C).
snow gage [HYD] An instrument for measuring the amount of water equivalent in a snowpack. Also known as snow sampler.
snow garland [HYD] A rare phenomenon in which snow is festooned from trees, fences, and so on, in the form of a rope of snow, several feet long and several inches in diameter; produced by surface tension acting in thin films of water bonding individual crystals; such garlands form only when the surface temperature is close to the melting point, for only then will the requisite films of slightly supercooled water exist.
snow geyser [METEOROL] Fine, powdery snow blown upward by a snow tremor.
snow glide [HYD] The slow slip of a snowpack over the ground surface caused by the stress of its own weight.
snow grains [METEOROL] Precipitation in the form of very small, white opaque particles of ice; the solid equivalent of drizzle; the grains resemble snow pellets in external appearance, but are more flattened and elongated, and generally have diameters of less than 1 millimeter; they neither shatter nor bounce when they hit a hard surface. Also known as granular snow.
snow ice [HYD] Ice crust formed from snow, either by compaction or by the refreezing of partially thawed snow.
snow line [GEOGR] **1.** A transient line delineating a snow-covered area or altitude. **2.** An area with more than 50% snow cover. **3.** The altitude or geographic line separating areas in which snow melts in summer from areas having perennial ice and snow.
snow load [CIV ENG] The unit weight factor considered in the design of a flat or pitched roof for the probable amount of snow lying upon it.
snow mantle *See* snow cover.
snow mat [ENG] A device used to mark the surface between old and new snow, consisting of a piece of white duck 28 inches (71 centimeters) square, having in each corner triangular pockets in which are inserted slats placed diagonally to keep the mat taut and flat.
snow medano *See* snow barchan.
snowmelt [HYD] The water resulting from the melting of snow; it may evaporate, seep into the ground, or become a part of runoff.
snow-melting system [CIV ENG] A system of pipes containing a circulating nonfreezing liquid or electric-heating cables, embedded beneath the surface of a road, walkway, or other area to be protected from snow accumulation.
snow niche *See* nivation hollow.
snowpack [HYD] The amount of annual accumulation of snow at higher elevations in the western United States, usually expressed in terms of average water equivalent.
snow patch erosion *See* nivation.
snow pellets [METEOROL] Precipitation consisting of white, opaque, approximately round (sometimes conical) ice particles which have a snowlike structure and are about 2 to 5 millimeters in diameter; snow pellets are crisp and easily crushed, differing

in this respect from snow grains, and they rebound when they fall on a hard surface and often break up. Also known as graupel; soft hail; tapioca snow.

snow pillow [ENG] A device used to record the changing weight of the snow cover at a point, consisting of a fluid-filled bladder lying on the ground with a pressure transducer or a vertical pipe and float connected to it.

snowplow [MECH ENG] A device for clearing away snow, as from a road or railway track.

snow plume *See* snow banner.

snow point [PHYS CHEM] Referring to a gas mixture, the temperature at which the vapor pressure of the sublimable component is equal to the actual partial pressure of that component in the gas mixture; analogous to dew point.

snowquake *See* snow tremor.

snow resistograph [ENG] An instrument for recording a hardness profile of a snow cover by recording the force required to move a blade up through the snow.

snow ripple *See* wind ripple.

snow roller [HYD] A mass of snow, shaped somewhat like a lady's muff, rather common in mountainous or hilly regions; it occurs when snow, moist enough to be cohesive, is picked up by wind blowing down a slope and rolled onward and downward until either it becomes too large or the ground levels off too much for the wind to propel it further; snow rollers vary in size from very small cylinders to some as large as 4 feet (1.2 meters) long and 7 feet (2.1 meters) in circumference.

snow sampler [ENG] A hollow tube for collecting a sample of snow in place. Also known as snow tube. [HYD] *See* snow gage.

snow scale *See* snow stake.

snowshed [CIV ENG] A structure to protect an exposed area as a road or rail line from snow. [HYD] A drainage basin primarily supplied by snowmelt.

snow sky *See* snow blink.

snowslide *See* snow avalanche.

snow sludge [OCEANOGR] Sludge formed mainly from snow.

snow slush [HYD] Slush formed from snow that has fallen into water that is at a temperature below that of the snow. Also known as snezhura.

snow smoke *See* snow banner.

snow stage [METEOROL] The thermodynamic process of sublimation of water vapor into snow in an idealized saturation-adiabatic or pseudoadiabatic expansion (lifting) of moist air; the snow stage begins at the condensation level when it is higher than the freezing level.

snow stake [ENG] A wood scale, calibrated in inches, used in regions of deep snow to measure its depth; it is bolted to a wood post or angle iron set in the ground. Also known as snow scale.

snow static [ELECTROMAG] Precipitation static caused by falling snow.

snowstorm [METEOROL] A storm in which snow falls.

snow survey [HYD] The process of determining depth and water content of snow at representative points, for example, along a snow course.

snow swamp *See* slush field.

snow tremor [HYD] A disturbance in a snowfield, caused by the simultaneous settling of a large area of thick snow crust or surface layer. Also known as snowquake.

snow tube *See* snow sampler.

SNR *See* signal-to-noise ratio.

SNU *See* solar neutrino unit.

snub [MIN ENG] **1.** To increase the height of an undercut by means of explosives or otherwise. **2.** To check the descent of a car by the turn of a rope around a post.

snubber [MECH ENG] A mechanical device consisting essentially of a drum, spring, and friction band, connected between axle and frame, in order to slow the recoil of the spring and reduce jolting.

snuffles [MED] Discharge from the nasal mucosa in congenital syphilis in infants.

Snyder sampler [ENG] A mechanical device for obtaining small representative quantities from a moving stream of pulverized or granulated solids; it consists of a cast-iron plate revolving in a vertical plane on a horizontal axis with an inclined sample spout; the material to be sampled comes to the sampler by way of an inclined chute whenever the sample spout comes in line with the moving stream.

soak cleaning [MET] Cleaning the surface of a metal by immersion in a cleaning solution without electrolysis.

soaking [MET] Heating an alloy, usually an ingot, to a temperature not far below its melting temperature and holding it there for a long time to eliminate segregation that occurred on solidification.

soaking drum [CHEM ENG] A heated petroleum-refinery process vessel used in connection with petroleum thermal-cracking coils to furnish the residence time needed to complete the cracking reaction.

soaking pit [MET] A high-temperature, gas-fired, tightly covered, refractory-lined hole or pit into which a hot metal ingot (with liquid interior) is held at a fixed temperature until needed for rolling into sheet or other forms.

soap [MATER] **1.** A particular type of detergent, in which the water-solubilizing group is a carboxylate, COO—, and the positive ion is usually sodium, Na^+, or potassium, K^+. **2.** A soap compound mixed with a fragrance and other ingredients and then cast into soap bars of different shapes.

soap bubble test [ENG] A leak test in which a soap solution is applied to the surface of the vessel under internal pressure test; soap bubbles form if the tracer gas leaks from the vessel.

soap builder [MATER] A substance mixed with soap to modify the alkali content, to add water-softening ability, or to improve otherwise the cleaning properties; examples are rosin and sodium phosphate.

soaprock *See* soapstone.

soapstone [MINERAL] **1.** A mineral name applied to steatite or to massive talc. Also known as soaprock. **2.** *See* saponite. [PETR] A metamorphic rock characterized by massive, schistose, or interlaced fibrous texture and a soft unctuous feel.

soar [AERO ENG] To fly without loss of altitude, using no motive power other than updrafts in the atmosphere.

sobole [BOT] An underground creeping stem.

social animal [ZOO] An animal that exhibits social behavior.

social anthropology [ANTHRO] The study of social organization among nonliterate peoples.

social behavior [ZOO] Any behavior on the part of an organism stimulated by, or acting upon, another member of the same species.

social hierarchy [VERT ZOO] The establishment of a dominance-subordination relationship among higher animal societies.

socialization [PSYCH] The process whereby a child learns to get along with and to behave similarly to other people in the group, largely through imitation as well as group pressure.

social parasitism [VERT ZOO] An aberrant type of parasitism occurring in some birds, in which the female of one species lays her eggs in the nests of other species and permits the foster parents to raise the young.

social psychiatry [PSYCH] Psychiatry especially concerned with the study of social influences on the cause and dynamics of emotional and mental illness, the use of the social environment in treatment, and preventive community programs, as well as the application of psychiatry to social issues, industry, law, education, and other such activities and organizations.

social psychology [PSYCH] The study of the manner in which the attitudes, personality, and motivations of the individual influence, and are influenced by, the structure, dynamics, and behavior of the social group with which the individual interacts.

social releaser [ZOO] A releaser stimulus which an animal receives from a member of its species.

society [ECOL] A secondary or minor plant community forming part of a community.

socked in [METEOROL] In the early days of aviation, pertaining to weather at an airport when ceiling or visibility were of such low values that the airport was effectively closed to aircraft operations.

socket [ELEC] A device designed to provide electric connections and mechanical support for an electronic or electric component requiring convenient replacement.

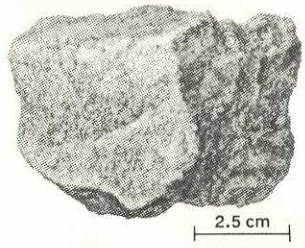
socket-head screw [DES ENG] A screw fastener with a geometric recess in the head into which an appropriate wrench is inserted for driving and turning, with consequent improved nontamperability.

socket wrench [DES ENG] A wrench with a socket to fit the head of a bolt or a nut.

soda *See* sodium carbonate.

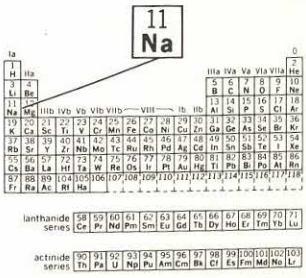
soda-acid extinguisher [ENG] A fire-extinguisher from which water is expelled at a high rate by the generation of carbon dioxide, the result of mixing (when the extinguisher is tilted) of sulfuric acid and sodium bicarbonate.
soda alum *See* aluminum sodium sulfate.
soda ash [INORG CHEM] Na_2CO_3 The commercial grade of sodium carbonate; a powder soluble in water, insoluble in alcohol; used in glass manufacture and petroleum refining, and for soaps and detergents. Also known as anhydrous sodium carbonate; calcined soda.
soda blasting powder *See* B blasting powder.
sodaclase *See* albite.
soda crystals *See* metahydrate sodium carbonate.
soda-granite [PETR] **1.** A granite in which soda is more abundant than potash. **2.** A granite that contains soda-plagioclase instead of the orthoclase found in normal granite.
soda lake [HYD] An alkali lake rich in dissolved sodium salts, especially sodium carbonate, sodium chloride, and sodium sulfate. Also known as natron lake.
soda lime [MATER] A mixture of sodium or potassium hydroxide with calcium oxide; granules are used to absorb water vapor and carbon dioxide gas.
soda-lime glass [MATER] Glass made by fusion of sand with sodium carbonate, or sodium sulfate and lime, or limestone; used for window glass.
sodalite [MINERAL] $Na_2Al_3Si_3O_{12}Cl$ A blue or sometimes white, gray, or green mineral tectosilicate of the feldspathoid group, crystallizing in the isometric system, with vitreous luster, hardness of 5 on Mohs scale, and specific gravity of 2.2–2.4; used as an ornamental stone.
soda mica *See* paragonite.
soda microcline *See* anorthoclase.
sodamide *See* sodium amide.
soda niter [MINERAL] $NaNO_3$ A colorless to white mineral composed of sodium nitrate, crystallizing in the rhombohedral division of the hexagonal system; hardness is 1½ to 2 on Mohs scale and specific gravity is 2.266. Also known as nitratine; Peru saltpeter.
soda pulping process [CHEM ENG] The digestion of wood chips by caustic soda; used to manufacture pulp for paper products.
soddyite [MINERAL] $(UO_2)_{12}Si_4O_{23}\cdot 14H_2O$ A pale-yellow orthorhombic mineral composed of hydrous uranium silicate and occurring in fine-grained aggregates or crystals.
Soddy's displacement law [NUC PHYS] The atomic number of a nuclide decreases by 2 in alpha decay, increases by 1 in beta negatron decay, and decreases by 1 in beta positron decay and electron capture.
sodide [INORG CHEM] A member of a class of alkalides in which the metal anion is sodium (Na^-).
sodium [CHEM] A metallic element of group I, symbol Na, with atomic number 11, atomic weight 22.9898; silver-white, soft, and malleable; oxidizes in air; melts at 97.6°C; used as a chemical intermediate and in pharmaceuticals, petroleum refining, and metallurgy; the source of the symbol Na is natrium.
sodium-24 [NUC PHYS] A radioactive isotope of sodium, mass 24, half-life 15.5 hours; formed by deuteron bombardment of sodium; decomposes to magnesium with emission of beta rays.
sodium acetate [ORG CHEM] $NaC_2H_3O_2$ Colorless, efflorescent crystals, soluble in water and ether; melts at 324°C; used as a chemical intermediate and for pharmaceuticals, dyes, and dry colors.
sodium-acetone bisulfite *See* acetone-sodium bisulfite.
sodium acid carbonate *See* sodium bicarbonate.
sodium acid chromate *See* sodium dichromate.
sodium acid fluoride *See* sodium bifluoride.
sodium acid methanearsonate *See* sodium methanearsonate.
sodium acid sulfate *See* sodium bisulfate.
sodium acid sulfite *See* sodium bisulfite.
sodium alginate [ORG CHEM] $C_6H_7O_6Na$ Colorless or light yellow filaments, granules, or powder which forms a viscous colloid in water; used in food thickeners and stabilizers, in medicine and textile printing, and for paper coating and water-base paint. Also known as alginic acid sodium salt; sodium polymannuronate.
sodium alphanaphthylamine sulfonate *See* sodium naphthionate.
sodium aluminate [INORG CHEM] $Na_2Al_2O_4$ A white powder soluble in water, insoluble in alcohol; melts at 1800°C; used as a zeolite-type of material and a mordant, and in water purification, milkglass manufacture, and cleaning compounds.
sodium aluminosilicate [INORG CHEM] White, amorphous powder or beads, partially soluble in strong acids and alkali hydroxide solutions between 80 and 100°C; used in food as an anticaking agent. Also known as sodium silicoaluminate.
sodium aluminum phosphate [INORG CHEM] $NaAl_3H_{14}(PO_4)_8\cdot 4H_2O$ or $Na_3Al_2H_{15}(PO_4)_8$ White powder, soluble in hydrochloric acid; used as a food additive for baked products. Also known as sodium aluminum phosphate.
sodium aluminum silicofluoride [INORG CHEM] $Na_3Al(SiF_6)_4$ A toxic, white powder, used for mothproofing and in insecticides.
sodium aluminum sulfate *See* aluminum sodium sulfate.
sodium amalgam [INORG CHEM] Na_xHg_x A fire-hazardous, silver-white crystal mass that decomposes in water; used to make hydrogen and as an analytical reagent.
sodium amalgam–oxygen cell [ELEC] Fuel cell system in which materials functioning in the dual capacity of fuel and anode are consumed continuously; low operating temperatures and high power-to-weight ratios are significant characteristics of the system.
sodium amide [INORG CHEM] $NaNH_2$ White crystals that decompose in water; melts at 210°C; a fire hazard; used to make sodium cyanide. Also known as sodamide.
sodium *para*-aminobenzoate [PHARM] $NH_2C_6H_4COONa$ Water-soluble crystals, used in medicine. Also known as PABA sodium.
sodium aminophenylarsonate *See* sodium arsanilate.
sodium anilinearsonate *See* sodium arsanilate.
sodium antimonate [INORG CHEM] $NaSbO_3$ A white, granular powder, used as an enamel opacifier and high-temperature oxidizing agent. Also known as antimony sodiate.
sodium antimony bis(pyrocatechol-2,4-disulfonate) *See* stibophen.
sodium arsanilate [ORG CHEM] $C_6H_4NH_2(AsO\cdot OH\cdot ONa)$ A white, water-soluble, poisonous powder with a faint saline taste, used in medicine and as a chemical intermediate. Also known as sodium aminophenylarsonate; sodium anilinearsonate.
sodium arsenate [INORG CHEM] $Na_3AsO_4\cdot 12H_2O$ Water-soluble, poisonous, clear, colorless crystals with a mild alkaline taste; melts at 86°C; used in medicine, insecticides, dry colors, and textiles, and as a germicide and a chemical intermediate.
sodium arsenite [INORG CHEM] $NaAsO_2$ A poisonous, water-soluble, grayish powder; used in antiseptics, dyeing, insecticides, and soaps for taxidermy. Also known as sodium metaarsenite.
sodium ascorbate [ORG CHEM] $CH_2OH(CHOH)_2COHCOHCOONa$ White, odorless crystals; soluble in water, insoluble in alcohol; decomposes at 218°C; used in therapy for vitamin C deficiency.
sodium aurichloride *See* sodium gold chloride.
sodium aurocyanide *See* sodium gold cyanide.
sodium aurothiomalate *See* gold sodium thiomalate.
sodium azide [INORG CHEM] NaN_3 Poisonous, colorless crystals; soluble in water and liquid ammonia; decomposes at 300°C; used in medicine and to make lead azide explosives.
sodium barbital [PHARM] $C_8H_{11}N_2NaO_3$ A bitter, white powder, soluble in water; used in medicine. Also known as soluble barbital.
sodium barbiturate [ORG CHEM] $C_4H_3N_2O_3Na$ White to slightly yellow powder, soluble in water and dilute mineral acid; used in wood-impregnating solutions.
sodium benzoate [ORG CHEM] $NaC_7H_5O_2$ Water- and alcohol-soluble, white, amorphous crystals with a sweetish taste; used as a food preservative and an antiseptic and in tobacco, pharmaceuticals, and medicine.
sodium benzosulfimide *See* sodium saccharine.
sodium benzoylacetone dihydrate [ORG CHEM] A metal chelate with low melting point (115°C) and slight solubility in acetone.
sodium benzyl penicillinate *See* benzyl penicillin sodium.
sodium bicarbonate [INORG CHEM] $NaHCO_3$ White, water-soluble crystals with an alkaline taste; loses carbon dioxide at 270°C; used as a medicine and a butter preservative, in food preparation, in effervescent salts and beverages, in ceramics, and to prevent timber mold. Also known as baking soda; sodium acid carbonate.
sodium bichromate *See* sodium dichromate.

SODA NITER



Soda niter from La Noria, Chile. *(Specimen from Department of Geology, Bryn Mawr College)*

SODIUM



Periodic table of the chemical elements showing the position of sodium.

sodium bifluoride [INORG CHEM] $NaHF_2$ Poisonous, water-soluble, white crystals; decomposes when heated; used as a laundry-rinse neutralizer, preservative, and antiseptic, and in glass etching and tinplating. Also known as sodium acid fluoride.

sodium bismuthate [INORG CHEM] $NaBiO_3$ A yellow to brown amorphous powder; used as an analytical reagent and in pharmaceuticals.

sodium bisulfate [INORG CHEM] $NaHSO_4$ Colorless crystals, soluble in water; the aqueous solution is strongly acidic; decomposes at 315°C; used for flux to decompose minerals, as a disinfectant, and in dyeing and manufacture of magnesia, cements, perfumes, brick, and glue. Also known as niter cake; sodium acid sulfate.

sodium bisulfide *See* sodium hydrosulfide.

sodium bisulfite [INORG CHEM] $NaHSO_3$ A colorless, water-soluble solid; decomposes when heated. Also known as sodium acid sulfite.

sodium bisulfite test [ANALY CHEM] A test for aldehydes in which aldehydes form a crystalline salt upon addition of a 40% aqueous solution of sodium bisulfite.

sodium bitartrate [ORG CHEM] $NaHC_4H_5O_6 \cdot H_2O$ A white, combustible, water-soluble powder that loses water at 100°C, decomposes at 219°C; used in effervescing mixtures and as an analytical reagent. Also known as acid sodium tartrate.

sodium borate [INORG CHEM] $Na_2B_4O_7 \cdot 10H_2O$ A water-soluble, odorless, white powder; melts between 75 and 200°C; used in glass, ceramics, starch and adhesives, detergents, agricultural chemicals, pharmaceuticals, and photography; the impure form is known as borax. Also known as sodium pyroborate; sodium tetraborate.

sodium boroformate [ORG CHEM] $NaH_2BO_3 \cdot 2HCOOH \cdot 2H_2O$ Water-soluble, white crystals, melting at 110°C; used in textile treating and in tanning, and as a buffering agent.

sodium borohydride [INORG CHEM] $NaBH_4$ A flammable, hygroscopic, white to gray powder; soluble in water, insoluble in ether and hydrocarbons; decomposes in damp air; used as a hydrogen source, a chemical reagent, and a rubber foaming agent.

sodium bromate [INORG CHEM] $NaBrO_3$ Odorless, white crystals; soluble in water, insoluble in alcohol; decomposes at 381°C; a fire hazard, used as an analytical reagent.

sodium bromide [INORG CHEM] NaBr White, water-soluble, crystals with a bitter, saline taste; absorbs moisture from air; melts at 758°C; used in photography and medicine, as a chemical intermediate, and to make bromides.

sodium cacodylate [ORG CHEM] $(CH_3)_2AsOONa \cdot 3H_2O$ A white crystalline compound that melts at approximately 60°C and dissolves in ethanol and water; used as a herbicide. Also known as sodium dimethylarsenate.

sodium-calcium feldspar *See* plagioclase.

sodium carbolate *See* sodium phenate.

sodium carbonate [INORG CHEM] Na_2CO_3 A white, water-soluble powder that decomposes when heated to about 852°C; used as a reagent; forms a monohydrate compound, $Na_2CO_3 \cdot H_2O$, and a decahydrate compound, $Na_2CO_3 \cdot 10H_2O$. Also known as soda.

sodium carbonate decahydrate *See* sal soda.

sodium carbonate peroxide [INORG CHEM] $2Na_2CO_3 \cdot 3H_2O$ A white, crystalline powder; used in household detergents, in dental cleansers, and for bleaching and dyeing.

sodium carboxymethylcellulose *See* carboxymethyl cellulose.

sodium caseinate [ORG CHEM] A tasteless, odorless, water-soluble, white powder; used in medicine, foods, emulsification, and stabilization; formed by dissolving casein in sodium hydroxide and then evaporating. Also known as casein sodium; nutrose.

sodium cellulose glycolate *See* carboxymethyl cellulose.

sodium chlorate [INORG CHEM] $NaClO_3$ Water- and alcohol-soluble, colorless crystals with a saline taste; melts at 255°C; used as a medicine, weed killer, defoliant, and oxidizing agent, and in matches, explosives, and bleaching.

sodium chloride [INORG CHEM] NaCl Colorless or white crystals; soluble in water and glycerol, slightly soluble in alcohol; melts at 804°C; used in foods and as a chemical intermediate and an analytical reagent. Also known as common salt; table salt.

sodium chloride solution *See* normal saline.

sodium chlorite [INORG CHEM] $NaClO_2$ An explosive, white, mildly hygroscopic, water-soluble powder; decomposes at 175°C; used as an analytical reagent and oxidizing agent.

sodium chloroacetate [ORG CHEM] $ClCH_2COONa$ A white, water-soluble powder; used as a defoliant and in the manufacture of weed killers, dyes, and pharmaceuticals.

sodium chloroaurate *See* sodium gold chloride.

sodium chloroplatinate [INORG CHEM] $Na_2PtCl_6 \cdot 4H_2O$ A yellow powder, soluble in alcohol and water; used for zinc etching, indelible ink, plating, and mirrors, and in photography and medicine. Also known as platinic sodium chloride; platinum sodium chloride; sodium platinichloride.

sodium chromate [INORG CHEM] $Na_2CrO_4 \cdot 10H_2O$ Water-soluble, translucent, yellow, efflorescent crystals that melt at 20°C; used as a rust preventive and in inks, dyeing, and leather tanning.

sodium citrate [ORG CHEM] $C_6H_5Na_3O_7 \cdot 2H_2O$ A white powder with the taste of salt; soluble in water, slightly soluble in alcohol; has an acid taste; loses water at 150°C; decomposes at red heat; used in medicine as an anticoagulant, in soft drinks, cheesemaking, and electroplating. Also known as trisodium citrate.

sodium cobaltinitrite [INORG CHEM] $Na_3Co(NO_2)_6 \cdot \frac{1}{2}H_2O$ Purple, water-soluble, hygroscopic crystals; used as a reagent for analysis of potassium.

sodium-cooled reactor [NUCLEO] A nuclear reactor in which sodium metal in liquid form is used as the coolant.

sodium cyanate [INORG CHEM] NaOCN A poisonous, white powder; soluble in water, insoluble in alcohol and ether; used as a chemical intermediate and for the manufacture of medicine and the heat-treating of steels.

sodium cyanide [INORG CHEM] NaCN A poisonous, water-soluble, white powder melting at 563°C; decomposes rapidly when standing; used to manufacture pigments, in heat treatment of metals, and as a silver- and gold-ore extractant.

sodium cyanoaurite *See* sodium gold cyanide.

sodium cyclamate [ORG CHEM] $C_6H_{11}NHSO_3Na$ White, water-soluble crystals; sweetness 30 times that of sucrose; formerly used as an artificial sweetener for foods, but now prohibited. Also known as sodium cyclohexylsulfamate.

sodium cyclohexylsulfomate *See* sodium cyclamate.

sodium dehydroacetate [ORG CHEM] $C_8H_7NaO_4 \cdot H_2O$ A tasteless, white powder, soluble in water and propylene glycol; used as a fungicide and plasticizer, in toothpaste, and for pharmaceuticals.

sodium 3,5-diacetamido-2,4,6-triiodobenzoate *See* sodium diatrizoate.

sodium diacetate [ORG CHEM] $CH_3COONa \cdot x(CH_3COOH)$ Combustible, white, water-soluble crystals with an acetic acid aroma; decomposes above 150°C; used to inhibit mold, and as a buffer, varnish hardener, sequestrant, and food preservative, and in mordants.

sodium diatrizoate [ORG CHEM] $C_{11}H_8NO_4I_3Na$ White, water-soluble crystals which give a radiopaque solution; used in medicine as a radiopaque medium. Also known as sodium 3,5-diacetamido-2,4,6-triiodobenzoate.

sodium dichloroisocyanate [ORG CHEM] $HC_3N_3O_3NaCl$ A white, crystalline compound, soluble in water; used as a bactericide and algicide in swimming pools.

sodium dichloroisocyanurate [ORG CHEM] $C_3N_3O_3Cl_2Na$ A white, crystalline powder; used in dry bleaches, detergents, and cleaning compounds, and for water and sewage treatment.

sodium dichromate [INORG CHEM] $Na_2Cr_2O_7 \cdot 2H_2O$ Poisonous, red to orange deliquescent crystals; soluble in water, insoluble in alcohol; melts at 320°C; loses water of hydration upon prolonged heating at 105°C; used as a chemical intermediate and corrosion inhibitor and in the manufacture of pigments, leather tanning, and electroplating. Also known as bichromate of soda; sodium acid chromate; sodium bichromate.

sodium diethyldithiocarbamate [ORG CHEM] $(C_2H_5)_2NCS_2Na$ A solid that is soluble in water and in alcohol; the trihydrate is used to determine small amounts of copper and to separate copper from other metals.

sodium dimethylarsenate *See* sodium cacodylate.

sodium dimethyldithiocarbamate [ORG CHEM] $(CH_3)_2NCS_2Na$ Amber to light green liquid; used as a fungicide, corrosion inhibitor, and rubber accelerator. Abbreviated SDDC.

sodium dinitro-*ortho*-cresylate [ORG CHEM] $CH_3C_6H_2(NO_2)_2ONa$ A toxic, orange-yellow dye, used as an herbicide and fungicide.

sodium *para*-diphenylaminoazobenzenesulfonate *See* tropeoline 00.

sodium dithionite *See* sodium hydrosulfite.

sodium diuranate [ORG CHEM] $Na_2U_2O_7 \cdot 6H_2O$ A yellow-orange solid, soluble in dilute acids; used for colored glazes on ceramics and in the manufacture of fluorescent uranium glass. Also known as uranium yellow.

sodium dodecylbenzenesulfanate [ORG CHEM] $C_{18}H_{29}SO_3Na$ Biodegradable, white to yellow flakes, granules, or powder, used as a synthetic detergent.

sodium ethoxide *See* sodium ethylate.

sodium ethylate [ORG CHEM] C_2H_5ONa A white powder formed from ethanol by replacement of the hydroxyl groups' hydrogen by monovalent sodium; used in organic synthesis. Also known as caustic alcohol; sodium ethoxide.

sodium 2-ethylhexyl sulfoacetate [ORG CHEM] $C_{10}H_{19}O_5SO_3Na$ Cream-colored, water-soluble flakes, used as a stabilizing agent in soapless shampoos.

sodium ethylmercurithiosalicylate *See* thimerosal.

sodium ethylxanthate [ORG CHEM] $C_2H_5OC(S)SNa$ A yellowish powder, soluble in water and alcohol; used as an ore flotation agent. Also known as sodium xanthate; sodium xanthogenate.

sodium feldspar *See* albite.

sodium ferricyanide [INORG CHEM] $Na_3Fe(CN)_6 \cdot H_2O$ A poisonous, deliquescent, red powder; soluble in water, insoluble in alcohol; used in printing and for the manufacture of pigments. Also known as red prussiate of soda.

sodium ferrocyanide [INORG CHEM] $Na_4Fe(CN)_6 \cdot 10H_2O$ Semitransparent crystals, soluble in water; insoluble in alcohol; used in photography, dyes, tanning, and blueprint paper. Also known as yellow prussiate of soda.

sodium fluoborate [INORG CHEM] $NaBF_4$ A white powder with a bitter taste; soluble in water, slightly soluble in alcohol; decomposes when heated, fuses below 500°C; used in electrochemical processes, as flux for nonferrous metals refining, and as an oxidation inhibitor.

sodium fluorescein *See* uranine.

sodium fluoride [INORG CHEM] NaF A poisonous, water-soluble, white powder, melting at 988°C; used as an insecticide and a wood and adhesive preservative, and in fungicides, vitreous enamels, and dentistry.

sodium fluoroacetate [ORG CHEM] $C_2H_2FO_2Na$ A white powder, hygroscopic and nonvolatile; decomposes at 200°C; very soluble in water; used as a repellent for rodents and predatory animals.

sodium fluosilicate [INORG CHEM] Na_2SiF_6 A poisonous, white, amorphous powder; slightly soluble in water; decomposes at red heat; used to fluoridate drinking water and to kill rodents and insects. Also known as sodium silicofluoride.

sodium folate [ORG CHEM] $C_{19}H_{18}N_7NaO_6$ A yellow to yellow-orange liquid; used in medicine for folic acid deficiency. Also known as folic acid sodium salt; sodium pteroylglutamate.

sodium formaldehyde bisulfite *See* formaldehyde sodium bisulfite.

sodium formaldehyde sulfoxylate [ORG CHEM] $HCHO \cdot HSO_2Na \cdot 2H_2O$ A white solid with a melting point of 64°C; soluble in water and alcohol; used as a textile stripping agent and a bleaching agent for soap and molasses. Abbreviated SFS. Also known as sodium sulfoxylate; sodium sulfoxylate formaldehyde.

sodium formate [ORG CHEM] HCOONa A mildly hygroscopic, white powder, soluble in water; has a formic acid aroma; melts at 245°C; used in medicine and as a chemical intermediate and reducing agent.

sodium glucoheptonate [ORG CHEM] $C_7H_{13}O_8Na$ A light tan, crystalline powder; used for cleaning metal, mercerizing, paint stripping, and aluminum etching.

sodium gluconate [ORG CHEM] $C_6H_{11}NaO_7$ A water-soluble, yellow to white, crystalline powder, produced by fermentation; used in food and pharmaceutical industries, and as a metal cleaner. Also known as gluconic acid sodium salt.

sodium glucosulfone [PHARM] $C_{24}H_{34}N_2Na_2O_{18}S_3$ A leprostatic drug, and suppressant for dermatitis herpetiformis. Also known as glucosulfone sodium.

sodium glutamate [ORG CHEM] $COOH(CH_2)_2CH(NH_2)COONa$ A salt of an amino acid; a white powder, soluble in water and alcohol; used as a taste enhancer. Also known as monosodium glutamate (MSG).

sodium gold chloride [INORG CHEM] $NaAuCl_4 \cdot 2H_2O$ Yellow crystals, soluble in water and alcohol; used in photography, fine glass staining, porcelain decorating, and medicine. Also known as gold salt; gold sodium chloride; sodium aurichloride; sodium chloroaurate.

sodium gold cyanide [ORG CHEM] $NaAu(CN)_2$ A yellow, water-soluble powder; used for gold plating radar and electric parts, jewelry, and tableware. Also known as gold sodium cyanide; sodium aurocyanide; sodium cyanoaurite.

sodium-graphite reactor [NUCLEO] A nuclear reactor that uses slightly enriched uranium as fuel, graphite as moderator, and liquid sodium as the coolant.

sodium halide [INORG CHEM] A compound of sodium with a halogen; for example, sodium bromide (NaBr), sodium chloride (NaCl), sodium iodide (NaI), and sodium fluoride (NaF).

sodium halometallate [INORG CHEM] A compound of sodium with halogen and a metal; for example, sodium platinichloride, $Na_2PtCl_6 \cdot 6H_2O$.

sodium hexylene glycol monoborate [ORG CHEM] $C_6H_{12}O_3BNa$ An amorphous, white solid with a melting point of 426°C; used as a corrosion inhibitor, flame retardant, and lubricating-oil additive.

sodium hydrate *See* sodium hydroxide.

sodium hydride [INORG CHEM] NaH A white powder, decomposed by water, and igniting in moist air; used to make sodium borohydride and as a drying agent and a reagent.

sodium hydrogen phosphate [INORG CHEM] $NaH_2PO_4 \cdot H_2O$ Hygroscopic, transparent, water-soluble crystals; used as a purgative, reagent, and buffer.

sodium hydrogen sulfide *See* sodium hydrosulfide.

sodium hydrosulfide [INORG CHEM] $NaSH \cdot 2H_2O$ Toxic, colorless, water-soluble needles, melting at 55°C; used in pulping of paper, processing dyestuffs, hide dehairing, and bleaching. Also known as sodium bisulfide; sodium hydrogen sulfide; sodium sulfhydrate.

sodium hydrosulfite [INORG CHEM] $Na_2S_2O_4$ A fire-hazardous, lemon to whitish-gray powder; soluble in water, insoluble in alcohol; melts at 55°C; used as a chemical intermediate and catalyst and in ore flotation. Also known as sodium dithionite.

sodium hydroxide [INORG CHEM] NaOH White, deliquescent crystals; absorbs carbon dioxide and water from air; soluble in water, alcohol, and glycerol; melts at 318°C; used as an analytical reagent and chemical intermediate, in rubber reclaiming and petroleum refining, and in detergents. Also known as sodium hydrate.

sodium hypochlorite [INORG CHEM] NaOCl Air-unstable, pale-green crystals with sweet aroma; soluble in cold water, decomposes in hot water; used as a bleaching agent for paper pulp and textiles, as a chemical intermediate, and in medicine.

sodium hypophosphite [INORG CHEM] $NaH_2PO_2 \cdot H_2O$ Colorless, pearly, water-soluble crystalline plates or a white, granular powder; used in medicine and electroless nickel plating of plastic and metal.

sodium hyposulfite *See* sodium thiosulfate.

sodium illite *See* brammalite.

sodium indigotin disulfonate *See* indigo carmine.

sodium iodate [INORG CHEM] $NaIO_3$ A white, water- and acetone-soluble powder; used as a disinfectant and in medicine.

sodium iodide [INORG CHEM] NaI A white, air-sensitive powder, deliquescent, with bitter taste; soluble in water, alcohol, and glycerin; melts at 653°C; used in photography and in medicine and as an analytical reagent.

sodium iodide scintillator [NUCLEO] A sodium iodide crystal activated with thallium; used especially in the measurement of the energy of gamma rays, by measuring the amplitude of pulses of light generated by electrons in the crystal which are excited by the gamma rays.

sodium iodomethanesulfonate *See* sodium methiodal.

sodium isopropylxanthate [ORG CHEM] $C_5H_7ONaS_2$ Light yellow, crystalline compound that decomposes at 150°C; soluble in water; used as a postemergence herbicide and as a flotation agent for ores.

sodium lactate [ORG CHEM] $CH_3CHOHCOONa$ A water-soluble, hygroscopic, yellow to colorless, syrupy liquid; solidifies at 17°C; used in medicine, as a corrosion inhibitor in antifreeze, and a hygroscopic agent.

sodium lauryl sulfate [ORG CHEM] $CH_3(CH_2)_{10}CH_2OSO_3Na$ A water-soluble salt, produced as a white or cream powder, crystals, or flakes; used in the textile industry as a

SODIUM IODIDE SCINTILLATOR

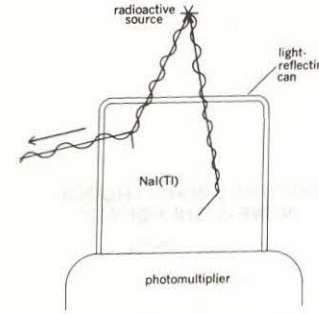


Illustration of γ-ray absorption in sodium iodide crystal used as scintillator. In event at left, photon coming from source undergoes Compton scattering in crystal and secondary quantum escapes unabsorbed. At right, photon is fully absorbed because of photoelectric effect.

wetting agent and detergent. Also known as dodecyl sodium sulfate.

sodium lead alloy [MATER] A highly toxic, explosion-prone alloy of lead and sodium; contains 10% sodium and 90% lead when used to make tetraethyllead, and 2% sodium and 98% lead when used as a deoxidizer and homogenizer in lead-containing nonferrous alloys; reacts with moisture, acids, and oxidizing agents.

sodium lead hyposulfate *See* lead sodium thiosulfate.

sodium lead thiosulfate *See* lead sodium thiosulfate.

sodium mercaptoacetate *See* sodium thioglycolate.

sodium metaarsenite *See* sodium arsenite.

sodium metaborate [INORG CHEM] $NaBO_2$ Water-soluble, white crystals, melting at 966°C; the aqueous solution is alkaline; made by fusing sodium carbonate with borax; used as an herbicide.

sodium metaphosphate [INORG CHEM] $(NaPO_3)_x$ Sodium phosphate groupings; cyclic forms range from $x = 3$ for the trimetaphosphate, to $x = 10$ for the decametaphosphate; sodium hexametaphosphate with $x = 10$ to 20 is probably a polymer; used for dental polishing, building detergents, and water softening, and as a sequestrant, emulsifier, and food additive.

sodium metasilicate *See* sodium silicate.

sodium metavanadate [INORG CHEM] $NaVO_3$ Colorless crystals or a pale green, crystalline powder with a melting point of 630°C; soluble in water; used in inks, fur dyeing, and photography, and as a corrosion inhibitor in gas scrubbers.

sodium methanearsonate [ORG CHEM] $CH_3AsO(OH)(ONa)$ White, water-soluble solid with a melting point of 130–140°C; used as an herbicide. Also known as monosodium methanearsonate; sodium acid methanearsonate; sodium methylarsonate.

sodium methiodal [ORG CHEM] ICH_2SO_3Na A white, crystalline powder, soluble in water and methanol; used in medicine as a radiopaque medium. Also known as sodium iodomethanesulfonate.

sodium methoxide [ORG CHEM] CH_3ONa A salt produced as a free-flowing powder, soluble in methanol and ethanol; used as an intermediate in organic synthesis. Also known as sodium methylate.

sodium methylarsonate *See* sodium methanearsonate.

sodium methylate *See* sodium methoxide.

sodium *N*-methyldithiocarbamate dihydrate [ORG CHEM] $CH_3NHC(S)SNa \cdot 2H_2O$ A white, water-soluble, crystalline solid; used as a fungicide, insecticide, nematicide, and weed killer.

sodium molybdate [INORG CHEM] Na_2MoO_4 Water-soluble crystals, melting at 687°C; used as an analytical reagent, corrosion inhibitor, catalyst, and zinc-plating brightening agent, and in medicine.

sodium 12-molybdophosphate [INORG CHEM] $Na_3PMo_{12}O_{40}$ Yellow, water-soluble crystals; used in neuromicroscopy and photography, and as a water-resisting agent in plastic adhesives and cements.

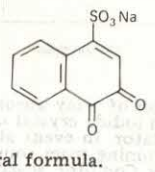
sodium monoxide [INORG CHEM] Na_2O A strong basic white powder soluble in molten caustic soda; forms sodium hydroxide in water; used as a dehydrating and polymerization agent. Also known as sodium oxide.

sodium naphthalenesulfonate [ORG CHEM] $C_{10}H_7SO_3Na$ Yellow, water-soluble crystalline plates or white scales; used as a liquefying agent in animal glue.

sodium naphthionate [ORG CHEM] $NaC_{10}H_6(NH_2)SO_3 \cdot 4H_2O$ White, light-sensitive crystals, soluble in water and insoluble in ether; used in analysis (Riegler's reagent) for nitrous acid. Also known as sodium alphanaphthylamine sulfonate.

sodium β-naphthoquinone-4-sulfonate [ORG CHEM] $C_{10}H_5NaO_5S$ A yellow, crystalline compound, soluble in water; used for the determination of amines and amino acids. Also known as 1,2-naphthoquinone-4-sulfonic acid sodium salt; β-naphthoquinone-4-sulfonic acid sodium salt; sodium 1,2-naphthoquinone-4-sulfonate.

SODIUM β-NAPHTHOQUINONE-4-SULFONATE



Structural formula.

sodium nitrate [INORG CHEM] $NaNO_3$ Fire-hazardous, transparent, colorless crystals with bitter taste; soluble in glycerol and water; melts at 308°C; decomposes when heated; used in manufacture of glass and pottery enamel and as a fertilizer and food preservative.

sodium nitrate gelignites [MATER] A group of explosives, modifications of blasting gelatin in which varying percentages of nitroglycerin are replaced by sodium nitrate and combustible material; characterized by plastic consistency, high densities, medium velocity of detonation, good resistance to the effects of water, and fume characteristics which are suitable for underground workings.

sodium nitrite [INORG CHEM] $NaNO_2$ A fire-hazardous air-sensitive, yellowish powder, soluble in water; decompose above 320°C; used as an intermediate for dyestuffs and for pickling meat, textiles dyeing, and rust-proofing, and in medicine.

sodium nitroferricyanide [INORG CHEM] $Na_2Fe(CN)_5NO \cdot 2H_2O$ Water-soluble, transparent, reddish crystals; slowly decomposes in water; used as an analytical reagent. Also known as sodium nitroprussiate; sodium nitroprusside.

sodium nitroprussiate *See* sodium nitroferricyanide.

sodium nitroprusside *See* sodium nitroferricyanide.

sodium oleate [ORG CHEM] $C_{17}H_{33}COONa$ A white powder with a tallow aroma; soluble in alcohol and water, with partial decomposition; used in medicine and textile waterproofing.

sodium oxalate [ORG CHEM] $Na_2C_2O_4$ A poisonous, white powder; soluble in water, insoluble in alcohol; used for leather tanning and as an analytical reagent.

sodium oxide *See* sodium monoxide.

sodium paraperiodate [INORG CHEM] $Na_3H_2IO_6$ White, crystalline solid, soluble in concentrated sodium hydroxide solutions; used to wet-strengthen paper and to aid in tobacco combustion. Also known as sodium triparaperiodate.

sodium penicillin G_1 *See* benzyl penicillin sodium.

sodium pentaborate [INORG CHEM] $Na_2B_{10}O_{16} \cdot 10H_2O$ A white, water-soluble powder; used in glassmaking, weed killers, and fireproofing compositions.

sodium pentachlorophenate [ORG CHEM] C_6Cl_5ONa A white or tan powder, soluble in water, ethanol, and acetone; used as a fungicide and herbicide.

sodium pentobarbitone *See* pentobarbital sodium.

sodium perborate [INORG CHEM] $NaBO_2 \cdot H_2O_2 \cdot 3H_2O$ A white powder with a saline taste; slightly soluble in water, decomposes in moist air; used in deodorants, in dental compositions and as a germicide. Also known as peroxydol.

sodium perchlorate [INORG CHEM] $NaClO_4$ Fire-hazardous, white, deliquescent crystals; soluble in water and alcohol; melts at 482°C; explosive when in contact with concentrated sulfuric acid; used in jet fuel, as an analytical reagent, and for explosives.

sodium permanganate [INORG CHEM] $NaMnO_4 \cdot 3H_2O$ A fire-hazardous, water-soluble, purple powder; decomposes when heated; used to make saccharin, as a disinfectant, and as an oxidizing agent.

sodium peroxide [INORG CHEM] Na_2O_2 A fire-hazardous, white powder that yellows with heating; decomposes when heated; causes ignition when in contact with water; used as an oxidizing agent and a bleach, and in medicinal soap.

sodium peroxydisulfate *See* sodium persulfate.

sodium persulfate [INORG CHEM] $Na_2S_2O_8$ A white, water-soluble, crystalline powder; used as a bleaching agent and in medicine. Also known as sodium peroxydisulfate.

sodium phenate [ORG CHEM] C_6H_5ONa White, deliquescent crystals, soluble in water and alcohol; decomposed by carbon dioxide in air; used as a chemical intermediate, antiseptic, and military gas absorbent. Also known as sodium carbolate; sodium phenolate.

sodium phenolate *See* sodium phenate.

sodium phenylacetate [ORG CHEM] $C_6H_5CH_2 \cdot COONa$ Pale yellow, 50% aqueous solution which crystallizes at 15°C; used in the manufacture of penicillin G. Also known as sodium α-toluene.

sodium *ortho*-phenylphenate [ORG CHEM] $C_6H_4(C_6H_5)ONa \cdot 4H_2O$ White flakes, soluble in water, methanol, and acetone; used as a bactericide and fungicide. Also known as sodium *ortho*-phenylphenolate.

sodium *ortho*-phenylphenolate *See* sodium *ortho*-phenylphenate.

sodium phenylphosphinate [ORG CHEM] $C_6H_5PH(O)(ONa)$ Crystals with a melting point of 355°C; used as an antioxidant and as a heat and light stabilizer.

sodium phosphate [INORG CHEM] A general term encompassing the following compounds: sodium hexametaphosphate, sodium metaphosphate, dibasic sodium phosphate, hemibasic sodium phosphate, monobasic sodium phosphate, tribasic so-

dium phosphate, sodium pyrophosphate, and acid sodium pyrophosphate.

sodium phosphite [INORG CHEM] $Na_2HPO_3 \cdot 5H_2O$ White, hygroscopic crystals, melting at 53°C; soluble in water, insoluble in alcohol; used in medicine.

sodium phosphotungstate *See* sodium 12-tungstophosphate.

sodium phytate [ORG CHEM] $C_6H_9O_{24}P_6Na_9$ A hygroscopic, water-soluble powder; used as a chelating agent for trace metals and in medicine.

sodium picramate [ORG CHEM] $NaOC_6H_2(NO_2)_2NH_2$ A yellow salt, soluble in water; used in the manufacture of dye intermediates.

sodium platinichloride *See* sodium chloroplatinate.

sodium plumbite [INORG CHEM] $Na_2PbO_2 \cdot 3H_2O$ A toxic, corrosive solution of lead oxide (litharge) in sodium hydroxide; used (as doctor solution) to sweeten gasoline.

sodium polymannuronate *See* sodium alginate.

sodium polysulfide [INORG CHEM] Na_2S_x Yellow-brown granules, used to make dyes and colors, and insecticides, as a petroleum additive, and in electroplating.

sodium-potassium tartrate *See* potassium-sodium tartrate.

sodium propionate [ORG CHEM] CH_3CH_2COONa Deliquescent, transparent crystals; soluble in water, slightly soluble in alcohol; used as a fungicide, and mold preventive.

sodium pteroylglutamate *See* sodium folate.

sodium pyroborate *See* sodium borate.

sodium pyrophosphate [INORG CHEM] $Na_4P_2O_7$ A white powder; soluble in water, insoluble in alcohol and ammonia; melts at 880°C; used as a water softener and newsprint deinker, and to control drilling-mud viscosity. Also known as normal sodium pyrophosphate; tetrasodium pyrophosphate (TSPP).

sodium saccharin [ORG CHEM] $C_7H_4NNaO_3S \cdot 2H_2O$ White crystals or a crystalline powder, soluble in water and slightly soluble in alcohol; used in medicine and as a nonnutritive food sweetener. Also known as sodium benzosulfimide; soluble gluside; soluble saccharin.

sodium salicylate [ORG CHEM] HOC_6H_4COONa A shiny, white powder with sweetish taste and mild aromatic aroma; soluble in water, glycerol, and alcohol; used in medicine and as a preservative.

sodium selenate [INORG CHEM] $Na_2SeO_4 \cdot 10H_2O$ White, poisonous, water-soluble crystals; used as an insecticide.

sodium selenite [INORG CHEM] $Na_2SeO_3 \cdot 5H_2O$ White, water-soluble crystals; used in glass manufacture, as a bacteriological reagent, and for decorating porcelain.

sodium sesquicarbonate [INORG CHEM] $Na_2CO_3 \cdot NaHCO_3 \cdot 2H_2O$ White, water-soluble, needle-shaped crystals; used as a detergent, an alkaline agent for water softening and leather tanning, and a food additive.

sodium sesquisilicate [INORG CHEM] $Na_6Si_2O_7$ A white, water-soluble powder; used for metals cleaning and textile processing.

sodium silicate [INORG CHEM] Na_2SiO_3 A gray-white powder; soluble in alkalies and water, insoluble in alcohol and acids; used to fireproof textiles, in petroleum refining and corrugated paperboard manufacture, and as an egg preservative. Also known as liquid glass; silicate of soda; sodium metasilicate; soluble glass; water glass.

sodium silicoaluminate *See* sodium aluminosilicate.

sodium silicofluoride *See* sodium fluosilicate.

sodium stannate [INORG CHEM] $Na_2SnO_3 \cdot 3H_2O$ Water- and alcohol-insoluble, whitish crystals; used in ceramics, dyeing, and textile fireproofing, and as a mordant. Also known as preparing salt.

sodium stearate [ORG CHEM] $NaC_{18}H_{35}O_2$ A white powder with a fatty aroma; soluble in hot water and alcohol; used in medicine and toothpaste and as a waterproofing agent.

sodium subsulfite *See* sodium thiosulfate.

sodium succinate [ORG CHEM] $Na_2C_4H_4O_4 \cdot 6H_2O$ Water-soluble, white crystals; loses water at 120°C; used in medicine.

sodium sulfate [INORG CHEM] Na_2SO_4 Crystalline compound, melts at 888°C, soluble in water; used to make paperboard, kraft paper, glass, and freezing mixtures.

sodium sulfhydrate *See* sodium hydrosulfide.

sodium sulfide [INORG CHEM] Na_2S An irritating, water-soluble, yellow to red, deliquescent powder; melts at 1180°C; used as a chemical intermediate, solvent, photographic reagent, and analytical reagent. Also known as sodium sulfuret.

sodium sulfite [INORG CHEM] Na_2SO_3 White, water-soluble, crystals with a sulfurous, salty taste; decomposes when heated; used as a chemical intermediate and food preservative, in medicine and paper manufacturing, and for dyes and photographic developing.

sodium sulfite process [CHEM ENG] A process for the digestion of wood chips in a solution of magnesium, ammonium, or calcium disulfite containing free sulfur dioxide; used in papermaking.

sodium sulfocyanate *See* sodium thiocyanate.

sodium sulfoxylate *See* sodium formaldehyde sulfoxylate.

sodium sulfoxylate formaldehyde *See* sodium formaldehyde sulfoxylate.

sodium sulfuret *See* sodium sulfide.

sodium tartrate [ORG CHEM] $Na_2C_4H_4O_6 \cdot 2H_2O$ White, water-soluble crystals or granules; loses water at 150°C; used in medicine and as a food stabilizer and sequestrant. Also known as disodium tartrate; sal tartar.

sodium TCA *See* sodium trichloroacetate.

sodium tetraborate *See* sodium borate.

sodium tetrafluorescein *See* easin.

sodium tetraphenylborate [ORG CHEM] $[(C_6H_5)_4B]Na$ A snow-white, crystalline compound, soluble in water and acetone; used as a reagent in the determination of the following ions: potassium, ammonium, rubidium, and cesium. Also known as tetraphenylboron sodium.

sodium tetrasulfide [INORG CHEM] Na_2S_4 Hygroscopic, yellow or dark-red crystals, melting at 275°C; used for insecticides and fungicides, ore flotation, and dye manufacture, and as a reducing agent.

sodium thiocyanate [INORG CHEM] NaSCN A poisonous, water- and alcohol-soluble, deliquescent, white powder; melts at 287°C; used as an analytical reagent, solvent, and chemical intermediate, and for rubber treatment and textile dyeing and printing. Also known as sodium sulfocyanate.

sodium thioglycolate [ORG CHEM] $C_2H_3NaO_2S$ A water-soluble compound produced as hygroscopic crystals; used as an ingredient in bacteriology mediums, and in hair-waving solutions. Also known as sodium mercaptoacetate.

sodium thiopental [PHARM] $C_{11}H_{17}N_2O_2SNa$ A yellowish-white powder, soluble in water and alcohol; used in medicine as a barbiturate.

sodium thiosulfate [INORG CHEM] $Na_2S_2O_3 \cdot 5H_2O$ White, translucent crystals or powder with a melting point of 48°C; soluble in water and oil of turpentine; used as a fixing agent in photography, for extracting silver from ore, in medicine, and as a sequestrant in food. Also known as sodium hyposulfite; sodium subsulfite.

sodium α-toluene *See* sodium phenylacetate.

sodium trichloroacetate [ORG CHEM] CCl_3COONa A toxic material, used in herbicides and pesticides. Abbreviated sodium TCA.

sodium 2,4,5-trichlorophenate [ORG CHEM] $C_6H_2Cl_3ONa \cdot 1\frac{1}{2}H_2O$ Buff to light brown flakes, soluble in water, methanol, and acetone; used as a bactericide and fungicide.

sodium triparaperiodate *See* sodium paraperiodate.

sodium triphosphate *See* sodium tripolyphosphate.

sodium tripolyphosphate [INORG CHEM] $Na_5P_3O_{10}$ A white powder with a melting point of 622°C; used for water softening and as a food additive and texturizer. Abbreviated STPP. Also known as pentasodium triphosphate; sodium triphosphate.

sodium tungstate [INORG CHEM] $Na_2WO_4 \cdot 2H_2O$ Water-soluble, colorless crystals; lose water at 100°C, melts at 692°C; used as a chemical intermediate analytical reagent, and for fireproofing. Also known as sodium wolframate.

sodium 12-tungstophosphate [INORG CHEM] $Na_3[P(W_3O_{10})_4] \cdot xH_2O$ A yellowish-white powder, soluble in water and alcohols; used to manufacture organic pigments, as an antistatic agent for textiles, in leather tanning, and as a water-resistant agent in plastic films, adhesives, and cements. Also known as sodium phosphotungstate.

sodium undecylenate [ORG CHEM] $C_{11}H_{19}O_2Na$ A white, water-soluble powder that decomposes above 200°C; used in cosmetics and pharmaceuticals as a bacteriostat and fungistat.

sodium-vapor lamp [ELECTR] A discharge lamp containing sodium vapor, used chiefly for outdoor illumination.

sodium wolframate *See* sodium tungstate.

sodium xanthate *See* sodium ethylxanthate.

sodium xanthogenate *See* sodium ethylxanthate.

sofar [NAV] A system of fixing a position at sea by exploding

a charge under water, measuring the time for the shock waves to travel through water to three widely separated shore stations, and calculating the position of the explosive by triangulation; the explosive can be dropped from a lifeboat by survivors of air or sea disasters. Derived from sound fixing and ranging.

soffione [GEOL] A jet of steam and other vapors issuing from the ground in a volcanic area.

soffit [CIV ENG] The underside of a horizontal structural member, such as a beam or a slab.

soffosian knob *See* frost mound.

soft cataract [MED] A cataract, affecting the cortex of the lens of the eye, which is of soft consistency and has a milky appearance.

soft chancre *See* chancroid.

soft coal *See* bituminous coal.

soft copy [COMPUT SCI] Information that is displayed on a screen, given by voice, or stored in a form that cannot be read directly by a person, as on magnetic tape, disk, or microfilm.

soft-copy terminal [COMPUT SCI] A computer terminal that presents its output through an electronic display, rather than printing it on paper.

soft coral [INV ZOO] The common name for coelenterates composing the order Alcyonacea; the colony is supple and leathery.

soft dot [GRAPHICS] A dot on a screened halftone with an excessive fringe having an area almost as large as the dot itself.

softening agent [MATER] **1.** A substance that is added to another substance to increase softness; for example, stearic acid added to plastics, fat-liquoring agents to leather, and fatty alcohol to fabrics. **2.** A chemical that softens hard water by removing or trapping calcium and magnesium ions.

softening point [PHYS] For a substance which does not have a definite melting point, the temperature at which viscous flow changes to plastic flow.

softening range [PHYS] The temperature range in which material without a melting point goes from a rigid to a soft condition.

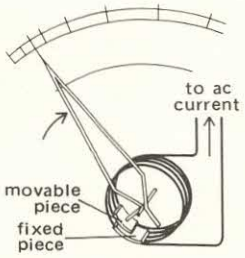
soft ground [MIN ENG] **1.** A mineral deposit which can be mined without drilling and shooting hard rock. **2.** The rock about underground openings that does not stand well and requires heavy timbering.

soft hail *See* snow pellets.

soft hammer [ENG] A hammer having a head made of a soft material, such as copper, lead, rawhide, or plastic; used to prevent damage to a finished surface.

soft-iron ammeter [ENG] An ammeter in which current in a coil causes two pieces of magnetic material within the coil, one fixed and one attached to a pointer, to become similarly magnetized and to repel each other, moving the pointer; used for alternating-current measurement.

SOFT-IRON AMMETER



Schematic of the repulsion-type soft-iron ammeter showing the fixed and movable pieces of magnetic material.

soft landing [AERO ENG] The act of landing on the surface of a planet or moon without damage to any portion of the vehicle or payload, except possibly the landing gear.

soft limiting [ELECTR] Limiting in which there is still an appreciable increase in output for increases in input signal strength up into the range at which limiting action occurs.

soft magnetic material [ELECTROMAG] A magnetic material which is relatively easily magnetized or demagnetized.

soft missile base [CIV ENG] A missile-launching base that is not protected against a nuclear explosion.

soft palate [ANAT] The posterior part of the palate which consists of an aggregation of muscles, the tensor veli palatini, levator veli palatini, azygos uvulae, palatoglossus, and palatopharyngeus, and their covering mucous membrane.

soft patch [ENG] A patch in a crack in a vessel such as a steam boiler consisting of a soft material inserted in the crack and covered by a metal plate bolted or riveted to the vessel.

soft phosphate [MATER] Powdery, impure tricalcium phosphate separated in fertilizer manufacture from rock and pebble phosphates.

soft point [ORD] A bullet with a soft point, intended to spread upon striking a target with some resistance, such as the flesh of game; not permitted in combat operations.

soft radiation [PHYS] Radiation whose particles or photons have a low energy, and, as a result, do not penetrate any type of material readily.

soft rime [HYD] A white, opaque coating of fine rime deposited chiefly on vertical surfaces, especially on points and edges of objects, generally in supercooled fog.

soft rock [MIN ENG] Rock that can be removed by air-operated hammers, but cannot be handled economically by a pick. [PETR] **1.** A broad designation for sedimentary rock. **2.** A rock that is relatively nonresistant to erosion.

soft rot [PL PATH] A mushy, watery, or slimy disintegration of plant parts caused by either fungi or bacteria.

soft-shell disease [INV ZOO] A disease of lobsters caused by a chitinous bacterium which extracts chitin from the exoskeleton.

soft shower [NUC PHYS] A cosmic-ray shower that cannot penetrate 15 to 20 centimeters of lead; consists mainly of electrons and positrons.

soft solder [MET] Solder composed of an alloy of lead and tin. Also known as low melting solder.

soft soldering [MET] Soldering with a soft solder.

soft tube [ELECTR] **1.** An x-ray tube having a vacuum of about 0.000002 atmosphere (0.202650 newton per square meter), the remaining gas being left in intentionally to give less-penetrating rays than those of a more completely evacuated tube. **2.** *See* gassy tube.

software [COMPUT SCI] The totality of programs usable on a particular kind of computer, together with the documentation associated with a computer or program, such as manuals, diagrams, and operating instructions.

software compatibility [COMPUT SCI] Property of two computers, with respect to a particular programming language, in which a source program from one machine in that language will compile and execute to produce acceptably similar results in the other.

software engineering [COMPUT SCI] The systematic application of scientific and technological knowledge, through the medium of sound engineering principles, to the production of computer programs, and to the requirements definition, functional specification, design description, program implementation, and test methods that lead up to this code.

software flexibility [COMPUT SCI] The ability of software to change easily in response to different user and system requirements.

software interface [COMPUT SCI] A computer language whereby computer programs can communicate with each other, and one language can call upon another for assistance.

software maintenance [COMPUT SCI] The correction of errors in software systems and the remedying of inadequacies in running the software.

software monitor [COMPUT SCI] A system, used to evaluate the performance of computer software, that is similar to accounting packages, but can collect more data concerning usage of various components of a computer system and is usually part of the control program.

software multiplexing [COMPUT SCI] A procedure used in a time-sharing or multiprogrammed system in which the central processing unit, acting under control of a software algorithm, interleaves its attention between a family of programs waiting for service, in such a way that the programs appear to be processed in parallel.

software package [COMPUT SCI] A program for performing some specific function or calculation which is useful to more than one computer user and is sufficiently well documented to be used without modification on a defined configuration of some computer system.

software piracy [COMPUT SCI] The process of copying commercial software without the permission of the originator.

soft waste [TEXT] The waste from yarn manufacturing prior to spinning, including some spinning waste; usually reprocessed in the mill.

soft water [CHEM] Water that is free of magnesium or calcium salts.

soft wood [MATER] Wood from a coniferous tree.

soft x-ray [ELECTROMAG] An x-ray having a comparatively long wavelength and poor penetrating power.

soft x-ray absorption spectroscopy [SPECT] A spectroscopic technique which is used to get information about unoccupied states above the Fermi level in a metal or about empty conduction bands in an inoculator.

soft x-ray appearance potential spectroscopy [SPECT] A branch of electron spectroscopy in which a solid surface is bombarded with monochromatic electrons, and small but abrupt changes in the resulting total x-ray emission intensity are detected as the energy of the electrons is varied. Abbreviated SXAPS.

sogasoid [PHYS] A system of solid particles dispersed in a gas.

Sohm Abyssal Plain [GEOL] A basin in the North Atlantic, about 2400 fathoms deep, between Newfoundland and the Mid-Atlantic Ridge.

Sohncke's law [PHYS] The law that the stress per unit area normal to a crystallographic plane needed to produce a fracture in a crystal is a constant characteristic of a crystalline substance.

soil [GEOL] **1.** Unconsolidated rock material over bedrock. **2.** Freely divided rock-derived material containing an admixture of organic matter and capable of supporting vegetation.

soil air [GEOL] The air and other gases in spaces in the soil; specifically, that which is found within the zone of aeration. Also known as soil atmosphere.

soil atmosphere *See* soil air.

soil blister *See* frost mound.

soil-cement [MATER] A compacted mixture of soil, cement, and water used as a base course or surface for roads and airport paving.

soil chemistry [GEOCHEM] The study and analysis of the inorganic and organic components and the life cycles within soils.

soil colloid [GEOL] Colloidal complex of soils composed principally of clay and humus.

soil complex [GEOL] A mapping unit used in detailed soil surveys; consists of two or more recognized classifications.

soil conservation [ECOL] Management of soil to prevent or reduce soil erosion and depletion by wind and water.

soil creep [GEOL] The slow, steady downhill movement of soil and loose rock on a slope. Also known as surficial creep.

soil erosion [GEOL] The detachment and movement of topsoil by the action of wind and flowing water.

soil flow *See* solifluction.

soil fluction *See* solifluction.

soil formation *See* soil genesis.

soil genesis [GEOL] The mode by which soil originates, with particular reference to processes of soil-forming factors responsible for the development of true soil from unconsolidated parent material. Also known as pedogenesis; soil formation.

soil mechanics [ENG] The application of the laws of solid and fluid mechanics to soils and similar granular materials as a basis for design, construction, and maintenance of stable foundations and earth structures.

soil microbiology [MICROBIO] A study of the microorganisms in soil, their functions, and the effect of their activities on the character of the soil and the growth and health of plant life.

soil moisture *See* soil water.

soil physics [GEOPHYS] The study of the physical characteristics of soils; concerned also with the methods and instruments used to determine these characteristics.

soil pipe [CIV ENG] A vertical cast-iron or plastic pipe for carrying sewage from a building into the soil drain.

soil profile [GEOL] A vertical section of a soil, showing horizons and parent material.

soil rot [PL PATH] Plant rot caused by soil microorganisms.

soil science [GEOL] The study of the formation, properties, and classification of soil; includes mapping. Also known as pedology.

soil series [GEOL] A family of soils having similar profiles, and developing from similar original materials under the influence of similar climate and vegetation.

soil shear strength [GEOL] The maximum resistance of a soil to shearing stresses.

soil stabilizer [MATER] A chemical that alters the engineering property of a natural soil; used to stabilize soil slopes, to prepare for building foundations, and to prevent erosion.

soil stack [BUILD] The main vertical pipe into which flows the waste water from all fixtures in a structure.

soil stripes [GEOL] Alternating bands of fine and coarse material in a soil structure.

soil structure [GEOL] Arrangement of soil into various aggregates, each differing in the characteristics of its particles.

soil survey [GEOL] The systematic examination of soils, their description and classification, mapping of soil types, and the assessment of soils for various agricultural and engineering uses.

soil thermograph [ENG] A remote-recording thermograph whose sensing element may be buried at various depths in the earth.

soil thermometer [ENG] A thermometer used to measure the temperature of the soil, usually the mercury-in-glass thermometer. Also known as earth thermometer.

soil water [HYD] Water in the belt of soil water. Also known as rhizic water; soil moisture.

soil-water belt *See* belt of soil water.

soil-water zone *See* belt of soil water.

sol [CHEM] A colloidal solution consisting of a suitable dispersion medium, which may be gas, liquid, or solid, and the colloidal substance, the disperse phase, which is distributed throughout the dispersion medium.

Sol *See* sun.

solaire [METEOROL] A name generally applied to winds from an easterly direction (that is, from the rising sun) in central and southern France.

sol-air temperature [METEOROL] The temperature which, under conditions of no direct solar radiation and no air motion, would cause the same heat transfer into a house as that caused by the interplay of all existing atmospheric conditions.

Solanaceae [BOT] A family of dicotyledonous plants in the order Polemoniales having internal phloem, mostly numerous ovules and seeds on axile placentae, and mostly cellular endosperm.

solano [METEOROL] A southeasterly or easterly wind on the southeast coast of Spain in summer; usually an extension of the sirocco; it is hot and humid and sometimes brings rain; when dry, it is dusty.

solar absorption index [GEOPHYS] A relation of the sun's angle at various latitudes and local times with the ionospheric absorption.

solar activity [ASTRON] Disturbances on the surface of the sun; examples are sunspots, prominences, and solar flares.

solar air mass [METEOROL] The optical air mass penetrated by light from the sun for any given position of the sun.

solar antapex [ASTRON] The point on the celestial sphere away from which the solar system is moving; it lies in the constellation Columba.

solar apex [ASTRON] A point toward which the solar system is moving; it is about 10° southwest of the star Vega.

solar atmospheric tide [GEOPHYS] An atmospheric tide due to the thermal or gravitational action of the sun.

solar attachment [ENG] A device for determining the true meridian directly from the sun; used an an attachment on a surveyor's transit or compass.

solar battery [ELECTR] An array of solar cells, usually connected in parallel and series.

solar bridge [ASTRON] A bright, narrow, streak-shaped region which is sometimes observed across a large sunspot, dividing the umbra into two or more parts.

solar burst [ASTROPHYS] A sudden increase in the radio-frequency energy radiated by the sun, generally associated with visible solar flares.

solar calendar [ASTRON] A calendar based on the time period known as the tropical year, which has 365.24220 days.

solar cell [ELECTR] A *pn*-junction device which converts the radiant energy of sunlight directly and efficiently into electrical energy.

solar climate [CLIMATOL] The hypothetical climate which would prevail on a uniform solid earth with no atmosphere; thus, it is a climate of temperature alone and is determined only by the amount of solar radiation received.

solar constant [METEOROL] The rate at which energy from the sun is received just outside the earth's atmosphere on a surface normal to the incident radiation and at the earth's mean distance from the sun; it is 0.140 watt per square centimeter.

solar cooking [FOOD ENG] The preparation of food by concentrating solar radiation on a heater plate.

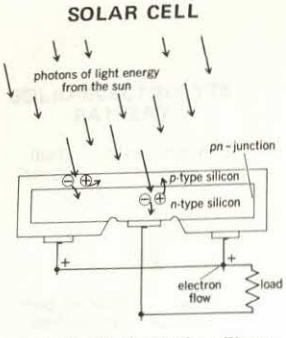
solar corona [ASTRON] The upper, rarefied solar atmosphere which becomes visible around the darkened sun during a total solar eclipse. Also known as corona.

solar cosmic rays *See* energetic solar particles.

solar cycle [ASTRON] The periodic change in the number of sunspots; the cycle is taken as the interval between successive minima and is about 11.1 years.

solar day [ASTRON] A time measurement, the duration of one rotation of the earth on its axis with respect to the sun; this may be a mean solar day or an apparent solar day as the reference is to the mean sun or apparent sun.

solar dermatitis [MED] Any of various skin eruptions caused by exposure to the sun, excluding sunburn.



Cross-sectional view of a silicon *pn*-junction solar cell, illustrating the creation of electron pairs by photons of light energy from the sun.

solar distillation [CHEM ENG] A procedure in which the sun's heat is used to evaporate seawater in order to produce sodium chloride and other salts or potable water.

solar eclipse [ASTRON] An eclipse that takes place when the new moon passes between the earth and the sun and the shadow formed reaches the earth; may be classified as total, partial, or annular.

solar energy [ASTROPHYS] The energy transmitted from the sun in the form of electromagnetic radiation.

solar engine [MECH ENG] An engine which converts thermal energy from the sun into electrical, mechanical, or refrigeration energy; may be used as a method of spacecraft propulsion, either directly by photon pressure on huge solar sails, or indirectly from solar cells or from a reflector-boiler combination used to heat a fluid.

solar evaporation [HYD] The evaporation of water due to the sun's heat.

solar-excited laser *See* sun-pumped laser.

solar faculae [ASTRON] Bright streaks or regions on the surface of the sun, especially near solar sunspots.

solar flare [ASTROPHYS] An abrupt increase in the intensity of the H-α and other emission near a sunspot region; the brightness may be many times that of the associated plage.

solar furnace [ENG] An image furnace in which high temperatures are produced by focusing solar radiation.

solar generator [ELEC] An electric generator powered by radiation from the sun and used in some satellites.

solar heat exchanger drive [AERO ENG] A proposed method of spacecraft propulsion in which solar radiation is focused on an area occupied by a boiler to heat a working fluid that is expelled to produce thrust directly. Abbreviated SHED.

solar heating [MECH ENG] The conversion of solar radiation into heat for technological, comfort-heating, and cooking purposes.

solar heat storage [ENG] The storage of solar energy for later use; usually accomplished by the heating of water or fusing a salt, although sand and gravel have been used as storage media.

solar house [BUILD] A house with large expanses of glass designed to catch solar radiation for heating.

solarimeter [ENG] **1.** A type of pyranometer consisting of a Moll thermopile shielded from the wind by a bell glass. **2.** *See* pyranometer.

solarization [GRAPHICS] **1.** Reversal of a photographic image due to great overexposure. **2.** *See* Sabattier effect. [PHYS] Loss of transparency or coloration of glass exposed to sunlight or ultraviolet radiation.

solar magnetic field [ASTROPHYS] The magnetic field that pervades the ionized and highly conducting gas composing the sun.

solar magnetograph [ENG] An instrument that utilizes the Zeeman effect to directly measure the strength and polarity of the complex patterns of magnetic fields at the sun's surface; comprises a telescope, a differential analyzer, a spectrograph, and a photoelectric or photographic means of differencing and recording.

solar month [ASTRON] A time interval equal to one-twelfth of the solar year.

solar motion [ASTRON] The two main motions of the sun: relative motion with respect to the neighboring stars, or motion due to the rotation of the Milky Way of which the sun is a part.

solar neutrino unit [ASTROPHYS] A unit for measuring the capture rate of neutrinos emanating from the sun, equal to 10^{-36} per second per atom. Abbreviated SNU.

solar noise *See* solar radio noise.

solar nutation [ASTRON] Nutation caused by the change in declination of the sun.

solar orbit [ASTRON] An orbit of a planet or other celestial body or satellite about the sun.

solar parallax [ASTRON] The sun's mean equatorial horizontal parallax p, which is the angle subtended by the equatorial radius r of the earth at mean distance a of the sun.

solar photophthalmia *See* snow blindness.

solar physics [ASTROPHYS] The scientific study of all physical phenomena connected with the sun; it overlaps with geophysics in the consideration of solar-terrestrial relationships, such as the connection between solar activity and auroras.

solar power [MECH ENG] The conversion of the energy of the sun's radiation to useful work.

solar probe [AERO ENG] A space probe whose trajectory passes near the sun so that instruments on board may detect and transmit back to earth data about the sun.

solar prominence [ASTRON] Sheets of luminous gas emanating from the sun's surface; they appear dark against the sun's disk but bright against the dark sky, and occur only in regions of horizontal magnetic fields.

solar propagation [BOT] A method of rooting plant cuttings involving the use of a modified hotbed; bottom heat is provided by radiation of stored solar heat from bricks or stones in the bottom of the hotbed frame.

solar propulsion [AERO ENG] Spacecraft propulsion with a system composed of a type of solar engine.

solar pumping [OPTICS] The use of sunlight focused directly into a laser rod for pumping to induce lasing action.

solar radiation [ASTROPHYS] The electromagnetic radiation and particles (electrons, protons, and rarer heavy atomic nuclei) emitted by the sun.

solar-radiation observation [GEOPHYS] An evaluation of the radiation from the sun that reaches an observation point; the observing instrument is usually a pyrheliometer or pyranometer.

solar radio emission [ASTROPHYS] Radio-frequency electromagnetic radiation emitted from the sun, and increasing greatly in intensity during sunspots and flares.

solar radio noise [ELECTROMAG] Radio noise originating at the sun, and increasing greatly in intensity during sunspots and flares; it is heard as a hissing noise on shortwave radio receivers. Also known as solar noise.

solar rocket [AERO ENG] A rocket designed to carry instruments to measure and transmit parameters of the sun.

solar sail [AERO ENG] A surface of a highly polished material upon which solar light radiation exerts a pressure. Also known as photon sail.

solar satellite [AERO ENG] A space vehicle designed to enter into orbit about the sun. Also known as sun satellite.

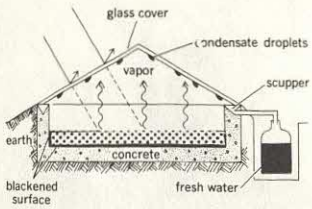
solar sensor [ELECTR] A light-sensitive diode that sends a signal to the attitude-control system of a spacecraft when it senses the sun. Also known as sun sensor.

solar spectrum [ASTROPHYS] The spectrum of the sun's electromagnetic radiation extending over the whole electromagetic spectrum, from wavelengths of 10^{-9} centimeter to 30 kilometers.

solar spicule *See* spicule.

solar still [CHEM ENG] A device for evaporating seawater, in which water is confined in one or more shallow pools, over which is placed a roof-shaped transparent cover made of glass or plastic film; the sun's heat evaporates the water, leaving behind a residue of salt; the vapor from the evaporated water condenses on the surface of the cover and trickles down into gutters, which thus collect fresh water.

SOLAR STILL



Roof-type solar still. Dotted area above the concrete is sea water.

solar system [ASTRON] The sun and the celestial bodies moving about it; the bodies are planets, satellites of the planets, asteroids, comets, and meteor swarms.

solar telescope [OPTICS] An observational instrument of the solar astronomer; it is designed so that heating effects produced by the sun do not distort the images; the two classes consist of those designed for observations of the brilliant solar disk, and those designed for the study of the much fainter prominences and the still fainter corona through the relatively bright, scattered light of the sky.

solar-terrestrial phenomena [GEOPHYS] All observed physical effects that are caused by solar activity; the phenomena may be in the atmosphere or on the earth's surface; an example is the aurora borealis.

solar tide [OCEANOGR] The tide caused solely by the tide-producing forces of the sun.

solar time [ASTRON] Time based on the rotation of the earth relative to the sun.

solar-topographic theory [CLIMATOL] The theory that the changes of climate through geologic time (the paleoclimates) have been due to changes of land and sea distribution and orography, combined with fluctuations of solar radiation of the order of 10–20% on either side of the mean.

solar tower [ASTRON] A tower which has a coelostat mounted on top to reflect the sun's light vertically downward so that it may be studied with a spectroheliograph or other astronomical instrument at the bottom of the tower.

solar turboelectric drive [AERO ENG] A proposed method of spacecraft propulsion in which solar radiation is focused on an area occupied by a boiler to heat a working fluid that drives a

turbine generator system, producing electrical energy. Abbreviated STED.

solar-type star [ASTRON] Any of the stars (yellow stars) of spectral type G, so called because the sun is in this class.

solar ultraviolet radiation [ASTROPHYS] That portion of the sun's electromagnetic radiation that has wavelengths from about 400 to about 4 nanometers; this radiation may sufficiently ionize the earth's atmosphere so that propagation of radio waves is affected.

solar wind [GEOPHYS] The supersonic flow of gas, composed of ionized hydrogen and helium, which continuously flows from the sun out through the solar system with velocities of 300 to 1000 kilometers per second; it carries magnetic fields from the sun.

Solasteridae [INV ZOO] The sun stars, a family of asteroid echinoderms in the order Spinulosida.

solation [PHYS CHEM] The change of a substance from a gel to a sol.

solder [MET] **1.** To join by means of solder. **2.** An alloy, such as of zinc and copper, or of tin and lead, used when melted to join metallic surfaces.

solder brazing [MET] Brazing by means of a relatively high-melting solder.

solder glass [MATER] A special glass having a relatively low softening point (below 500°C); used to join two pieces of higher-melting glass without softening and deforming them.

soldering embrittlement [MET] The reduction in mechanical properties of a metal due to the local penetration of solder along grain boundaries.

soldering flux [MET] A chemical substance which aids the flow of solder and serves to remove and prevent the formation of oxides on the pieces to be united.

soldering gun [ENG] A soldering iron shaped like a gun.

soldering iron [ENG] A rod of copper with a handle on one end and pointed or wedge-shaped at the other end, and used for applying heat in soldering.

soldering lug [ELEC] A stamped metal strip used as a terminal to which wires can be soldered.

soldering pencil [ENG] A small soldering iron, about the size and weight of a standard lead pencil, used for soldering or unsoldering joints on printed wiring boards.

solderless contact *See* crimp contact.

solderless wrapped connection *See* wire-wrap connection.

sole [BUILD] The horizontal member beneath the studs in a framed building. [ELECTR] Electrode used in magnetrons and backward-wave oscillators to carry a current that generates a magnetic field in the direction wanted. [GEOGR] The lowest part of a valley. [GEOL] **1.** The bottom of a sedimentary stratum. **2.** The middle and lower portion of the shear surface of a landslide. **3.** The underlying fault plane of a thrust nappe. Also known as sole plane. [HYD] The basal ice of a glacier, often dirty in appearance due to contained rock fragments.

soleil compensator [OPTICS] A compensator which resembles the Babinet compensator but is constructed so that the phase change is constant over the entire field.

sole injection [GEOL] An igneous intrusion that was put in place along a thrust plane.

sole mark [GEOL] An irregularity or penetration on the undersurface of a sedimentary stratum.

Solemyidae [INV ZOO] A family of bivalve mollusks in the order Protobranchia.

Solenichthyes [VERT ZOO] An equivalent name for Gasterosteiformes.

solenium [INV ZOO] A diverticulum of the enteron in certain hydroids.

solenocyte [INV ZOO] Any of various hollow, flagellated cells in the nephridia of the larvae of certain annelids, mollusks, rotifers, and lancelets.

solenodon [VERT ZOO] Either of two species of insectivorous mammals comprising the family Solenodontidae; the almique (*Atopogale cubana*) is found only in Cuba, while the white agouta (*Solenodon paradoxus*) is confined to Haiti.

Solenodontidae [VERT ZOO] The solenodons, a family of insectivores belonging to the group Lipotyphla.

Solenogastres [INV ZOO] The equivalent name for Aplacophora.

solenoid [ELECTROMAG] Also known as electric solenoid. **1.** An electrically energized coil of insulated wire which produces a magnetic field within the coil. **2.** In particular, a coil that surrounds a movable iron core which is pulled to a central position with respect to the coil when the coil is energized by sending current through it. [METEOROL] *See* meteorological solenoid.

solenoidal [MATH] A vector field has this property in a region if its divergence vanishes at every point of the region.

solenoidal index [METEOROL] The difference between the mean virtual temperature from the surface to some specified upper level averaged around the earth at 55° latitude, and the mean virtual temperature for the corresponding layer averaged at 35° latitude.

solenoid brake [MECH ENG] A device that retards or arrests rotational motion by means of the magnetic resistance of a solenoid.

solenoid valve [MECH ENG] A valve actuated by a solenoid, for controlling the flow of gases or liquids in pipes.

Solenopora [PALEOBOT] A genus of extinct calcareous red algae in the family Solenoporaceae that appeared in the Late Cambrian and lasted until the Early Tertiary.

Solenoporaceae [PALEOBOT] A family of extinct red algae having compact tissue and the ability to deposit calcium carbonate within and between the cell walls.

solepiece [CIV ENG] One of two steel plates, port and starboard, whose forward parts are bolted to the ground ways supporting a ship about to be launched, while their aft parts are attached to the sliding ways; at the start of the launch, they are cut simultaneously with burning torches to release the ship. Also known as soleplate. [NAV ARCH] **1.** A member attached to the bottom of the rudder of a wooden ship, which brings it down to the false keel. **2.** A member which joins the sternpost and the rudderpost of a wooden ship. **3.** A projection from the keel of a ship.

sole plane *See* sole.

soleplate [BUILD] The plate on which stud bases butt in a stud partition. [CIV ENG] *See* solepiece. [ENG] **1.** The supporting base of a machine. **2.** A plate on which a bearing can be attached and, if necessary, adjusted slightly.

soleus [ANAT] A flat muscle of the calf; origin is the fibula, popliteal fascia, and tibia, and insertion is the calcaneus; plantar-flexes the foot.

solfatara [GEOL] A fumarole from which sulfurous gases are emitted.

solid [PHYS] **1.** A substance that has a definite volume and shape and resists forces that tend to alter its volume or shape. **2.** A crystalline material, that is, one in which the constituent atoms are arranged in a three-dimensional lattice, periodic in three independent directions.

solid angle [MATH] A surface formed by all rays joining a point to a closed curve.

solid asphalt [MATER] Asphalt with a penetration number of less than 10 under specified test conditions.

solid box [MECH ENG] A solid, unadjustable ring bearing lined with babbitt metal, used on light machinery.

solid car [MIN ENG] A mine car equipped with a swivel coupling and generally used with a rotary dump.

solid coupling [MECH ENG] A flanged-face or a compression-type coupling used to connect two shafts to make a permanent joint and usually designed to be capable of transmitting the full load capacity of the shaft; a solid coupling has no flexibility.

solid crib timbering [MIN ENG] Shaft timbering with cribs laid solidly upon one another.

solid cutter [DES ENG] A cutter made of a single piece of material.

solid die [DES ENG] A one-piece screw-cutting tool with internal threads.

solid-dielectric capacitor [ELEC] A capacitor whose dielectric is one of several solid materials such as ceramic, mica, glass, plastic film, or paper.

solid drilling [ENG] In diamond drilling, using a bit that grinds the whole face, without preserving a core for sampling.

solid-electrolyte battery [ELEC] A primary battery whose electrolyte is either a solid crystalline salt, such as silver iodide or lead chloride, or an ion-exchange membrane; in either case, conductivity is almost entirely ionic.

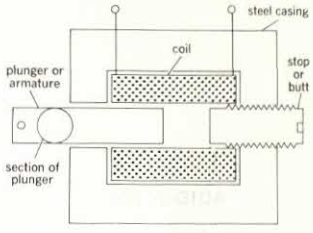
solid-electrolyte fuel cell [ELEC] Self-contained fuel cell in which oxygen is the oxidant and hydrogen is the fuel; the oxidant and fuel are kept separated by a solid electrolyte which has a crystalline structure and a low conductivity.

solid electrolytic capacitor [ELEC] An electrolytic capacitor in which the dielectric is an anodized coating on one elec-

SOLENODON

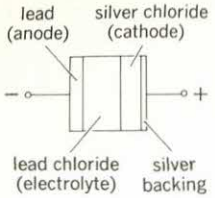
The solenodon uses its elongated snout to grub for food.

SOLENOID



A cross-sectional view of a steel-clad solenoid showing coil and movable core known as plunger or armature.

SOLID-ELECTROLYTE BATTERY



Schematic diagram of typical solid-electrolyte cell with solid crystalline salt electrolyte.

trode, with a solid semiconductor material filling the rest of the space between the electrodes.

solid explosive [MATER] An explosive employed in the form of a powder, a light-running granulated mass, or as solid sticks.

solid helium [CRYO] A certain state which is not attained by helium under its own vapor pressure down to absolute zero, but which requires an external pressure of 25 atmospheres at absolute zero.

solidification [PHYS] The change of a fluid (liquid or gas) into the solid state.

solidification shrinkage [MET] Volume contraction of a metal during solidification.

solidified petroleum *See* jellied petroleum.

solid injection system [MECH ENG] A fuel injection system for a diesel engine in which a pump forces fuel through a fuel line and an atomizing nozzle into the combustion chamber.

solid insulator [ELEC] An electric insulator made of a solid substance, such as sulfur, polystyrene, rubber, or porcelain.

solid laser [OPTICS] A laser in which either a crystalline or amorphous solid material, usually in the form of a rod, is excited by optical pumping; the most common crystalline materials are ruby, neodymium-doped ruby, and neodymium-doped yttrium aluminum garnet.

solid-liquid equilibrium [PHYS CHEM] **1.** The interrelation of a solid material and its melt at constant vapor pressure. **2.** The concentration relationship of a solid with a solvent liquid other than its melt. Also known as liquid-solid equilibrium.

solid logic technology [ELECTR] A method of computer construction that makes use of miniaturized modules, resulting in faster circuitry because of the reduced distances that current must travel.

solid moment of inertia [PHYS] The integral of the products of the mass of each of the infinitesimal elements of the solid with the square of their distance from a given axis.

solid-phase welding [MET] A welding method in which the weld is consummated by pressure or by heat and pressure without fusion.

solid-piled [MATER] Pertaining to plywood which is fresh from clamps or a hot press, and which is piled onto a solid flat base without stickers and weighted down until it reaches its normal temperature and moisture content. Also known as bulked-down; dead-piled.

solid propellant [MATER] A rocket propellant in solid form, usually containing both fuel and oxidizer combined or mixed, and formed into a monolithic (not powdered or granulated) grain. Also known as solid rocket fuel; solid rocket propellant.

solid propellant binder [MATER] The ingredient component of a propellant that is the agent for holding all the other ingredients together; contributes most to the physical or mechanical properties of the grain.

solid-propellant rocket engine [AERO ENG] A rocket engine fueled with a solid propellant; such motors consist essentially of a combustion chamber containing the propellant, and a nozzle for the exhaust jet.

solid rocket [AERO ENG] A rocket that is propelled by a solid-propellant rocket engine.

solid rocket fuel *See* solid propellant.

solid rocket propellant *See* solid propellant.

solid Schmidt telescope [OPTICS] A type of Schmidt system which is constructed from a single block of glass, designed to operate at very small aperture ratios.

solid shafting [MECH ENG] A solid round bar that supports a roller and wheel of a machine.

solid shank tool [ENG] A cutting tool in which the shank and cutting edges are machined from one piece.

solid solution [PHYS] A homogeneous crystalline phase composed of several distinct chemical species, occupying the lattice points at random and existing in a range of concentrations.

solid state [ENG] Pertaining to a circuit, device, or system that depends on some combination of electrical, magnetic, and optical phenomena within a solid that is usually a crystalline semiconductor material. [PHYS] The condition of a substance in which it is a solid.

solid-state battery [ELEC] A battery in which both the electrodes and the electrolyte are solid-state materials.

solid-state circuit [ELECTR] Complete circuit formed from a single block of semiconductor material.

solid-state circuit breaker [ELECTR] A circuit breaker in which a Zener diode, silicon controlled rectifier, or solid-state device is connected to sense when load terminal voltage exceeds a safe value.

solid-state component [ELECTR] A component whose operation depends on the control of electrical or magnetic phenomena in solids, such as a transistor, crystal diode, or ferrite device.

solid-state computer [COMPUT SCI] A digital computer which uses diodes and transistors instead of vacuum tubes.

solid-state counter [NUCLEO] A radiation counter whose sensitive material is a crystalline solid; for example, a crystal counter or a scintillation counter.

solid-state device [ELECTR] A device, other than a conductor, which uses magnetic, electrical, and other properties of solid materials, as opposed to vacuum or gaseous devices.

solid-state image sensor *See* charge-coupled image sensor.

solid-state lamp *See* light-emitting diode.

solid-state laser [OPTICS] A laser in which a semiconductor material produces the coherent output beam.

solid-state maser [PHYSICS] A maser in which a semiconductor material produces the coherent output beam; two input waves are required: one wave, called the pumping source, induces upward energy transitions in the active material, and the second wave, of lower frequency, causes downward transitions and undergoes amplification as it absorbs photons from the active material.

solid-state memory [COMPUT SCI] A computer memory whose elements consist of integrated-circuit bistable multivibrators in which bits of information are stored as one of two states.

solid-state physics [PHYS] The branch of physics centering about the physical properties of solid materials.

solid-state relay [ELECTR] A relay that uses only solid-state components, with no moving parts. Abbreviated SSR.

solid-state switch [ELECTR] A microwave switch in which a semiconductor material serves as the switching element; a zero or negative potential applied to the control electrode will reverse-bias the switch and turn it off, and a slight positive voltage will turn it on.

solid-state thyratron [ELECTR] A semiconductor device, such as a silicon controlled rectifier, that approximates the extremely fast switching speed and power-handling capability of a gaseous thyratron tube.

solid-state uninterruptible power system [ELEC] An uninterruptible power system in which the load operates continuously from the output of a dc-to-ac static inverter powered by a battery.

solid-state welding [MET] Welding processes which coalesce materials at temperatures below the melting point of the base metal by methods such as welding or diffusion welding without the use of filler metal.

solid stowing [MIN ENG] The complete filling of the waste area behind a longwall face with stone and dirt.

solid tantalum capacitor [ELEC] An electrolytic capacitor in which the anode is a porous pellet of tantalum; the dielectric is an extremely thin layer of tantalum pentoxide formed by anodization of the exterior and interior surfaces of the pellet; the cathode is a layer of semiconducting manganese dioxide that fills the pores of the anode over the dielectric.

solidus [PHYS CHEM] In a constitution or equilibrium diagram, the locus of points representing the temperature below which the various compositions finish freezing on cooling, or begin to melt on heating.

solidus curve [PHYS CHEM] A curve on the phase diagram of a system with two components which represents the equilibrium between the liquid phase and the solid phase.

solid-web girder [CIV ENG] A beam, such as a box girder, having a web consisting of a plate or other solid section but not a lattice.

solifluction [GEOL] A rapid soil creep, especially referring to downslope soil movement in periglacial areas. Also known as sludging; soil flow; soil fluction.

solifluction lobe [GEOL] An isolated, tongue-shaped feature of the land surface with a steep front and a smooth upper surface formed by more rapid solifluction on certain sections of the slope. Also known as solifluction tongue.

solifluction mantle [GEOL] The locally derived, unsorted material moved downslope by solifluction. Also known as flow earth.

solifluction sheet [GEOL] A broad deposit of a solifluction mantle.
solifluction stream [GEOL] A narrow, streamlike deposit of a solifluction mantle.
solifluction tongue *See* solifluction lobe.
solion [ELEC] An electrochemical device in which amplification is obtained by controlling and monitoring a reversible electrochemical reaction.
soliquid [PHYS CHEM] A system in which solid particles are dispersed in a liquid.
solitary wave [PHYS] A traveling wave in which a single disturbance is neither preceded by nor followed by other such disturbances, but which does not involve unusually large amplitudes or rapid changes in variables, in contrast to a shock wave.
soliton [MATH] A solution of a nonlinear differential equation that propagates with a characteristic constant shape.
solodize [GEOL] To improve a soil by removing alkalies from it.
Solod soil *See* Soloth soil.
Solo man [PALEON] A relative but primitive form of fossil man from Java; this form had a small brain, heavy horizontal browridges, and a massive cranial base.
Solomon R unit [NUCLEO] A unit of radiation dose rate due to x-rays, equal to 2100 roentgens per hour. Also known as R unit.
Solonchak soil [GEOL] One of an intrazonal, balamorphic group of light-colored soils rich in soluble salts.
Solonetz soil [GEOL] One of an intrazonal group of black alkali soils having a columnar structure.
solore [METEOROL] A cold, night wind of the mountains following the course of the Drome River in southeastern France.
Soloth soil [GEOL] One of an intrazonal halomorphic group of soils formed from saline material; the surface layer is soft and friable, and overlies a light-colored leached horizon which, in turn, overlies a dark horizon. Also known as Solod soil.
Solpugida [INV ZOO] The sun spiders, an order of nonvenomous, spiderlike, predatory arachnids having large chelicerae for holding and crushing prey.
solstice [ASTRON] The two days (actually, instants) during the year when the earth is so located in its orbit that the inclination (about 23½°) of the polar axis is toward the sun; the days are June 21 for the North Pole and December 22 for the South Pole; because of leap years, the dates vary a little.
solstitial colure [ASTRON] That great circle of the celestial sphere through the celestial poles and the solstices.
solstitial points [ASTRON] Those points of the ecliptic that are 90° from the equinoxes north or south at which the greatest declination of the sun is reached.
solstitial tidal currents [OCEANOGR] Tidal currents of especially large tropic diurnal inequality occurring at the time of solstitial tides.
solstitial tides [OCEANOGR] Tides occurring near the times of the solstices, when the tropic range is especially large.
solubility [PHYS CHEM] The ability of a substance to form a solution with another substance.
solubility coefficient [PHYS CHEM] The volume of a gas that can be dissolved by a unit volume of solvent at a specified pressure and temperature.
solubility curve [PHYS CHEM] A graph showing the concentration of a substance in its saturated solution in a solvent as a function of temperature.
solubility product constant [PHYS CHEM] A type of simplified equilibrium constant, K_{sp}, defined for and useful for equilibria between solids and their respective ions in solution; for example, the equilibrium

$$AgCl(s) \rightleftarrows Ag^+ + Cl^-, [Ag^+][Cl^-] \cong K_{sp},$$

where $[Ag^+]$ and $[Cl^-]$ are molar concentrations of silver ions and chloride ions.
solubility test [ANALY CHEM] **1.** A test for the degree of solubility of asphalts and other bituminous materials in solvents, such as carbon tetrachloride, carbon disulfide, or petroleum ether. **2.** Any test made to show the solubility of one material in another (such as liquid-liquid, solid-liquid, gas-liquid, or solid-solid).
soluble [CHEM] Capable of being dissolved.
soluble barbital *See* sodium barbital.
soluble castor oil *See* Turkey red oil.
soluble cutting oil [MATER] A petroleum oil containing an emulsifying agent to make it mix easily with water; used as a coolant for metal-cutting tools.
soluble glass *See* sodium silicate.
soluble gluside *See* sodium saccharine.
soluble guncotton *See* pyroxylin.
soluble indigo blue *See* indigo carmine.
soluble nitrocellulose *See* pyroxylin.
soluble oil [MATER] An oil that readily forms a stable emulsion or colloidal suspension in water. Also known as emulsifying oil.
soluble saccharin *See* sodium saccharin.
soluble starch [MATER] A group of water-soluble polymers formed from starch, such as the starches derived from corn or potato, by acetylation, acid hydrolysis, chlorination, or by action of enzymes to form starch acetates, ethers, and esters; used as textile sizing agents, emulsifying agents, and paper coatings.
solum [GEOL] The upper part of a soil profile, composed of A and B horizons in mature soil. Also known as true soil.
solute [CHEM] The substance dissolved in a solvent.
solution [CHEM] A single, homogeneous liquid, solid, or gas phase that is a mixture in which the components (liquid, gas, solid, or combinations thereof) are uniformly distributed throughout the mixture.
solution ceramic [ELEC] A nonbrittle, inorganic ceramic insulating coating that can be applied to wires at a low temperature; examples include ceria, chromia, titania, and zirconia.
solution dyeing [TEXT] Adding dye to the chemical compound in the spinneret before extrusion. Also known as dope dyeing.
solution gas [PETRO ENG] Gaseous reservoir hydrocarbons dissolved in liquid reservoir hydrocarbons because of the prevailing pressures in the reservoir. Also known as dissolved gas.
solution gas drive *See* internal gas drive.
solution-gas reservoir [PETRO ENG] Oil reservoir initially at or above the bubble-point pressure of the gas-oil mixture, and produced primarily by the expansion of the oil and its dissolved gas. Also known as dissolved-gas reservoir.
solution groove [GEOL] One of a series of continuous, subparallel furrows developed on an inclined or vertical surface of a soluble and homogeneous rock (such as the limestone walls of a cave) by the slow corroding action of trickling water.
solution heat treatment [MET] Heating and holding an alloy at a temperature at which one (or more) constituent enters into solid solution, then cooling the alloy rapidly to prevent the constituent from precipitating.
solution mining [MIN ENG] The extraction of soluble minerals from subsurface strata by injection of fluids, and the controlled removal of mineral-laden solutions.
solution poison [NUCLEO] A soluble nuclear poison, such as boric acid, added to the coolant of a nuclear reactor for purposes of reactivity control; generally used only during shutdown periods, and chemically removed from the coolant prior to resuming operation.
solution pool [GEOL] A pool in a rock that is formed by the dissolution of the rock in ocean water.
solution porosity [PETRO ENG] A generic designation for reservoir-rock porosity created by solution action; some examples are crystalline limestone and dolomite, porous cap rock, and honeycombed anhydrite.
solution potholes [GEOL] Potholes produced in carbonate rocks by dissolution.
solution pressure [PHYS CHEM] **1.** A measure of the tendency of molecules or atoms to cross a bounding surface between phases and to enter into a solution. **2.** A measure of the tendency of hydrogen, metals, and certain nonmetals to pass into solution as ions.
solution process [CHEM ENG] An oil-refining process for separating mercaptans from gasoline by washing with a caustic solution containing organic compounds in which the mercaptans are soluble.
solution transfer [GEOL] A process whereby pressure solution of detrital mineral grains at contact areas is followed by recrystallization on the less strained parts of the grain surfaces.
solutizer-air regenerative process [CHEM ENG] A petroleum refinery process that is identical to the solutizer-steam regeneration process, except for the regeneration step; the newer units use uncatalyzed air regeneration.
solutizer-steam regenerative process [CHEM ENG] A petroleum refinery process used to extract mercaptans from gas-

SOLPUGIDA

Sun spider. *(From T. I Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

oline or naphtha; uses solutizers (potassium isobutyrate or potassium alkyl phenolate) in strong potassium hydroxide solution as the selective solvent.

solutizer-tannin process [CHEM ENG] A petroleum refinery process that is an early variation of the solutizer-air regenerative process for extraction of mercaptans from gasoline; uses tannin-catalyzed oxidation for the regeneration step.

solutrope [CHEM] A ternary mixture with two liquid phases and a third component distributed between the phases, or selectively dissolved in one or the other of the phases; analogous to an azeotrope.

solvable group [MATH] A group G which has subgroups G_0, $G_1,\ldots,G_n$, where $G_0 = G$, $G_n =$ the identity element alone, and each G_i is a normal subgroup of G_{i-1} with the quotient group G_{i-1}/G_i Abelian.

solvation [CHEM] The process of swelling, gelling, or dissolving of a material by a solvent; for resins, the solvent can be a plasticizer.

Solvay process [CHEM ENG] The process to make sodium carbonate and calcium chloride by treating sodium chloride with ammonia and carbon dioxide.

solvent [CHEM] That part of a solution that is present in the largest amount, or the compound that is normally liquid in the pure state (as for solutions of solids or gases in liquids).

solvent deasphalting [CHEM ENG] A petroleum refinery process used to remove asphaltic and resinous materials from reduced crude oils, lubricating oil stocks, gas oils, or middle distillates through the extractive or precipitant action of solvents. Also known as solvent deresining.

solvent deresining *See* solvent deasphalting.

solvent dewaxing [CHEM ENG] A petroleum refinery process for solvent removal of wax from oils; the mixture of waxy oil and solvent is chilled, then filtered or centrifuged to remove the precipitated oil; the solvent is recovered for reuse.

solvent dyeing [TEXT] The dyeing of synthetic textiles by using chlorinated hydrocarbon solvents (such as trichloroethylene or perchloroethylene) instead of water; used for nylons, polyesters, and acrylics.

solvent extraction [CHEM ENG] The separation of materials of different chemical types and solubilities by selective solvent action; that is, some materials are more soluble in one solvent than in another, hence there is a preferential extractive action; used to refine petroleum products, chemicals, vegetable oils, and vitamins. [NUCLEO] A process for removing uranium fuel residue from used fuel elements of a reactor; it generally involves decay cooling under water for up to 6 months, removal of cladding, dissolution, separation of reusable fuel, decontamination, and disposal of radioactive wastes. Also known as liquid extraction.

solvent molding [ENG] A process to form thermoplastic articles by dipping a mold into a solution or dispersion of the resin and drawing off (evaporating) the solvent to leave a plastic film adhering to the mold.

solvent naphtha [MATER] Refined petroleum naphtha of restricted boiling range; used as a solvent and paint thinner and in dry cleaning; Stoddard solvent is a special grade of solvent naphtha.

solvent recovery [CHEM ENG] For reuse purposes, the catching and recovery of solvent vapors from vent lines, process vessels, or other sources of evaporative loss, usually with a solid adsorbent material.

solvent-refined [CHEM ENG] Pertaining to any product material whose final quality and condition is in part the result of a solvent treatment during processing of the feedstock material.

solvent-refined oil [MATER] A lubricating oil that has been solvent-treated during refining, such as most motor, aircraft, diesel-engine, steam-turbine, and other high-quality oils.

solvent refining [CHEM ENG] The process of treating a mixed material with a solvent that preferentially dissolves and removes certain minor constituents (usually the undesired ones); common in the petroleum refining industry.

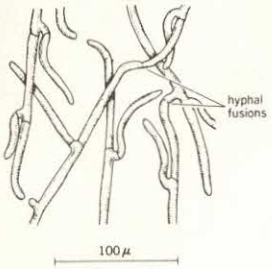
solvmanifold [MATH] A homogeneous space obtained by factoring a connected solvable Lie group by a closed subgroup.

solvolysis [CHEM] A reaction in which a solvent reacts with the solute to form a new substance.

solvus [PHYS CHEM] In a phase or equilibrium diagram, the locus of points representing the solid-solubility temperatures of various compositions of the solid phase.

soma [BIOL] The whole of the body of an individual, excluding the germ tract.

SOMATIC COPULATION



Somatic copulation by sexual fusion of vegetative cells of hyphae.

Somali Current *See* East Africa Coast Current.

Somasteroidea [INV ZOO] A subclass of Asterozoa comprising sea stars of generalized structure, the jaws often only partly developed, and the skeletal elements of the arm arranged in a double series of transverse rows termed metapinnules.

somatic aneuploidy [CYTOL] An irregular variation in number of one or more individual chromosomes in the cells of a tissue.

somatic cell [BIOL] Any cell of the body of an organism except the germ cells.

somatic copulation [MYCOL] A form of reproduction in ascomycetes and basidiomycetes involving sexual fusion of undifferentiated vegetative cells.

somatic crossing-over [CYTOL] Crossing-over during mitosis in somatic or vegetative cells.

somatic death [BIOL] The cessation of characteristic life functions.

somatic mesoderm [EMBRYO] The external layer of the lateral mesoderm associated with the ectoderm after formation of the coelom.

somatic nervous system [PHYSIO] The portion of the nervous system concerned with the control of voluntary muscle and relating the organism with its environment.

somatic pairing [CYTOL] The pairing of homologous chromosomes at mitosis in somatic cells; occurs in Diptera.

somatic reflex system [PHYSIO] An involuntary control system characterized by a control loop which includes skeletal muscles.

somatization [PSYCH] A type of neurosis manifested in neurasthenias, hypochondriacal symptoms, and conversion hysterias.

somatoblast [INV ZOO] **1.** An undifferentiated cleavage cell that gives rise to somatic cells in annelids. **2.** The outer cell layer of the nematogen in Dicyemida.

somatochrome [CYTOL] A nerve cell possessing a well-defined body completely surrounding the nucleus on all sides, the cytoplasm having a distinct contour, and readily taking a stain.

somatocyst [INV ZOO] A cavity filled with air in the float of certain Siphonophora.

somatometry [ANAT] Measurement of the human body with the soft parts intact.

somatophyte [BOT] A plant composed of distinct somatic cells that develop especially into mature or adult tissue.

somatopleure [EMBRYO] A complex layer of tissue consisting of the somatic layer of the mesoblast together with the epiblast, forming the body wall in craniate vertebrates and the amnion and chorion in amniotes.

somatopsychic [MED] Pertaining to both the body and mind.

somatotonia [PSYCH] The temperamental trait associated with a mesomorphic somatotype, characterized by an active, aggressive, and risk-taking approach to life.

somatotropin [BIOCHEM] The growth hormone of the pituitary gland.

somatotype [PSYCH] A basic body type; three primary components are ectomorph, mesomorph, and endomorph.

somesthesis [PHYSIO] The general name for all systems of sensitivity present in the skin, muscles and their attachments, visceral organs, and nonauditory labyrinth of the ear.

somite *See* metamere.

somma [GEOL] The rim of a volcano.

Sommelet process [ORG CHEM] The preparation of thiophene aldehydes by treatment of thiophene with hexamethylenetetramine.

Sommerfeld equation *See* Sommerfeld formula.

Sommerfeld fine-structure constant *See* fine-structure constant.

Sommerfeld formula [ELECTROMAG] An approximate formula for the field strength of electromagnetic radiation generated by an antenna at distances small enough so that the curvature of the earth may be neglected, in terms of radiated power, distance from the antenna, and various constants and parameters. Also known as Sommerfeld equation.

Sommerfeld law for doublets [ATOM PHYS] According to the Bohr-Sommerfeld theory, the splitting in frequency of regular or relativistic doublets is $\alpha^2 R(Z - \sigma)^4/n^3(l + 1)$, where α is the fine structure constant, R is the Rydberg constant of the atom, Z is the atomic number, σ is a screening constant, n is the

principal quantum number, and l is the orbital angular momentum quantum number.

Sommerfeld model *See* free-electron theory of metals.

Sommerfeld theory *See* free-electron theory of metals.

Sommerfeld-Watson transformation *See* Watson-Sommerfeld transformation.

somnambulism [PHYSIO] **1.** Sleepwalking. **2.** The performance of any fairly complex act while in a sleeplike state or trance.

somnificant *See* hypnotic.

sonar [ENG] **1.** A system that uses underwater sound, at sonic or ultrasonic frequencies, to detect and locate objects in the sea, or for communication; the commonest type is echo-ranging sonar, other versions are passive sonar, scanning sonar, and searchlight sonar. Derived from sound navigation and ranging. **2.** *See* sonar set.

sonar array [ELECTR] An arrangement of several sonar transducers or sonar projectors, appropriately spaced and energized to give proper directional characteristics.

sonar attack plotter [ORD] A system that coordinates information from a sonar installation, a ship's gyrocompass, and related devices, and presents graphically the information needed to plan an antisubmarine attack.

sonar beacon [ENG ACOUS] An underwater beacon that transmits sonic or ultrasonic signals for the purpose of providing bearing information; it may have receiving facilities that permit triggering an external source.

sonar boomer transducer [ENG ACOUS] A sonar transducer that generates a large pressure wave in the surrounding water when a capacitor bank discharges into a flat, epoxy-encapsulated coil, creating opposed magnetic fields from the coil and from eddy currents in an adjacent aluminum disk, which cause the disk to be driven away from the coils with great force.

sonar capsule [ENG ACOUS] A capsule that reflects high-frequency sound waves; the sonar capsule, if attached to a reentry body, may be used to locate the reentry body.

sonar countermeasures [ORD] Actions taken to prevent or reduce an enemy's effective use of sonar.

sonar detector *See* sonar receiver.

sonar dome [ENG] A streamlined, watertight enclosure that provides protection for a sonar transducer, sonar projector, or hydrophone and associated equipment, while offering minimum interference to sound transmission and reception.

sonar navigation *See* sonic navigation.

sonar projector [ENG ACOUS] An electromechanical device used under water to convert electrical energy to sound energy; a crystal or magnetostriction transducer is usually used for this purpose.

sonar receiver [ELECTR] A receiver designed to intercept and amplify the sound signals reflected by an underwater target and display the accompanying intelligence in useful form; it may also pick up other underwater sounds. Also known as sonar detector.

sonar resolver [ELECTR] A resolver used with echo-ranging and depth-determining sonar to calculate and record the horizontal range of a sonar target, as required for depth-bombing.

sonar self-noise [ELECTR] Unwanted sonar signals generated in the sonar equipment itself.

sonar set [ENG] A complete assembly of sonar equipment for detecting and ranging or for communication. Also known as sonar.

sonar target [ENG ACOUS] An object which reflects a sufficient amount of a sonar signal to produce a detectable echo signal at the sonar equipment.

sonar transducer [ENG ACOUS] A transducer used under water to convert electrical energy to sound energy and sound energy to electrical energy.

sonar transmission [ENG ACOUS] The process by which underwater sound signals generated by a sonar set travel through the water.

sonar transmitter [ELECTR] A transmitter that generates electrical signals of the proper frequency and form for application to a sonar transducer or sonar projector, to produce sound waves of the same frequency in water; the sound waves may carry intelligence.

sonar window [ENG ACOUS] The portion of a sonar dome or sonar transducer that passes sound waves at sonar frequencies with little attenuation while providing mechanical protection for the transducer.

sondage [ARCHEO] A trial excavation made prior to an archeological excavation.

sonde [ENG] An instrument used to obtain weather data during ascent and descent through the atmosphere, in a form suitable for telemetering to a ground station by radio, as in a radiosonde.

sone [ACOUS] A unit of loudness, equal to the loudness of a simple 1000-hertz tone with a sound pressure level 40 decibels above 0.0002 microbar; a sound that is judged by listeners to be n times as loud as this tone has a loudness of n sones.

sonic [ACOUS] **1.** Of or pertaining to the speed of sound. **2.** Pertaining to that which moves at acoustic velocity, as in sonic flow. **3.** Designed to operate or perform at the speed of sound, as in sonic leading edge.

sonic altimeter [ENG] An instrument for determining the height of an aircraft above the earth by measuring the time taken for sound waves to travel from the aircraft to the surface of the earth and back to the aircraft again.

sonic anemometer [ENG] An anemometer which measures wind speed by means of the properties of wind-borne sound waves; it operates on the principle that the propagation velocity of a sound wave in a moving medium is equal to the velocity of sound with respect to the medium plus the velocity of the medium.

sonic barrier [AERO ENG] A popular term for the large increase in drag that acts upon an aircraft approaching acoustic velocity; the point at which the speed of sound is attained and existing subsonic and supersonic flow theories are rather indefinite. Also known as sound barrier.

sonic bearing [NAV] A bearing determined by measuring the direction from which a sound wave is coming. Also known as acoustic bearing.

sonic boom [ACOUS] A noise caused by a shock wave that emanates from an aircraft or other object traveling at or above sonic velocity.

sonic chemical analyzer [ENG] A device to characterize the composition of a gas, liquid, or solid by the attenuation or change in the velocity of sound waves through a sample; the effect is related to molecular structure and intermolecular interactions.

sonic cleaning [ENG] Cleaning of contaminated materials by the action of intense sound in the liquid in which the material is immersed.

sonic delay line *See* acoustic delay line.

sonic depth finder [ENG] A sonar-type instrument used to measure ocean depth and to locate underwater objects; a sound pulse is transmitted vertically downward by a piezoelectric or magnetostriction transducer mounted on the hull of the ship; the time required for the pulse to return after reflection is measured electronically. Also known as echo sounder.

sonic drilling [MECH ENG] The process of cutting or shaping materials with an abrasive slurry driven by a reciprocating tool attached to an audio-frequency electromechanical transducer and vibrating at sonic frequency.

sonic fix [NAV] A fix established by means of sound waves. Also known as acoustic fix.

sonic flaw detection [ENG] The process of locating imperfections in solid materials by observing internal reflections or a variation in transmission through the materials as a function of sound-path location.

sonic line of position [NAV] A line of position determined by means of sound waves. Also known as acoustic line of position.

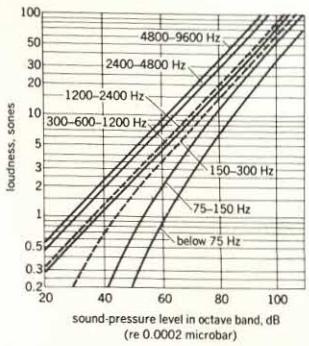
sonic liquid-level meter [ENG] A meter that detects a liquid level by sonic-reflection techniques.

sonic navigation [NAV] Navigation by means of sound waves whether or not they are within the audible range. Also known as acoustic navigation; sonar navigation.

sonic nucleation [CHEM ENG] In supersaturated solutions, the use of sonic or ultrasonic radiation to help bring about nucleation and corresponding crystallization of substances otherwise difficult to crystallize.

sonic pump [PETRO ENG] A type of lifting pump used in a shallow oil well to pump out the crude; consists of a string of tubing equipped with a check valve at each point, and mechanical means on the surface to vibrate the tubing string vertically; creates a harmonic condition that results in several hundred strokes per minute, with the strokes being a small fraction of an inch.

SONE



Functions relating loudness, in sones, to sound pressure, in decibels above 0.0002 microbar, for bands of noise one octave wide in a sound field.

sonic radiation [ACOUS] Acoustic radiation with a frequency between about 16 hertz and about 20,000 hertz.

sonics [ACOUS] The technology of sound, or elastic wave motion, as applied to problems of measurement, control, and processing.

sonic sifter [MECH ENG] A high-speed vibrating apparatus used in particle size analysis.

sonic sounding [ENG] Determining the depth of the ocean bottom by measuring the time for an echo to return to a shipboard sound source.

sonic spark chamber [NUCLEO] A spark chamber in which the position of a spark is determined by measuring the time it takes for sound from the spark to arrive at each of two microphones.

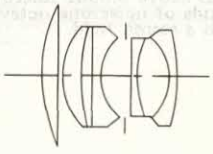
sonic speed *See* speed of sound.

sonic thermometer [ENG] A thermometer based upon the principle that the velocity of a sound wave is a function of the temperature of the medium through which it passes.

sonic velocity *See* speed of sound.

sonic well logging [ENG] A well logging technique that uses a pulse-echo system to measure the distance between the instrument and a sound-reflecting surface; used to measure the size of cavities around brine wells, and capacities of underground liquefied petroleum gas storage chambers.

SONNAR LENS



Components of a Sonnar camera lens.

Sonnar lens [OPTICS] A modified triplet lens used as a photographic objective.

Sonne [NAV] The German forerunner of the British Consol long-range, low-frequency navigation system.

Sonne dysentery [MED] An intestinal bacterial infection caused by *Shigella sonnei*.

Sonnenschein's reagent [ANALY CHEM] A solution of phosphomolybdic acid that forms a yellow precipitate with alkaloid sulfates.

Sonne's bacillus [MICROBIO] The bacterium *Shigella sonnei*.

sonobuoy [ENG] An acoustic receiver and radio transmitter mounted in a buoy that can be dropped from an aircraft by parachute to pick up underwater sounds of a submarine and transmit them to the aircraft; to track a submarine, several buoys are dropped in a pattern that includes the known or suspected location of the submarine, with each buoy transmitting an identifiable signal; an electronic computer then determines the location of the submarine by comparison of the received signals and triangulation of the resulting time-delay data. Also known as radio sonobuoy.

Sonobuoy Reference System [NAV] An automatic electronic system for locating sonobuoys, employing angle-measuring equipment, distance-measuring equipment, or both. Abbreviated SRS.

sonoencephalograph *See* echoencephalograph.

sonograph [ENG] **1.** An instrument for recording sound or seismic vibrations. **2.** An instrument for converting sounds into seismic vibrations.

Sonolog [PETRO ENG] An acoustical device used for sound-reflection logging of oil well boreholes to determine the fluid level in a pumping well.

sonoluminescence [PHYS] Luminescence produced by high-frequency sound waves or by phonons.

sonometer [ENG] An instrument for measuring rock stress; a piano wire is stretched between two bolts in the rock, and any change of pitch after destressing is observed and used to indicate stress.

sonora [METEOROL] A summer thunderstorm in the mountains and deserts of southern California and Baja California.

sonoscan [ENG] A type of acoustic microscope in which an unfocused acoustic beam passes through the object and produces deformations in a liquid-solid interface that are sensed by a laser beam reflected from the surface.

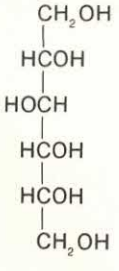
soot [MATER] Impure black carbon with oily compounds obtained from the incomplete combustion of resinous materials, oils, wood, or coal.

soot blower [ENG] A system of steam or air jets used to maintain cleanliness, efficiency, and capacity of heat-transfer surfaces by the periodic removal of ash and slag from the heat-absorbing surfaces.

soot luminosity [OPTICS] The portion of the luminosity of a flame attributable to soot particles in the flame.

sooty mold [MYCOL] Ascomycetous fungi of the family Capnodiaceae, with dark mycelium and conidia. [PL PATH] A plant disease, common on *Citrus* species, characterized by a dense velvety layer of a sooty mold on exposed parts of the plant.

SORBITOL



Structural formula for sorbitol.

sophisticated vocabulary [COMPUT SCI] An advanced and elaborate set of instructions; a computer with a sophisticated vocabulary can go beyond the more common mathematical calculations such as addition, multiplication, and subtraction, and perform operations such as linearize, extract square root, and select highest number.

soporific *See* hypnotic.

sorbent [MATER] A material, compound, or system that can provide a sorption function, such as adsorption, absorption, or desorption.

sorbic acid [ORG CHEM] $CH_3CH{=}CHCH{=}CHCOOH$ A white, crystalline compound; soluble in most organic solvents, slightly soluble in water; melts at 135°C; used as a fungicide and food preservative, and in the manufacture of plasticizers and lubricants. Also known as 2,4-hexadienoic acid.

sorbic acid potassium salt *See* potassium sorbate.

sorbide [CHEM] The generic term for anhydrides derived from sorbitol.

sorbin *See* sorbose.

D-sorbite *See* sorbitol.

sorbitol [ORG CHEM] $C_6H_8(OH)_6$ Combustible, white, water-soluble, hygroscopic crystals with a sweet taste; melt at 93 to 97.5°C (depending on the form); used in cosmetic creams and lotions, toothpaste, and resins; as a food additive; and for ascorbic acid fermentation. Also known as D-sorbite; D-sorbitol.

D-sorbitol *See* sorbitol.

sorbose [BIOCHEM] $C_6H_{12}O_6$ A carbohydrate prepared by fermentation; produced as water-soluble crystals that melt at 165°C; used in the production of vitamin C. Also known as sorbin; L-sorbose.

L-sorbose *See* sorbose.

sordawalite *See* tachylite.

soredium [BOT] A structure comprising algal cells wrapped in the hyphal tissue of lichens, as in certain Lecanorales; when separated from the thallus, it grows into a new thallus.

Sorel cement *See* oxychloride cement.

Sörensen titration [ANALY CHEM] Titration with one of the Sörensen hydrogen-ion-concentration indicators.

sore shin [PL PATH] A fungus disease of cowpea, cotton, tobacco, and other plants, beyond the seedling stage, marked by annular growth of the pathogen on the stem at the groundline.

Soret coefficient [PHYS] A tabulated value used in binary thermal diffusion calculations in gaseous systems; expressed as $D'/D = \alpha X_1 X_2$, where D' is the coefficient of thermal diffusion, D is the coefficient of ordinary diffusion, α is the thermal diffusion constant, X_1 is the mole fraction of the lower-molecular-weight component, and X_2 is the mole fraction of the higher-molecular-weight component.

Soret effect [PHYS] Thermal diffusion in liquids.

sorghum [BOT] Any of a variety of widely cultivated grasses, especially *Sorghum bicolor* in the United States, grown for grain and herbage; growth habit and stem form are similar to Indian corn, but leaf margins are serrate and spikelets occur in pairs on a hairy rachis.

Soricidae [VERT ZOO] The shrews, a family of insectivorous mammals belonging to the Lipotyphla.

sorosilicate [MINERAL] A structural type of silicate whose crystal lattice has two SiO_4 tetrahedra sharing one oxygen atom.

sorotiite [GEOL] A type of meteorite similar to the pallasites, with troilite substituting for olivine.

sorption [PHYS CHEM] A general term used to encompass the processes of adsorption, absorption, desorption, ion exchange, ion exclusion, ion retardation, chemisorption, and dialysis.

sorption pumping [ENG] A technique used to reduce the pressure of gas in an atmosphere; the gas is adsorbed on a granular sorbent material such as a molecular sieve in a metal container; when this sorbent-filled container is immersed in liquid nitrogen, the gas is sorbed.

sorrel tree *See* sourwood.

sort [COMPUT SCI] **1.** To rearrange a set of data items into a new sequence, governed by specific rules of precedence. **2.** The program designed to perform this activity.

sorted [GEOL] **1.** Pertaining to a nongenetic group of patterned-ground features displaying a border of stones, including boulders, commonly alternating with very small particles, including silt, sand, and clay. **2.** Pertaining to an unconsolidated

sediment or a cemented detrital rock consisting of particles of essentially uniform size or of particles lying within the limits of a single grade.

sorted polygon [GEOL] A patterned ground having a sorted appearance due to a border of stones and characterized by a polygonal mesh. Also known as stone polygon.

sorter *See* card sorter; sequencer.

sort generator [COMPUT SCI] A computer program that produces other programs which arrange collections of items into sequences as specified by parameters in the original program.

sortie [AERO ENG] An operational flight by one aircraft. [ORD] A sudden attack made from a defensive position.

sortie number [ENG] A reference used to identify the images taken by all the sensors during one air reconnaissance sortie.

sortie plot [MAP] An overlay representing the area on a map covered by imagery taken during one sortie.

sorting [GEOL] The process by which similar in size, shape, or specific gravity sedimentary particles are selected and separated from associated but dissimilar particles by the agent of transportation.

sorting coefficient [GEOL] A sorting index equal to the square root of the ratio of the larger quartile (the diameter having 25% of the cumulative size-frequency distribution larger than itself) to the smaller quartile (the diameter having 75% of the cumulative size-frequency distribution larger than itself).

sorting index [GEOL] A measure of the degree of sorting in a sediment based on the statistical spread of the frequency curve of particle sizes.

sorting table [ENG] Any horizontal conveyor where operators, along its side, sort bulk material, packages, or objects from the conveyor.

sort key [COMPUT SCI] A key used as a basis for determining the sequence of items in a set.

sort/merge package [COMPUT SCI] A set of programs capable of sorting and merging data files.

sorus [BOT] **1.** A cluster of sporangia on the lower surface of a fertile fern leaf. **2.** A clump of reproductive bodies or spores in lower plants.

SOS [COMMUN] The distress signal in radiotelegraphy, consisting of the letters S, O, and S of the international Morse code.

sosoloid [PHYS CHEM] A system consisting of particles of a solid dispersed in another solid.

SOTAS *See* stand-off target acquisition system.

Sothic cycle [ASTRON] A time period of about 1460 years; this cycle is such that the New Year of the calendar used in ancient Egypt was in error by a whole year because the adopted year of 365 days is about a quarter of a day shorter than the mean solar year.

sou'easter *See* southeaster.

souma [VET MED] A disease caused by *Trypanosoma vivax* in domestic and wild animals; the insect vectors are the tsetse fly and the stable fly.

sound [ACOUS] **1.** An alteration of properties of an elastic medium, such as pressure, particle displacement, or density, that propagates through the medium, or a superposition of such alterations; sound waves having frequencies above the audible (sonic) range are termed ultrasonic waves; those with frequencies below the sonic range are called infrasonic waves. Also known as acoustic wave; sound wave. **2.** The auditory sensation which is produced by these alterations. Also known as sound sensation.

sound absorption [ACOUS] A process in which sound energy is reduced when sound waves pass through a medium or strike a surface. Also known as acoustic absorption.

sound absorption coefficient [ACOUS] The ratio of sound energy absorbed to that arriving at a surface or medium. Also known as acoustic absorption coefficient; acoustic absorptivity.

sound analyzer [ENG] An instrument which measures the amount of sound energy in various frequency bands; it generally consists of a set of fixed electrical filters or a tunable electrical filter, along with associated amplifiers and a meter which indicates the filter output.

sound and flash ranging [ORD] Two distinct and separate but supplementary systems of locating enemy weapons and, secondarily, adjusting friendly counterfire: by observation by sonic devices on the sound produced by the enemy weapon in firing or by the friendly projectile in exploding; or by visual observation of the flash produced or of the point of burst of the enemy weapon or friendly projectile.

sound attenuation [ACOUS] Diminution of the intensity of sound energy propagating in a medium; caused by absorption, spreading, and scattering.

sound band pressure level [ACOUS] The effective sound pressure for the sound energy in a given frequency band.

sound barrier *See* sonic barrier.

sound buoy [NAV] A buoy equipped with a characteristic sound signal, such as a bell or a whistle.

sound carrier [COMMUN] The television carrier that is frequency-modulated by the sound portion of a television program; the unmodulated center frequency of the sound carrier is 4.5 megahertz higher than the video carrier frequency for the same channel.

sound channel [ACOUS] A layer of seawater extending from about 700 meters down to about 1500 meters, in which sound travels at about 450 meters per second, the slowest it can travel in seawater; below 1500 meters the speed of sound increases as a result of pressure. [ELECTR] The series of stages that handles only the sound signal in a television receiver.

sound detection [ACOUS] The discrimination of a sound from background noise, either by the ear or by an electronic instrument such as a volume indicator.

sound effects [ENG ACOUS] Mechanical devices or recordings used to provide lifelike imitations of various sounds.

sound energy [ACOUS] The difference between the total energy and the energy which would exist if no sound waves were present. Also known as acoustic energy.

sound energy density [ACOUS] Sound energy per unit volume; the commonly used unit is the erg per cubic centimeter.

sound energy flux [ACOUS] Average over one period of the rate of flow of sound energy through any specified area; the unit is the erg per second.

sound exclusion [PETRO ENG] Several techniques used to prevent a borehole from sloughing in drilling a well through a reservoir rock that has an unconsolidated nature, similar to beach sand; the borehole can be lined with a screen, the sand consolidated with a binding material, or prepack gravel liner can be used.

sound film [ENG ACOUS] Motion picture film having a sound track along one side for reproduction of the sounds that are to accompany the film.

sound filmstrip [ENG ACOUS] A filmstrip that has accompanying sound on a separate disk or tape, which is manually or automatically synchronized with projection of the pictures in the strip.

sound fixing and ranging *See* sofar.

sound gate [ENG ACOUS] The gate through which film passes in a sound-film projector for conversion of the sound track into audio-frequency signals that can be amplified and reproduced.

sound head [ENG ACOUS] **1.** The section of a sound motion picture projector that converts the photographic or magnetic sound track to audible sound signals. **2.** In a sonar system, the cylindrical container for the transmitting projector and the receiving hydrophone.

sound image [ACOUS] The photographic image of a sound, as on a film sound track.

sounding [ENG] **1.** Determining the depth of a body of water by an echo sounder or sounding line. **2.** Measuring the depth of bedrock by driving a steel rod into the soil. **3.** Any penetration of the natural environment for scientific observation. [METEOROL] *See* upper-air observation. [MIN ENG] **1.** Knocking on a mine roof to see whether it is sound or safe to work under. **2.** Subsurface investigation by observing the penetration resistance of the subsurface material without drilling holes, by driving a rod into the ground or by using a penetrometer.

sounding balloon [ENG] A small free balloon used for carrying radiosonde equipment aloft.

sounding device [PETRO ENG] An acoustical device used to measure the liquid level in a wellbore; for example, a Sonolog or an Echometer.

sounding lead [ENG] A lead used for determining the depth of water.

sounding line [ENG] The line attached to a sounding lead. Also known as lead line.

sounding machine [ENG] An instrument for measuring the depth of water, consisting essentially of a reel of wire; to one end of this wire there is attached a weight which carries a device for

SORUS

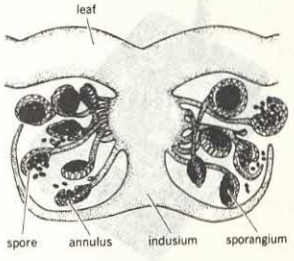


Diagram of section through a fern leaf, showing details of a sorus. *(From W. W. Robbins, T. E. Weier, and C. R. Stocking, Botany: An Introduction to Plant Science, 3d ed., copyright © 1964 by John Wiley & Sons, Inc.; reprinted by permission)*

measuring and recording the depth; a crank or motor reels in the wire.

sounding pipe [NAV ARCH] A pipe through which the depth of liquid in a water or oil tank on board a ship can be measured or sounded.

sounding pole [ENG] A pole or rod used for sounding in shallow water, and usually marked to indicate various depths.

sounding rocket [AERO ENG] A rocket that carries aloft equipment for making observations of or from the upper atmosphere.

sounding sand [GEOL] Sand that emits musical, humming, or crunching sounds when disturbed. Also known as singing sand.

sounding sextant *See* hydrographic sextant.

sounding velocity [ACOUS] The vertical velocity of sound in water, usually assumed to be constant at 800 to 820 fathoms (1464 to 1501 meters) per second for sounding measurements.

sounding wire [ENG] A wire used with a sounding machine in determining depth of water.

sound intensity [ACOUS] For a specified direction and point in space, the average rate at which sound energy is transmitted through a unit area perpendicular to the specified direction.

sound irradiator [ACOUS] A device for focusing sound waves so that sound of high intensity is produced at the focus.

sound lag [ACOUS] Time necessary for a sound wave to travel from its source to the point of reception.

sound level [ACOUS] The sound pressure level (in decibels) at a point in a sound field, averaged over the audible frequency range and over a time interval, with a frequency weighting and the time interval as specified by the American National Standards Association.

SOUND-LEVEL METER

General Radio Type 1551-C sound-level meter. *(General Radio Co.)*

sound-level meter [ENG] An instrument used to measure noise and sound levels in a specified manner; the meter may be calibrated in decibels or volume units and includes a microphone, an amplifier, an output meter, and frequency-weighting networks.

sound locator [ENG ACOUS] A device formerly used to detect aircraft in flight by sound, consisting of four horns, or sound collectors (two for azimuth detection and two for elevation), together with their associated mechanisms and controls, which enabled the listening operator to determine the position and angular velocity of an aircraft.

sound masking [ACOUS] The ability of one sound to make the ear incapable of perceiving another sound.

sound navigation and ranging *See* sonar.

sound power [ACOUS] The total sound energy radiated by a source per unit time, generally expressed in ergs per second or watts. Also known as acoustic power.

sound-powered telephone [ENG ACOUS] A telephone operating entirely on current generated by the speaker's voice, with no external power supply; sound waves cause a diaphragm to move a coil back and forth between the poles of a powerful but small permanent magnet, generating the required audio-frequency voltage in the coil.

sound pressure *See* effective sound pressure.

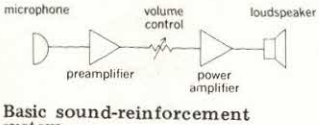
sound pressure level [ACOUS] A value in decibels equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound under consideration to a reference pressure; reference pressures in common use are 0.0002 microbar and 1 microbar. Abbreviated SPL.

sound production [ENG ACOUS] Conversion of energy from mechanical or electrical into acoustical form, as in a siren or loudspeaker.

soundproofing *See* damping.

sound ranging [ENG ACOUS] Determining the location of a gun or other sound source by measuring the travel time of the sound wave to microphones at three or more different known positions.

SOUND-REINFORCEMENT SYSTEM



Basic sound-reinforcement system.

sound-ray diagram [ACOUS] A plot of the paths taken by sound rays in an acoustical system; analogous to a light-ray diagram in optics.

sound reception [ENG ACOUS] Conversion of acoustical energy into another form, usually electrical, as in a microphone.

sound recording [ENG ACOUS] The process of recording sound signals so they may be reproduced at any subsequent time, as on a phonograph disk, motion picture sound track, or magnetic tape.

sound reduction factor [ACOUS] A measure of the reduction in the intensity of sound when it crosses an interface, equal to 10 times the common logarithm of the reciprocal of the sound transmission coefficient of the surface.

sound reflection coefficient *See* acoustic reflectivity.

sound-reinforcement system [ENG ACOUS] An electronic means for augmenting the sound output of a speaker, singer, or musical instrument in cases where it is either too weak to be heard above the general noise or too reverberant; basic elements of such a system are microphones, amplifiers, volume controls, and loudspeakers. Also known as public address system.

sound-reproducing system [ENG ACOUS] A combination of transducing devices and associated equipment for picking up sound at one location and time and reproducing it at the same or some other location and at the same or some later time. Also known as audio system; reproducing system; sound system.

sound reproduction [ENG ACOUS] The use of a combination of transducing devices and associated equipment to pick up sound at one point and reproduce it either at the same point or at some other point, at the same time or at some subsequent time.

sound sensation *See* sound.

sound signal [COMMUN] Any sound produced to convey intelligence, as a fog signal.

sound spectrograph [ENG ACOUS] An instrument that records and analyzes the spectral composition of audible sound.

sound spectrum [ACOUS] A plot of the strength of a sound at various frequencies.

sound speed [ENG] The speed of sound motion picture film, standardized at 24 frames per second (silent film speed is 18 frames per second).

soundstripe [ENG ACOUS] A longitudinal stripe of magnetic material placed on some motion picture films for recording a magnetic sound track.

sound system *See* sound-reproducing system.

sound track [ENG ACOUS] A narrow band, usually along the margin of a sound film, that carries the sound record; it may be a variable-width or variable-density optical track or a magnetic track.

sound transducer *See* electroacoustic transducer.

sound transmission [ACOUS] Passage of a sound wave through a medium or series of media.

sound transmission coefficient [ACOUS] The ratio of transmitted to incident sound energy at an interface in a sound medium; the value depends on the angle of incidence of the sound. Also known as acoustic transmission coefficient; acoustic transmissivity.

sound velocity *See* speed of sound.

sound volume velocity [ACOUS] The rate at which a substance flows through a specified area as a result of a sound wave.

sound wave *See* sound.

sour [CHEM] The condition of containing large amounts of sulfur or sulfur compounds (such as mercaptans or hydrogen sulfide), as in crude oils, naphthas, or gasoline.

source [ELEC] The circuit or device that supplies signal power or electric energy or charge to a transducer or load circuit. [ELECTR] The terminal in a field-effect transistor from which majority carriers flow into the conducting channel in the semiconductor material. [NUCLEO] A radioactive material packaged so as to produce radiation for experimental or industrial use. [PHYS] **1.** In general, a device that supplies some extensive entity, such as energy, matter, particles, or electric charge. **2.** A point, line, or area at which mass or energy is added to a system, either instantaneously or continuously. **3.** A point at which lines of force in a vector field originate, such as a point in an electrostatic field where there is positive charge. [SPECT] The arc or spark that supplies light for a spectroscope. [THERMO] A device that supplies heat.

source address [COMPUT SCI] The first address of a two-address instruction (the sound address is known as the destination address).

source area *See* provenance.

source bed [GEOL] The original stratigraphic horizon from which secondary sulfide minerals were derived.

source data [SCI TECH] Data generated in the course of research.

source data automation *See* automation source data.

source data automation equipment [COMPUT SCI] Equipment (except paper tape and magnetic tape cartridge typewriters acquired separately and not operated in support of a computer) which, as a by-product of its operation, produces a record in a

medium which is acceptable by automatic data-processing equipment.

source data capture [COMPUT SCI] Electronic recording of data at its time and place of origination.

source data entry [COMPUT SCI] Entry of data into a computer system directly from its source, without transcription.

source document [COMPUT SCI] The original medium containing the basic data to be used by a data-processing system, from which the data are converted into a form which can be read into a computer. Also known as original document.

source flow [FL MECH] **1.** In three-dimensional flow, a point from which fluid issues at a uniform rate in all directions. **2.** In two-dimensional flow, a line normal to the planes of flow, from which fluid flows uniformly in all directions at right angles to the line.

source-follower amplifier *See* common-drain amplifier.

source impedance [ELEC] Impedance presented by a source of energy to the input terminals of a device.

sourceland *See* provenance.

source language [COMPUT SCI] The language in which a program (or other text) is originally expressed.

source level [ACOUS] The sound intensity, in decibels above a reference level, at a point which is a unit distance from a source and on an axis of the source.

source library [COMPUT SCI] A collection of computer programs in compiler language or assembler language.

source material [NUCLEO] Material from which fissionable material can be extracted.

source module [COMPUT SCI] An organized set of statements in any source language recorded in machine-readable form and suitable for input to an assembler or compiler.

source program [COMPUT SCI] The form of a program just as the programmer has written it, often on coding forms or machine-readable media; a program expressed in a source-language form.

source program optimizer [COMPUT SCI] A routine for examining the source code of a program under development and providing information about use of the various portions of the code, enabling the programmer to modify those sections of the target program that are most heavily used in order to improve performance of the final, operational program.

source region [METEOROL] An extensive area of the earth's surface characterized by essentially uniform surface conditions and so situated with respect to the general atmospheric circulation that an air mass may remain over it long enough to acquire its characteristic properties.

source rock [GEOL] **1.** Rock from which fragments have been derived which form a later, usually sedimentary rock. Also known as mother rock; parent rock. **2.** Sedimentary rock, usually shale and limestone, deposited together with organic matter which was subsequently transformed to liquid or gaseous hydrocarbons.

source time [COMPUT SCI] The time involved in fetching the contents of the register specified by the first address of a two-address instruction.

source transition loss [ELECTR] The transmission loss at the junction between an energy source and a transducer connecting that source to an energy load; measured by the ratio of the source power to the input power.

sourcing [ELECTR] Redesign or the modification of existing equipment to eliminate a source of radio-frequency interference.

sour corrosion [PETRO ENG] Corrosion occurring in oil or gas wells where there is an iron sulfide corrosion product, and hydrogen sulfide is present in the produced reservoir fluid.

sour crude [MATER] Crude oil containing an abnormally large amount of sulfur compounds that, upon refining, liberate corrosive sulfur compounds; opposite to sweet crude.

sour dirt [PETRO ENG] Sulfate-impregnated soil or soil characterized by escaping sulfur dioxide or hydrogen sulfide; considered an indicator of oil in the area. Also known as copper dirt.

sour gas [MATER] Natural gas that contains corrosive, sulfur-bearing compounds, such as hydrogen sulfide and mercaptans.

sourwood [BOT] *Oxydendrum arboreum*. A deciduous tree of the heath family (Ericaceae) indigenous along the Alleghenies and having long, simple, finely toothed, long-pointed leaves that have an acid taste, and white, urn-shaped flowers. Also known as sorrel tree.

south [GEOD] The direction 180° from north.

South African jade *See* Transvaal jade.

South African tick-bite fever [MED] An infectious tick-borne rickettsial disease of humans which is similar to fièvre boutonneuse.

South America [GEOGR] The southernmost of the Western Hemisphere continents, three-fourths of which lies within the tropics.

South American blastomycosis [MED] An infectious, yeastlike fungus disease of humans seen primarily in Brazil; caused by *Blastomyces brasiliensis* and characterized by massive enlargement of the cervical lymph nodes. Also known as paracoccidioidomycosis.

South American leishmaniasis *See* American mucocutaneous leishmaniasis.

South American trypanosomiasis *See* Chagas' disease.

South Atlantic Current [OCEANOGR] An eastward-flowing current of the South Atlantic Ocean that is continuous with the northern edge of the West Wind Drift.

South Australian faunal region [ECOL] A marine littoral region along the southwestern coast of Australia.

southbound node *See* descending node.

Southeast Drift Current [OCEANOGR] A North Atlantic Ocean current flowing southeastward and southward from a point west of the Bay of Biscay toward southwestern Europe and the Canary Islands, where it continues as the Canary Current.

southeaster [METEOROL] A southeasterly wind, particularly a strong wind or gale; for example, the winter southeast storms of the Bay of San Francisco. Also spelled sou'easter.

South Equatorial Current [OCEANOGR] Any of several ocean currents, flowing westward, driven by the southeast trade winds blowing over the tropical oceans of the Southern Hemisphere and extending slightly north of the equator. Also known as Equatorial Current.

souther [METEOROL] A south wind, especially a strong wind or gale.

southerly burster [METEOROL] A cold wind from the south in Australia.

Southern Cross *See* Crux.

Southern Crown *See* Corona Australis.

Southern Fish *See* Piscis Australis.

southern lights *See* aurora australis.

Southern Polar Front *See* Antarctic Convergence.

Southern Triangle *See* Triangulum Australe.

south foehn [METEOROL] A foehn condition sustained by a strong south-to-north airflow across a transverse mountain barrier; the south foehn of the Alps may well be the most striking foehn in the world.

south frigid zone [GEOGR] That part of the earth south of the Antarctic Circle.

south geographical pole [GEOGR] The geographical pole in the Southern Hemisphere, at latitude 90°S. Also known as South Pole.

south geomagnetic pole [GEOPHYS] The geomagnetic pole in the Southern Hemisphere at approximately 78.5°S, longitude 111°E, 180° from the north geomagnetic pole. Also known as south pole.

South Indian Current [OCEANOGR] An eastward-flowing current of the southern Indian Ocean that is continuous with the northern edge of the West Wind Drift.

southing [NAV] The distance a craft makes good to the south.

South Pacific Current [OCEANOGR] An eastward-flowing current of the South Pacific Ocean that is continuous with the northern edge of the West Wind Drift.

south point [ASTRON] That imaginary point on the celestial sphere at which the meridian intersects the horizon; it is due south of the observer.

south polar distance [ASTRON] The angular distance between a celestial object and the south celestial pole.

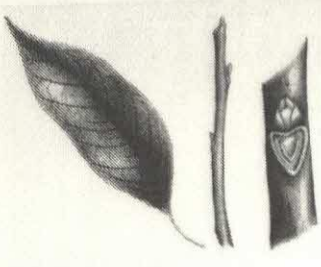
south pole [ELECTROMAG] The pole of a magnet at which magnetic lines of force are assumed to enter. [GEOPHYS] *See* south geomagnetic pole.

South Pole *See* south geographical pole.

south temperate zone [GEOGR] That part of the earth between the Tropic of Capricorn and the Antarctic Circle.

south tropical disturbance [ASTRON] An elongated dark band seen on the surface of Jupiter at about the latitude of the Great Red Spot; it has at times exceeded 180° of longitude in

SOURWOOD



Sourwood *(Oxydendrum arboreum)* leaf, twig, and enlargement of twig showing axial bud and leaf scar.

length and, like the Red Spot, appears and disappears intermittently.

southwester [METEOROL] A southwest wind, particularly a strong wind or gale. Also spelled sou'wester.

sou'wester *See* southwester.

souzalite [MINERAL] $(Mg,Fe)_3(Al,Fe)_4(PO_4)_4(OH)_6 \cdot 2H_2O$ A green mineral composed of hydrous basic phosphate of magnesium, iron, and aluminum.

Sovafining [CHEM ENG] A proprietary petroleum refinery hydrogenation process for pretreatment of straight-run and thermal naphtha for feed to catalytic reforming units, and for desulfurization of fuel oils.

Sovaforming [CHEM ENG] A proprietary petroleum refinery process using a platinum catalyst in a multiple-reactor, fixed-bed catalytic system; used to catalytically reform gasoline-range hydrocarbons to produce high octanes.

sow [MET] **1.** A mold of larger size than a pig. **2.** A channel that conducts molten metal to molds in a pig bed. [VERT ZOO] An adult female swine.

sow block [MET] In forging, a removable block set into the hammer anvil to reduce wear on the anvil.

Soxhlet extractor [CHEM] A flask and condenser device for the continuous extraction of alcohol- or ether-soluble materials.

soya bean oil *See* soybean oil.

soybean [BOT] *Glycine max*. An erect annual legume native to China and Manchuria and widely cultivated for forage and for its seed.

soybean lecithin *See* lecithin.

soybean oil [MATER] A pale yellow, fixed drying oil produced by solvent extraction from soybeans; soluble in alcohol, chloroform, and ether; used for soap manufacture, cattle feeds, and printing inks, and in margarine, salad dressing, and high-protein foods. Also known as Chinese bean oil; soya bean oil; soy oil.

soy lecithin *See* lecithin.

soy oil *See* soybean oil.

Soyuz Program [AERO ENG] A crewed space-flight program begun in 1967 by the Soviet Union.

space [ASTRON] **1.** Specifically, the part of the universe lying outside the limits of the earth's atmosphere. **2.** More generally, the volume in which all celestial bodies, including the earth, move. [COMMUN] The open-circuit condition or the signal causing the open-circuit condition in telegraphic communication; the closed-circuit condition is called the mark. [MATH] In context, usually a set with a topology on it or some other type of structure.

space attenuation [ACOUS] Loss of energy, expressed in decibels, of a signal in free air; caused by such factors as absorption, reflection, scattering, and dispersion.

space biology [BIOL] A term for the various biological sciences and disciplines that are concerned with the study of living things in the space environment.

space capsule [AERO ENG] A container, manned or unmanned, used for carrying out an experiment or operation in space.

space character *See* blank character.

space charge [ELEC] The net electric charge within a given volume. [GEOPHYS] In atmospheric electricity, space charge refers to a preponderance of either negative or positive ions within any given portion of the atmosphere.

space-charge balanced flow [ELECTR] A method of focusing an electron beam in the interaction region of a traveling-wave tube; there is an axial magnetic field in the interaction region which is stronger than that in the gun region; at the transition between the two values of magnetic field strength, the beam is given a rotation in such a direction as to produce an inward force that counterbalances the outward forces from space charge and from the centrifugal forces set up by rotation.

space-charge debunching [ELECTR] A process in which the mutual interactions between electrons in a stream spread out the electrons of a bunch.

space-charge effect [ELECTR] Repulsion of electrons emitted from the cathode of a thermionic vacuum tube by electrons accumulated in the space charge near the cathode.

space-charge grid [ELECTR] Grid operated at a low positive potential and placed between the cathode and control grid of a vacuum tube to reduce the limiting effect of space charge on the current through the tube.

space-charge layer *See* depletion layer.

space-charge limitation [ELECTR] The current flowing through a vacuum between a cathode and an anode cannot exceed a certain maximum value, as a result of modification of the electric field near the cathode due to space charge in this region.

space-charge polarization [ELEC] Polarization of a dielectric which occurs when charge carriers are present which can migrate an appreciable distance through the dielectric but which become trapped or cannot discharge at an electrode. Also known as interfacial polarization.

space-charge region [ELECTR] Of a semiconductor device, a region in which the net charge density is significantly different from zero.

space cloth [CHEM ENG] Woven cloth or wire used for solids screening, and for which the openings between the fibers or strands are designated in terms of space or clear opening.

space communication [COMMUN] Communication between a vehicle in outer space and the earth, using high-frequency electromagnetic radiation.

space cone [MECH] The cone in space that is swept out by the instantaneous axis of a rigid body during Poinsot motion. Also known as herpolhode cone.

space coordinates [MATH] A three-dimensional system of cartesian coordinates by which a point is located by three magnitudes indicating distance from three planes which intersect at a point.

spacecraft [AERO ENG] Devices, manned and unmanned, which are designed to be placed into an orbit about the earth or into a trajectory to another celestial body. Also known as space ship; space vehicle.

spacecraft ground instrumentation [ENG] Instrumentation located on the earth for monitoring, tracking, and communicating with manned spacecraft, satellites, and space probes. Also known as ground instrumentation.

spacecraft launching [AERO ENG] The setting into motion of a space vehicle with sufficient force to cause it to leave the earth's atmosphere.

spacecraft propulsion [AERO ENG] The use of rocket engines to accelerate space vehicles.

spacecraft tracking [ENG] The determination of the positions and velocities of spacecraft through radio and optical means.

space current [ELECTR] Total current flowing between the cathode and all other electrodes in a tube; this includes the plate current, grid current, screen grid current, and any other electrode current which may be present.

spaced antenna [ELECTROMAG] Antenna system consisting of a number of separate antennas spaced a considerable distance apart, used to minimize local effects of fading at short-wave receiving stations.

spaced armor [ORD] An arrangement of armor plate, using two or more thicknesses, each thickness spaced from the adjoining one; used as a protective device, particularly against shaped-charge ammunition.

space defense [ORD] All measures designed to reduce or nullify the effectiveness of hostile acts by vehicles (including missiles) while in space.

space detection and tracking system [ENG] System capable of detecting and tracking space vehicles from the earth, and reporting the orbital characteristics of these vehicles to a central control facility. Abbreviated SPADATS.

space diversity reception [ELECTROMAG] Radio reception involving the use of two or more antennas located several wavelengths apart, feeding individual receivers whose outputs are combined; the system gives an essentially constant output signal despite fading due to variable propagation characteristics, because fading affects the spaced-out antennas at different instants of time.

spaced loading [ENG] Loading shot holes so that cartridges are separated by open spacers which do not prevent the concussion from one charge from reaching the next.

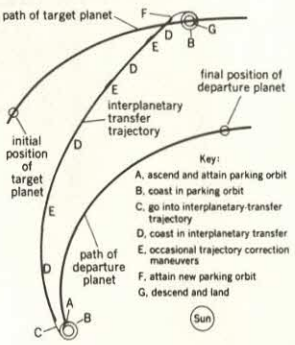
space-dyed yarn [TEXT] Yarn dyed in one color for a specified length and in other colors for other lengths, the sequence being repeated.

space environment [ASTRON] The environment encountered by vehicles and living creatures in space, characterized by absence of atmosphere.

space factor [ELECTROMAG] **1.** The ratio of the space occupied by the conductors in a winding to the total cubic content or volume of the winding, or the similar ratio of cross sections. **2.** The ratio of the space occupied by iron to the total cubic content of an iron core.

space fixed reference [NAV] An oriented reference system in space independent of earth phenomena for positioning.
space flight [AERO ENG] Travel beyond the earth's sensible atmosphere; space flight may be an orbital flight about the earth or it may be a more extended flight beyond the earth into space.
space-flight trajectory [AERO ENG] The track or path taken by a spacecraft.
space frame [BUILD] A three-dimensional steel building frame which is stable against wind loads.
space group [CRYSTAL] A group of operations which leave the infinitely extended, regularly repeating pattern of a crystal unchanged; there are 230 such groups.
space group extinction [CRYSTAL] The absence of certain classes of reflections in the x-ray diffraction pattern of a crystal due to the existence of symmetry elements in the space group of the crystal which are not present in its point group.
space guidance [NAV] Guidance operations considered as consisting of the following three phases: ascent from earth to an orbit or space trajectory, operations in space requiring navigation or guidance, and descent to the surface of the earth or the moon.
space-hold [COMMUN] The transmission of a steady space signal over a transmission line which is carrying no traffic.
space inversion *See* inversion.
space lattice [BUILD] A space frame built of lattice girders. [CRYSTAL] *See* crystal lattice; lattice.
spacelike surface [RELAT] A three-dimensional surface in a four-dimensional space-time which has the property that no event on the surface lies in the past or the future of any other event on the surface.
spacelike vector [RELAT] A four vector in Minkowski space whose space component has a magnitude which is greater than the magnitude of its time component multiplied by the speed of light.
space medicine [MED] A branch of medicine that deals with the physiologic disturbances and diseases produced in man by high-velocity projection through and beyond the earth's atmosphere, flight through interplanetary space, and return to earth.
space mission [AERO ENG] A journey by a vehicle, manned or unmanned, beyond the earth's atmosphere, usually for the purpose of collecting scientific data.
space modulation [COMMUN] The combining of signals in space to form a signal of desired characteristics.
space motion [ASTRON] Motion of a celestial body through space.
space navigation [NAV] Determination of the three-dimensional position and velocity vector of a space vehicle relative to a selected frame of reference.
space perception [PHYSIO] The awareness of the spatial properties and relations of an object, or of one's own body, in space; especially, the sensory appreciation of position, size, form, distance, and direction of an object, or of the observer himself, in space.
space permeability [ELECTROMAG] Factor that expresses the ratio of magnetic induction to magnetizing force in a vacuum; in the centimeter-gram-second electromagnetic system of units, the permeability of a vacuum is arbitrarily taken as unity; in the meter-kilogram-second-ampere system, it is $4\pi \times 10^{-7}$.
space polar coordinates [MATH] A system of coordinates by which a point is located in space by its distance from a fixed point called the pole, the colatitude or angle between the polar axis (a reference line through the pole) and the radius vector (a straight line connecting the pole and the point), and the longitude or angle between a reference plane containing the polar axis and a plane through the radius vector and polar axis.
spaceport [AERO ENG] An installation used to test and launch spacecraft.
space power system [AERO ENG] An on-board assemblage of equipment to generate and distribute electrical energy on satellites and spacecraft.
space probe [AERO ENG] An instrumented vehicle, the payload of a rocket-launching system designed specifically for flight missions to other planets or the moon and into deep space, as distinguished from earth-orbiting satellites.
space quadrature [PHYS] A difference of a quarter-wavelength in the position of corresponding points of a wave in space.
space quantization [QUANT MECH] The quantization of the component of the angular momentum of a system in some specified direction.
spacer [ENG] **1.** A piece of metal wire twisted at one end to form a guard to keep the explosive in a shothole in place and twisted at the other end to form a guard to hold the tamping in its place. **2.** A piece of wood doweling interposed between charges to extend the column of explosive. **3.** A device for holding two members at a given distance from each other. Also known as spacer block. **4.** The tapered section of a pug joining the barrel to the die; clay is compressed in this section before it issues through the die.
spacer block *See* spacer.
space reconnaissance [AERO ENG] Reconnaissance of the surface of a planet from a space ship or satellite.
space reddening [ASTRON] Reddening of light from distant stars caused by selective absorption of blue light by interstellar dust clouds.
space reflection symmetry *See* parity.
space research [AERO ENG] Research involving studies of all aspects of environmental conditions beyond the atmosphere of the earth.
spacer strip [MET] A strip or bar of metal placed in the root of a weld joint, prepared for a groove weld, to serve as backing and maintain root opening during welding.
space satellite [AERO ENG] A vehicle, manned or unmanned, for orbiting the earth.
space ship *See* spacecraft.
space shuttle [AERO ENG] A spacecraft designed to travel from the earth to a space station and to return to earth.
space simulator [AERO ENG] **1.** Any device which simulates one or more parameters of the space environment and which is used to test space systems or components. **2.** Specifically, a closed chamber capable of reproducing approximately the vacuum and normal environments of space.
space station [AERO ENG] An autonomous, permanent facility in space for the conduct of scientific and technological research, earth-oriented applications, and astronomical observations.
space suit [ENG] A pressure suit for wear in space or at very low ambient pressures within the atmosphere, designed to permit the wearer to leave the protection of a pressurized cabin.
space suppression [COMPUT SCI] Prevention of the normal movement of paper in a computer printer after the printing of a line of characters.
space technology [AERO ENG] The systematic application of engineering and scientific disciplines to the exploration and utilization of outer space.
space-time [RELAT] A four-dimensional space used to represent the universe in the theory of relativity, with three dimensions corresponding to ordinary space and the fourth to time. Also known as space-time continuum.
space-time continuum *See* space-time.
space-to-mark transition [COMMUN] The transition from the space condition to the mark condition in telegraphic communication.
Space Tracking and Data Acquisition Network [ENG] A network of ground stations operated by the National Aeronautics and Space Administration, which tracks, commands, and receives telemetry for United States and foreign unmanned satellites. Abbreviated STADAN.
space vehicle *See* spacecraft.
space velocity [ASTRON] A star's true velocity with reference to the sun. [CHEM ENG] The relationship between feed rate and reactor volume in a flow process; defined as the volume or weight of feed (measured at standard conditions) per unit time per unit volume of reactor (or per unit weight of catalyst).
space walk [AERO ENG] The movement of an astronaut outside the protected environment of a spacecraft during a space flight; the astronaut wears a spacesuit.
space wave [ELECTROMAG] The component of a ground wave that travels more or less directly through space from the transmitting antenna to the receiving antenna; one part of the space wave goes directly from one antenna to the other; another part is reflected off the earth between the antennas.
space weapon [ORD] A weapon that travels through space and is directed against an enemy target whether on the ground, in the air, or in space.
spacing [GRAPHICS] The arrangement of characters, words, lines, and other elements to give the most pleasing effect on a printed page.
spacing bias *See* bias telegraph distortion.

SPACE-FLIGHT TRAJECTORY



Simplified trajectory, a schematic diagram of an interplanetary mission.

spacing clamp [PETRO ENG] A clamp for maintaining the rod string in the correct pumping position while the well is in the final stages of being fitted to the pump.

spacing pulse [COMMUN] In teletypewriter operation, the signal interval during which the selector unit is not operated.

spacing wave *See* back wave.

spacistor [ELECTR] A multiple-terminal solid-state device, similar to a transistor, that generates frequencies up to about 10,000 megahertz by injecting electrons or holes into a space-charge layer which rapidly forces these carriers to a collecting electrode.

spackling [ENG] The process of repairing a part of a plaster wall or mural by cleaning out the defective spot and then patching it with a plastering material.

SPADATS *See* space detection and tracking system.

spade [DES ENG] A shovellike implement with a flat oblong blade; used for turning soil by pushing against the blade with the foot.

spade bolt [DES ENG] A bolt having a spade-shaped flattened head with a transverse hole, used to fasten shielded coils, capacitors, and other components to a chassis.

spade drill [DES ENG] A drill consisting of three main parts: a cutting blade, a blade holder or shank, and a device, such as a screw, which fastens the blade to the holder; used for cutting holes over 1 inch (2.54 centimeters) in diameter.

spade grip [ORD] D-shaped handle for pointing a gun, fastened on the rear of the receiver of certain flexible automatic weapons.

spade lug [DES ENG] An open-ended flat termination for a wire lead, easily slipped under a terminal nut.

spadix [BOT] A fleshy spike that is enclosed in a leaflike spathe and is the characteristic inflorescence of palms and arums. [INV ZOO] A cone-shaped structure in male Nautiloidea formed of four modified tentacles, and believed to be homologous with the hectocotylus in male squids.

spaghetti [ELEC] Insulating tubing used over bare wires or as a sleeve for holding two or more insulated wires together; the tubing is usually made of a varnished cloth or a plastic.

spall [ENG] **1.** To reduce irregular stone blocks to an approximate size by chipping with a hammer. **2.** To break off thin chips from, and parallel to, the surface of a material, such as a metal or rock. [GEOL] **1.** A fragment removed from the surface of a rock by weathering. **2.** A relatively thin, sharp-edged fragment produced by exfoliation. **3.** A rock fragment produced by chipping with a hammer. [MIN ENG] To break ore. [ORD] A fragment torn from the surface of an armor plate.

spallation [NUC PHYS] A nuclear reaction in which the energy of each incident particle is so high that more than two or three particles are ejected from the target nucleus and both its mass number and atomic number are changed. Also known as nuclear spallation.

spallation reaction [NUC PHYS] A high-energy nuclear reaction which results in the release of large numbers of nucleons as reaction products.

spalling [GEOL] The chipping or fracturing with an upward heaving, of rock caused by a compressional wave at a free surface.

span [AERO ENG] **1.** The dimension of a craft measured between lateral extremities; the measure of this dimension. **2.** Specifically, the dimension of an airfoil from tip to tip measured in a straight line. [ENG] A structural dimension measured between certain extremities. [MATH] The span of a set of vectors is the set of all possible linear combinations of those vectors.

spandex [TEXT] An elastic synthetic fiber; usually provides a core around which other fibers are wound.

spandrel [BUILD] The part of a wall between the sill of a window and the head of the window below it.

spandrel wall [BUILD] A wall on the outer surface of a vault to fill the spandrels.

spangolite [MINERAL] $Cu_6Al(SO_4)(OH)_{12}Cl \cdot 3H_2O$ A dark-green hexagonal mineral composed of hydrous basic sulfate and chloride of aluminum and copper and occurring as crystals.

Spanish collar *See* paraphimosis.

spanishing [GRAPHICS] The depositing of ink in the valleys of a grained or embossed substrate.

Spanish lavender oil *See* spike oil.

Spanish spike oil *See* spike oil.

Spanish white *See* bismuth subnitrate.

spanned record [COMPUT SCI] A logical record which covers more than one block, used when the size of a data buffer is fixed or limited.

spanner [DES ENG] A wrench with a semicircular head having a projection or hole at one end. [ENG] **1.** A horizontal brace. **2.** An artificial horizon attachment for a sextant.

spanning subgraph [MATH] With reference to a graph G, a subgraph of G that contains all the vertices of G.

spar [AERO ENG] A principal spanwise member of the structural framework of an airplane wing, aileron, stabilizer, and such; it may be of one-piece design or a fabricated section. [MIN ENG] A small clay vein in a coal seam. [MINERAL] Any transparent or translucent, nonmetallic, light-colored, readily cleavable, crystalline mineral; examples are calespar and fluorspar. [NAV ARCH] A long, round stick of steel or wood, often tapered at one or both ends, and usually a part of a ship's masts or rigging.

sparagmite [GEOL] Late Precambrian fragmental rocks of Scandinavia, characterized by high proportions of microcline.

spar buoy [NAV] A long, thin, typically cylindrical buoy, ballasted at one end so that it floats in an approximately vertical position; used to mark the port side of a channel.

spar deck [NAV ARCH] A deck fitted from bow to stern on a superstructure having heavier scantlings than those under an awning deck.

spare part [ENG] In supply usage, any part, component, or subassembly kept in reserve for the maintenance and repair of major items of equipment.

spare parts list [ENG] List approved by designated authorities, indicating the total quantities of spare parts, tools, and equipment necessary for the maintenance of a specified number of major items for a definite period of time.

Sparganiaceae [BOT] A family of monocotyledonous plants in the order Typhales distinguished by the inflorescence of globose heads, a vestigial perianth, and achenes that are sessile or nearly sessile.

sparganosis [VET MED] An infection by the plerocercoid larva, or sparganum, of certain species of *Spirometra;* the adult form normally occurs in the intestine of dogs and cats.

sparganum [INV ZOO] The plerocercoid larva of a tapeworm.

sparger *See* perforated-pipe distributor.

Sparidae [VERT ZOO] A family of perciform fishes in the suborder Percoidei, including the porgies.

sparite *See* sparry calcite.

spark [ELEC] A short-duration electric discharge due to a sudden breakdown of air or some other dielectric material separating two terminals, accompanied by a momentary flash of light. Also known as electric spark; spark discharge; sparkover.

spark arrester [ENG] **1.** An apparatus that prevents sparks from escaping from a chimney. **2.** A device that reduces or eliminates electric sparks at a point where a circuit is opened and closed.

spark capacitor [ELEC] Capacitor connected across a pair of contact points, or across the inductance which causes the spark, for the purpose of diminishing sparking at these points.

spark chamber [NUCLEO] A particle-detecting device in which the trajectory of a charged particle is made visible by a series of sparks that are triggered by the particle as it passes through an array of spark gaps.

spark coil [ELECTROMAG] An induction coil for producing spark discharges, as to initiate combustion in an internal combustion engine.

spark coil leak detector [ENG] A coil similar to a Tesla coil which detects leaks in a vacuum system by jumping a spark between the leak hole and the core of the coil.

spark counter [NUCLEO] A particle detector in which high-speed charged particles ionize a gas, consisting of argon mixed with an organic gas, triggering a spark between two plane parallel metal electrodes.

spark discharge *See* spark.

spark excitation [SPECT] The use of an electric spark (10,000 to 30,000 volts) to excite spectral line emissions from otherwise hard-to-excite samples; used in emission spectroscopy.

spark explosion method [ANALY CHEM] A technique for the analysis of hydrogen; the sample is mixed with an oxidant and exploded by a spark or hot wire, and the combustion products are then analyzed.

spark gap [ELEC] An arrangement of two electrodes be-

tween which a spark may occur; the insulation (usually air) between the electrodes is self-restoring after passage of the spark; used as a switching device, for example, to protect equipment against lightning or to switch a radar antenna from receiver to transmitter and vice versa.

spark-gap generator [ELEC] A high-frequency generator in which a capacitor is repeatedly charged to a high voltage and allowed to discharge through a spark gap into an oscillatory circuit, generating successive trains of damped high-frequency oscillations.

spark-ignition combustion cycle *See* Otto cycle.

spark-ignition engine [MECH ENG] An internal combustion engine in which an electrical discharge ignites the explosive mixture of fuel and air.

sparking potential *See* breakdown voltage.

sparking voltage *See* breakdown voltage.

spark killer *See* spark suppressor.

spark knock [MECH ENG] The knock produced in an internal combustion engine precedes the arrival of the piston at the top dead-center position.

spark lead [MECH ENG] The amount by which the spark precedes the arrival of the piston at its top (compression) dead-center position in the cylinder of an internal combustion engine.

sparkle metal [MET] A crude mixture of sulfides containing 74% copper produced by the smelting of copper ore.

spark machining [MET] Cutting metal by repetitive sparking between a tool (the cathode) and the workpiece (the anode).

sparkover *See* spark.

spark-over-initiated discharge machining [MECH ENG] An electromachining process in which a potential is impressed between the tool (cathode) and workpiece (anode) which are separated by a dielectric material; a heavy discharge current flows through the ionized path when the applied potential is sufficient to cause rupture of the dielectric.

sparkover voltage *See* flashover voltage.

spark plate [ELEC] A metal plate insulated from the chassis of an auto radio by a thin sheet of mica, and connected to the battery lead to bypass noise signals picked up by battery wiring in the engine compartment.

spark plug [ELEC] A device that screws into the cylinder of an internal combustion engine to provide a pair of electrodes between which an electrical discharge is passed to ignite the explosive mixture.

sparkproof [ENG] **1.** Treated with a material to prevent ignition or damage by sparks. **2.** Generating no sparks.

spark range [ORD] A firing range in which missiles in free flight can be photographed by the light from an electric spark which is triggered by passage of the projectile.

spark recorder [ENG] Recorder in which the recording paper passes through a spark gap formed by a metal plate underneath and a moving metal pointer above the paper; sparks from an induction coil pass through the paper periodically, burning small holes that form the record trace.

spark spectrum [SPECT] The spectrum produced by a spark discharging through a gas or vapor; with metal electrodes, a spectrum of the metallic vapor is obtained.

spark suppressor [ELEC] A device used to prevent sparking between a pair of contacts when the contacts open, such as a resistor and capacitor in series between the contacts, or, in the case of an inductive circuit, a rectifier in parallel with the inductor. Also known as spark killer.

spark transmitter [ELECTR] A radio transmitter that utilizes the oscillatory discharge of a capacitor through an inductor and a spark gap as the source of radio-frequency power.

spark voltage [ELEC] The voltage required to create an arc across the gap of a spark plug.

Sparnacean [GEOL] A European stage of geologic time; upper upper Paleocene, above Thanetian, below Ypresian of Eocene.

Sparrow [ORD] A Navy air-to-air guided missile having a speed of over 1500 miles (2400 kilometers) per hour, guided to its target by a radar beam transmitted by the launching airplane; several models exist, designated Sparrow I, Sparrow II, and Sparrow III.

sparry calcite [MINERAL] A clean, coarse-grained calcite crystal. Also known as calcsparite; sparite.

sparry cement [GEOL] Clear, relatively coarse-grained calcite in the interstices of any sedimentary rock.

sparry iron *See* siderite.

sparseness [MATH] The property of a nonlinear programming problem which has many variables, but whose objective and constraint functions each involve only relatively few variables.

spartalite *See* zincite.

sparteine [ORG CHEM] $C_{15}H_{26}N_2$ A poisonous, colorless, oily alkaloid; soluble in alcohol and ether, slightly soluble in water; boils at 173°C; used in medicine. Also known as lupinidine.

spar varnish [MATER] A flammable varnish made of drying oils, resins, thinners, and driers to provide a durable, water-resistant coating for outside or other severe service.

spasmodic turbidity current [GEOPHYS] A single, rapidly developed turbidity current.

spasmophilia [MED] A morbid tendency to convulsions, and to tonic spasms, such as those observed in tetany, infantile spasms, or spasmus nutans.

spastic colon *See* irritable colon.

spastic diplegia [MED] **1.** Spastic paralysis of the arms and legs caused by diffuse lesions of the cerebral cortex. **2.** A form of cerebral palsy, possibly due to prenatal or perinatal hypoxia or other injuries resulting in atrophic lobar sclerosis, or to congenital or developmental abnormalities.

spastic ileus [MED] A form of ileus in which temporary obstruction is due to segmental intestinal spasm. Also known as dynamic ileus; hyperdynamic ileus.

spastic paralysis [MED] A condition in which a group of muscles manifest increased tone, exaggerated tendon reflexes, depressed or absent superficial reflexes, and sometimes clonus, due to an upper motor neuron lesion.

spastic paraplegia [MED] Paralysis of the lower limbs with increased muscular tone and hyperactive tendon reflexes; commonly seen in diseases and injuries involving pyramidal tracts of the spinal cord.

spastic strabismus [MED] A squint resulting from the contraction of an ocular muscle.

Spatangoida [INV ZOO] An order of exocyclic Euechinoidea in which the posterior ambulacral plates form a shield-shaped area behind the mouth.

spathe [BOT] A large, usually colored bract or pair of bracts enclosing an inflorescence, especially a spadix, on the same axis.

spathic iron *See* siderite.

spatial [PHYS] Of or pertaining to space; occupying space; occurring in, or conditioned by, space; considered with relation to space.

spatial data management [COMPUT SCI] A technique whereby users retrieve information in data bases, document files, or other sources by making contact with picture symbols displayed on the screen of a video terminal through the use of such devices as light pens, joy sticks, and heat-sensitive screens for finger-touch activation.

spatial dendrite [METEOROL] A complex ice crystal with fernlike arms that extend in many directions (spatially) from a central nucleus; its form is roughly spherical. Also known as spatial dendritic crystal.

spatial dendritic crystal *See* spatial dendrite.

spatial filter [OPTICS] An optical filter that consists of a very small aperture, such as a pinhole.

spatiotemporal [PHYS] Of or pertaining to space time; having extent and duration.

spatter [MET] Particles of metal expelled during arc or gas welding.

spatter cone [GEOL] A low, steep-sided cone of small pyroclastic fragments built up on a fissure or vent. Also known as agglutinate cone; volcanello.

spatter dash [CIV ENG] **1.** A finish put on stucco by dashing a mortar and sand mixture against it. **2.** Paint spattered on a different-colored ground coat.

spatter rampart [GEOL] A low, circular ridge of pyroclastics built up around the margins of small volcanoes.

spatulate [BIOL] Shaped like a spoon.

spawn [ZOO] **1.** The collection of eggs deposited by aquatic animals, such as fish. **2.** To produce or deposit eggs or discharge sperm; applied to aquatic animals.

spay [VET MED] To remove the ovaries.

SPC *See* stored program control.

SPDT *See* single-pole double-throw.

speaker *See* loudspeaker.

spear [DES ENG] A rodlike fishing tool having a barbed-hook

SPARK PLUG

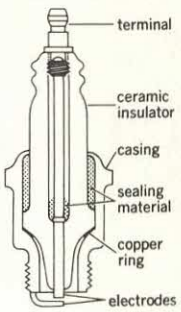


Diagram of a typical spark plug.

SPARROW

Sparrow, air-to-air missile launched from fighter aircraft. *(Official U.S. Navy photograph)*

end, used to recover rope, wire line, and other materials from a borehole.

spearmint [BOT] *Mentha spicata*. An aromatic plant of the mint family, Labiatae; the leaves are used as a flavoring in foods.

spearmint oil [MATER] A colorless to yellowish essential oil obtained from spearmint with characteristic taste and scent; soluble in alcohol, ether, and chloroform; used as a flavor and a source of carvone.

special ammunition supply point [ORD] A mobile supply point where special ammunition is stored and issued to delivery units.

special atomic demolition munition [ORD] A very-low-yield, man-portable, atomic demolition munition which is detonated by a timer device.

special cargo [IND ENG] Cargo which requires special handling or protection, such as pyrotechnics, detonators, watches, and precision instruments.

special character [COMPUT SCI] A computer-representable character that is not alphabetic, numeric, or blank.

special flight [AERO ENG] An air transport flight, other than a scheduled service, set up to move a specific load.

special functions [MATH] The various families of solution functions corresponding to cases of the hypergeometric equation or functions used in the equation's study, such as the gamma function.

special gelatin [MATER] The brand name of a series of ammonia-gelatin-type dynamites used in open-pit mining, underground metal mining, quarrying, and construction.

special job cover map [MAP] A small-scale map used to record progress on photographic reconnaissance tasks covering very large areas; as each portion of the task is completed, the area covered is outlined on the map.

special nuclear material [NUCLEO] Fissionable and related material controlled directly by the Atomic Energy Commission, such as uranium enriched in the isotopes ^{235}U and ^{233}U, and plutonium.

special observation [METEOROL] A category of aviation weather observation taken to report significant changes in one or more of the observed elements since the last previous record observation.

special-purpose buoy [NAV] A buoy for a special purpose which has no lateral significance, such as those buoys used to mark quarantine and anchorage areas, or dredging and survey operations.

special-purpose computer [COMPUT SCI] A digital or analog computer designed to be especially efficient in a certain class of applications.

special-purpose item [ENG] In supply usage, any item designed to fill a special requirement, and having a limited application; for example, a wrench or other tool designed to be used for one particular model of a piece of machinery.

special-purpose language [COMPUT SCI] A programming language designed to solve a particular type of problem.

special-purpose vehicle [ENG] A vehicle having a special chassis, or a general-purpose chassis incorporating major modifications, designed to fill a specialized requirement; all tractors (except truck tractors) and tracklaying vehicles, regardless of design, size, or intended purpose, are classified as special-purpose vehicles.

special relativity [RELAT] The division of relativity theory which relates the observations of observers moving with constant relative velocities and postulates that natural laws are the same for all such observers.

special weapon [ORD] Any extraordinary modern weapon, such as an atomic, radiological, or biological weapon.

special weather report [METEOROL] The encoded and transmitted weather report of a special observation.

speciation [EVOL] The evolution of species.

species [CHEM] A chemical entity or molecular particle, such as a radical, ion, molecule, or atom. [NUC PHYS] *See* nuclide. [SYST] A taxonomic category ranking immediately below a genus and including closely related, morphologically similar individuals which actually or potentially interbreed.

species concept [EVOL] The idea that the diversity of nature is divisible into a finite number of definable species.

species number [OCEANOGR] The first number in the argument number in a Doodson tide schedule; indicates approximately the period of a component of tidal potential.

species population [ECOL] A group of similar organisms residing in a defined space at a certain time.

specific [PHYS] Indicating the amount of a physical quantity per unit mass, weight, volume, or area, or the ratio of the quantity for the substance under consideration to the same quantity for a standard substance, such as water.

specific acoustical impedance [ACOUS] The ratio of the pressure phasor associated with a sound wave at any given point in a medium to the velocity phasor at that point.

specific acoustical ohm *See* rayl.

specific acoustical reactance [ACOUS] The magnitude of the imaginary part of the specific acoustical impedance.

specific acoustical resistance [ACOUS] The real part of the specific acoustical impedance.

specific activity [NUCLEO] **1.** The activity of a radioisotope of an element per unit weight of element present in the sample. **2.** The activity per unit mass of a pure radionuclide. **3.** The activity per unit weight of a sample of radioactive material. In these three cases, specific activity can be expressed in such units as millicuries per gram, disintegrations per second per milligram, or counts per minute per milligram.

specification [ENG] An organized listing of basic requirements for materials of construction, product compositions, dimensions, or test conditions; a number of organizations publish standards (for example, ASME, API, ASTM), and many companies have their own specifications. Also known as specs. [IND ENG] A quantitative description of the required characteristics of a device, machine, structure, product, or process.

specific charge [ELEC] The ratio of a particle's charge to its mass.

specific conductance *See* conductivity.

specific cryptosystem [COMMUN] A general cryptosystem and a key or set of keys for controlling the cryptographic process.

specific energy [HYD] The energy at any cross section of an open channel, measured above the channel bottom as datum; numerically the specific energy is the sum of the water depth plus the velocity head, $v^2/2g$, where v is the velocity of flow and g the acceleration of gravity. [THERMO] The internal energy of a substance per unit mass.

specific fuel consumption [MECH ENG] The weight flow rate of fuel required to produce a unit of power or thrust, for example, pounds per horsepower-hour. Abbreviated SFC. Also known as specific propellant consumption.

specific gravity [MECH] The ratio of the density of a material to the density of some standard material, such as water at a specified temperature, for example, 4°C or 60°F, or (for gases) air at standard conditions of pressure and temperature. Abbreviated sp gr. Also known as relative density.

specific gravity bottle [ENG] A small bottle or flask used to measure the specific gravities of liquids; the bottle is weighed when it is filled with the liquid whose specific gravity is to be determined, when filled with a reference liquid, and when empty. Also known as density bottle; relative density bottle.

specific gravity hydrometer [ENG] A hydrometer which indicates the specific gravity of a liquid, with reference to water at a particular temperature.

specific heat [THERMO] **1.** The ratio of the amount of heat required to raise a mass of material 1 degree in temperature to the amount of heat required to raise an equal mass of a reference substance, usually water, 1 degree in temperature; both measurements are made at a reference temperature, usually at constant pressure or constant volume. **2.** The quantity of heat required to raise a unit mass of homogeneous material one degree in temperature in a specified way; it is assumed that during the process no phase or chemical change occurs.

specific humidity [METEOROL] In a system of moist air, the (dimensionless) ratio of the mass of water vapor to the total mass of the system.

specific impulse [AERO ENG] A performance parameter of a rocket propellant, expressed in seconds, equal to the thrust in pounds divided by the weight flow rate in pounds per second. Also known as specific thrust.

specific inductive capacity *See* dielectric constant.

specific insulation resistance *See* volume resistivity.

specific ionization [NUCLEO] The number of ion pairs formed per unit distance along the track of an ion passing through matter. Also known as total specific ionization.

specific locus test [GEN] A technique used to detect recessive induced mutations in diploid organisms; a strain which

carries several known recessive mutants in a homozygous condition is crossed with a nonmutant strain treated to induce mutations in its germ cells; induced recessive mutations allelic with those of the test strain will be expressed in the progeny.

specific mass shift [NUC PHYS] The portion of the mass shift that is produced by the correlated motion of different pairs of atomic electrons and is therefore absent in one-electron systems.

specific power [NUCLEO] The power produced per unit mass of fuel present in a nuclear reactor.

specific productivity index [PETRO ENG] Barrels per day of oil produced per pound decline in bottom-hole pressure per foot of effective reservoir thickness.

specific propellant consumption *See* specific fuel consumption.

specific reluctance *See* reluctivity.

specific repetition rate [ELECTR] The pulse repetition rate of a pair of transmitting stations of an electronic navigation system using various rates differing slightly from each other, as in loran.

specific resistance *See* electrical resistivity.

specific retention volume [ANALY CHEM] The relationship among retention volume, void volume, and adsorbent weight, used to standardize gas chromatography adsorbents by the elution of a standard solute by a standard eluent from the adsorbent under test.

specific rotation [OPTICS] The calculated rotation of light passing through a solution as related to the solution volume and depth, the amount of solute, and the observed optical rotation at a given wavelength and temperature.

specific routine [COMPUT SCI] Computer routine to solve a particular data-handling problem in which each address refers to explicitly stated registers and locations.

specific speed [MECH ENG] A number, N_s, used to predict the performance of centrifugal and axial pumps or hydraulic turbines: for pumps, $N_s = N\sqrt{Q}/H^{3/4}$; for turbines, $N_s = N\sqrt{P}/H^{5/4}$, where N_s is specific speed, N is the rotational speed in revolutions per minute, Q is the rate of flow in gallons per minute, H is head in feet, and P is shaft horsepower.

specific surface [CHEM ENG] The surface area per unit weight or volume of a particulate solid; used in size-reduction (crushing and grinding) calculations.

specific susceptibility *See* mass susceptibility.

specific thrust *See* specific impulse.

specific viscosity [FL MECH] The specific viscosity of a polymer is the relative viscosity of a polymer solution of known concentration minus 1; usually determined at low concentration of the polymer; for example, 0.5 gram per 100 milliliters of solution, or less.

specific volume [MECH] The volume of a substance per unit mass; it is the reciprocal of the density. Abbreviated sp vol.

specific-volume anomaly [OCEANOGR] The excess of the actual specific volume of the sea water at any point in the ocean over the specific volume of sea water of salinity 35 parts per thousand (‰) and temperature 0°C at the same pressure. Also known as steric anomaly.

specific weight [MECH] The weight per unit volume of a substance.

specific yield [HYD] The quantity of water which a unit volume of aquifer, after being saturated, will yield by gravity; it is expressed either as a ratio or as a percentage of the volume of the aquifer; specific yield is a measure of the water available to wells.

specimen [SCI TECH] **1.** An item representative of others in the same class or group. **2.** A sample selected for testing, examination, or display.

speck [PL PATH] A fungus or bacterial disease of rice characterized by speckled grains.

speckle [OPTICS] A phenomenon in which the scattering of light from a highly coherent source, such as a laser, by a rough surface or inhomogeneous medium generates a random-intensity distribution of light that gives the surface or medium a granular appearance.

speckle interferometry [OPTICS] The use of speckle patterns in the study of object displacements, vibration, and distortion, and in obtaining diffraction-limited images of stellar objects.

specs *See* specification.

spectacle [ZOO] A colored marking in the form of rings around the eyes, as in certain birds, reptiles, and mammals (as the raccoon).

spectacle frame [NAV ARCH] A frame at or close to the sternposts of a twin-screw ship, through which pass propeller shafts.

spectacle stone *See* selenite.

spectral bandwidth [SPECT] The minimum radiant-energy bandwidth to which a spectrophotometer is accurate; that is, 1–5 nanometers for better models.

spectral centroid [OPTICS] An average wavelength; specifically, for a light filter or other light-transmitting device, a weighted average of the spectral energy distribution of the incident light, the transmittance of the device, and the luminosity function.

spectral characteristic [OPTICS] The relation between wavelength and some other variable, such as between wavelength and emitted radiant power of a luminescent screen per unit wavelength interval.

spectral classification [ASTRON] A classification of stars by characteristics revealed by study of their spectra; the six classes B, A, F, G, K, and M include 99% of all known stars.

spectral color [OPTICS] **1.** A color corresponding to light of a pure frequency; the basic spectral colors are violet, blue-green, yellow, orange, and red. **2.** A color that is represented by a point on the chromaticity diagram that lies on a straight line between some point on the spectral color (first definition) locus and the achromatic points; purple, for example, is not a spectral color.

spectral density [ELECTROMAG] *See* spectral energy distribution. [MATH] The density function for the spectral measure of a linear transformation on a Hilbert space. [SYS ENG] *See* frequency spectrum.

spectral directional reflectance factor [ANALY CHEM] In spectrophotometric colorimetry, the ratio of the energy diffused in any desired direction by the object under analysis to that energy diffused in the same direction by an ideal perfect (energy) diffuser.

spectral energy distribution [ELECTROMAG] The power carried by electromagnetic radiation within some small interval of wavelength (of frequency) of fixed amount as a function of wavelength (of frequency). Also known as spectral density.

spectral extinction [OPTICS] The selective absorption of different wavelengths of light as a function of depth in water.

spectral factorization [MATH] A process sometimes used in the study of control systems, in which a given rational function of the complex variable s is factored into the product of two functions, $F_R(s)$ and $F_L(s)$, each of which has all of its poles and zeros in the right and left half of the complex plane, respectively.

spectral function [MATH] In the theory of stationary stochastic processes, the function

$$F(y) = (2/\pi)\int_0^\infty \rho(x)(\sin xy/x)(dx),\ 0 \le y \le \infty$$

where $\rho(x)$ is the autocorrelation function of a stationary time series.

spectral hygrometer [ENG] A hygrometer which determines the amount of precipitable moisture in a given region of the atmosphere by measuring the attenuation of radiant energy caused by the absorption bands of water vapor; the instrument consists of a collimated energy source, separated by the region under investigation and a detector which is sensitive to those frequencies that correspond to the absorption bands of water vapor.

spectral irradiance [OPTICS] The density of the radiant flux that is incident on a surface per unit of wavelength.

spectral line [SPECT] A discrete value of a quantity, such as frequency, wavelength, energy, or mass, whose spectrum is being investigated; one may observe a finite spread of values resulting from such factors as level width, Doppler broadening, and instrument imperfections. Also known as spectrum line.

spectral locus *See* spectrum locus.

spectral luminosity classification *See* MK system.

spectral luminous efficacy [OPTICS] The ratio of the luminous flux emitted by a monochromatic light source in lumens to its radiant flux in watts, as a function of the wavelength of the emitted light.

spectral luminous efficiency *See* luminosity function.

spectral measure [MATH] A measure on the spectrum of an operator on a Hilbert space whose values are projection opera-

tors there; spectral theorems concerning linear operators often give an integral representation of the operator in terms of these projection valued measures.

spectral photography [OPTICS] A technique used in airborne surveys for mineral deposits; narrow-band-pass filters and special film are used to accentuate minor color effects caused by mineralization and alteration which would be undetectable by broad-band photography.

spectral pyrometer *See* narrow-band pyrometer.

spectral radiance factor [ANALY CHEM] A situation when the desired directions for analysis of energy diffused from (reflected from) an object under spectrophotometric colorimetric analysis are all substantially the same (a solid angle of nearly zero steradians).

spectral radius [MATH] For the spectrum of an operator, this is the least upper bound of the set of all $|\lambda|$, where λ is in the spectrum.

spectral reflectance [ANALY CHEM] Situation when the desired directions for analysis of energy from (reflected from) an object under spectrophotometric colorimetric analysis is diffused in all directions (not directed as a single beam).

spectral regions [SPECT] Arbitrary ranges of wavelength, some of them overlapping, into which the electromagnetic spectrum is divided, according to the types of sources that are required to produce and detect the various wavelengths, such as x-ray, ultraviolet, visible, infrared, or radio-frequency.

spectral response *See* spectral sensitivity.

spectral sensitivity [ELECTR] Radiant sensitivity, considered as a function of wavelength. [PHYS] The response of a device or material to monochromatic light as a function of wavelength. Also known as spectral response.

spectral series [SPECT] Spectral lines or groups of lines that occur in sequence.

spectral-shift reactor [NUCLEO] A reactor in which, for control or other purposes, the neutron spectrum may be adjusted by varying the properties or amount of moderator.

spectral theorems [MATH] Spectral theorems enable detailed study of various types of operators on Banach spaces by giving an integral or series representation of the operator in terms of its spectrum, eigenspaces, and simple projectionlike operators.

spectral transmission [OPTICS] The radiant flux which passes through a filter divided by the radiant flux incident upon it, for monochromatic light of a specified wavelength.

spectral type [ASTRON] A label used to indicate the physical and chemical characteristics of a star as indicated by study of the star's spectra; for example, the stars in the spectral type known as class B are blue-white, and are referred to as helium stars because the dominant lines in their spectra are the lines in helium spectra.

Spectra Pritchard photometer [OPTICS] A photoelectric instrument for measuring the luminance of surfaces; it has a telescopic viewing system for imaging the bright surface to be measured on the cathode of a photoemissive tube, and a separate unit that combines the power supply with the controls and readout meter.

spectrobolometer [SPECT] An instrument that measures radiation from stars; measurement can be made in a narrow band of wavelengths in the electromagnetic spectrum; the instrument itself is a combination spectrometer and bolometer.

spectrofluorometer [SPECT] A device used in fluorescence spectroscopy to increase the selectivity of fluorometry by passing emitted fluorescent light through a monochromator to record the fluorescence emission spectrum.

spectrogram [SPECT] The record of a spectrum produced by a spectrograph.

spectrograph [SPECT] A spectroscope provided with a photographic camera or other device for recording the spectrum.

spectrography [SPECT] The use of photography to record the electromagnetic spectrum displayed in a spectroscope.

spectroheliocinematograph [OPTICS] A camera used to make motion pictures of, for example, prominences of the sun; the camera utilizes monochromatic light; it is composed of a camera and a spectrohelioscope.

spectroheliogram [ASTRON] A photograph of the sun obtained by means of a spectroheliograph.

spectroheliograph [OPTICS] An instrument used to photograph the sun in one spectral band.

spectrohelioscope [OPTICS] An instrument based on the principle of the spectroheliograph but used for visual observation, and not for photography.

spectrometer [SPECT] **1.** A spectroscope that is provided with a calibrated scale either for measurement of wavelength or for measurement of refractive indices of transparent prism materials. **2.** A spectroscope equipped with a photoelectric photometer to measure radiant intensities at various wavelengths.

spectrometry [SPECT] The use of spectrographic techniques for deriving the physical constants of materials.

spectrophone [ANALY CHEM] A cell containing the sample in the optoacoustic detection method; equipped with windows through which the laser beam enters the cell and a microphone for detecting sound.

spectrophotometer [SPECT] An instrument that measures transmission or apparent reflectance of visible light as a function of wavelength, permitting accurate analysis of color or accurate comparison of luminous intensities of two sources or specific wavelengths.

spectrophotometric titration [ANALY CHEM] An analytical method in which the radiant-energy absorption of a solution is measured spectrophotometrically after each increment of titrant is added.

spectrophotometry [SPECT] A procedure to measure photometrically the wavelength range of radiant energy absorbed by a sample under analysis; can be by visible light, ultraviolet light, or x-rays.

spectropolarimeter [OPTICS] A device used to measure optical rotation in solutions for different light wavelengths.

spectropyrheliometer [SPECT] An astronomical instrument used to measure distribution of radiant energy from the sun in the ultraviolet and visible wavelengths.

spectroscope [SPECT] An optical instrument consisting of a slit, collimator lens, prism or grating, and a telescope or objective lens which produces a spectrum for visual observation.

spectroscopic binary star [ASTRON] A binary star that may be distinguished from a single star only by noting the Doppler shift of the spectral lines of one or both stars as they revolve about their common center of mass.

spectroscopic displacement law [SPECT] The spectrum of an un-ionized atom resembles that of a singly ionized atom of the element one place higher in the periodic table, and that of a doubly ionized atom two places higher in the table, and so forth.

spectroscopic parallax [ASTRON] Parallax as determined from examination of a stellar spectrum; critical spectral lines indicate the star's absolute magnitude, from which the star's distance, or parallax, can be deduced.

spectroscopic splitting factor *See* Landé g factor.

spectroscopy [PHYS] The branch of physics concerned with the production, measurement, and interpretation of electromagnetic spectra arising from either emission or absorption of radiant energy by various substances.

spectrum [MATH] If T is a linear operator of a normed space X to itself and I is the identity transformation ($I(x) \equiv x$), the spectrum of T consists of all scalars λ for which either $T - \lambda I$ has no inverse or the range of $T - \lambda I$ is not dense in X. [PHYS] **1.** A display or plot of intensity of radiation (particles, photons, or acoustic radiation) as a function of mass, momentum, wavelength, frequency, or some related quantity. **2.** The set of frequencies, wavelengths, or related quantities, involved in some process; for example, each element has a characteristic discrete spectrum for emission and absorption of light. **3.** A range of frequencies within which radiation has some specified characteristic, such as audio-frequency spectrum, ultraviolet spectrum, or radio spectrum.

spectrum analysis [PHYS] The measurement of the amplitude of the components of a complex waveform throughout the frequency range of the waveform.

spectrum analyzer [ENG] Test instrument used to show the distribution of energy contained in the frequencies emitted by a pulse magnetron; also used to measure the Q of resonant cavities and lines, and to measure the cold impedance of a magnetron.

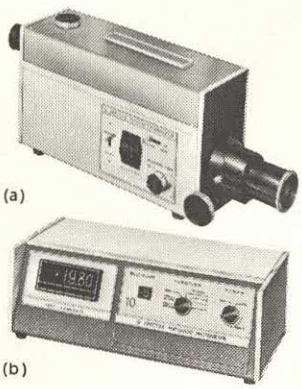
spectrum level [COMMUN] The level of the part of a specified signal at a specified frequency that is contained within a frequency band 1 hertz wide, centered at the particular frequency.

spectrum line *See* spectral line.

spectrum locus [OPTICS] The locus of points representing the chromaticities of spectrally pure stimuli in a chromaticity diagram. Also known as spectral locus.

spectrum of turbulence [ASTROPHYS] A relationship be-

SPECTRA PRITCHARD PHOTOMETER



(a)

(b)

Spectra Pritchard photometer. *(a)* The viewing system. *(b)* The readout meter. *(Photo Research Corp.)*

SPECTROFLUOROMETER

Turner 210 "Spectro," an advanced spectrofluorometer. *(G. K. Turner Associates)*

tween the size of turbulent eddies in the sun's atmosphere and their average speed.

spectrum-selectivity characteristic [ELECTR] Measure of the increase in the minimum input signal power over the minimum detectable signal required to produce an indication on a radar indicator, if the received signal has a spectrum different from that of the normally received signal.

spectrum signature [ELECTR] The spectral characteristics of the transmitter, receiver, and antenna of an electronic system, including emission spectra, antenna patterns, and other characteristics.

spectrum signature analysis [ELECTR] The evaluation of electromagnetic interference from transmitting and receiving equipment to determine operational and environment compatibility.

specular hematite [MINERAL] A variety of hematite with a blue-gray color and bright metallic luster.

specular iron *See* specularite.

specularite [MINERAL] A black or gray variety of hematite with brilliant metallic luster, occurring in micaceous or foliated masses, or in tabular or disklike crystals. Also known as gray hematite; iron glance; specular iron.

specular reflection [PHYS] Reflection of electromagnetic, acoustic, or water waves in which the reflected waves travel in a definite direction, and the directions of the incident and reflected waves make equal angles with a line perpendicular to the reflecting surface, and lie in the same plane with it. Also known as direct reflection; mirror reflection; regular reflection.

specular reflection factor [OPTICS] The ratio of the specularly reflected light to the incident light.

specular reflector [OPTICS] A reflecting surface (polished metal or silvered glass) that gives a direct image of the source, with the angle of reflection equal to the angle of incidence. Also known as regular reflector.

specular transmittance [ELECTROMAG] The ratio of the power carried by electromagnetic radiation which emerges from a body and is parallel to a beam entering the body, to the power carried by the beam entering the body.

speculum [MED] A tubular instrument for inserting into a passage or cavity of the body to facilitate visual inspection or medication. [OPTICS] An optical instrument reflector of polished metal or of glass with a film of metal.

speculum alloy [MET] A brilliant white, hard, brittle alloy composed of copper and tin in a 2:1 proportion and sometimes with additions of other elements.

speech [PHYSIO] A set of audible sounds produced by disturbing the air through the integrated movements of certain groups of anatomical structures.

speech amplifier [ENG ACOUS] An audio-frequency amplifier designed specifically for amplification of speech frequencies, as for public-address equipment and radiotelephone systems.

speech bandwidth [COMMUN] The range of speech frequencies that can be transmitted by a carrier telephone system.

speech clipper [ENG ACOUS] A clipper used to limit the peaks of speech-frequency signals, as required for increasing the average modulation percentage of a radiotelephone or amateur radio transmitter.

speech clipping [ACOUS] In tests of the intelligibility of speech signals, the limiting of peak signals to a maximum value, or the reduction of signals of less than a certain value to zero.

speech coil *See* voice coil.

speech compression [COMMUN] Modulation technique that takes advantage of certain properties of the speech signal to permit adequate information quality, characteristics, and the sequential pattern of a speaker's voice to be transmitted over a narrower frequency band than would otherwise be necessary.

speech frequency *See* voice frequency.

speech intelligibility *See* intelligibility.

speech interference level [ACOUS] The average sound pressure, in decibels above 0.0002 microbar, in the frequency range from 600 to 4800 hertz. Abbreviated SIL.

speech interpolation [COMMUN] Method of obtaining more than one voice channel per voice circuit by giving each subscriber a speech path in the proper direction only at times when his speech requires it.

speech inverter *See* scrambler.

speech scrambler *See* scrambler.

speed [GRAPHICS] The sensitivity of a photographic film, expressed according to one of several scales. [MECH] The time rate of change of position of a body without regard to direction; in other words, the magnitude of the velocity vector. [OPTICS] **1.** The light-gathering power of a lens, expressed as the reciprocal of the *f* number. **2.** The time that a camera shutter is open. [PHYS] In general, the rapidity with which a process takes place.

speed circle [NAV] A circle having a radius equal to a given speed and drawn about a specified center; the term is used chiefly in connection with relative movement problems.

speed cone [MECH ENG] A cone-shaped pulley, or a pulley composed of a series of pulleys of increasing diameter forming a stepped cone.

speed control [ELEC] A control that changes the speed of a motor or other drive mechanism, as for a phonograph or magnetic tape recorder.

speed-course-latitude error [NAV] An error in both pendulous and nonpendulous types of gyro compasses resulting from movement of the gyro compass in other than an east-west direction. Also known as speed error.

speed density metering [AERO ENG] A type of aircraft carburetion in which the fuel feed is regulated by the parameters of engine feed and intake manifold pressure.

speed error [NAV] **1.** Acceleration error due to a change in the speed of a craft. **2.** *See* speed-course-latitude error.

speed-in [PETRO ENG] To start drilling by making a hole.

speed lathe [MECH ENG] A light, pulley-driven lathe, usually without a carriage or back gears, used for work in which the tool is controlled by hand.

speed-length ratio [NAV ARCH] The speed of a ship divided by the square root of its length.

speed line [NAV] A line of position approximately perpendicular to the course, which can be used to determine the speed made good.

speed made good [NAV] The actual average speed in knots which was maintained in proceeding along the intended track to the ultimate destination or an intermediate point.

speed of advance [NAV] The average speed in knots which must be maintained during a passage to arrive at a destination at an appointed time.

speed of light [ELECTROMAG] The speed of propagation of electromagnetic waves in a vacuum, which is a physical constant equal to 299,792.4580±0.0012 kilometers per second. Also known as electromagnetic constant; velocity of light.

speed of response [PHYS] The time required for a system to react to some signal; for example, the delay time for a photon detector to react to a radiation pulse, or the time needed for a current or voltage in a circuit to reach a definite fraction of its final value as a result of an abrupt change in the electromotive force.

speed of sound [ACOUS] The phase velocity of a sound wave. Also known as sonic speed; sonic velocity; velocity of sound.

speed of travel [MET] The speed at which a weld is made along its longitudinal axis; measured in inches or spots per minute.

speedometer [ENG] An instrument that indicates the speed of travel of a vehicle in miles per hour, kilometers per hour, or knots.

speed over the ground [NAV] The speed of travel of a craft over the ground; usually called ground speed.

speed-power product [ELECTR] The product of the gate speed or propagation delay of an electronic circuit and its power dissipation.

speed reducer [MECH ENG] A train of gears placed between a motor and the machinery which it will drive, to reduce the speed with which power is transmitted.

speed regulator [ELEC] A device that maintains the speed of a motor or other device at a predetermined value or varies it in accordance with a predetermined plan.

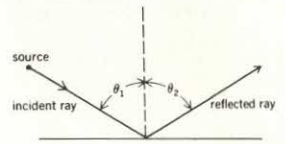
speed triangle [NAV] A vector diagram composed of vectors representing the actual courses and speeds of two craft and the relative course and speed; the third vector is the sum and represents them.

speed-up theorem [MATH] There is a computable function f with the property that for any algorithm A there is another algorithm B which computes f much faster than A.

speiss [MET] A mixture of impure metal arsenides and antimonides resulting from the smelting of certain ores such as cobalt and lead.

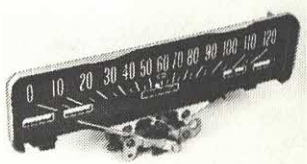
Spelaeogriphacea [INV ZOO] A peracaridan order of the

SPECULAR REFLECTION



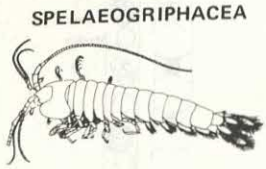
Specular reflection, such as from a polished surface. Angle θ_1 between incident ray and perpendicular to surface equals angle θ_2 between reflected ray and perpendicular.

SPEEDOMETER



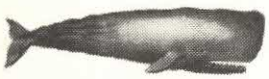
Speedometer dial. *(AC Spark Plug Div., General Motors)*

SPELAEOGRIPHACEA



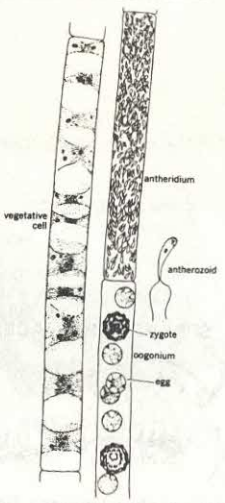
Spelaeogriphus lepidops Gordon, ovigerous female in dorsolateral aspect. *(British Museum of Natural History)*

SPERM WHALE



The sperm whale *(Physeter catodon)* has a head that measures 20 feet (6 meters), or one-third of the total body length.

SPHAEROPLEINEAE



Representative cells of *Sphaeroplea* showing bandlike chloroplasts and heterogametes.

Malacostraca comprised of the single species *Spelaeogriphus lepidops*, a small, blind, transparent, shrimplike crustacean with a short carapace that coalesces dorsally with the first thoracic somite.

spelean [GEOL] Of or pertaining to a feature in a cave.

speleology [GEOL] The study and exploration of caves.

speleothem [GEOL] A secondary mineral deposited in a cave by the action of water. Also known as cave formation.

spelter [MET] A commercially pure grade of zinc used in galvanizing; contains lead or iron as impurities.

spelter shakes *See* metal fume fever.

spelter solder [MET] Brass composed of equal parts of copper and zinc; used in brazing as a filler metal. Also known as brazing brass.

spencerite [MINERAL] $Zn_4(PO_4)_2(OH)_2 \cdot 3H_2O$ A pearly white monoclinic mineral composed of hydrous basic zinc phosphate and occurring in scaly masses and small crystals.

spending beach [GEOL] In a wave basin, the beach on which the entering waves spend themselves, except for the small remainder entering the inner harbor.

spent acid *See* sludge acid.

spent fuel [NUCLEO] Nuclear reactor fuel that has been irradiated to the extent that it can no longer effectively sustain a chain reaction because its fissionable isotopes have been partially consumed and fission-product poisons have accumulated in it.

spent iron sponge [MATER] Iron sponge saturated with sulfur; prone to spontaneous heating. Also known as spent oxide.

spent liquor [MATER] The liquid effluent from the digestion of wood during pulping; contains wood chemicals (for example, lignin) and spent digestant (caustic, sulfite, or sulfate, depending on the process used).

spent oxide *See* spent iron sponge.

spergenite [GEOL] A biocalcarenite containing ooliths and fossil debris and having a maximum quartz content of 10%. Also known as Bedford limestone; Indiana limestone.

sperm *See* spermatozoon.

spermaceti [MATER] A white, crystalline, oily (waxy) solid that separates from sperm oil; soluble in ether, chloroform, and carbon disulfide, insoluble in water; melts at 42 to 50°C; used in ointments, emulsions, candles, soaps, and cosmetics; and for linen finishing. Also known as spermaceti wax.

spermaceti wax *See* spermaceti.

spermatheca [ZOO] A sac in the female for receiving and storing sperm until fertilization; found in many invertebrates and certain vertebrates. Also known as seminal receptacle.

spermatic cord [ANAT] The cord consisting of the ductus deferens, epididymal and testicular nerves and blood vessels, and connective tissue that extends from the testis to the deep inguinal ring.

spermatid [HISTOL] A male germ cell immediately before assuming its final typical form.

spermatin [BIOCHEM] An albuminoid material occurring in semen.

spermatocele [MED] A cystic dilation of a duct in the head of the epididymis or in the rete testis.

spermatocyte [HISTOL] A cell of the last or next to the last generation of male germ cells which differentiates to form spermatozoa.

spermatogenesis [PHYSIO] The process by which spermatogonia undergo meiosis and transform into spermatozoa.

spermatogonium [HISTOL] A primitive male germ cell, the last generation of which gives rise to spermatocytes.

spermatophore [ZOO] A bundle or packet of sperm produced by certain animals, such as annelids, arthropods, and some vertebrates.

spermatorrhea [MED] Involuntary discharge of semen without orgasm.

spermatozoon [HISTOL] A mature male germ cell. Also known as sperm.

spermaturia [MED] The presence of sperm in the urine.

spermidine [BIOCHEM] $H_2N(CH_2)_3NH(CH_2)_4NH_2$ The triamine found in semen and other animal tissues.

spermine [BIOCHEM] $C_{10}H_{26}N_4$ A tetramine found in semen, blood serum, and other body tissues.

spermiogenesis [CYTOL] Nuclear and cytoplasmic transformation of spermatids into spermatozoa.

sperm nucleus [BOT] One of the two nuclei in a pollen grain that function in double fertilization in seed plants.

sperm oil [MATER] A combustible, yellowish oil found in the head cavities and blubber of the sperm whale; soluble in ether, chloroform, and benzene; used as a lubricant for precision machinery, for rustproofing metals, and in transmission fluids.

sperm whale [VERT ZOO] *Physeter catadon*. An aggressive toothed whale belonging to the group Odontoceti of the order Cetacea; it produces ambergris and contains a mixture of spermaceti and oil in a cavity of the nasal passage.

speromagnetic state [SOLID STATE] The condition of a rare-earth glass in which the spins are oriented in fixed directions which are more or less random because of electric fields which exist in the glass.

sperrylite [MINERAL] $PtAs_2$ A tin-white isometric mineral composed of platinum arsenide; the only platinum compound known to occur in nature; hardness is 6–7 on Mohs scale, and specific gravity is 10.60.

Sperry process [CHEM ENG] The electrolytic manufacture of basic lead carbonate (white lead) from desilverized lead that contains some bismuth; impure lead collects at the anode, and carbon dioxide is passed into the solution to convert the lead to carbonate.

spessartite [MINERAL] $Mn_3Al_2(SiO_4)_3$ A mineral composed of manganese aluminum silicate with small amounts of iron, magnesium, or other elements. [PETR] A lamprophyre composed of a sodic plagioclase groundmass in which green hornblende phenocrysts are embedded; also contains accessory olivine, biotite, apatite, and opaque oxides.

sp gr *See* specific gravity.

Sphaeractinoidea [PALEON] An extinct group of fossil marine hydrozoans distinguished in part by the relative prominence of either vertical or horizontal trabeculae and by the presence of long, tabulate tubes called autotubes.

Sphaeriales [MYCOL] An order of fungi in the subclass Euascomycetes characterized by hard, dark perithecia with definite ostioles.

Sphaeriidae [INV ZOO] The minute bog beetles, a small family of coleopteran insects in the suborder Myxophaga.

Sphaerioidaceae [MYCOL] A family of fungi of the order Sphaeropsidales in which the pycnidia are black or dark-colored and are flask-, cone-, or lens-shaped with thin walls and a round, relatively small pore.

sphaerite [MINERAL] Light-gray or bluish mineral composed of hydrous aluminum phosphate and occurring in global concretions.

Sphaeroceridae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

Sphaerodoridae [INV ZOO] A family of polychaete annelids belonging to the Errantia in which species are characterized by small bodies, and are usually papillated.

Sphaerolaimidae [INV ZOO] A family of free-living nematodes in the superfamily Monhysteroidea characterized by a spacious and deep stoma.

sphaerolitic *See* spherulitic.

Sphaeromatidae [INV ZOO] A family of isopod crustaceans in the suborder Flabellifera in which the body is broad and oval and the inner branch of the uropod is immovable.

Sphaerophoraceae [BOT] A family of the Ascolichenes in the order Caliciales which are fruticose with a solid thallus.

Sphaeropleineae [BOT] A suborder of green algae in the order Ulotrichales distinguished by long, coenocytic cells, numerous bandlike chloroplasts, and heterogametes produced in undifferentiated vegetative cells.

Sphaeropsidaceae [MYCOL] An equivalent name for Sphaerioidaceae.

Sphaeropsidales [MYCOL] An order of fungi of the class Fungi Imperfecti in which asexual spores are formed in pycnidia, which may be separate or joined to vegetative hyphae, conidiophores are short or absent, and conidia are always slime spores.

Sphaerotilus [MICROBIO] A genus of sheathed bacteria; single cells are motile by means of polar or subpolar flagella, and sheaths are not encrusted with iron or manganese oxides.

Sphagnaceae [BOT] The single monogeneric family of the order Sphagnales.

Sphagnales [BOT] The single order of mosses in the subclass Sphagnobrya containing the single family Sphagnaceae.

Sphagnobrya [BOT] A subclass of the Bryopsida; plants are grayish-green with numerous, spirally arranged branches and grow in deep tufts or mats, commonly in bogs and in other wet habitats.

sphagnum bog [ECOL] A bog composed principally of

mosses of the genus *Sphagnum* (Sphagnales) but also of other plants, especially acid-tolerant species, which tend to form peat.

sphalerite [MINERAL] (Zn,Fe)S The low-temperature form and common polymorph of zinc sulfide; a usually brown or black mineral that crystallizes in the hextetrahedral class of the isometric system, occurs most commonly in coarse to fine, granular, cleanable masses, has resinous luster, hardness of 3.5 on Mohs scale, and specific gravity of 4.1. Also known as blende; false galena; jack; lead marcasite; mock lead; mock ore; pseudogalena; steel jack.

Sphecidae [INV ZOO] A large family of hymenopteran insects in the superfamily Sphecoidea.

Sphecoidea [INV ZOO] A superfamily of wasps belonging to the suborder Apocrita.

Sphenacodontia [PALEON] A suborder of extinct reptiles in the order Pelycosauria which were advanced, active carnivores.

sphene [MINERAL] $CaTiSiO_5$ A brown, green, yellow, gray, or black neosilicate mineral common as an accessory mineral in igneous rocks; it is monoclinic and has resinous luster; hardness is 5–5.5 on Mohs scale; specific gravity is 3.4–3.5. Also known as grothite; titanite.

sphenethmoid [VERT ZOO] A bone that surrounds the anterior portion of the brain in many amphibians.

Spheniscidae [VERT ZOO] The single family of the avian order Sphenisciformes.

Sphenisciformes [VERT ZOO] The penguins, an order of aquatic birds found only in the Southern Hemisphere and characterized by paddlelike wings, erect posture, and scalelike feathers.

sphenochasm [GEOL] A triangular gap of oceanic crust separating two continental blocks and converging to a point.

Sphenodontidae [VERT ZOO] A family of lepidosaurian reptiles in the order Rhynchocephalia represented by a single living species, *Sphenodon punctatus*, a lizardlike form distinguished by lack of a penis.

sphenoid [CRYSTAL] An open crystal, occurring in monoclinic crystals of the sphenoidal class, and characterized by two nonparallel faces symmetrical with an axis of twofold symmetry. [SCI TECH] Wedge-shaped.

sphenoid bone [ANAT] The butterfly-shaped bone forming the anterior part of the base of the skull and portions of the cranial, orbital, and nasal cavities.

sphenoid sinus [ANAT] Either of a pair of paranasal sinuses located centrally between and behind the eyes, below the ethymoid sinus.

sphenolith [GEOL] A wedgelike igneous intrusion that is partly concordant and partly discordant.

sphenopalatine [ANAT] Of or pertaining to the region of or surrounding the sphenoid and palatine bones.

sphenopalatine foramen [ANAT] The space between the sphenoid and orbital processes of the palatine bone; it opens into the nasal cavity and gives passage to branches from the pterygopalatine ganglion and the sphenopalatine branch of the maxillary artery.

sphenoparietal index [ANTHRO] The ratio, multiplied by 100, of the breadth of the skull from stenion to stenion to its greatest breadth.

Sphenophyllatae *See* Sphenophyllopsida.

Sphenyllopsida [PALEOBOT] An extinct class of embryophytes in the division Equisetophyta.

Sphenopsida [BOT] A group of vascular cryptogams characterized by whorled, often very small leaves and by the absence of true leaf gaps in the stele; essentially equivalent to the division Equisetophyta.

spherator [PL PHYS] One of the class of low-β, low-density, quasi-steady-state closed devices (like Tokamak) used in studying production of electric power by fusion.

sphere [MATH] **1.** The set of all points in a euclidean space which are a fixed common distance from some given point; in euclidean three-dimensional space the Riemann sphere consists of all points (x,y,z) which satisfy the equation $x^2+y^2+z^2=1$. **2.** The set of points in a metric space whose distance from a fixed point is constant.

sphere gap [ELEC] A spark gap between two equal-diameter spherical electrodes.

sphere of attraction [PHYS CHEM] The distance within which the potential energy arising from mutual attraction of two molecules is not negligible with respect to the molecules' average thermal energy at room temperature.

sphere photometer *See* integrating-sphere photometer.

spheres of Eudoxus [ASTRON] A theory of Eudoxus from about 400 B.C.; the planets, sun, and moon were on a series of concentric spheres rotating inside one another on different axes.

spherical aberration [OPTICS] Aberration arising from the fact that rays which are initially at different distances from the optical axis come to a focus at different distances along the axis when they are reflected from a spherical mirror or refracted by a lens with spherical surfaces.

spherical antenna [ELECTROMAG] An antenna having the shape of a sphere, used chiefly in theoretical studies.

spherical capacitor [ELEC] A capacitor made of two concentric metal spheres with a dielectric filling the space between the spheres.

spherical coordinates [MATH] A system of curvilinear coordinates in which the position of a point in space is designated by its distance r from the origin or pole, called the radius vector, the angle ϕ between the radius vector and a vertically directed polar axis, called the cone angle or colatitude, and the angle θ between the plane of ϕ and a fixed meridian plane through the polar axis, called the polar angle or longitude. Also known as spherical polar coordinates.

spherical cyclic curve *See* cyclic curve.

spherical degree [MATH] A solid angle equal to one-ninetieth of a spherical right angle.

spherical-earth attenuation [ELECTROMAG] Attenuation over an imperfectly conducting spherical earth in excess of that over a perfectly conducting plane.

spherical-earth factor [ELECTROMAG] The ratio of the electric field strength that would result from propagation over an imperfectly conducting spherical earth to that which would result from propagation over a perfectly conducting plane.

spherical excess [MATH] The sum of the angles of a spherical triangle, minus 180°.

spherical harmonics [MATH] Solutions of Laplace's equation in spherical coordinates.

spherical indicatrix of binormal to a curve [MATH] All the end points of those radii from the sphere of radius one which are parallel to the positive direction of the binormal to a space curve.

spherical indicatrix of tangent to a curve [MATH] Those points on the unit sphere traced out by a radius moving from point to point always parallel with the tangent to the curve.

spherical mirror [OPTICS] A mirror, either convex or concave, whose surface forms part of a sphere.

spherical pendulum [MECH] A simple pendulum mounted on a pivot so that its motion is not confined to a plane; the bob moves over a spherical surface.

spherical polar coordinates *See* spherical coordinates.

spherical powder [MATER] A powder consisting of globular-shaped particles.

spherical sailing [NAV] Any of the sailing computation methods which are used to solve the problems of course, distance, difference of latitude, difference of longitude, and departure which take into account the spherical or spheroidal shape of the earth.

spherical sector [MATH] The cap and cone formed by the intersection of a plane with a sphere, the cone extending from the plane to the center of the sphere and the cap extending from the plane to the surface of the sphere.

spherical segment [MATH] A solid that is bounded by a sphere and two parallel planes which intersect the sphere or are tangent to it.

spherical separator [PETRO ENG] A gas-oil separator in the form of a spherical vessel.

spherical stress [MECH] The portion of the total stress that corresponds to an isotropic hydrostatic pressure; its stress tensor is the unit tensor multiplied by one-third the trace of the total stress tensor.

spherical triangle [MATH] A three-sided surface on a sphere the sides of which are arcs of great circles.

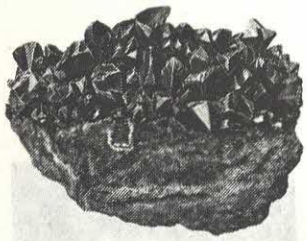
spherical trigonometry [MATH] The study of spherical triangles from the viewpoint of angle, length, and area.

spherical wave [PHYS] A wave whose equiphase surfaces form a family of concentric spheres; the direction of travel is always perpendicular to the surfaces of the spheres.

spherical weathering *See* spheroidal weathering.

spherical wedge [MATH] The portion of a sphere bounded by two semicircles and a lune (the surface of the sphere between the semicircles).

SPHALERITE

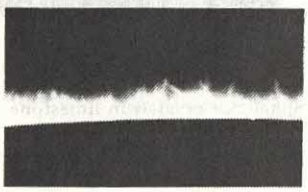


Sphalerite crystals in limestone from Joplin, Missouri. *(Specimen from Department of Geology, Bryn Mawr College)*

SPHECIDAE

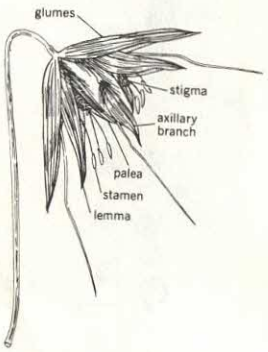
Typical member of the family Sphecidae.

SPICULE



Large-scale photograph of the chromosphere in H-α light, with the disk of the sun artificially eclipsed and the hairy spicules projecting about the continuous chromosphere. The length of this section is about 70,000 kilometers. *(Photography by R. B. Dunn, through 15-inch telescope, Sacramento Peak Observatory, operated by the Association of Universities for Research in Astronomy, Inc.)*

SPIKELET



Spikelet of wild oat *(Avena fatua)*.

sphericity [SCI TECH] The degree to which a shape approaches that of a sphere.

spherocylindrical lens [OPTICS] A lens having one surface that is a portion of a sphere, while the other is a portion of a cylinder.

spherocyte [PATH] A spherical red blood cell.

spherocytosis [MED] Preponderance of spherocytes in the blood.

spheroid *See* ellipsoid of revolution.

spheroidal excess [MATH] The amount by which the sum of the three angles of a triangle on the surface of a spheroid exceeds 180°.

spheroidal galaxy *See* elliptical galaxy.

spheroidal graphite cast iron *See* nodular cast iron.

spheroidal group [CRYSTAL] A group in the tetragonal symmetry system; the sphenoid is the typical form.

spheroidal harmonics [MATH] Solutions to Laplace's equation when phrased in ellipsoidal coordinates.

spheroidal recovery [GEOPHYS] The hypothetical return of the earth to spheroid form after it has been distorted.

spheroidal weathering [GEOL] Chemical weathering in which concentric or spherical shells of decayed rock are successively separated from a block of rock; commonly results in the formation of a rounded boulder of decomposition. Also known as concentric weathering; spherical weathering.

spheroidized carbides [MET] Globular forms of carbide, as formed in spheroidized steel.

spheroidized steel [MET] Steel that has been heat-treated to produce a spheroidized carbide structure.

spheroidizing [MET] Heating steels just below Ae_1 until the shape of cementite particles becomes relatively spherical.

spherometer [ENG] A device used to measure the curvature of a spherical surface.

spheroplast [CYTOL] A plant cell which possesses only a partial or modified cell wall. [MICROBIO] A bacterial cell that assumes a spherical shape due to partial or complete absence of the wall.

spherotoric lens [OPTICS] A lens having one surface that is a portion of a sphere, while the other is a portion of a torus.

spherulite [GEOL] A spherical body or coarsely crystalline aggregate having a radial internal structure arranged about one or more centers.

spherulitic [PETR] Relating to the texture of a rock composed of numerous spherulites. Also known as globular; sphaerolitic.

sphincter [ANAT] A muscle that surrounds and functions to close an orifice.

sphincter of Oddi [ANAT] Sphincter of the hepatopancreatic ampulla.

Sphinctozoa [PALEON] A group of fossil sponges in the class Calcarea which have a skeleton of massive calcium carbonate organized in the form of hollow chambers.

Sphindidae [INV ZOO] The dry fungus beetles, a family of coleopteran insects in the superfamily Cucujoidea.

Sphingidae [INV ZOO] The single family of the lepidopteran superfamily Sphingoidea.

Sphingoidea [INV ZOO] A superfamily of Lepidoptera in the suborder Heteroneura consisting of the sphinx, hawk, or hummingbird moths; these are heavy-bodied forms with antennae that are thickened with a pointed apex, a well-developed proboscis, and narrow wings.

sphingolipid [BIOCHEM] Any lipid, such as a sphingomyelin, that yields sphingosine or one of its derivatives as a product of hydrolysis.

sphingolipidosis [MED] Any of a group of hereditary metabolic disorders characterized by excessive accumulations of certain glycolipids and phospholipids in various tissues of the body.

sphingomyelin [BIOCHEM] A phospholipid consisting of choline, sphingosine, phosphoric acid, and a fatty acid.

sphingosine [BIOCHEM] $C_{18}H_{37}O_2N$ A moiety of sphingomyelin, cerebrosides, and certain other phosphatides.

sphygmomanometer [MED] An instrument for measuring the arterial blood pressure.

sphygmophone [MED] A microphone attached to the wrist to pick up the sounds of the pulse.

Sphyraenidae [VERT ZOO] A family of shore fishes in the suborder Mugiloidei of the order Perciformes comprising the barracudas.

Sphyrilidae [INV ZOO] A family of ectoparasitic Crustacea belonging to the group Lernaeopodoida; the parasite embeds its head and part of its thorax into the host.

Spica [ASTRON] A blue-white dwarf star of stellar magnitude 1.0, 160 light-years from the sun, spectral classification B1-V, in the constellation Virgo; the star α Virginis.

spice [FOOD ENG] An aromatic vegetable material used for food seasoning.

spicule [ASTRON] One of an irregular distribution of jets shooting up from the sun's chromosphere. Also known as solar spicule. [BOT] An empty diatom shell. [INV ZOO] A calcareous or siliceous, usually spikelike supporting structure in many invertebrates, particularly in sponges and alcyonarians.

spiculin [BIOCHEM] An organic material making up a portion of a spicule.

spiculite [PETR] A spindle-shaped belonite thought to have formed by the coalescence of globulites.

spiculum [INV ZOO] A bristlelike copulatory organ in certain nematodes. Also known as copulatory spicule.

spider [ELEC] A structure on the shaft of an electric rotating machine that supports the core or poles of the rotor, consisting of a hub, spokes, and rim, or some similar arrangement. [ENG] **1.** The part of an ejector mechanism which operates ejector pins in a molding press. **2.** In extrusion, the membranes which support a mandrel within the head-die assembly. [ENG ACOUS] A highly flexible perforated or corrugated disk used to center the voice coil of a dynamic loudspeaker with respect to the pole piece without appreciably hindering in-and-out motion of the voice coil and its attached diaphragm. [INV ZOO] The common name for arachnids comprising the order Araneida. [PETRO ENG] A steel block with a tapered opening which permits passage of pipe during movement into or from a well; designed to hold pipe suspended in the well when the slips are placed in the tapered opening and in contact with the pipe.

spider nevus [MED] A type of telangiectasis characterized by a central, elevated, tiny red dot, pinhead in size, from which blood vessels radiate like strands of a spider's web. Also known as stellar nevus.

spiderweb antenna [ELECTROMAG] All-wave receiving antenna having several different lengths of doublets connected somewhat like the web of a spider to give favorable pickup characteristics over a wide range of frequencies.

spiegeleisen [MET] An iron alloy containing 15–30% manganese and 5% carbon used in steelmaking.

Spiegler's test [PATH] A test for the presence of protein in urine performed by overlaying clear acidulated urine on Spiegler's reagent (mercuric chloride, tartaric acid, glycerin, distilled water); opalescence at the fluid junction indicates protein.

spigot mortar [ORD] A mortar which propels a warhead larger than the bore of the mortar by means of a closed tube (spigot) attached to the warhead and extending into the mortar; the force of the propellant within the mortar acts upon the tube, thus propelling the warhead toward the target.

spike [BOT] An indeterminate inflorescence with sessile flowers. [DES ENG] A large nail, especially one longer than 3 inches (7.6 centimeters), and often of square section. [PHYS] A short-duration transient whose amplitude considerably exceeds the average amplitude of the associated pulse or signal. [SOLID STATE] A sputtering event in which the process from impact of a bombarding projectile to the ejection of target atoms involves motion of a large number of particles in the target, so that collisions between particles become significant.

spike antenna *See* monopole antenna.

spiked core *See* seed core.

spikelet [BOT] The compound inflorescence of a grass consisting of one or several bracteate spikes.

spike microphone [ENG ACOUS] A device for clandestine aural surveillance in which the sensor is a spike driven into the wall of the target area and mechanically coupled to the diaphragm of a microphone on the other side of the wall.

spike oil [MATER] A pale yellow essential oil extracted by distillation from the flowers of *Lavandula latifolia*; soluble in fixed oils and propylene glycol; used in soap and as an alcohol denaturant and flavoring agent. Also known as lavender spike oil; Spanish lavender oil; Spanish spike oil.

spike-tooth harrow [AGR] An implement with steel spikes extending downward from a frame and pulled by a tractor to pulverize and smooth plowed soil.

spile [MIN ENG] **1.** A temporary lagging driven ahead on

levels in loose ground. **2.** A short piece of plank sharpened flatwise and used for driving into watery stratums as sheet piling to assist in checking the flow of water.

spiling *See* forepoling.

spilite [PETR] An altered basalt containing albitized feldspar accompanied by low-temperature, hydrous crystallization products such as chlorite, calcite, and epidote.

spill [ENG] The accidental release of some material, such as nuclear material or oil, from a container. [NUCLEO] The accidental release of radioactive material.

spill box [CIV ENG] A device such as a flume that maintains a constant head on a measuring weir or orifice.

spilling [OCEANOGR] The process by which steep waves break on approaching the shore; white water appears on the crest and the wave top gradually rolls over, without a crash.

spilling breaker *See* plunging breaker.

spillover [COMMUN] The receiving of a radio signal of a different frequency from that to which the receiver is tuned, due to broad tuning characteristics. [METEOROL] That part of orographic precipitation which is carried along by the wind so that it reaches the ground in the nominal rain shadow on the lee side of the barrier.

spillover positions [COMMUN] When a send channel is unusually busy or inoperative, the resulting backlogged traffic can be switched to spillover (storage) positions where it is held for immediate transmission when a channel becomes available.

spill pit *See* runoff pit.

spill stream *See* overflow stream.

spillway [CIV ENG] A passage in or about a dam or other hydraulic structure for escape of surplus water.

spillway apron [CIV ENG] A concrete or timber floor at the bottom of a spillway to prevent soil erosion from heavy or turbulent flow.

spillway channel [CIV ENG] An outlet channel from a spillway.

spillway dam *See* overflow dam.

spillway gate [CIV ENG] A gate for regulating the flow from a reservoir.

spin [MECH] Rotation of a body about its axis. [QUANT MECH] The intrinsic angular momentum of an elementary particle or nucleus, which exists even when the particle is at rest, as distinguished from orbital angular momentum.

spina bifida [MED] A congenital anomaly characterized by defective closure of the vertebral canal with herniation of the spinal cord meninges.

spina bifida occulta [MED] An asymptomatic congenital anomaly consisting of incomplete fusion of the posterior arch of the vertebral canal without hernial protrusion of the meninges.

spinacene *See* squalene.

spinach [BOT] *Spinacia oleracea*. An annual potherb of Asiatic origin belonging to the order Caryophyllales and grown for its edible foliage.

spinal anesthesia [MED] **1.** Anesthesia due to a lesion of the spinal cord. **2.** Anesthesia produced by the injection of an anesthetic into the spinal subarachnoid space.

spinal column *See* spine.

spinal cord [ANAT] The cordlike posterior portion of the central nervous system contained within the spinal canal of the vertebral column of all vertebrates.

spinal foramen [ANAT] Central canal of the spinal cord.

spinal ganglion [ANAT] Any one of the sensory ganglions, each associated with the dorsal root of a spinal nerve.

spinal nerve [ANAT] Any of the paired nerves arising from the spinal cord.

spinal reflex [PHYSIO] A reflex mediated through the spinal cord without the participation of the more cephalad structures of the brain or spinal cord.

spin axis [PHYS] The axis of rotation of a gyroscope.

spin compensation [MECH] Overcoming or reducing the effect of projectile rotation in decreasing the penetrating capacity of the jet in shaped-charge ammunition.

spin-decelerating moment [MECH] A couple about the axis of the projectile, which diminishes spin.

spin-density wave [SOLID STATE] The ground state of a metal in which the conduction–electron spin density has a sinusoidal variation in space.

spin dependent force [PHYS] A force between two particles which depends in some way on the spin, possibly on the angle between their spin directions, or on the angles between their spin directions and a line joining the particles.

spindle [CYTOL] A structure formed of fiberlike elements just before metaphase that extends between the poles of the achromatic figure and is attached to the centromeric regions of the chromatid pairs. [DES ENG] A short, slender or tapered shaft. [NAV] A spar serving as a beacon.

spindle fiber [CYTOL] One of the fiberlike elements of the spindle; an aggregation of microtubules resulting from the polymerization of a series of small protein fibrils by primary —S—S— linkages.

spindle tuber [PL PATH] A virus disease of the potato characterized by spindliness of the tops and tubers.

spine [ANAT] An articulated series of vertebrae forming the axial skeleton of the trunk and tail, and being a characteristic structure of vertebrates. Also known as backbone; spinal column; vertebral column. [BOT] A rigid sharp-pointed process in plants; many are modified leaves. [INV ZOO] One of the processes covering the surface of a sea urchin. [VERT ZOO] **1.** One of the spiny rays supporting the fins of most fishes. **2.** A sharp-pointed modified hair on certain mammals, such as the porcupine.

spin echo technique [NUC PHYS] A variation of the nuclear magnetic resonance technique in which the radio frequency field is applied in two pulses, separated by a time interval t, and a strong nuclear induction signal is observed at a time t after the second pulse.

spinel [MINERAL] **1.** $MgAl_2O_4$ A colorless, purplish-red, greenish, yellow, or black mineral, usually forming octahedral crystals, and characterized by great hardness; used as a gemstone. **2.** A group of minerals of general formula AB_2O_4, where A is magnesium, ferrous iron, zinc, or manganese, or a combination of them, and B is aluminum, ferric iron, or chromium.

spin filter [ELECTR] A device used in a Lamb-shift polarized ion source to cause those atoms having an undesired nuclear spin orientation to decay from their metastable state to the ground state, while those with the desired spin orientation are allowed to pass through without decay.

spin-flip laser [OPTICS] A semiconductor laser in which the output wavelength is continuously tunable by a magnetic field; operation is based on exciting conduction-band electrons to a higher energy level by reversing the direction of the electrons as they spin about an axis in the direction of the magnetic field.

spin-flip scattering [QUANT MECH] Scattering of a particle with spin ½ in which the direction of the particle's spin is reversed.

spin glass [SOLID STATE] A substance in which the atomic spins are oriented in random but fixed directions.

spin isomer [NUC PHYS] An excited nuclear state which has an unusually long lifetime because of the large difference between the spin of the state and the spins of the states of lower energy into which it is permitted to decay.

spin label [PHYS CHEM] A molecule which contains an atom or group of atoms exhibiting an unpaired electron spin that can be detected by electron spin resonance (ESR) spectroscopy and can be bonded to another molecule.

spin-lattice interaction [SOLID STATE] The state of a solid when the energy of electron spins is being shared with the thermal-vibration energy of the solid as a whole.

spin-lattice relaxation [SOLID STATE] Magnetic relaxation in which the excess potential energy associated with electron spins in a magnetic field is transferred to the lattice.

spin magnetism [SOLID STATE] Paramagnetism or ferromagnetism that arises from polarization of electron spins in a substance.

Spinnbarkeit relaxation [FL MECH] A rheological effect illustrated by the pulling away of liquid threads when an object that has been immersed in a viscoelastic fluid is pulled out.

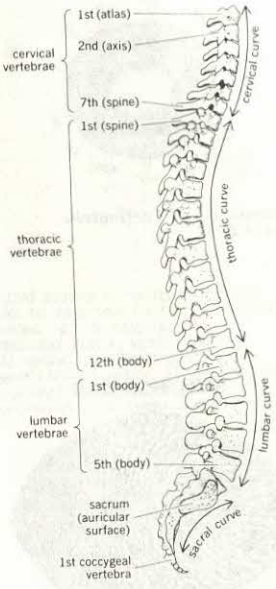
spinner [ENG] **1.** Automatically rotatable radar antenna, together with directly associated equipment. **2.** Part of a mechanical scanner which rotates about an axis, generally restricted to cases where the speed of rotation is relatively high.

spinneret [ENG] An extrusion die with many holes through which plastic melt is forced to form filaments. [INV ZOO] An organ that spins fiber from the secretion of silk glands. [TEXT] A metal device with tiny holes through which a solution is forced at high speeds to make fine textile filaments.

spinney [ECOL] A small grove of trees or a thicket with undergrowth.

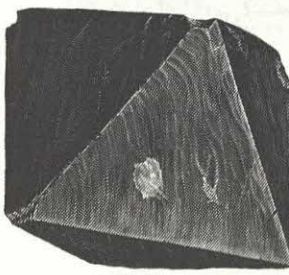
spinning [ENG] The extrusion of a spinning solution (such as molten plastic) through a spinneret. [MECH ENG] Shaping

SPINE



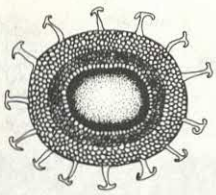
The human spine in lateral view. *(From W. J. Hamilton et al., Textbook of Human Anatomy, © 1956 by Macmillan Publishing Co., Inc.; reprinted with permission)*

SPINEL



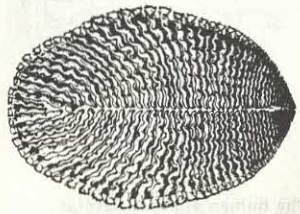
Spinel crystal from Franklin, New Jersey. *(Specimen from Department of Geology, Bryn Mawr College)*

SPINOBLAST



Spinoblast of *Pectinatella magnifica.*

SPINTHERIDAE

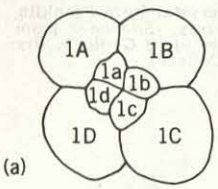


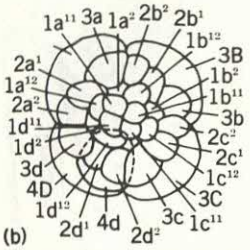
Spinther, dorsal view.

SPIONIDAE

Nerinides showing the anterior portion (left) and the tail section (right), in dorsal view.

SPIRAL CLEAVAGE





Cell lineage for spiral cleavage pattern in egg of gastropod *Crepidula,* seen from the animal pole. *(a)* Eight-cell stage, showing the first quarter of micromeres (1a–1d) and the macromeres (1A–1D). *(b)* Twenty-five-cell stage. *(After Conklin, 1897)*

and finishing sheet metal by rotating the workpiece over a mandrel and working it with a round-ended tool. Also known as metal spinning. [TEXT] Converting fibers or filaments into thread or yarn by drawing and twisting.

spinning band column [ANALY CHEM] An analytical distillation column inside of which is a series of driven, spinning bands; centrifugal action of the bands throws a layer of liquid onto the inner surface of the column; used as an aid in liquid-vapor contact.

spinning machine [MECH ENG] **1.** A machine that winds insulation on electric wire. **2.** A machine that shapes metal hollow ware. [TEXT] A machine that spins yarn from staple fiber or continuous filament.

spinoblast [INV ZOO] A statoblast having a float of air cells and barbs or hooks on the surface.

spinochrome [BIOCHEM] A type of echinochrome; an organic pigment that is known only from sea urchins and certain homopteran insects.

spinode *See* cusp.

spinor [MATH] **1.** A vector with two complex components, which undergoes a unitary unimodular transformation when the three-dimensional coordinate system is rotated; it can represent the spin state of a particle of spin ½. **2.** More generally, a spinor of order (or rank) n is an object with 2^n components which transform as products of components of n spinors of rank one. **3.** A quantity with four complex components which transforms linearly under a Lorentz transformation in such a way that if it is a solution of the Dirac equation in the original Lorentz frame it remains a solution of the Dirac equation in the transformed frame; it is formed from two spinors (definition 1). Also known as Dirac spinor.

spin-orbit coupling [QUANT MECH] The interaction between a particle's spin and its orbital angular momentum.

spin-orbit multiplet [PHYS] A collection of atomic or nuclear states which differ in energy only on account of spin-orbit coupling; the total spin angular momentum quantum number S and total orbital angular momentum quantum number L are the same for all states; the energy levels are labeled by the total angular momentum quantum number J.

spinous process [ANAT] Any slender, sharp-pointed projection on a bone.

spin paramagnetism [SOLID STATE] Paramagnetism that arises from the electron spins in a substance.

spin-parity [PARTIC PHYS] A combined symbol J^P for an elementary particle's spin J, and its intrinsic parity P.

spin-polarized low-energy electron diffraction [SOLID STATE] A version of low-energy electron diffraction in which electrons in the incident beam have their spins aligned in one direction; used in studies of the magnetic properties of atoms near the surface of a material.

spin quantum number [QUANT MECH] The ratio of the maximum observable component of a system's spin to Planck's constant divided by 2π; it is an integer or a half-integer.

spin resonance *See* magnetic resonance.

spin rocket [AERO ENG] A small rocket that imparts spin to a larger rocket vehicle or spacecraft.

spin safe [ORD] Referring to a fuse that is safe when experiencing a rotation equivalent to that attained during flight; that is, other arming forces are necessary to arm the fuse.

spin space [MATH] The two-dimensional vector space over the complex numbers, whose unitary unimodular transformations are a two-dimensional double-valued representation of the three-dimensional rotation group; its vectors can represent the various spin states of a particle with spin ½, and its unitary unimodular transformations can represent rotations of this particle.

spin-spin energy [PHYS] An interaction energy proportional to the dot product of the spin angular momenta of two systems.

spin-spin relaxation [SOLID STATE] Magnetic relaxation, observed after application of weak magnetic fields, in which the excess potential energy associated with electron spins in a magnetic field is redistributed among the spins, resulting in heating of the spin system.

spin stabilization [AERO ENG] Directional stability of a spacecraft obtained by the action of gyroscopic forces which result from spinning the body about its axis of symmetry.

spin state [QUANT MECH] Condition of a particle in which its total spin, and the component of its spin along some specified axis, have definite values; more precisely, the particle's wave function is an eigenfunction of the operators corresponding to these quantities.

spin temperature [SOLID STATE] For a system of electron spins in a lattice, a temperature such that the population of the energy levels of the spin system is given by the Boltzmann distribution with this temperature.

spinthariscope [ELECTR] An instrument for viewing the scintillations of alpha particles on a luminescent screen, usually with the aid of a microscope.

Spintheridae [INV ZOO] An amphinomorphan family of small polychaete annelids included in the Errantia.

Spinulosida [INV ZOO] An order of Asteroidea in which pedicellariae rarely occur, marginal plates bounding the arms and disk are small and inconspicuous, and spines occur in groups on the upper surface.

spin wave [SOLID STATE] A sinusoidal variation, propagating through a crystal lattice, of that angular momentum which is associated with magnetism (mostly spin angular momentum of the electrons).

spin welding [ENG] Fusion of two objects (for example, plastics) by forcing them together while one of the pair is spinning; frictional heat melts the interface, spinning is stopped, and the bodies are held together until they are frozen in place (welded).

spiny-rayed fish [VERT ZOO] The common designation for actinopterygian fishes, so named for the presence of stiff, unbranched, pointed fin rays, known as spiny rays.

Spionidae [INV ZOO] A family of spioniform annelid worms belonging to the Sedentaria.

spioniform worm [INV ZOO] A polychaete annelid characterized by the presence of a pair of short to long, grooved palpi near the mouth.

spiracle [INV ZOO] An external breathing orifice of the tracheal system in insects and certain arachnids. [VERT ZOO] **1.** The external respiratory orifice in cetaceous and amphibian larvae. **2.** The first visceral cleft in fishes.

spiral [MATH] A simple curve in the plane which continuously winds about itself either into some point or out from some point.

spiral arms [ASTRON] The shape of sections of certain galaxies called spirals; these sections are two so-called arms composed of stars, dust, and gas extending from the center of the galaxy and coiled about it.

spiral band [METEOROL] Spiral-shaped radar echoes received from precipitation areas within intense tropical cyclones (hurricanes or typhoons); they curve cyclonically in toward the center of the storm and appear to merge to form the wall around the eye of the storm. Also known as hurricane band; hurricane radar band.

spiral bevel gear [DES ENG] Bevel gear with curved, oblique teeth to provide gradual engagement and bring more teeth together at a given time than an equivalent straight bevel gear.

spiral binding [GRAPHICS] A book binding in which a spiral of wire or plastic strip is wound through holes at the edge of the book.

spiral chute [DES ENG] A gravity chute in the form of a continuous helical trough spiraled around a column for conveying materials to a lower level.

spiral cleavage [EMBRYO] A cleavage pattern characterized by formation of a cell mass showing spiral symmetry; occurs in mollusks.

spiral conveyor *See* screw conveyor.

spiral cutterhead [MIN ENG] A rotary digging device which dislodges and feeds alluvial sand or gravel to the intake of a suction dredge.

spiral delay line [ELECTROMAG] A transmission line which has a helical inner conductor.

spiral flow tank [CIV ENG] An aeration tank of the activated sludge process into which air is diffused in a spiral helical movement guided by baffles and proper location of diffusers.

spiral flow test [ENG] The determination of the flow properties of a thermoplastic resin by measuring the length and weight of resin flowing along the path of a spiral cavity.

spiral four cable [ELEC] A quad cable in which the four conductors are twisted about a common axis, the two sets of opposite conductors being used as pairs.

spiral gage *See* spiral pressure gage.

spiral galaxy [ASTRON] A type of galaxy classified on the basis of appearance of its photographic image; this type includes two main groups: normal spirals with circular symmetry of the

nucleus and of the spiral arms, and barred spirals in which the dominant form is a luminous bar crossing the nucleus with spiral arms starting at the ends of the bar or tangent to a luminous rim on which the bar terminates.

spiral ganglion [ANAT] The ganglion of the cochlear part of the vestibulocochlear nerve embedded in the spiral canal of the modiolus.

spiral gear [MECH ENG] A helical gear that transmits power from one shaft to another, nonparallel shaft.

spiral-jaw clutch [MECH ENG] A modification of the square-jaw clutch permitting gradual meshing of the mating faces, which have a helical section.

spiral layer *See* Ekman layer.

spiral ligament [ANAT] The reticular connective tissue connecting the basilar membrane to the outer cochlear wall in the ear of mammals.

spiral mold cooling [ENG] Cooling an injection mold by passing a liquid through a spiral cavity in the body of the mold.

spiral of Archimedes [MATH] The curve spiraling into the origin which in polar coordinates is given by the equation $r = a\theta$. Also known as Archimedes' spiral.

spiral organ *See* organ of Corti.

spiral pipe [DES ENG] Strong, lightweight steel pipe with a single continuous welded helical seam from end to end.

spiral plate exchanger [CHEM ENG] A heat-transfer device made from a pair of plates rolled in a spiral to provide two relatively long, rectangular passages for heat-transfer between fluids in countercurrent flow.

spiral pressure gage [ENG] A device for measurement of pressures; a hollow tube spiral receives the system pressure which deforms (unwinds) the spiral in direct relation to the pressure in the tube. Also known as spiral gage.

spiral ramp system [MIN ENG] Development of a mine by driving moderately inclined haulageways from the surface to underground ore horizons.

spiral ring structure [ASTRON] A lunar crater in which ridges spiral inward from the main wall across the floor.

spiral scanning [ENG] Scanning in which the direction of maximum radiation describes a portion of a spiral; the rotation is always in one direction; used with some types of radar antennas.

spiral spring [DES ENG] A spring bar or wire wound in an Archimedes spiral in a plane; each end is fastened to the force-applying link of the mechanism.

spiral thermometer [ENG] A temperature-measurement device consisting of a bimetal spiral that winds tighter or opens with changes in temperature.

spiral-tube heat exchanger [ENG] A countercurrent heat-exchange device made of a group of concentric spirally wound coils, generally connected by manifolds; used for cryogenic exchange in air-separation plants.

spiral valve [VERT ZOO] A spiral fold of mucous membrane in the small intestine of elasmobranchs and some primitive fishes which increases the surface area for absorption.

spiral welded pipe [DES ENG] A steel pipe made of long strips of steel plate fitted together to form helical seams, which are welded.

spiral wire column [ANALY CHEM] An analytical rectification (distillation) column with a wire spiral the length of the inside of the column to serve as a liquid-vapor contact surface.

spiramycin [MICROBIO] A complex of related antibiotics, which resemble erythromycin structurally and in antibacterial spectrum, produced by *Streptomyces ambofaciens*.

spiran [ORG CHEM] A polycyclic compound containing a carbon atom which is a member of two rings.

spiraster [INV ZOO] A spiral spicule bearing rays in Porifera.

spire [ARCH] As a landmark, a prominent, slender, pointed structure surmounting a building; a spire is seldom less than two-thirds of the entire height, and its lines are rarely broken by stages or other features. [BOT] A narrow, tapering blade or stalk.

spiricle [BOT] Any of the coiled threads in certain seed coats which uncoil when moistened.

Spiriferida [PALEON] An order of fossil articulate brachiopods distinguished by the spiralium, a pair of spirally coiled ribbons of calcite supported by the crura.

Spiriferidina [PALEON] A suborder of the extinct brachiopod order Spiriferida including mainly ribbed forms having laterally or ventrally directed spires, well-developed interareas, and a straight hinge line.

Spirillaceae [MICROBIO] A family of bacteria; motile, helically curved rods that move with a characteristic corkscrewlike motion.

Spirillinacea [INV ZOO] A superfamily of foraminiferan protozoans in the suborder Rotaliina characterized by a planispiral or low conical test with a wall composed of radial calcite.

Spirillospora [MICROBIO] A genus of bacteria in the family Actinoplanaceae; sporangia are spherical to subspherical; spores are rod-shaped, curved, or spiral, and motile by means of subpolar flagella.

Spirillum [MICROBIO] A genus of bacteria in the family Spirillaceae; motile by means of a tuft of 5–20 polar flagella, usually at both poles; have polyhydroxybutyrate granules in the cytoplasm.

spirit compass [NAV] A liquid compass using a mixture of alcohol and water.

spirit duplicating [GRAPHICS] A contact process used in reproducing maps in which a map with several colors in accurate position relative to each other can be produced in one run through the machine; the map is drawn on a paper master having a carbon backing; different-colored carbons can be substituted to prepare a multicolor image.

spirit level *See* level.

spirit stain [MATER] A dye dissolved in methylated spirits; used to stain wood surfaces.

spirit thermometer [ENG] A temperature-measurement device consisting of a closed capillary tube with a liquid (for example, alcohol) reservoir bulb at the bottom; as the bulb is heated, the liquid expands up into the capillary tubing, indicating the temperature of the bulb.

spirit varnish [MATER] An artificial varnish consisting of resin, asphalt, or a cellulose ester dissolved in a volatile solvent.

Spirobrachiidae [INV ZOO] A family of the Brachiata in the order Thecanephria.

Spirochaeta [MICROBIO] A genus of bacteria in the family Spirochaetaceae; helical cells have axial fibrils and are free-living in hydrogen sulfide-containing water, mud, and sewage.

Spirochaetaceae [MICROBIO] The single family of the order Spirochaetales.

Spirochaetales [MICROBIO] An order of bacteria characterized by slender, helically coiled cells sometimes occurring in chains.

spirochetal jaundice *See* Weil's disease.

spirochete [MICROBIO] The common name for any member of the order Spirochaetales.

spirochetemia [MED] The presence of spirochetes in the blood.

spirocyst [INV ZOO] A thin-walled capsule that contains a long, unarmed, evertable, spirally coiled thread of uniform diameter; found in coelenterates.

spirograph [MED] An instrument for registering respiration.

Spiroid gear [DES ENG] A trade name of the Illinois Tool Works, it resembles a hypoid-type bevel gear but performs like a worm mesh; used to connect skew shafts.

spirometry [PHYSIO] The measurement, by a form of gas meter (spirometer), of volumes of air that can be moved in or out of the lungs.

spironolactone [PHARM] $C_{24}H_{32}O_4S$ A steroid having a lactone ring attached at carbon-17; used as a diuretic.

Spiroplasma [MICROBIO] A genus of the class Mollicutes; pleomorphic cells varying from spherical to helical with branched nonhelical filaments.

spiro ring system [ORG CHEM] A molecular structure with two ring structures having one atom in common; for example, spiropentane.

Spirotrichia [INV ZOO] A subclass of the protozoan class Ciliatea which contains those ciliates characterized by conspicuous, compound ciliary structures, known as cirri, and buccal organelles.

spirule [GRAPHICS] A plastic device consisting of a protractor and a pivoted arm with a logarithmic spiral, used to add angles between vectors and multiply magnitudes of vectors.

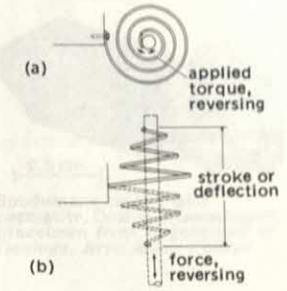
Spirulidae [INV ZOO] A family of cephalopod mollusks containing several species of squids.

Spiruria [INV ZOO] A subclass of nematodes in the class Secernentea.

Spirurida [INV ZOO] An order of phasmid nematodes in the subclass Spiruria.

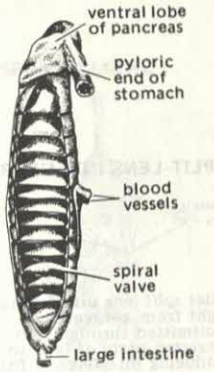
Spiruroidea [INV ZOO] A superfamily of spirurid nematodes

SPIRAL SPRING



Spiral spring is unique in being able to respond to two types of forces. *(a)* In response to torsional force, spring remains flat spiral. *(b)* In response to translational force, perpendicular to spiral plane, spring is deformed into conical helix.

SPIRAL VALVE



Small intestine of shark *(Squalus acanthias)* cut open to show spiral valve. *(From C. K. Weichert, Anatomy of the Chordates, 3d ed., McGraw-Hill, 1965)*

SPIRIFERIDINA

Dorsal view of *Spinocyrtia* valve.

which are parasitic in the respiratory and digestive systems of vertebrates.

spit [ENG] To light a fuse. [GEOGR] A small point of land commonly consisting of sand or gravel and which terminates in open water.

Spitsbergen Current [OCEANOGR] An ocean current flowing northward and westward from a point south of Spitsbergen, and gradually merging with the East Greenland Current in the Greenland Sea; the Spitsbergen Current is the continuation of the northwestern branch of the Norwegian Current.

spitted fuse [ENG] A slow-burning fuse which has been cut open at the lighting end for ease of ignition.

spitting rock [ENG] A rock mass under stress that breaks and ejects small fragments with considerable velocity.

SPL *See* sound pressure level.

splanchnic mesoderm [EMBRYO] The internal layer of the lateral mesoderm that is associated with the entoderm after the formation of the coelom.

splanchnic nerve [ANAT] A nerve carrying nerve fibers from the lower thoracic paravertebral ganglions to the collateral ganglions.

splanchnocranium [ANAT] Portions of the skull derived from the primitive skeleton of the gill apparatus.

splanchnopleure [EMBRYO] The inner layer of the mesoblast from which part of the wall of the alimentary canal and portions of the visceral organs are derived in coelomates.

splashdown [AERO ENG] **1.** The landing of a spacecraft or missile on water. **2.** The moment of impact of a spacecraft on water.

splash erosion [GEOL] Erosion resulting from the impact of falling raindrops.

splash lubrication [ENG] An engine-lubrication system in which the connecting-rod bearings dip into troughs of oil, splashing the oil onto the cylinder and piston rods.

splatter [COMMUN] Distortion due to overmodulation of a transmitter by peak signals of short duration, particularly sounds containing high-frequency harmonics; it is a form of adjacent-channel interference.

spleen [ANAT] A blood-forming lymphoid organ of the circulatory system, present in most vertebrates.

splenectomy [MED] Surgical removal of the spleen.

splenic fever *See* anthrax.

splenic flexure [ANAT] An abrupt turn of the colon beneath the lower end of the spleen, connecting the descending with the transverse colon.

splenium [ANAT] The rounded posterior extremity of the corpus callosum. [MED] A bandage.

splenomegaly [MED] Enlargement of the spleen.

splent coal *See* splint coal.

splice [ELEC] A joint used to connect two lengths of conductor with good mechanical strength and good conductivity. [ENG] To unite two parts, such as rope or wire, to form a continuous length. [GRAPHICS] To join two pieces of film together.

spliced [GEOL] Relating to veins that pinch out and are overlapped at that point by another parallel vein.

splice plate [CIV ENG] A plate for joining the web plates or the flanges of girders.

splicing tape [MATER] A pressure-sensitive nonmagnetic tape used for splicing magnetic tape and motion picture film; it has a hard adhesive that will not ooze and gum up the equipment or cause adjacent layers of tape or film on the reel to stick together.

spline [DES ENG] One of a number of equally spaced keys cut integral with a shaft, or similarly, keyways in a hubbed part; the mated pair permits the transmission of rotation or translatory motion along the axis of the shaft. [ENG] A strip of wood, metal, or plastic. [GRAPHICS] A flexible strip used in drawing curves.

spline broach [MECH ENG] A broach for cutting straight-sided splines, or multiple keyways in holes.

splined shaft [DES ENG] A shaft with longitudinal gearlike ridges along its interior or exterior surface.

splint *See* splint coal.

splint coal [GEOL] A hard, dull, blocky, grayish-black, banded bituminous coal characterized by an uneven fracture and a granular texture; burns with intense heat. Also known as splent coal; splint.

split [GEOL] A coal seam that cannot be mined as a single unit because it is separated by a parting of other sedimentary rock. Also known as coal split; split coal. [MIN ENG] **1.** To divide the air current into separate circuits to ventilate more than one section of the mine. **2.** Any division or branch of the ventilating current.

split-altitude profile [AERO ENG] Flight profile at two separate altitudes.

split-anode magnetron [ELECTR] A magnetron in which the cylindrical anode is divided longitudinally into halves, between which extremely high-frequency oscillations are produced.

split barrel [DES ENG] A core barrel that is split lengthwise so that it can be taken apart and the sample removed.

split-barrel sampler [DES ENG] A drive-type soil sampler with a split barrel.

split base concept [ORD] A principle which applies to a deployed tactical combat unit that divides its resources between two separate operating bases.

split bearing [DES ENG] A shaft bearing composed of two pieces bolted together.

split cameras [OPTICS] An assembly of two cameras disposed at a fixed overlapping angle relative to each other.

split cavity [ENG] A cavity, such as in a mold, made in sections.

split coal *See* split.

split die [MET] **1.** A screw-thread die made in one piece with a longitudinal slit connecting the outside to the central hole which allows size adjustment. **2.** *See* segment die.

split-field microtron [NUCLEO] A microtron whose magnetic field is divided into two separate sections in order to provide room for a large accelerating section.

split fix [NAV] A fix by horizontal sextant angles obtained by measuring two angles between four objects, or suitable charted features, with no common center object being observed.

split flap [AERO ENG] A hinged plate forming the rear upper or lower portion of an airfoil; the lower portion may be deflected downward to give increased lift and drag; the upper portion may be raised over a portion of the wing for the purpose of lateral control.

split gene [GEN] A gene that is not continuous. Also known as interrupted gene.

split interstitial [CRYSTAL] A crystal defect in which a displaced atom forms a bond with a normal atom in such a way that neither atom is on the normal site but the two are symmetrically displaced from it.

split-lens interference [OPTICS] Interference produced by a Billet split lens.

split link [DES ENG] A metal link in the shape of a two-turn helix pressed together.

splitnut [ENG] A nut cut axially into halves to allow for rapid engagement (closed) or disengagement (open).

split personality [PSYCH] The condition in which there is a separation of various components of the normal personality unit, and each component functions as an independent entity.

split-phase motor [ELEC] A single-phase induction motor having an auxiliary winding connected in parallel with the main winding, but displaced in magnetic position from the main winding so as to produce the required rotating magnetic field for starting; the auxiliary circuit is generally opened when the motor has attained a predetermined speed.

split pin [DES ENG] A pin with a split at one end so that it can spread to hold it in place.

split-ring core lifter [DES ENG] A hardened steel ring having an open slit, an outside taper, and an inside or outside serrated surface; in its expanded state it allows the core to pass through it freely, but when the drill string is lifted, the outside taper surface slides downward into the bevel of the bit or reaming shell, causing the ring to contract and grip tightly the core which it surrounds. Also known as core catcher; core gripper; core lifter; ring lifter; split-ring lifter; spring lifter.

split-ring lifter *See* split-ring core lifter.

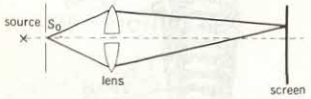
split-ring mold [ENG] A plastics mold in which a split-cavity block is assembled in a chase to permit the forming of undercuts in a molded piece.

split-ring piston packing [MECH ENG] A metal ring mounted on a piston to prevent leakage along the cylinder wall.

split shovel [DES ENG] A shovel containing parallel troughs separated by slots; used for sampling ground ore.

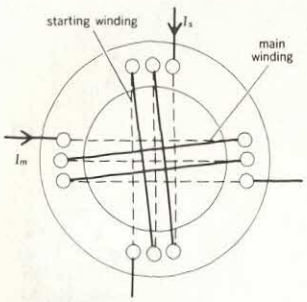
split-stator variable capacitor [ELECTR] Variable capacitor having a rotor section that is common to two separate stator

SPLIT-LENS INTERFERENCE



Billet split-lens interference. Light from source S_0 is transmitted through two separated parts of lens to screen, producing interference fringes on screen.

SPLIT-PHASE MOTOR



Windings of a split-phase motor; I_m is current of the main winding, and I_s is current of the starting winding.

sections; used in grid and plate tank circuits of transmitters for balancing purposes.

splitter [CHEM ENG] A petroleum-refinery term for a fractionating tower that produces only an overhead and bottom stream. [SYST] A taxonomist who divides taxa very finely.

splitter vanes [ENG] A group of curved, parallel vanes located in a sharp (for example, miter) bend of a gas conduit; the vane shape and its location help guide the moving gas around the bend.

splitting [ELECTR] In the scope presentation of the standard loran (2000 kilohertz), signals the slow diminution of the leading or lagging edge of the pulse so that it resembles two pulses and eventually a single pulse, which appears to be normal but which may be displaced in time by as much as 10,000 microseconds; this phenomenon is caused by shifting of the E_1 reflections from the ionosphere, and if the deformation is that of the leading edge and is not detected, it will cause serious errors in the reading of the navigational parameter. [MIN ENG] **1.** Lamina of mica with a maximum thickness of 0.0012 inch (30 micrometers), split from blocks and thins. **2.** One of a pair of horizontal level headings driven through a pillar, in pillar workings, in order to mine the pillar coal.

split transducer [ENG] A directional transducer with electroacoustic transducing elements which are divided and arranged so that there is an electrical separation of each division.

split vertical photography [GRAPHICS] Photographs taken simultaneously by two cameras mounted at an angle from the vertical, one tilted to the left and one to the right, to obtain a small side lap.

split-word operation [COMPUT SCI] A computer operation performed with portions of computer words rather than whole words as is normally done.

SP logging *See* spontaneous-potential well logging.

spodic horizon [GEOL] A soil horizon characterized by illuviation of amorphous substances.

Spodosol [GEOL] A soil order characterized by accumulations of amorphous materials in subsurface horizons.

spodumene [MINERAL] $LiAlSi_2O_6$ A white to yellowish-, purplish-, or emerald-green clinopyroxene mineral occurring in prismatic crystals; hardness is 6.5–7 on Mohs scale, and specific gravity 3.13–3.20; an ore of lithium. Also known as triphane.

spoil [MIN ENG] **1.** The overburden or nonore material from a coal mine. **2.** A stratum of coal and dirt mixed.

spoil bank [MIN ENG] **1.** In surface mining, the accumulation of overburden. **2.** The place where spoil is deposited. Also known as spoil heap.

spoil dam [MIN ENG] An earthen dike forming a depression, in which returns from a borehole can be collected and retained.

spoiler [AERO ENG] A plate, series of plates, comb, tube, bar, or other device that projects into the airstream about a body to break up or spoil the smoothness of the flow, especially such a device that projects from the upper surface of an airfoil, giving an increased drag and a decreased lift. [ELECTROMAG] Rod grating mounted on a parabolic reflector to change the pencil-beam pattern of the reflector to a cosecant-squared pattern; rotating the reflector and grating 90° with respect to the feed antenna changes one pattern to the other.

spoil heap *See* spoil bank.

spoke [DES ENG] A bar or rod radiating from the center of a wheel.

spokeshave [ENG] A small tool for planing convex or concave surfaces.

spondylitis [MED] Inflammation of the vertebrae.

spondylolisthesis [MED] Forward displacement of a vertebra upon the one below as a result of a bilateral defect in the vertebral arch, or erosion of the articular surface of the posterior facets due to degenerative joint disease.

sponge [CHEM ENG] Wood shavings coated with iron oxide and used as a catalyst in processes for removing hydrogen sulfide from industrial gases. [INV ZOO] The common name for members of the phylum Porifera.

sponge gold *See* cake of gold.

sponge grease [MATER] Fibrous, spongy, soda-base grease.

sponge iron [MET] Iron in porous or powder form made without fusion by heating iron ore in a reducing gas or with charcoal.

sponge metal [MET] Any porous metal made by decomposition or reduction of a compound without melting.

sponge rubber *See* rubber sponge.

spongework [GEOL] A pattern of small irregular interconnecting cavities on walls of limestone caves.

Spongiidae [INV ZOO] A family of sponges of the order Dictyoceratida; members are encrusting, massive, or branching in form and have small spherical flagellated chambers which characteristically join the exhalant canals by way of narrow channels.

Spongillidae [INV ZOO] A family of fresh- and brackish water sponges in the order Haplosclerida which are chiefly gray, brown, or white in color, and encrusting, massive, or branching in form.

spongin [BIOCHEM] A scleroprotein, occurring as the principal component of skeletal fibers in many sponges.

spongioblast [EMBRYO] A primordial cell arising from the ectoderm of the embryonic neural tube which differentiates to form the neuroglia, the ependymal cells, the neurolemma sheath cells, the satellite cells of ganglions, and Müller's fibers of the retina.

spongiocyte [HISTOL] **1.** A neuroglia cell. **2.** A cell of the adrenal cortex which has a spongy appearance due to the solution of lipids during tissue preparation for microscopical examination.

Spongiomorphida [PALEON] A small, extinct Mesozoic order of fossil colonial Hydrozoa in which the skeleton is a reticulum composed of perforate lamellae parallel to the upper surface and of regularly spaced vertical elements in the form of pillars.

Spongiomorphidae [PALEON] The single family of extinct hydrozoans comprising the order Spongiomorphida.

spongocoel [INV ZOO] The branching, internal cavity of a sponge, connected to the outside by way of the osculum.

spongolite [GEOL] A rock or sediment composed chiefly of the remains of sponges. Also known as spongolith.

spongolith *See* spongolite.

spongy mesophyll [BOT] A system of loosely and irregularly arranged parenchymal cells with numerous intercellular spaces found near the lower surface in well-differentiated broad leaves. Also known as spongy parenchyma.

spongy parenchyma *See* spongy mesophyll.

sponson mount [ORD] A gun mount positioned on the sponson of a tank or combat vehicle; practically abandoned because of vulnerability and limited field of fire, although widely used in earlier tanks.

sponsor [COMMUN] The advertiser who pays part or all of the cost of a television or radio program.

spontaneous [PHYS] Occurring without application of an external agency, because of the inherent properties of an object.

spontaneous abortion [MED] An unexpected, premature expulsion of the fetus.

spontaneous amputation [MED] **1.** Congenital amputation. **2.** Amputation not caused by external trauma or injury, as in ainhum.

spontaneous combustion *See* autoignition.

spontaneous fission [NUC PHYS] Nuclear fission in which no particles or photons enter the nucleus from the outside.

spontaneous generation *See* abiogenesis.

spontaneous heating [CHEM] The slow reaction of material with atmospheric oxygen at ambient temperatures; liberated heat, if undissipated, accumulates so that in the presence of combustible substances a fire will result.

spontaneous ignition [CHEM] Ignition which can occur when certain materials such as tung oil are stored in bulk, resulting from the generation of heat, which cannot be readily dissipated; often heat is generated by microbial action.

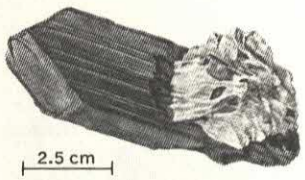
spontaneous magnetization [ELECTROMAG] Magnetization which a substance possesses in the absence of an applied magnetic field.

spontaneous mutation [GEN] A mutation that occurs naturally.

spontaneous nucleation [METEOROL] The nucleation of a phase change of a substance without the benefit of any seeding nuclei within or otherwise in contact with that substance; examples of such systems are a pure vapor condensing to its pure liquid state, a pure liquid freezing to its pure solid state, and a pure solution crystallizing to yield pure solute crystals.

spontaneous pneumothorax [MED] Air that has entered the chest cavity and caused lung collapse without being the result of injury or deliberate introduction of air; caused by an overexpansion of air in the lungs.

SPODUMENE

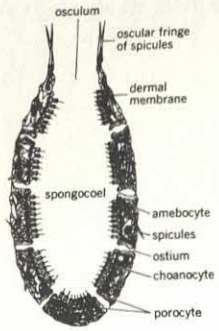


Spodumene crystal with pegmatite, Doshen, Massachusetts. *(Specimen from Department of Geology, Bryn Mawr College)*

SPONGILLIDAE

An encrusting spongillid sponge growing on a twig.

SPONGOCOEL



Morphology of asconoid calcareous sponge—longitudinal section. *(After Hyman, 1940)*

spontaneous polarization [ELEC] Electric polarization that a substance possesses in the absence of an external electric field.

spontaneous-potential well logging [ENG] The recording of the natural electrochemical and electrokinetic potential between two electrodes, one above the other, lowered into a drill hole; used to detect permeable beds and their boundaries. Also known as SP logging.

spontaneous process [THERMO] A thermodynamic process which takes place without the application of an external agency, because of the inherent properties of a system.

spontaneous symmetry breaking [PHYS] A situation in which the solution of a set of physical equations fails to exhibit a symmetry possessed by the equations themselves; an example is a magnet, in which the underlying equations describing the metal do not distinguish any direction of space from any other, but the magnet certainly does, since it points in some definite direction.

spoofing [ELECTR] Deceiving or misleading the enemy in electronic operations, as by continuing transmission on a frequency after it has been effectively jammed by the enemy, using decoy radar transmitters to lead the enemy into a useless jamming effort, or transmitting radio messages containing false information for intentional interception by the enemy.

spool [MECH ENG] **1.** The drum of a hoist. **2.** The movable part of a slide-type hydraulic valve. [TEXT] A cylinder made of wood or other material on which yarn is held during spinning or weaving.

spooling [COMPUT SCI] The temporary storage of input and output on high-speed input-output devices, typically magnetic disks and drums, in order to increase throughput. Acronym for simultaneous peripheral operations on line.

spool-type roller conveyor [MECH ENG] A type of roller conveyor in which the rolls are of conical or tapered shape with the diameter at the ends of the roll larger than that at the center.

spoon [DES ENG] A slender rod with a cup-shaped projection at right angles to the rod, used for scraping drillings out of a borehole. [MIN ENG] An instrument in which earth or pulp may be delicately tested by washing to detect gold or amalgam.

spoon nail *See* koilonychia.

sporadic E layer [GEOPHYS] A layer of intense ionization that occurs sporadically within the E layer; it is variable in time of occurrence, height, geographical distribution, penetration frequency, and ionization density.

sporadic meteor [ASTRON] A meteor which is not associated with one of the regularly recurring meteor showers or streams.

sporadic reflections [ELECTROMAG] Sharply defined reflections of substantial intensity from the sporadic E layer at frequencies greater than the critical frequency of the layer; they are variable with respect to time of occurrence, geographic location, and range of frequencies at which they are observed.

sporangiophore [BOT] A stalk or filament on which sporangia are borne.

sporangiospore [BOT] A spore that forms in a sporangium.

sporangium [BOT] A case in which asexual spores are formed and borne.

spore [BIOL] A uni- or multicellular, asexual, reproductive or resting body that is resistant to unfavorable environmental conditions and produces a new vegetative individual when the environment is favorable.

spore mother cell [BOT] One of the cells of the archespore of a sporebearing plant from which a spore, but usually a tetrad of spores, is produced.

Spörer's law [ASTRON] A relationship to indicate the frequency of occurrence of sunspots and their progressive movement to lower latitudes on the sun.

Sporichthya [MICROBIO] A genus of bacteria in the family Streptomycetaceae; aerial hyphae form only aerial mycelia; motile spores are produced on aerial hyphae.

sporidium [MYCOL] A small spore, especially one formed on a promycelium.

sporinite [GEOL] A variety of exinite composed of spore exines which have been compressed parallel to the stratification.

sporoblast [INV ZOO] A sporozoan cell from which sporozoites arise.

Sporobolomycetaceae [MYCOL] The single family of the order Sporobolomycetales.

Sporobolomycetales [MYCOL] An order of yeastlike and moldlike fungi assigned to the class Basidiomycetes characterized by the formation of sterigmata, upon which the asexual ballistospores are formed.

sporocarp [BOT] Any multicellular structure in or on which spores are formed.

sporocyst [BOT] A unicellular resting body from which asexual spores arise. [INV ZOO] **1.** A resistant envelope containing an encysted sporozoan. **2.** An encysted sporozoan. **3.** The first reproductive form of a digenetic trematode in which rediae develop.

Sporocytophaga [MICROBIO] A genus of bacteria in the family Cytophagaceae; cells are motile rods with rounded ends; microcysts are formed.

sporogenesis [BIOL] **1.** Reproduction by means of spores. **2.** Formation of spores.

sporogony [BIOL] Reproduction by means of spores. [INV ZOO] Propagative reproduction involving formation, by sexual processes, and subsequent division of a zygote.

Sporolactobacillus [MICROBIO] A genus of bacteria in the family Bacillaceae; rod-shaped cells occurring singly or in pairs; microaerophilic and do not produce catalase.

sporont [INV ZOO] A stage in the life history of sporozoans which gives rise to spores.

sporophore [MYCOL] A structure on the thallus of fungi which produces spores.

sporophyll [BOT] A modified leaf that develops sporangia.

sporophyte [BOT] **1.** An individual of the spore-bearing generation in plants exhibiting alternation of generation. **2.** The spore-producing generation. **3.** The diplophase in a plant life cycle.

sporopollenin [BIOCHEM] A substance related to suberin and cutin but more resistant to decay that is found in the exine of pollen grains.

sporosac [INV ZOO] A degenerate gonophore in certain hydroid coelenterates.

Sporosarcina [MICROBIO] A genus of bacteria in the family Bacillaceae; spherical cells occur in packets and form endospores.

sporotrichosis [MED] A granulomatous fungus disease caused by *Sporotrichum schenckii*, with cutaneous lesions along the lymph channels and occasionally involving the internal organs. Also known as de Beurmann-Gougerot disease; Schenk's disease.

Sporozoa [INV ZOO] A subphylum of parasitic Protozoa, typically producing spores during the asexual stages of the life cycle.

sporozoite [INV ZOO] A motile, infective stage of certain sporozoans, which is the result of sexual reproduction and which gives rise to an asexual cycle in the new host.

sporting gun [ORD] A classification of shotguns which includes those with 30-inch (762-millimeter) full choke barrels.

sporulation [BIOL] The act and process of spore formation.

spot [ELECTR] In a cathode-ray tube, the area instantaneously affected by the impact of an electron beam. [ORD] **1.** To determine, by observation, deviations of ordnance from the target for the purpose of supplying necessary information for adjustment of fire. **2.** To place ordnance in a proper location. **3.** To locate or espy something, as an aircraft or troop concentration.

spot beam [COMMUN] A beam generated by a communications satellite antenna of sufficient size that the angular spread of energy in the beam is very small, and a region only a few hundred kilometers in diameter is illuminated on the earth.

spot blight *See* grease spot.

spot blotch [PL PATH] A fungus disease of barley caused by *Helminthosporium sativum* and characterized by the appearance of dark, elongated spots on the foliage.

spot carbon [GRAPHICS] Carbon paper that is carbonized only in certain areas so that only the corresponding areas of the original will be reproduced.

spot check [IND ENG] A check or inspection of certain steps in an operation, process, or the like, of certain parts of a piece of equipment or of a representative lot of completed parts or articles; the steps or parts inspected would normally be only a small percentage of the total.

spot drilling [MECH ENG] Drilling a small hole or indentation in the surface of a material to serve as a centering guide in later machining operations.

spot elevation [MAP] Elevation of a point on a map or chart, usually indicated by a dot accompanied by a number indicating the vertical distance of the point from the reference datum; spot

elevations are used principally to indicate points higher than their surroundings.

spot facing [MECH ENG] A finished circular surface around the top of a hole to seat a bolthead or washer, or to allow flush mounting of mating parts.

spot film [MED] A small, highly collimated radiograph of an anatomic part, usually obtained in conjunction with fluoroscopy.

spot gluing [ENG] Applying heat to a glued assembly by dielectric heating to make the glue set in spots that are more or less regularly distributed.

spot group [ASTROPHYS] A complex formation of the sun's surface consisting of a sunspot with several umbrae surrounded by a single penumbra, or of several sunspots which are close together and clearly associated.

spot hover [AERO ENG] To remain stationary relative to a point on the ground while airborne.

spot jammer [ELECTR] A jammer that interferes with reception of a specific channel or frequency.

spotlight [ELEC] **1.** A strong beam of light that illuminates only a small area about an object. **2.** A lamp that has a strongly focused beam.

spot net [COMMUN] Radio communication net used by a spotter in calling fire.

spot noise figure [ELECTR] Of a transducer at a selected frequency, the ratio of the output noise power per unit bandwidth to a portion thereof attributable to the thermal noise in the input termination per unit bandwidth, the noise temperature of the input termination being standard (290 K).

spot punch [COMPUT SCI] A hand-operated device resembling a pair of pliers, for selectively punching holes in punch cards.

spot-size error [ELECTR] The distortion of the radar returns on the radarscope presentation caused by the diameter of the electron beam which displays the returns of the scope and the lateral radiation across the scope of part of the glow produced when the electron beam strikes the phosphorescent coating of the cathode-ray tube.

spot speed [COMMUN] **1.** In television, the product of the length (in units of elemental area, that is, in spots) of scanning line by the number of scanning lines per second. **2.** In facsimile transmission, the speed of the scanning or recording spot within the available line. Also known as scanning speed.

spotted wilt [PL PATH] A virus disease of various crop and wild plants, especially tomato, characterized by bronzing and downward curling of the leaves.

spotter [OPTICS] *See* dotter. [ORD] An observer stationed for the purpose of observing and reporting results of naval gunfire to the firing agency, or in designating targets.

spotter-tracer [ORD] In cartridge nomenclature, indicating that the bullet or projectile is equipped with a tracer and contains a filler suitable for spotting purposes.

spot test [ANALY CHEM] The addition of a drop of reagent to a drop or two of sample solution to obtain distinctive colors or precipitates; used in qualitative analysis.

spottiness [ELECTR] Bright spots scattered irregularly over the reproduced image in a television receiver, due to man-made or static interference entering the television system at some point.

spotting [ENG] Fitting one part of a die to another part by applying an oil color to the surface of the finished part and bringing this against the surface of the intended mating part, the high spots being marked by the transferred color. [MIN ENG] Bringing mine cars or surface wagons to the correct spot for loading, discharging, or any other purpose.

spotting board [ORD] Device for determining the direction and size of deviations from the target; it converts the readings of spotters into usable form for firing data.

spotting hoist [MIN ENG] A small haulage engine used for bringing mine cars into the correct position under a loading chute or feeder or some other point.

spotting line [ORD] Either the gun-target line, the observer-target line, or a reference line used by the observer or spotter in making spot corrections.

spotting pistol [ORD] A short automatic or semiautomatic firearm mounted coaxially on a larger-caliber gun, designed to conserve and to increase first-round hit probability of the ammunition used in the larger weapon; it employs a magazine and fires a spotter-tracer projectile which is ballistically matched with the trajectory of the projectile of the gun on which it is mounted.

spotting rifle [ORD] An auxiliary item mounted coaxially on a larger-caliber gun used to assist a gunner in determining range; it is usually a magazine-fed, semiautomatic gun with a rifled barrel that utilizes ammunition incorporating a tracer element providing a smoke puff on impact.

spotty ore [MIN ENG] Ore in which the valuable material is concentrated irregularly as small particles.

spot welding [MET] Resistance welding in which fusion is localized in small circular areas; sometimes also accomplished by various arc-welding processes.

spot wind [METEOROL] In air navigation, wind direction and speed, either observed or forecast if so specified, at a designated altitude over a fixed location.

spout hole [VERT ZOO] **1.** A blowhole of a cetacean mammal. **2.** A nostril of a walrus or seal.

spouting [ENG] A term used in the feeding or ejection of powdered or granulated solids by means of vertical or slanted discharge spouts.

spouting horn [GEOL] A sea cave with a rearward or upward opening through which water spurts or sprays after waves enter the cave. Also known as chimney; oven.

sprag [ENG] A stake used as a brake for a vehicle by inserting it through the spokes of a wheel or digging it into the ground at an angle. [MIN ENG] A prop supporting the roof or ore in a mine.

spragger [MIN ENG] In coal mining, a laborer who rides trains of cars and controls their free movement down gently sloping inclines by throwing switches and by poking sprags between the wheel spokes to stop them.

sprag road [MIN ENG] A road so steep that sprags must be used on the wheels of ore cars during descent.

sprain [MED] A wrenching of a joint, producing a stretching or laceration of the ligaments.

sprain fracture [MED] An injury in which a tendon or ligament, together with a shell of bone, is torn from its attachment; occurs most commonly at the ankle.

spray [ASTROPHYS] An explosive release of gas in all directions from the sun's chromosphere, with velocities as high as 1500 kilometers per second, which normally occurs in the first minutes of a flare. [ENG] A mechanically produced dispersion of liquid into a gas stream; as drops are large, the spray is unstable and the liquid will fall free of the gas stream when velocity decreases.

spray angle [FL MECH] The angle formed by the cone of liquid leaving a nozzle orifice.

spray chamber [MECH ENG] A compartment in an air conditioner where humidification is conducted.

spray dryer [MECH ENG] A machine for drying an atomized mist by direct contact with hot gases.

sprayed metal mold [ENG] A plastics mold made by spraying molten metal onto a master form until a shell of predetermined thickness is achieved; the shell is then removed and backed up with plaster, cement, or casting resin; used primarily in plastic sheet forming.

sprayer plate [ENG] A rotating flat-faced or dished metal plate used in an oil burner to enhance atomization.

spray gun [MECH ENG] An apparatus shaped like a gun which delivers an atomized mist of liquid.

spray nozzle [MECH ENG] A device in which a liquid is subdivided to form a stream (mist) of small drops.

spray oil [MATER] A low-viscosity petroleum oil similar to lubricating oil; used to combat pests that attack trees and shrubbery.

spray painting [ENG] Applying a fine, even coat of paint by means of a spray nozzle.

spray point [ELEC] One of the sharp points arranged in a row and charged to a high direct-current potential, used to charge and discharge the conveyor belt in a Van de Graaff generator.

spray pond [ENG] An arrangement for cooling large quantities of water in open reservoirs or ponds; nozzles spray a portion of the water into the air for the evaporative cooling effect.

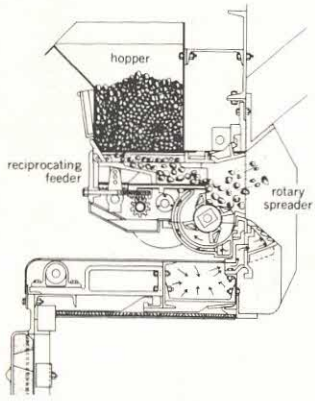
spray probe [ENG] A device which detects a jet spray of tracer gas in vacuum testing for leaks.

spray quenching [MET] Rapid cooling in a spray of water or oil.

spray region *See* fringe region.

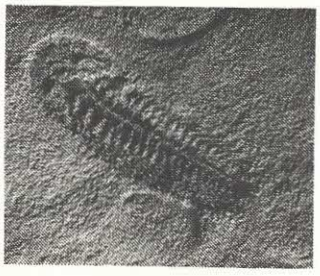
spray torch [ENG] In thermal spraying, a device used for the

SPREADER STOKER



A type of spreader stoker utilizing a reciprocating coal feeder.

SPRIGGINIDAE



Spriggina floundersi fossil showing characteristic horseshoe-shaped head.

SPRING GRAVIMETER

Principle of a spring gravimeter. The variable length of the spring is *s*.

application of self-fluxing alloys; molten metal is propelled against the substrate by a stream of air and gas.

spray tower [CHEM ENG] A vertical column, at the top of which is a liquid spray device; used to contact liquids with gas streams for absorption, humidification, or drying.

spray transfer [MET] In arc welding, transfer of filler metal across the arc to the workpiece in the form of droplets.

spray-up [ENG] A term for a number of techniques in which a spray gun is used as the processing tool; for example, in reinforced plastics manufacture, fibrous glass and resin can simultaneously be spray-deposited into a mold or onto a form.

spread [ENG] **1.** The layout of geophone groups from which data from a single shot are recorded simultaneously. **2.** *See* sensitivity. [STAT] The range within which the values of a variable quantity occur.

spreader [CIV ENG] A wood or steel member inserted temporarily between form walls to keep them apart. [ELEC] An insulating crossarm used to hold apart the wires of a transmission line or multiple-wire antenna. [MECH ENG] **1.** A tool used in sharpening machine drill bits. **2.** A machine which spreads dumped material with its blades. [MIN ENG] **1.** A horizontal timber below the cap of a set, used to stiffen the legs, and to support the brattice when there are two air courses in the same gangway. **2.** A piece of timber stretched across a shaft as a temporary support of the walls.

spreader beam [ENG] A rigid beam hanging from a crane hook and fitted with a number of ropes at different points along its length; employed for such purposes as lifting reinforced concrete piles or large sheets of glass.

spreader stoker [MECH ENG] A coal-burning system where mechanical feeders and distributing devices form a thin fuel bed on a traveling grate, intermittent-cleaning dump grate, or reciprocating continuous-cleaning grate.

spread footing [CIV ENG] A wide, shallow footing usually made of reinforced concrete.

spreading anomaly [PHYS] That part of the propagation anomaly which may be identified with the geometry of the ray paths.

spreading coefficient [THERMO] The work done in spreading one liquid over a unit area of another, equal to the surface tension of the stationary liquid, minus the surface tension of the spreading liquid, minus the interfacial tension between the liquids.

spreading concept *See* sea floor spreading.

spreading factor *See* hyaluronidase.

spreading fire [ORD] A notification by the spotter or the naval gunfire ship, depending on who is controlling the fire, to indicate that fire is about to be distributed over an area.

spreading floor hypothesis *See* sea floor spreading.

spread reflection [ELECTROMAG] Reflection of electromagnetic radiation from a rough surface with large irregularities. Also known as mixed reflection.

spread spectrum transmission [ELECTR] Communications technique in which many different signal waveforms are transmitted in a wide band; power is spread thinly over the band so narrow-band radios can operate within the wide-band without interference; used to achieve security and privacy, prevent jamming, and utilize signals buried in noise.

Sprengel pump [MECH ENG] An air pump that exhausts by trapping gases between drops of mercury in a tube.

Sprigginidae [INV ZOO] An extinct family of annelid worms distinguished by a horseshoe-shaped head.

spring [ASTRON] The period extending from the vernal equinox to the summer solstice; comprises the transition period from winter to summer. [ENG] To enlarge the bottom of a drill hole by small charges of a high explosive in order to make room for the full charge; to chamber a drill hole. [HYD] A general name for any discharge of deep-seated, hot or cold, pure or mineralized water. [MECH ENG] An elastic, stressed, stored-energy machine element that, when released, will recover its basic form or position. Also known as mechanical spring.

springback [MET] **1.** Return of a metal part to its original shape after release of stress. **2.** The degree to which a metal returns to its original shape after forming operations. **3.** In flash, upset or pressure welding, the deflection in the welding machine caused by the upset pressure.

spring balance [ENG] An instrument which measures force by determining the extension of a helical spring.

spring bearings [NAV ARCH] Bearings designed to take the weight of the propeller shaft inside a vessel.

spring bolt [DES ENG] A bolt which must be retracted by pressure and which is shot into place by a spring when the pressure is released.

spring box mold [ENG] A compression mold with a spacing fork that is removed after partial compression.

spring brass [MET] Common brass containing 70–72% copper which has been cold-worked to make it stiffer.

spring calipers [ENG] Calipers in which tension against the adjusting nut is maintained by a circular spring.

spring clip [DES ENG] **1.** A U-shaped fastener used to attach a leaf spring to the axle of a vehicle. **2.** A clip that grips an inserted part under spring pressure; used for electrical connections.

spring clock [HOROL] A clock containing a spring that supplies the energy to operate the clock mechanism.

spring collet [DES ENG] A bushing that surrounds and holds the end of the work in a machine tool; the bushing is slotted and tapered, and when the collet is slipped over it, the slot tends to close and the bushing thereby grips the work.

spring contact [ELEC] A relay or switch contact mounted on a flat spring, usually of phosphor bronze.

spring cotter [DES ENG] A cotter made of an elastic metal that has been bent double to form a split pin.

spring coupling [MECH ENG] A flexible coupling with resilient parts.

spring crust [HYD] A type of snow crust, formed when loose firn is recemented by a decrease in temperature; it is most common in late winter and spring.

spring die [DES ENG] An adjustable die consisting of a hollow cylinder with internal cutting teeth, used for cutting screw threads.

spring equinox *See* vernal equinox.

spring faucet [ENG] A faucet that is kept closed by a spring; force must be exerted to open it, and it closes when the force is removed.

spring gravimeter [ENG] An instrument for making relative measurements of gravity; the elongation s of the spring may be considered proportional to gravity g, $s = (1/k)g$, and the basic formula for relative measurements is $g_2 - g_1 = k(s_2 - s_1)$.

spring hammer [MECH ENG] A machine-driven hammer actuated by a compressed spring or by compressed air.

spring high water *See* mean high-water springs.

spring hook [DES ENG] A hook closed at the end by a spring snap. Also known as snap hook.

spring-joint caliper [DES ENG] An outside or inside caliper having a heavy spring joining the legs together at the top; legs are opened and closed by a knurled nut.

spring lifter *See* split-ring core lifter.

spring-lifter case *See* lifter case.

spring line [NAV ARCH] A hawser run out from any part of a vessel to a point on shore, as a dock, to prevent the vessel from going ahead or astern.

spring-loaded meter [ENG] A variable-area flowmeter in which the force on an obstruction in a tapered tube created by the fluid flowing past the obstruction is balanced by the force of a spring to which the obstruction is attached, and the resulting differential pressure is used to determine the flow rate.

spring-loaded regulator [MECH ENG] A pressure-regulator valve for pressure vessels or flow systems; the regulator is preloaded by a calibrated spring to open (or close) at the upper (or lower) limit of a preset pressure range.

spring low water *See* mean low-water springs.

spring modulus [MECH] The additional force necessary to deflect a spring an additional unit distance; if a certain spring has a modulus of 100 newtons per centimeter, a 100-newton weight will compress it 1 centimeter, a 200-newton weight 2 centimeters, and so on.

spring needle *See* bearded needle.

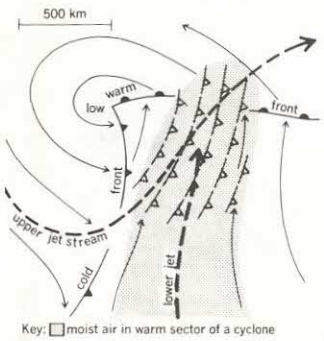
spring pin [MECH ENG] An iron rod which is mounted between spring and axle on a locomotive, and which maintains a regulated pressure on the axle.

spring range [OCEANOGR] The mean semidiurnal range of tide when spring tides are occurring; the mean difference in height between spring high water and spring low water. Also known as mean spring range.

spring rise [OCEANOGR] The height of mean high-water springs above the chart datum.

spring scale [ENG] A scale that utilizes the deflection of a spring to measure the load.
spring seepage [HYD] A spring of small discharge. Also known as weeping spring.
spring shackle [ENG] A shackle for supporting the end of a spring, permitting the spring to vary in length as it deflects.
spring sludge *See* rotten ice.
spring snow [HYD] A coarse, granular snow formed during spring by alternate freezing and thawing. Also known as corn snow.
spring steel [MET] Carbon or low-alloy steel which can be processed to give it the hardness and yield strength needed in springs.
spring stop-nut locking fastener [DES ENG] A locking fastener that functions by a spring action clamping down on the bolt.
spring switch [CIV ENG] A railroad switch that contains a spring to return it to the running position after it has been thrown over by trailing wheels moving on the diverging route.
spring temper [MET] **1.** A steel temper characterized by an increased upper limit of elasticity; obtained by hardening and tempering in the usual way, then reheating until the steel turns blue. **2.** A similar temper in brass obtained by cold rolling.
spring tidal currents [OCEANOGR] Tidal currents of increased speed occurring at the time of spring tides.
spring tide [OCEANOGR] Tide of increased range which occurs about every 2 weeks when the moon is new or full.
spring velocity [OCEANOGR] The average speed of the maximum flood and maximum ebb of a tidal current at the time of spring tides.
springwood [BOT] The portion of an annual ring that is formed principally during the growing season; it is softer, more porous, and lighter than summerwood because of its higher proportion of large, thin-walled cells.
sprinkle [METEOROL] A very light shower of rain.
sprinkler system [ENG] A fire-protection system of pipes and outlets in a building, mine, or other enclosure for delivering a fire extinguishing liquid or gas, usually automatically by the action of heat on the sprinkler head. Also known as fire sprinkling system.
Sprint [ORD] A United States guided, surface-to-air, high-acceleration, antimissile missile with nuclear warhead capability employed in the Nike X system.
s-process [NUC PHYS] The synthesis of elements, predominantly in the iron group, over long periods of time through the capture of slow neutrons which are produced mainly by the reactions of α-particles with carbon-13 and neon-21.
sprocket [DES ENG] A tooth on the periphery of a wheel or cylinder to engage in the links of a chain, the perforations of a motion picture film, or other similar device.
sprocket chain [MECH ENG] A continuous chain which meshes with the teeth of a sprocket and thus can transmit mechanical power from one sprocket to another.
sprocket hole [ENG] One of a series of perforations at the edge of a motion picture film, paper tape, or roll of continuous stationery, which are engaged by the teeth of a sprocket wheel to drive the material through some device.
sprocket pulse [COMPUT SCI] **1.** A pulse generated by a magnetized spot which accompanies every character recorded on magnetic tape; this pulse is used during read operations to regulate the timing of the read circuits, and also to provide a count on the number of characters read from the tape. **2.** A pulse generated by the sprocket or driving hole in paper tape which serves as the timing pulse for reading or punching the paper tape.
sprocket wheel [DES ENG] A wheel with teeth or cogs, used for a chain drive or to engage the blocks on a cable.
spruce [BOT] An evergreen tree belonging to the genus *Picea* characterized by single, four-sided needles borne on small peglike projections, pendulous cones, and resinous wood.
spruce oil [MATER] A combustible, colorless to yellow essential oil, soluble in fixed and mineral oils; derived from spruce needles and branches; the main components are bornyl acetate, cadinene, and pinene; used in flavors and veterinary liniments, and as an odorant for soaps and cosmetics. Also known as hemlock oil.
spruce sulfite extract [MATER] A paper-manufacture by-product from the sulfite-pulping process; used as a foundry core binder and road binder, and in tanning.
sprue [ENG] **1.** A feed opening or vertical channel through which molten material, such as metal or plastic, is poured in an injection or transfer mold. **2.** A slug of material that solidifies in the channel. [MED] A syndrome characterized by impaired absorption of food, water, and minerals by the small intestine; symptoms are the result of nutritional deficiencies.
sprue bushing [ENG] A steel insert in an injection mold which contains the sprue hole and has a seat for the injection cylinder nozzle.
sprue gate [ENG] A passageway for the flow of molten resin from the nozzle to the mold cavity.
sprue puller [ENG] A pin with a Z-shaped slot to pull the sprue out of the sprue bushing in an injection mold.
sprung axle [MECH ENG] A supporting member for carrying the rear wheels of an automobile.
sprung weight [MECH ENG] The weight of a vehicle which is carried by the springs, including the frame, radiator, engine, clutch, transmission, body, load, and so forth.
SPST *See* single-pole single-throw.
spud [DES ENG] **1.** A diamond-point drill bit. **2.** An offset type of fishing tool used to clear a space around tools stuck in a borehole. **3.** Any of various spade- or chisel-shaped tools or mechanical devices. **4.** *See* grouser. [MIN ENG] A nail, resembling a horseshoe nail, with a hole in the head, driven into mine timbering or into a wooden plug inserted in the rock to mark a surveying station. [NAV ARCH] A foot piece to provide support for the legs of the A frame of a floating dipper dredge.
spudded-in [MIN ENG] A borehole that has been started and has reached bedrock or in which the standpipe has been set.
Spumellina [INV ZOO] The equivalent name for Peripylina.
spun glass [MATER] Blown glass made of fine threads of glass.
spun rayon [TEXT] A yarn or fabric spun from rayon staple.
spun silk [TEXT] A yarn made from short lengths of inferior filaments such as silk broken by moths as they emerged from their cocoons.
spun yarn [TEXT] A textile yarn spun and twisted from staple-length fiber, either natural or synthetic.
spur [BOT] **1.** A hollow process at the base of a petal or sepal. **2.** A short fruit-bearing tree branch. **3.** A short projecting root. [GEOL] A ridge or rise projecting from a larger elevational feature. [HYD] *See* ram. [MATH] *See* trace. [PHYS] A cluster of ionized molecules near the path of an energetic charged particle, consisting of the molecule ionized directly by the charged particle, and secondary ionizations produced by electrons released in the primary ionization; it usually forms a side track from the path of the particle. [ZOO] A stiff, sharp outgrowth, as on the legs of certain birds and insects.
spur blight [PL PATH] A fungus disease of raspberries and blackberries caused by *Didymella applanata* which kills the fruit spurs and causes dark spotting of the cane.
spur dike *See* groin.
spur gear [DES ENG] A toothed wheel with radial teeth parallel to the axis.
spurious disk [OPTICS] The nearly round image of perceptible diameter of a star as seen through a telescope, due to diffraction of light in the telescope.
spurious emission *See* spurious radiation.
spurious modulation [ELECTR] Undesired modulation occurring in an oscillator, such as frequency modulation caused by mechanical vibration.
spurious radiation [ELECTROMAG] Any emission from a radio transmitter at frequencies outside its frequency band. Also known as spurious emission.
spurious response [ELECTR] **1.** Response of a radio receiver to a frequency different from that to which the receiver is tuned. **2.** In electronic warfare, the undesirable signal images in the intercept receiver resulting from the mixing of the intercepted signal with harmonics of the local oscillators in the receiver.
spur pile *See* batter pile.
spurrite [MINERAL] $Ca_5(SiO_4)_2(CO_3)$ A light-gray mineral occurring in granular masses.
spurt tone [COMMUN] Short audio-frequency tone used for signaling or dialing selection.
Sputnik program [AERO ENG] A series of Soviet earth-orbiting satellites; Sputnik I, launched on October 4, 1957, was the first artificial satellite.
sputtering [ELECTR] Also known as cathode sputtering. **1.**

SQUALL LINE

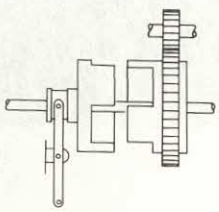


Map showing successive locations of squall line moving eastward through unstable northern portion of tongue of moist air in warm sector of a cyclone. Solid arrows show general flow in low levels; broken arrows, axes of strongest wind at about 1 kilometer (lower jet) aboveground and at 10–12 kilometers (upper jet stream).

SQUAMOUS EPITHELIUM

Cellular arrangement in squamous epithelial tissue.

SQUARE-JAW CLUTCH



Square-jaw positive clutch.

SQUASH

Two varieties of squash (*Cucurbita pepo*). (*a*) Summer Crookneck. (*b*) Summer Bergen.

The ejection of atoms or groups of atoms from the surface of the cathode of a vacuum tube as the result of heavy-ion impact. **2.** The use of this process to deposit a thin layer of metal on a glass, plastic, metal, or other surface in vacuum.

sputter-ion pump *See* getter-ion pump.

sputum [PHYSIO] Material discharged from the surface of the respiratory passages, mouth, or throat; may contain saliva, mucus, pus, microorganisms, blood, or inhaled particulate matter in any combination.

sp vol *See* specific volume.

sq *See* square.

squadron [ORD] **1.** An organization consisting of two or more divisions of ships, or two or more divisions (U.S. Navy) or flights of aircraft; it is normally, but not necessarily, composed of ships or aircraft of the same type. **2.** The basic administrative aviation unit of the U.S. Army, Navy, Marine Corps, and Air Force.

squalene [BIOCHEM] $C_{30}H_{50}$ A liquid triterpene which is found in large quantities in shark liver oil, and which appears to play a role in the biosynthesis of sterols and polycyclic terpenes; used as a bactericide and as an intermediate in the synthesis of pharmaceuticals. Also known as spinacene.

Squalidae [VERT ZOO] The spiny dogfishes, a family of squaloid elasmobranchs recognized by their well-developed fin spines.

squall [METEOROL] A strong wind with sudden onset and more gradual decline, lasting for several minutes; in the United States observational practice, a squall is reported only if a wind speed of 16 knots or higher (8.23 meters per second) is sustained for at least 2 minutes.

squall cloud [METEOROL] A small eddy cloud sometimes formed below the leading edge of a thunderstorm cloud, between the upward and downward currents.

squall line [METEOROL] A line of thunderstorms near whose advancing edge squalls occur along an extensive front; the region of thunderstorms is typically 20 to 50 kilometers wide and a few hundred to 2000 kilometers long.

Squamata [VERT ZOO] An order of reptiles, composed of the lizards and snakes, distinguished by a highly modified skull that has only a single temporal opening, or none, by the lack of shells or secondary palates, and by possession of paired penes on the males.

squamodisk [INV ZOO] In monogenetic trematodes, a disk bearing concentric circles of spines, scales, or ridges, and located on the opisthaptor.

squamosal bone [ANAT] The part of the temporal bone in man corresponding with the squamosal bone in lower vertebrates. [VERT ZOO] A membrane bone lying external and dorsal to the auditory capsule of many vertebrate skulls.

squamous [BIOL] Covered with or composed of scales.

squamous-cell carcinoma [MED] A carcinoma composed principally of anaplastic, squamous epithelial cells. Also known as epidermoid carcinoma.

squamous epithelium [HISTOL] A single-layered epithelium consisting of thin, flat cells.

squamulose [BIOL] Covered with or composed of minute scales.

square [MATH] **1.** The square of a number r is the number r^2, that is, r times r. **2.** The plane figure with four equal sides and four interior right angles. [MECH] Denotes a unit of area; if x is a unit of length, a square x is the area of a square whose sides have a length of 1x; for example, a square meter, or a meter squared, is the area of a square whose sides have a length of 1 meter. Abbreviated sq.

square degree [MATH] A unit of a solid angle equal to $(\pi/180)^2$ steradian, or approximately 3.04617×10^{-4} steradian.

square dome [ARCH] A spherical dome with a square base.

square-edged orifice [ENG] An orifice plate with straight-through edges for the hole through which fluid flows; used to measure fluid flow in fluid conduits by means of differential pressure drop across the orifice.

square engine [MECH ENG] An engine in which the stroke is equal to the cylinder bore.

square-foot unit of absorption *See* sabin.

square grade [MATH] A unit of solid angle equal to $(\pi/200)^2$ steradian, or approximately 2.46740×10^{-4} steradian.

square groove weld [MET] A groove weld in which the joint edges are square.

square-head bolt [DES ENG] A cylindrical threaded fastener with a square head.

square-jaw clutch [MECH ENG] A type of positive clutch consisting of two or more jaws of square section which mesh together when they are aligned.

square key [DES ENG] A machine key of square, usually uniform, but sometimes tapered, cross section.

square-law demodulator *See* square-law detector.

square-law detector [ELECTR] A demodulator whose output voltage is proportional to the square of the amplitude-modulated input voltage. Also known as square-law demodulator.

square-loop ferrite [ELECTROMAG] A ferrite that has an approximately rectangular hysteresis loop.

square matrix [MATH] A matrix with the same number of rows and columns.

square mesh [DES ENG] A wire-cloth textile mesh count that is the same in both directions.

squareness ratio [ELECTROMAG] **1.** The magnetic induction at zero magnetizing force divided by the maximum magnetic induction, in a symmetric cyclic magnetization of a material. **2.** The magnetic induction when the magnetizing force has changed half-way from zero toward its negative limiting value divided by the maximum magnetic induction in a symmetric cyclic magnetization of a material.

square-nose bit *See* flat-face bit.

square root [MATH] A square root of a real or complex number s is a number t for which $t^2 = s$.

square-root law [STAT] The standard deviation of the ratio of the number of successes to number of trials is inversely proportional to the square root of the number of trials.

square search [NAV] Search by a series of course lines such as to produce an expanding square pattern relative to either a fixed point or a moving point. Also known as expanding square search.

square-serif type [GRAPHICS] A contemporary type face; the serifs do not have any curvature and appear boxlike.

square set [MIN ENG] A set of timbers composed of a cap, girt, and post which meet so as to form a solid 90° angle; they are so framed at the intersection as to form a compression joint, and join with three other similar sets.

square-set block caving [MIN ENG] Block caving in which the ore is extracted through drifts supported by square sets.

square-set stopes [MIN ENG] The use of square-set timbering to support the ground as ore is extracted.

square thread [DES ENG] A screw thread having a square cross section; the width of the thread is equal to the pitch or distance between threads.

square wave [ELEC] An oscillation the amplitude of which shows periodic discontinuities between two values, remaining constant between jumps.

square-wave amplifier [ELECTR] Resistance-coupled amplifier, the circuit constants of which are to amplify a square wave with the minimum amount of distortion.

square-wave generator [ELECTR] A signal generator that generates a square-wave output voltage.

square-wave response [ELECTR] The response of a circuit or device when a square wave is applied to the input.

square wheel [DES ENG] A wheel with a flat spot on its rim.

squaring circuit [ELECTR] **1.** A circuit that reshapes a sine or other wave into a square wave. **2.** A circuit that contains nonlinear elements proportional to the square of the input voltage.

squaring shear [MECH ENG] A machine tool consisting of one fixed cutting blade and another mounted on a reciprocating crosshead; used for cutting sheet metal or plate.

squarrose [BOT] Having stiff divergent bracts, or other processes.

squarrulose [BOT] Mildly squarrose.

squash [BOT] Either of two plants of the genus *Cucurbita*, order Violales, cultivated for its fruit; some types are known as pumpkins.

Squatinidae [VERT ZOO] A group of squaloid elasmobranchs of uncertain affinity characterized by a greatly extended rostrum with enlarged denticles along the margins; maximum length is under 4 feet (1.2 meters).

squatting [NAV ARCH] The lowering of the stern of a ship when it is traveling at high speed.

squealing [ELECTR] A condition in which a radio receiver produces a high-pitched note or squeal along with the desired radio program, due to interference between stations or to oscillation in some receiver circuit.

squeegee [DES ENG] A device consisting of a handle with a blade of rubber or leather set transversely at one end and used for spreading, pushing, or wiping liquids off or across a surface.
squeezable waveguide [ELECTROMAG] A waveguide whose dimensions can be altered periodically; used in rapid scanning.
squeeze [ENG] **1.** To inject a grout into a borehole under high pressure. **2.** The plastic movement of a soft rock in the walls of a borehole or mine working that reduced the diameter of the opening. [MIN ENG] **1.** The settling, without breaking, of the roof over a considerable area of working. Also known as creep; nip; pinch. **2.** The gradual upheaval of the floor of a mine due to the weight of the overlying strata. **3.** The sections in coal seams that have become constricted by the squeezing in of the overlying or underlying rock. [PHYS] Increasing external pressure upon the ears and sinuses in diving.
squeeze roll [MECH ENG] A roller designed to exert pressure on material passing between it and a similar roller.
squeeze section [ELECTROMAG] Length of waveguide constructed so that alteration of the critical dimension is possible with a corresponding alteration in the electrical length.
squeeze time [MET] In resistance welding, the time between the initial application of the current and of the pressure.
squegger *See* blocking oscillator.
squegging [ELECTR] Condition of self-blocking in an electron-tube-oscillator circuit.
squegging oscillator *See* blocking oscillator.
squelch [ELECTR] To automatically quiet a receiver by reducing its gain in response to a specified characteristic of the input.
squelch circuit *See* noise suppressor.
squib [ENG] A small tube filled with fine-grained black powder; upon the lighting and burning of the ignition match, the squib assumes a rocket effect and darts back into the hole to ignite the powder charge. [ORD] A small explosive device, similar in appearance to a detonator, but loaded with low explosive, so that its output is primarily heat (flash); usually electrically initiated, and provided to initiate action of pyrotechnic devices and rocket propellants.
squid [INV ZOO] Any of a number of marine cephalopod mollusks characterized by a reduced internal shell, ten tentacles, an ink sac, and chromatophores.
SQUID *See* superconducting quantum interference device.
Squillidae [INV ZOO] The single family of the eumalacostracan order Stomatopoda, the mantis shrimp.
squint [ELECTROMAG] **1.** The angle between the two major lobe axes in a radar lobe-switching antenna. **2.** The angular difference between the axis of radar antenna radiation and a selected geometric axis, such as the axis of the reflector. **3.** The angle between the full-right and full-left positions of the beam of a conical-scan radar antenna. [MED] *See* strabismus.
squirrel [VERT ZOO] Any of over 200 species of arboreal rodents of the families Sciuridae and Anomaluridae having a bushy tail and long, strong hind limbs.
squirrel-cage motor [ELEC] An induction motor in which the secondary circuit consists of a squirrel-cage winding arranged in slots in the iron core.
squirrel-cage rotor *See* squirrel-cage winding.
squirrel-cage winding [ELEC] A permanently short-circuited winding, usually uninsulated, around the periphery of the rotor and joined by continuous end rings. Also known as squirrel-cage rotor.
squirt can [ENG] An oil can with a flexible bottom and a tapered spout; pressure applied to the bottom forces oil out the spout.
squirt gun [ENG] A device with a bulb and nozzle; when the bulb is pressed, liquid squirts from the nozzle.
squitter [ELECTR] Random firing, intentional or otherwise, of the transponder transmitter in the absence of interrogation.
sr *See* steradian.
Sr *See* strontium.
SRAM *See* short-range attack missile.
SRA-size [ENG] One of a series of sizes to which untrimmed paper is manufactured; for reels of paper the standard sizes are 450, 640, 900, and 1280 millimeters; for sheets of paper the sizes are SRA0, 900 × 1280 mm; SRA1, 640 × 900 mm; and SRA2, 450 × 640 mm; SRA sizes correspond to A sizes when trimmed.
SR cylinder oil [MATER] A viscous, unfiltered lubrication oil, generally made from reduced petroleum crudes that have had the lighter lubricant fractions removed by direct steam heating; used to lubricate steam engine cylinders and valves. Also known as steam-refined cylinder oil.
SRS *See* Sonobuoy Reference System.
SS *See* stainless steel.
SSB *See* single-sideband.
SS Cygni stars *See* U Geminorum stars.
SSD *See* steady-state distribution.
SSI *See* small-scale integration.
ss loran *See* sky-wave-synchronized loran.
SSM *See* surface-to-surface missile.
SSP *See* static spontaneous potential.
SSR *See* solid-state relay.
SST *See* supersonic transport.
S star [ASTRON] A spectral classification of stars, comprising red stars with surface temperature of about 2200 K; prominent in the spectra is zirconium oxide.
s-state [QUANT MECH] A single-particle state whose orbital angular momentum quantum number is zero.
SSTV *See* slow-scan television.
SSU *See* Saybolt Seconds Universal.
St *See* stoke.
stab [ENG] In a drilling operation, to insert the threaded end of a pipe joint into the collar of the joint already placed in the hole and to rotate it slowly to engage the threads before screwing up.
stab culture [MICROBIO] A culture of anaerobic bacteria made by piercing a solid agar medium in a test tube with an inoculating needle covered with the bacterial inoculum.
stabilator [AERO ENG] A one-piece horizontal tail that is swept back and movable; movement is controlled by motion of the pilot's control stick; usually used in supersonic aircraft.
stability [CHEM] The property of a chemical compound which is not readily decomposed and does not react with other compounds. [CONT SYS] The property of a system for which any bounded input signal results in a bounded output signal. [ENG] The property of a body, as an aircraft, rocket, or ship, to maintain its attitude or to resist displacement, and, if displaced, to develop forces and moments tending to restore the original condition. [FL MECH] The resistance to overturning or mixing in the water column, resulting from the presence of a positive (increasing downward) density gradient. [GEOL] **1.** The resistance of a structure, spoil heap, or clay bank to sliding, overturning, or collapsing. **2.** Chemical durability, resistance to weathering. [MATER] Of a fuel, the capability to retain its characteristics in an adverse environment, for example, extreme temperature. [MECH] *See* dynamic stability. [PHYS] **1.** The property of a system which does not undergo any change without the application of an external agency. **2.** The property of a system in which any departure from an equilibrium state gives rise to forces or influences which tend to return the system to equilibrium. Also known as static stability. [PL PHYS] The property of a plasma which maintains its shape against externally applied forces (usually pressure of magnetic fields) and whose constituents can pass through confining fields only by diffusion of individual particles.
stability augmentation system [AERO ENG] Automatic control devices which supplement a pilot's manipulation of the aircraft controls and are used to modify inherent aircraft handling qualities. Abbreviated SAS. Also known as stability augmentors.
stability augmentors *See* stability augmentation system.
stability chart [METEOROL] A synoptic chart that shows the distribution of a stability index.
stability constant [CHEM] Refers to the equilibrium reaction of a metal cation and a ligand to form a chelating mononuclear complex; the absolute-stability constant is expressed by the product of the concentration of products divided by the product of the concentrations of the reactants; the apparent-stability constant (also known as the conditional- or effective-stability constant) allows for the nonideality of the system because of the combination of the ligand with other complexing agents present in the solution.
stability criterion [CONT SYS] A condition which is necessary and sufficient for a system to be stable, such as the Nyquist criterion, or the condition that poles of the system's overall transmittance lie in the left half of the complex-frequency plane.
stability exchange principle [CONT SYS] In a linear system, which is either dynamically stable or unstable depending

SQUID

Dorsal view of a squid *(Loligo)*, a cephalopod mollusk having worldwide distribution.

on the value of a parameter, the complex frequency varies with the parameter in such a way that its real and imaginary parts pass through zero simultaneously; the principle is often violated.

stability factor [ELECTR] A measure of a transistor amplifier's bias stability, equal to the rate of change of collector current with respect to reverse saturation current.

stability index [METEOROL] An indication of the local static stability of a layer of air.

stability matrix *See* stiffness matrix.

stability of a system [MATH] Stability theory of systems of differential equations deals with those solution functions possessing some particular property which still maintain the property after a perturbation.

stability test [ENG] Accelerated test to determine the probable suitability of an explosive material for long-term storage.

stabilivolt [ELECTR] Gas tube that maintains a constant voltage drop across its terminals, essentially independent of current, over a relatively wide range.

stabilization [CHEM ENG] A petroleum-refinery process for separating light gases from petroleum or gasoline, thus leaving a stable (less volatile) liquid so that it can be handled or stored with less change in composition. [CONT SYS] *See* compensation. [ELECTR] Feedback introduced into vacuum tube or transistor amplifier stages to reduce distortion by making the amplification substantially independent of electrode voltages and tube constants. [ELECTROMAG] Treatment of a magnetic material to improve the stability of its magnetic properties. [ENG] Maintenance of a desired orientation independent of the roll and pitch of a ship or aircraft.

stabilize [TEXT] To treat a fabric to prevent it from shrinking and stretching.

stabilized feedback *See* negative feedback.

stabilized flight [AERO ENG] Maintenance of desired orientation in flight.

stabilized gasoline [MATER] Gasoline from which the "wild" or low-boiling (high vapor pressure, volatile) hydrocarbons have been removed by stabilization.

stabilized platform *See* stable platform.

stabilized winding [ELEC] Auxiliary winding used particularly in star-connected transformers to stabilize the neutral point of the fundamental frequency voltages, to protect the transformer and the system from excessive third-harmonic voltages; and to prevent telephone interference caused by third-harmonic currents and voltages in the lines and earth. Also known as tertiary winding.

stabilizer [AERO ENG] Any airfoil or any combination of airfoils considered as a single unit, the primary function of which is to give stability to an aircraft or missile. [CHEM ENG] The fractionation column in a petroleum refinery used to stabilize (remove fractions from) hydrocarbon mixtures. [ENG] **1.** A hardened, splined bushing, sometimes freely rotating, slightly larger than the outer diameter of a core barrel and mounted directly above the core barrel back head. Also known as ferrule; fluted coupling. **2.** A tool located near the bit in the drilling assembly to modify the deviation angle in a well by controlling the location of the contact point between the hole and the drill collars. [MATER] **1.** Any powdered or liquid additive used as an agent in soil stabilization. **2.** An ingredient used in the formulation of some compounded plastics to maintain the physical and chemical properties at their initial values throughout the processing and service life of the material, for example, heat and RV stabilizers. [NAV ARCH] Any of the submerged fins used on ships to prevent rolling.

stabilizing magnetic field [PL PHYS] A magnetic field which is added to a device confining a plasma in order to increase the plasma's stability.

stabilizing treatment [MET] Any of various treatments intended to promote dimensional stability of a metal part or stabilize the structure of an alloy.

stabistor [ELECTR] A diode component having closely controlled conductance, controlled storage charge, and low leakage, as required for clippers, clamping circuits, bias regulators, and other logic circuits that require tight voltage-level tolerances.

stable [PHYS] Not subject to any change without the application of an external agency, such as radiation; said of a molecule, atom, nucleus, or elementary particle.

stable-base film [MATER] A particular type of film having high stability in regard to shrinkage and stretching.

stable element [ENG] Any instrument or device, such as a gyroscope, used to stabilize a radar antenna, turret, or other piece of equipment mounted on an aircraft or ship.

stable equilibrium [SCI TECH] Equilibrium in which any departure from the equilibrium state gives rise to forces or influences which tend to return the system to equilibrium.

stable factor *See* factor VII.

stable homeomorphism conjecture [MATH] For dimension n, the assertion that each orientation-preserving homeomorphism of the real n space, R^n, into itself can be expressed as a composition of homeomorphisms, each of which is the identity on some nonempty open set in R^n.

stable isobar [NUC PHYS] One of two or more stable nuclides which have the same mass number but differ in atomic number.

stable isotope [NUC PHYS] An isotope which does not spontaneously undergo radioactive decay.

stable local oscillator *See* stalo.

stable nucleus [NUC PHYS] A nucleus which does not spontaneously undergo radioactive decay.

stable orbit *See* equilibrium orbit.

stable platform [AERO ENG] A gimbal-mounted platform, usually containing gyros and accelerometers, the purpose of which is to maintain a desired orientation in inertial space independent of craft motion. Also known as stabilized platform.

stable strobe [ELECTR] Series of strobes which behaves as if caused by a single jammer.

stable vertical [ENG] Vertical alignment of any device or instrument maintained during motion of the mount.

stack [BUILD] The portion of a chimney rising above the roof. [CHEM ENG] In gas works, a row of benches containing retorts. [COMPUT SCI] A portion of a computer memory used to temporarily hold information, organized as a linear list for which all insertions and deletions, and usually all accesses, are made at one end of the list. [ELECTR] *See* pileup. [ENG] **1.** To stand and rack drill rods in a drill tripod or derrick. **2.** Any structure or part thereof that contains a flue or flues for the discharge of gases. **3.** One or more filter cartridges mounted on a single column. **4.** Tall, vertical conduit (such as smokestack, flue) for venting of combustion or evaporation products or gaseous process wastes. **5.** The exhaust pipe of an internal combustion engine. [GEOL] An erosional, coastal landform that is a steep-sided, pillarlike rocky island or mass that has been detached by wave action from a shore made up of cliffs; applies particularly to a stack that is columnar in structure and has horizontal stratifications. Also known as marine stack; rank. [MET] The cone-shaped section of a blast furnace or cupola above the hearth and melting zone and extending to the throat. [NAV] To assign different altitudes by radio to aircraft awaiting their turns to land at an airport.

stack automaton [COMPUT SCI] A variation of a pushdown automaton in which the read-only head of the input tape is allowed to move both ways, and the read-write head on the pushdown storage is allowed to scan the entire pushdown list in a read-only mode.

stack cutting [MET] Cutting a stack of metal plates with a single cut using a stream of oxygen.

stacked antennas [ELECTROMAG] Two or more identical antennas arranged above each other on a vertical supporting structure and connected in phase to increase the gain.

stacked array [ELECTROMAG] An array in which the antenna elements are stacked one above the other and connected in phase to increase the gain.

stacked-beam radar [ENG] Three-dimensional radar system that derives elevation by emitting narrow beams stacked vertically to cover a vertical segment, azimuth information from horizontal scanning of the beam, and range information from echo-return time.

stacked-dipole antenna [ELECTROMAG] Antenna in which directivity is increased by providing a number of identical dipole elements, excited either directly or parasitically; the resultant radiation pattern depends on the number of dipole elements used, the spacing and phase difference between the elements, and the relative magnitudes of the currents.

stacked-job processing [COMPUT SCI] A technique of automatic job-to-job transition, with little or no operator intervention.

stacked loops [ELECTROMAG] Two or more loop antennas arranged above each other on a vertical supporting structure and

connected in phase to increase the gain. Also known as vertically stacked loops.

stack effect [MECH ENG] The pressure difference between the confined hot gas in a chimney or stack and the cool outside air surrounding the outlet.

stacker [COMPUT SCI] That part (or parts) of a punched-card handling device which arranges the processed cards into an orderly stack and holds them until they are removed by the operator. [MECH ENG] A machine for lifting merchandise on a platform or fork and arranging it in tiers; operated by hand, or electric or hydraulic mechanisms.

stacker-reclaimer [MECH ENG] Equipment which transports and builds up material stockpiles, and recovers and transports material to processing plants.

stack gas [ENG] Gas passed through a chimney.

stacking [AERO ENG] The holding pattern of aircraft awaiting their turn to approach and land at an airport. [ELECTROMAG] The placing of antennas one above the other, connecting them in phase to increase the gain.

stacking fault [CRYSTAL] A defect in a face-centered cubic or hexagonal close-packed crystal in which there is a change from the regular sequence of positions of atomic planes.

stack model [COMPUT SCI] A model for describing the runtime execution of programs written in block-structured languages, consisting of a program component, which remains unchanged throughout the execution of the program; a control component, consisting of an instruction pointer and an environment pointer; and a stack of records containing all the data the program operates on.

stack operation [COMPUT SCI] A computer system in which flags, return address, and all temporary addresses are saved in the core in sequential order for any interrupted routine so that a new routine (including the interrupted routine) may be called in.

stack pointer [COMPUT SCI] A register which contains the last address of a stack of addresses.

stack pollutants [ENG] Smokestack emissions subject to Environmental Protection Agency standards regulations, including sulfur oxides, particulates, nitrogen oxides, hydrocarbons, carbon monoxide, and photochemical oxidants.

stack welding [MET] Simultaneous spot welding of stacked plates.

stactometer *See* stalagmometer.

STADAN *See* Space Tracking and Data Acquisition Network.

stade [GEOL] A substage of a glacial stage marked by a secondary advance of glaciers.

Stader's splint [MED] A metal bar with pins affixed at right angles; the pins are driven into the fragments of a fracture, and the bar maintains the alignment.

stadia [ENG] A surveying instrument consisting of a telescope with special horizontal parallel lines or wires, used in connection with a vertical graduated rod.

stadia hairs [ENG] Two horizontal lines in the reticule of a theodolite arranged symmetrically above and below the line of sight. Also known as stadia wires.

stadial moraine *See* recessional moraine.

stadia rod [ENG] A graduated rod used with a stadia to measure the distance from the observation point to the rod by observation of the length of rod subtended by the distance between the stadia hairs.

stadia tables [ENG] Mathematical tables from which may be found, without computation, the horizontal and vertical components of a reading made with a transit and stadia rod.

stadia wires *See* stadia hairs.

stadimeter [ENG] An instrument for determining the distance to an object, but its height must be known; the angle, subtended by the object's bottom and top as measured at the observer's position, is proportional to the object's height; the instrument is graduated directly in distance.

staff bead [BUILD] **1.** A bead between a wooden frame and adjacent masonry. **2.** A molded or beaded angle of wood or metal set into the corner of plaster walls.

Staffellidae [PALEON] An extinct family of marine protozoans (superfamily Fusulinacea) that persisted during the Pennsylvanian and Early Permian.

staff gage [ENG] A graduated scale placed in a position so that the stage of a stream may be read directly therefrom; a type of river gage.

Staffordian [GEOL] A European stage of geologic time forming the middle Upper Carboniferous, above Yorkian and below Radstockian, equivalent to part of the upper Westphalian.

stage [AERO ENG] A self-propelled separable element of a rocket vehicle or spacecraft. [ELECTR] A circuit containing a single section of an electron tube or equivalent device or two or more similar sections connected in parallel, push-pull, or push-push; it includes all parts connected between the control-grid input terminal of the device and the input terminal of the next adjacent stage. [GEOL] **1.** A developmental phase of an erosion cycle in which landscape features have distinctive characteristic forms. **2.** A phase in the historical development of a geologic feature. **3.** A major subdivision of a glacial epoch. **4.** A time-stratigraphic unit ranking below series and above substage. [HYD] The elevation of the water surface in a stream as measured by a river gage with reference to some arbitrarily selected zero datum. [MIN ENG] **1.** A certain length of underground roadway worked by one horse. **2.** A narrow thin dike, especially one where the material of which the dike is composed is soft. **3.** A platform on which mine cars stand.

stage acidizing [PETRO ENG] An oil-reservoir acid treatment (acidizing) in which the formation is treated with two or more separate stages of acid, instead of a single large treatment.

staged crew [AERO ENG] An aircrew specifically positioned at an intermediate airfield to take over aircraft operating on an air route, thus relieving a complementary crew of flying fatigue and speeding up the traffic rate of the aircraft concerned.

stage gain [ELECTR] The ratio of the output power of an amplifier stage to the input power, usually expressed in decibels.

stage loader *See* feeder conveyor.

stage separation [PETRO ENG] A system for gas-oil separation of well fluids by a series of stages instead of a single operation.

stage theory [PHYSIO] A theory of color vision which proposes that there are three or more types of cone receptors whose responses are conducted to higher visual centers, and that interactions occur at some stage along the conducting paths so that strong activity in one type of response inhibits that of other response paths. Also known as zone theory.

stagger [COMMUN] Periodic error in the position of the recorded spot along a recorded facsimile line.

staggered blastholes [MIN ENG] Two rows of holes staggered to a triangular pattern to distribute the burden when shot-firing in thick coal seams.

staggered-intermittent fillet welding [MET] Making a line of intermittent fillet welds on each side of a joint in a manner such that the increments on one side are not opposite to those on the other side.

staggered-line drive [PETRO ENG] In the placement and drilling of water-injection wells for water flood recovery of oil, the staggered (versus in-line) areal arrangement of the injection wells.

staggered tuning [ELECTR] Alignment of successive tuned circuits to slightly different frequencies in order to widen the overall amplitude-frequency response curve.

staggering [COMMUN] Offsetting of two channels of different carrier systems from exact side-band frequency coincidence to avoid mutual interference.

staggering advantage [COMMUN] Effective reduction, in decibels, of interference between carrier channels, due to staggering.

staggers [VET MED] Any of various diseases of livestock, sheep, and horses manifested by lack of coordination in movement and a staggering gait.

stagger-tooth cutter [MECH ENG] Side-milling cutter with successive teeth having alternating helix angles.

stagger-tuned amplifier [ELECTR] An amplifier that uses staggered tuning to give a wide bandwidth.

stagger-tuned filter [ELECTR] A filter consisting of a cascade of amplifier stages with tuned coupling networks whose resonant frequencies and bandwidths may be easily adjusted to achieve an overall transmission function of desired shape (maximally flat or equal ripple).

staghead *See* witches'-broom disease.

staging [AERO ENG] The process or operation during the flight of a rocket vehicle whereby a full stage or half stage is disengaged from the remaining body and made free to decelerate or be propelled along its own flightpath. [COMPUT SCI] Moving blocks of data from one storage device to another. [GRAPHICS] *See* stopping out.

staging area [ORD] A general locality, containing accommodations for troops, established for the concentration of troop

STAFFELLIDAE

A representative of the fusulinacean family Staffellidae.

STALACTITE

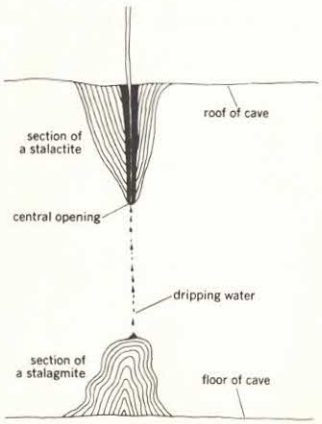


Diagram of stalactite and stalagmite formation. Deposits of calcium carbonate are made along the central opening of the stalactite by water dripping from the crack in the limestone of the roof of the cave. Water dripping to the floor from the stalactite deposits calcium carbonate to form a stalagmite. *(After E. B. Branson et al., Introduction to Geology, McGraw-Hill, 3d ed., 1952)*

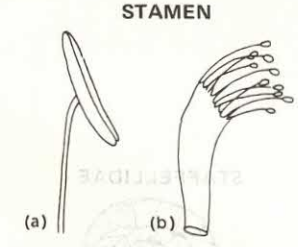
STAMEN



Two types of stamens: *(a)* with versatile anther; *(b)* monodelphous, with filaments united into one set.

units and transient personnel between movements over the lines of communication.

staging base [ORD] **1.** An advanced naval base for the anchoring, fueling, and refitting of transports and cargo ships, and for replenishing mobile service squadrons. **2.** A landing and takeoff area with minimum servicing, supply, and shelter provided for the temporary occupancy of military aircraft during the course of movement from one location to another.

stagnant glacier [HYD] A glacier which has ceased to move.

stagnant water [HYD] Motionless water, not flowing in a stream or current.

stagnation [HYD] **1.** The condition of a body of water unstirred by a current or wave. **2.** The condition of a glacier that has stopped flowing.

stagnation point [FL MECH] A point in a field of flow about a body where the fluid particles have zero velocity with respect to the body.

stagnation pressure *See* dynamic pressure.

stagnation temperature *See* adiabatic recovery temperature.

stagnum [HYD] A pool of water with no outlet.

stain [MATER] **1.** A nonprotective coloring matter used on wood surfaces; imparts color without obscuring the wood grains. **2.** Any colored, organic compound used to stain tissues, cells, cell components, cell contents, or other biological substrates for microscopic examination.

stained glass [ENG] Glass colored by any of several means and assembled to produce a varicolored mosaic or representation.

stainierite *See* heterogenite.

stainless alloy [MET] Any of a large and complex group of corrosion-resistant iron-chromium alloys (containing 10% or more chromium), sometimes containing other elements, such as nickel, silicon, molybdenum, tungsten, and niobium. Commonly known as stainless steel (SS).

stainless-clad steel [MET] Steel clad on one or two sides with a stainless steel to provide a surface that is corrosion-resistant and attractive.

stainless iron *See* ferritic stainless steel.

stainless steel *See* stainless alloy.

stair [CIV ENG] A series of steps between levels or from floor to floor in a building.

stairway [CIV ENG] One or more flights of stairs connected by landings.

stake [ELEC] An iron peg used as a power electrode to transfer current into the ground in electrical prospecting. [ENG] **1.** To fasten back or prop open with a piece of chain or otherwise the valves or clacks of a water barrel in order that the water may run back into the sump when necessary. **2.** A pointed piece of wood driven into the ground to mark a boundary, survey station, or elevation.

staking [ENG] Joining two parts together by fitting a projection on one part against a mating feature in the other part and then causing plastic flow at the joint.

staking out [ENG] Driving stakes into the earth to indicate the foundation location of a structure to be built.

stalactite [GEOL] A conical or roughly cylindrical speleothem formed by dripping water and hanging from the roof of a cave; usually composed of calcium carbonate.

stalacto-stalagmite [GEOL] A columnar deposit formed by the union of a stalactite with its complementary stalagmite.

stalagmite [GEOL] A conical speleothem formed upward from the floor of a cave by the action of dripping water; usually composed of calcium carbonate.

stalagmometer [ENG] An instrument for measuring the size of drops suspended from a capillary tube, used in the drop-weight method. Also known as stactometer.

stalked barnacle [INV ZOO] The common name for crustaceans composing the suborder Lepadomorpha.

stall [AERO ENG] **1.** The action or behavior of an airplane (or one of its airfoils) when by the separation of the airflow, as in the case of insufficient airspeed or of an excessive angle of attack, the airplane or airfoil tends to drop; the condition existing during this behavior. **2.** A flight performance in which an airplane is made to lose flying speed and to drop by pointing the nose steeply upward. **3.** An act or instance of stalling.

stall flutter [AERO ENG] A type of dynamic instability that takes place when the separation of flow around an airfoil occurs during the whole or part of each cycle of a flutter motion.

stalling angle *See* angle of stall.

stalling angle of attack *See* critical angle of attack.

stalling Mach number [AERO ENG] The Mach number of an aircraft when the coefficient of lift of the aerodynamic surfaces is the maximum obtainable for the pressure altitude, true airspeed, and angle of attack under which the craft is operated.

stallion [VERT ZOO] **1.** A mature male equine mammal. **2.** A male horse not castrated.

stall warning indicator [AERO ENG] A device that determines the critical angle of attack for a given aircraft; usually operates from vane sensors, airflow sensors, tabs on leading edges of wings, and computing devices such as accelerometers or airspeed indicators.

stalo [ELECTR] A highly stable local radio-frequency oscillator used for heterodyning signals to produce an intermediate frequency in radar moving-target indicators; only echoes that have changed slightly in frequency due to reflection from a moving target produce an output signal. Derived from stable local oscillator.

stalogometer [ENG] A device for measuring surface tension; a drop is suspended from a tube of known radius, and the radius of the drop is measured at the instant the drop detaches itself from the tube.

stamen [BOT] The male reproductive structure of a flower, consisting of an anther and a filament.

Stamey test [MED] A test of differential urinary excretion designed to detect unilateral renovascular disease.

staminode [BOT] A stamen with no functional anther.

stamp battery [MIN ENG] A machine for crushing very strong ores or rocks; consists essentially of a crushing member (gravity stamp) which is dropped on a die, the ore being crushed in water between the shoe and the die.

stamp copper [MIN ENG] A copper-bearing rock that is stamped and washed before it is smelted.

stamper [ENG ACOUS] A negative, generally made of metal by electroforming, used for molding phonograph records.

stamp head [MIN ENG] A heavy and nearly cylindrical cast-iron head fixed on the lower end of the stamp rod, shank, or lifter to give weight in stamping the ore.

Stampian *See* Rupelian.

stamping [ELECTR] A transformer lamination that has been cut out of a strip or sheet of metal by a punch press. [MECH ENG] Almost any press operation including blanking, shearing, hot or cold forming, drawing, bending, and coining. [MIN ENG] Reducing to the desired fineness in a stamp mill; the grain is usually not so fine as that produced by grinding in pans.

stamping mill [MIN ENG] A machine in which ore is finely crushed by descending pestles (stamps), usually operated by hydraulic power. Also known as crushing mill.

stamukha [OCEANOGR] An individual piece of stranded ice.

stanchion [NAV ARCH] An upright metal post on a ship.

stand [ECOL] A group of plants, distinguishable from adjacent vegetation, which is generally uniform in species composition, age, and condition. [FOR] The amount of standing timber per unit area; usually expressed in terms of volume. [OCEANOGR] The interval at high or low water when there is no appreciable change in the height of the tide. Also known as tidal stand.

stand-alone fuel [MATER] A fuel that is burned directly rather than being blended with another fuel.

stand-alone machine [COMPUT SCI] A machine capable of functioning independently of a master computer, either part of the time or all of the time.

standard [PHYS] An accepted reference sample used for establishing a unit for the measurement of a physical quantity.

standard advanced base units [ORD] Personnel and materiel organized to function as advanced base units, including the functional components which are employed in the stops of naval advanced bases.

standard air munitions package [ORD] A package of air-to-ground conventional munitions required for the 30-day support of a specific type of aircraft; designed to be air transportable in three equal increments.

standard antenna [ELECTROMAG] An open single-wire antenna (including the lead-in wire) having an effective height of 4 meters.

standard arm [ORD] A passive homing air-to-surface anti-radiation missile designed as a follow-on to the Shrike.

standard artillery atmosphere [METEOROL] A set of values describing atmospheric conditions on which ballistic com-

putations are based, namely: no wind, a surface temperature of 15°C, a surface pressure of 1000 millibars, a surface relative humidity of 78%, and a lapse rate which yields a prescribed density-altitude relation.

standard artillery zone [METEOROL] A vertical subdivision of the standard artillery atmosphere; it may be considered a layer of air of prescribed thickness and altitude.

standard atmosphere [METEOROL] A hypothetical vertical distribution of atmospheric temperature, pressure, and density which is taken to be representative of the atmosphere for purposes of pressure altimeter calibrations, aircraft performance calculations, aircraft and missile design, and ballistic tables; the air is assumed to obey the perfect gas law and hydrostatic equation, which, taken together, relate temperature, pressure, and density variations in the vertical; it is further assumed that the air contains no water vapor, and that the acceleration of gravity does not change with height. [PHYS] *See* atmosphere.

standard ballistic conditions [MECH] A set of ballistic conditions arbitrarily assumed as standard for the computation of firing tables.

standard blocked F-format data set *See* FBS data set.

standard broadcast band *See* broadcast band.

standard broadcast channel [COMMUN] Band of frequencies occupied by the carrier and two side bands of a broadcast signal, with the carrier frequency at the center.

standard broadcasting [COMMUN] Broadcasting using amplitude modulation in the band of frequencies from 535 to 1605 kilohertz; carrier frequencies are placed 10 kilohertz apart.

standard calomel electrode [PHYS CHEM] A mercury-mercurous chloride electrode used as a reference (standard) measurement in polarographic determinations.

standard candle *See* international candle.

standard capacitor [ELEC] A capacitor constructed in such a manner that its capacitance value is not likely to vary with temperature and is known to a high degree of accuracy. Also known as capacitance standard.

standard cell [ELEC] A primary cell whose voltage is accurately known and remains sufficiently constant for instrument calibration purposes; the Weston standard cell has a voltage of 1.018636 volts at 20°C.

standard compass [NAV] A compass designated as the standard for a vessel; it is located in a favorable position, that is, a position with a minimum magnetic aberration, and is accurately calibrated.

standard conditions [PHYS] **1.** A temperature of 0°C and a pressure of 1 atmosphere (760 torr). Also known as normal temperature and pressure (NTP); standard temperature and pressure (STP). **2.** According to the American Gas Association, a temperature of 60°F (15 5/9°C) and a pressure of 762 millimeters (30 inches) of mercury. **3.** According to the Compressed Gas Institute, a temperature of 20°C (68°F) and a pressure of 1 atmosphere. [SOLID STATE] The allotropic form in which a substance most commonly occurs.

standard coordinates [ASTRON] A coordinate system used to locate stars on a photographic plate, in which the coordinates are the differences in right ascension and declination between the position of each star and the assumed position of the plate center.

standard depth-pressure recorder [PETRO ENG] A device for the measurement of pressures at the bottom of a well bore (that is, bottom-hole pressure); a spring-restrained piston moves a recording stylus on a pressure-sealed chart.

standard deviation [STAT] The positive square root of the expected value of the square of the difference between a random variable and its mean.

standard electrode potential [PHYS CHEM] The reversible or equilibrium potential of an electrode in an environment where reactants and products are at unit activity.

standard elemental time [IND ENG] A standard time for individual work elements.

standard error [STAT] A measure of the variability any statistical constant would be expected to show in taking repeated random samples of a given size from the same universe of observations.

standard evaporator *See* short-tube vertical evaporator.

standard fit [DES ENG] A fit whose allowance and tolerance are standardized.

standard form [COMPUT SCI] The form of a floating point number whose mantissa lies within a standard specified range of values.

standard free energy increase [THERMO] The increase in Gibbs free energy in a chemical reaction, when both the reactants and the products of the reaction are in their standard states.

standard-frequency signal [COMMUN] One of the highly accurate signals broadcast by government radio stations and used for testing and calibrating radio equipment all over the world; in the United States signals are broadcast by the National Bureau of Standards' radio stations WWV, WWVH, WWVB, and WWVL.

standard gage [CIV ENG] A railroad gage measuring 4 feet 8½ inches (1.4351 meters). [DES ENG] A highly accurate gage used only as a standard for working gages.

standard gold [MET] A gold alloy containing 10% copper; at one time used for legal coinage in the United States.

standard gravity [MECH] A value of the acceleration of gravity equal to 9.80665 meters per second per second.

standard heat of formation [THERMO] The heat needed to produce one mole of a compound from its elements in their standard state.

standard hole [DES ENG] A hole with zero allowance plus a specified tolerance; fit allowance is provided for by the shaft in the hole.

standard hour [IND ENG] The quantity of output required of an operator to meet an hourly production quota. Also known as allowed hour.

standard hour plan [IND ENG] A wage incentive plan in which standard work times are expressed as standard hours and the worker is paid for standard hours instead of the actual work hours.

standard illuminants [OPTICS] Three standard sources of light, designated A, B, and C, used in specifying the light used when colors are matched; A is light from a filament at a color temperature of 2575°C, and B and C, representing noon sunlight and normal daylight respectively, are obtained by modifying A with rigorously specified filters.

standard inductor [ELECTROMAG] An inductor (coil) having high stability of inductance value, with little variation of inductance with current or frequency and with a low temperature coefficient; it may have an air core or an iron core; used as a primary standard in laboratories and as a precise working standard for impedance measurements.

standard interface [COMPUT SCI] **1.** A joining place of two systems or subsystems that has a previously agreed-upon form, so that two systems may be readily connected together. **2.** In particular, a system of uniform circuits and input/output channels connecting the central processing unit of a computer with various units of peripheral equipment.

standardization [DES ENG] The adoption of generally accepted uniform procedures, dimensions, materials, or parts that directly affect the design of a product or a facility. [ENG] The process of establishing by common agreement engineering criteria, terms, principles, practices, materials, items, processes, and equipment parts and components.

standardize [COMPUT SCI] To replace any given floating point representation of a number with its representation in standard form; that is, to adjust the exponent and fixed-point part so that the new fixed-point part lies within a prescribed standard range.

standardized product [DES ENG] A product that conforms to specifications resulting from the same technical requirements.

standardized test statistic [STAT] A test statistic which has been reduced to standardized units.

standardized units [STAT] A random variable Z has been reduced to standardized units when it has zero expected value and standard deviation 1; this is accomplished by dividing the difference of Z and the expected value of Z by the standard deviation of Z.

standard leak [ENG] Tracer gas allowed to enter a leak detector at a controlled rate in order to facilitate calibration and adjustment of the detector.

standard lens [OPTICS] Usually the lens provided with a camera as standard equipment; in still cameras, the standard lens is one whose focal length is about equal to the length of the diagonal of the negative area normally provided by the camera; the normal field of view of a standard lens is about 53°.

standard load [DES ENG] A load which has been preplanned

as to dimensions, weight, and balance, and designated by a number or some classification.

standard loran *See* loran A.

standard meridian [GEOD] The meridian used for reckoning standard time; throughout most of the world the standard meridians are those whose longitudes are exactly divisible by 15°. [MAP] A meridian of a map projection along which the scale is as stated.

standard mineral [MINERAL] A mineral that, on the basis of chemical analyses, is theoretically capable of being present in a rock. Also known as normative mineral.

standard noise temperature [ELECTR] The standard reference temperature for noise measurements, equal to 290 K.

standard noon [ASTRON] Twelve o'clock standard time, or the instant the mean sun is over the upper branch of the standard meridian.

standard output [IND ENG] The reciprocal of standard time.

standard parallel [MAP] A parallel on a map or chart along which the scale is as stated for that map or chart. [GEOD] The parallel or parallels of latitude used as control lines in the computation of a map projection.

standard performance [IND ENG] The performance of an individual or of a group on meeting standard output.

standard pitch [ACOUS] A musical pitch based on 440 hertz for tone A; with this standard, the frequency of middle C is 261 hertz.

standard plane [CRYSTAL] The crystal plane whose Miller indices are (111), that is, whose intercepts on the crystal axes are proportional to the corresponding sides of a unit cell.

standard potential [PHYS CHEM] The potential of an electrode composed of a substance in its standard state, in equilibrium with ions in their standard states compared to a hydrogen electrode.

standard preemphasis [COMMUN] Preemphasis in frequency-modulation and television aural broadcasting whose level lies between upper and lower limits specified by the Federal Communications Commission.

standard pressure [METEOROL] The arbitrarily selected atmospheric pressure of 1000 millibars to which adiabatic processes are referred for definitions of potential temperature, equivalent potential temperature, and so on. [PHYS] A pressure of 1 atmosphere (101,325 newtons per square meter), to which measurements of quantities dependent on pressure, such as the volume of a gas, are often referred. Also known as normal pressure.

standard project flood [HYD] The volume of streamflow expected to result from the most severe combination of meteorological and hydrologic conditions which are reasonably characteristic of the geographic region involved, excluding extremely rare combinations.

standard propagation [ELECTROMAG] Propagation of radio waves over a smooth spherical earth of specified dielectric constant and conductivity, under conditions of standard refraction in the atmosphere.

standard rate turn [AERO ENG] A turn in an aircraft in which heading changes at the rate of 3° per second.

standard refraction [ELECTROMAG] Refraction which would occur in an idealized atmosphere in which the index of refraction decreases uniformly with height at a rate of 39×10^{-6} per kilometer; standard refraction may be included in ground wave calculations by use of an effective earth radius of 8.5×10^{6} meters, or $\frac{4}{3}$ the geometrical radius of the earth.

standard seawater *See* normal water.

standard shaft [DES ENG] A shaft with zero allowance minus a specified tolerance.

standard star [ASTRON] A star whose position or other data are precisely known so that it is used as a reference to calculate positions of other celestial bodies, or of objects on earth.

standard state [PHYS] The stable and pure form of a substance at standard pressure and ordinary temperature.

standard station *See* reference station.

standard subroutine [COMPUT SCI] In computers, a subroutine which is applicable to a class of problems.

standard target [ELECTROMAG] A radar target which will produce an echo of known power under various conditions; smooth metal spheres or corner reflectors of known dimensions are such targets, and they may be used to calibrate a radar or check its performance.

standard temperature and pressure *See* standard conditions.

standard terminal arrival route [NAV] A route established for the purpose of reducing pilot and controller workload and reducing communications congestion in air-traffic control arrival operations. Abbreviated STAR.

standard test-tone power [ELECTR] One milliwatt (0 decibels above one milliwatt) at 1000 hertz.

standard time [ASTRON] The mean solar time, based on the transit of the sun over a specified meridian, called the time meridian, and adopted for use over an area that is called a time zone. [IND ENG] A unit time value for completion of a work task as determined by the proper application of the appropriate work-measurement techniques. Also known as direct labor standard; output standard; production standard; time standard.

standard ton *See* ton.

standard trajectory [MECH] Path through the air that it is calculated a projectile will follow under given conditions of weather, position, and material, including the particular fuse, projectile, and propelling charge that are used; firing tables are based on standard trajectories.

standard visibility *See* meteorological range.

standard visual range *See* meteorological range.

standard volume [PHYS] The volume of 1 mole of a gas at a pressure of 1 atmosphere and a temperature of 0°C. Also known as normal volume.

standard waveguide [ELECTROMAG] Any one of several rectangular waveguides whose dimensions have been specified by various agencies and which are in general use.

standard wiggler [NUCLEO] A wiggler that has a relatively high magnetic field and produces radiation with a smooth spectral distribution similar to that of normal synchrotron radiation.

standard wire rope [DES ENG] Wire rope made of six wire strands laid around a sisal core. Also known as hemp-core cable.

standby battery [ELEC] A storage battery held in reserve as an emergency power source in event of failure of regular power facilities at a radio station or other location.

standby computer [COMPUT SCI] A computer in a duplex system that takes over when the need arises.

standby power source [ELEC] An uninterruptible power system in which the load normally operated from the commercial power line is switched to the output of a dc-to-ac static inverter powered by a battery in the event of a power failure.

standby register [COMPUT SCI] In computers, a register into which information can be copied to be available in case the original information is lost or mutilated in processing.

standby replacement redundancy [COMPUT SCI] A form of redundancy in which there is a single active unit and a reserve of spare units, one of which replaces the active unit if it fails.

standby time [COMPUT SCI] **1.** The time during which two or more computers are tied together and available to answer inquiries or process intermittent actions on stored data. **2.** The elapsed time between inquiries when the equipment is operating on an inquiry application.

stand fire [FOR] A forest fire igniting in the trunks of trees.

standing cloud [METEOROL] Any stationary cloud maintaining its position with respect to a mountain peak or ridge.

standing crop [ECOL] The number of individuals or total biomass present in a community at one particular time.

standing ground [MIN ENG] Ground that will stand firm without timbering.

standing knee height [ANTHRO] The vertical distance taken from the top of the kneecap to the floor as the subject stands.

standing-on-nines carry [COMPUT SCI] In high-speed parallel addition of decimal numbers, an arrangement that causes carry digits to pass through one or more nine digits, while signaling that the skipped nines are to be reset to zero.

standing operating procedure [AERO ENG] A set of instructions covering those features of operations which lend themselves to a definite or standardized procedure without loss of effectiveness; the procedure is applicable unless prescribed otherwise in a particular case; thus, the flexibility necessary in special situations is retained.

standing rigging [NAV ARCH] Rigging that is permanently secured such as shrouds, stays, bob-stays, martingales, and mast pendants.

standing valve [PETRO ENG] A sucker-rod-pump (oil well) discharge valve that remains stationary during the pumping cycle, in contrast to a traveling valve.

standing wave [PHYS] A wave in which the ratio of an

instantaneous value at one point to that at any other point does not vary with time. Also known as stationary wave.

standing-wave detector [ELECTROMAG] An electric indicating instrument used for detecting a standing electromagnetic wave along a transmission line or in a waveguide and measuring the resulting standing-wave ratio; it can also be used to measure the wavelength, and hence the frequency, of the wave. Also known as standing-wave indicator; standing-wave meter; standing-wave-ratio meter.

standing-wave indicator *See* standing-wave detector.

standing-wave loss factor [ELECTROMAG] The ratio of the transmission loss in an unmatched waveguide to that in the same waveguide when matched.

standing-wave meter *See* standing-wave detector.

standing-wave method [ELECTROMAG] Any method of measuring the wavelength of electromagnetic waves that involves measuring the distance between successive nodes or antinodes of standing waves.

standing-wave producer [ELECTROMAG] A movable probe inserted in a slotted waveguide to produce a desired standing-wave pattern, generally for test purposes.

standing-wave ratio [PHYS] **1.** The ratio of the maximum amplitude to the minimum amplitude of corresponding components of a wave in a transmission line or waveguide. **2.** The reciprocal of this ratio.

standing-wave-ratio meter *See* standing-wave detector.

standing ways *See* ground ways.

stand method [FOR] The practice of successively cutting trees of different ages so that ultimately the trees in the stand are new growth of a uniform age.

standoff insulator [ELEC] An insulator used to support a conductor at a distance from the surface on which the insulator is mounted.

standoff target acquisition system [ORD] An airborne radar system designed to locate with extreme accuracy moving targets within enemy territory while ensuring maximum survivability. Abbreviated SOTAS.

standoff weapon [ORD] A weapon which may be launched at a distance sufficient to allow attacking personnel to evade defensive fire from the target area.

stand on [NAV] To proceed on the same course.

standpipe [ENG] A vertical tube filled with a material, for example, water, or in petroleum refinery catalytic cracking, a catalyst to serve as a seal between high- and low-pressure parts of the process equipment.

stanfieldite [MINERAL] $Ca_4(Mg,Fe,Mn)_5(PO_4)_6$ A phosphate mineral found only in meteorites.

Stanford achievement test [PSYCH] A group test employing a primary (grades 2 and 3) and an advanced (grades 4 through 9) examination to measure achievement at various grade levels.

stannane *See* tin hydride.

stannic acid *See* stannic oxide.

stannic anhydride *See* stannic oxide.

stannic bromide [INORG CHEM] $SnBr_4$ Water- and alcohol-soluble, white crystals that fume when exposed to air, and melt at 31°C; used in mineral separations. Also known as tin bromide; tin tetrabromide.

stannic chloride [INORG CHEM] $SnCl_4$ A colorless, fuming liquid; soluble in cold water, alcohol, carbon disulfide, and oil of turpentine; decomposed by hot water; boils at 114°C; used as a conductive coating and a sugar bleach, and in drugs, ceramics, soaps, and blueprinting. Also known as tin chloride; tin tetrachloride.

stannic chromate [INORG CHEM] $Sn(CrO_4)_2$ Toxic, brownish-yellow crystals, slightly soluble in water; used to decorate porcelain and china. Also known as tin chromate.

stannic iodide [INORG CHEM] SnI_4 Yellow-reddish crystals; insoluble in water, soluble in alcohol, ether, chloroform, carbon disulfide, and benzene; decomposed by water, melt at 144°C, sublime at 180°C. Also known as tin iodide; tin tetraiodide.

stannic oxide [INORG CHEM] SnO_2 A white powder; insoluble in water, soluble in concentrated sulfuric acid; melts at 1127°C; used in ceramic glazes and colors, special glasses, putty, and cosmetics, and as a catalyst. Also known as flowers of tin; stannic acid; stannic anhydride; tin dioxide; tin oxide; tin peroxide.

stannic sulfide [INORG CHEM] SnS_2 A yellow-brown powder; insoluble in water, soluble in alkaline sulfides; decomposes at red heat; used as a pigment and for imitation gilding. Also known as artificial gold; mosaic gold; tin bisulfide.

stannite [MINERAL] Cu_2FeSnS_4 A steel-gray or iron-black mineral crystallizing in the tetragonal system and occurring in granular masses; luster is metallic, hardness is 4 on Mohs scale, and specific gravity is 4.3–4.53. Also known as bell-metal ore; tin pyrites.

stannous bromide [INORG CHEM] $SnBr_2$ A yellow powder; soluble in water, alcohol, acetone, ether, and dilute hydrochloric acid; browns in air; melts at 215°C. Also known as tin bromide.

stannous chloride [INORG CHEM] $SnCl_2$ White crystals; soluble in water, alcohol, and alkalies; oxidized in air to the oxychloride; melt at 247°C; used as a chemical intermediate, reducing agent, and ink-stain remover, and for silvering mirrors. Also known as tin chloride; tin crystals; tin dichloride; tin salts.

stannous chromate [INORG CHEM] $SnCrO_4$ A brown powder; very slightly soluble in water; used to decorate porcelain. Also known as tin chromate.

stannous 2-ethylhexoate [ORG CHEM] $Sn(C_8H_{15}O_2)_2$ A light yellow liquid, soluble in benzene, toluene, and petroleum ether; used as a lubricant, a vulcanizing agent, and a stabilizer for transformer oil. Also known as stannous octoate; tin octoate.

stannous fluoride [INORG CHEM] SnF_2 A white, lustrous powder; slightly soluble in water; used to fluoridate toothpaste and as a medicine. Also known as tin difluoride; tin fluoride.

stannous octoate *See* stannous 2-ethylhexoate.

stannous oxalate [ORG CHEM] SnC_2O_4 A white, crystalline powder that decomposes at about 280°C; soluble in acids; used in textile dyeing and printing. Also known as tin oxalate.

stannous oxide [INORG CHEM] SnO An air-unstable, brown to black powder; insoluble in water, soluble in acids and strong bases; decomposes when heated; used as a reducing agent and chemical intermediate, and for glass plating. Also known as tin oxide; tin protoxide.

stannous sulfate [INORG CHEM] $SnSO_4$ Heavy light-colored crystals; decomposes rapidly in water, loses SO_2 at 360°C; used for dyeing and tin plating. Also known as tin sulfate.

stannous sulfide [INORG CHEM] SnS Dark crystals; insoluble in water, soluble (with decomposition) in concentrated hydrochloric acid; melts at 880°C; used as an analytical reagent and catalyst, and in bearing material. Also known as tin monosulfide; tin protosulfide; tin sulfide.

stannum [CHEM] The Latin name for tin, thus the symbol Sn for the element.

Stanton diagram [FL MECH] The plot of the airflow friction coefficient against the Reynolds number.

Stanton number [THERMO] A dimensionless number used in the study of forced convection, equal to the heat-transfer coefficient of a fluid divided by the product of the specific heat at constant pressure, the fluid density, and the fluid velocity. Symbolized N_{St}. Also known as Margoulis number (M).

stapedectomy [MED] Surgical reconstruction of the junction of the ossicular chain of the middle ear with the oval window of the inner ear, fixed in place by otosclerosis.

stapedius muscle [ANAT] The muscle which attaches to and controls the stapes in the inner ear.

stapes [ANAT] The stirrup-shaped middle-ear ossicle, articulating with the incus and the oval window. Also known as columella.

Staphylinidae [INV ZOO] The rove beetles, a very large family of coleopteran insects in the superfamily Staphylinoidea.

Staphylinoidea [INV ZOO] A superfamily of Coleoptera in the suborder Polyphaga.

staphylococcal pneumonia [MED] A severe form of pneumonia caused by *Staphylococcus aureus*.

Staphylococcus [MICROBIO] A genus of bacteria in the family Micrococcaceae; cells may occur singly or in pairs, but usually in irregular masses; metabolism is respiratory and fermentative; many strains are potential pathogens.

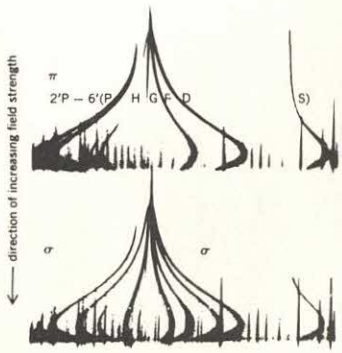
Staphylococcus aureus [MICROBIO] A common human pathogen that causes furunculosis, pyemia, osteomyelitis, suppuration of wounds, and food poisoning. Also known as *Micrococcus pyogenes*.

staphylococcus toxoid [IMMUNOL] Formaldehyde-detoxified toxins of *Staphylococcus aureus* whose antigenicity is maintained; used prophylactically and therapeutically in the

STAPHYLINIDAE

A representative member of the coleopteran superfamily Staphylinidae.

STARK EFFECT



An example of the linear Stark effect in the 4144- and 4169-angstrom lines of helium showing large symmetrical pattern. Electric field strengths range continuously from 0 to 85,000 volts per centimeter. Symbols π and σ refer respectively to light polarized parallel and perpendicular to the electric field.

treatment of various staphylococcic pyodermas and localized pyogenic processes.

staphylomycin [MICROBIO] An antibiotic composed of three active components produced by a strain of *Actinomyces* that inhibits growth of gram-positive microorganisms and acid-fast bacilli.

staphylotoxin [BIOCHEM] Any of the various toxins elaborated by strains of *Staphylococcus aureus*, including hemolysins, enterotoxins, and leukocidin.

staple [DES ENG] A U-shaped loop of wire with points at both ends; used as a fastener. [TEXT] The average fiber length to be used in spinning a yarn.

stapler [ENG] **1.** A device for inserting wire staples into paper or wood. **2.** A hammer for inserting staples.

star [ASTRON] A celestial body consisting of a large, self-luminous mass of hot gas held together by its own gravity; the sun is a typical star. [NUCLEO] A star-shaped group of tracks made by ionizing particles originating at a common point in a nuclear emulsion, cloud chamber, or bubble chamber; some stars are produced by successive disintegrations of an atom in a radioactive series, and others by nuclear reactions of the spallation type, such as those due to cosmic-ray particles. Also known as nuclear star.

STAR *See* ship-tended acoustic radar; standard terminal arrival route.

star atlas [ASTRON] A series of star maps for different times, for example, for each month; the maps are generally drawn to a small scale and in book form.

starboard [NAV ARCH] The side of a ship or airplane which is on one's right when one faces forward.

star catalog [ASTRON] A comprehensive tabulation of data concerning the stars listed; the data may include, for example, apparent positions, brightness, motions, parallaxes, and other properties of stars.

starch [BIOCHEM] Any one of a group of carbohydrates or polysaccharides, of the general composition $(C_6H_{10}O_5)_n$, occurring as organized or structural granules of varying size and markings in many plant cells; it hydrolyzes to several forms of dextrin and glucose; its chemical structure is not completely known, but the granules consist of concentric shells containing at least two fractions: an inner portion called amylose, and an outer portion called amylopectin.

star chain [NAV] A group of synchronized, transmitting, navigation stations having the master station located at the center of a roughly circular area and surrounded by three or more slave stations located at some distance from the master.

star chart *See* star map.

starch nitrate *See* nitrostarch.

star cloud [ASTRON] An aggregation of thousands or of millions of stars spread over hundreds or thousands of light-years.

star cluster [ASTRON] A group of stars held together by gravitational attraction; the two chief types are open clusters (composed of from 12 to hundreds of stars) and globular clusters (composed of thousands to hundreds of thousands of stars).

star color [ASTRON] The color of a star as a function of its radiation and related to its temperature; colors range from blue-white to deep red.

star-connected circuit [ELEC] Polyphase circuit in which all the current paths within the region that delimits the circuit extend from each of the points of entry of the phase conductors to a common conductor (which may be the neutral conductor).

star connection *See* star network.

star count [ASTRON] A count of stars on a photographic plate.

star cut [LAP] A gem cut characterized by a hexagonal table surrounded by six facets in the form of an equilateral triangle.

star day [ASTRON] The time period between two successive passages of a star across the meridian.

star-delta switching starter [ELEC] A type of motor starter, used with three-phase induction motors, that switches the stator windings from a star connection to a delta connection.

star density [ASTRON] The average number of stars in a unit volume of space.

star drift [ASTRON] A description of two star groups in the Milky Way traveling through each other in opposite directions; individual stars have movements that are relative to each other. Also known as star stream.

star drill [DES ENG] A tool with a star-shaped point, used for drilling in stone or masonry.

Starfighter [AERO ENG] A United States supersonic, single-engine, turbojet-powered, tactical and air superiority fighter; the tactical version employs cannons or nuclear weapons for attack against surface targets, and is capable of providing close support for ground forces; the interceptor version employs Sidewinders or cannons.

star finder [ASTRON] A device such as a star map or celestial globe to facilitate the identification of stars. Also known as a star identifier.

starfish [INV ZOO] The common name for echinoderms belonging to the subclass Asteroidea.

star-free expression [COMPUT SCI] An expression containing only Boolean operations and concatenation, used to define the language corresponding to a counter-free machine.

star globe *See* celestial globe.

star grain [MATER] A rocket propellant grain with a cavity of star-shaped cross section.

star group [ASTRON] A number of stars that move in the same general direction at the same time.

star identifier *See* star finder.

Stark effect [SPECT] The effect on spectrum lines of an electric field which is either externally applied or is an internal field caused by the presence of neighboring ions or atoms in a gas, liquid, or solid. Also known as electric field effect.

Stark-Einstein law *See* Einstein photochemical equivalence law.

Stark-Lunelund effect [ELECTROMAG] The polarization of light emitted from a beam of moving atoms in a region where there are no electric or magnetic fields.

Stark number *See* Stefan number.

star lamp [ELEC] A high-pressure xenon arc, used in a planetarium, which produces a tiny, intense point of light focused through thousands of individual lenses and pinholes, and projected to the planetarium's dome.

Starlifter [AERO ENG] A United States large cargo transport powered by four turbofan engines, capable of intercontinental range with heavy payloads and airdrops.

Starling's law of the heart [PHYSIO] The energy associated with cardiac contraction is proportional to the length of the myocardial fibers in diastole.

star map [ASTRON] A map indicating the relative apparent positions of the stars. Also known as star chart.

star model *See* stellar model.

star motions [ASTRON] For the Milky Way, this includes rotation within the galaxy, motion which is described with respect to an external frame of reference; superposed on this systematic rotation are the individual motions of a star; each star moves in a somewhat elliptical orbit, with respect to the local standard of rest, the standard moving in a circular orbit around the galactic center.

star names [ASTRON] Nomenclature for the identification of stars; hundreds of stars have proper names that are traditional, for example, Betelgeuse; this star may be also identified as α Orionis (Alpha Orionis), α for its being the brightest visual star in the constellation Orion.

star network [COMMUN] A communications network in which all communications between any two points must pass through a central node. [ELEC] A set of three or more branches with one terminal of each connected at a common node to give the form of a star. Also known as star connection; Y connection.

star place [ASTRON] The position of a star on the celestial sphere, usually measured by its right ascension and declination.

star ruby [MINERAL] An asteriated variety of ruby with normally six chatoyant rays.

star sapphire [MINERAL] A variety of sapphire exhibiting a six-pointed star resulting from the presence of microscopic crystals in various orientations within the gemstone.

star shell *See* illuminating projectile.

star stream *See* star drift.

start bit [COMPUT SCI] The first bit transmitted in asynchronous data transmission to unequivocally indicate the start of the word.

start dialing signal [COMMUN] Signal transmitted from the incoming end of a circuit, following the receipt of a seizing signal, to indicate that the necessary circuit conditions have been established for receiving the numerical routine information.

start element [COMMUN] The first element of a character in certain serial transmissions, used to permit synchronization.

star telescope [OPTICS] An accessory of the marine naviga-

tional sextant designed primarily for star observations; it has a large objective to give a greater field of view and increased illumination; it is an erect telescope, that is, the object viewed is seen erect as opposed to the inverting telescope in which the object viewed is inverted.

starter [ELEC] **1.** A device used to start an electric motor and to accelerate the motor to normal speed. **2.** *See* engine starter. [ELECTR] An auxiliary control electrode used in a gas tube to establish sufficient ionization to reduce the anode breakdown voltage. Also known as trigger electrode. [ENG] A drill used for making the upper part of a hole, the remainder of the hole being made with a drill of smaller gage, known as a follower. [MICROBIO] A culture of microorganisms, either pure or mixed, used to commence a process, for example, cheese manufacture.

star test [OPTICS] A procedure in which a telescope is directed at a bright star and the in-focus and out-of-focus images and diffraction patterns of the star are examined to detect aberrations and abnormalities in the optical system.

starting barrel [ENG] A short (12 to 24 inches or 30 to 60 centimeters) core barrel used to begin coring operations when the distance between the drill chuck and the bottom of the hole or to the rock surface in which a borehole is to be collared is too short to permit use of a full 5- or 10-foot-long (1.5- or 3.0-meter-long) core barrel.

starting box [ELEC] A device for providing extra resistance in the armature of a motor while it is being started.

starting friction *See* static friction.

starting mix [MATER] In pyrotechnic devices, an easily ignited mixture which transmits flame from an initiating device to a less readily ignitable composition.

starting motor *See* engine starter.

starting reactor [ELEC] A reactor that is used to limit the starting current of electric motors, and usually consists of an iron-core inductor connected in series with the machine stator winding.

starting resistance [MECH ENG] The force needed to produce an oil film on the journal bearings of a train when it is at a standstill.

starting sheet [MET] A thin sheet of metal used as the initial cathode in electrowinning or electrorefining.

starting taper [DES ENG] A slight end taper on a reamer to aid in starting.

startle response [PHYSIO] The complex, involuntary, usually spasmodic psychophysiological response movement of an organism to a sudden unexpected stimulus.

startover [COMPUT SCI] Program function that causes a computer that is not active to become active.

startover data transfer and processing program [COMPUT SCI] Program which controls the transfer of startover data from the active to the standby machine and their subsequent processing by the standby machine.

star tracker *See* astrotracker.

start-stop multivibrator *See* monostable multivibrator.

start-stop printing telegraph [COMMUN] Form of printing telegraph in which the signal-receiving mechanisms, normally at rest, are started in operation at the beginning and stopped at the end of each character transmitted over the channel.

start-stop system [COMMUN] A telegraph system in which each group of code elements corresponding to a character is preceded by a start signal that prepares the receiving mechanism to receive and register a character, and is followed by a stop signal that brings the receiving mechanism to rest in preparation for the reception of the next character.

start-to-leak pressure [MECH ENG] The amount of inlet pressure at which the first bubble occurs at the outlet of a safety relief valve with a resilient disk when the valve is subjected to an air test under a water seal.

start-up curve [IND ENG] A learning curve applied to a job for the purpose of adjusting work times that are longer than the standard because of the introduction of new jobs or new workers.

starved basin [GEOL] A sedimentary basin in which the rate of subsidence exceeds the rate of sedimentation.

starved joint [ENG] A glued joint containing insufficient or inadequate adhesive. Also known as hungry joint.

star wheel [COMPUT SCI] The sensing device of a card punch, which is held in contact with the card under spring tension and which, detecting a hole, closes a contact point.

stasis [MED] A cessation of the normal flow of blood or other body fluids.

stasis dermatitis [MED] Chronic inflammation of the skin of the legs, resulting from poor circulation.

stat [NUCLEO] A unit of radioactive disintegration rate equal to the disintegration rate of that quantity of radon that gives rise to a charge of 1 statcoulomb in 1 second when situated in air.

stat- [ELEC] A prefix indicating an electrical unit in the electrostatic centimeter-gram-second system of units; it is attached to the corresponding SI unit.

statA *See* statampere.

statampere [ELEC] The unit of electric current in the electrostatic centimeter-gram-second system of units, equal to a flow of charge of 1 statcoulomb per second; equal to approximately 3.3356×10^{-10} ampere. Abbreviated statA.

statC *See* statcoulomb.

statcoulomb [ELEC] The unit of charge in the electrostatic centimeter-gram-second system of units, equal to the charge which exerts a force of 1 dyne on an equal charge at a distance of 1 centimeter in a vacuum; equal to approximately 3.3356×10^{-10} coulomb. Abbreviated statC. Also known as franklin (Fr); unit charge.

state [CONT SYS] A minimum set of numbers which contain enough information about a system's history to enable its future behavior to be computed. [PHYS] The condition of a system which is specified as completely as possible by observations of a specified nature, for example, thermodynamic state, energy state. [QUANT MECH] The condition in which a system exists; the state may be pure and describable by a wave function or mixed and describable by a density matrix.

state equations [CONT SYS] Equations which express the state of a system and the output of a system at any time as a single valued function of the system's input at the same time and the state of the system at some fixed initial time.

state estimator *See* observer.

state feedback [CONT SYS] A class of feedback control laws in which the control inputs are explicit memoryless functions of the dynamical system state, that is, the control inputs at a given time t_a are determined by the values of the state variables at t_a and do not depend on the values of these variables at earlier times $t \geq t_a$.

state graph [COMPUT SCI] A directed graph whose nodes correspond to internal states of a sequential machine and whose edges correspond to transitions among these states.

statement [COMPUT SCI] An elementary specification of a computer action or process, complete and not divisible into smaller meaningful units; it is analogous to the simple sentence of a natural language.

statement editor [COMPUT SCI] A text editor in which the text is divided into superlines, that is, units greater than ordinary lines, resulting in easier editing and freedom from truncation problems.

state observer *See* observer.

state of matter [PHYS] One of three fundamental conditions of matter: the solid, liquid, and gaseous states.

state of strain [MECH] A complete description, including the six components of strain, of the deformation within a homogeneously deformed volume.

state of stress [MECH] A complete description, including the six components of stress, of a homogeneously stressed volume.

state of the sea [OCEANOGR] A description of the properties of the wind-generated waves on the surface of the sea.

state of the sky [METEOROL] The aspect of the sky in reference to the cloud cover; the state of the sky is fully described when the amounts, kinds, directions of movement, and heights of all clouds are given.

state parameter *See* thermodynamic function of state.

state space [CONT SYS] The set of all possible values of the state vector of a system.

state table [COMPUT SCI] A table that represents a sequential machine, in which the rows correspond to the internal states, the columns to the input combinations, and the entries to the next state.

state transition equation [CONT SYS] The equation satisfied by the $n \times n$ state transition matrix $\Phi(t,t_0)$: $\partial\Phi(t,t_0)/\partial t = A(t)\,\Phi(t,t_0)$, $\Phi(t_0,t_0) = I$; here I is the unit $n \times n$ matrix, and $A(t)$ is the $n \times n$ matrix which appears in the vector differential equation $dx(t)/dt = A(t)x(t)$ for the n-component state vector $x(t)$.

state transition matrix [CONT SYS] A matrix $\Phi(t,t_0)$ whose product with the state vector x at an initial time t_0 gives the state vector at a later time t; that is, $x(t) = \Phi(t,t_0)x(t_0)$.

state variable [CONT SYS] One of a minimum set of numbers which contain enough information about a system's history to enable computation of its future behavior. [THERMO] *See* thermodynamic function of state.

state vector [COMPUT SCI] *See* task descriptor. [CONT SYS] A column vector whose components are the state variables of a system. [QUANT MECH] A vector in Hilbert space which corresponds to the state of a quantum-mechanical system.

statF *See* statfarad.

statfarad [ELEC] Unit of capacitance in the electrostatic centimeter-gram-second system of units, equal to the capacitance of a capacitor having a charge of 1 statcoulomb, across the plates of which the charge is 1 statvolt; equal to approximately 1.1126×10^{-12} farad. Abbreviated statF. Also known as centimeter.

statH *See* stathenry.

stathenry [ELECTROMAG] The unit of inductance in the electrostatic centimeter-gram-second system of units, equal to the self-inductance of a circuit or the mutual inductance between two circuits if there is an induced electromotive force of 1 statvolt when the current is changing at a rate of 1 statampere per second; equal to approximately 8.9876×10^{11} henry. Abbreviated statH.

static [COMMUN] A hissing, crackling, or other sudden sharp sound that tends to interfere with the reception, utilization, or enjoyment of desired signals or sounds. [PHYS] Without motion or change.

static algorithm [COMPUT SCI] An algorithm whose operation is known in advance. Also known as deterministic algorithm.

static bed [CHEM ENG] Refers to a layer of solids in a process vessel (absorber, catalytic reactor, packed distillation column, or granular filter bed) in which the particles rest upon one another at essentially the settled bulk density of the solids phase; contrasted to moving-solids or fluidized-solids beds.

static breeze *See* convective discharge.

static characteristic [ELECTR] A relation between a pair of variables, such as electrode voltage and electrode current, with all other operating voltages for an electron tube, transistor, or other amplifying device maintained constant.

static charge [ELEC] An electric charge accumulated on an object.

static check [COMPUT SCI] Of a computer, one or more tests of computing elements, their interconnections, or both, performed under static conditions.

static contraction *See* isometric contraction.

static debugging routine [COMPUT SCI] A debugging routine which is used after the program being checked has been run and has stopped.

static discharger [ELEC] A rubber-covered cloth wick about 6 inches (15 centimeters) long, sometimes attached to the trailing edges of the surfaces of an aircraft to discharge static electricity in flight.

static dump [COMPUT SCI] An edited printout of the contents of main memory or of the auxiliary storage, performed in a fixed way; it is usually taken at the end of a program run either automatically or by operator intervention.

static electricity [ELEC] **1.** The study of the effects of macroscopic charges, including the transfer of a static charge from one object to another by actual contact or by means of a spark that bridges an air gap between the objects. **2.** *See* electrostatics.

static eliminator [ELECTR] Device intended to reduce the effect of atmospheric static interference in a radio receiver.

static equilibrium *See* equilibrium.

static error [STAT] Error independent of the time-varying nature of a variable.

static firing [AERO ENG] The firing of a rocket engine in a hold-down position to measure thrust and to accomplish other tests.

static fluid column [FL MECH] An unchanging height of fluid in a vertical pipe, well bore, process vessel, or tank.

static friction [MECH] **1.** The force that resists the initiation of sliding motion of one body over the other with which it is in contact. **2.** The force required to move one of the bodies when they are at rest. Also known as starting friction.

static gearing ratio [AERO ENG] The ratio of the control-surface deflection in degrees to angular displacement of the missile which caused the deflection of the control surface.

static gel buildup [FL MECH] A method used to infer the degree of thixotropy of a fluid by viscometric measurement of its gel strength.

static granitization [PETR] The formation of a granitic rock by a metasomatic process in the absence of compressive forces or strains.

static grizzly [MIN ENG] A grizzly in the form of a stationary bar screen which either allows suitable pieces of rock or ore to pass over and unwanted small sizes to drop through, or rejects oversize pieces while allowing suitable material to drop through.

static head [FL MECH] Pressure of a fluid due to the head of fluid above some reference point.

static induction transistor [ELECTR] A type of transistor capable of operating at high current and voltage, whose current-voltage characteristics do not saturate, and are similar in form to those of a vacuum triode. Abbreviated SIT.

static inverter [ELEC] A device that converts a dc voltage to a stable ac voltage for use in an uninterruptible power system.

staticize [COMPUT SCI] **1.** To capture transient data in stable form, thus converting fleeting events into examinable information. **2.** To extract an instruction from the main computer memory and store the various component parts of it in the appropriate registers, preparatory to interpreting and executing it.

static level [FL MECH] Elevation of the water level or a pressure surface at rest. [HYD] The height to which water will rise in an artesian well; the static level of a flowing well is above the ground surface.

static line [AERO ENG] A line attached to a parachute pack and to a strop or anchor cable in an aircraft so that when the load is dropped the parachute is deployed automatically.

static load [MECH] A nonvarying load; the basal pressure exerted by the weight of a mass at rest, such as the load imposed on a drill bit by the weight of the drill-stem equipment or the pressure exerted on the rocks around an underground opening by the weight of the superimposed rocks. Also known as dead load.

static machine [ELEC] A machine for generating electric charges, usually by electric induction, sometimes used to build up high voltages for research purposes.

static magnetism *See* magnetostatics.

static metamorphism [GEOL] Regional metamorphism caused by heat and solvents at high lithostatic pressures. Also known as load metamorphism.

static moment [MECH] **1.** A scalar quantity (such as area or mass) multiplied by the perpendicular distance from a point connected with the quantity (such as the centroid of the area or the center of mass) to a reference axis. **2.** The magnitude of some vector (such as force, momentum, or a directed line segment) multiplied by the length of a perpendicular dropped from the line of action of the vector to a reference point.

static oceanography [OCEANOGR] Branch of oceanography that deals with the physical and chemical nature of water in the ocean and with the shape and composition of the ocean bottom.

static pressure [ACOUS] The pressure that would exist at a point in a medium if no sound waves were present. [FL MECH] **1.** The normal component of stress, the force per unit area, exerted across a surface moving with a fluid, especially across a surface which lies in the direction of fluid flow. **2.** The average of the normal components of stress exerted across three mutually perpendicular surfaces moving with a fluid.

static pressure tap *See* pressure tap.

static-pressure tube [ENG] A smooth tube with a rounded nose that has radial holes in the portion behind the nose and is used to measure the static pressure within the flow of a fluid.

static random-access memory [COMPUT SCI] A read-write random-access memory whose storage cells are made up of four or six transistors forming flip-flop elements that indefinitely remain in a given state until the information is intentionally changed, or the power to the memory circuit is shut off.

static reaction [MECH] The force exerted on a body by other bodies which are keeping it in equilibrium.

static reflex [PHYSIO] Any one of a series of reflexes which are involved in the establishment of muscular tone for postural purpose.

static regulator [ELECTR] Transmission regulator in which

the adjusting mechanism is in self-equilibrium at any setting and requires control power to change the setting.

statics [MECH] The branch of mechanics which treats of force and force systems abstracted from matter, and of forces which act on bodies in equilibrium.

static seal *See* gasket.

static sensitivity [ELECTR] In phototubes, quotient of the direct anode current divided by the incident radiant flux of constant value.

static SP *See* static spontaneous potential.

static spontaneous potential [PETRO ENG] Theoretical maximum spontaneous potential current that can be measured in a down-hole, mud log in clean sand. Abbreviated SSP; static SP.

static stability [METEOROL] The stability of an atmosphere in hydrostatic equilibrium with respect to vertical displacements, usually considered by the parcel method. Also known as convectional stability; hydrostatic stability; vertical stability. [PHYS] *See* stability.

static storage [COMPUT SCI] Computer storage such that information is fixed in space and available at any time, as in flip-flop circuits, electrostatic memories, and coincident-current magnetic-core storage.

static subroutine [COMPUT SCI] In computers, a subroutine which involves no parameters other than the addresses of the operands.

static switching [ELEC] Switching of circuits by means of magnetic amplifiers, semiconductors, and other devices that have no moving parts.

static test [AERO ENG] In particular, a test of a rocket or other device in a stationary or hold-down position, either to verify structural design criteria, structural integrity, and the effects of limit loads, or to measure the thrust of a rocket engine. [ENG] A measurement taken under conditions where neither the stimulus nor the environmental conditions fluctuate.

static trees [GRAPHICS] A pattern created on film by undesirable emulsion exposures to static electricity.

static tube [ENG] A device used to measure the static (not kinetic or total) pressure in a stream of fluid; consists of a perforated, tapered tube that is placed parallel to the flow, and has a branch tube that is connected to a manometer.

static universe [ASTRON] A postulated universe that has a finite static volume and is closed.

static weapon [ORD] A weapon which is used in place.

static work [IND ENG] Manual work performed with no significant motion.

station [COMPUT SCI] One of a series of essentially similar positions or facilities occurring in a data-processing system. [COMMUN] *See* broadcast station. [ELEC] An assembly line or assembly machine location at which a wiring board or chassis is stopped for insertion of one or more parts. [ELECTR] A location at which radio, television, radar, or other electric equipment is installed. [ENG] Any predetermined point or area on the seas or oceans which is patrolled by naval vessels. [MIN ENG] **1.** An enlargement in a mining shaft or gallery on any level used for a landing at any desired place and also for receiving loaded mine cars that are to be sent to the surface. **2.** An opening into a level which heads out of the side of an inclined plane; the point at which a surveying instrument is planted or observations are made. [SCI TECH] A geographic location at which scientific observations and measurements are made.

stationary cone classifier [MECH ENG] In a pulverizer directly feeding a coal furnace, a device which returns oversize coal to the pulverizing zone.

stationary distribution [PHYS] A time-independent distribution of a scalar quantity.

stationary engine [MECH ENG] A permanently placed engine, as in a power house, factory, or mine.

stationary ergodic noise [ELECTR] A stationary noise for which the probability that the noise voltage lies within any given interval at any time is nearly equal to the fraction of time that the noise voltage lies within this interval if a sufficiently long observation interval is recorded.

stationary field [PHYS] Field which does not change during the time interval under consideration. Also known as constant field.

stationary front *See* quasi-stationary front.

stationary noise [ELECTR] A random noise for which the probability that the noise voltage lies within any given interval does not change with time.

stationary orbit [AERO ENG] A circular, equatorial orbit in which the satellite revolves about the primary body at the angular rate at which the primary body rotates on its axis; from the primary body, the satellite thus appears to be stationary over a point on the primary body; a stationary orbit must be synchronous, but the reverse need not be true.

stationary phase [MICROBIO] The period following termination of exponential growth in a bacterial culture when the number of viable microorganisms remains relatively constant for a time.

stationary point [ASTRON] A point at which a planet's apparent motion changes from direct to retrograde motion, or vice versa.

stationary population [ECOL] A population containing a basically even distribution of age groups.

stationary satellite [AERO ENG] A satellite in a stationary orbit.

stationary state *See* energy state.

stationary stochastic process [MATH] A stochastic process $x(t)$ is stationary if each of the joint probability distributions is unaffected by a change in the time parameter t.

stationary time principle *See* Fermat's principle.

stationary time series [STAT] A time series which as a stochastic process is unchanged by a uniform increment in the time parameter defining it.

stationary wave *See* standing wave.

station authentication [COMMUN] Security measure designed to establish the authenticity of a transmitting or receiving station.

station buoy [NAV] A buoy used to mark the approximate station (position) of an important buoy or lightship should it be carried away or temporarily removed. Also known as marker buoy; watch buoy.

station continuity chart [METEOROL] A chart or graph on which time is one coordinate, and one or more of the observed meteorological elements at that station is the other coordinate.

station elevation [METEOROL] The vertical distance above mean sea level that is adopted as the reference datum level for all current measurements of atmospheric pressure at the station.

station model [METEOROL] A specified pattern for entering, on a weather map, the meteorological symbols that represent the state of the weather at a particular observation station.

station pointer *See* three-arm protractor.

station pole [CIV ENG] One of various rods used in surveying to mark stations, to sight points and lines; or to measure elevation with respect to the transit.

station pressure [METEOROL] The atmospheric pressure computed for the level of the station elevation.

station stock level [ORD] Maximum quantity of supplies expressed in days of supply, permitted to be on hand or due in at any time at a military installation; this level is based on actual past issues and anticipated demands; it represents the requisitioning objective.

station time [AERO ENG] Time at which crews, passengers, and cargo are to be on board air transport and ready for the flight.

statistic [STAT] An estimate or piece of data, concerning some parameter, obtained from a sampling.

statistical analysis [STAT] The body of techniques used in statistical inference concerning a population.

statistical distribution *See* distribution of a random variable.

statistical forecast [METEOROL] A weather forecast based upon a systematic statistical examination of the past behavior of the atmosphere, as distinguished from a forecast based upon thermodynamic and hydrodynamic considerations.

statistical hypothesis [STAT] A statement about the way a random variable is distributed.

statistical independence [STAT] Two events are statistically independent if the probability of their occurring jointly equals the product of their respective probabilities.

statistical inference [STAT] The process of reaching conclusions concerning a population upon the basis of random samplings.

statistical map [MAP] A special type of map in which the variation in quantity of a factor such as rainfall, population, or crops in a geographic area is indicated; a dot map is one type.

statistical mechanics [PHYS] That branch of physics which endeavors to explain and predict the macroscopic properties and

which sensible heat is added to the steam after it has been evaporated from the liquid phase.

steam tracing [ENG] A steam-carrying heater (such as tubing or piping) next to or twisted around a process-fluid or instrument-air line; used to keep liquids from solidifying or condensing.

steam trap [MECH ENG] A device which drains and removes condensate automatically from steam lines.

steam-tube dryer [MECH ENG] Rotary dryer with steam-heated tubes running the full length of the cylinder and rotating with the dryer shell.

steam turbine [MECH ENG] A prime mover for the conversion of heat energy of steam into work on a revolving shaft, utilizing fluid acceleration principles in jet and vane machinery.

steam valve [ENG] A valve used to regulate the flow of steam.

steam washer [ENG] A device for removing contaminants, such as silica, from the steam produced in a boiler.

steapsin [BIOCHEM] An enzyme in pancreatic juice that catalyzes the hydrolysis of fats. Also known as pancreatic lipase.

stearamide [ORG CHEM] $CH_3(CH_2)_{16}CONH_2$ Colorless leaflets with a melting point of 109°C; used as a corrosion inhibitor in oil wells. Also known as octadecanamide.

stearate [ORG CHEM] $C_{17}H_{35}COOM$ A salt or ester of stearic acid where M is a monovalent radical, for example, sodium stearate, $C_{17}H_{35}COONa$.

stearic acid [ORG CHEM] $CH_3(CH_2)_{16}COOH$ Nature's most common fatty acid, derived from natural animal and vegetable fats; colorless, waxlike solid, insoluble in water, soluble in alcohol, ether, and chloroform; melts at 70°C; used as a lubricant and in pharmaceuticals, cosmetics, and food packaging. Also known as *n*-octadecanoic acid.

stearin [ORG CHEM] $C_3H_5(C_{18}H_{35}O_2)_3$ A colorless combustible powder; insoluble in water, soluble in alcohol, chloroform, and carbon disulfide; melts at 72°C; used in metal polishes, pastes, candies, candles, and soap, and to waterproof paper. Also known as glyceryl tristearate; tristearin.

stearyl alcohol [ORG CHEM] $CH_3(CH_2)_{16}CH_2OH$ Oily white, combustible flakes; insoluble in water, soluble in alcohol, acetone, and ether; melt at 59°C; used in lubricants, resins, perfumes, and cosmetics, and as a surface-active agent. Also known as 1-octadecanol; octadecyl alcohol.

steatite [PETR] A compact, massive, fine-ground rock composed principally of talc, but with much other material.

steatization [GEOL] Introduction of or replacement by talc or steatite.

Steatornithidae [VERT ZOO] A family of birds in the order Caprimulgiformes which contains a single, South American species, the oilbird or guacharo (*Steatornis caripensis*).

steatorrhea [MED] **1.** Fatty stool. **2.** Increased flow of sebum.

Steckel rolling [MET] Cold metal rolling in which the strip is pulled through idler rolls by front tension only; the direction is reversed until the desired thickness is attained.

S tectonite [PETR] A tectonite whose fabric is dominated by planar surfaces of formation or deformation, such as slate.

STED *See* solar turboelectric drive.

steel [MET] An iron base alloy, malleable under proper conditions, containing up to about 2% carbon.

steel bronze [MET] A hardened bronze consisting of 92% copper and 8% tin; used as a substitute for steel in guns.

steel-cable conveyor belt [DES ENG] A rubber conveyor belt in which the carcass is composed of a single plane of steel cables.

steel-case [ORD] In cartridge nomenclature, indicating that the cartridge case is made of steel.

steel-clad rope [DES ENG] A wire rope made from flat strips of steel wound helically around each of the six strands composing the rope.

steel converter [MET] A retort in which cast iron is converted to steel; an example is the Bessemer converter.

steel emery [MET] An abrasive material composed of chilled iron produced by forcing iron through a steam jet; used in tumbling barrels and for grinding stones.

steel engraving [GRAPHICS] Engraving on a steel plate, as used in printing.

Steelflex coupling [MECH ENG] A flexible coupling made with two grooved steel hubs keyed to their respective shafts and connected by a specially tempered alloy-steel member called the grid.

steel foil [MET] A very thin sheet of steel, the thickness of which is measured in thousandths of an inch.

steel jack [MIN ENG] A screw jack suitable in mechanical mining; used for legs or upright timbers. [MINERAL] *See* sphalerite.

steel-jacket [ORD] In small-arms ammunition nomenclature, indicating that the bullet has a steel shell and core.

steelmaking [MET] Any of various processes for making steel from pig iron.

steel sets [MIN ENG] Steel beam used in main entries of coal mines and in shafts of metal mines; I beams for caps and H beams for posts or wall plates.

steel tunnel support [MIN ENG] One of the tunnel support systems made of steel; five types are continuous rib; rib and post; rib and wall plate; rib, wall plate, and post; and full circle rib.

steel wool [MET] Fine steel threads matted into a mass.

steelyard [ENG] A weighing device with a counterbalanced arm supporting the load to be weighed on the short end.

steen [CIV ENG] To line an excavation such as a cellar or well with stone, cement, or similar material without the use of mortar.

Steenrod algebra [MATH] The cohomology groups of a topological space have additive operations on them, which can be added and multiplied so as to form the Steenrod algebra.

Steenrod squares [MATH] Operations which associate elements from different cohomology groups of a topological space and produce an element in another of the groups; these operations can be so added and multiplied as to produce the Steenrod algebra.

steepest descent method [MATH] Certain functions can be approximated for large values by an asymptotic formula derived from a Taylor series expansion about a saddle point. Also known as saddle point method.

steeple [ARCH] A tall, tapering structure atop a church tower.

steerable antenna [ELECTROMAG] A directional antenna whose major lobe can be readily shifted in direction.

steerage [NAV ARCH] The least desirable portions of a vessel used for accommodations for passengers who pay the lowest fare.

steerageway [NAV ARCH] The least speed (forward or reverse) to allow a vessel to be steered.

steering [METEOROL] Loosely used for any influence upon the direction of movement of an atmospheric disturbance exerted by another aspect of the state of the atmosphere; for example, a surface pressure system tends to be steered by isotherms, contour lines, or streamlines aloft, or by warm-sector isobars or the orientation of a warm front.

steering arm [MECH ENG] An arm that transmits turning motion from the steering wheel of an automotive vehicle to the drag link.

steering brake [MECH ENG] Means of turning, stopping, or holding a tracked vehicle by braking the tracks individually.

steering compass [NAV] A compass by which a craft is steered; it sometimes refers to a gyro repeater, which is used for the same purpose as the steering compass; the term steering repeater is preferable.

steering engine [NAV ARCH] A steam-, electric-, or hydraulic-power machine used for turning the rudder, and having its valves or operating gear actuated by leads from the pilot house.

steering gear [MECH ENG] The mechanism, including gear train and linkage, for the directional control of a vehicle or ship.

steering level [METEOROL] A hypothetical level, in the atmosphere, where the velocity of the basic flow bears a direct relationship to the velocity of movement of an atmospheric disturbance embedded in the flow.

steering repeater [NAV] A device which repeats at a distance the reading of the gyro compass; a craft is steered by reference to the device; sometimes called a steering compass.

steering wheel [MECH ENG] A hand-operated wheel for controlling the direction of the wheels of an automotive vehicle or of the rudder of a ship.

Stefan-Boltzmann constant [STAT MECH] The energy radiated by a blackbody per unit area per unit time divided by the fourth power of the body's temperature; equal to $(5.6696 \pm 0.0010) \times 10^{-8}$ (watts)(meter)$^{-2}$(degrees Kelvin)$^{-4}$.

Stefan-Boltzmann law [STAT MECH] The total energy radiated from a blackbody is proportional to the fourth power of the

temperature of the body. Also known as fourth-power law; Stefan's law of radiation.

Stefan number [THERMO] A dimensionless number used in the study of radiant heat transfer, equal to the Stefan-Boltzmann constant times the cube of the temperature times the thickness of a layer divided by the layer's thermal conductivity. Symbolized *St*. Also known as Stark number (*Sk*).

Stefan's formula [OCEANOGR] A formula for the growth of thickness h of an ice cover on the ocean at various freezing temperatures, expressed as

$$h \approx \sqrt{\left(\frac{2l}{\lambda_i \rho_i}\right)\psi}$$

where l is the coefficient of thermal conductivity, λ_i is the latent heat of fusion, ρ_i is the density of ice, and ψ is the cold sum (in degree days below 0°C).

Stefan's law of radiation *See* Stefan-Boltzmann law.

Steffen process [FOOD ENG] A process used in sugar factories to concentrate the dilute waste liquor from beet molasses and recover sugar for use in a fermentation process to make monosodium glutamate.

Steganopodes [VERT ZOO] Formerly, an order of birds that included the totipalmate swimming birds.

Stegodontinae [PALEON] An extinct subfamily of elephantoid proboscideans in the family Elephantidae.

Stegosauria [PALEON] A suborder of extinct reptiles of the order Ornithischia comprising the plated dinosaurs of the Jurassic which had tiny heads, great triangular plates arranged on the back in two alternating rows, and long spikes near the end of the tail.

steigerite [MINERAL] $4AlVO_4 \cdot 13H_2O$ A canary-yellow mineral composed of hydrous aluminum vanadate and occurring in masses.

Steiner's theorem *See* parallel axis theorem.

Steinheil lens [OPTICS] A type of magnifier lens in which a biconvex crown lens is cemented between a pair of flint lenses.

Steinheim man [PALEON] A prehistoric man represented by a skull, without mandible, found near Stuttgart, Germany; the browridges are massive, the face is relatively small, and the braincase is similar in shape to that of *Homo sapiens*.

steinkern [GEOL] **1.** Rock material formed from consolidated mud or sediment that filled a hollow organic structure, such as a fossil shell. **2.** The fossil formed after dissolution of the mold. Also known as endocast; internal cast.

Stein-Leventhal syndrome [MED] A complex of symptoms characterized by amenorrhea or abnormal uterine bleeding or both, enlarged polycystic ovaries, frequently hirsutism, and occasionally retarded breast development.

Steinmann pin [MED] A surgical nail inserted in distal portions of such bones as the femur or tibia for skeletal tractions.

Steinmetz coefficient [ELECTROMAG] The constant of proportionality in Steinmetz's law.

Steinmetz's law [ELECTROMAG] The energy converted into heat per unit volume per cycle during a cyclic change of magnetization is proportional to the maximum magnetic induction raised to the 1.6 power, the constant of proportionality depending only on the material.

stele [BOT] The part of a plant stem including all tissues and regions of plants from the cortex inward, including the pericycle, phloem, cambium, xylem, and pith.

Stelenchopidae [INV ZOO] A family of polychaete annelids belonging to the Myzostomaria, represented by a single species from Crozet Island in the Antarctic Ocean.

stellar [ASTRON] Relating to or consisting of stars.

stellar association [ASTRON] A loose grouping of stars which may have had a common origin.

stellar atmosphere [ASTRON] The envelope of gas and plasma surrounding a star; consists of about 90% hydrogen atoms and 9% helium atoms, by number of atoms.

stellarator [PL PHYS] A device for confining a high-temperature plasma, consisting of a tube, which closes in on itself in a figure-eight or race-track configuration, and external coils which generate magnetic fields whose lines of force run parallel to the walls of the tube and prevent the plasma from touching the walls.

stellar crystal *See* plane-dendritic crystal.

stellar evolution [ASTROPHYS] The changes in spectrum and luminosity that take place in the life of a star.

stellar flare [ASTRON] Ejection of material from a star in an eruption that may last from a few minutes to an hour or more.

stellar guidance [NAV] Guidance by means of celestial bodies, particularly the stars.

stellar inertial guidance [NAV] The guidance of a flight-borne vehicle by a combination of celestial and inertial devices and techniques.

stellar interferometer [OPTICS] An optical interferometer for measuring angular diameters of stars; it is attached to a telescope and measures interference rings at the telescope's focus.

stellar light [ASTRON] The part of the background illumination of the night sky that results from direct light from stars too faint to be visible to the unaided eye.

stellar lightning [GEOPHYS] Lightning consisting of several flashes seeming to radiate from a single point.

stellar luminosity [ASTRON] A star's brightness; it is measured either in ergs per second or in units of solar luminosity or in absolute magnitude.

stellar magnetic field [ASTROPHYS] A magnetic field, generally stronger than the earth's magnetic field, possessed by many stars.

stellar magnitude *See* magnitude.

stellar mass [ASTROPHYS] The mass of a star, usually expressed in terms of the sun's mass.

stellar model [ASTROPHYS] A mathematical characterization of the internal properties of a star. Also known as star model.

stellar nevus *See* spider nevus.

stellar parallax [ASTRON] The subtended angle at a star formed by the mean radius of the earth's orbit; it indicates distance to the star.

stellar photometry [ASTRON] The measurement of the brightness of stars.

stellar population [ASTRON] Either of two classes of stars, termed population I and populationII; populationI are relatively young stars, found in the arms of spiral galaxies, especially the blue stars of high luminosity; populationII stars are the much older, more evolved stars of lower metallic content; many high luminosity red giants and many variable stars are members of populationII.

stellar pulsation [ASTROPHYS] Expansion of a star followed by contraction so that its surface temperature and intrinsic brightness undergo periodic variation.

stellar rotation [ASTRON] Axial rotation of stars; surface rotational equatorial velocities of stars range from a few to 500 kilometers per second.

stellar scintillation *See* astronomical scintillation.

stellar spectroscopy [ASTRON] The techniques of obtaining spectra of stars and their study.

stellar spectrum [ASTRON] The spectrum of a star normally obtained with a slit spectrograph by black-and-white photography; the spectrum of a star in a large majority of cases shows absorption lines superposed on a continuous background.

stellar structure [ASTROPHYS] The mathematical study of a rotating, chemically homogeneous mass of gas held together by its own gravitation; a representative model of the observable properties of a star; thermonuclear reactions are postulated to be the main source of stellar energy.

stellar system [ASTRON] A gravitational system of stars.

stellar temperature [ASTROPHYS] Any temperature above several million degrees, such as occurs naturally in the interior of the sun and other stars.

stellate ganglion [ANAT] The ganglion formed by the fusion of the inferior cervical and the first thoracic sympathetic ganglions.

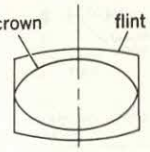
stellate reticulum [HISTOL] The part of the epithelial dental organ of a developing tooth which lies between the inner and the outer dental epithelium; composed of stellate cells with long, anastomosing processes in a mucoid fluid in the interstitial spaces.

Stelleroidea [INV ZOO] The single class of echinoderms in the subphylum Asterozoa; characters coincide with those of the subphylum.

stellite [MET] A hard, wear- and corrosion-resistant family of nonferrous alloys of cobalt (20–65%), chromium (11–32%), and tungsten (2–5%); resistance to softening is exceptionally high at high temperature.

stem [BOT] The organ of vascular plants that usually develops branches and bears leaves and flowers. [ENG] **1.** The

STEINHEIL LENS



Schematic of Steinheil aplanat magnifier showing the crown lens within the flint lenses.

STELLARATOR

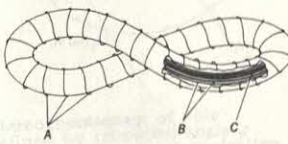


Diagram of a stellarator. External closely spaced, current-carrying windings *A* produce a magnetic field whose lines of force *B* run parallel to the walls, confining plasma *C* in tube's center.

heavy iron rod acting as the connecting link between the bit and the balance of the string of tools on a churn rod. **2.** To insert packing or tamping material in a shothole. [NAV] To make headway against an obstacle, as a current. [NAV ARCH] The foremost part of a ship's hull.

STEM *See* scanning transmission electron microscope.

stem bag [MIN ENG] A fire-resisting paper bag filled with dry sand for stemming shotholes.

stem blight [PL PATH] Any of various fungus blights that affect the plant stem.

stem break *See* browning.

stem canker [PL PATH] Any canker disease affecting the stem.

stem cell [EMBRYO] A formative cell. [HISTOL] *See* hemocytoblast.

stem-cell leukemia [MED] A form of leukemia in which the predominant cell type is so poorly differentiated that its series cannot be identified.

stem correction [THERMO] A correction which must be made in reading a thermometer in which part of the stem, and the thermometric fluid within it, is at a temperature which differs from the temperature being measured.

stemming rod [ENG] A nonmetallic rod used to push explosive cartridges into position in a shothole and to ram tight the stemming.

Stemonitaceae [MYCOL] The single family of the order Stemonitales.

Stemonitales [MYCOL] An order of fungi in the subclass Myxogastromycetidae of the class Myxomycetes.

stem rust [PL PATH] Any of several fungus diseases, especially of grasses, affecting the stem and marked by black or reddish-brown lesions.

stem-winding [MECH ENG] Pertaining to a timepiece that is wound by an internal mechanism turned by an external knob and stem (the winding button of a watch).

stench *See* odorant.

stencil [GRAPHICS] A means of applying a pattern with ink or paint; the stencil itself is cut from thin metal or cardboard sheet, and the paint or ink is brushed or sprayed into the open areas.

stencil printing *See* screen printing.

Stenetrioidea [INV ZOO] A group of isopod crustaceans in the suborder Asellota consisting mostly of tropical marine forms in which the first pleopods are fused.

Stengel process [CHEM ENG] Manufacture of ammonium nitrate fertilizer from nitric acid and anhydrous ammonia.

Stenocephalidae [INV ZOO] A family of Old World, neotropical Hemiptera included in the Pentatomorpha.

stenocephaly [MED] Unusual narrowness of the head.

stenode circuit [ELECTR] Superheterodyne receiving circuit in which a piezoelectric unit is used in the intermediate-frequency amplifier to balance out all frequencies except signals at the crystal frequency, thereby giving very high selectivity.

Stenoglossa [INV ZOO] The equivalent name for Neogastropoda.

stenohaline [ECOL] In marine organisms, indicating the ability to tolerate only a narrow range of salinities.

Stenolaemata [INV ZOO] A class of marine ectoproct bryozoans having lophophores which are circular in basal outline and zooecia which are long, slender, tubular or prismatic, and gradually tapering to their proximal ends.

Stenomasteridae [PALEON] An extinct family of Euchinoidea in the order Holasteroida comprising oval and heart-shaped forms with fully developed pore pairs.

stenometer [ENG] An instrument for measuring distances; employs a telescope in which two target images a known distance apart are superimposed by turning a micrometer screw.

stenoplastic [BIOL] An organism which exhibits a limited capacity for modification or adaptation to a new environment.

Stenopodidea [INV ZOO] A section of decapod crustaceans in the suborder Natantia which includes shrimps having the third pereiopods chelate and much longer and stouter than the first pair.

stenosis [MED] Constriction or narrowing, as of the heart or blood vessels.

Stenostomata [INV ZOO] The equivalent name for Cyclostomata.

stenotherm [BIOL] An organism able to tolerate only a small variation of temperature in the environment.

stenothermic [BIOL] Indicating the ability to tolerate only a limited range of temperatures.

Stenothoidae [INV ZOO] A family of amphipod crustaceans in the suborder Gammaridea containing semiparasitic and commensal species.

stenotopic [ECOL] Referring to an organism with a restricted distribution.

Stensen's duct *See* parotid duct.

Stensioellidae [PALEON] A family of Lower Devonian placoderms of the order Petalichthyida having large pectoral fins and a broad subterminal mouth.

Stenurida [PALEON] An order of Ophiuroidea, comprising the most primitive brittlestars, known only from Paleozoic sediments.

step [COMPUT SCI] A single computer instruction or operation. [ENG] A small offset on a piece of core or in a drill hole resulting from a sudden sidewise deviation of the bit as it enters a hard, tilted stratum or rock underlying a softer rock. [GEOL] A hitch or dislocation of the strata. [MIN ENG] The portion of a longwall face at right angles to the line of the face formed when a place is worked in front of or behind an adjoining place. [ORG CHEM] *See* elementary reaction.

step aeration [CIV ENG] An activated sludge process in which the settled sewage is introduced into the aeration tank at more than one point.

step-and-repeat camera [OPTICS] A type of camera providing a gridlike pattern of latent image frames in a given sequence.

step attenuator [ELECTR] An attenuator in which the attenuation can be varied in precisely known steps by means of switches.

step bearing [MECH ENG] A device which supports the bottom end of a vertical shaft. Also known as pivot bearing.

step block [ENG] A metal block, usually of steel or cast iron, with integral stepped sections to allow application of clamps when securing a workpiece to a machine tool table.

step brazing [MET] Brazing consecutive joints at sequentially lower temperatures to maintain the integrity of preceding joints.

step-by-step operation *See* single-step operation.

step-by-step switch [ELEC] A bank-and-wiper switch in which the wipers are moved by electromagnet ratchet mechanisms individual to each switch.

step-by-step system [COMMUN] *See* Strowger system. [CONT SYS] A control system in which the drive motor moves in discrete steps when the input element is moved continuously.

step change [ELECTR] The change of a variable from one value to another in a single process, taking a negligible amount of time.

step-climb profile [AERO ENG] The aircraft climbs a specified number of feet whenever its weight reaches a predetermined amount, thus stepping to an optimum altitude as gross weight decreases.

step counter [COMPUT SCI] In computers, a counter in the arithmetic unit used to count the steps in multiplication, division, and shift operations.

step cut [LAP] A cut for gems in which the facets decrease in length the farther they are from the girdle, giving the appearance of steps; an example is the emerald cut.

step-down transformer [ELEC] A transformer in which the alternating-current voltages of the secondary windings are lower than those applied to the primary winding.

step fault [GEOL] One of a set of closely spaced, parallel faults. Also known as distributive fault; multiple fault.

step function [MATH] **1.** A function f defined on an interval $[a,b]$ so that $[a,b]$ can be partitioned into a finite number of subintervals on each of which f is a constant. Also known as simple function. **2.** More generally, a real function with finite range.

step-function generator [ELECTR] A function generator whose output waveform increases and decreases suddenly in steps that may or may not be equal in amplitude.

step gage [DES ENG] **1.** A plug gage containing several cylindrical gages of increasing diameter mounted on the same axis. **2.** A gage consisting of a body in which a blade slides perpendicularly; used to measure steps and shoulders.

Stephanian [GEOL] A European stage of Upper Carboniferous geologic time, forming the Upper Pennsylvanian, above the Westphalian and below the Sakmarian of the Permian.

Stephanidae [INV ZOO] A small family of the Hymenoptera

in the superfamily Ichneumonoidea characterized by many-segmented filamentous antennae.

stephanite [MINERAL] Ag_5SbS_4 An iron-black mineral crystallizing in the orthorhombic system and having a metallic luster; an ore of silver. Also known as black silver; brittle silver ore; goldschmidtine.

Stephan's Quintet [ASTRON] A group of five galaxies which lie close together, one of which has widely divergent red shifts.

step lake *See* paternoster lake.

stepout time [GEOPHYS] In seismic prospecting, the time differentials in arrivals of a given peak or trough of a reflected or refracted event for successive detector positions on the earth's surface.

step-out well [PETRO ENG] A well drilled at a later time over remote, undeveloped portions of a partially developed continuous reservoir rock. Also known as delayed development well.

steppe [GEOGR] An extensive grassland in the semiarid climates of southeastern Europe and Asia; it is similar to but more arid than the prairie of the United States.

steppe climate [CLIMATOL] The type of climate in which precipitation though very slight, is sufficient for growth of short, sparse grass; typical of the steppe regions of south-central Eurasia. Also known as semiarid climate.

stepped cone pulley [DES ENG] A one-piece pulley with several diameters to engage transmission belts and thereby provide different speed ratios.

stepped footing [CIV ENG] A widening at the bottom of a wall consisting of a series of steps in the proportion of one horizontal to two vertical units.

stepped gear wheel [DES ENG] A gear wheel containing two or more sets of teeth on the same rim, with adjacent sets slightly displaced to form a series of steps.

stepped leader [GEOPHYS] The initial streamer of a lightning discharge; an intermittently advancing column of high ion density which established the channel for subsequent return streamers and dart leaders.

stepped screw [DES ENG] A screw from which sectors have been removed, the remaining screw surfaces forming steps.

stepped-wave static inverter [ELEC] A static inverter that generates several pulses in each half cycle and combines them to achieve an output voltage which needs very little filtering.

stepper motor [ELEC] A motor that rotates in short and essentially uniform angular movements rather than continuously; typical steps are 30, 45, and 90°; the angular steps are obtained electromagnetically rather than by the ratchet and pawl mechanisms of stepping relays. Also known as magnetic stepping motor; stepping motor; step-servo motor.

stepping *See* zoning.

stepping motor *See* stepper motor.

stepping reflex [PHYSIO] A reflex response of the newborn and young infant, characterized by alternating stepping movements with the legs, as in walking, elicited when the infant is held upright so that both soles touch a flat surface while the infant is moved forward to accompany any step taken.

stepping relay [ELEC] A relay whose contact arm may rotate through 360° but not in one operation. Also known as rotary stepping relay; rotary stepping switch; stepping switch.

stepping switch *See* stepping relay.

step pulley [MECH ENG] A series of pulleys of various diameters combined in a single concentric unit and used to vary the velocity ratio of shafts. Also known as cone pulley.

step-recovery diode [ELECTR] A varactor in which forward voltage injects carriers across the junction, but before the carriers can combine, voltage reverses and carriers return to their origin in a group; the result is abrupt cessation of reverse current and a harmonic-rich waveform.

step response [CONT SYS] The behavior of a system when its input signal is zero before a certain time and is equal to a constant nonzero value after this time.

step rocket *See* multistage rocket.

step-servo motor *See* stepper motor.

step soldering [MET] Soldering consecutive joints at sequentially lower temperatures to maintain the integrity of preceding joints.

step strobe marker [ELECTR] Form of strobe marker in which the discontinuity is in the form of a step in the time base.

step tablet *See* density step tablet.

step test [GRAPHICS] A series of exposures made to determine the optimum exposures of either film or paper prints.

steptoe [GEOL] An isolated protrusion of bedrock, such as the summit of a hill or mountain, in a lava flow.

step trench [ARCHEO] A trench cut in a mound in a series of steps.

step-up transformer [ELEC] Transformer in which the energy transfer is from a low-voltage winding to a high-voltage winding or windings.

step voltage regulator [ELEC] A type of voltage regulator used on distribution feeder lines; it provides increments or steps of voltage change.

step wedge [GRAPHICS] A series of tones in steps from white to black usually on film or a glass plate for testing purposes.

sterad *See* steradian.

steradian [MATH] The unit of measurement for solid angles; it is equal to the solid angle subtended at the center of a sphere by a portion of the surface of the sphere whose area equals the square of the sphere's radius. Abbreviated sr; sterad.

steradiancy *See* radiance.

sterane [ORG CHEM] A cycloalkane derived from a sterol.

sterba curtain [ELECTROMAG] Type of stacked dipole antenna array consisting of one or more phased half-wave sections with a quarter-wave section at each end; the array can be oriented for either vertical or horizontal radiation, and can be either center or end fed.

stercobilin [BIOCHEM] Urobilin as a component of the brown fecal pigment.

stercobilinogen [BIOCHEM] A colorless reduction product of stercobilin found in feces.

Stercorariidae [VERT ZOO] A family of predatory birds of the order Charadriiformes including the skuas and jaegers.

stercorite [MINERAL] $Na(NH_4)H(PO_4)\cdot 4H_2O$ A white to yellowish and brown, triclinic mineral consisting of a hydrated acid phosphate of sodium and ammonium.

Sterculiaceae [BOT] A family of dicotyledonous trees and shrubs of the order Malvales distinguished by imbricate or contorted petals, bilocular anthers, and ten to numerous stamens arranged in two or more whorls.

stère [MECH] A unit of volume equal to 1 cubic meter; it is used mainly in France, and in measuring timber volumes.

steregon [MATH] The entire solid angle bounded by a sphere; equal to 4π steradians.

stereo *See* stereophonic; stereo sound system.

stereo- [PHYS] A prefix used to designate a three-dimensional characteristic.

stereo amplifier [ENG ACOUS] An audio-frequency amplifier having two or more channels, as required for use in a stereo sound system.

stereoblastula [EMBRYO] A blastula that lacks a cavity, making it unable to gastrulate.

stereo broadcasting [COMMUN] Broadcasting two sound channels for reproduction by a stereo sound system having a stereo tuner at its input.

stereo camera *See* stereoscopic camera.

stereochemistry [PHYS CHEM] The study of the spatial arrangement of atoms in molecules and the chemical and physical consequences of such arrangement.

stereocilia [CYTOL] **1.** Nonmotile tufts of secretory microvilli on the free surface of cells of the male reproductive tract. **2.** Homogeneous cilia within simple membrane coverings; found on the free-surface hair cells.

stereocomparagraph [OPTICS] A projection device in which two-dimensional aerial photographs taken at slightly different angles are combined so as to give the appearance of tridimensionality.

stereo comparator [OPTICS] An instrument that may be used to view two photographs taken of the stars in the same section of sky at different times; viewing the images stereoscopically may reveal stars that have moved between exposures or stars of varying brightness.

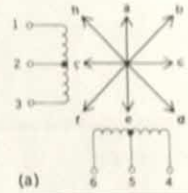
stereo effect [ACOUS] Reproduction of sound in such a manner that the listener receives the sensation that individual sounds are coming from different locations, just as did the original sounds reaching the stereo microphone system.

stereofluoroscopy [ELECTR] A fluoroscopic technique that gives three-dimensional images.

stereogastrula [EMBRYO] A gastrula that lacks a cavity.

stereognomogram [CRYSTAL] The projection resulting from the superposition of the projection planes of a stereogram and a gnomogram.

STEPPER MOTOR



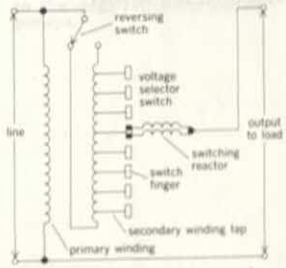
(a)

(b)

Rotor position	Windings to which voltage is applied
a	V_{1-2}
b	V_{1-2} and V_{4-5}
c	V_{4-5}
d	V_{4-5} and V_{3-2}
e	V_{3-2}
f	V_{3-2} and V_{6-5}
g	V_{6-5}
h	V_{6-5} and V_{1-2}

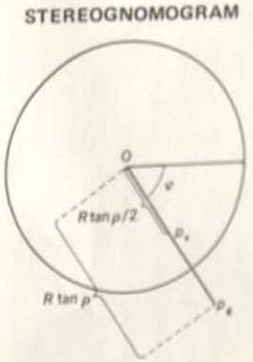
Permanent-magnet stepper motor. *(a)* Circuit diagram. *(b)* Excitation sequence for 45°-per-step clockwise rotation.

STEP VOLTAGE REGULATOR



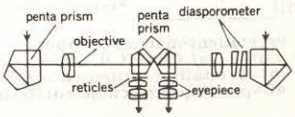
Circuit diagram of a step voltage regulator. When switch moves from full-tap position shown, one finger contacts next secondary winding tap before other finger leaves first tap; switching reactors limit current circulating between the bridged taps in resulting position.

STEREOGNOMOGRAM



Stereognomogram of pole defined by azimuthal angle φ and colatitude ρ. Both projection planes are superimposed; P_x and P_g are on a radius making an angle φ with the origin, and at distances respectively equal to $R \tan \rho/2$ and $R \tan \rho$.

STEREOSCOPIC RANGEFINDER



Lens system of a typical stereoscopic rangefinder. Objective forms images in plane of respective reticles. Diasporometer is used to vary angle between beams reaching eyes from target until it equals angle between beams reaching eyes from two reticles.

stereognosis [PSYCH] The recognition or identification of objects by the sense of touch.

stereogram [GRAPHICS] A stereoscopic set of photographs or drawings correctly oriented and mounted for stereoscopic viewing.

stereographic chart [MAP] A chart on the stereographic projection.

stereographic coverage [GRAPHICS] Photographic coverage with overlapping air photographs to provide a three-dimensional presentation of the picture; 60% overlap is considered normal, and 53% is generally regarded as the minimum.

stereographic net *See* net.

stereographic projection [MAP] A perspective conformal, azimuthal map projection in which points on the surface of a sphere or spheroid, such as the earth, are conceived as projected by radial lines from any point on the surface to a plane tangent to the antipode of the point of projection; circles project as circles through the point of tangency, except for great circles which project as straight lines; the principal navigational use of the projection is for charts of the polar regions. Also known as azimuthal orthomorphic projection. [MATH] The projection of the Riemann sphere onto the euclidean plane performed by emanating rays from the north pole of the sphere through a point on the sphere.

stereoisomers [ORG CHEM] Compounds whose molecules have the same number and kind of atoms and the same atomic arrangement, but differ in their spatial relationship.

stereomicrography [OPTICS] The taking of two microphotographs of the same field at different angles (a stereo pair), then viewing them simultaneously with a stereo viewer.

stereomicrometer [ENG] An instrument attached to an optical instrument (such as a telescope) to measure small angles.

stereo multiplex [COMMUN] Stereo broadcasting by a frequency-modulation station, in which the output of two microphones is transmitted on the same carrier by frequency-division multiplexing.

stereophonic [ENG ACOUS] Pertaining to three-dimensional pickup or reproduction of sound, as achieved by using two or more separate audio channels. Also known as stereo.

stereophonics [ENG ACOUS] The study of reproducing or reinforcing sound in such a way as to produce the sensation that the sound is coming from sources whose spatial distribution is similar to that of the original sound sources.

stereophonic sound system *See* stereo sound system.

stereo pickup [ENG ACOUS] A phonograph pickup designed for use with standard single-groove two-channel stereo records; the pickup cartridge has a single stylus that actuates two elements, one responding to stylus motion at 45° to the right of vertical and the other responding to stylus motion at 45° to the left of vertical.

stereoplanigraph [ENG] An instrument for drawing topographic maps from observations of stereoscopic aerial photographs with a stereocomparator.

stereo preamplifier [ENG ACOUS] An audio-frequency preamplifier having two channels, used in a stereo sound system.

stereopsis *See* stereoscopy.

stereo rangefinder *See* stereoscopic rangefinder.

stereo record [ENG ACOUS] A single-groove disk record having V-shaped grooves at 45° to the vertical; each groove wall has one of the two recorded channels.

stereo recorded tape [ENG ACOUS] Recorded magnetic tape having two separate recordings, one for each channel of a stereo sound system.

stereoregular polymer *See* stereospecific polymer.

stereorubber [ORG CHEM] Synthetic rubber, *cis*-polyisoprene, a polymer with stereospecificity.

stereoscope [OPTICS] An optical instrument in which each eye views one of two photographs taken with the camera or object of study displaced, or simultaneously with two cameras, or with a stereoscopic camera, so that a sensation of depth is produced.

stereoscopic camera [OPTICS] A camera which takes photographs simultaneously with two similar lenses a few inches apart, for use in a stereoscope or other optical system which gives a sensation of depth to the viewer. Also known as stereo camera.

stereoscopic heightfinder *See* stereoscopic rangefinder.

stereoscopic model [GRAPHICS] A mental impression of an area or object seen as being in three dimensions when viewed stereoscopically on photographs.

stereoscopic pair [GRAPHICS] Two photographs with sufficient overlap of detail to make possible stereoscopic examination of an object or an area common to both.

stereoscopic parallax *See* absolute stereoscopic parallax.

stereoscopic photography [OPTICS] A technique that simulates stereoscopic vision, in which two photographs are made with the camera or object of study displaced, or simultaneously with two cameras, or with a stereoscopic camera, and each of the photographs is viewed by one eye, using a stereoscope or other optical system.

stereoscopic power [OPTICS] The magnifying power of a binoculars or other stereo system multiplied by the ratio of the distance between the objective axes to the distance between the eyepiece axes; it is a measure of the stereoscopic radius. Also known as total relief.

stereoscopic radius [PHYSIO] The greatest distance at which there is a sensation of depth in vision due to the fact that the two eyes do not perceive exactly the same view.

stereoscopic rangefinder [OPTICS] An optical rangefinder which utilizes stereoscopic vision; it is essentially a large binoculars fitted with special reticles which allow a skilled user to superimpose the stereoscopic image formed by the pair of reticles over the images of the target seen in the eyepieces, so that the correct range is obtained when the reticle marks appear to be suspended over the target and at the same apparent distance. Also known as stereo rangefinder; stereoscopic heightfinder.

stereoscopic vision *See* stereoscopy.

stereoscopy [PHYSIO] The phenomenon of simultaneous vision with two eyes in which there is a vivid perception of the distances of objects from the viewer; it is present because the two eyes view objects in space from two points, so that the retinal image patterns of the same object are slightly different in the two eyes. Also known as stereopsis; stereoscopic vision.

stereoselective reaction [ORG CHEM] A chemical reaction in which one stereoisomer is produced or decomposed more rapidly than another.

stereo sound system [ENG ACOUS] A sound reproducing system in which a stereo pickup, stereo tape recorder, stereo tuner, or stereo microphone system feeds two independent audio channels, each of which terminates in one or more loudspeakers arranged to give listeners the same audio perspective that they would get at the original sound source. Also known as stereo; stereophonic sound system.

stereospecificity [ORG CHEM] The condition of a polymer whose molecular structure has a fixed spatial (geometric) arrangement of its constituent atoms, thus having crystalline properties; for example, synthetic natural rubber, *cis*-polyisoprene.

stereospecific polymer [ORG CHEM] A polymer with specific or definite order of arrangement of molecules in space, as in isotactic polypropylene; permits close packing of molecules and leads to a high degree of polymer crystallinity. Also known as stereoregular polymer.

stereospecific synthesis [ORG CHEM] Catalytic polymerization of monomer molecules to produce stereospecific polymers, as with Ziegler or Natta catalysts (derived from a transition metal halide and a metal alkyl).

Stereospondyli [PALEON] A group of labyrinthodont amphibians from the Triassic characterized by a flat body without pleurocentra and with highly developed intercentra.

stereo subcarrier [COMMUN] A subcarrier whose frequency is the second harmonic of the pilot subcarrier frequency used in frequency-modulation stereo broadcasting.

stereo tape recorder [ENG ACOUS] A magnetic-tape recorder having two stacked playback heads, used for reproduction of stereo recorded tape.

stereotaxis [BIOL] An orientation movement in response to stimulation by contact with a solid body. Also known as thigmotaxis.

stereotropism [BIOL] Growth or orientation of a sessile organism or part of an organism in response to the stimulus of a solid body. Also known as thigmotropism.

stereo tuner [ENG ACOUS] A tuner having provisions for receiving both channels of a stereo broadcast.

stereotype [GRAPHICS] A duplicate printing plate made from type and cuts; a paper matrix, or mat, is forced down over the type and cuts to form a mold, into which molten metal is poured, resulting in a new metal printing surface that exactly duplicates the original.

sterhydraulic [MECH ENG] Pertaining to a hydraulic press in

which motion or pressure is produced by the introduction of a solid body into a cylinder filled with liquid.

steric anomaly *See* specific-volume anomaly.

steric effect [PHYS CHEM] The influence of the spatial configuration of reacting substances upon the rate, nature, and extent of reaction.

steric hindrance [CHEM] The prevention or retardation of chemical reaction because of neighboring groups on the same molecule; for example, ortho-substituted aromatic acids are more difficult to esterify than are the meta and para substitutions.

stericooling [FOOD ENG] A method of cooling or precooling fruit and vegetables prior to shipping; uses a cooling spray of water containing, in addition to salt in solution to lower freezing point, a fungicide or bactericide.

sterigma [BOT] A peg-shaped structure to which needles are attached in certain conifers. [MYCOL] A slender stalk arising from the basidium of some fungi, from the top of which basidiospores are formed by abstriction.

sterile distribution [ECOL] A range of areas in which marine animals may live and spawn, but in which eggs do not hatch and larvae do not survive.

sterile field *See* field.

sterility [PHYSIO] The inability to reproduce because of congenital or acquired reproductive system disorders involving lack of gamete production or production of abnormal gametes.

sterilization [MICROBIO] An act or process of destroying all forms of microbial life on and in an object.

sterilizer [ENG] An apparatus for sterilizing by dry heat, steam, or water.

sterling silver [MET] A silver alloy having a defined standard of purity of 92.5% silver and the remaining 7.5% usually of copper.

stern [NAV ARCH] The aftermost part of a ship.

Sternaspidae [INV ZOO] A monogeneric family of polychaete annelids belonging to the Sedentaria.

stern attack [AERO ENG] In air intercept, an attack by an interceptor aircraft which terminates with a heading crossing angle of 45° or less.

sternbergite [MINERAL] $AgFe_2S_3$ A dark-brown or black mineral composed of silver iron sulfide and occurring as tabular crystals or flexible laminae.

sternebra [VERT ZOO] A segment of the sternum in vertebrates.

stern end bulb [NAV ARCH] A bulb-shaped structure which can be installed at the stern end of a ship to reduce both wave-making and eddy-making resistance.

stern frame [NAV ARCH] **1.** The timbers making up the upper part of the stern of a wooden ship. **2.** A casting or forging, including the propeller post, sternpost, arch, and solepiece of a steel ship.

Stern-Gerlach effect [ATOM PHYS] The splitting of a beam of atoms passing through a strong, inhomogeneous magnetic field into several beams.

Sterninae [VERT ZOO] A subfamily of birds in the family Laridae, including the Arctic tern.

sternite [INV ZOO] **1.** The ventral part of an arthropod somite. **2.** The chitinous plate on the ventral surface of an abdominal segment of an insect.

stern layer [PHYS CHEM] One of two electrically charged layers of electrolyte ions, the layer of ions immediately adjacent to the surface, in the neighborhood of a negatively charged surface.

sternocleidomastoid [ANAT] A muscle of the neck that flexes the head; origin is the manubrium of the sternum and clavicle, and insertion is the mastoid process.

sternocostal [ANAT] Pertaining to the sternum and the ribs.

sternohyoid [ANAT] A muscle arising from the manubrium of the sternum and inserted into the hyoid bone.

Sternorrhyncha [INV ZOO] A series of the insect order Homoptera in which the beak appears to arise either between or behind the fore coxae, and the antennae are long and filamentous with no well-differentiated terminal setae.

sternothyroid [ANAT] Pertaining to the sternum and thyroid cartilage.

Sternoxia [INV ZOO] The equivalent name for Elateroidea.

stern post [NAV ARCH] The main member of the after end of a ship, usually upright, running from the keel up to the bottom of the hull.

stern tube [NAV ARCH] **1.** A long, circular bearing or bushing which supports the propeller shaft where it emerges from the stern of a ship. **2.** A torpedo tube at the stern of a ship.

sternum [ANAT] The bone, cartilage, or series of bony or cartilaginous segments in the median line of the anteroventral part of the body of vertebrates above fishes, connecting with the ribs or pectoral girdle.

sternum height [ANTHRO] Vertical distance taken from the lower tip of the sternum to the floor as the subject stands.

sternway [NAV] Making way through the water in a direction opposite to the heading.

stern wheel [NAV ARCH] A paddle wheel located at the vessel's stern and used to propel the vessel.

Stern-Zartman experiment [STAT MECH] An experiment in which the distribution in speed of atoms or molecules in a beam emitted from an opening in an oven is measured by having the beam impinge on a rotating cylindrical drum, with a slit cut parallel to the drum axis, and measuring the density of atoms or molecules deposited on the inner surface of the drum, roughly opposite the slit, as a function of distance from a point directly opposite the slit; it is used to test the Maxwell-Boltzmann distribution law.

steroid [BIOCHEM] A member of a group of compounds, occurring in plants and animals, that are considered to be derivatives of a fused, reduced ring system, cyclopenta[α]-phenanthrene, which consists of three fused cyclohexane rings in a nonlinear or phenanthrene arrangement.

sterol [BIOCHEM] Any of the natural products derived from the steroid nucleus; all are waxy, colorless solids soluble in most organic solvents but not in water, and contain one alcohol functional group.

sterone [BIOCHEM] A ketone derived from a steroid.

sterrettite *See* kolbeckite.

sterrometal [MET] Hard brass containing a small amount of iron and manganese; used for hydraulic cylinders and marine castings.

Stetefeldt furnace [MET] A furnace for desulfurizing and chloridizing silver ores; the ores are powdered, mixed with salt, and dropped through a hot atmosphere.

stethoscope [MED] An instrument for indirect auscultation for the detection and study of sounds arising within the body; sounds are conveyed to the ears of the examiner through rubber tubing connected to a funnel or disk-shaped endpiece.

stewartite [GEOL] A steel-gray, iron-containing variety of bort that has magnetic properties. [MINERAL] $Mn_3(DO)_2 \cdot 4H_2O$ A brownish-yellow mineral composed of hydrous manganese phosphate occurring in minute crystals or fibrous tufts in pegmatites.

sthène [MECH] The force which, when applied to a body whose mass is 1 metric ton, results in an acceleration of 1 meter per second per second; equal to 1000 newtons. Formerly known as funal.

Sthenurinae [PALEON] An extinct subfamily of marsupials of the family Diprotodontidae, including the giant kangaroos.

stibiconite [MINERAL] $Sb_3O_6(OH)$ A pale yellow to yellowish- or reddish-white mineral consisting of a basic or hydrated oxide of antimony; occurs in massive form, as a powder, and in crusts.

stibide *See* antimonide.

stibiocolumbite [MINERAL] $Sb(Nb,Ta,Cb)O_4$ A dark brown to light yellowish- or reddish-brown, orthorhombic mineral consisting of an oxide of antimony and tantalum-columbium.

stibium [CHEM] The Latin name for antimony, thus the symbol Sb for the element. [MINERAL] *See* antimonite.

stibnate *See* potassium antimonate.

stibnite *See* antimonite.

stibophen [PHARM] $C_{12}H_4Na_5O_{16}S_4Sb \cdot 7H_2O$ A crystalline compound that is soluble in water, insoluble in organic solvents; used in medicine for protozoan infections. Also known as sodium antimony bis(pyrocatechol-2,4-disulfonate).

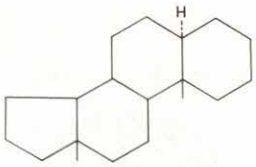
Stichaeidae [VERT ZOO] The pricklebacks, a family of perciform fishes in the suborder Blennioidei.

Stichocotylidae [INV ZOO] A family of trematodes in the subclass Aspidogastrea in which adults are elongate and have a single row of alveoli.

Stichopodidae [INV ZOO] A family of the echinoderm order Aspidochirotida characterized by tentacle ampullae and by left and right gonads.

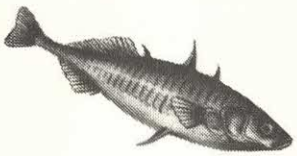
stichtite [MINERAL] $Mg_6Cr_2(CO_3)(OH)_{16} \cdot 4H_2O$ A lilac-

STEROID



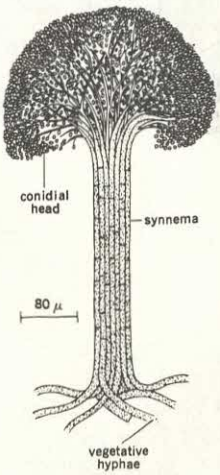
Shorthand formulation for steroid skeleton; lines attached to the rings represent methyl groups.

STICKLEBACK



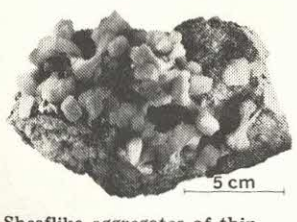
The three-spined stickleback. It is used for fish meal and oil in some Baltic countries.

STILBELLACEAE



Graphium ulmi, cause of Dutch elm disease. *(After C. Ferdinandsen and C. A. Jörgensen, 1938–1939)*

STILBITE



Sheaflike aggregates of thin crystals of stilbite, found at Two Islands, Nova Scotia. *(American Museum of Natural History Specimens)*

colored rhombohedral mineral composed of hydrous basic carbonate of magnesium and chromium.

stick [ENG] **1.** A rigid bar hinged to the boom of a dipper or pull shovel and fastened to the bucket. **2.** A long slender tool bonded with an abrasive for honing or sharpening tools and for dressing of wheels. [ORD] A succession of missiles fired or released separately at predetermined intervals from a single aircraft.

stick gage [ENG] A suitably divided vertical rod, or stick, anchored in an open vessel so that the magnitude of rise and fall of the liquid level may be observed directly.

sticking [COMPUT SCI] In computers, the tendency of a flip-flop to remain in, or to spontaneously switch to, one of its two stable states.

Stickland reaction [BIOCHEM] An amino acid fermentation involving the coupled decomposition of two or more substrates.

stickleback [VERT ZOO] Any fish which is a member of the family Gasterosteidae, so named for the variable number of free spines in front of the dorsal fin.

stick shellac [MATER] Shellac in the form of a solid stick and in a variety of colors; used for filling imperfections in wood.

sticky charge *See* sticky grenade.

sticky grenade [ORD] A small explosive charge covered with an adhesive, intended to be thrown or placed by hand where the adhesive will hold the charge in place until detonated by a time fuse. Also known as sticky charge.

stiction [MECH] Friction that tends to prevent relative motion between two movable parts at their null position.

Stieltjes integral [MATH] The Stieltjes integral of a real function $f(x)$ relative to a real function $g(x)$ of bounded variation on an interval $[a,b]$ is defined, analogously to the Riemann integral, as a limit of a sum of terms $f(a_i)\,[g(x_i) - g(x_{i-1})]$ taken as partitions of the interval shrink. Denoted

$$\int_a^b f(x)dg(x).$$

Stieltjes transform [MATH] A form of the Laplace transform of a function where the usual Riemann integral is replaced by a Stieltjes integral.

stiffened-shell fuselage *See* semimonocoque.

stiffener [CIV ENG] A steel angle or plate attached to a slender beam to prevent its buckling by increasing its stiffness.

stiffleg derrick [MECH ENG] A derrick consisting of a mast held in the vertical position by a fixed tripod of steel or timber legs. Also known as derrick crane; Scotch derrick.

stiffness [ACOUS] *See* acoustic stiffness. [MECH] The ratio of a steady force acting on a deformable elastic medium to the resulting displacement.

stiffness coefficient [MECH] The ratio of the force acting on a linear mechanical system, such as a spring, to its displacement from equilibrium.

stiffness constant [MECH] Any one of the coefficients of the relations in the generalized Hooke's law used to express stress components as linear functions of the strain components. Also known as elastic constant.

stiffness matrix [MECH] A matrix $\mathbf{K}$ used to express the potential energy V of a mechanical system during small displacements from an equilibrium position, by means of the equation $V = \frac{1}{2}\mathbf{q}^T\,\mathbf{Kq}$, where $\mathbf{q}$ is the vector whose components are the generalized components of the system with respect to time and $\mathbf{q}^T$ is the transpose of $\mathbf{q}$. Also known as stability matrix.

stiffness reactance *See* acoustic stiffness reactance.

stigma [BOT] The rough or sticky apical surface of the pistil for reception of the pollen. [INV ZOO] **1.** The eyespot of certain protozoans, such as *Euglena*. **2.** The spiracle of an insect or arthropod. **3.** A colored spot on many lepidopteran wings. [MECH] A unit of length used mainly in nuclear measurements, equal to 10^{-12} meter. Also known as bicron.

Stigmatella [MICROBIO] A genus of bacteria in the family Cystobacteraceae; vegetative cells are tapered, and sporangia are borne in clusters on branched or unbranched stalks.

stigmatic [OPTICS] **1.** Property of an optical system whose focal power is the same in all meridians. **2.** *See* homocentric.

stigmatic concave grating [OPTICS] An optical element with many parallel grooves on a concave optical surface; combines the two functions of light dispersion and focusing in one dispersive element; used in space optics, in food and metal analysis, and as a dispersive element of spectrophotometers and spectrographs.

stigmatism [PHYSIO] A condition of the refractive media of the eye in which rays of light from a point are accurately brought to a focus on the retina.

stilb [OPTICS] A unit of luminance, equal to 1 candela per square centimeter. Abbreviated sb.

Stilbaceae [MYCOL] The equivalent name for Stilbellaceae.

Stilbellaceae [MYCOL] A family of fungi of the order Moniliales in which conidiophores are aggregated in long bundles or fascicles, forming synnemata or coremia, generally having the conidia in a head at the top.

stilbene [ORG CHEM] $C_6H_5CH{:}CHC_6H_5$ Colorless crystals soluble in ether and benzene, insoluble in water; melts at 124°C; used to make dyes and bleaches and as phosphors. Also known as diphenylethylene; toluylene.

stilbesterol *See* diethylstilbesterol.

stilbite [MINERAL] $Ca(Al_2Si_7O_{18})\cdot 7H_2O$ A white, brown, or yellow mineral belonging to the zeolite family of silicates; crystallizes in the monoclinic system, occurs in sheaflike aggregates of tabular crystals, and has pearly luster; hardness is 3.5–4 on Mohs scale, and specific gravity is 2.1–2.2. Also known as desmine.

stile [BUILD] The upright outside framing piece of a window or door.

Stiles method [PETRO ENG] A technique for computing oil recovery by waterflood methods, taking into account the distribution of varying permeability stratums throughout the reservoir.

stiletto [ELECTR] An advanced electronic subsystem contained in United States strike aircraft type F-4D for detection, identification, and location of ground-based radars; the location of radar targets is determined by direction finding and passive ranging techniques; it is used for the delivery of guided and unguided weapons against the target radars under all weather conditions.

still [CHEM ENG] A device used to evaporate liquids; heat is applied to the liquid, and the resulting vapor is condensed to a liquid state.

stillage [FOOD ENG] The residue grain from the manufacture of alcohol from grain; used as a feed supplement.

stillbirth [MED] Birth of a dead infant.

stilling basin [ENG] A depressed area in a channel or reservoir that is deep enough to reduce the velocity of the flow. Also known as stilling box.

stilling box *See* stilling basin.

stillingia oil [MATER] A combustible, toxic, pale-yellow drying oil with a linseed-oil scent and a mustard taste, derived from tallow tree seeds; used in lubricants, candles, textile dressing, and soap. Also known as tallow-seed oil.

Still's disease [MED] Juvenile rheumatoid arthritis in which involvement of the viscera is prominent. Also known as Chauffard-Still disease.

Stillson wrench [DES ENG] A trademark for an adjustable pipe wrench consisting of an L-shaped jaw in a sleeve, the sleeve being pivoted to a handle; pressure on the handle increases the grip of the jaw.

stillstand [GEOL] Referring to a land area, a continent, or an island, to remain stationary with respect to the interior of the earth or to sea level.

still water [HYD] A portion of a stream having a very slight gradient and no visible current.

still-water level [OCEANOGR] The level that the sea surface would assume in the absence of wind waves.

still wax *See* wax tailings.

still well [METEOROL] A device, used in evaporation pan measurements, which provides an undisturbed water surface and support for the hook gage; the U.S. Weather Bureau model consists of a brass cylinder, 8 inches (20.32 centimeters) high and 3.5 inches (8.89 centimeters) in diameter, mounted over a hole in a triangular galvanized iron base which is provided with leveling screws.

stilpnomelane [MINERAL] $K(Fe,Mg,Al)_3Si_4O_{10}(OH)_2\cdot H_2O$ A black or greenish-black mineral composed of basic hydrous potassium iron magnesium aluminum silicate; occurs as fibers, iron magnesium aluminum silicate; occurs as fibers, incrustations, and foliated plates.

stilt root [BOT] A prop root of a mangrove tree.

Stimson anchor [NAV ENG] A cast-iron anchor in the shape of an airfoil and bridled in such a way that the slightest horizon-

tal force, combined with the weight of the anchor, tends to plow it into the soft sediments of the sea floor.

stimulated emission device [ELECTR] A device that uses the principle of amplification of electromagnetic waves by stimulated emission, namely, a maser or a laser.

stimulated scattering [OPTICS] The amplification, by stimulated emission, of intense radiation from a pulsed laser that has been inelastically scattered; results in exponential growth of the scattered power and, in some cases, almost complete scattering of the incident light.

stimulation deafness [MED] Deafness induced by noise; involves changes in the chemical interchange between the canals of the cochlea, as well as nerve destruction.

stimulation treatment [PETRO ENG] One of the techniques to increase (stimulate) oil- or gas-reservoir production, such as acidizing, fracturing, controlled underground explosions, or various cleaning techniques. Also known as well stimulation.

stimulator [MED] A neurosurgical device that supplies a controlled alternating-current voltage to two electrodes that are applied to a patient.

stimulus [CONT SYS] A signal that affects the controlled variable in a control system. [PHYSIO] An agent that produces a temporary change in physiological activity in an organism or in any of its parts.

stimulus filtering [PSYCH] The apparent awareness of only a few of the great number of stimuli bombarding an animal.

stinger [PETRO ENG] A support which is attached to the stern of a pipe-laying barge and which controls the bending of the pipe as it leaves the barge to enter the water. [ZOO] A sharp piercing organ, as of a bee, stingray, or wasp, usually connected with a poison gland.

stinging cell *See* cnidoblast.

stingray [VERT ZOO] Any of various rays having a whiplike tail armed with a long serrated spine, at the base of which is a poison gland.

stink *See* gob stink.

stinkdamp [MIN ENG] The hydrogen sulfide that occurs in mines.

stinkstone [GEOL] A stone containing decomposing organic matter that gives off an offensive odor when rubbed or struck.

stipe [BOT] **1.** The petiole of a fern frond. **2.** The stemlike portion of the thallus in certain algae. [MYCOL] The short stalk or stem of the fruit body of a fungus, such as a mushroom.

stipoverite *See* stishovite.

stippling [GRAPHICS] Graduation of shading by numerous separate touches; shadow areas on charts, for instance, are sometimes indicated by numerous dots decreasing in density as the depth increases.

stipule [BOT] Either of a pair of appendages that are often present at the base of the petiole of a leaf.

stir-in resin [MATER] A vinyl resin that does not require grinding in order to disperse in a plastisol or organisol.

Stirling cycle [THERMO] A regenerative thermodynamic power cycle using two isothermal and two constant volume phases.

Stirling engine [MECH ENG] An engine in which work is performed by the expansion of a gas at high temperature; heat for the expansion is supplied through the wall of the piston cylinder.

Stirling numbers [MATH] The coefficients which occur in the Stirling interpolation formula for a difference operator.

Stirling's formula [MATH] The expression $(n/e)^n\sqrt{2\pi n}$ is asymptotic to factorial n; that is, the limit as n goes to ∞ of their ratio is 1.

Stirodonta [INV ZOO] Formerly, an order of Euechinoidea that included forms with stirodont dentition.

stirodont dentition [INV ZOO] In Echinoidea, the condition in which the teeth are keeled within and the foramen magnum is open.

stirring [PHYS] A turbulent process in which molecular diffusion and molecular heat conduction are speeded up.

stirring effect [ELECTROMAG] The circulation in a molten metal carrying electric current as a result of the combined forces of the pinch and motor effects.

stirrup [CIV ENG] In concrete construction, a U-shaped bar which is anchored perpendicular to the longitudinal steel as reinforcement to resist shear. [MIN ENG] **1.** A piece of steel hung from a gallows frame to engage the endgate hooks when a mine car is tilted over; used at dumps. **2.** A screw joint suspended from the brakestaff of a spring pole, by which the boring rods are adjusted to the depth of the borehole. Also known as temper screw.

stishovite [MINERAL] SiO_2 A polymorph of quartz, a dense, fine-grained mineral formed under very high pressure (about 1,000,000 pounds per square inch or 7×10^9 newtons per square meter); it is the only mineral in which the silicon atom has a coordination number of six; specific gravity is 4.28. Also known as stipoverite.

stitch bonding [ENG] A method of making wire connections between two or more points on an integrated circuit by using impulse welding or heat and pressure while feeding the connecting wire through a hole in the center of the welding electrode.

stitching [ENG] Progressive welding of thermoplastic materials (resins) by successive applications of two small, mechanically operated, radio-frequency-heated electrodes; the mechanism is similar to that of a normal sewing machine.

stitch rivet [ENG] One of a series of rivets joining the parallel elements of a structural member so that they act as a unit.

stitch welding [MET] A series of spaced spot resistance welds.

Stobbe reaction [ORG CHEM] A type of aldol condensation reaction represented by the reaction of benzophenone with dimethyl succinate and sodium methoxide to form monoesters of an α-alkylidene (or arylidene) succinic acid.

stochastic [MATH] Pertaining to random variables.

stochastic automaton *See* probabilistic automaton.

stochastic calculus [MATH] The mathematical theory of stochastic integrals and differentials, and its application to the study of stochastic processes.

stochastic chain rule [MATH] A generalization of the ordinary chain rule to stochastic processes; it states that the process $U_t = u(X_t^1, X_t^2, \ldots, X_t^n)$ satisfies

$$dU = \sum_i \partial_i u dX^i + \tfrac{1}{2}\sum_{i,j} \partial_i \partial_j u dX^i dX^j$$

with the conventions $(dt)^2 = 0$ and $dW^\alpha dW^\beta = \partial_{\alpha\beta} dt$, where the X^i are processes satisfying

$$dX_t^i = a_t^i dt + \sum_{\alpha=1}^m b_t^{i\alpha} dW_t^\alpha,\ i = 1, 2, \ldots, n;$$
$$\{W_t^\alpha,\ t \geq 0\},\ \alpha = 1, 2, \ldots, m$$

are independent Wiener processes; the dW_t^α are the corresponding random disturbances occurring in the infinitesimal time interval dt; the a_t^i and $b_t^{i\alpha}$ are independent of future disturbances, and $u(x_1, x_2, \ldots, x_n)$ is a function whose derivatives $\partial_i u$ and $\partial_i \partial_j u$ are continuous. Also known as Itô's formula.

stochastic differential [MATH] An expression representing the random disturbances occurring in an infinitesimal time interval; it has the form dW_t, where $\{W_t,\ t \geq 0\}$ is a Wiener process.

stochastic integral [MATH] An integral used to construct the sample functions of a general diffusion process from those of a Wiener process; it has the form

$$\int_{W_0}^{W_s} a_t dW_t$$

where $\{W_t,\ t \geq 0\}$ is a Wiener process, dW_t represents the random disturbances occurring in an infinitesimal time interval dt, and a_t is independent of future disturbances. Also known as Itô's integral.

stochastic matrix [MATH] A square matrix with nonnegative real entries such that the sum of the entries of each row is equal to 1.

stochastic process [MATH] A family of random variables, dependent upon a parameter which usually denotes time. Also known as random process.

stochastic sequential machine *See* probabilistic sequential machine.

stock [GEOL] *See* pipe. [IND ENG] **1.** A product or material kept in storage until needed for use or transferred to some ultimate point for use, for example, crude oil tankage or paper-pulp feed. **2.** Designation of a particular material, such as bright stock or naphtha stock. [PETR] A usually discordant, batholithlike body of intrusive igneous rock not exceeding 40 square miles (103.6 square kilometers) in surface exposure and usually discordant.

stock accounting [IND ENG] The establishment and main-

STIRLING ENGINE

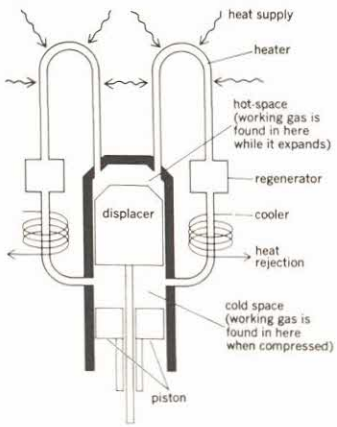


Diagram of Stirling engine, displacer type. Second piston, called displacer, transfers gas back and forth between hot space, at a fixed high temperature, and cold space, at a fixed low temperature.

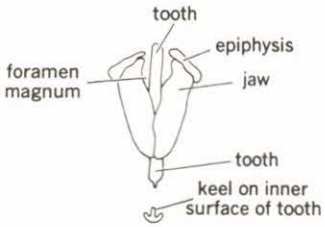
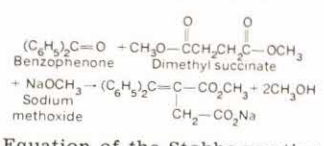
STIRODONT DENTITION



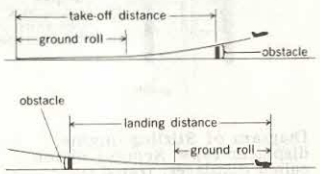
Tooth and lantern structure in stirodont dentition.

STOBBE REACTION



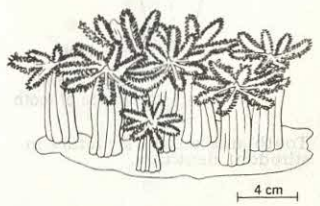
Equation of the Stobbe reaction using structural formulas for the reactants and the product.

STOL AIRCRAFT



Takeoff and landing profile of STOL aircraft; obstacles are 15 meters high.

STOLONIFERA



Clavularia garciae. (After Y. Delage)

tenance of formal records of material in stock reflecting such information as quantities, values, or condition.

stockage objective [AERO ENG] The maximum quantities of material to be maintained on hand to sustain current operations; it will consist of the sum of stocks represented by the operating level and the safety level.

stock control [IND ENG] Process of maintaining inventory data on the quantity, location, and condition of supplies and equipment due in, on hand, and due out, to determine quantities of material and equipment available or required for issue and to facilitate distribution and management of material.

stock coordination [IND ENG] A supply management function exercised usually at department level which controls the assignment of material cognizance for items or categories of material to inventory managers.

stock-dye [TEXT] Dyeing fibers before they are spun into yarn.

stocking cutter [MECH ENG] **1.** A gear cutter having side rake or curved edges to rough out the gear-tooth spaces before they are formed by the regular gear cutter. **2.** A concave gear cutter ganged beside a regular gear cutter and used to finish the periphery of a gear blank by milling ahead of the regular cutter.

stock number [IND ENG] Number assigned to an item, principally to identify that item for storage and issue purposes.

stockpile [ENG] A reserve stock of material, equipment, raw material, or other supplies.

stock rail [CIV ENG] The fixed rail in a track, against which the switch rail operates.

stock record account [IND ENG] A basic record showing by item the receipt and issuance of property, the balances on hand, and such other identifying or stock control data as may be required by proper authority.

Stoddard solvent [MATER] A petroleum naphtha product with a comparatively narrow boiling range; used mostly for dry cleaning.

stoichiometry [PHYS CHEM] The numerical relationship of elements and compounds as reactants and products in chemical reactions.

stoke [FL MECH] A unit of kinematic viscosity, equal to the kinematic viscosity of a fluid with a dynamic viscosity of 1 poise and a density of 1 gram per cubic centimeter. Symbol St (formerly S). Also known as lentor (deprecated usage); stokes.

stoker [MECH ENG] A mechanical means, as used in a furnace, for feeding coal, removing refuse, controlling air supply, and mixing with combustibles for efficient burning.

stokes *See* stoke.

Stokes-Adams syndrome [MED] Syncopic or convulsive attacks occurring in patients with complete heart block.

Stokes drift [FL MECH] The drift of particles in a gravity wave, which arises from the fact that particle velocities are periodic with a mean which is not zero.

Stokes flow [FL MECH] Fluid flow in which the Reynolds number is very small, so that the nonlinear terms in the Navier-Stokes equations can be neglected.

Stokes frequencies [OPTICS] Scattered (secondary) light in the Raman effect (when a high-intensity light beam passes through a transparent medium) that occurs at frequencies smaller than the frequency of the primary beam.

Stokes' integral theorem [MATH] The analog of Green's theorem in n-dimensional euclidean space; that is, a line integral of $F_1(x_1, x_2, \ldots, x_n)dx_1 + \ldots + F_n(x_1, x_2, \ldots, x_n)dx_n$ over a closed curve equals an integral of an expression containing various partial derivatives of $F_1, \ldots, F_n$ over a surface bounded by the curve.

stokesite [MINERAL] $CaSnSi_3O_9 \cdot 2H_2O$ A colorless orthorhombic mineral composed of hydrous calcium tin silicate occurring in crystals.

Stokes' law [FL MECH] At low velocities, the frictional force on a spherical body moving through a fluid at constant velocity is equal to 6π times the product of the velocity, the fluid viscosity, and the radius of the sphere. [SPECT] The wavelength of luminescence excited by radiation is always greater than that of the exciting radiation.

Stokes line [SPECT] A spectrum line in luminescent radiation whose wavelength is greater than that of the radiation which excited the luminescence, and thus obeys Stokes' law.

Stokes number 1 [FL MECH] A dimensionless number used in the study of the dynamics of a particle in a fluid, equal to the product of the dynamic viscosity of the fluid and the particle's vibration time, divided by the product of the fluid density and a characteristic length. Symbol St.

Stokes number 2 [ENG] A dimensionless number used in the calibration of rotameters, equal to $1.042\ m_f\ g\rho\ (1 - \rho/\rho_f)R^3/\mu^2$, where ρ and μ are the density and dynamic viscosity of the fluid respectively, m_f and ρ_f are the mass and density of the float respectively, and R is the ratio of the radius of the tube to the radius of the float. Symbol St_2.

Stokes shift [SPECT] The displacement of spectral lines or bands of luminescent radiation toward longer wavelengths than those of the absorption lines or bands.

Stokes stream function [FL MECH] A one-component vector potential function used in analyzing and describing a steady, axially symmetric fluid flow; at any point it is equal to $\frac{1}{2}\pi$ times the mass rate of flow inside the surface generated by rotating the streamline on which the point is located about the axis of symmetry.

Stokes stretcher [MED] A basket-type stretcher constructed of tubular steel and strong wire mesh, and which acts as a splint for the entire body.

stoking [MET] Presintering or sintering a metal powder in such a way as to advance the compacts through the furnace at a fixed rate. Also known as continuous sintering.

STOL *See* short takeoff and landing.

STOL aircraft [AERO ENG] Heavier-than-air craft that cannot take off and land vertically, but can operate within areas substantially more confined than those normally required by aircraft of the same size. Derived from short takeoff and landing aircraft.

stolon [BOT] *See* runner. [INV ZOO] An elongated projection of the body wall from which buds are formed giving rise to new zooids in Anthozoa, Hydrozoa, Bryozoa, and Ascidiacea. [MYCOL] A hypha produced above the surface and connecting a group of conidiophores.

Stolonifera [INV ZOO] An order of the Alcyonaria, lacking a coenenchyme; they form either simple (*Clavularia*) or rather complex colonies (*Tubipora*).

stolzite [MINERAL] $PbWO_4$ A tetragonal mineral composed of native lead tungstate; it is isomorphous with wulfenite and dimorphous with raspite.

stoma [BIOL] A small opening or pore in a surface. [BOT] One of the minute openings in the epidermis of higher plants which are regulated by guard cells and through which gases and water vapor are exchanged between internal spaces and the external atmosphere.

stomach [ANAT] The tubular or saccular organ of the vertebrate digestive system located between the esophagus and the intestine and adapted for temporary food storage and for the preliminary stages of food breakdown.

stomatitis [MED] Inflammation of the soft tissues in the mouth.

stomatoblastula [INV ZOO] A blastula stage in some sponges capable of engulfing maternal amebocytes for nutrition.

stomatology [MED] The branch of medical science that concerns the anatomy, physiology, pathology, therapeutics, and hygiene of the oral cavity, of the tongue, teeth, and adjacent structures and tissues, and of the relationship of that field to the entire body.

Stomatopoda [INV ZOO] The single order of the Eumalacostraca in the superorder Hoplocarida distinguished by raptorial arms, especially the second pair of maxillipeds.

Stomiatoidei [VERT ZOO] A suborder of fishes of the order Salmoniformes including the lightfishes and allies, which are of small size and often grotesque form and are equipped with photophores.

stomocnidae nematocyst [INV ZOO] A nematocyst which has an open-ended thread.

stomodaeum [EMBRYO] The anterior part of the embryonic alimentary tract formed as an invagination of the ectoderm.

stone [GEOL] **1.** A small fragment of rock or mineral. **2.** *See* stony meteorite. [LAP] A cut and polished natural gemstone. [MECH] A unit of mass in common use in the United Kingdom, equal to 14 pounds or 6.35029318 kilograms.

stoneboat [MIN ENG] A flat runnerless sled for transporting heavy material.

stone bubble *See* lithophysa.

stone canal [INV ZOO] A canal in many echinoderms that has a more or less calcified wall and that leads from the madreporite to the ring vessel.

stone cell *See* brachysclereid.
stone coal *See* anthracite.
stone dust [MIN ENG] Inert dust spread on roadways in coal mines as a defense against the danger of coal-dust explosions; effective because the stone dust absorbs heat.
stone-dust barrier [MIN ENG] A device erected in mine roadways to arrest explosions; consists of trays or Vee troughs loaded with stone dust, which are upset or overturned by the pressure wave in front of an explosion and the flame, producing a dense cloud of inert dust which blankets the flame and stops further propagation of the explosion.
stone fruit *See* drupe.
stone gobber [MIN ENG] In bituminous coal mining, one who removes stone and other refuse from coal mine floors and dumps the refuse into mine cars for disposal.
stone ice *See* ground ice.
stone polygon *See* sorted polygon.
stoner [FOOD ENG] A machine that removes stones and other undesirable material from coffee beans and other crops before the crops are processed further.
stone ring [GEOL] A ring of stones surrounding a central area of finer material; characteristic of sorted circle and sorted polygon.
Stone's representation theorem [MATH] This theorem determines the nature of all unitary representations of locally compact Abelian groups.
Stone's theorem [MATH] Every Boolean ring is isomorphic to a ring of subsets of some set.
stoneware [MATER] Vitrified ware with impermeable surface; used for corrosive materials in the laboratory and for some industrial operations.
Stone-Weierstrass theorem [MATH] If S is a collection of continuous real-valued functions on a compact space E, which contains the constant functions, and if for any pair of distinct points x and y in E there is a function f in S such that $f(x)$ is not equal to $f(y)$, then for any continuous real-valued function g on E there is a sequence of functions, each of which can be expressed as a polynomial in the functions of S with real coefficients, that converges uniformly to g.
stonework [CIV ENG] A structure or the part of a structure built of stone.
stonewort [BOT] The common name for algae comprising the class Charophyceae, so named because most species are lime-encrusted.
Stoney gate [CIV ENG] A crest gate which moves along a series of rollers traveling vertically in grooves in masonry piers, independently of the gate and piers.
stony coral [INV ZOO] Any coral characterized by a calcareous skeleton.
stony-iron meteorite [GEOL] Any of the rare meteorites containing at least 25% of both nickel-iron and heavy basic silicates. Also known as iron-stony meteorite; lithosiderite; sideraerolite; siderolite; syssiderite.
stony meteorite [GEOL] Any meteorite composed principally of silicate minerals, especially olivine, pyroxene, and plagioclase. Also known as aerolite; asiderite; meteoric stone; meteorolite; stone.
stooping [METEOROL] An atmospheric refraction phenomenon; a special case of sinking in which the curvature of light rays due to atmospheric refraction decreases with elevation so that the visual image of a distant object is foreshortened in the vertical.
stop [OPTICS] The aperture or useful opening of a lens, usually adjustable by means of a diaphragm.
stop and stay *See* absolute stop.
stop band *See* rejection band.
stop bath [GRAPHICS] When a negative or print is removed from the developer, it is usually placed in a stop bath to halt the action of the developer immediately; a common stop bath is a solution of 2 to 5% acetic or citric acid, or potassium metabisulfite.
stop bead [BUILD] A molding on the pulley stile of a window frame; forms one side of the groove for the inner sash.
stop bits [COMPUT SCI] The last two bits transmitted in asynchronous data transmission to unequivocally indicate the end of a word.
stop cock [ENG] A small valve for stopping or regulating the flow of a fluid through a pipe.
stop down [OPTICS] To reduce the size of a lens aperture.
stope [MIN ENG] **1.** To excavate ore in a vein by driving horizontally upon it a series of workings, one immediately over the other, or vice versa; each horizontal working is called a stope because when a number of them are in progress, each working face under attack assumes the shape of a flight of stairs. **2.** Any subterranean extraction of ore except that which is incidentally performed in sinking shafts or driving levels for the purpose of opening the mine.
stope assay plan [MIN ENG] A plan that details assay value of ore exposures in a stope.
stope board [MIN ENG] A timber staging on the floor of a stope for setting a rock drill; the stage is tilted so that the bottom holes can be drilled in the same inclined direction.
stope fillings [MIN ENG] Broken waste material or low-grade matter from a lode or vein used to fill stopes on abandonment.
stope hoist [MIN ENG] A small, portable, compressed-air hoist for operating a scraper-loader or for pulling heavy timbers into position, often used in narrow stopes.
stop element [COMMUN] The last element of a character in certain serial transmissions, used to ensure the recognition of the next start element.
stope pillar [MIN ENG] An ore column left in place to support the stope.
stoper *See* stoping drill.
stoping drill [MIN ENG] A small air or electric drill, usually mounted on an extensible column, for working stopes, raises, and narrow workings. Also known as stoper.
stoping ground [MIN ENG] Part of an ore body opened by drifts and raises, and ready for breaking down.
stoplog [CIV ENG] A log, plank, or steel or concrete beam that fits into a groove or rack between walls or piers to prevent the flow of water through an opening in a dam, conduit, or other channel.
stop loop *See* loop stop.
stop number *See* f number.
stop nut [DES ENG] **1.** An adjustable nut that restricts the travel of an adjusting screw. **2.** A nut with a compressible insert that binds it so that a lock washer is not needed.
stopoff *See* resist.
stoppage [ORD] A jam in an automatic weapon; the condition of a weapon being jammed.
stopping [MIN ENG] A brattice, or more commonly, a masonry or brick wall built across old headings, chutes, or airways to confine the ventilating current to certain passages, or to lock up the gas in old workings, or to smother a mine fire. [NUCLEO] The decrease in kinetic energy of an ionizing particle as a result of energy losses along its path through matter.
stopping capacitor *See* coupling capacitor.
stopping off [MET] **1.** Local deposition of a protective coating, such as copper or fireclay, to prevent carburization, decarburization, or nitriding during heat treatment. **2.** Filling up a portion of the mold cavity to keep out molten metal. **3.** Applying a nonconducting layer to avoid electrodeposition in certain areas.
stopping out [GRAPHICS] A photomechanical process in which opaque material is applied to photographic negatives to cover the material that is not to be reproduced. Also known as staging.
stopping potential [ELECTR] Voltage required to stop the outward movement of electrons emitted by photoelectric or thermionic action.
stopping power [NUCLEO] The energy lost by a charged particle passing through a substance per unit length of path; related concepts are mass, atomic, molecular, and relative stopping power. Also known as linear energy transfer (LET); linear stopping power.
stopping rule [STAT] A rule which specifies when observation is to be discontinued in sequential trials.
stop signal [COMMUN] Signal that initiates the transfer of facsimile equipment from active to standby conditions.
stop valve [ENG] A valve that can be opened or closed to regulate or stop the flow of fluid in a pipe.
stopwatch [HOROL] A watch with one or more sweep hands that can be started or stopped at will by pressing a small button; used to measure elapsed time.
stopwater [NAV ARCH] A canvas, backed with red lead or some other substance, fitted between metal parts of a ship to make it watertight.
storable propellant [MATER] A propellant capable of being

placed and kept in a tank without benefit of special measures for temperature or pressure control.

storage [COMPUT SCI] Any device that can accept, retain, and read back one or more times; the means of storing data may be chemical, electrical, magnetic, mechanical, or sonic.

storage allocation [COMPUT SCI] The process of assigning storage locations to data or instructions in a digital computer.

storage and retrieval system [COMPUT SCI] An organized method of putting items away in a manner which permits their recall or retrieval from storage. Also known as storetrieval system.

storage area [COMPUT SCI] A specified set of locations in a storage unit. Also known as zone.

storage battery [ELEC] A connected group of two or more storage cells or a single storage cell. Also known as accumulator; accumulator battery; rechargeable battery; secondary battery.

storage battery locomotive [MIN ENG] An underground locomotive powered by storage batteries.

storage calorifier *See* cylinder.

storage camera *See* iconoscope.

storage capacity [COMPUT SCI] The quantity of data that can be retained simultaneously in a storage device; usually measured in bits, digits, characters, bytes, or words. Also known as capacity; memory capacity.

storage cell [COMPUT SCI] An elementary (logically indivisible) unit of storage; the storage cell can contain one bit, character, byte, digit (or sometimes word) of data. [ELEC] An electrolytic cell for generating electric energy, in which the cell after being discharged may be restored to a charged condition by sending a current through it in a direction opposite to that of the discharging current. Also known as secondary cell.

storage compacting [COMPUT SCI] The practice, followed on multiprogramming computers which use dynamic allocation, of assigning and reassigning programs so that the largest possible area of adjacent locations remains available for new programs.

storage cycle [COMPUT SCI] **1.** Periodic sequence of events occurring when information is transferred to or from the storage device of a computer. **2.** Storing, sensing, and regeneration from parts of the storage sequence.

storage cycle time [COMPUT SCI] The time required to read and restore one word from a computer storage, or to write one word in computer storage.

storage density [COMPUT SCI] The number of characters stored per unit-length of area of storage medium (for example, number of characters per inch of magnetic tape).

storage device [COMPUT SCI] A mechanism for performing the function of data storage: accepting, retaining, and emitting (unchanged) data items. Also known as computer storage device.

storage disease [MED] Metabolic abnormality in which some substance (such as fats, proteins, or carbohydrates) accumulates in abnormal amounts in certain body tissues.

storage dump [COMPUT SCI] A printout of the contents of all or part of a computer storage. Also known as memory dump; memory print.

storage element [COMPUT SCI] Smallest part of a digital computer storage used for storing a single bit.

storage equation [HYD] The equation of continuity applied to unsteady flow; it states that the fluid inflow to a given space during an interval of time minus the outflow during the same interval is equal to the change in storage; it is applied in hydrology to the routing of floods through a reservoir or a reach of a stream; the moisture continuity equation applied to the atmosphere is a modification of this.

storage factor *See* Q.

storage fill [COMPUT SCI] Storing a pattern of characters in areas of a computer storage that are not intended for use in a particular machine run; these characters cause the machine to stop if one of these areas is erroneously referred to. Also known as memory fill.

storage hierarchy [COMPUT SCI] The sequence of storage devices, characterized by speed, type of access, and size for the various functions of a computer; for example, core storage from programs and data, disks or drums for temporary storage of massive amounts of data, tapes and cards for back up storage.

storage integrator [COMPUT SCI] In an analog computer, an integrator used to store a voltage in the hold condition for future use while the rest of the computer assumes another computer control state.

storage key [COMPUT SCI] A special set of bits associated with every word or character in some block of storage, which allows tasks having a matching set of protection key bits to use that block of storage.

storage location [COMPUT SCI] A digital-computer storage position holding one machine word and usually having a specific address.

storage mark [COMPUT SCI] The name given to a point location which defines the character space immediately to the left of the most significant character in accumulator storage.

storage medium [COMPUT SCI] Any device or recording medium into which data can be copied and held until some later time, and from which the entire original data can be obtained.

storage oscilloscope [ELECTR] An oscilloscope that can retain an image for a period of time ranging from minutes to days, or until deliberately erased to make room for a new image.

storage print [COMPUT SCI] In computers, a utility program that records the requested core image, core memory, or drum locations in absolute or symbolic form either on the line-printer or on the delayed-printer tape.

storage protection [COMPUT SCI] Any restriction on access to storage blocks, with respect to reading, writing, or both. Also known as memory protection.

storage register [COMPUT SCI] A register in the main internal memory of a digital computer storing one computer word. Also known as memory register.

storage reservoir *See* impounding reservoir.

storage rings [NUCLEO] Annular vacuum chambers in which charged particles can be stored, without acceleration, by a magnetic field of suitable focusing properties; they are used to stretch effectively the duty cycle of a particle accelerator or to produce colliding beams of particles, resulting in a greater possible center of mass energy.

storage ripple [COMPUT SCI] A hardware function, used during maintenance periods, which reads or writes zeros or ones through available storage locations to detect a malfunctioning storage unit.

storage routing *See* flood routing.

storage surface [COMPUT SCI] In computers, the surface (screen), in an electrostatic storage tube, on which information is stored.

storage tank *See* tank.

storage time [ELECTR] **1.** The time required for excess minority carriers stored in a forward-biased *pn* junction to be removed after the junction is switched to reverse bias, and hence the time interval between the application of reverse bias and the cessation of forward current. **2.** The time required for excess charge carriers in the collector region of a saturated transistor to be removed when the base signal is changed to cut-off level, and hence for the collector current to cease. [PHYS] *See* decay time.

storage tube [ELECTR] An electron tube employing cathode-ray beam scanning and charge storage for the introduction, storage, and removal of information. Also known as electrostatic storage tube; memory tube (deprecated usage).

storage-type camera tube *See* iconoscope.

store [COMPUT SCI] **1.** To record data into a (static) data storage device. **2.** To preserve data in a storage device.

store and forward [COMMUN] A procedure in data communications in which data are stored at some point between the sender and the receiver and are later forwarded to the receiver.

stored-energy welding [MET] Welding by means of energy accumulated electrostatically, electrochemically, or electromagnetically at a low rate.

stored-program computer [COMPUT SCI] A digital computer which executes instructions that are stored in main memory as patterns of data.

stored program control [COMMUN] Electronic control of a telecommunications switching system by means of a program of instructions stored in bulk electronic memory. Abbreviated SPC.

stored program logic [COMPUT SCI] Program that is stored in a memory unit containing logical commands in order to perform the same processes on all problems.

stored routine [COMPUT SCI] In computers, a series of instructions in storage to direct the step-by-step operation of the machine.

stored word [COMPUT SCI] The actual linear combination of

letters (or their machine equivalents) to be placed in the machine memory; this may be physically quite different from a dictionary word.

storethrough [COMPUT SCI] The process of updating data in main memory each time the central processing unit writes into a cache.

store transmission bridge [ELEC] Transmission bridge, which consists of four identical impedance coils (the two windings of the back-bridge relay and live relay of a connector, respectively) separated by two capacitors, which couples the calling and called telephones together electrostatically for the transmission of voice-frequency (alternating) currents, but separates the two lines for the transmission of direct current for talking purposes (talking current).

storetrieval system *See* storage and retrieval system.

stork [VERT ZOO] Any of several species of long-legged wading birds in the family Ciconiidae.

storm [METEOROL] An atmospheric disturbance involving perturbations of the prevailing pressure and wind fields on scales ranging from tornadoes (1 kilometer across) to extratropical cyclones (2–3000 km across); also the associated weather (rain storm or blizzard) and the like.

storm beach [GEOL] A ridge composed of gravel or shingle built up by storm waves at the inner margin of a beach.

storm cellar *See* cyclone cellar.

storm center [METEOROL] The area of lowest atmospheric pressure of a cyclone; this is a more general expression than eye of the storm, which refers only to the center of a well-developed tropical cyclone, in which there is a tendency of the skies to clear.

storm choke [PETRO ENG] A device installed in an oil-well tubing string below the surface to shut in the well when the flow reaches a predetermined rate; provides an automatic shutoff in case Christmas-tree or control valves are damaged. Also known as tubing safety valve.

storm delta *See* washover.

storm detection [METEOROL] Any of the methods and techniques used to detect the formation of severe storms, including procedures for locating, tracking, and forecasting; special tools adapted to this purpose are radar and satellites to supplement meteorological charts and visual observations.

storm drain [CIV ENG] A drain which conducts storm surface, or wash water, or drainage after a heavy rain from a building to a storm or a combined sewer. Also known as storm sewer.

storm ice foot [OCEANOGR] An ice foot produced by the breaking of a heavy sea or the freezing of wind-driven spray.

storm microseism [GEOPHYS] A microseism lasting 25 or more seconds, caused by ocean waves.

storm model [METEOROL] A physical, three-dimensional representation of the inflow, outflow, and vertical motion of air and water vapor in a storm.

storm sewage [CIV ENG] Refuse liquids and waste carried by sewers during or following a period of heavy rainfall.

storm sewer *See* storm drain.

storm surge [OCEANOGR] A rise above normal water level on the open coast due only to the action of wind stress on the water surface; includes the rise in level due to atmospheric pressure reduction as well as that due to wind stress. Also known as storm wave; surge.

storm tide [OCEANOGR] Height of a storm surge or hurricane wave above the astronomically predicted sea level.

storm track [METEOROL] The path followed by a center of low atmospheric pressure.

storm transposition [METEOROL] The transfer of precipitation patterns or DDA (depth-duration-area) values from the areas where they actually occurred to areas where they could occur; if necessary, the precipitation values are modified to account for differences in elevation or intervening barriers, and restrictions on change in shape or orientation of the storm may be imposed.

storm warning [METEOROL] A specially worded forecast of severe weather conditions, designed to alert the public to impending dangers; usually, this refers to a warning of potentially dangerous wind conditions for marine interests.

storm-warning signal [METEOROL] An arrangement of flags or pennants (by day) and lanterns (by night) displayed on a coastal storm-warning tower.

storm-warning tower [METEOROL] A tower, generally constructed of steel, for displaying coastal storm-warning signals.

storm wave *See* storm surge.

storm wind [METEOROL] In the Beaufort wind scale, a wind whose speed is from 56 to 63 knots (64 to 72 miles per hour or 104 to 117 kilometers per hour).

storm window [BUILD] A sash placed on the outside of an ordinary window to give added protection from the weather.

Storrow whirling hygrometer [ENG] A hygrometer in which the two thermometers are mounted side by side on a brass frame and fitted with a loose handle so that it can be whirled in the atmosphere to be tested; the instrument is whirled at some 200 revolutions per minute for about 1 minute and the readings on the wet- and dry-bulb thermometers are recorded; used in conjunction with Glaisher's or Marvin's hygrometrical tables.

story [BUILD] The space between two floors or between a floor and the roof.

storyboard [GRAPHICS] A series of small drawings intended to show the sequence and continuity of a proposed motion picture, television production, or slide presentation; only key portions of the action or story are shown, which help to visualize the total idea.

stoss [GEOL] Of the side of a hill, knob, or prominent rock, facing the upstream side of a glacier.

stove [ENG] A chamber within which a fuel-air mixture is burned to provide heat, the heat itself being radiated outward from the chamber; used for space heating, process-fluid heating, and steel blast furnaces.

stove bolt [DES ENG] A coarsely-threaded bolt with a slotted head, which with a square nut is used to join metal parts.

stovepipe [ENG] Large-diameter pipe made of sheet steel.

stovewood [MATER] Firewood sawed into short lengths for use in a stove.

stoving *See* baking.

stowage diagram [NAV ARCH] A scaled drawing included in the loading plan of a ship for each deck or platform showing the exact location of all cargo, and specifying for each location such data as overall dimensions, location of obstructions, dimensions of the overhead hatch opening, dimensions of bow door or stern gate opening, minimum clearances to the overhead, bale cubic capacity, square feet of deck area, and the capacity of booms.

stowage factor [NAV ARCH] The number which expresses the space, in cubic feet, occupied by a long ton of any commodity as prepared for shipment, including all crating or packaging.

stowage plan [NAV ARCH] A completed stowage diagram showing each type of material that has been loaded and its exact stowage location; each port of discharge is indicated by a particular color or other symbol; deck and between-deck cargo is shown in perspective, cargo stowed in the lower hold is shown in profile, but vehicles are shown in perspective, regardless of stowage.

stowboard [MIN ENG] A mine heading used for storing waste.

STP *See* standard conditions.

STPP *See* sodium tripolyphosphate.

STR *See* self-tuning regulator.

strabismus [MED] Incoordinate action of the extrinsic ocular muscles resulting in failure of the visual axes to meet at the desired objective point. Also known as cast; heterotropia; squint.

straddle milling [MECH ENG] Face milling of two parallel vertical surfaces of a workpiece simultaneously by using two side-milling cutters.

strafe [ORD] To rake a body of troops or other persons with gunfire or rocket fire at close range and from a flying aircraft, or to attack a roadway, railyard, factory, or other installation with bullets, projectiles, or rockets fired from a low firing airplane.

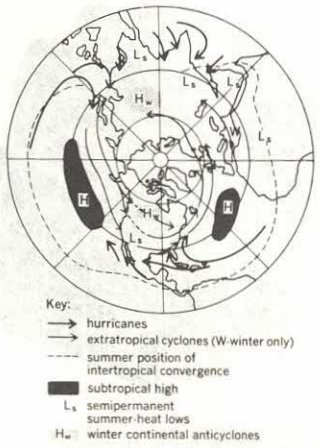
straggling [PHYS] Random variations in some property associated with the passage of ions through matter.

straight beam [ENG] In ultrasonic testing, a longitudinal wave emitted from an ultrasonic search unit in a wavetrain which travels perpendicularly to the test surface.

straight bevel gear [DES ENG] A simple form of bevel gear having straight teeth which, if extended inward, would come together at the intersection of the shaft axes.

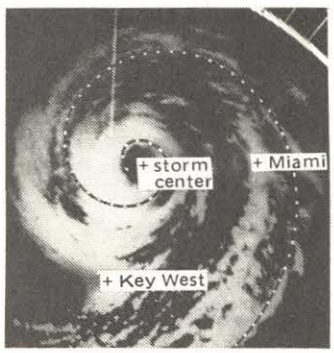
straight dynamite [MATER] Any of the powerful, quick-acting dynamites composed of nitroglycerin, a combustible such as wood meal, sodium nitrate, and an antacid such as calcium or magnesium carbonate; made in 15 to 60% strength,

STORM



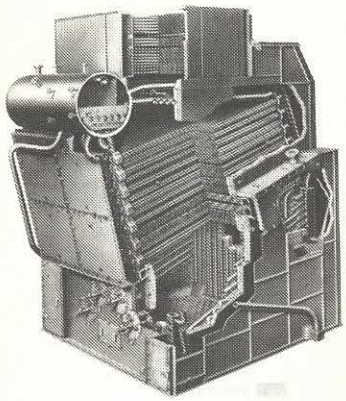
Principal tracks of extratropical cyclones and hurricanes with significantly associated features in the Northern Hemisphere.

STORM DETECTION



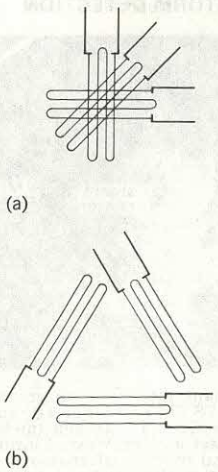
Hurricane Donna as observed at 0840 EST, September 10, 1960, on the WSR-57, 10-centimeter radar set at Key West, Florida. A spiral overlay of crossover angle $\alpha = 15°$ has been fitted to the precipitation bands in order to indicate the location of the storm center. *(ESSA photograph)*

STRAIGHT-TUBE BOILER



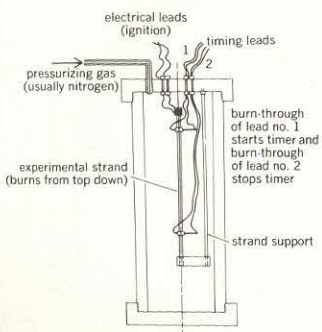
A straight-tube-type marine boiler, which has been fitted with a superheater and an air heater and arranged for oil firing. *(Babcock and Wilcox Co.)*

STRAIN ROSETTE



Strain rosettes. *(a)* 45° type; *(b)* 60° type.

STRAND BURNER



Strand burner apparatus.

the percentage representing the proportion of nitroglycerin in the dynamite.

straightedge [DES ENG] A strip of wood, plastic, or metal with one or more long edges made straight with a desired degree of accuracy.

straightening vanes [ENG] Horizontal vanes mounted on the inside of fluid conduits to reduce the swirling or turbulent flow ahead of the orifice or the venturi meters.

straight filing [ENG] Filing by pushing a file in a straight line across the work.

straightforward circuit [COMMUN] Circuit in which signaling is automatic and in one direction.

straightforward trunking [COMMUN] In a manual telephone switchboard system, that method of operation in which the A operator gives the order to the B operator over the trunk on which talking later takes place.

straight-line coding [COMPUT SCI] A digital computer program or routine (section of program) in which instructions are executed sequentially, without branching, looping, or testing.

straight-line mechanism [MECH ENG] A linkage so proportioned and constrained that some point on it describes over part of its motion a straight or nearly straight line.

straight piecework system *See* one-hundred-percent premium plan.

straight polarity [MET] Arrangement of an arc welding circuit in which the electrode is connected to the negative terminal.

straight proportional system *See* one-hundred-percent premium plan.

straight-run [CHEM ENG] Petroleum fractions derived from the straight distillation of crude oil without chemical reaction or molecular modification. Also known as virgin.

straight-run distillation [CHEM ENG] Continuous nonreactive distillation of petroleum oil to separate it into products in the order of their boiling points.

straight-run gasoline [MATER] Gasoline comprised of only natural ingredients from crude oil or natural-gas liquids; for example, no cracked, polymerized, alkylated, reformed, or visbroken stock.

straight-run pitch [MATER] A petroleum pitch that is run directly during distillation to the desired consistency without any compounding or aftertreatment.

straight-run stock *See* virgin stock.

straight sinus [ANAT] A sinus of the dura mater running from the inferior sagittal sinus along the junction of the falx cerebri and tentorium to the transverse sinus.

straight strap clamp [DES ENG] A clamp made of flat stock with an elongated slot for convenient positioning; held in place by a T bolt and nut.

straight-tube boiler [MECH ENG] A water-tube boiler in which all the tubes are devoid of curvature and therefore require suitable connecting devices to complete the circulatory system. Also known as header-type boiler.

straight turning [MECH ENG] Work turned in a lathe so that the diameter is constant over the length of the workpiece.

straight vertical antenna [ELECTROMAG] An antenna consisting of a straight vertical wire.

straightway pump [MECH ENG] A pump with suction and discharge valves arranged to give a direct flow of fluid.

straight wheel [DES ENG] A grinding wheel whose sides or face are straight and not in any way changed from a cylindrical form.

strain [MECH] Change in length of an object in some direction per unit undistorted length in some direction, not necessarily the same; the nine possible strains form a second-rank tensor.

strain aging [MET] Change of mechanical properties of a metal by aging induced by plastic deformation.

strain axis *See* principal axis of strain.

strain bursts [MIN ENG] Rock bursts in which there is spitting, flaking, and sudden fracturing at the face, indicating increased pressure at the site.

strain ellipsoid [MECH] A mathematical representation of the strain of a homogeneous body by a strain that is the same at all points or of unequal stress at a particular point. Also known as deformation ellipsoid.

strain energy [MECH] The potential energy stored in a body by virtue of an elastic deformation, equal to the work that must be done to produce this deformation.

strainer [ENG] A porous or screen medium used ahead of equipment to filter out harmful solid objects and particles from a fluid stream; used for example, in river-water intakes for process plants or to remove decomposition products from the circulating fluid in a hydraulic system.

strain figure [PHYS] A series of markings, such as Lüder's lines, that may appear on the surface of a body subjected to stress, indicating its state of deformation. Also known as flow figure.

strain foil [ENG] A strain gage produced from thin foil by photoetching techniques; may be applied to curved surfaces, has low transverse sensitivity, exhibits negligible hysteresis under cycling loads, and creeps little under sustained loads.

strain gage [ENG] A device which uses the change of electrical resistance of a wire under strain to measure pressure.

strain gage accelerometer [ENG] Any accelerometer whose operation depends on the fact that the resistance in a wire changes when it is strained; these devices are classified as bonded or unbonded.

strain gage bridge [ENG] A bridge arrangement of four strain gages, cemented to a stressed part in such a way that two gages show increases in resistance and two show decreases when the part is stressed; the change in output voltage under stress is thus much higher than that for a single gage.

strain hardening [MET] Increasing the hardness and tensile strength of a metal by cold plastic deformation.

strain insulator [ELEC] An insulator used between sections of a stretched wire or antenna to break up the wire into insulated sections while withstanding the total pull of the wire.

strain rate [MECH] The time rate for the usual tensile test.

strain relief method [MIN ENG] A method for determining absolute strain and stress within rock in place by boring a smooth hole in the rock and inserting a gage capable of measuring diametral deformation, and overcoring the hole with a large coring bit; the change in the diameter of the hole when the rock cylinder is free to expand is a function of the original stress in the rock and its elastic modulus.

strain restoration method [MIN ENG] A method for determining absolute strain and stress within rock in place by the installation of strain gages on the rock surface, cutting of a slot in the rock between the strain gages so that the surface rock is free to expand, installation of a flat jack in the slot, and application of hydraulic pressure to the flat jack until the rock is restored to its original state of strain; the original stress in the rock is presumed to be equal to the final pressure in the flat jack.

strain rosette [MECH] A pattern of intersecting lines on a surface along which linear strains are measured to find stresses at a point.

strain seismograph [ENG] A seismograph that detects secular strains related to tectonic processes and tidal yielding of the solid earth; also detects strains associated with propagating seismic waves.

strain seismometer [ENG] A seismometer that measures relative displacement of two points in order to detect deformation of the ground.

strain shadow *See* pressure shadow.

strain-slip [GEOL] A rock fracture resulting in a slight displacement.

strain-slip cleavage *See* slip cleavage.

strait [GEOGR] **1.** A neck of land. **2.** A narrow waterway connecting two larger bodies of water.

strake [MIN ENG] A relatively wide trough set at a slope and covered with a blanket or corduroy for catching comparatively coarse gold and any valuable mineral. [NAV ARCH] A continuous band of planking or plating running fore and aft along the hull of a ship.

strand [ENG] **1.** One of a number of steel wires twisted together to form a wire rope or cable or an electrical conductor. **2.** A thread, yarn, string, rope, wire, or cable of specified length. **3.** One of the fibers or filaments twisted or laid together into yarn, thread, rope, or cordage. [GEOL] A beach bordering a sea or an arm of an ocean. [NAV] To run aground; term strand usually refers to a serious grounding, while the term "ground" refers to any grounding, however slight. [TEXT] An element of a woven material.

strand burner [ENG] A device that determines the rate at which a propellant burns at various pressures by using a propellant strand.

stranded caisson *See* box caisson.

stranded conductor *See* stranded wire.

stranded floe ice foot *See* stranded ice foot.

stranded ice [OCEANOGR] Ice held in place by virtue of being grounded. Also known as grounded ice.

stranded ice foot [OCEANOGR] An ice foot formed by the stranding of floes or small icebergs along a shore; it may be built up by freezing spray or breaking seas. Also known as stranded floe ice foot.

stranded wire [ELEC] A conductor composed of a group of wires or a combination of groups of wires, usually twisted together. Also known as stranded conductor.

strand flat *See* wave-cut platform.

strandline [GEOL] **1.** A beach raised above the present sea level. **2.** The level at which a body of standing water meets the land.

strandline *See* shoreline.

strange attractor [PHYS] An object in a phase space describing a fluid in Rayleigh-Benard convection, which is filled by the aperiodic state to which the fluid evolves, and which has a fractal (noninteger) dimension.

strangeness conservation [PARTIC PHYS] The principle that the sum of the strangeness numbers of the hadrons in an isolated system is constant; it is violated by the weak interactions.

strangeness number [PARTIC PHYS] A quantum number carried by hadrons, equal to the hypercharge minus the baryon number. Symbol S.

strange particle [PARTIC PHYS] A hadron whose strangeness number is not zero, for example, a K-meson or a Σ-hyperon.

strange quark [PARTIC PHYS] A quark with an electric charge of $-\frac{1}{3}$, baryon number of $\frac{1}{3}$, strangeness of -1, and 0 charm. Symbolized s.

stranger [AERO ENG] In air intercept, an unidentified aircraft, bearing, distance, and altitude as indicated relative to an aircraft.

strangulated hernia [MED] A hernia involving the intestine in which circulation of the blood and fecal current are blocked.

strangulation [MED] **1.** Asphyxiation due to obstruction of the air passages, as by external pressure on the neck. **2.** Constriction of a part producing arrest of the circulation, as strangulation of a hernia.

strap bolt [DES ENG] **1.** A bolt with a hook or flat extension instead of a head. **2.** A bolt with a flat center portion and which can be bent into a U shape.

strap hammer [MECH ENG] A heavy hammer controlled and operated by a belt drive in which the head is slung from a strap, usually of leather.

strap hinge [DES ENG] A hinge fastened to a door and the adjacent wall by a long hinge.

strapped-down inertial navigation equipment [NAV] Inertial navigation equipment in which a stable platform and gimbal system are not used: the inertial devices are attached or strapped directly to the carrier; a computer utilizing gyro information resolves accelerations sensed along the carrier axes and refers these accelerations to an inertial frame of reference. Also known as gimballess inertial navigation equipment.

strapped magnetron [ELECTR] A multicavity magnetron in which resonator segments having the same polarity are connected together by small conducting strips to suppress undesired modes of oscillation.

strapped wall *See* battened wall.

strapping [ELEC] Connecting two or more points in a circuit or device with a short piece of wire or metal. [ELECTR] Connecting together resonator segments having the same polarity in a multicavity magnetron to suppress undesired modes of oscillation. [PETRO ENG] A petroleum industry procedure in which storage tanks are strapped (measured) on their outside with steel measuring tapes to calculate the volumetric capacity of the tank for increments of height.

strapping table [PETRO ENG] A tabular record of tank volume versus height so that taped (strapped) measurements of liquid depth can be converted into liquid volumes.

Strasbourg turpentine [MATER] A balsam from the European white fir; a heavy, thick material, it is sometimes used in painting mediums and glazes, but an excessive amount causes smearing and slow drying of the paint.

Stratco alkylation [CHEM ENG] A proprietary petroleum refinery process for the manufacture of alkylate gasoline; uses sulfuric acid as catalyst and refrigeration of reactor effluent to control isobutane-olefin ratio in the reactor feedstream. Also known as effluent refrigeration alkylation.

strategic [ORD] Of or pertaining to military measures or actions taken against the enemy's war-making effort.

strategic airlift [AERO ENG] The continuous, sustained air movement of units, personnel, and materiel in support of all U.S. Department of Defense agencies between area commands.

strategic air warfare [ORD] Air combat and supporting operations designed to effect, through the systematic application of force to a selected series of vital targets, the progressive destruction and disintegration of the enemy's war-making capacity to a point where the ability or the will to wage war is no longer retained; vital targets may include key manufacturing systems, sources of raw material, critical material, stockpiles, power systems, transportation systems, communication facilities, concentrations of uncommitted elements of enemy armed forces, key agricultural areas, and other such target systems.

strategic attack [ORD] An attack by means of aerospace forces directed at selected vital targets of an enemy nation so as to destroy its war-making capacity or will to fight.

strategic concentration [ORD] The assembly of designated forces in areas from which it is intended that operations of the assembled forces shall begin so that they are best disposed to initiate the plan of campaign.

strategic map [MAP] A map of medium scale, or smaller, used for planning of operations, including the movement, concentration, and supply of troops.

strategic material [IND ENG] A material needed for the industrial support of a war effort.

strategic mobility [ORD] The capability of a unit, command, force, or thing that enables it to be readily moved in advance of engagement with hostile forces.

strategic nuclear weapon [ORD] A nuclear weapon which is programmed primarily for use against strategic targets in strategic nuclear war.

strategic research [SCI TECH] Research conducted to produce specific applied programs.

strategic reserve [ORD] That quantity of material which is placed in a particular geographic location due to strategic considerations or in anticipation of major interruptions in the supply distribution system; it is over and above the stockage objective.

strategic target [ORD] Any installation, network, group of buildings, or the like, considered vital to a country's war-making capacity and singled out for attack.

strategic transport aircraft [AERO ENG] Aircraft designed primarily for the carriage of personnel or cargo over long distances.

strategy [MATH] In game theory a strategy is a specified collection of moves, which cover all possible situations, for the complete play of a given game.

strath [GEOL] **1.** A broad, elongate depression with steep sides on the continental shelf. **2.** An extensive remnant of a broad, flat valley floor that has undergone degradation following uplift.

strath terrace [GEOL] An extensive remnant of a strath from a former erosion cycle.

stratification [GEOL] An arrangement or deposition of sedimentary material in layers, or of sedimentary rock in strata. [HYD] **1.** The arrangement of a body of water, as a lake, into two or more horizontal layers of differing characteristics, especially densities. **2.** The formation of layers in a mass of snow, ice, or firn.

stratification index [GEOL] A measure of the beddedness of a stratigraphic unit, expressed as the number of beds in the unit per 100 feet (30 meters) of section.

stratification plane [GEOL] A demarcation between two layers of sedimentary rock, often signifying that the layers were deposited under different conditions.

stratified drift [GEOL] Fluvioglacial drift composed of material deposited by a meltwater stream or settled from suspension.

stratified flow [FL MECH] A two-phase flow in which a liquid flows along the bottom of a pipe and gas flows separately above it.

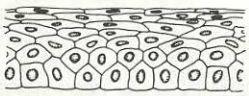
stratified fluid [FL MECH] A fluid having density variation along the axis of gravity, usually implying upward decrease of density, that is, a stratification characterized by static stability.

stratified ocean [OCEANOGR] An ocean where there is a vertical gradient of density.

stratified rock *See* sedimentary rock.

stratified sampling [STAT] A random sample of specified size is drawn from each stratum of a population.

STRATIFIED SQUAMOUS EPITHELIUM



Drawing of a section through stratified squamous epithelium showing arrangement of cells.

stratified squamous epithelium [HISTOL] A multiple-layered epithelium composed of thin, flat superficial cells and cuboidal and columnar deeper cells.

stratiform [GEOL] **1.** Descriptive of a layered mineral deposit of either igneous or sedimentary origin. **2.** Consisting of parallel bands, layers, or sheets. [METEOROL] Description of clouds of extensive horizontal development, as contrasted to the vertically developed cumuliform types.

stratiformis [METEOROL] A cloud species consisting of a very extensive horizontal layer or layers which need not be continuous; this species is the most common form of the genera altocumulus and stratocumulus and is occasionally found in cirrocumulus.

stratigrapher [GEOL] A geologist who deals with stratified rocks, for example, the classification, nomenclature, correlation, and interpretation of rocks.

stratigraphic geology *See* stratigraphy.

stratigraphic map [GEOL] A map showing the areal distribution, configuration, or aspect of a stratigraphic unit or surface, such as an isopach map or a lithofacies map.

stratigraphic oil fields [GEOL] Hydrocarbon reserves in stratigraphic (sedimentary) traps formed by the positioning of clastic materials through chemical deposition.

stratigraphic separation *See* stratigraphic throw.

stratigraphic sequence *See* sequence.

stratigraphic throw [GEOL] The thickness of the strata which originally separated two beds brought into contact at a fault. Also known as stratigraphic separation.

stratigraphic trap [GEOL] Sealing of a reservoir bed due to lithologic changes rather than geologic structure. Also known as porosity trap; secondary stratigraphic trap.

stratigraphic unit [GEOL] A stratum of rock or a body of strata classified as a unit on the basis of character, property, or attribute.

stratigraphy [GEOL] A branch of geology concerned with the form, arrangement, geographic distribution, chronologic succession, classification, correlation, and mutual relationships of rock strata, especially sedimentary. Also known as stratigraphic geology.

Stratiomyidae [INV ZOO] The soldier flies, a family of orthorrhaphous dipteran insects in the series Brachycera.

stratocumulus [METEOROL] A principal cloud type predominantly stratiform, in the form of a gray or whitish layer of patch, which nearly always has dark parts.

Stratofortress [AERO ENG] A United States all-weather, intercontinental, strategic heavy bomber powered by eight turbojet engines; it is capable of delivering nuclear and nonnuclear bombs, air-to-surface missiles, and decoys; its range is extended by in-flight refueling. Designated B-52.

Stratofreighter [AERO ENG] A United States strategic, aerial tanker-freighter powered by four reciprocating engines; it is equipped for inflight refueling of bombers and fighters. Designated KC-97.

Stratojet [AERO ENG] A United States all-weather strategic medium bomber; it is powered by six turbojet engines, has intercontinental range through in-flight refueling, and is capable of delivering nuclear and nonnuclear bombs. Designated B-47.

stratopause [METEOROL] The boundary or zone of transition separating the stratosphere and the mesosphere; it marks a reversal of temperature change with altitude.

stratoscope [OPTICS] A balloon-borne astronomical telescope for taking solar or other celestial photographs at high altitudes; subsequently, the photos are transmitted to a ground receiving station.

stratosphere [METEOROL] The atmospheric shell above the troposphere and below the mesosphere; it extends, therefore, from the tropopause to about 55 kilometers, where the temperature begins again to increase with altitude.

stratosphere radiation [GEOPHYS] Any infrared radiation involved in the complex infrared exchange continually proceeding within the stratosphere.

stratospheric coupling [METEOROL] The interaction between disturbances in the stratosphere and those in the troposphere.

stratospheric steering [METEOROL] The steering of lower-level atmospheric disturbances along the contour lines of the tropopause, which lines are presumably roughly parallel to the direction of the wind at the tropopause level.

Stratotanker [AERO ENG] A United States multipurpose aerial tanker-transport powered by four turbojet engines; and equipped for high speed, high-altitude refueling of bombers and fighters. Designated KC-135.

stratotype [GEOL] A specifically bounded type section of rock strata to which a time-stratigraphic unit is ascribed, ideally consisting of a complete and continuously exposed and deposited sequence of correlatable strata, and extending from a readily identifiable basal boundary to a readily identifiable top boundary.

stratovolcano [GEOL] A volcano constructed of lava and pyroclastics, deposited in alternating layers. Also known as composite volcano.

stratum *See* subpopulation.

stratum corneum [HISTOL] The outer layer of flattened keratinized cells of the epidermis.

stratum disjunctum [HISTOL] The outermost layer of desquamating keratinized cells of the stratum corneum.

stratum germinativum [HISTOL] The innermost germinative layer of the epidermis.

stratum granulosum [HISTOL] A layer of granular cells interposed between the stratum corneum and the stratum germinativum in the thick skin of the palms and soles.

stratum lucidum [HISTOL] A layer of irregular transparent epidermal cells with traces of nuclei interposed between the stratum corneum and stratum germinativum in the thick skin of the palms and soles.

stratus [METEOROL] A principal cloud type in the form of a gray layer with a rather uniform base; a stratus does not usually produce precipitation, but when it does occur it is in the form of minute particles, such as drizzle, ice crystals, or snow grains.

Strauss reaction [IMMUNOL] The exudative swelling of the scrotum in male hamsters and guinea pigs upon subcutaneous or intraperitoneal inoculation of *Pseudomonas mallei*, the causative agent of glanders.

straw [AGR] Grain stalks after threshing and usually mixed with leaves and chaff. [BOT] A stem of grain, such as wheat or oats.

strawberry [BOT] A low-growing perennial of the genus *Fragaria*, order Rosales, that spreads by stolons; the juicy, usually red, edible fruit consists of a fleshy receptacle with numerous seeds in pits or nearly superficial on the receptacle.

strawberry hemangioma [MED] A vascular birthmark characterized by a soft, raised, bright-red, lobular appearance.

straw oil [MATER] A straw-colored petroleum paraffin oil; used for many process applications.

strawwalker [AGR] A set of reciprocating notched bars inside a thresher or combine that push the straw to the rear.

stray [GEOL] A lenticular rock formation encountered unexpectedly in drilling an oil or a gas well; it differs from an adjacent persistent formation in lithology and hardness.

stray capacitance [ELECTR] Undesirable capacitance between circuit wires, between wires and the chassis, or between components and the chassis of electronic equipment.

stray current [ELEC] **1.** A portion of a current that flows over a path other than the intended path, and may cause electrochemical corrosion of metals in contact with electrolytes. **2.** An undesirable current generated by discharge of static electricity; it commonly arises in loading and unloading petroleum fuels and some chemicals, and can initiate explosions.

stray current corrosion [MET] Corrosion of metals caused by a stray current.

stray emission [PHYS] Emission of radiation that serves no useful purpose.

stray field [ELECTROMAG] Leakage of magnetic flux that spreads outward from a coil and does no useful work.

stray line [ENG] An ungraduated portion of the line connected to a current pole, used so that the pole will acquire the speed of the current before a measurement is begun.

strays *See* atmospheric interference.

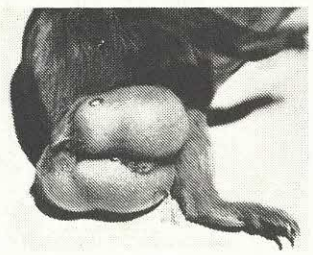
stray sand [GEOL] A stray composed of sandstone.

streak [MINERAL] The color of a powdered mineral, obtained by rubbing the mineral on a streak plate.

streak lightning [GEOPHYS] Ordinary lightning, of a cloud-to-ground discharge, that appears to be entirely concentrated in a single, relatively straight lightning channel.

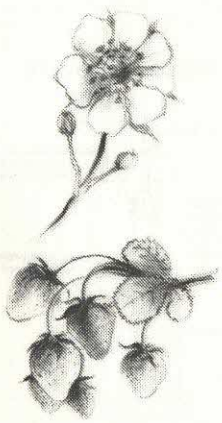
streak line [FL MECH] A line within a fluid which, at a given instant, is formed by those fluid particles which at some previous instant have passed through a specified fixed point in the fluid; an example is the line of color in a flow into which a dye is continuously introduced through a small tube, all dyed fluid particles having passed the tube's end.

STRAUSS REACTION



Strauss reaction in the guinea pig.

STRAWBERRY



Flower and fruit of a strawberry plant.

streak plate [MICROBIO] A method of culturing aerobic bacteria by streaking the surface of a solid medium in a petri dish with an inoculating wire or glass rod in a continuous movement so that most of the surface is covered; used to isolate majority members of a mixed population.

stream [HYD] A body of running water moving under the influence of gravity to lower levels in a narrow, clearly defined natural channel.

stream anchor [NAV ARCH] An anchor used in narrow channels to prevent the stern of the vessel moving with the tide.

stream-built terrace *See* alluvial terrace.

stream capacity [GEOL] The ability of a stream to carry detritus, measured at a given point per unit of time.

stream capture *See* capture.

stream channel [GEOL] A long, narrow, sloping troughlike depression where a natural stream flows or may flow. Also known as streamway.

stream channel form ratio [GEOL] The mathematical relationship between a stream channel width, depth, and channel perimeter.

stream cipher [COMMUN] A cipher that makes use of an algorithmic procedure to produce an unending sequence of binary digits which is then combined either with plaintext to produce ciphertext or with ciphertext to recover plaintext.

stream current [HYD] A steady current in a stream or river. [OCEANOGR] A deep, narrow, well-defined fast-moving ocean current.

stream day [CHEM ENG] Denoting a 24-hour actual operation of a processing unit, in contrast to the hours actually operated during a calendar (24-hour) day.

stream editor [COMPUT SCI] A modification of a statement editor to allow superlines that expand and contract as necessary; the most powerful type of text editor. Also known as string editor.

streamer [GEOPHYS] A sinuous channel of very high ion-density which propagates itself through a gas by continual establishment of an electron avalanche just ahead of its advancing tip; in lightning discharges, the stepped leader, and return streamer all constitute special types of streamers.

stream erosion [GEOL] The progressive removal of exposed matter from the surface of a stream channel by a stream.

stream feeder [GRAPHICS] A printing press device that feeds several overlapping sheets toward the grippers.

streamflow [HYD] A type of channel flow, applied to surface runoff moving in a stream.

streamflow routing *See* flood routing.

stream frequency [GEOL] A measure of topographic texture expressed as the ratio of the number of streams in a drainage basin to the area of the basin. Also known as channel frequency.

stream function *See* Lagrange stream function.

stream gage *See* river gage.

stream gradient [GEOL] The angle, measured in the direction of flow, between the water surface (for large streams) or the channel flow (for small streams) and the horizontal. Also known as stream slope.

stream gradient ratio [GEOL] Ratio of the stream gradient of a stream channel of one order to the stream gradient of the next higher order channel in the same drainage basin. Also known as channel gradient ratio.

streaming current [ELEC] The electric current which is produced when a liquid is forced to flow through a diaphragm, capillary, or porous solid.

streaming potential [ELEC] The difference in electric potential between a diaphragm, capillary, or porous solid and a liquid that is forced to flow through it.

stream-length ratio [HYD] Ratio of the mean length of a stream of a given order to the mean length of the next lower order stream in the same basin.

streamline [FL MECH] A line which is every where parallel to the direction of fluid flow at a given instant.

streamline flow [FL MECH] Flow of a fluid in which there is no turbulence; particles of the fluid follow well-defined continuous paths, and the flow velocity at a fixed point either remains constant or varies in a regular fashion with time.

streamlining [DES ENG] The contouring of a body to reduce its resistance to motion through a fluid.

stream morphology *See* river morphology.

stream order [HYD] The designation by a dimensionless integer series (1, 2, 3, . . .) of the relative position of stream segments in the network of a drainage basin. Also known as channel order.

stream piracy *See* capture.

stream profile [HYD] The longitudinal profile of a stream.

stream robbery *See* capture.

stream segment [HYD] The part of a stream extending between designated tributary junctions. Also known as channel segment.

stream slope *See* stream gradient.

stream takeoff [AERO ENG] Aircraft taking off in tail/column formation.

stream terrace [GEOL] One of a series of level surfaces on a stream valley flanking and parallel to a stream channel and above the stream level, representing the uneroded remnant of an abandoned floodplain or stream bed. Also known as river terrace.

stream tin [GEOL] The mineral cassiterite occurring as pebbles in alluvial deposits.

stream transport [GEOL] Movement of rock material in and by a stream.

stream tube [FL MECH] In fluid flow, an imaginary tube whose wall is generated by streamlines passing through a closed curve.

streamway *See* stream channel.

Streblidae [INV ZOO] The bat flies, a family of cyclorrhaphous dipteran insects in the section Pupipara; adults are ectoparasites on bats.

street [CIV ENG] A paved road for vehicular traffic in an urban area.

street elbow [DES ENG] A pipe elbow with an internal thread at one end and an external thread at the other.

Strelitziaceae [BOT] A family of monocotyledonous plants in the order Zingiberales distinguished by perfect flowers with five functional stamens and without an evident hypanthium, penniveined leaves, and symmetrical guard cells.

stremmatograph [ENG] An instrument for measuring longitudinal stress in rails as trains pass over.

strengite [MINERAL] $FePO_4 \cdot 2H_2O$ A pale-red mineral crystallizing in the orthorhombic system, isomorphous with variscite and dimorphous with phosphosiderite, and specific gravity 2.87.

strength [ACOUS] The maximum instantaneous rate of volume displacement produced by a sound source when emitting a wave with sinusoidal time variation. [MECH] The stress at which material ruptures or fails.

strength of current [OCEANOGR] **1.** The phase of a tidal current at which the speed is a maximum. **2.** The velocity of the current at this time.

strength of ebb [OCEANOGR] **1.** The ebb current at the time of maximum speed. **2.** The speed of the current at this time.

strength of ebb interval [OCEANOGR] The time interval between the transit (upper or lower) of the moon and the next maximum ebb current at a place.

strength of enemy forces [ORD] The description of an enemy unit of force in terms of men, weapons, and equipment.

strength of flood [OCEANOGR] **1.** The flood current at the time of maximum speed. **2.** The speed of the current at this time.

strength of flood interval [OCEANOGR] The time interval between the transit (upper or lower) of the moon and the next maximum flood current at a place.

strepaster [INV ZOO] A short, spiny microscleric, monaxonic spicule.

strepogenin [BIOCHEM] A factor, possibly a peptide derivative of glutamic acid, reported to exist in certain proteins, acting as a growth stimulant in bacteria and mice in the presence of completely hydrolyzed protein. Also known as streptogenin.

Strepsiptera [INV ZOO] An order of the Coleoptera that is coextensive with the family Stylopidae.

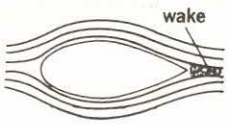
streptobacillary fever *See* Haverhill fever.

Streptobacillus [MICROBIO] A genus of gram-negative, facultatively anaerobic rods of uncertain affiliation; rod-shaped cells frequently occur in chains and filaments; parasites and pathogens of certain mammals.

streptobiosamine [BIOCHEM] $C_{13}H_{23}NO_9$ A nitrogen-containing disaccharide, obtained when streptomycin undergoes acid hydrolysis; in the streptomycin molecule it is glycosidally linked to streptidine.

Streptococcaceae [MICROBIO] A family of gram-positive cocci; chemoorganotrophs with fermentative metabolism.

STREAMLINE FLOW



Flow indicated about a streamlined body which is traveling at subsonic speed.

Streptococceae [MICROBIO] Formerly a tribe of the family Lactobacillaceae including cocci that occur in pairs, short chains, or tetrads and which generally obtain energy by fermentation of carbohydrates or related compounds.

Streptococcus [MICROBIO] A genus of bacteria in the family Streptococcaceae; coccoid to ovoid cells occurring in pairs of chains; ferment glucose, with production of dextrorotatory lactic acid (homofermentative).

streptogenin *See* strepogenin.

streptokinase [BIOCHEM] An enzyme occurring as a component of fibrinolysin in cultures of certain hemolytic streptococci.

streptolysin [BIOCHEM] Any of a group of hemolysins elaborated by *Streptococcus pyogenes*.

Streptomyces [MICROBIO] A genus of bacteria in the family Streptomycetaceae; hyphae are slender and coenocytic; chains of nonmotile spores form on aerial hyphae; many strains produce antibiotics.

Streptomycetaceae [MICROBIO] A family of soil-inhabiting bacteria in the order Actinomycetales; branched mycelia are produced by vegetative hyphae; spores are produced on aerial hyphae.

streptomycin [MICROBIO] $C_{21}H_{39}O_{12}N_7$ Water-soluble antibiotic obtained from *Streptomyces griseus* that is used principally in the treatment of tuberculosis.

Streptosporangium [MICROBIO] A genus of bacteria in the family Actinoplanaceae; sporangia are spherical to subspherical; spores are nonmotile and spherical and are arranged in a coil in the sporangium.

streptothricin [MICROBIO] $C_{19}H_{34}O_7N_8$ An antibiotic produced by *Streptomyces lavendulae*; active against various gram-negative and gram-positive microorganisms.

Streptothrix [MICROBIO] A genus of sheathed bacteria; cells are nonmotile, and sheaths are attached and are not encrusted with iron or manganese oxides.

Streptoverticillium [MICROBIO] A genus of bacteria in the family Streptomycetaceae; a branched aerial mycelium is produced in a whorl; chains of nonmotile spores form on secondary branches.

stress [BIOL] A stimulus or succession of stimuli of such magnitude as to tend to disrupt the homeostasis of the organism. [MECH] The force acting across a unit area in a solid material in resisting the separation, compacting, or sliding that tends to be induced by external forces.

STRESS [COMPUT SCI] A problem-oriented programming language used to solve structural engineering problems. Derived from structural engineering system solver.

stress amplitude [MECH ENG] One half the algebraic difference between the maximum and minimum stress in one fatigue test cycle.

stress analysis [PHYS] The determination of the stresses produced in a solid body when subjected to various external forces.

stress axis *See* principal axis of stress.

stress birefringence *See* mechanical birefringence.

stress concentration [MECH] A condition in which a stress distribution has high localized stresses; usually induced by an abrupt change in the shape of a member; in the vicinity of notches, holes, changes in diameter of a shaft, and so forth, maximum stress is several times greater than where there is no geometrical discontinuity.

stress concentration factor [MECH] A theoretical factor K_t expressing the ratio of the greatest stress in the region of stress concentration to the corresponding nominal stress.

stress corrosion [MET] Corrosion that is accelerated by stress, applied or residual, in a metal.

stress-corrosion cracking [MET] Failure by cracking under the conjoint action of a constant tensile stress, which is applied to residual, in certain chemical environments specific to the metal.

stress crack [MECH] An external or internal crack in a solid body (metal or plastic) caused by tensile, compressive, or shear forces.

stress difference [MECH] The difference between the greatest and the least of the three principal stresses.

stressed skin construction [CIV ENG] A type of construction in which the outer skin and the framework interact, thus contributing to the flexural strength of the unit.

stress ellipsoid [MECH] A mathematical representation of the state of stress at a point that is defined by the minimum, intermediate, and maximum stresses and their intensities.

stress function [MECH] A single function, such as the Airy stress function, or one of two or more functions, such as Maxwell's or Morera's stress functions, that uniquely define the stresses in an elastic body as a function of position.

stress intensity [MECH] Stress at a point in a structure due to pressure resulting from combined tension (positive) stresses and compression (negative) stresses.

stress lines *See* isostatics.

stress mineral [MINERAL] Any mineral whose formation in metamorphosed rock is favored by shearing stress.

stress-optic law [OPTICS] In a transparent, isotropic plate subjected to a biaxial stress field, the relative retardation R_t between the two components produced by temporary double refraction is equal to $Ct\ (p - q)$, which in turn is equal to $n\lambda$; C is the stress-optic coefficient, t the plate thickness, p and q the principal stresses, n the number of fringes which have passed the point during application of the load, and λ the wavelength of the light.

stress raiser [MET] A notch, hole, or other discontinuity in contour or structure which causes localized stress concentration.

stress range [MECH] The algebraic difference between the maximum and minimum stress in one fatigue test cycle.

stress ratio [MECH] The ratio of minimum to maximum stress in fatigue testing, considering tensile stresses as positive and compressive stresses as negative.

stress relief cracking [MET] Cracking between metal grains in the heat-affected zone of a weldment during exposure to high temperatures.

stress relieving [MET] Low-temperature heating to reduce residual stress.

stress-strain curve *See* deformation curve.

stress tensor [MECH] A second-rank tensor whose components are stresses exerted across surfaces perpendicular to the coordinate directions.

stress trajectories *See* isostatics.

stress-wave emission *See* acoustic emission.

stretch [GEOGR] *See* reach. [PETRO ENG] The increase in length of oil-well casing or tubing when freely suspended in fluid mediums.

stretched pebbles [GEOL] Pebbles in a sedimentary rock which have been elongated from their original shape by deformation.

stretcher [CIV ENG] A brick or block that is laid with its length paralleling the wall. [MED] A litter usually made of canvas stretched on a frame for carrying injured, disabled, or dead persons. [MIN ENG] A bar used for roof support on roadways and which is either wedged against or pocketed into the sides of the roadway without support of legs or struts.

stretcher bar [MIN ENG] A single screw column, capable of holding one machine drill; used in small drifts.

stretcher leveling [MET] Removing warp and distortion from a piece of metal by gripping it at each end and subjecting it to stress beyond the yield strength. Also known as patent leveling.

stretcher strains *See* Lüders' lines.

stretch fault *See* stretch thrust.

stretch former [MECH ENG] A machine used to stretch form materials, such as metals and plastics.

stretch forming [MECH ENG] Shaping metals and plastics by applying tension to stretch the heated sheet or part, wrapping it around a die, and then cooling it. Also known as wrap forming.

stretch out [IND ENG] A reduction in the delivery rate specified for a program without a reduction in the total quantity to be delivered.

stretch reflex [PHYSIO] Contraction of a muscle in response to a sudden, brisk, longitudinal stretching of the same muscle. Also known as myostatic reflex.

stretch thrust [GEOL] A reverse fault developed as a result of shear in the middle limb of an overturned fold. Also known as stretch fault.

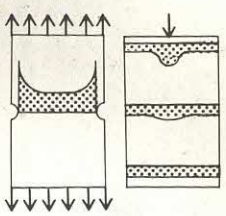
stria [BIOL] A minute line, band, groove, or channel.

striated ground *See* striped ground.

striated muscle [HISTOL] Muscle tissue consisting of muscle fibers having cross striations.

striation [ELECTR] A succession of alternately luminous and dark regions sometimes observed in the positive column of a

STRESS CONCENTRATION



Stress concentrations. *(a)* Tensile stress distribution in a plate reduced by circular notches is shown qualitatively; stress at root of notch is about three times stress at end of plate. *(b)* Bar under concentrated end load; load concentrated at end of bar produces nonuniformly distributed normal stresses on adjacent sections with variation decreasing at more remote sections.

glow-discharge tube near the anode. [GEOL] One of a series of parallel or subparallel scratches, small furrows, or lines on the surface of a rock or rock fragment; usually inscribed by rock fragments embedded at the base of a moving glacier. [MINERAL] One of a series of parallel, shallow depressions or narrow bands on the cleavage face of a mineral caused either by growth twinning or oscillatory growth of different crystal faces.

striation technique [ACOUS] A technique for making sound waves visible by using their ability to refract light waves.

strich *See* millimeter.

strictly Hurwitz polynomial [MATH] A polynomial whose roots all have strictly negative real parts.

stricture [MED] Abnormal narrowing of a passage, such as a vessel, duct, or the intestine. Also known as constriction.

striding compass [ENG] A compass mounted on a theodolite for orientation.

stridor [MED] A peculiar, harsh, vibrating sound produced during respiration.

stridulation [INV ZOO] Creaking and other audible sounds made by certain insects, produced by rubbing various parts of the body together.

Strigidae [VERT ZOO] A family of birds of the order Strigiformes containing the true owls.

Strigiformes [VERT ZOO] The order of birds containing the owls.

strigose [BIOL] Covered with stiff, pointed, hairlike scales or bristles.

strigovite [MINERAL] $Fe_3(Al,Fe)_3Si_3O_{11}(OH)_7$ A dark-green mineral of the chlorite group, composed of basic aluminum iron silicate; occurs as crystalline incrustations.

Strigulaceae [BOT] A family of Ascolichenes in the order Pyrenulales comprising crustose species confined to tropical evergreens, and which form extensive crusts on or under the cuticle of leaves.

strike [GEOL] The direction taken by a structural surface, such as a fault plane, as it intersects the horizontal. Also known as line of strike. [MET] **1.** A very thin, initially electroplated film or the plating solution with which to deposit such a film. **2.** A local crater in a metal surface due to accidental contact with the welding electrode. [ORD] Concerted air attack on a single objective.

strike board [MIN ENG] A board at the top of a shaft from which the bucket is tipped; used in shaft sinking; formerly, the beam or plank at the shaft top on which the baskets were landed. Also known as strike tree.

strike fault [GEOL] A fault whose strike is parallel with that of the strata involved.

strike force [ORD] A force composed of appropriate units necessary to conduct strikes, attack, or assault operations.

strike joint [GEOL] A joint that strikes parallel to the bedding or cleavage of the constituent rock.

strike-off board [ENG] A straight-edge board used to remove excess, freshly placed plaster, concrete, or mortar from a surface.

strike photography [GRAPHICS] Air photographs taken during an air strike.

strike plate [DES ENG] A metal plate or box which is set in a door jamb and is either pierced or recessed to receive the bolt or latch of a lock.

strike plating [MET] Applying a thin electroplated film prior to depositing the principal electroplate.

striker [ORD] A firing pin or a projection on the hammer of a firearm, which strikes the primer to initiate a propelling charge explosive train or a fuse explosive train.

striker plate [ORD] A plate in the breech of a firearm or gun, which supports the base of the cartridge and which is pierced with a hole through which the striker or firing pin hits the primer.

strike separation [GEOL] The distance of separation on either side of a fault surface of two formerly adjacent beds.

strike-separation fault *See* lateral fault.

strike-shift fault *See* strike-slip fault.

strike slip [GEOL] The component of the slip of a fault that is parallel to the strike of the fault. Also known as horizontal displacement; horizontal separation.

strike-slip fault [GEOL] A fault whose direction of movement is parallel to the strike of the fault. Also known as strike-shift fault.

strike stream *See* subsequent stream.

strike-through *See* show-through.

strike tree *See* strike board.

striking hammer [ENG] A hammer used to strike a rock drill.

striking potential [ELECTR] **1.** Voltage required to start an electric arc. **2.** Smallest grid-cathode potential value at which plate current begins flowing in a gas-filled triode.

striking velocity *See* impact velocity.

string [COMPUT SCI] A set of consecutive, adjacent items of similar type; normally a bit string or a character string. [ENG] A piece of pipe, casing, or other down-hole drilling equipment coupled together and lowered into a borehole. [GEOL] A very small vein, either independent or occurring as a branch of a larger vein. Also known as stringer. [MECH] A solid body whose length is many times as large as any of its cross-sectional dimensions, and which has no stiffness.

string bead [MET] A continuous weld bead made without appreciable transverse oscillation.

string break [COMPUT SCI] In the sorting of records, the situation that arises when there are no records having keys with values greater than the highest key already written in the sequence of records currently being processed.

string constant [COMPUT SCI] An arbitrary combination of letters, digits, and other symbols that is treated in a manner completely analogous to numeric constants.

string course [BUILD] A horizontal band of masonry, generally narrower than other courses and sometimes projecting, extending across the facade of a structure and in some instances encircling pillars or engaged columns. Also known as belt course.

string editor *See* stream editor.

string electrometer [ENG] An electrometer in which a conducting fiber is stretched midway between two oppositely charged metal plates; the electrostatic field between the plates displaces the fiber laterally in proportion to the voltage between the plates.

stringer [CIV ENG] **1.** A long horizontal member used to support a floor or to connect uprights in a frame. **2.** An inclined member supporting the treads and risers of a staircase. [GEOL] *See* string. [MET] An elongated mass of microconstituents or foreign material in wrought metal oriented in the direction of working.

stringer lode [GEOL] A lode that consists of many narrow veins in a mass of country rock.

stringer plate [NAV ARCH] One of the plates that make up the outer strake of the deck of a ship, and which are usually heavier than those making up the rest of the deck.

string galvanometer [ENG] A galvanometer consisting of a silver-plated quartz fiber under tension in a magnetic field, used to measure oscillating currents. Also known as Einthoven galvanometer.

stringing [PETRO ENG] The connecting of lengths of pipe end to end (tubing or casing) to make a string long enough to reach to the desired depth in a well bore.

string manipulation [COMPUT SCI] The handling of strings of characters in a computer storage as though they were single units of data.

string manipulation language *See* string processing language.

string milling [MECH ENG] A milling method in which parts are placed in a row and milled consecutively.

String-Oriented-Symbolic Language *See* SNOBOL.

string processing language [COMPUT SCI] A higher-level programming language equipped with facilities to synthesize and decompose character strings, search them in response to arbitrarily complex criteria, and perform a variety of other manipulations. Also known as string manipulation language.

string shot [PETRO ENG] An oil-well stimulation technique in which a string of explosive (for example, Prima Cord) is hung opposite to the producing zone down a wellbore and detonated; used to remove deposits (gypsum, mud, or paraffin) from the formation face.

stringy floppy [COMPUT SCI] A peripheral storage device for microcomputers that uses a removable magnetic tape cartridge with a 1/16-inch wide (1.5875-millimeter) loop of magnetic tape.

strip [ENG] To remove insulation from a wire. [MIN ENG] To remove coal, stone, or other material from a quarry or from a working that is near the surface of the earth. [ORD] To dissassemble a piece of equipment, such as a gun, in order to clean, repair, or transport it.

strip-borer drill [MECH ENG] An electric or diesel skid- or

caterpillar-mounted drill used at quarry or opencast sites to drill 3- to 6-inch-diameter (8- to 15-centimeter-diameter), horizontal blast holes up to 100 feet (30 meters) in length, without the use of flush water.

strip-chart recorder [ENG] A recorder in which one or more writing pens or other recording devices trace changes in a measured variable on the surface of a strip chart that is moved at constant speed by a time-clock motor.

strip-cropping [AGR] Growing separate crops in adjacent strips that follow the contour of the land as a method of reducing soil erosion.

striped ground [GEOL] A pattern of alternating stripes formed by frost action on a sloping surface. Also known as striated ground; striped soil.

striped soil *See* striped ground.

strip lights [NAV] Lights marking the edge of a landing strip.

strip line [ELECTROMAG] A strip transmission line that consists of a flat metal-strip center conductor which is separated from flat metal-strip outer conductors by dielectric strips.

strip-line circuit [ELECTROMAG] A circuit in which one or more strip transmission lines serve as filters or other circuit components.

strip method [FOR] A lumbering method in which timbers are cleared from a forest in strips; new growth in the strip results from seeds sown in the adjoining forest.

strip mine [MIN ENG] An opencut mine in which the overburden is removed from a coal bed before the coal is taken out.

strip mining [MIN ENG] The mining of coal by surface mining methods.

stripped atom [ATOM PHYS] An ionized atom which has appreciably fewer electrons than it has protons in the nucleus.

stripped illite *See* degraded illite.

stripped plane [GEOL] The upper, exposed surface of a resistant stratum that forms a stripped structural surface when extended over a considerable area.

stripped structural surface [GEOL] An erosion surface formed in an area underlain by horizontal or gently sloping strata of unequal resistance where the overlying softer beds have been removed by erosion. Also known as stripped surface.

stripped surface *See* stripped structural surface.

stripper [CHEM ENG] An evaporative device for the removal of vapors from liquids; can be in a bubble-tray distillation tower, a vacuum vessel, or an evaporator; if it is a part of a distillation column below the feed tray, it is called the stripping section. [ENG] A hand or motorized tool used to remove insulation from wires. [PETRO ENG] A well from which oil production is quite small.

stripper plate [ENG] In plastics molding, a plate that strips a molded article free of core pins or force plugs.

stripper punch [MET] In powder metallurgy, a device used as the bottom or top of the die cavity which can be pushed into the die to eject the formed compact.

stripper rubber [PETRO ENG] A pressure-actuated seal used to control gas pressure in the casing-tubing annulus of low-pressure wells while inserting (running) or withdrawing (pulling) tubing.

stripping [CHEM ENG] In petroleum refining, the removal (by flash evaporation or steam-induced vaporation) of the more volatile components from a cut or fraction; used to raise the flash point of kerosine, gas oil, or lubricating oil. [GRAPHICS] In offset lithography, the process of positioning negatives or positives on a flat before making plates. [MET] Removing a coating from the surface of a metal.

stripping agent [TEXT] A substance used to remove dyes from fabrics so that they can be redyed, for example, sodium hydrosulfite, titanous sulfate, and sodium and zinc formaldehyde sulfoxylates.

stripping analysis [ANALY CHEM] An analytic process of solutions or concentrations containing ions, in which the ions are electrodeposited onto an electrode, stripped (dissolved) from the material from the electrode, and weighed.

stripping area [MIN ENG] In stripping operations, an area encompassing the pay material, its bottom depth, the thickness of the layer of waste, the slope of the natural ground surface, and the steepness of the safe slope of cuts.

stripping a shaft [MIN ENG] **1.** Removing the timber from an abandoned shaft. **2.** Trimming or squaring the sides of a shaft.

stripping film [GRAPHICS] **1.** The process of assembling photographic negatives or positives to make printing plates. **2.** A film with an emulsion that can be removed from its base and transferred to another one.

stripping ratio [MIN ENG] The unit amount of spoil or waste that must be removed to gain access to a similar unit amount of ore or mineral material.

stripping reaction [NUC PHYS] A nuclear reaction in which part of the incident nucleus combines with the target nucleus, and the other part proceeds with most of its original momentum in practically its original direction; especially the reaction in which the incident nucleus is a deuteron and only a proton emerges from the target.

stripping shovel [MIN ENG] A shovel with an especially long boom and stick, enabling it to reach further and pile higher.

strip pit [MIN ENG] **1.** A coal or other mine worked by stripping. **2.** An open-pit mine.

strip plot [MAP] A portion of a map or overlay on which a number of photographs taken along a flight line is delineated without defining the outlines of individual prints.

strip printer [ENG] A device that prints computer, telegraph, or industrial output information along a narrow paper tape which resembles a ticker tape.

strip survey [FOR] A survey of the value of a strip of forest; used to estimate the value of a larger area of the forest.

strip transmission line [ELECTROMAG] A microwave transmission line consisting of a thin, narrow, rectangular metal strip that is supported above a ground-plane conductor or between two wide ground-plane conductors and is usually separated from them by a dielectric material.

strobe [ELECTR] **1.** Intensified spot in the sweep of a deflection-type indicator, used as a reference mark for ranging or expanding the presentation. **2.** Intensified sweep on a plan-position indicator or B-scope; such a strobe may result from certain types of interference, or it may be purposely applied as a bearing or heading marker. **3.** Line on a console oscilloscope representing the azimuth data generated by a jammed radar site.

strobe circuit [ELECTR] A circuit that produces an output pulse only at certain times or under certain conditions, such as a gating circuit or a coincidence circuit.

strobe marker [ELECTR] A small bright spot, or a short gap, or other discontinuity produced on the trace of a radar display to indicate that part of the time base which is receiving attention.

strobe photography *See* stroboscopic photography.

strobe pulse [ELECTR] Pulse of duration less than the time period of a recurrent phenomenon used for making a close investigation of that phenomenon; the frequency of the strobe pulse bears a simple relation to that of the phenomenon, and the relative timing is usually adjustable.

strobilation [INV ZOO] Asexual reproduction by segmentation of the body into zooids, proglottids, or separate individuals.

strobilocercus [INV ZOO] A larval tapeworm that has undergone strobilation.

strobilus [BOT] **1.** A conelike structure made up of sporophylls, or spore-bearing leaves, as in Equisetales. **2.** The cone of members of the Pinophyta.

strobing [COMPUT SCI] The technique required to time-synchronize data appearing as pulses at the output of a computer memory.

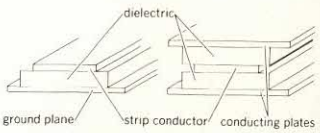
stroboscope [ENG] An instrument for making moving bodies visible intermittently, either by illuminating the object with brilliant flashes of light or by imposing an intermittent shutter between the viewer and the object; a high-speed vibration can be made visible by adjusting the strobe frequency close to the vibration frequency.

stroboscopic direction finder [NAV] A radio direction finder employing a continuously rotating antenna or other directional element such as a goniometer; associated with the rotating element, either directly or remotely, is a mechanism which rotates a thin metal disk in synchronism with the antenna or directional element; the disk has a single thin radial slot which covers a neon tube so that its light can be seen only through the slot; the output of the receiver is connected to the neon tube so that illumination occurs at a reading corresponding to the bearing of the received signal.

stroboscopic disk [ENG] A printed disk having a number of concentric rings each containing a different number of dark and light segments; when the disk is placed on a phonograph turntable or rotating shaft and illuminated at a known frequency by a flashing discharge tube, speed can be determined by noting which pattern appears to stand still or to rotate slowly.

stroboscopic lamp *See* flash lamp.

STRIP TRANSMISSION LINE



Components of strip transmission lines.

stroboscopic photography [GRAPHICS] The technique of producing pictures of both single and multiple exposure taken by flashes of light from electrical discharges. Also known as flash photography; strobe photography.

stroboscopic tachometer [ENG] A stroboscope having a scale that reads in flashes per minute or in revolutions per minute; the speed of a rotating device is measured by directing the stroboscopic lamp on the device, adjusting the flashing rate until the device appears to be stationary, then reading the speed directly on the scale of the instrument.

stroboscopic tube *See* strobotron.

strobotron [ELECTR] A cold-cathode gas-filled arc-discharge tube having one or more internal or external grids to initiate current flow and produce intensely bright flashes of light for a stroboscope. Also known as stroboscopic tube.

stroke [COMPUT SCI] **1.** A key-depressing operation in keypunching. **2.** In optical character recognition, straight or curved portion of a letter, such as is commonly made with one smooth motion of a pen. Also known as character stroke. **3.** That segment of a printed or handwritten character which has been temporarily isolated from other segments for the purpose of analyzing it, particularly with regard to its dimensions and relative reflectance. Also known as character stroke. [ELECTR] The penlike motion of a focused electron beam in cathode-ray-tube diplays. [MECH ENG] The linear movement, in either direction, of a reciprocating mechanical part. [MED] A sudden cerebrovascular accident.

stroke analysis [COMPUT SCI] In character recognition, a method employed in character property detection in which an input specimen is dissected into certain prescribed elements; the sequence, relative positions, and number of detected elements are then used to identify the characters.

stroke-bore ratio [MECH ENG] The ratio of the distance traveled by a piston in a cylinder to the diameter of the cylinder.

stroke center line [COMPUT SCI] In character recognition, a line midway between the two average-edge lines; the center line describes the stroke's direction of travel. Also known as center line.

stroke density [GEOPHYS] The areal density of lightning discharges over a given region during some specified period of time, as number per square mile per year.

stroke edge [COMPUT SCI] In character recognition, a continuous line, straight or otherwise, which traces the outermost part of intersection of the stroke along the two sides of its greatest dimension.

stroke speed [COMMUN] Number of times per minute that a fixed line, perpendicular to the direction of scanning, is crossed in one direction by a scanning or recording spot in a facsimile system. Also known as scanning frequency; scanning line frequency.

stroke volume [PHYSIO] The amount of blood pumped during each cardiac contraction; quantitatively, the diastolic volume of the left ventricle minus the volume of blood in the ventricle at the end of systole.

stroke width [COMPUT SCI] In character recognition, the distance that obtains, at a given location, between the points of intersection of the stroke edges and a line drawn perpendicular to the stroke center line.

stroma [ANAT] The supporting tissues of an organ, including connective and nervous tissues and blood vessels.

stromal endometriosis *See* interstitial endometrosis.

stromal myosis *See* interstitial endometrosis.

Stromateidae [INV ZOO] A family of perciform fishes in the suborder Stromateoidei containing the butterfishes.

Stromateoidei [VERT ZOO] A suborder of fishes of the order Perciformes in which most species have teeth in pockets behind the pharyngeal bone.

stromatite [GEOL] Chorismite having flat or folded parallel layers of two or more textural elements. Also known as stromatolith.

stromatolite [GEOL] A structure in calcareous rocks consisting of concentrically laminated masses of calcium carbonate and calcium-magnesium carbonate which are believed to be of calcareous algal origin; these structures are irregular to columnar and hemispheroidal in shape, and range from 1 millimeter to many meters in thickness. Also known as callenia.

stromatolith [GEOL] **1.** A complex sill-like igneous intrusion interfingered with sedimentary strata. **2.** *See* stromatite.

Stromatoporoidea [PALEON] An extinct order of fossil colonial organisms thought to belong to the class Hydrozoa; the skeleton is a coenosteum.

stromatosis *See* interstitial endometrosis.

Strombacea [PALEON] An extinct superfamily of gastropod mollusks in the order Prosobranchia.

Strombidae [INV ZOO] A family of gastopod mollusks comprising tropical conchs.

strombolian [GEOL] A type of volcanic eruption characterized by fire fountains of lava from a central crater.

stromeyerite [MIN] CuAgS A metallic-gray orthorhombic mineral with a blue tarnish composed of silver copper sulfide occurring in compact masses.

strong acid [CHEM] An acid with a high degree of dissociation in solution, for example, mineral acids, such as hydrochloric acid, HCl, sulfuric acid, H_2SO_4, or nitric acid, HNO_3.

strong algorithm [COMMUN] A cryptographic algorithm for which the cost or time required to obtain the message or key is prohibitively great in practice even though the message may be obtainable in theory.

strong base [CHEM] A base with a high degree of dissociation in solution, for example, sodium hydroxide, NaOH, potassium hydroxide, KOH.

strong breeze [METEOROL] In the Beaufort wind scale, a wind whose speed is from 22 to 27 knots (25 to 31 miles per hour or 41 to 50 kilometers per hour).

strong fix [NAV] A fix determined from horizontal sextant angles between objects well placed.

strong gale [METEOROL] In the Beaufort wind scale, a wind whose speed is from 41 to 47 knots (47 to 54 miles per hour or 76 to 87 kilometers per hour).

strong interaction [PARTIC PHYS] One of the fundamental interactions of elementary particles, primarily responsible for nuclear forces and other interactions among hadrons.

strongly damped collision *See* quasi-fission.

strong point [ORD] A strongly fortified and heavily armed point in a defense system, usually supported by auxiliary armed positions.

strong topology [MATH] The topology on a normed space obtained from the given norm; the basic open neighborhoods of a vector x are sets consisting of all those vectors y where the norm of $x - y$ is less than some number.

strongyle [INV ZOO] A monaxonic spicule rounded at each end.

Strongyloidea [INV ZOO] The hookworms, an order or superfamily of roundworms which, as adults, are endoparasites of most vertebrates, including man.

strongyloidiasis [MED] An infestation of man with one of the roundworms of the genus *Strongyloides*.

strongylote [INV ZOO] Rounded at one end, referring to sponge spicules.

strontia *See* strontium oxide.

strontianite [MINERAL] $SrCO_3$ A pale-green, white, gray, or yellowish mineral of the aragonite group having orthorhombic symmetry and occurring in veins or as masses; hardness is 3.5 on Mohs scale, and specific gravity is 3.76.

strontium [CHEM] A metallic element in group IIA, symbol Sr, with atomic number 38, atomic weight 87.62; flammable, soft, pale-yellow solid; soluble in alcohol and acids, decomposes in water; melts at 770°C, boils at 1380°C; chemistry is similar to that of calcium; used as electron-tube getter.

strontium-90 [NUC PHYS] A poisonous, radioactive isotope of strontium; 28-year half life with β radiation; derived from reactor-fuel fission products; used in thickness gages, medical treatment, phosphor activation, and atomic batteries.

strontium acetate [ORG CHEM] $Sr(C_2H_3O_2)_2 \cdot \frac{1}{2}H_2O$ White, water-soluble crystals, loses water at 150°C; used for catalysts, as a chemical intermediate, and in medicine.

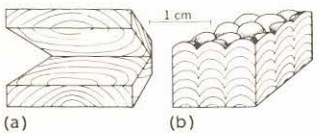
strontium bromide [INORG CHEM] $SrBr_2 \cdot 6H_2O$ A white, hygroscopic powder soluble in water and alcohol; loses water at 180°C, melts at 643°C; used in medicine and as an analytical reagent.

strontium carbonate [INORG CHEM] $SrCO_3$ A white powder slightly soluble in water, decomposes at 1340°C; used to make TV-tube glass, strontium salts, and ceramic ferrites, and in pyrotechnics.

strontium chlorate [INORG CHEM] $Sr(ClO_3)_2$ Shock-sensitive, highly combustible, white, water-soluble crystals that decompose at 120°C; used in pyrotechnics and tracer bullets.

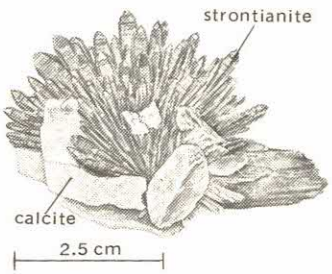
strontium chloride [INORG CHEM] $SrCl_2$ Water- and alco-

STROMATOLITE



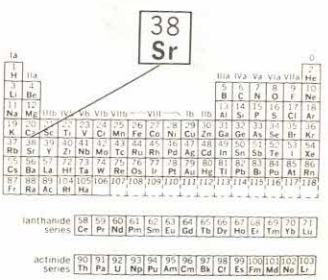
Sectioned stromatolites. *(a)* A large, strongly laminated stromatolite. Laminae dip away from the center of the hemispheroidal mass if viewed from above, and toward the center if viewed from beneath. *(b)* A small stromatolite consisting of columns with highly arched laminae. Lower Ordovician of western Wisconsin. *(From R. R. Shrock, Sequence in Layered Rocks, McGraw-Hill, 1948)*

STRONTIANITE



Strontianite crystals with calcite. *(Specimen from Department of Geology, Bryn Mawr College)*

STRONTIUM



Periodic table of the chemical elements showing the position of strontium.

hol-soluble white crystals, melts at 872°C; used in medicine and pyrotechnics and to make strontium salts.

strontium chromate [INORG CHEM] $SrCrO_4$ A light yellow, rust and corrosion-resistant pigment used in metal coatings and for pyrotechnics.

strontium dioxide *See* strontium peroxide.

strontium fluoride [INORG CHEM] SrF_2 A white powder, soluble in hydrochloric acid and hydrofluoric acid; used in medicine and for single crystals for lasers.

strontium hydrate *See* strontium hydroxide.

strontium hydroxide [INORG CHEM] $Sr(OH)_2$ Colorless deliquescent crystals that absorb carbon dioxide from air, soluble in hot water and acids, melts at 375°C; used by the sugar industry, in lubricants and soaps, and as a plastic stabilizer. Also known as strontium hydrate.

strontium iodide [INORG CHEM] SrI_2 Air-yellowing, white crystals that decompose in moist air, melts at 515°C; used in medicine and as a chemicals intermediate.

strontium monosulfide *See* strontium sulfide.

strontium nitrate [INORG CHEM] $Sr(NO_3)_2$ A white, water-soluble powder melting at 570°C; used in pyrotechnics, signals and flares, medicine, and matches, and as a chemicals intermediate.

strontium oxalate [INORG CHEM] $SrC_2O_4 \cdot H_2O$ A white powder that loses water at 150°C; used in pyrotechnics and tanning.

strontium oxide [INORG CHEM] SrO A grayish powder, melts at 2430°C, becomes the hydroxide in water; used in medicine, pyrotechnics, pigments, greases, soaps, and as a chemicals intermediate. Also known as strontia.

strontium peroxide [INORG CHEM] SrO_2 A strongly oxidizing, fire-hazardous, white, alcohol-soluble powder that decomposes in hot water; used in medicine, bleaching, and fireworks. Also known as strontium dioxide.

strontium salicylate [ORG CHEM] $Sr(C_7H_5O_3)_2 \cdot 2H_2O$ White crystals or powder with a sweet saline taste; soluble in water and alcohol; used in medicine and manufacture of pharmaceuticals.

strontium sulfate [INORG CHEM] $SrSO_4$ White crystals insoluble in alcohol, slightly soluble in water and concentrated acids, melts at 1605°C; used in paper manufacture, pyrotechnics, ceramics, and glass.

strontium sulfide [INORG CHEM] SrS A gray powder with a hydrogen sulfide aroma in moist air, slightly soluble in water, soluble (with decomposition) in acids, melts above 2000°C; used in depilatories and luminous paints and as a chemicals intermediate. Also known as strontium monosulfide.

strontium titanate [INORG CHEM] $SrTiO_3$ A solid material, insoluble in water and melting at 2060°C; used in electronics and electrical insulation.

strontium unit [NUCLEO] A unit of concentration of strontium-90 in a medium relative to the concentration of calcium, equal to 10^{-12} curie of strontium per gram of calcium. Abbreviated SU. Also known as sunshine unit (deprecated usage).

strophanthin [PHARM] A glycoside or mixture of glycosides extracted from the plant *Strophanthus kombe;* used as a cardioactive drug in the treatment of various heart ailments.

Strophanthus [BOT] A genus of woody climbers of the dogbane family (Apocynaceae), natives of tropical Asia and Africa; the source of arrow poisons and of strophanthin.

strophiole [BOT] A crestlike excrescence around the hilum in certain seeds.

strophoid [MATH] The curve traced in the plane by a point P moving along a varying line L passing through a fixed point, where the distance of P to L's intersection with the y-axis always is equal to the y-intercept value.

Strophomenida [PALEON] A large diverse order of articulate brachiopods which first appeared in Lower Ordovician times and became extinct in the Late Triassic.

Strophomenidina [PALEON] A suborder of extinct, articulate brachiopods in the order Strophomenida characterized by a concavo-convex shell, the pseudodeltidium and socket plates disposed subparallel to the hinge.

Strouhal number [MECH] A dimensionless number used in studying the vibrations of a body past which a fluid is flowing; it is equal to a characteristic dimension of the body times the frequency of vibrations divided by the fluid velocity relative to the body; for a taut wire perpendicular to the fluid flow, with the characteristic dimension taken as the diameter of the wire, it has a value between 0.185 and 0.2 Symbolized S_t. Also known as reduced frequency.

Strowger system [COMMUN] An automatic telephone switching system that uses successive step-by-step selector switches actuated by current pulses produced by rotation of a telephone dial. Also known as step-by-step system.

struck capacity [MIN ENG] The volume of water a mine car, tram, hoppet, or wagon would hold if the conveyance were of watertight construction.

struck joint [CIV ENG] A mortar joint in brickwork formed by pressing the trowel in at the lower edge, so that a recess is formed at the bottom of the joint; suitable only for interior work.

structural adhesive [MATER] An adhesive capable of bearing loads of considerable magnitude; a structural adhesive will not fail when a bonded joint prepared from the thickness of metal, or other material typical for that industry, is stressed to its yield point.

structural analysis [ENG] The determination of stresses and strains in a given structure. [PETR] *See* structural petrology.

structural bench [GEOL] A bench typifying the resistant edge of a terrace that is being reduced by erosion. Also known as rock bench.

structural bulkhead [NAV ARCH] A bulkhead designed to function as a strength member of the ship's structure.

structural clay tile [MATER] Hollow burned-clay masonry unit with parallel cells used as facing tile, load-bearing tile, partition tile, fireproofing tile, furring tile, floor tile, and header tile.

structural connection [CIV ENG] A means of joining the individual members of a structure to form a complete assembly.

structural contour map [GEOL] A map representation of a subsurface stratigraphic unit; depicts the configuration of a rock surface by means of elevation contour lines.

structural deflections [MECH] The deformations or movements of a structure and its flexural members from their original positions.

structural drawings [GRAPHICS] The design and working drawings for structures such as buildings, bridges, dams, tanks, and highways.

structural drill [MECH ENG] A highly mobile diamond- or rotary-drill rig complete with hydraulically controlled derrick mounted on a truck, designed primarily for rapidly drilling holes to determine the structure in subsurface strata or for use as a shallow, slim-hole producer or seismograph drill.

structural drilling [ENG] Drilling done specifically to obtain detailed information delineating the location of folds, domes, faults, and other subsurface structural features indiscernible by studying strata exposed at the surface.

structural engineering [CIV ENG] A branch of civil engineering dealing with the design of structures such as buildings, dams, and bridges.

structural engineering system solver *See* STRESS.

structural fabric *See* fabric.

structural foam [MATER] A type of cellular plastic with a dense outer skin surrounding a foamed core.

structural formula [CHEM] A system of notation used for organic compounds in which the exact structure, if it is known, is given in schematic representation.

structural gene *See* cistron.

structural geology [GEOL] A branch of geology concerned with the form, arrangement, and internal structure of the rocks.

structural high [GEOL] Any of various structural features such as a crest, culmination, anticline, or dome.

structural information [COMPUT SCI] Information specifying the number of independently variable features or degrees of freedom of a pattern.

structural low [GEOL] Any of various structural features such as a basin, a syncline, a saddle, or a sag.

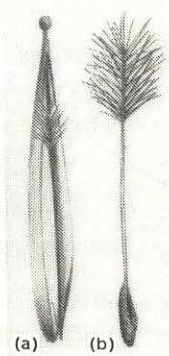
structural petrology [PETR] The study of the internal structure of a rock to determine its deformational history. Also known as fabric analysis; microtectonics; petrofabric analysis; petrofabrics; petrogeometry; petromorphology; structural analysis.

structural riveting [ENG] Riveting structural members by using punched holes.

structural shape [MET] A piece of metal of a standard design used in construction.

structural steel [MET] Steel used in engineering structures,

STROPHANTHUS



Strophanthus kombe seed (*a*) in folicle, (*b*) out of folicle.

usually manufactured by either open-hearth or the electricfurnace process.

structural terrace [GEOL] A terracelike landform developed where generally steeply inclined and otherwise uniformly dipping strata locally flatten.

structural tile [MATER] A hollow clay product which may be load-bearing or non-load-bearing; used for facing, flooring, or partitions.

structural trap [GEOL] Containment in a reservoir bed of oil or gas due to flexure or fracture of the bed.

structural valley [GEOL] A valley whose form and origin is attributable to the underlying geologic structure.

structural wall *See* bearing wall.

structural weight *See* construction weight.

structure [AERO ENG] The construction or makeup of an airplane, spacecraft, or missile, including that of the fuselage, wings, empennage, nacelles, and landing gear, but not that of the power plant, furnishings, or equipment. [CIV ENG] Something, as a bridge or a building, that is built or constructed and designed to sustain a load. [GEOL] **1.** An assemblage of rocks upon which erosive agents have been or are acting. **2.** The sum total of the structural features of an area. [MINERAL] The form taken by a mineral, such as tabular or fibrous. [PETR] A macroscopic feature of a rock mass or rock unit, best seen in an outcrop. [SCI TECH] The arrangement and interrelation of the parts of an object.

structure cell *See* unit cell.

structure contour [GEOL] A contour that portrays a structural surface, such as a fault. Also known as subsurface contour.

structure-contour map [GEOL] A map that uses structure contour lines to portray subsurface configuration. Also known as structure map.

structured data type [COMPUT SCI] The manner in which a collection of data items, which may have the same or different scalar data types, is represented in a computer program.

structured programming [COMPUT SCI] The use of program design and documentation techniques that impose a uniform structure on all computer programs.

structure factor [SOLID STATE] A factor which determines the amplitude of the beam reflected from a given atomic plane in the diffraction of an x-ray beam by a crystal, and is equal to the sum of the atomic scattering factors of the atoms in a unit cell, each multiplied by an appropriate phase factor.

structure map *See* structure-contour map.

structure number [DES ENG] A number, generally from 0 to 15, indicating the spacing of abrasive grains in a grinding wheel relative to their grit size.

structure of a system [COMPUT SCI] Refers to the nature of the chain of command, the origin and type of data collected, the form and destination of results, and the procedures used to control operations.

structure section [GEOL] A vertical section showing the observed or inferred geologic structure on a vertical surface or plane.

structure type [CRYSTAL] The structural arrangement of a crystal, regardless of the atomic elements present; it corresponds to the crystal's space group.

struma lymphomatosa [MED] A type of chronic thyroiditis involving diffuse enlargement of the gland with retrogressive epithelial changes and lymphoid hyperplasia. Also known as Hashimoto's disease; Hashimoto's struma; lymphadenoid goiter.

struma ovarii [MED] An ovarian teratoma composed chiefly of thyroid tissue.

strut [AERO ENG] A bar supporting the wing or landing gear of an airplane. [CIV ENG] A long structural member of timber or metal, or a bar designed to resist pressure in the direction of its length. [ENG] **1.** A brace or supporting piece. **2.** A diagonal brace between two legs of a drill tripod or derrick. [MIN ENG] A vertical-compression member in a structure or in an underground timber set. [NAV ARCH] A bracket outside the hull of a ship, supporting the propeller shaft. Also known as propeller strut.

Struthionidae [VERT ZOO] The single family of the avian order Struthioniformes.

Struthioniformes [VERT ZOO] A monofamilial order of ratite birds containing the single living species of ostrich (*Struthio camelus*).

struvite [MINERAL] $Mg(NH_4)PO_4 \cdot 6H_2O$ A colorless to yellow or pale-brown mineral consisting of a hydrous ammonium magnesium phosphate, and occurring in orthorhombic crystals; hardness is 2 on Mohs scale, and specific gravity is 1.7.

strychnine [ORG CHEM] $C_{21}H_{22}O_2N_2$ An alkaloid obtained primarily from the plant nux vomica, formerly used for therapeutic stimulation of the central nervous system.

strychninization [MED] The condition resulting from large doses of strychnine.

Stuart factor [BIOCHEM] A procoagulant in normal plasma but deficient in the blood of patients with a hereditary bleeding disorder; may be closely related to prothrombin since both are formed in the liver by action of vitamin K. Also known as factor X; Stuart-Power factor.

Stuart-Power factor *See* Stuart factor.

Stuart windmill *See* Fales-Stuart windmill.

stub [COMPUT SCI] The left-hand portion of a decision table, consisting of a single column, and comprising the condition stub and the action stub. [ELECTROMAG] **1.** A short section of transmission line, open or shorted at the far end, connected in parallel with a transmission line to match the impedance of the line to that of an antenna or transmitter. **2.** A solid projection one-quarter-wavelength long, used as an insulating support in a waveguide or cavity.

stub angle [ELECTROMAG] Right-angle elbow for a coaxial radio-frequency transmission line which has the inner conductor supported by a quarter-wave stub.

stub axle [MECH ENG] An axle carrying only one wheel.

stubborn disease [PL PATH] A virus disease of citrus trees characterized by short internodes resulting in stiff brushy growth and chlorotic leaves.

stub cable [ELEC] Short branch off a principal cable; the end is often sealed until it is used at a later date; pairs in the stub are referred to as stubbed out pairs.

stub entry [MIN ENG] A short, narrow entry turned from another entry and driven into the solid coal, but not connected with other mine workings.

stub matching [ELECTROMAG] Use of a stub to match a transmission line to an antenna or load; matching depends on the spacing between the two wires of the stub, the position of the shorting bar, and the point at which the transmission line is connected to the stub.

stub mortise [ENG] A mortise which passes through only part of a timber.

Stubs gage [DES ENG] A number system for denoting the thickness of steel wire and drills.

stub-supported coaxial [ELECTROMAG] Coaxial whose inner conductor is supported by means of short-circuited coaxial stubs.

stub-supported line [ELECTROMAG] A transmission line that is supported by short-circuited quarter-wave sections of coaxial line; a stub exactly a quarter-wavelength long acts as an insulator because it has infinite reactance.

stub switch [ENG] A pair of short switch rails, held only at or near one end and free to move at the other end; used in mining and to some extent on narrow-gage industrial tramways.

stub tenon [ENG] A tenon that fits into a stub mortise.

stub tube [MECH ENG] A short tube welded to a boiler or pressure vessel to provide for the attachment of additional parts.

stub tuner [ELECTROMAG] Stub which is terminated by movable short-circuiting means and used for matching impedance in the line to which it is joined as a branch.

stucco [MATER] A smooth plasterlike material applied to the outside wall or other exterior surface of a building or structure.

stud [BUILD] One of the vertical members in the walls of a framed building to which wallboards, lathing, or paneling is nailed or fastened. [DES ENG] **1.** A rivet, boss, or nail with a large, ornamental head. **2.** A short rod or bolt threaded at both ends without a head.

Student's distribution [STAT] The probability distribution used to test the hypothesis that a random sample of n observations comes from a normal population with a given mean.

Student's t-statistic [STAT] A one-sample test statistic computed by $T = \sqrt{n}(\bar{X} - \mu_H)/S$, where $\bar{X}$ is the mean of a collection of n observations, S is the square root of the mean square deviation, and μ_H is the hypothesized mean.

Student's t-test [STAT] A test in a one-sample problem which uses Student's t-statistic.

studio [COMMUN] A room in which television or radio programs are produced.

STRUT

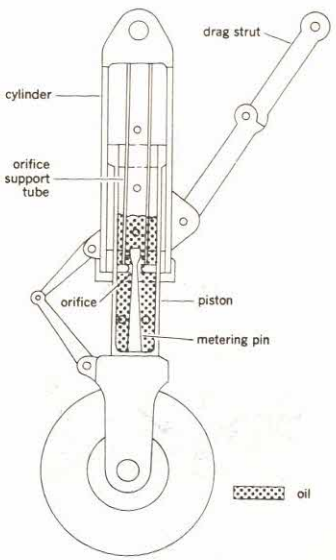


Diagram of oleopneumatic shock strut. As airplane sinks toward ground, piston forces oil through orifice, causing force which changes path of airplane.

stud link chain [NAV ARCH] Chain in which each link has a stud at its midlength perpendicular to the major axis to maintain the shape of the link.

stud wall [BUILD] A wall formed with timbers; studs are usually spaced 12–16 inches (30–41 centimeters) on center.

stud welding [MET] Arc-welding using the heat of an electric arc produced between a metal stud and another part, and then bringing the parts together under pressure.

stuffed mineral [MINERAL] A mineral having extra ions of a foreign element within its larger interstices.

stuffing [ENG] A method of sealing the mechanical joint between two metal surfaces; packing (stuffing) material is inserted within the seal area container (the stuffing or packing box), and compressed to a liquid-proof seal by a threaded packing ring follower. Also known as packing.

stuffing box [ENG] A packed, pressure-tight joint for a rod that moves through a hole, to reduce or eliminate fluid leakage.

stuffing nut [ENG] A nut for adjusting a stuffing box.

stull [MIN ENG] A platform laid on timbers, braced across a working from side to side, to support workers or to carry ore or waste.

stull piece [MIN ENG] **1.** A piece of timber placed slanting over the back of a level to prevent rock falling into the level from the stopes above. **2.** Timbers bracing the platform of a stull.

stull stoping [MIN ENG] Stull timbers placed between the foot and hanging walls, which constitute the only artificial support provided during the excavation of a stope.

stump [MIN ENG] A small pillar of coal left between the gangway or airway and the breasts to protect these passages; any small pillar.

stunt [PL PATH] Any of several plant diseases marked by reduction in size of the plant.

stunt box [ELEC] A device to control the nonprinting functions of a teletypewriter terminal.

stupp [MIN ENG] A black residue from distilled mercury ore, consisting of soot, hydrocarbons, mercury and mercury compounds, and ore dust.

sturgeon [VERT ZOO] Any of 10 species of large bottom-living fish which comprise the family Acipenseridae; the body has five rows of bony plates, and the snout is elongate with four barbels on its lower surface.

STURGEON

Short-nosed sturgeon (*Acipenser brevirostrus*), a species of sturgeon found in United States coastal waters.

Sturm-Liouville problem [MATH] The general problem of solving a given linear differential equation of order $2n$ together with $2n$-boundary conditions. Also known as eigenvalue problem.

Sturm-Liouville system [MATH] A given differential equation together with its boundary conditions having Sturm-Liouville problem form.

Sturm sequence [MATH] For a polynomial $p(x)$, this is the sequence of functions $f_0(x), f_1(x), \ldots$, where $f_0(x) = p(x)$, $f_1(x) = p'(x)$, and $f_n(x)$ is the negative remainder that occurs by finding the greatest common divisor of $f_{n-2}(x)$ and $f_{n-1}(x)$ via the euclidean algorithm.

Sturm's theorem [MATH] This gives a method to determine the number of real roots of a polynomial $p(x)$ which lie between two given values of x; the Sturm sequence of $p(x)$ provides the necessary information.

sturtite [MINERAL] A black mineral composed of hydrous silicate of iron, manganese, calcium, and magnesium; occurs in compact masses.

stutter [COMMUN] Series of undesired black and white lines sometimes produced when a facsimile signal undergoes a sharp amplitude change. [MED] A speech disorder marked by repetition of words, syllables, or sounds, or by hesitations in manner by the speaker.

Stuve chart [METEOROL] A thermodynamic diagram with atmospheric temperature as the x axis and atmospheric pressure to the power 0.286 as the y ordinate, increasing downward; named after G. Stuve. Also known as adiabatic chart; pseudo-adiabatic chart.

S twist [TEXT] A left-handed yarn twist in which the spirals resemble the letter S.

sty *See* hordeolum.

Styginae [INV ZOO] A subfamily of butterflies in the family Lycaenidae in which the prothoracic legs in the male are nonfunctional.

Stygocaridacea [INV ZOO] An order of crustaceans in the superorder Syncarida characterized by having a furca.

Stylasterina [INV ZOO] An order of the class Hydrozoa, including several brightly colored branching or encrusting coral-like coelenterates of warm seas.

style [BOT] The portion of a pistil connecting the stigma and ovary. [ENG] *See* gnomon. [ZOO] A slender elongated process on an animal.

stylet [GRAPHICS] A slender, pointed marking tool, as one used in graving. [INV ZOO] A slender, rigid, elongated appendage. [MED] **1.** A slender probe used for surgery. **2.** A thin wire inserted in a catheter to provide support or in a hollow needle to clear the passage.

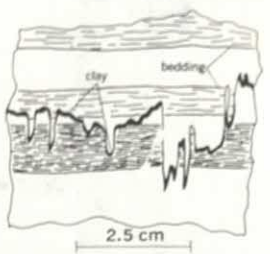
styloglossus [ANAT] A muscle arising from the styloid process of the temporal bone, and inserted into the tongue.

stylohyoid [ANAT] Pertaining to the styloid process of the temporal bone and the hyoid bone.

styloid [ZOO] Resembling a style.

stylolite [GEOL] An irregular surface, generally parallel to a bedding plane, in which small toothlike projections on one side of the surface fit into cavities of complementary shape on the other surface; interpreted to result diagenetically by pressure solution.

STYLOLITE



Stylolite in limestone.

stylomastoid [ANAT] Relating to the styloid and the mastoid processes of the temporal bone.

Stylommatophora [INV ZOO] A large order of the molluscan subclass Pulmonata characterized by having two pairs of retractile tentacles with eyes located on the tips of the large tentacles.

stylopodium [BOT] A conical or disk-shaped enlargement at the base of the style in plants of the family Umbelliferae.

stylotypite *See* tetrahedrite.

stylus [ENG ACOUS] The portion of a phonograph pickup that follows the modulations of a record groove and transmits the resulting mechanical motions to the transducer element of the pickup for conversion to corresponding audio-frequency signals. Also known as needle; phonograph needle; reproducing stylus. [GRAPHICS] A rather blunt metal point sometimes used in painting to make lightly ruled lines.

stylus printing *See* matrix printing.

S-type asteroid [ASTRON] A type of asteroid whose surface is reddish and of moderate albedo, containing pyroxene and olivine silicates, probably mixed with metallic iron, similar to stony iron meteorites.

S-type magma [GEOL] Magma formed from sedimentary source material.

styphnic acid [ORG CHEM] $C_6H(OH)_2(HO_2)_3$ An explosive, yellow, crystalline compound, melting at 179–180°C, slightly soluble in water; used in explosives as a priming agent. Also known as 2,4,6-trinitroresorcinol.

Stypocapitellidae [INV ZOO] A family of polychaete annelids belonging to the Sedentaria and consisting of a monotypic genus found in western Germany.

styralyl acetate *See* α-methylbenzyl acetate.

styralyl alcohol *See* α-methylbenzyl alcohol.

styramate [PHARM] $C_9H_{11}NO_3$ A compound that crystallizes from chloroform solution, and melts at 111–112°C; used in medicine as a muscle relaxant. Also known as carbamic acid β-hydroxyphenethyl ester.

styrene [ORG CHEM] $C_6H_5CH{:}CH_2$ A colorless, toxic liquid with a strong aromatic aroma; insoluble in water, soluble in alcohol and ether; polymerizes rapidly, can become explosive; boils at 145°C; used to make polymers and copolymers, polystyrene plastics, and rubbers. Also known as phenylethylene; styrene monomer; vinylbenzene.

styrene-acrylonitrile resin [ORG CHEM] A thermoplastic copolymer of styrene and acrylonitrile with good stiffness and resistance to scratching, chemicals, and stress. Also known as SAN.

styrene-butadiene rubber [MATER] The most common type of synthetic rubber, made by the copolymerization of styrene and butadiene monomers; used in tires, footwear, adhesives, and sealants. Also known as SBR.

styrene monomer *See* styrene.

styrene oxide [ORG CHEM] C_8H_8O A moderately toxic, combustible, colorless or straw-colored liquid miscible in acetone, ether, and benzene, and melts at 195°C; used as a chemical intermediate.

styrene plastic [ORG CHEM] A plastic made by the polymerization of styrene or the copolymerization of styrene with other unsaturated compounds.

styrene-rubber plastic [MATER] A plastic-rubber mixture

consisting of at least 50% of a styrene plastic combined with rubber and various compounding ingredients.

styroflex cable [COMMUN] A radio-frequency cable whose protective covering is a special type of styrene tape.

styryl carbinol *See* cinnamic alcohol.

styrylformic acid *See* cinnamic acid.

SU *See* strontium unit.

SU_2 symmetry *See* unitary symmetry.

subacute bacterial endocarditis *See* bacterial endocarditis.

subadditive function [MATH] A function F is subadditive if $f(x + y)$ is less than or equal to $f(x) + f(y)$ for all x and y in its domain.

subaerial [GEOL] Pertaining to conditions and processes occurring beneath the atmosphere or in the open air, that is, on or adjacent to the land surface.

subage [GEOL] A subdivision of a geologic age.

subalgebra [MATH] **1.** A subset of an algebra which itself forms an algebra relative to the same operations. **2.** A subalgebra (of sets) is any algebra (of sets) contained in some given algebra.

subalkaline [GEOCHEM] Pertaining to a soil in which the pH is 8.0 to 8.5, usually in a limestone or salt-marsh region.

subalphabet [COMPUT SCI] A subset of an alphabet.

subalpine *See* alpestrine.

subangular [SCI TECH] Somewhat angular but free from sharp edges and corners.

Subantarctic Intermediate Water [OCEANOGR] A layer of water above the deep-water layer in the South Atlantic.

subaqueous [HYD] Pertaining to conditions and processes occurring in, under, or beneath the surface of water, especially fresh water.

subaqueous dune [GEOL] A dune resulting from entrainment of grains by the flow of moving water.

subaqueous mining [MIN ENG] Surface mining in which the mined material is removed from the bed of a natural body of water.

subarachnoid hemorrhage [MED] Bleeding between the pia mater and the arachnoid of the brain.

subarachnoid space [ANAT] The space between the pia mater and the arachnoid of the brain.

subarctic [GEOGR] Pertaining to regions adjacent to the Arctic Circle or having characteristics somewhat similar to those of these regions.

subarctic climate *See* taiga climate.

subarid [CLIMATOL] Pertaining to regions that are moderately or slightly arid.

subarkose [GEOL] Sandstone that is intermediate in composition between arkose and pure quartz sandstone; it contains less feldspar than arkose.

subassembly [ELECTR] Two or more components combined into a unit for convenience in assembling or servicing equipment; an intermediate-frequency strip for a receiver is an example. [ENG] A structural unit, which, though manufactured separately, was designed for incorporation with other parts in the final assembly of a finished product.

subastral point *See* substellar point.

subatmospheric heating system [MECH ENG] A system which regulates steam flow into the main throttle valve under automatic thermostatic control and maintains a fixed vacuum differential between supply and return by means of a differential controller and a vacuum pump.

subatomic particle [PHYS] A particle which is smaller than an atom, namely, an elementary particle or an atomic nucleus.

subbase for a topology [MATH] A family S of subsets of a topological space X where by taking all finite intersections of sets from S and all unions of such intersections the entire topology of open sets of X is obtained.

subbituminous coal [GEOL] Black coal intermediate in rank between lignite and bituminous coal; has more carbon and less moisture than lignite.

subboreal [ECOL] A biogeographic zone whose climatic condition approaches that of the boreal.

subbottom depth recorder [ENG] A compact seismic instrument which can provide continuous soundings of strata beneath the ocean bottom utilizing the low-frequency output of an intense electrical spark discharge source in water.

subbottom reflection [GEOPHYS] The return of sound energy from a discontinuity in material below the surface of the sea bottom.

subboundary structure [MET] A network of low-angle grain boundaries of less than one degree within the main crystals of a metal.

subcaliber [ORD] Smaller than the standard caliber for a gun, generally used in practice firing.

subcaliber ammunition [ORD] Ammunition used with a gun or launching tube, usually in practice firing, of a caliber smaller than the standard.

subcaliber equipment [ORD] Any item of equipment, such as small guns, adapters, tubes, and accessories, used for firing subcaliber ammunition in practice drills with larger guns.

subcaliber firing [ORD] Practice firing of subcaliber ammunition, in connection with drills in elevating, traversing, or aiming guns of larger caliber.

subcaliber gun [ORD] A gun mounted on the outside and above the tube of a larger gun; it is used in practice firing of subcaliber ammunition, in connection with aiming drills with the larger gun.

subcaliber mount [ORD] Special mount in or on the tube of a gun, upon which a gun of smaller caliber can be attached for practice firing.

subcaliber rocket [ORD] A rocket designed especially to be fired from launching tubes of larger caliber than the rocket itself.

subcapillary interstice [GEOL] An interstice in which the molecular attraction of its walls extends across the entire opening; it is smaller than a capillary interstice.

subcardinal vein [VERT ZOO] Either of a pair of longitudinal veins of the mammalian embryo or the adult of some lower vertebrates which partly replace the postcardinals in the abdominal region, ventromedial to the mesonephros.

subcarrier [COMMUN] **1.** A carrier that is applied as a modulating wave to modulate another carrier. **2.** *See* chrominance subcarrier.

subcarrier oscillator [ELECTR] **1.** The crystal oscillator that operates at the chrominance subcarrier or burst frequency of 3.579545 megahertz in a color television receiver; this oscillator, synchronized in frequency and phase with the transmitter master oscillator, furnishes the continuous subcarrier frequency required for demodulators in the receiver. **2.** An oscillator used in a telemetering system to translate variations in an electrical quantity into variations of a frequency-modulated signal at a subcarrier frequency.

subcerebral plane [ANTHRO] The plane passing through a line traversing the lower angles of the parietal bones and the juncture of the superciliary ridge and the cheek bone.

subchannel [COMPUT SCI] The portion of an input/output channel associated with a specific input/output operation. [COMMUN] In a telemetry system, the route required to convey the magnitude of a single subcommutated measurand.

subclavian artery [ANAT] The proximal part of the principal artery in the arm or forelimb.

subclavian vein [ANAT] The proximal part of the principal vein in the arm or forelimb.

subclavius [ANAT] A small muscle attached to the clavicle and the first rib.

subclimax [ECOL] A community immediately preceding a climax in an ecological succession.

subclutter visibility [ELECTR] A measure of the effectiveness of moving-target indicator radar, equal to the ratio of the signal from a fixed target that can be canceled to the signal from a just visible moving target.

subcollateral [ANAT] Ventrad of the collateral sulcus of the brain.

subcommutation [COMMUN] In telemetry, commutation of additional channels with output applied to individual channels of the primary commutator.

subcomponent [DES ENG] A part of a component having characteristics of the component.

subcompound [CHEM] A compound, generally in the vapor phase, in which an element exhibits a valency lower than that exhibited in its ordinary compounds.

subconchoidal [GEOL] Pertaining to a fracture that is partly or vaguely conchoidal in shape.

subconscious [PSYCH] Pertaining to mental activity beyond the level of consciousness, including the preconscious and the unconscious.

subconsequent stream *See* secondary consequent stream.

subcontinent [GEOGR] **1.** A landmass such as Greenland that is large but not as large as the generally recognized continents. **2.** A large subdivision of a continent (for example, the

Indian subcontinent) distinguished geologically or geomorphically from the rest of the continent.

subcontract [ENG] A contract made with a third party by one who has contracted to perform work or service for whole or part performance of that work or service.

subcontractor [ENG] A manufacturer or organization that receives a contract from a prime contractor for a portion of the work on a project.

subcritical [NUCLEO] Having an effective multiplication constant less than one, so that a self-supporting chain reaction cannot be maintained in a nuclear reactor.

subcritical assembly *See* subcritical reactor.

subcritical flow *See* subsonic flow.

subcritical mass [NUCLEO] A piece of fissionable material having an effective multiplication constant of less than one, so that it does not give rise to a self-supporting chain reaction.

subcritical reactor [NUCLEO] A reactor having an effective multiplication constant of less than one, so that a self-supporting chain reaction cannot be maintained. Also known as subcritical assembly; teaching reactor.

subcrop [GEOL] An occurrence of strata beneath the subsurface of an inclusive stratigraphic unit that succeeds an unconformity on which there is marked overstep.

subcutaneous connective tissue [HISTOL] The layer of loose connective tissue beneath the dermis.

subcutaneous emphysema [MED] The presence of air in the tissues just under the skin; when seen in diving it usually involves the skin of the neck and nearby areas.

subcycle generator [ELECTR] Frequency-reducing device used in telephone equipment which furnishes ringing power at a submultiple of the power supply frequency.

subdevice bit *See* select bit.

subdivided capacitor [ELEC] Capacitor in which several capacitors known as sections are mounted so that they may be used individually or in combination.

subdominant [ECOL] A species which may appear more abundant at particular times of the year than the true dominant in a climax; for example, in a savannah trees and shrubs are more conspicuous than the grasses, which are the true dominants.

subdrainage [CIV ENG] Natural or artificial removal of water from beneath a lined conduit.

subdrilling [ENG] Refers to the breaking of the base in which boreholes are drilled 1 foot (0.3 meter) or several feet below the level of the quarry floor.

subduction [GEOL] The process by which one crustal block descends beneath another, such as the descent of the Pacific plate beneath the Andean plate along the Andean Trench.

subdural hematoma [MED] A mass of blood between the arachnoid and the dura mater.

subdural hemorrhage [MED] Bleeding between the dura mater and the arachnoid.

subdwarf star [ASTRON] An intermediate star type; luminosity is between that of main sequence stars and the white dwarf stars on the Hertzsprung-Russell diagram; spectral classes F, G, and K are most numerous.

subendothelial layer [HISTOL] The middle layer of the tunica intima of veins and of medium and larger arteries, consisting of collagenous and elastic fibers and a few fibroblasts.

suberic acid [ORG CHEM] $HOOC(CH_2)_6COOH$ A colorless, crystalline compound that melts at 143°C, and dissolves slightly in cold water; used in organic synthesis. Also known as octanedioic acid.

suberin [BIOCHEM] A fatty substance found in many plant cell walls, especially cork.

suberinite [GEOL] A variety of provitrinite composed of corky tissue.

suberization [BOT] Infiltration of plant cell walls by suberin resulting in the formation of corky tissue that is impervious to water.

suberose [BOT] Having a texture like cork due to or resembling that due to suberization.

subfeldspathic [GEOL] Referring to mature lithic wacke or arenite containing an abundance of quartz grains with less than 10% feldspar grains.

subfield [MATH] **1.** A subset of a field which itself forms a field relative to the same operations. **2.** A subfield (of sets) is any field (of sets) contained in some given field of sets.

subfloor [BUILD] The rough floor which rests on the floor joists and on which the finished floor is laid.

subframe [COMMUN] In telemetry, a complete sequence of frames during which all subchannels of a specific channel are sampled once.

subgelisol [GEOL] Unfrozen ground beneath permafrost.

subgeostrophic wind [METEOROL] Any wind of lower speed than the geostrophic wind required by the existing pressure gradient.

subgiant star [ASTRON] A member of the family of stars whose luminosity is intermediate between giants and the main sequence in the Hertzsprung-Russell diagram; spectral classes G and K are most frequent.

subglacial [GEOL] Pertaining to the area in or at the bottom of, or immediately beneath, a glacier.

subglacial moraine *See* ground moraine.

subgrade [CIV ENG] The soil or rock leveled off to support the foundation of a structure.

subgradient wind [METEOROL] A wind of lower speed than the gradient wind required by the existing pressure gradient and centrifugal force.

subgrain [MET] The portion of a metal crystal or grain with an orientation that differs slightly from the orientation of neighboring portions of the same crystal.

subgraph [MATH] A graph contained in a given graph which has as its vertices some subset of the vertices of the original.

subgraywacke [PETR] An argillaceous sandstone with a composition intermediate between graywacke and orthoquartzite; a clay matrix is usually present but it amounts to less than 15%

subgroup [MATH] A subset N of a group G which is itself a group relative to the same operation.

subharmonic [PHYS] A sinusoidal quantity having a frequency that is an integral submultiple of the frequency of some other sinusoidal quantity to which it is referred; a third subharmonic would be one-third the fundamental or reference frequency.

subharmonic function [MATH] A continuous function is subharmonic in a region R of the plane if its value at any point z_0 of R is less than or equal to its integral along a circle centered at z_0.

subharmonic triggering [ELECTR] A method of frequency division which makes use of a triggered multivibrator having a period of one cycle which allows triggering only by a pulse that is an exact integral number of input pulses from the last effective trigger.

subhedral [MINERAL] **1.** Pertaining to an individual mineral crystal that is partly bounded by its own crystal faces and partly bounded by surfaces formed against preexisting crystals. **2.** Descriptive of a crystal having partially developed crystal faces.

subhumid climate [CLIMATOL] A humidity province based on its typical vegetation. Also known as grassland climate; prairie climate.

subidiomorphic *See* hypidiomorphic.

subirrigation [AGR] Natural or artificial irrigation of crops by the application of water below the ground surface.

subjacent [GEOL] Being lower than but not directly underneath.

subjacent igneous body [GEOL] An igneous intrusion without a known floor, and which presumably enlarges downward.

subjamming visibility [ORD] Relates to how well a particular radar antijam technique can see through jamming signals.

subject copy [GRAPHICS] Material that is to be transmitted for facsimile reproduction. Also known as copy.

subjective probability *See* personal probability.

subkiloton weapon [ORD] A nuclear weapon producing a yield below 1 kiloton.

sublacustrine [GEOL] Existing or formed on the bottom of a lake.

sublacustrine channel [GEOL] A channel eroded in a lake bed either before the lake existed or by a strong current in the lake.

sublethal gene *See* semilethal gene.

subleukemic [MED] Less than leukemic; usually applied to states in which the peripheral blood manifestations of leukemia are temporarily suppressed.

sublevel [ATOM PHYS] *See* subshell. [MIN ENG] An intermediate level opened a short distance below the main level; or in the caving system of mining, a 15–20-foot (4.6–6.1-meter) level below the top of the ore body, preliminary to caving the ore between it and the level above.

sublevel caving [MIN ENG] A stoping method in which rela-

tively thin blocks of ore are caused to cave by successively undermining small panels.

sublevel drive [MIN ENG] A drive often made in a section which divides the deposit into narrower panels and zones.

sublevel stoping [MIN ENG] A mining method involving overhand, underhand, and shrinkage stoping; the characteristic feature is the use of sublevels which are worked simultaneously, the lowest on a given block being farthest advanced and the sublevels above following one another at short intervals.

sublimation [PSYCH] A defense mechanism whereby the energies of undesirable instinctual cravings and impulses are converted into socially acceptable activities. [THERMO] The process by which solids are transformed directly to the vapor state or vice versa without passing through the liquid phase.

sublimation cooling [THERMO] Cooling caused by the extraction of energy to produce sublimation.

sublimation curve [THERMO] A graph of the vapor pressure of a solid as a function of temperature.

sublimation energy [THERMO] The increase in internal energy when a unit mass, or 1 mole, of a solid is converted into a gas, at constant pressure and temperature.

sublimation nucleus [METEOROL] Any particle upon which an ice crystal may grow by the process of sublimation.

sublimation point [THERMO] The temperature at which the vapor pressure of the solid phase of a compound is equal to the total pressure of the gas phase in contact with it; analogous to the boiling point of a liquid.

sublimation pressure [THERMO] The vapor pressure of a solid.

sublimation vein [GEOL] A vein of mineral that has condensed from a vapor.

sublimatography [ANALY CHEM] A procedure of fractional sublimation in which a solid mixture is separated into bands along a condensing tube with a temperature gradient.

sublimator [CHEM] Device used for the heating of solids (usually under vacuum) to the temperature at which the solid sublimes.

sublime [THERMO] To change from the solid to the gaseous state without passing through the liquid phase.

sublimed sulfur *See* flowers of sulfur.

subliminal [PHYSIO] Below the threshold of responsiveness, consciousness, or sensation to a stimulus.

subliming rocket propellant [MATER] A propellant characterized by sublimation of the material at the heated surface.

sublingual gland [ANAT] A complex of salivary glands located in the sublingual fold on each side of the floor of the mouth.

sublittoral zone [OCEANOGR] The benthic region extending from mean low water (or 40–60 meters, according to some authorities) to a depth of about 100 fathoms (200 meters), or the edge of a continental shelf, beyond which most abundant attached plants do not grow.

sublunar point [ASTRON] The moon's geographic zenith position at any particular moment in time.

submachine gun [ORD] A type of machine gun; a short-barreled shoulder firearm using pistol-type ammunition and capable of full automatic fire.

submandibular duct [ANAT] The duct of the submandibular gland which empties into the mouth on the side of the frenulum of the tongue.

submandibular gland [ANAT] A large seromucous or mixed salivary gland located below the mandible on each side of the jaw. Also known as mandibular gland; submaxillary gland.

submarine [NAV ARCH] A ship that can operate both on the surface of the water and completely submerged. [OCEANOGR] Being or functioning in the sea.

submarine base [NAV ARCH] A base providing logistic support for submarines.

submarine bell [NAV] A bell whose signal is transmitted through water.

submarine blast [ENG] A charge of high explosives fired in boreholes drilled in the rock underwater for dislodging dangerous projections and for deepening channels.

submarine bulge *See* fan.

submarine cable [ELEC] A cable designed for service under water; usually a lead-covered cable with steel armor applied between layers of jute.

submarine canyon [GEOL] Steep-sided valleys winding across the continental shelf or continental slope, probably originally produced by Pleistocene stream erosion, but presently the site of turbidity flows.

submarine cave *See* submarine fan.

submarine delta *See* submarine fan.

submarine earthquake *See* seaquake.

submarine false target [ORD] A pyrotechnic item designed to be ejected from a submarine to confuse and disrupt underwater echo-ranging equipment and create a bubble wake which can be seen by aircraft and surface vessels.

submarine fan [GEOL] A shallow marine sediment that is fan- or cone-shaped and lies off the seaward opening of large rivers and submarine canyons. Also known as abyssal cave; abyssal fan; sea fan; submarine cave; submarine delta; subsea apron.

submarine gate [ENG] An edge gate with the opening from the runner into the mold positioned below the printing line or mold surface.

submarine geology *See* geological oceanography.

submarine isthmus [GEOL] A submarine elevation joining two land areas and separating two basins or depressions by a depth less than that of the basins.

submarine mine [MIN ENG] A mine for the extraction of minerals or ores under the sea.

submarine navigation [NAV] **1.** Navigation of a submarine, whether submerged or surfaced. **2.** *See* underwater navigation.

submarine oscillator [ENG ACOUS] A large, electrically operated diaphragm horn which produces a powerful sound for signaling through water.

submarine peninsula [GEOL] An elevated portion of the submarine relief resembling a peninsula.

submarine pipeline [ENG] A pipeline installed under water, resting on the bed of the waterway; frequently used for petroleum or natural gas transport across rivers, lakes, or bays.

submarine pit [GEOL] A cavity on the bottom of the sea. Also known as submarine well.

submarine plain *See* plain.

submarine relief [GEOL] Relative elevations of the ocean bed, or the representation of them on a chart.

submarine rocket *See* SUBROC.

submarine sanctuary [NAV ARCH] Any of the restricted areas established for the conduct of noncombat submarine or antisubmarine exercises; they may be either stationary or moving and are normally designated only in rear areas.

submarine sentry [ENG] A form of underwater kite towed at a predetermined constant depth in search of elevations of the bottom; the kite rises to the surface upon encountering an obstruction.

submarine sound signal [ACOUS] A sound signal transmitted through water.

submarine spring [HYD] A spring of water issuing from the bottom of the sea.

submarine station [OCEANOGR] **1.** One of the places for which tide or tidal current predictions are determined by applying a correction to the predictions of a reference station. **2.** A tide or tidal current station at which a short series of observations have been made; these observations are reduced by comparison with simultaneous observations at a reference station.

submarine striking forces [NAV ARCH] Submarines having guided or ballistic missile launching or guidance capabilities formed to launch offensive nuclear strikes.

submarine topography [GEOL] Configuration of a surface such as the sea bottom or of a surface of given characteristics within the water mass.

submarine trench *See* trench.

submarine trough *See* trough.

submarine valley *See* valley.

submarine wave recorder [ENG] An instrument for measuring the changing water height above a hovering submarine by measuring the time required for sound emitted by an inverted echo sounder on the submarine to travel to the surface and return.

submarine weathering [GEOL] A slow alteration of the form, texture, and composition of the sea floor from chemical, thermal, and biological causes.

submarine well *See* submarine pit.

submaxillary gland *See* submandibular gland.

submerged-arc furnace [MET] An arc-heating furnace in which the arcs may be completely submerged under the charge or in the molten bath under the charge.

submerged-arc welding [MET] Arc welding with a bare

metal electrode, the arc and tip of the electrode being shielded by a blanket of granular, fusible material.

submerged breakwater [OCEANOGR] A breakwater with its top below the still water level; when struck by a wave, part of the wave energy is reflected seaward and the remaining energy is largely dissipated in a breaker, transmitted shoreward as a multiple crest system, or transmitted shoreward as a simple wave system.

submerged coastal plain [GEOL] The continental shelf as the seaward extension of a coastal plain on the land. Also known as coast shelf.

submerged-combustion evaporator [ENG] A liquid-evaporation device in which heat is provided by combustion gases bubbling up through the liquid; the burner is submerged in the body of the liquid.

submerged-combustion heater [ENG] A combustion device in which fuel and combustion air are mixed and ignited below the surface of a liquid; used in heaters and evaporators where absorption of the combustion products will not be detrimental.

submerged culture [MICROBIO] A method for growing pure cultures of aerobic bacteria in which microorganisms are incubated in a liquid medium subjected to continuous, vigorous agitation.

submerged fermentation [MICROBIO] Industrial production of antibiotics, enzymes, and other substances by growing the microorganisms that produce the product in a submerged culture.

submerged-foil hydrofoil [NAV ARCH] A hydrofoil craft with foils which are completely submerged and whose angle of attack is controlled by an autopilot and sensors to maintain the height and attitude of the craft.

submerged lands [GEOL] Lands covered by water at any stage of the tide, as distinguished from tidelands which are attached to the mainland or an island and are covered or uncovered with the tide; tidelands presuppose a high-water line as the upper boundary, submerged lands do not.

submerged screw log [NAV ARCH] A type of electric log which is actuated by the flow of water past a propeller.

submerged shoreline *See* shoreline of submergence.

submerged weir [CIV ENG] A dam which, when in use, has the downstream water level at an elevation equal to or higher than the crest of the dam.

submergence [GEOL] A change in the relative levels of water and land either from a sinking of the land or a rise of the water level.

submersible pump [MECH ENG] A pump and its electric motor together in a protective housing which permits the unit to operate under water.

submetallic [OPTICS] Referring to a luster intermediate between metallic and nonmetallic, such as exhibited by the mineral chromite.

submillimeter wave [ELECTROMAG] An electromagnetic wave whose wavelength is less than 1 millimeter, corresponding to frequencies above 300 gigahertz.

subminiature tube [ELECTR] An extremely small electron tube designed for use in hearing aids and other miniaturized equipment; a typical subminiature tube is about 1½ inches (4 centimeters) long and 0.4 inch (1 centimeter) in diameter, with the pins emerging through the glass base.

submissile [ORD] One of several smaller missiles carried and released by a larger missile, especially in a warhead.

submucosa [HISTOL] The layer of fibrous connective tissue that attaches a mucous membrane to its subadjacent parts.

submucous plexus [ANAT] A visceral nerve network lying in the submucosa of the digestive tube. Also known as Meissner's plexus.

submultiple resonance [PHYS] Resonance at a frequency that is a submultiple of the frequency of the exciting impulses.

suboptimization [SYS ENG] The process of fulfilling or optimizing some chosen objective which is an integral part of a broader objective; usually the broad objective and lower-level objective are different.

Suboscines [VERT ZOO] A major division of the order Passeriformes, usually divided into the suborders Eurylaimi, Tyranni, and Memirae.

subpolar anticyclone *See* subpolar high.

subpolar glacier [HYD] A polar glacier with 10 to 20 meters of firn in the accumulation area where some melting occurs.

subpolar high [METEOROL] A high that forms over the cold continental surfaces of subpolar latitudes, principally in Northern Hemisphere winters; these highs typically migrate eastward and southward. Also known as polar anticyclone; polar high; subpolar anticyclone.

subpolar low-pressure belt [METEOROL] A belt of low pressure located, in the mean, between 50 and 70° latitude; in the Northern Hemisphere, this belt consists of the Aleutian low and the Icelandic low; in the Southern Hemisphere, it is supposed to exist around the periphery of the Antarctic continent.

subpolar westerlies *See* westerlies.

subpopulation [STAT] A subset of population. Also known as stratum.

subprogram [COMPUT SCI] A part of a larger program which can be converted independently into machine language.

subrefraction [ELECTROMAG] Atmospheric refraction which is less than standard refraction.

subring [MATH] **1.** A subset I of a ring R where I is also a ring relative to the operations of R. **2.** A subring (of sets) is any ring (of sets) contained in some given ring (of sets).

SUBROC [ORD] A Navy missile that is fired underwater from a conventional torpedo tube, but is rocket-powered and most of its course is through the air, and it has a range of about 50 miles (80 kilometers); used against enemy submarines. Abbreviation for submarine rocket.

subroutine [COMPUT SCI] **1.** A body of computer instruction (and the associated constants and working-storage areas, if any) designed to be used by other routines to accomplish some particular purpose. **2.** A statement in FORTRAN used to define the beginning of a closed subroutine (first definition).

subscale [MET] Oxidation occurring within a metal instead of on the surface.

subscapularis [ANAT] A muscle arising from the costal surface of the scapula and inserted on the lesser tubercle of the humerus.

subschema [COMPUT SCI] An individual user's partial view of a data base.

subscriber line [ELEC] A telephone line between a central office and a telephone station, private branch exchange, or other end equipment. Also known as central office line; subscriber loop.

subscriber loop *See* subscriber line.

subscriber multiple [ELEC] Bank of jacks in a manual switchboard providing outgoing access to subscriber lines, and usually having more than one appearance across the face of the switchboard.

subscriber set *See* subset.

subscriber station [COMMUN] The connection between a central office and an outside location, including the circuit, some circuit termination equipment, and possibly some associated input/output equipment.

subscript [SCI TECH] A letter or symbol written below, and usually to the right, of another symbol for any of various purposes, such as to identify a particular element or elements of a set, to denote a constant value of a variable, or, in a chemical formula, to indicate the number of atoms of a particular kind in a molecule.

subscription television [COMMUN] A television system in which programs are broadcast in coded or scrambled form, for reception only by subscribers who make individual or monthly payments for use of the decoding or unscrambling devices required to obtain a clear program. Also known as pay television; toll television.

subsea apron *See* submarine fan.

subsequence [MATH] A subsequence of a given sequence is any sequence all of whose entries appear in the original sequence and in the same manner of succession.

subsequent [GEOL] Referring to a geologic feature that followed in time the development of a consequent feature of which it is a part.

subsequent drainage [HYD] Drainage by a stream developed subsequent to the system of which it is a part; drainage follows belts of weak rocks.

subsequent fold *See* cross fold.

subsequent stream [HYD] A stream that flows in the general direction of the strike of the underlying strata and is subsequent to the formation of the consequent stream of which it is a tributary. Also known as longitudinal stream; strike stream.

subsequent valley [GEOL] A valley eroded by a stream developed subsequent to the system of which it is a part.

SUBMERGED-FOIL HYDROFOIL

Hydrofoil *Victoria*, with submerged foils and autopilot, designed by Gibbs and Cox, Inc.

subsere [ECOL] A secondary community that succeeds an interrupted climax.

subset [COMMUN] A telephone or other subscriber equipment connected to a communication system, such as a modem. Derived from subscriber set. [MATH] A subset A of a set B is a set all of whose elements are included in B.

subshell [ATOM PHYS] Electrons of an atom within the same shell (energy level) and having the same azimuthal quantum numbers. Also known as sublevel.

subsidence [METEOROL] A descending motion of air in the atmosphere, usually with the implication that the condition extends over a rather broad area. [MIN ENG] A sinking down of a part of the earth's crust due to underground excavations.

subsidence break [MIN ENG] A fracture in the rocks overlying a coal seam or mineral deposit resulting from mining operations.

subsidence inversion [METEOROL] A temperature inversion produced by the adiabatic warming of a layer of subsiding air; this inversion is enhanced by vertical mixing in the air layer below the inversion.

subsidiary conduit [CIV ENG] Terminating branch of an underground conduit run extending from a manhole or handhole to a nearby building, handhole, or pole.

subsidiary fracture *See* tension fracture.

subsidiary transport [MIN ENG] The conveying or haulage of coal or mineral from the working faces to a junction or loading point.

subsieve analysis [MET] Analysis by size distribution of metal powder particles all of which pass through a standard 44-micrometer sieve.

subsieve fraction [MET] The fraction of particles of a metal powder which pass through a standard 44-micrometer sieve.

subsoil [GEOL] **1.** Soil underlying surface soil. **2.** *See* B horizon.

subsoil ice *See* ground ice.

subsolar point [ASTRON] The sun's zenith geographic position at any particular moment in time.

subsolvus [PHYS CHEM] A range of conditions in which two or more solid phases can form by exsolution from an original homogeneous phase.

subsonic [ACOUS] *See* infrasonic. [PHYS] Of, pertaining to, or dealing with speeds less than acoustic velocity, as in subsonic aerodynamics.

subsonic flight [AERO ENG] Movement of a vehicle through the atmosphere at a speed appreciably below that of sound waves; extends from zero (hovering) to a speed about 85% of sonic speed corresponding to ambient temperature.

subsonic flow [FL MECH] Flow of a fluid at a speed less than that of the speed of sound in the fluid. Also known as subcritical flow.

subsonic inlet [ENG] An entrance or orifice for the admission of fluid flowing at speeds less than the speed of sound in the fluid.

subsonic nozzle [ENG] A nozzle through which a fluid flows at speed less than the speed of sound in the fluid.

subsonic speed [FL MECH] A speed relative to surrounding fluid less than that of the speed of sound in the same fluid.

subspace [MATH] A subset of a space which, in the appropriate context, is a space in its own right.

subspecies [SYST] A geographically defined grouping of local populations which differs taxonomically from similar subdivisions of species.

substance [PHYS] Tangible material, occurring in macroscopic amounts.

substance P [BIOCHEM] An undecapeptide widely distributed in the central nervous system and found in highest concentrations in superficial layers of the dorsal horn of the spinal cord, in the trigeminal nerve nucleus, and in the substantia nigra; acts as a neurotransmitter.

substandard propagation [ELECTROMAG] The propagation of radio energy under conditions of substandard refraction in the atmosphere; that is, refraction by an atmosphere or section of the atmosphere in which the index of refraction decreases with height at a rate of less than 12 N units (unit of index of refraction) per 1000 feet (304.8 meters).

substantive dye *See* direct dye.

substation [ELEC] *See* electric power substation. [ENG] An intermediate compression station to repressure a fluid being transported by pipeline over a long distance. [MIN ENG] A subsidiary station for the conversion of power to the type, usually direct current, and voltage needed for mining equipment and fed into the mine power system.

substellar point [ASTRON] The geographical position of a star; that point on the earth at which the star is in the zenith at a specified time. Also known as subastral point.

substitute mode [COMPUT SCI] One method of exchange buffering, in which segments of storage function alternately as buffer and as program work area.

substitutional impurity [SOLID STATE] An atom or ion which is not normally found in a solid, but which resides at the position where an atom or ion would ordinarily be located in the lattice structure, and replaces it.

substitution cipher [COMMUN] A cipher in which the characters of the original message are replaced by other characters according to a key.

substitution reaction [CHEM] Replacement of an atom or radical by another one in a chemical compound.

substitution solid solution [MET] A solid alloy having the atoms of the solute located at some lattice of points of the solvent.

substitutive nomenclature [ORG CHEM] A system in which the name of a compound is derived by using the functional group (the substituent) as a prefix or suffix to the name of the parent compound to which it is attached; for example, in 2-chloropropane a chlorine atom has replaced a hydrogen atom on the central carbon of the propane chain.

substrate [BIOCHEM] The substance with which an enzyme reacts. [ELECTR] The physical material on which a microcircuit is fabricated; used primarily for mechanical support and insulating purposes, as with ceramic, plastic, and glass substrates; however, semiconductor and ferrite substrates may also provide useful electrical functions. [ENG] Basic surface on which a material adheres, for example, paint or laminate. [ORG CHEM] A compound with which a reagent reacts.

substratosphere [METEOROL] A region of indefinite lower limit just below the stratosphere.

substratum [GEOL] Any layer underlying the true soil.

substring [COMPUT SCI] A sequence of successive characters within a string.

substructure [CIV ENG] The part of a structure which is below ground.

subsurface contour *See* structure contour.

subsurface current [OCEANOGR] An underwater current which is not present at the surface or whose core (region of maximum velocity) is below the surface.

subsurface flow [HYD] Interflow plus groundwater flow.

subsurface geology [GEOL] The study of geologic features beneath the land or sea-floor surface. Also known as underground geology.

subsurface tillage [AGR] A method of stirring the soil with blades that leaves stubble on or just below the surface.

subsurface waste disposal [ENG] A waste disposal method for manufacturing wastes in porous underground rock formations.

subsurface wave [ELECTROMAG] Electromagnetic wave propagated through water or land; operating frequencies for communications may be limited to approximately 35 kilohertz due to attenuation of high frequencies.

subsynchronous [ELEC] Operating at a frequency or speed that is related to a submultiple of the source frequency.

subsystem [ENG] A major part of a system which itself has the characteristics of a system, usually consisting of several components.

subtend [BOT] To lie adjacent to and below another structure, often enclosing it.

subtense bar [ENG] The horizontal bar of fixed length in the subtense technique of distance measurement method.

subtense technique [CIV ENG] A distance measuring technique in which the transit angle subtended by the subtense bar enables the computation of the transit-to-bar distance.

subterranean ice *See* ground ice.

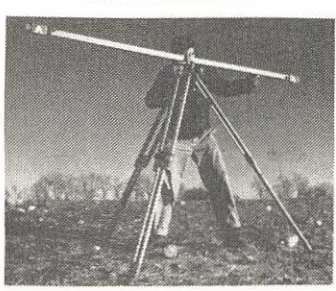
subterranean stream [HYD] A subsurface stream that flows through a cave or a group of communicating caves.

subtilin [MICROBIO] An antibiotic substance obtained from *Bacillus subtilis*, active against gram-positive bacteria.

subtracter [COMPUT SCI] A computer device that can form the difference of two numbers or quantities.

subtraction [MATH] The addition of one quantity with the negative of another; in a system with an additive operation this is

SUBTENSE BAR



The subtense bar used in the subtense technique of distance measurement. *(Lockwood, Kessler, and Bartlett Inc.)*

formally the sum of one element with the additive inverse of another.

subtractive primaries [OPTICS] The three colors, usually yellow, magenta, and cyan (greenish-blue), which are mixed together in a subtractive process.

subtractive process [OPTICS] The process of producing colors by mixing absorbing media or filters of subtractive primary colors.

subtrahend [MATH] A quantity which is to be subtracted from another given quantity.

subtree [MATH] A subgraph of a tree which is itself a tree.

Subtriquetridae [INV ZOO] A family of arthropods in the suborder Porocephaloidea.

subtropic [METEOROL] An indefinite belt in each hemisphere between the tropic and temperate regions; the polar boundaries are considered to be roughly 35–40° northern and southern latitudes, but vary greatly according to continental influence, being farther poleward on the western coasts of continents and farther equatorward on the eastern coasts.

subtropical anticyclone *See* subtropical high.

Subtropical Convergence [OCEANOGR] The zone of converging currents, generally located in midlatitudes.

subtropical cyclone [METEOROL] The low-level (surface chart) manifestation of a cutoff low.

subtropical easterlies *See* tropical easterlies.

subtropical easterlies index [METEOROL] A measure of the strength of the easterly wind between the latitudes of 20° and 35°N; the index is computed from the average sea-level pressure difference between these latitudes and is expressed as the east to west component of the corresponding geostrophic wind in meters and tenths of meters per second.

subtropical forest *See* temperate rainforest.

subtropical high [METEOROL] One of the semipermanent highs of the subtropical high-pressure belt; these highs appear as centers of action on mean charts of surface pressure; they lie over oceans and are best developed in the summer season. Also known as oceanic anticyclone; oceanic high; subtropical anticyclone.

subtropical high-pressure belt [METEOROL] One of the two belts of high atmospheric pressure that are centered, in the mean, near 30°N and 30°S latitudes; these belts are formed by the subtropical highs.

subtropical westerlies *See* westerlies.

subulate [BOT] Linear, delicate, and tapering to a sharp point.

Subulitacea [PALEON] An extinct superfamily of gastropod mollusks in the order Prosobranchia which possessed a basal fold but lacked an apertural sinus.

Subuluridae [INV ZOO] The equivalent name for Heterakidae.

subumbrella [INV ZOO] The concave undersurface of the body of a jellyfish.

subunit *See* protomer.

subvoice-grade channel [COMMUN] A channel whose bandwidth is smaller than the bandwidth of a voice-grade channel; it is usually a subchannel of a voice-grade line.

subway [CIV ENG] An underground passage.

subway-type transformer [ELEC] Transformer of submersible construction.

succession [ECOL] A gradual process brought about by the change in the number of individuals of each species of a community and by the establishment of new species populations which may gradually replace the original inhabitants.

succession of crops [AGR] **1.** Growing a crop over a long season by either repeated sowings or a single sowing of varieties of the crop that mature at different rates. **2.** Growing two or more crops in a season on the same land by planting them in succession.

successive-approximation converter [COMPUT SCI] An analog-to-digital converter which operates by successively considering each bit position in the digital output and setting that bit equal to 0 or 1 on the basis of the output of a comparator.

successive fracture treatment [PETRO ENG] A second or third fracturing operation of an oil well in an oil reservoir to fracture a new part or zone.

successor [MATH] For a vertex a in a directed graph, any vertex b for which there is an arc between a and b directed from a to b.

succinamide [BIOCHEM] $H_2NCOCH_2CONH_2$ The amide of succinic acid.

succinate [ORG CHEM] A salt or ester of succinic acid; for example, sodium succinate, $Na_2C_4H_4O_4 \cdot 6H_2O$, the reaction product of succinic acid and sodium hydroxide.

succinbromimide *See* *N*-bromosuccinamide.

succinic acid [ORG CHEM] $CO_2H(CH_2)_2CO_2H$ Water-soluble, colorless crystals with an acid taste; melts at 185°C; used as a chemical intermediate, in medicine, and to make perfume esters. Also known as butanedioic acid.

succinic acid dehydrogenase [BIOCHEM] An enzyme that catalyzes the dehydrogenation of succinic acid to fumaric acid in the presence of a hydrogen acceptor. Also known as succinic dehydrogenase.

succinic acid 2,2-dimethylhydrazide [ORG CHEM] $C_6H_{12}O_3N_2$ White crystals with a melting point of 154–156°C; soluble in water; used as a growth regulator for many crops and ornamentals. Also known as aminocide.

succinic anhydride [ORG CHEM] $C_4H_4O_3$ Colorless or pale needles soluble in alcohol and chloroform; converts to succinic acid in water; melts at 120°C; used as a chemical and pharmaceutical intermediate and a resin hardener. Also known as butanedioic anhydride; 2,5-diketotetrahydrofurane; succinyl oxide.

succinic dehydrogenase *See* succinic acid dehydrogenase.

succinimide [ORG CHEM] $C_4H_5O_2N \cdot H_2O$ Colorless or tannish water-soluble crystals with a sweet taste; melts at 126°C; used to make plant growth stimulants and as a chemical intermediate. Also known as 2,5-diketopyrrolidine.

Succinimonas [MICROBIO] A genus of gram-negative, strictly anaerobic bacteria of uncertain affiliation; motile, straight, short rods or cocci; ferment carbohydrates to form large amounts of succinate.

succinite [MINERAL] An amber-colored variety of grossularite.

Succinivibrio [MICROBIO] A genus of gram-negative, strictly anaerobic bacteria of uncertain affiliation; straight or slightly curved to helical rods with pointed ends; ferment carbohydrates and form succinate acetate, and formate.

succinonitrite *See* ethylene cyanide.

succinoxidase [BIOCHEM] A complex enzyme system containing succinic dehydrogenase and cytochromes that catalyzes the conversion of succinate ion and molecular oxygen to fumarate ion.

succinylcholine chloride [ORG CHEM] $[Cl(CH_3)_3N(CH_2)_2OOCH_2]_2 \cdot 2H_2O$ Water-soluble white crystals with a bitter taste, melts at 162°C; used in medicine. Also known as choline succinate dichloride dihydrate.

succinyl oxide *See* succinic anhydride.

succinylsulfathiazole [PHARM] $C_{13}H_{13}N_3O_5S_2$ A poorly absorbed sulfonamide used as an intestinal antibacterial agent in preoperative preparation of patients for abdominal surgery, and also postoperatively to maintain a low bacterial count.

succulent [BOT] Describing a plant having juicy, fleshy tissue.

succus entericus [PHYSIO] The intestinal juice secreted by the glands of the intestinal mucous membrane; it is thin, opalescent, alkaline, and has a specific gravity of 1.011.

sucker [BOT] A shoot that develops rapidly from the lower portion of a plant, and usually at the expense of the plant. [ZOO] A disk-shaped organ in various animals for adhering to or holding onto an individual, usually of another species.

sucker rod [PETRO ENG] A connecting rod between a downhole oil-well pump and the lifting or pumping device on the surface.

sucker-rod pump [PETRO ENG] A cylinder-piston-type pump used to displace oil into the oil-well tubing string, and to the surface.

sucking louse [INV ZOO] The common name for insects of the order Anoplura, so named for the slender, tubular mouthparts.

sucrase *See* saccharase.

sucrose [ORG CHEM] $C_{12}H_{22}O_{11}$ Combustible, white crystals soluble in water, decomposes at 160 to 186°C; derived from sugarcane or sugarbeet; used as a sweetener in drinks and foods and to make syrups, preserves, and jams. Also known as saccharose; table sugar.

sucrose octoacetate [ORG CHEM] $C_{28}H_{38}O_{19}$ A bitter crystalline compound that forms needles from alcohol solution, melts at 89°C, and breaks down at 286°C or above; used as an adhesive, to impregnate and insulate paper, and in lacquers and plastics.

sucrosic *See* saccharoidal.

suction anemometer [ENG] An anemometer consisting of an inverted tube which is half-filled with water that measures the change in water level caused by the wind's force.

suction boundary layer control [AERO ENG] A technique that is used in addition to purely geometric means to control boundary layer flow; it consists of sucking away the retarded flow in the lower regions of the boundary through slots or perforations in the surface.

suction cup [ENG] A cup, often of flexible material such as rubber, in which a partial vacuum is created when it is inverted on a surface; the vacuum tends to hold the cup in place.

suction-cutter dredger [MECH ENG] A dredger in which rotary blades dislodge the material to be excavated, which is then removed by suction as in a sand-pump dredger.

suction dredge [NAV ARCH] A vessel equipped with a centrifugal pump to excavate under water.

suction head *See* suction lift.

suction lift [MECH ENG] The head, in feet, that a pump must provide on the inlet side to raise the liquid from the supply well to the level of the pump. Also known as suction head.

suction line [ENG] A pipe or tubing feeding into the inlet of a fluid impelling device (for example, pump, compressor, or blower), consequently under suction.

suction pump [MECH ENG] A pump that raises water by the force of atmospheric pressure pushing it into a partial vacuum under the valved piston, which retreats on the upstroke.

suction stroke [MECH ENG] The piston stroke that draws a fresh charge into the cylinder of a pump, compressor, or internal combustion engine.

suction wave *See* rarefaction wave.

Suctoria [INV ZOO] A small subclass of the protozoan class Ciliatea, distinguished by having tentacles which serve as mouths.

Suctorida [INV ZOO] The single order of the protozoan subclass Suctoria.

sudamen [MED] A skin disease in which sweat accumulates under the superficial horny layers of the epidermis to form small, clear, transparent vesicles.

sudatoria *See* hyperhidrosis.

sudburite [GEOL] A basic basalt composed of hypersthene, augite, and magnetite, among other minerals.

sudden commencement [GEOPHYS] Magnetic storms which start suddenly (within a few seconds) and simultaneously all over the earth.

sudden death syndrome *See* crib death.

sudden ionospheric disturbance [GEOPHYS] A complex combination of sudden changes in the condition of the ionosphere following the appearance of solar flares, and the effects of these changes. Abbreviated SID.

sudomotor [PHYSIO] Pertaining to the efferent nerves that control the activity of sweat glands.

suede [MATER] Leather with a velvet finish on the flesh side of the skin; calfskin is the commonest suede leather. Also known as napped leather.

suede cloth [TEXT] Woven or knitted fabric with a surface which is finished to resemble suede leather.

suestada [METEOROL] Strong southeast winds occurring in winter along the coast of Argentina, Uruguay, and southern Brazil; they cause heavy seas and are accompanied by fog and rain; the counterpart of the northeast storm in North America.

suevite [GEOL] A grayish or yellowish fragmental rock associated with meteorite impact craters; resembles tuff breccia or pumiceous tuff but is of nonvolcanic origin.

suffix notation *See* reverse Polish notation.

suffrutescent [BOT] Of or pertaining to a stem intermediate between herbaceous and shrubby, becoming partly woody and perennial at the base.

suffruticose [BOT] Low stems which are woody, grading into herbaceous at the top.

sugar [BIOCHEM] A generic term for a class of carbohydrates usually crystalline, sweet, and water soluble; examples are glucose and fructose.

sugar alcohol [ORG CHEM] Any of the acyclic linear polyhydric alcohols; may be considered sugars in which the aldehydic group of the first carbon atom is reduced to a primary alcohol; classified according to the number of hydroxyl groups in the molecule; sorbitol (D-glucitol, sorbite) is one of the most widespread of all the naturally occurring sugar alcohols.

sugarbeet [BOT] *Beta vulgaris*. A beet characterized by a white root and cultivated for the high sugar content of the roots.

sugar berg [OCEANOGR] An iceberg of porous glacier ice.

sugarcane [BOT] *Saccharum officinarum*. A stout, perennial grass plant characterized by two-ranked leaves, and a many-jointed stalk with a terminal inflorescence in the form of a silky panicle; the source of more than 50% of the world's annual sugar production.

sugarcane gummosis *See* Cobb's disease.

sugarcane wax [MATER] Hard, tan to dark-green wax extracted from sugarcane; melts at 77°C; used in polishes, lubricants, and food wrappers.

sugarloaf sea [OCEANOGR] A sea characterized by waves that rise into sugarloaf shapes, with little wind, possibly resulting from intersecting waves.

sugar maple [BOT] *Acer saccharum*. A commercially important species of maple tree recognized by its gray furrowed bark, sharp-pointed scaly winter buds, and symmetrical oval outline of the crown.

sugar of lead *See* lead acetate.

sugar refining [FOOD ENG] The purification of sugar from sugarcane or sugarbeet by the removal of impurities (vegetable proteins and salts), followed by decolorization and crystallization of the pure sucrose.

sugar snow *See* depth hoar.

sugary *See* saccharoidal.

Suhl amplifier [SOLID STATE] A parametric microwave amplifier which utilizes the instability of certain spin waves in a ferromagnetic material subjected to intense microwave fields.

Suhl effect [ELECTR] When a strong transverse magnetic field is applied to an *n*-type semiconducting filament, holes injected into the filament are deflected to the surface, where they may recombine rapidly with electrons or be withdrawn by a probe.

Suidae [VERT ZOO] A family of paleodont artiodactyls in the superfamily Suoidae including wild and domestic pigs.

suite [COMPUT SCI] A collection of related computer programs run one after another.

sukhovei [METEOROL] Literally dry wind; a dry, hot, dusty wind in the south Russian steppes, which blows principally from the east and frequently brings a prolonged drought and crop damage.

sulcate [ZOO] Having furrows or grooves on the surface.

sulculus [ZOO] A small sulcus.

sulcus [ZOO] A furrow or groove, especially one on the surface of the cerebrum.

sulfadiazine [PHARM] $C_{10}H_{10}O_2N_4S$ An antibacterial sulfonamide used in the treatment of a variety of infections.

sulfa drug [PHARM] Any of a family of drugs of the sulfonamide type with marked bacteriostatic properties.

sulfaguanidine [PHARM] $C_7H_{10}N_4O_2S$ An intestinal antibacterial sulfonamide proposed for treatment of dysentery and for sterilization of the colon prior to gastrointestinal tract surgery.

sulfallate [ORG CHEM] $C_8H_{14}NS_2Cl$ An oily liquid, used as a preemergence herbicide for vegetable crops and ornamentals. Also known as 2-chloroallyl diethyldithiocarbamate.

sulfamate [CHEM] A salt of sulfamic acid; for example, calcium sulfamate, $Ca(SO_3NH_2)_2 \cdot 4H_2O$.

sulfamerazine [PHARM] $C_{11}H_{12}N_4O_2S$ An antibacterial agent with uses similar to those of sulfadiazine, but generally used in combination with sulfadiazine and with sulfamethazine.

sulfamic acid [INORG CHEM] HSO_3NH_2 White, nonvolatile crystals slightly soluble in water and organic solvents, decomposes at 205°C; used to clean metals and ceramics, and as a plasticizer, fire retardant, chemical intermediate, and textile and paper bleach.

sulfamidyl *See* sulfanilamide.

sulfanilamide [PHARM] $C_6H_8O_2N_2S$ White crystals slightly soluble in water, soluble in alcohol and most sulfa drugs, but less effective and more toxic than its derivatives. Also known as *para*-aminobenzenesulfonamide; sulfamidyl; sulfonamide P.

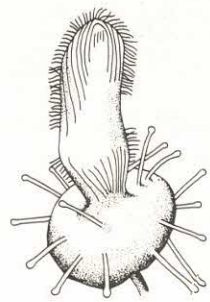
sulfanilic acid [ORG CHEM] $C_6H_4NH_2 \cdot SO_3H \cdot H_2O$ Combustible, grayish-white crystals slightly soluble in water, alcohol, and ether, soluble in fuming hydrochloric acid; chars at 280–300°C; used in medicine and dyestuffs and as a chemical intermediate. Also known as *para*-aminobenzenesulfonic acid; *para*-anilinesulfonic acid.

***meta*-sulfanilic acid** *See* metanillic acid.

SUCTION BOUNDARY LAYER CONTROL

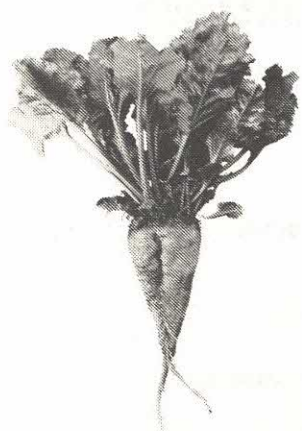
Cross-section of airfoil with suction boundary layer control.

SUCTORIA



Endogenous budding in the suctorian *Podophrya*, a species which measures 10–28 micrometers.

SUGARBEET



Root with leaves of a typical sugarbeet. *(USDA)*

sulfapyridine [PHARM] $C_{11}H_{11}N_3O_2S$ A sulfonamide formerly used for the treatment of various infections but found to be too toxic for general use; now employed only as a suppressant for dermatitis herpetiformis.

sulfaquinoxaline *See* N′-2-quinoxalysulfanilimide.

sulfatase [BIOCHEM] Any of a group of esterases that catalyze the hydrolysis of sulfuric esters.

sulfate [CHEM] **1.** A compound containing the $—SO_4$ group, as in sodium sulfate Na_2SO_4. **2.** A salt of sulfuric acid.

sulfate mineral [MINERAL] A mineral compound characterized by the sulfate radical SO_4.

sulfate paper [MATER] Paper made by the sulfate process, and which cannot be bleached as white as soda or sulfite paper; strong papers, such as kraft paper, are made from unbleached sulfate materials.

sulfate pulping [CHEM ENG] A wood-pulping process in which sodium sulfate is used in the caustic soda pulp-digestion liquor. Also known as kraft process; kraft pulping.

sulfathiazole [PHARM] $C_9H_9N_3O_2S_2$ A sulfa drug formerly widely used in the treatment of pneumococcal, staphylococcal, and urinary tract infections; it has been replaced by less toxic sulfonamides.

sulfatide lipidosis *See* metachromatic leukodystrophy.

sulfating [ELEC] The formation of lead sulfate on the plates of lead-acid storage batteries reducing the energy-storing ability of the battery and eventually causing failure.

sulfation [CHEM] The conversion of a compound into a sulfate by the oxidation of sulfur, as in sodium sulfide, Na_2S, oxidized to sodium sulfate, Na_2SO_4; or the addition of a sulfate group, as in the reaction of sodium and sulfuric acid to form Na_2SO_4.

sulfenic acid [ORG CHEM] An oxy acid of sulfur with the general formula RSOH, where R is an alkyl or aryl group such as CH_3; known as the esters and halides.

SULFENIC ACID

HO—S—R

Structural formula of sulfenic acids; R = alkyl group or aryl group such as CH_3.

sulfenyl chloride [ORG CHEM] Any of a group of well-known organosulfur compounds with the general formula RSCl; although highly reactive compounds, they can generally be synthesized and isolated; examples are trichloromethanesulfenyl chloride and 2,4-dinitrobenzenesulfenyl chloride.

sulfhemoglobin [BIOCHEM] A greenish substance derived from hemoglobin by the action of hydrogen sulfide; it may appear in the blood following the ingestion of sulfanilamide and other substances.

sulfhydryl compound [CHEM] A compound with a —SH group. Also known as a mercapto compound.

sulfidation [CHEM] The chemical insertion of a sulfur atom into a compound.

sulfide [CHEM] Any compound with one or more sulfur atoms in which the sulfur is connected directly to a carbon, metal, or other nonoxygen atom; for example, sodium sulfide, Na_2S.

SULFOBROMOPHTHALEIN SODIUM

Structural formula.

sulfide dye [ORG CHEM] A dye containing sulfur and soluble in a 0.25–0.50% sodium sulfide solution, and used to dye cotton; the dyes are manufactured from aromatic polyamines or hydroxy amines; the amine group is primary, secondary, or tertiary, or may be an equivalent nitro, nitroso, or imino group; an example is the dye sulfur blue. Also known as sulfur dye.

sulfide mineral [MINERAL] A mineral compound characterized by the linkage of sulfur with a metal or semimetal.

sulfinate [ORG CHEM] **1.** A compound containing the R_2SX_2 grouping, where X is a halide. **2.** A salt of sulfinic acid having the general formula R·OH·S:O.

sulfinic acid [ORG CHEM] Any of the monobasic organic acids of sulfur with the general formula RS:O(OH); for example, ethanesulfinic acid, $C_2H_5SO_2H$.

sulfinyl bromide *See* thionyl bromide.

sulfisoxazole [PHARM] $C_{11}H_{13}N_3O_3S$ A sulfonamide of general therapeutic utility; for parenteral administration the soluble salt sulfisoxazole diethanolamine is used; for pediatric use the tasteless derivative acetyl sulfisoxazole is given.

sulfite [INORG CHEM] M_2SO_3 A salt of sulfurous acid, for example, sodium sulfite, Na_2SO_3.

sulfite paper [MATER] Paper made from sulfite pulp.

sulfite pulp [MATER] Wood chips digested with a solution of magnesium, ammonium, or calcium disulfite, with free sulfur dioxide present; used to make paper and paper products from spruce and other coniferous woods.

sulfite waste liquor [MATER] Waste reactants and other impurities from the sulfite pulping of wood; used as a foaming and emulsifying agent, in adhesives and tanning, and for road construction.

SULFOSALICYLIC ACID

Structural formula.

sulfo- [CHEM] Prefix for a compound with either a divalent sulfur atom, or the presence of $—SO_3H$, the sulfo group in a compound. Also spelled sulpho-.

sulfoborite [MINERAL] $Mg_6H_4(BO_3)_4(SO_4)_2 \cdot 7H_2O$ A mineral composed of hydrous acid sulfate and borate of magnesium.

sulfobromophthalein sodium [PHARM] $C_{20}H_8Br_4Na_2O_{10}S_2$ A hygroscopic, crystalline compound that has a bitter taste; soluble in water; used in humans and animals as a diagnostic and in liver function tests. Also known as bromosulfophthalein; disodium phenoltetrabromophthalein sulfonate.

sulfocarbanilide *See* thiocarbanilide.

sulfocarbimide *See* isothiocyanate.

sulfocyanate *See* thiocyanate.

sulfocyanic acid *See* thiocyanic acid.

sulfocyanide *See* thiocyanate.

sulfofication [GEOCHEM] Oxidation of sulfur and sulfur compounds into sulfates, occurring in soils by the agency of bacteria.

sulfohalite [MINERAL] $Na_6(SO_4)_2FCl$ A mineral composed of sulfate, chloride, and fluoride of sodium.

sulfolane [ORG CHEM] $C_4H_8SO_2$ A liquid with a boiling point of 285°C and outstanding solvent properties; used for extraction of aromatic hydrocarbons, fractionation of fatty acids, and textile finishing, and as a solvent and plasticizer. Also known as tetrahydrothiophene-1,1-dioxide; tetramethylene sulfone.

Sulfolobus [MICROBIO] A genus of gram-negative, chemolithotrophic bacteria; spherical cells with lobes; obtain energy by metabolizing elemental sulfur.

sulfonamide [ORG CHEM] One of a group of organosulfur compounds, RSO_2NH_2, prepared by the reaction of sulfonyl chloride and ammonia; used for sulfa drugs.

sulfonamide P *See* sulfanilamide.

sulfonate [CHEM] A sulfuric acid derivative or a sulfonic acid ester containing a SO_4^{2-} group. [ORG CHEM] Any of a group of petroleum hydrocarbons derived from sulfuric-acid treatment of oils, used as synthetic detergents, emulsifying and wetting agents, and chemical intermediates.

sulfonated castor oil *See* Turkey red oil.

sulfonated oil [MATER] Mineral or vegetable oil treated with sulfuric acid to make a water-soluble (emulsifiable) form; used as lubricants, emulsifiers, defoamers, and softeners.

sulfonation [CHEM] Substitution of $—SO_3H$ groups (from sulfuric acid) for hydrogen atoms, for example, conversion of benzene, C_6H_6, into benzenesulfonic acid, $C_6H_5SO_3H$.

sulfone [ORG CHEM] R_2SO_2 (or RSOOR) A compound formed by the oxidation of sulfides, for example, ethyl sulfone, $C_4H_{10}SO_2$, from ethyl sulfide, $C_4H_{10}S$; the use of sulfones, particularly 4,4′-sulfonyldianiline (dapsone) in the treatment of leprosy leads to apparent improvement; relapses associated with sulfone-resistant strains have been encountered.

sulfonic acid [ORG CHEM] A compound with the radical $—SO_2OH$, derived by the sulfuric acid replacement of a hydrogen atom; for example, conversion of benzene, C_6H_6, to the water-soluble benzenesulfonic acid, $C_6H_5SO_3H$, by treatment with sulfuric acid; used to make dyes and drugs.

sulfonyl [CHEM] Also known as sulfuryl. **1.** A compound containing the radical $—SO_2—$. **2.** A prefix denoting the presence of a sulfone group.

sulfonyl chloride *See* sulfuryl chloride.

4,4′-sulfonyldianiline [PHARM] $C_{12}H_{12}N_2O_2S$ A sulfone that precipitates as crystals from alcohol; melting point 175–176°C; used in the treatment of leprosy. Also known as dapsone.

sulfoparaldehyde *See* trithioacetaldehyde.

sulfophile element [GEOCHEM] An element occurring preferentially in an oxygen-free mineral. Also known as thiophile element.

sulfosalicylic acid [ORG CHEM] $C_7H_6O_6S$ A trifunctional aromatic compound whose dihydrate is in the form of white crystals or crystalline powder; soluble in water and alcohol; melting point is 120°C; used as an indicator for albumin in urine and as a reagent for the determination of ferric ion; it also has industrial uses. Also known as 2-hydroxybenzoic-5-sulfonic acid; salicylsulfonic acid.

sulfotepp [ORG CHEM] $C_8H_{20}O_5P_2S_2$ A yellow liquid, slightly soluble in water; used in a smoke generator as an

insecticide, and as a miticide in a greenhouse. Also known as *O,O,O,O*-tetraethyldithiopyrophosphate.

sulfoxide [ORG CHEM] R_2SO A compound with the radical =SO; derived from oxidation of sulfides, the proportion of oxidant, such as hydrogen peroxide, and temperature being set to avoid excessive oxidation; an example is dimethyl sulfoxide, $(CH_3)_2SO$.

sulfur [CHEM] A nonmetallic element in group VIa, symbol S, atomic number 16, atomic weight 32.064, existing in a crystalline or amorphous form and in four stable isotopes; used as a chemical intermediate and fungicide, and in rubber vulcanization. [MINERAL] A yellow orthorhombic mineral occurring in crystals, masses, or layers, and existing in several allotropic forms; the native form of the element.

sulfur-35 [NUC PHYS] Radioactive sulfur with mass number 35; radiotoxic, with 87.1-day half-life, β radiation; derived from pile irradiation; used as a tracer to study chemical reactions, engine wear, and protein metabolism.

sulfurated lime *See* calcium sulfide.

sulfuration [CHEM] The chemical act of combining an element or compound with sulfur.

sulfur bacteria [MICROBIO] Any of various bacteria having the ability to oxidize sulfur compounds.

sulfur ball [GEOL] A bubble of hot volcanic gas encased in a sulfurous mud skin that solidified on contact with air.

sulfur bichloride *See* sulfur dichloride.

sulfur bromide [INORG CHEM] S_2Br_2 A toxic, irritating, yellow liquid that reddens in air, soluble in carbon disulfide, decomposes in water, boils at 54°C. Also known as sulfur monobromide.

sulfur cement [MATER] Cement used for connecting iron parts; made of equal parts of sulfur and pitch.

sulfur chloride [INORG CHEM] S_2Cl_2 A combustible, water-soluble, oily, fuming, amber to yellow-red liquid with an irritating effect on the eyes and lungs, boils at 138°C; used to make military gas and insecticides, in rubber substitutes and cements, to purify sugar juices, and as a chemical intermediate. Also known as sulfur monochloride; sulfur subchloride.

sulfur dichloride [INORG CHEM] SCl_2 A red-brown liquid boiling (when heated rapidly) at 60°C, decomposes in water; used to make insecticides, for rubber vulcanization, and as a chemical intermediate and a solvent. Also known as sulfur bichloride.

sulfur dioxide [INORG CHEM] SO_2 A toxic, irritating, colorless gas soluble in water, alcohol, and ether, boils at −10°C; used as a chemical intermediate, in artificial ice, paper pulping, and ore refining, and as a solvent. Also known as sulfurous acid anhydride.

sulfur dome [MET] An inverted container containing a high concentration of sulfur dioxide gas, used in die casting to cover a pot of molten magnesium to prevent burning.

sulfur dye *See* sulfide dye.

sulfur hexafluoride [INORG CHEM] SF_6 A colorless gas soluble in alcohol and ether, slightly soluble in water, sublimes at −64°C; used as a dielectric in electronics.

sulfur hexameter [ENG] An instrument used to measure or to continuously monitor the amount of sulfur hexafluoride present in a waveguide or other device in which this gas is used as a dielectric.

sulfuric acid [INORG CHEM] H_2SO_4 A toxic, corrosive, strongly acid, colorless liquid that is miscible with water and dissolves most metals, and melts at 10°C; used in industry in the manufacture of chemicals, fertilizers, and explosives, and in petroleum refining. Also known as dipping acid.

sulfuric acid alkylation [CHEM ENG] A petroleum refinery alkylation process in which three-carbon, four-carbon, and five-carbon olefins combine with isobutane in the presence of a sulfuric acid catalyst to form high-octane, branched-chain hydrocarbons; used in motor gasoline.

sulfuric chloride *See* sulfuryl chloride.

sulfuric chlorohydrin *See* chlorosulfonic acid.

sulfur iodide *See* sulfur iodine.

sulfur iodine [INORG CHEM] I_2S_2 A gray-black brittle mass with an iodine aroma and a metallic luster, insoluble in water, soluble in carbon disulfide; used in medicine. Also known as iodine bisulfide; iodine disulfide; sulfur iodide.

sulfurized oil [MATER] Any of various mineral oils and fatty oils containing active sulfur to increase film strength and load-carrying ability; used generally as cutting fluids.

sulfur monobromide *See* sulfur bromide.

sulfur monochloride *See* sulfur chloride.

sulfur monoxide [INORG CHEM] SO A gas at ordinary temperatures; produces an orange-red deposit when cooled to temperatures of liquid air; prepared by passing an electric discharge through a mixture of sulfur vapor and sulfur dioxide at low temperature.

sulfur-mud pool *See* mud pot.

sulfur number [ANALY CHEM] The number of milligrams of sulfur per 100 milliliters of sample, determined by electrometric titration; used in the petroleum industry for oils.

sulfurous acid [INORG CHEM] H_2SO_3 An unstable, water-soluble, colorless liquid with a strong sulfur aroma; derived from absorption of sulfur dioxide in water; used in the synthesis of medicine and chemicals, manufacture of paper and wine, brewing, metallurgy, and ore flotation, as a bleach and analytic reagent, and to refine petroleum products.

sulfurous acid anhydride *See* sulfur dioxide.

sulfurous oxychloride *See* thionyl chloride.

sulfur oxide [INORG CHEM] An oxide of sulfur, such as sulfur dioxide, SO_2, and sulfur trioxide, SO_3.

sulfur oxychloride *See* thionyl chloride.

sulfur spring [HYD] A spring containing sulfur compounds such as hydrogen sulfide.

sulfur subchloride *See* sulfur chloride.

sulfur test [ANALY CHEM] **1.** Method to determine the sulfur content of a petroleum material by combustion in a bomb. **2.** Analysis of sulfur in petroleum products by lamp combustion in which combustion of the sample is controlled by varying the flow of carbon dioxide and oxygen to the burner.

sulfur trioxide [INORG CHEM] SO_3 A toxic, irritating liquid in three forms, α, β, γ, with respective melting points of 62°C, 33°C, and 17°C; a strong oxidizing agent and fire hazard; used for sulfonation of organic chemicals.

sulfuryl *See* sulfonyl.

sulfuryl chloride [INORG CHEM] SO_2Cl_2 A colorless liquid with a pungent aroma, boils at 69°C, decomposed by hot water and alkalies; used as a chlorinating agent and solvent and for pharmaceuticals, dyestuffs, rayon, and poison gas. Also known as chlorosulfuric acid; sulfonyl chloride; sulfuric chloride.

sulfuryl fluoride [INORG CHEM] SO_2F_2 A colorless gas with a melting point of −136.7°C and a boiling point of 55.4°C; used as an insecticide and fumigant.

Sulidae [VERT ZOO] A family of aquatic birds in the order Pelecaniformes including the gannets and boobies.

Sullivan angle compressor [MECH ENG] A two-stage compressor in which the low-pressure cylinder is horizontal and the high-pressure cylinder is vertical; a compact compressor driven by a belt, or directly connected to an electric motor or diesel engine.

Sullivan reaction [ORG CHEM] The formation of a red-brown color when cysteine is reacted with 1,2-naphthoquinone-4-sodium sulfate in a highly alkaline reducing medium.

sulpho- *See* sulfo-.

sultriness [METEOROL] An oppressively uncomfortable state of the weather which results from the simultaneous occurrence of high temperature and high humidity, and often enhanced by calm air and cloudiness.

sulvanite [MINERAL] Cu_3VS_4 A bronze-yellow mineral composed of copper vanadium sulfide occurring in masses.

Sulzer two-cycle engine [MECH ENG] An internal combustion engine utilizing the Sulzer Co. system for the effective scavenging and charging of the two-cycle diesel engine.

sum [MATH] **1.** The addition of numbers or mathematical objects in context. **2.** The sum of an infinite series is the limit of the sequence consisting of all partial sums of the series.

sumac wax *See* Japan wax.

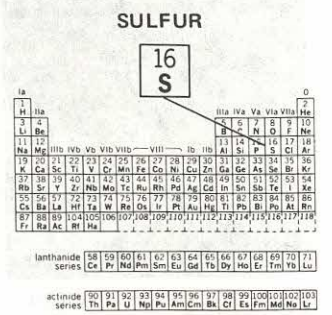
sumatra [METEOROL] A squall, with wind speeds occasionally exceeding 30 miles (48 kilometers) per hour, in the Malacca Strait between Malay and Sumatra during the southwest monsoon (April through November).

sumbul oil [MATER] Oil from the root of a muskroot (*Ferula sumbul*); formerly used in medicine as an antispasmodic.

sumi ink *See* india ink.

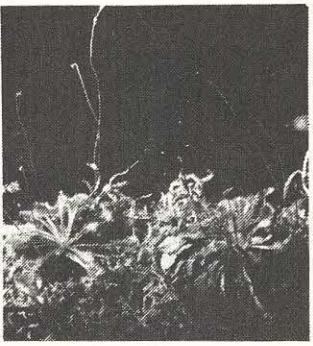
sumi reed [GRAPHICS] A reed about a foot long with a sharp point at one end, used in ink drawings.

summary plotter [ORD] A polar coordinate chart showing the tactical distribution of ships and aircraft.



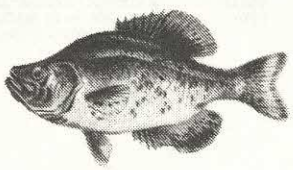
Periodic table of the chemical elements showing the position of sulfur.

SUNDEW



The sundew, *Drosera* species, a small, herbaceous, insectivorous plant. *(General Biological Supply House)*

SUNFISH



Black crappie *(Pomoxis nigromaculatus)*, a freshwater sunfish also known as the calico bass.

SUNFLOWER

Maturing sunflower on a farm in California. *(USDA)*

summary punching [COMPUT SCI] The conversion of information developed by accounting machines into holes in a punch card.

summary recorder [COMPUT SCI] In computers, output equipment which records a summary of the information handled.

summation check [COMPUT SCI] An error-detecting procedure involving adding together all the digits of some number and comparing this sum to a previously computed value of the same sum.

summation convention [MATH] An abbreviated notation used particularly in tensor analysis and relativity theory, in which a product of tensors is to be summed over all possible values of any index which appears twice in the expression.

summation network *See* summing network.

summation principle [METEOROL] In United States weather observing practice, the rule which governs the assignment of sky cover amount to any layer of cloud or obscuring phenomenon, and to the total sky cover; in essence, this principle states that the sky cover at any level is equal to the summation of the sky cover of the lowest layer plus the additional sky cover provided at all successively higher layers up to and including the layer in question; thus, no layer can be assigned a sky cover less than a lower layer, and no sky cover can be greater than 1.0 (10/10).

summation tone [ACOUS] Combination tone, heard under certain circumstances, whose pitch corresponds to a frequency equal to the sum of the frequencies of the two components.

summation wave [PHYSIO] A sustained contraction of muscles, caused by the rapid firing of nerve impulses.

summer [ASTRON] The period from the summer solstice to the autumnal equinox; popularly and for most meteorological purposes, it is taken to include June through August in the Northern Hemisphere, and December through February in the Southern Hemisphere.

summer black oil *See* tempering oil.

summer noon *See* daylight saving noon.

summer savory oil *See* savory oil.

summer solstice [ASTRON] **1.** The sun's position on the ecliptic when it reaches its greatest northern declination. Also known as first point of Cancer. **2.** The date, about June 21, on which the sun has its greatest northern declination.

summer time *See* daylight saving time.

summerwood [BOT] The less porous, usually harder portion of an annual ring that forms in the latter part of the growing season.

summing amplifier [ELECTR] An amplifier that delivers an output voltage which is proportional to the sum of two or more input voltages or currents.

summing network [ELEC] A passive electric network whose output voltage is proportional to the sum of two or more input voltages. Also known as summation network.

summit [SCI TECH] **1.** The apex of a pyramid. **2.** The highest point of, for example, a mountain, road, trajectory, or tower.

summit plain *See* peak plain.

Sumner line [NAV] **1.** A line of position established by the Sumner method. **2.** Any celestial line of position (deprecated usage).

Sumner method [NAV] The establishing of a line of position from the observation of the altitude of a celestial body by assuming two latitudes (or longitudes) and calculating the longitudes (or latitudes) through which the line of position passes; the line of position is the straight line connecting these two points (extended if necessary).

sum of states *See* partition function.

sum over states *See* partition function.

sump [ENG] A pit or tank which receives and temporarily stores drainage at the lowest point of a circulating or drainage system.

sump fuse [ENG] A fuse used for underwater blasting.

sump pump [MECH ENG] A small, single-stage vertical pump used to drain shallow pits or sumps.

sum rule [QUANT MECH] A formula which sets some quantity equal to the sum, over all the states of a system, of another quantity, usually involving the square of the magnitude of the matrix element of some operator between a given state and the state being summed over.

sun [ASTRON] The star about which the earth revolves; it is a globe of gas 1.4×10^6 kilometers in diameter, held together by its own gravity; thermonuclear reactions take place in the deep interior of the sun converting hydrogen into helium releasing energy which streams out. Also known as Sol.

sun-and-planet motion [MECH ENG] A train of two wheels moving epicyclically with a small wheel rotating a wheel on the central axis.

sunburn [MED] Skin inflammation due to overexposure to sunlight.

sun compass [NAV] A device which utilizes the shadow of a shadow pin, or gnomon, and a suitable dial to facilitate use of the sun for determination of direction.

sun crack *See* mud crack.

sun cross [METEOROL] A rare halo phenomenon in which bands of white light intersect over the sun at right angles; it appears probable that most of such observed crosses appear merely as a result of the superposition of a parhelic circle and a sun pillar.

sun crust [HYD] A type of snow crust, formed by refreezing of surface snow crystals after having been melted by the sun.

sundew [BOT] Any plant of the genus *Drosera* of the family Droseraceae; the genus comprises small, herbaceous, insectivorous plants that grow on all continents, especially Australia.

sundial [HOROL] An instrument for telling time by the sun; it is composed of a stylus that casts a shadow and a dial plate, on which hour lines are marked and upon which the shadow falls.

sun dog *See* parhelion.

sun drawing water [METEOROL] Popular designation for a phenomenon of the sun showing through scattered openings in a layer of clouds into a layer of turbid air that is hazy or dusty; bright bands are seen where the several beams of sunlight pass down through the subcloud layer; sailors called the phenomenon the backstays of the sun.

sundtite *See* andorite.

sunfish [VERT ZOO] Any of several species of marine and freshwater fishes in the families Centrarchidae and Molidae characterized by brilliant metallic skin coloration.

sunflower [BOT] *Helianthus annuus*. An annual plant native to the United States characterized by broad, ovate leaves growing from a single, usually long (3–20 feet or 1–6 meters) stem, and large, composite flowers with yellow petals.

sunflower oil [MATER] A combustible, pale-yellow, semidrying oil with a pleasant scent, expressed from the seeds of the common sunflower; soluble in alcohol, ether, and carbon disulfide; consists mostly of mixed triglycerides of fatty acids; used for resins, soaps, edible oils, and margarines.

sun follower [ELECTR] A photoelectric pickup and an associated servomechanism used to maintain a sun-facing orientation, as for a space vehicle. Also known as sun seeker.

sun gear *See* central gear.

S-unit meter *See* signal-strength meter.

sunk [MIN ENG] Drilled downward, as a shaft.

sunken rock [NAV] A rock that is a potential danger to navigation; for cartographic purposes, it is a rock whose summit is below the lower limit of the zone for a rock awash.

sunlamp [ELEC] A mercury-vapor gas-discharge tube used to produce ultraviolet radiation for therapeutic or cosmetic purposes.

sun line [NAV] A line of position determined from a sextant observation of the sun.

sunlit aurora [GEOPHYS] An aurora which occurs in the part of the upper atmosphere which is in the sunlight, above the earth's shadow.

sun opal *See* fire opal.

sun pillar [METEOROL] A luminous streak of light, white or slightly reddened, extending above and below the sun, most frequently observed near sunrise or sunset; it may extend to about 20° above the sun, and generally ends in a point. Also known as light pillar.

sun-pumped laser [OPTICS] A continuous-wave laser in which pumping is achieved by concentrating the energy of the sun on the laser crystal with a parabolic mirror. Also known as solar-excited laser.

sunrise [ASTRON] The exact moment the upper limb of the sun appears above the horizon.

sun satellite *See* solar satellite.

sunscald [PL PATH] An injury to woody plants which results in local death of the plant tissues; in summer it is caused by excessive action of the sun's rays, in winter, by the great varia-

tion of temperature on the side of trees that is exposed to the sun in cold weather.

sun seeker *See* sun follower.

sun sensor *See* solar sensor.

sunset [ASTRON] The exact moment the upper limb of the sun disappears below the horizon.

sunshine [ASTRON] Direct radiation from the sun, as opposed to the shading of a location by clouds or by other obstructions.

sunshine integrator [ENG] An instrument for determining the duration of sunshine (daylight) in any locality.

sunshine recorder [ENG] An instrument designed to record the duration of sunshine without regard to intensity at a given location; sunshine recorders may be classified in two groups according to the method by which the time scale is obtained: in one group the time scale is obtained from the motion of the sun in the manner of a sun dial, in the second group the time scale is supplied by a chronograph.

sunshine unit *See* strontium unit.

sunspot [ASTRON] A dark area in the photosphere of the sun caused by a lowered surface temperature.

sunspot cycle [ASTRON] Variation of the size and number of sunspots in an 11-year cycle which is shared by all other forms of solar activity.

sunspot maximum [ASTRON] The time in the solar cycle when the number of sunspots reaches a maximum value.

sunspot number *See* relative sunspot number.

sunspot relative number *See* relative sunspot number.

sunstone [MINERAL] An aventurine feldspar containing minute flakes of hematite; usually brilliant and translucent, it emits reddish or golden billowy reflection. Also known as heliolite.

sun strobe [ELECTR] The signal display seen on a radar plan-position-indicator screen when the radar antenna is aimed at the sun; the pattern resembles that produced by continuous-wave interference, and is due to radio-frequency energy radiated by the sun.

sunstroke [MED] Heat stroke resulting from prolonged exposure to the sun, characterized by extreme pyrexia, prostration, convulsion, and coma. Also known as thermic fever.

sun's way [ASTRON] The path of the solar system through space.

sun-synchronous orbit [AERO ENG] An earth orbit of a spacecraft so that the craft is always in the same direction relative to that of the sun; as a result, the spacecraft passes over the equator at the same spots at the same times.

Suoidea [VERT ZOO] A superfamily of artiodactyls of the suborder Paleodonta which comprises the pigs and peccaries.

sup *See* least upper bound.

superacid [CHEM] **1.** An acidic medium that has a proton-donating ability equal to or greater than 100% sulfuric acid. **2.** A solution of acetic or phosphoric acid.

superadiabatic lapse rate [METEOROL] An environmental lapse rate greater than the dry-adiabatic lapse rate, such that potential temperature decreases with height.

superaerodynamics [FL MECH] That branch of gas dynamics dealing with the flow of gases at such low density that the molecular mean free path is not negligibly small; under these conditions the gas no longer behaves as a continuous fluid.

superalloy [MET] A thermally resistant alloy for use at elevated temperatures where high stresses and oxidation are encountered.

supercalendered finish [MATER] A shiny, smooth-surface paper obtained by passing the paper between alternating fiber-filled and steel rolls with the application of steam and pressure.

supercalendering [ENG] A calendering process that uses both steam and high pressure to give calendered material, for example, paper, a high-density finish.

supercapillary interstice [GEOL] An interstice that is too large to hold water above the free water surface by surface tension; it is larger than a capillary interstice.

supercavitating propeller [NAV ARCH] A marine propeller which has special blade sections so that at sufficiently high speed the whole back of each blade becomes enveloped by a smooth sheet of cavitation.

supercentrifuge [MECH ENG] A centrifuge built to operate at faster speeds than an ordinary centrifuge.

supercharge method [ENG] A method for measuring the knock-limited power, under supercharge rich-mixture conditions, of fuels for use in spark-ignition aircraft engines.

supercharger [MECH ENG] An air pump or blower in the intake system of an internal combustion engine used to increase the weight of air charge and consequent power output from a given engine size.

supercharging [MECH ENG] A method of introducing air for combustion into the cylinder of an internal combustion engine at a pressure in excess of that which can be obtained by natural aspiration.

supercilium [ANAT] The eyebrow.

supercluster [ASTRON] A cluster of galaxy clusters.

supercobalt drill [DES ENG] A drill made of 8% cobalt high-speed steel; used for drilling work-hardened stainless steels, silicon chrome, and certain chrome-nickel alloy steels.

supercompressibility factor *See* compressibility factor.

supercomputer [COMPUT SCI] A computer which is among those with the highest speed, largest functional size, biggest physical dimensions, or greatest monetary cost in any given period of time.

superconducting alloy [MET] An alloy capable of exhibiting superconductivity, such as an alloy of niobium and zirconium or an alloy of lead and bismuth.

superconducting circuit [CRYO] An electric circuit having elements which are in a superconducting state at least part of the time, such as a cryotron.

superconducting computer [COMPUT SCI] A high-performance computer whose circuits employ superconductivity and the Josephson effect to reduce computer cycle time.

superconducting device *See* cryogenic device.

superconducting gyroscope *See* cryogenic gyroscope.

superconducting magnet [CRYO] An electromagnet whose coils are made of a type II superconductor with a high transition temperature and extremely high critical field, such as niobium tin, Nb_3Sn; it is capable of generating magnetic fields of 100,000 oersteds and more with no steady power dissipation.

superconducting material *See* superconductor.

superconducting memory [CRYO] A computer memory made up of a number of cryotrons, thin-film cryotrons, superconducting thin films, or other superconducting storage devices; these operate only under cryogenic conditions and dissipate power only during the read or write operation, which permits construction of large, dense memories.

superconducting metal [MET] A metal capable of exhibiting superconductivity.

superconducting quantum interference device [ELECTR] A superconducting ring that couples with one or two Josephson junctions; applications include high-sensitivity magnetometers, near-magnetic-field antennas, and measurement of very small currents or voltages. Abbreviated SQUID.

superconducting thin film [CRYO] A thin film of indium, tin, or other superconducting element, used as a cryogenic switching or storage device, as in a thin-film cryotron.

superconductivity [SOLID STATE] A property of many metals, alloys, and chemical compounds at temperatures near absolute zero by virtue of which their electrical resistivity vanishes and they become strongly diamagnetic.

superconductor [SOLID STATE] Any material capable of exhibiting superconductivity; examples include iridium, lead, mercury, niobium, tin, tantalum, vanadium, and many alloys. Also known as cryogenic conductor; superconducting material.

supercooled cloud [METEOROL] A cloud composed of supercooled liquid waterdrops.

supercooling [THERMO] Cooling of a substance below the temperature at which a change of state would ordinarily take place without such a change of state occurring, for example, the cooling of a liquid below its freezing point without freezing taking place; this results in a metastable state.

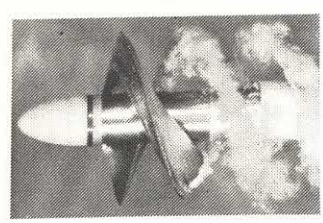
supercritical [NUCLEO] Having an effective multiplication constant greater than 1, so that the rate of reaction rises rapidly in a nuclear reactor. [THERMO] Property of a gas which is above its critical pressure and temperature.

supercritical flow [FL MECH] *See* supersonic flow. [HYD] *See* rapid flow.

supercritical mass [NUCLEO] A mass of nuclear-reactor fuel whose effective multiplication factor is greater than 1.

supercritical reactor [NUCLEO] A nuclear reactor in which the effective multiplication constant is greater than 1 and consequently a reactor that is increasing its power level; if uncontrolled, a supercritical reactor will undergo a sudden and dangerous rise in power level.

SUPERCAVITATING PROPELLER



Supercavitating propeller in 24-inch (61-centimeter) water tunnel at David Taylor Model Basin, Carderock, Maryland. *(U.S. Navy photograph)*

SUPERCRITICAL WING

Shape of a supercritical wing.

supercritical wing [AERO ENG] A wing developed to permit subsonic aircraft to maintain an efficient cruise speed very close to the speed of sound; the middle portion of the wing is relatively flat with substantial downward curvature near the trailing edge; in addition, the forward region of the lower surface is more curved than that of the upper surface with a substantial cusp of the rearward portion of the lower surface.

supercurrent [SOLID STATE] In the two-fluid model of superconductivity, the current arising from motion of superconducting electrons, in contrast to the normal current.

superdense theory *See* big bang theory.

superego [PSYCH] The subdivision of the psyche that acts as the conscience of the unconscious; the components, derived from both the id and the ego, are associated with standards of behavior and self-criticism.

superelevation [ORD] **1.** An added positive angle in antiaircraft gunnery that compensates for the fall of the projectile during the time of flight due to the pull of gravity. **2.** The angle the gun or launcher much be elevated above the gun-target line.

superemitron camera *See* image iconoscope.

superexchange [SOLID STATE] A phenomenon in which two electrons from a double negative ion (such as oxygen) in a solid go to different positive ions and couple with their spins, giving rise to a strong antiferromagnetic coupling between the positive ions, which are too far apart to have a direct exchange interaction.

superfecundation [PHYSIO] Multiple, simultaneous fertilization by a number of sperm of many eggs released at ovulation.

superfemale [GEN] A female with three X chromosomes and two sets of autosomes resulting in sterility and generally early death.

superficial cleavage [EMBRYO] Meroblastic cleavage restricted to the peripheral cytoplasm, as in the centrolecithal insect ovum.

superficial deposit *See* surficial deposit.

superficial palmar arch [ANAT] The arterial anastomosis formed by the ulnar artery in the palm with a branch from the radial artery. Also known as palmar arch.

superficial Rockwell hardness test [MET] A test to determine surface hardness of thin sheet material which applies relatively light loads producing minimal penetration and damage.

superfines [MET] The portion of a metal powder composed of particles smaller than 10 micrometers.

superfinishing [MET] Fine honing of a metal surface with abrasive stones.

superfiche [GRAPHICS] A sheet of film, usually 4 by 6 inches (10 by 15 centimeters) in size, containing either negative or positive images, or frames, of printed material reduced from 40 to 100 times by photographic reduction.

superfluid [PHYS] A collection of particles which obey Bose-Einstein statistics and are all in the lowest energy state allowed by quantum mechanics, having zero entropy and zero resistance to motion; examples are a fraction of the atoms in liquid helium II and a fraction of the pairs of electrons in a superconductor.

superfluidity [CRYO] The frictionless flow of liquid helium at temperatures very close to absolute zero through holes as small as 10^{8}ms7 centimeter in diameter, and for particle velocities below a few centimeters per second.

superfluorescence [ATOM PHYS] The process of spontaneous emission of electromagnetic radiation from a collection of excited atoms.

supergalaxy [ASTRON] A hypothetical very large group of galaxies which together fill an ellipsoidal space.

supergene [MINERAL] Referring to mineral deposits or enrichments formed by descending solutions. Also known as hypergene.

supergeostrophic wind [METEOROL] Any wind of greater speed than the geostrophic wind required by the pressure gradient.

supergiant star [ASTRON] A member of the family containing the intrinsically brightest stars, populating the top of the Hertzsprung-Russell diagram; supergiant stars occur at all temperatures from 30,000 to 3000 K and have luminosities from 10^{4} to 10^{6} times that of the sun; the star Betelgeuse is an example.

superglacial [HYD] Of or pertaining to the upper surface of a glacier or ice sheet.

supergradient wind [METEOROL] A wind of greater speed than the gradient wind required by the existing pressure gradient and centrifugal force.

supergravity [PHYS] A supersymmetry which is used to unify general relativity and quantum theory; it is formed by adding to the Poincaré group, as a symmetry of space-time, four new generators that behave as spinors and vary as the square root of the translations.

supergroup [COMMUN] In carrier telephony, five groups (60 voice channels) multiplexed together and treated as a unit; a basic supergroup occupies the band between 312 and 552 kilohertz.

superharmonic function [MATH] A continuous complex function f whose value at a point z_0 exceeds its average values computed by the integral of f around a circle centered at z_0.

superheat [THERMO] Sensible heat in a gas above the amount needed to maintain the gas phase.

superheated vapor [THERMO] A vapor that has been heated above its boiling point.

superheater [MECH ENG] A component of a steam-generating unit in which steam, after it has left the boiler drum, is heated above its saturation temperature.

superheating [THERMO] Heating of a substance above the temperature at which a change of state would ordinarily take place without such a change of state occurring, for example, the heating of a liquid above its boiling point without boiling taking place; this results in a metastable state.

superheavy boson [PARTIC PHYS] A hypothetical particle, postulated in grand unified theories, which would be responsible for interactions between quarks and leptons in the early universe, and also responsible for proton decay. Also known as X boson.

superheavy element [INORG CHEM] A chemical element with an atomic number of 110 or greater.

superhelix [BIOCHEM] A macromolecular structure consisting of a number of alpha-helical polypeptide strands which are twisted together.

superhet *See* superheterodyne receiver.

superheterodyne receiver [ELECTR] A receiver in which all incoming modulated radio-frequency carrier signals are converted to a common intermediate-frequency carrier value for additional amplification and selectivity prior to demodulation, using heterodyne action; the output of the intermediate-frequency amplifier is then demodulated in the second detector to give the desired audio-frequency signal. Also known as superhet.

superhigh frequency [COMMUN] A frequency band from 3,000 to 30,000 megahertz, corresponding to wavelengths from 1 to 10 centimeters. Abbreviated SHF.

superhighway [CIV ENG] A broad highway, such as an expressway, freeway, turnpike, for high-speed traffic.

superimposed [GEOL] Pertaining to layered or stratified rocks.

superimposed back pressure [MECH ENG] The static pressure at the outlet of an operating pressure relief device, resulting from pressure in the discharge system.

superimposed coding [COMPUT SCI] A means of placing many keywords in a single card area, where they can be scanned simultaneously.

superimposed drainage [HYD] Drainage by superimposed streams.

superimposed fan [GEOL] An alluvial fan developed on, and having a steeper gradient than, an older fan.

superimposed fold *See* cross fold.

superimposed glacier [GEOL] A glacier whose course is maintained despite different preexisting structures and lithologies as the glacier erodes downward.

superimposed stream [HYD] A stream, started on a new surface, that kept its course through the different preexisting lithologies and structures encountered as it eroded downward into the underlying rock. Also known as superinduced stream.

superimposed valley [GEOL] A valley eroded by or containing a superimposed stream.

superincumbent [GEOL] Pertaining to a superjacent layer, especially one that is situated so as to exert pressure.

superinduced stream *See* superimposed stream.

superinfection [VIROL] An attack on a bacterial cell by several phages due to the introduction of large numbers of viruses into the bacterial culture.

superinsulation [CHEM ENG] A multilayer insulation for cryogenic systems, composed of many floating radiation shields

in an evacuated double-wall annulus, closely spaced but thermally separated by a poor-conducting fiber.

superior [BOT] **1.** Positioned above another organ or structure. **2.** Referring to a calyx that is attached to the ovary. **3.** Referring to an ovary that is above the insertion of the floral parts.

superior air [METEOROL] An exceptionally dry mass of air formed by subsidence and usually found aloft but occasionally reaching the earth's surface during extreme subsidence processes.

superior alveolar canals [ANAT] The alveolar canals of the maxilla.

superior conjunction [ASTRON] A conjunction when an astronomical body is opposite the earth on the other side of the sun.

superior ganglion [ANAT] **1.** The upper sensory ganglion of the glossopharyngeal nerve, located in the upper part of the jugular foramen; it is inconstant. **2.** The upper sensory ganglion of the vagus nerve, located in the jugular foramen.

superior mesenteric artery [ANAT] A major branch of the abdominal aorta with branches to the pancreas and intestine.

superior mirage [OPTICS] A spurious image of an object formed above the object's position by abnormal refraction conditions; opposite to an inferior mirage.

superior planet [ASTRON] Any of the planets that are farther than the earth from the sun; includes Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto.

superior tide [OCEANOGR] The tide in the hemisphere in which the moon is above the horizon.

superior transit *See* upper transit.

superior vena cava [ANAT] The principal vein collecting blood from the head, chest wall, and upper extremities and draining into the right atrium.

superjacent [GEOL] Pertaining to a stratum situated immediately upon or over a particular lower stratum or above an unconformity.

superjacent roadway system *See* Hirschback method.

superjacent waters [OCEANOGR] The waters above the continental shelf.

superlattice [ELECTR] A structure consisting of alternating layers of two different semiconductor materials, each several nanometers thick. [SOLID STATE] An ordered arrangement of atoms in a solid solution which forms a lattice superimposed on the normal solid solution lattice. Also known as superstructure.

superline [COMPUT SCI] A unit of text longer than an ordinary line, used in some of the more powerful text editors.

supermale [GEN] A male with one X chromosome and three or more sets of autosomes, resulting in sterility and generally early death.

supermassive star [ASTRON] A star with a mass exceeding about 50 times that of the sun.

supermature [GEOL] Pertaining to a texturally mature clastic sediment whose grains have become rounded.

supermini [COMPUT SCI] A large minicomputer.

supermode laser [OPTICS] Frequency-modulated laser, the output of which is passed through a second phase modulator driven 180° out of phase and with the same modulation index as the first modulator; all of the energy of the previously existing laser modes is compressed into a single frequency with nearly the full power of the laser concentrated in that signal.

supermolecule [PHYS CHEM] A single quantum-mechanical entity presumably formed by two reacting molecules and in existence only during the collision process; a concept in the hard-sphere collision theory of chemical kinetics.

supermultiplet [QUANT MECH] A set of quantum-mechanical states each of which has the same value of some fundamental quantum numbers and differs from the other members of the set by other quantum numbers, which take values from a range of numbers dictated by the fundamental quantum numbers.

supernatant liquor [ENG] The liquid above settled solids, as in a gravity separator.

supernova [ASTRON] A star that suddenly bursts into very great brilliance as a result of its blowing up; it is orders of magnitude brighter than a nova.

supernumerary bud *See* accessory bud.

supernumerary chromosome [CYTOL] A chromosome present in addition to the normal chromosome complement. Also known as accessory chromosome.

supernumerary rainbow [OPTICS] One of a set of weakly colored rainbow arcs sometimes discernible inside a primary rainbow; they are of smaller angular width, and fade toward the common center.

superphosphate [MATER] The most important phosphorus fertilizer, derived by action of sulfuric acid on phosphate rock (mostly tribasic calcium phosphate) to produce a mix of gypsum and monobasic calcium phosphate.

superplasticity [MET] The unusual ability of some metals and alloys to elongate uniformly by thousands of percent at elevated temperatures, much like hot polymers or glasses.

superposed [BOT] **1.** Growing vertically over another part. **2.** Of or pertaining to floral parts that are opposite each other.

superposed circuit [COMMUN] Additional channel obtained from one or more circuits, normally provided for other channels, in a way that all channels can be used simultaneously without mutual interference.

superposed stream *See* consequent stream.

superposition [GEOL] **1.** The order in which sedimentary layers are deposited, the highest being the youngest. **2.** The process by which the layering occurs. [MATH] The principle of superposition states that any given geometric figure in a euclidean space can be so moved about as not to change its size or shape. [PHYS] Addition of phenomena when the sum of two physically realizable disturbances is also physically realizable; for example, sound waves are superposable in this sense, but shock waves are not.

superposition eye [INV ZOO] A compound eye in which a given rhabdome receives light from a number of facets; visual acuity is reduced in this type of eye.

superposition integral [CONT SYS] An integral which expresses the response of a linear system to some input in terms of the impulse response or step response of the system; it may be thought of as the summation of the responses to impulses or step functions occurring at various times.

superposition principle *See* principle of superposition.

superposition theorem *See* principle of superposition.

superprint *See* overprint.

superrefraction *See* ducting.

superregeneration [ELECTR] Regeneration in which the oscillation is broken up or quenched at a frequency slightly above the upper audibility limit of the human ear by a separate oscillator circuit connected between the grid and anode of the amplifier tube, to prevent regeneration from exceeding the maximum useful amount.

superresolution [OCEANOGR] Separation of tides into components of different frequencies, without taking measurements for the full extent of the longest-period component.

Super Sabre [AERO ENG] A United States supersonic, single-engine, turbojet-powered, tactical and air superiority fighter capable of delivering either nuclear or nonnuclear bombs, rockets, and Bullpup missiles against surface targets, or cannons and Sidewinder missiles against airborne targets; it is capable of providing close support for ground forces, and it can be refueled in flight. Designated F-100.

supersaturation [METEOROL] The condition existing in a given portion of the atmosphere when the relative humidity is greater than 100%, in respect to a plane surface of pure water or pure ice. [PHYS CHEM] The condition existing in a solution when it contains more solute than is needed to cause saturation. Also known as supersolubility.

super-Schmidt telescope [OPTICS] A type of Schmidt system that has a compound corrector plate consisting of a pair of opposing meniscus lenses and an achromatic doublet.

superscript [SCI TECH] A letter or symbol written above, and usually to the right, of another symbol for any of various purposes, such as to denote a power or derivative, to identify a particular element of a set, or to indicate the mass number of an isotope.

supersensitive relay [ELEC] A relay that operates on extremely small currents, generally below 250 microamperes.

supersolubility *See* supersaturation.

supersonic [ACOUS] *See* ultrasonic. [PHYS] Of, pertaining to, or dealing with speeds greater than the speed of sound.

supersonic aerodynamics [FL MECH] The study of aerodynamics of supersonic speeds.

supersonic aircraft [AERO ENG] Aircraft capable of supersonic speeds.

supersonic airfoil [AERO ENG] An airfoil designed to produce lift at supersonic speeds.

supersonic combustion ramjet *See* scramjet.

supersonic compressor [MECH ENG] A compressor in which a supersonic velocity is imparted to the fluid relative to the rotor blades, the stator blades, or both, producing oblique shock waves over the blades to obtain a high-pressure rise.

supersonic diffuser [MECH ENG] A diffuser designed to reduce the velocity and to increase the pressure of fluid moving at supersonic velocities.

supersonic flow [FL MECH] Flow of a fluid over a body at speeds greater than the speed of sound in the fluid, and in which the shock waves start at the surface of the body. Also known as supercritical flow.

supersonic inlet [AERO ENG] An inlet of a jet engine at which single, double, or multiple shock waves form.

supersonic nozzle *See* convergent-divergent nozzle.

supersonic transport [AERO ENG] A transport plane capable of flying at speeds higher than the speed of sound. Abbreviated SST.

superstandard propagation [ELECTROMAG] The propagation of radio waves under conditions of superstandard refraction in the atmosphere, that is, refraction by an atmosphere or section of the atmosphere in which the index of refraction decreases with height at a rate of greater than 12 N units (unit of index of refraction) per 1000 feet (304.8 meters).

superstructure [CIV ENG] The part of a structure that is raised on the foundation. [NAV ARCH] The entire structure of a ship above the main deck. [SOLID STATE] *See* superlattice.

supersymmetry [PARTIC PHYS] A generalization of previously known symmetries of elementary particles to new kinds of supermultiplets that include both bosons and fermions; it is based on graded Lie algebras rather than on Lie algebras.

supersystem [SCI TECH] A whole comprising systems as the major functions at the first level; conceptualized during the process of synthesis rather than analysis, it results from an awareness that a system under consideration has a relationship with one or more other systems.

supertanker [NAV ARCH] An obsolete term for an unusually large tanker, about 30,000 to 50,000 tons deadweight; such a vessel is now referred to as a very large or ultra-large crude carrier.

superthermal source [NUCLEO] A source of ultracold neutrons consisting of a container of liquid helium, cooled to about 1 K or less, which has walls that are good reflectors of ultracold neutrons but are transparent to electrons with energies of about 1 millielectronvolt, and which is placed in a beam of such electrons.

superturbulent flow [FL MECH] The flow of water in which the energy loss by friction is so great that Reynolds criterion for the transition of laminar to turbulent flow does not apply.

supervisor call [COMPUT SCI] A mechanism whereby a computer program can interrupt the normal flow of processing and ask the supervisor to perform a function for the program that the program cannot or is not permitted to perform for itself.

supervisor interrupt [COMPUT SCI] An interruption caused by the program being executed which issues an instruction to the master control program.

supervisor mode [COMPUT SCI] A method of computer operation in which the computer can execute all its own instructions, including the privileged instruction not normally allowed to the programmer, in contrast to problem mode.

supervisory computer [COMPUT SCI] A minicomputer which accepts test results from satellite minicomputers, transmits new programs to the satellite minicomputers, and may further communicate with a larger computer.

supervisory control [ENG] A control panel or room showing key readings or indicators (temperature, pressure, or flow rate) from an entire operating area, allowing visual supervision and control of the overall operation.

supervisory controlled manipulation [ENG] A form of remote manipulation in which a computer enables the operator to teach the manipulator motion patterns to be remembered and repeated later.

supervisory program [COMPUT SCI] A program that organizes and regulates the flow of work in a computer system, for example, it may automatically change over from one run to another and record the time of the run.

supervisory routine [COMPUT SCI] A program or routine that initiates and guides the execution of several (or all) other routines and programs; it usually forms part of (or is) the operating system.

supervisory signal [ELEC] A signal which indicates the operating condition of a circuit or a combination of circuits in a switching apparatus or other electrical equipment to an attendant.

supervisory system [ELEC] A system of control, indicating, and telemetry devices which operates between the stations of an electric power distribution system, using a single common channel to transmit signals.

supervoltage [ELEC] A voltage in the range of 500 to 2000 kilovolts, used for some x-ray tubes.

supination [ANAT] **1.** Turning the palm upward. **2.** Inversion of the foot.

supplementary angle [MATH] One angle is supplementary to another angle if their sum is 180°.

supplementary condition [QUANT MECH] In a quantized field theory, an auxiliary condition required of a state vector to make it correspond to an actual state.

supplementary group [ELEC] In wire communications, a group of trunks that directly connects local or trunk switching centers over other than a fundamental (or backbone) route.

supplied-air respirator [ENG] An atmospheric-supplying device which provides the wearer with respirable air from a source outside the contaminated area; only those with manual or motor-operated blowers are approved for immediately harmful or oxygen-deficient atmospheres.

supplies [ORD] All items necessary for the equipment, maintenance, and operation of a military command, including food, clothing, equipment, arms, ammunition, fuel, forage, materials, and machinery of all kinds.

supply control [IND ENG] The process by which an item of supply is controlled within the supply system, including requisitioning receipt, storage, stock control, shipment, disposition, identification, and accounting. [ORD] The process by which anticipated demands for supplies are balanced against the projected availability of supplies in order that qualitative acquisition or disposal action can be initiated.

supply current [GEOPHYS] The electrical current in the atmosphere which is required to balance the observed air-earth current of fair-weather regions by transporting positive charge upward or negative charge downward.

supply point [ORD] Any point where supplies are issued in detail.

supply voltage [ELEC] The voltage obtained from a power source for operation of a circuit or device.

support [MATH] The support of a real-valued function f on a topological space is the closure of the set of points where f is not zero.

support base [ENG] A place from which logistic support is provided for a group of launch complexes and their control center.

supporting artillery [ORD] Artillery which executes fire missions in support of a specific unit, usually infantry, but remains under the command of the next higher artillery commander.

supporting fire [ORD] Fire delivered by supporting units to assist or protect a unit in combat.

supporting weapon [ORD] Any weapon used to assist or protect a unit of which it is not an organic part.

suppository [PHARM] A medicated solid body of varying weight and shape, intended for introduction into different orifices of the body, as the rectum, urethra, or vagina; usually suppositories melt or are softened at body temperature, though in some instances release of medication is effected through use of a hydrophilic vehicle; typical vehicles or bases are theobroma oil (cocoa butter), glycerinated gelatin, sodium stearate, and propylene glycol monostearate.

suppressed carrier [COMMUN] A carrier that is suppressed at the transmitter; the chrominance subcarrier in a color television transmitter is an example.

suppressed-carrier modulation [COMMUN] Modulation resulting from elimination of the carrier component from an amplitude modulated wave.

suppressed-carrier transmission [COMMUN] Transmission in which the carrier component of the modulated wave is suppressed, leaving only the side bands to be transmitted.

suppressed-zero instrument [ENG] An indicating or recording instrument in which the zero position is below the lower end of the scale markings.

suppression [COMPUT SCI] **1.** Removal or deletion usually of insignificant digits in a number, especially zero suppression. **2.** Optional function in either on-line or off-line printing devices that permits them to ignore certain characters or groups of characters which may be transmitted through them. [ELECTR] Elimination of any component of an emission, as a particular frequency or group of frequencies in an audio-frequency of a radio-frequency signal.

suppressor [ELEC] **1.** In general, a device used to reduce or eliminate noise or other signals that interfere with the operation of a communication system, usually at the noise source. **2.** Specifically, a resistor used in series with a spark plug or distributor of an automobile engine or other internal combustion engine to suppress spark noise that might otherwise interfere with radio reception. [ELECTR] *See* suppressor grid.

suppressor gene [GEN] A gene that reverses the effect of a mutation in another gene.

suppressor grid [ELECTR] A grid placed between two positive electrodes in an electron tube primarily to reduce the flow of secondary electrons from one electrode to the other; it is usually used between the screen grid and the anode. Also known as suppressor.

suppressor mutation [GEN] A mutation that restores functional loss of a primary mutation and is located at a different genetic site from the primary mutation.

suppressor pulse [ELECTR] Pulse used to disable an ionized flow field or beacon transponder during intervals when interference would be encountered.

suppuration [MED] Pus formation.

supracardinal veins [VERT ZOO] Paired longitudinal veins in the mammalian embryo and various adult lower vertebrates in the thoracic and abdominal regions, dorsolateral to and on the sides of the descending aorta; they replace the postcardinal and subcardinal veins.

supracrustal rocks [GEOL] Rocks that overlie basement rock.

supragelisol *See* suprapermafrost layer.

suprahyoid muscles [ANAT] The muscles attached to the upper margin of the hyoid bone.

supralateral tangent arcs [METEOROL] Two oblique luminous arcs, concave to the sun and tangent to the halo of 46° at points above the altitude of the sun.

supraliminal [PHYSIO] Above, or in excess of, a threshold.

supranuclear [ANAT] In the nervous system, central to a nucleus.

supraoccipital [ANAT] Situated above the occipital bone.

supraoptic [ANAT] Situated above the optic tract.

suprapermafrost layer [HYD] The layer of ground above permafrost; it includes the active layer and possibly occurrences of talik and perelotok. Also known as supragelisol.

suprarenal gland *See* adrenal gland.

suprascapula [ANAT] An anomalous bone sometimes found between the superior border of the scapula and the spines of the lower cervical or first thoracic vertebrae.

suprasegmental reflex [PHYSIO] A reflex employing complex multineuronal channels to integrate the body and limb musculature with fixed positions or movements of the head.

suprasternal notch [ANAT] Jugular notch of the sternum.

suprasternal space [ANAT] The triangular space above the manubrium, enclosed by the layers of the deep cervical fascia which are attached to the front and back of this bone.

supratidal sediment [GEOL] The sediment deposited immediately above the high-tide level.

supratidal zone [GEOL] Pertaining to the shore area immediately marginal to and above the high-tide level.

supravital [BIOL] Pertaining to the staining of living cells after removal from a living animal or of still living cells from a recently killed animal.

supremum *See* least upper bound.

surbase [ARCH] **1.** A molding above the base of a wall. **2.** A molding or series of moldings above the base of a pedestal.

surcharge [CIV ENG] The load supported above the level of the top of a retaining wall.

surcharged wall [CIV ENG] A retaining wall with an embankment on the top.

surf [OCEANOGR] Wave activity in the area between the shoreline and the outermost limit of breakers, that is, in the surf zone.

surface [ENG] The outer part (skin with a thickness of zero) of a body; can apply to structures, to micrometer-sized particles, or to extended-surface zeolites.

surface acoustic wave [ACOUS] A sound wave that propagates along and is bound to the surface of a solid; ordinarily it contains both compressional and shear components. Abbreviated SAW.

surface acoustic wave device [ELECTR] Any device, such as a filter, resonator, or oscillator, which employs surface acoustic waves with frequencies in the range 10^7–10^9 hertz, traveling on the optically polished surface of a piezoelectric substrate, to process electronic signals.

surface acoustic wave filter [ELECTR] An electric filter consisting of a piezoelectric bar with a polished surface along which surface acoustic waves can propagate, and on which are deposited metallic transducers, one of which is connected, via thermocompression-bonded leads, to the electric source, while the other drives the load.

surface-active agent [MATER] A soluble compound that reduces the surface tension of liquids, or reduces interfacial tension between two liquids or a liquid and a solid. Also known as surfactant.

surface air leakage [MIN ENG] The amount of surface air entering the fan through the casing at the top of the upcast shaft, the air-lock doors, and fan-drift walls.

surface analyzer [ENG] An instrument that measures or records irregularities in a surface by moving the stylus of a crystal pickup or similar device over the surface, amplifying the resulting voltage, and feeding the output voltage to an indicator or recorder that shows the surface irregularities magnified as much as 50,000 times.

surface area [ENG] Measurement of the extent of the area (without allowance for thickness) covered by a surface.

surface barrier [ELECTR] A potential barrier formed at a surface of a semiconductor by the trapping of carriers at the surface.

surface-barrier diode [ELECTR] A diode utilizing thin-surface layers, formed either by deposition of metal films or by surface diffusion, to serve as a rectifying junction.

surface-barrier transistor [ELECTR] A transistor in which the emitter and collector are formed on opposite sides of a semiconductor wafer, usually made of *n*-type germanium, by training two jets of electrolyte against its opposite surfaces to etch and then electroplate the surfaces.

surface boundary layer [METEOROL] That thin layer of air adjacent to the earth's surface, extending up to the so-called anemometer level (the base of the Ekman layer); within this layer the wind distribution is determined largely by the vertical temperature gradient and the nature and contours of the underlying surface, and shearing stresses are approximately constant. Also known as atmospheric boundary layer; friction layer; ground layer; surface layer.

surface carburetor [MECH ENG] A carburetor in which air is passed over the surface of gasoline to charge it with fuel.

surface-charge transistor [ELECTR] An integrated-circuit transistor element based on controlling the transfer of stored electric charges along the surface of a semiconductor.

surface chart [METEOROL] An analyzed synoptic chart of surface weather observations; essentially, a surface chart shows the distribution of sea-level pressure (therefore, the positions of highs, lows, ridges, and troughs) and the location and nature of fronts and air masses, plus the symbols of occurring weather phenomena, analysis of pressure tendency (isallobars), and indications of the movement of pressure systems and fronts. Also known as sea-level chart; sea-level-pressure chart; surface map.

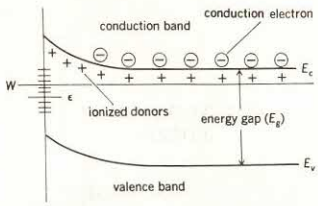
surface chemistry [PHYS CHEM] The study and measurement of the forces and processes that act on the surfaces of fluids (gases and liquids) and solids, or at an interface separating two phases; for example, surface tension.

surface-coated mirror [OPTICS] A mirror produced by depositing a thin film of highly reflective material on a glass surface.

surface combustion [ENG] Combustion brought about near the surface of a heated refractory material by forcing a mixture of air and combustible gases through it or through a hole in it, or having the gas impinge directly upon it; used in muffles, crucibles, and certain types of boiler furnaces.

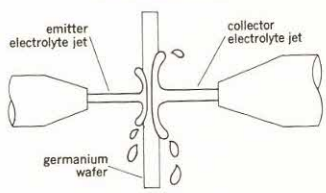
surface condenser [MECH ENG] A heat-transfer device used to condense a vapor, usually steam under vacuum, by absorbing its latent heat in cooling fluid, ordinarily water.

SURFACE BARRIER



Energy diagram of a surface barrier as employed in an *n*-type semiconductor. W = Fermi level; ϵ = highest energy level of surface state filled by electrons when surface is electrically neutral; E_C = energy of bottom of conduction band; E_V = energy of top of valence band.

SURFACE-BARRIER TRANSISTOR



Technique for making surface-barrier transistor.

surface contamination [NUCLEO] The deposition and attachment of radioactive materials to a surface.

surface-controlled avalanche transistor [ELECTR] Transistor in which avalanche breakdown voltage is controlled by an external field applied through surface-insulating layers, and which permits operation at frequencies up to the 10-gigahertz range.

surface creep [GEOL] A stage of the wind erosion process in which grains of sand move each other along the surface.

surface current [OCEANOGR] **1.** Water movement which extends to depths of 3–10 feet (1–3 meters) below the surface in nearshore areas, and to about 33 feet (10 meters) in deep-ocean areas. **2.** Any current whose maximum velocity core is at or near the surface.

surface density [PHYS] The quantity of anything distributed over a surface per unit area of surface.

surface deposit *See* surficial deposit.

surface detention [HYD] Water in temporary storage as a thin sheet over the soil surface during the occurrence of overland flow.

surface drainage [HYD] Natural or artificial removal of excess groundwater.

surface drilling [MIN ENG] Boreholes collared at the surface of the earth, as opposed to boreholes collared in mine workings or underwater.

surface duct [GEOPHYS] Atmospheric duct for which the lower boundary is the surface of the earth.

surface-effect ship [MECH ENG] A transportation device with fixed side walls, which is supported by low-pressure, low-velocity air and operates on water only.

surface energy [FL MECH] The energy per unit area of an exposed surface of a liquid; generally greater than the surface tension, which equals the free energy per unit surface.

surface finish [ENG] The surface roughness of a component after final treatment, measured by a surface profile.

surface fire [FOR] A forest fire in which only surface litter and undergrowth burn.

surface flow *See* overland flow.

surface force [MECH] An external force which acts only on the surface of a body; an example is the force exerted by another object with which the body is in contact.

surface friction [GEOPHYS] The drag or skin friction of the earth on the atmosphere, usually expressed in terms of the shearing stress of the wind on the earth's surface.

surface gage [DES ENG] **1.** A scribing tool in an adjustable stand, used to mark off castings and to test the flatness of surfaces. **2.** A gage for determining the distances of points on a surface from a reference plane.

surface geology [GEOL] The scientific study of the features at the surface of the earth.

surface grinder [MECH ENG] A grinding machine that produces a plane surface.

surface hardening [MET] Hardening the surface of steel by one of several processes, such as carburizing, carbonitriding, nitriding, flame or induction hardening, and surface working.

surface hoar [HYD] **1.** Fernlike ice crystals formed directly on a snow surface by sublimation; a type of hoarfrost. **2.** Hoarfrost that has grown primarily in two dimensions, as on a window or other smooth surface.

surface ignition [ENG] The initiation of a flame in the combustion chamber of an automobile engine by any hot surface other than the spark discharge.

surface integral [MATH] The integral of a function of several variables with respect to surface area over a surface in the domain of the function.

surface inversion [METEOROL] A temperature inversion based at the earth's surface; that is, an increase of temperature with height beginning at ground level. Also known as ground inversion.

surface irrigation [AGR] Application of water to the soil by means of pipes or furrows along the surface.

surface layer *See* surface boundary layer.

surface leakage [ELEC] The passage of current over the surface of an insulator.

surface lift [MIN ENG] In the freezing method of shaft sinking, freezing and heaving of the surface around the shaft due to the formation of ice and the variation of temperature.

surface magnetic wave [ELECTROMAG] A magnetostatic wave that can be propagated on the surface of a magnetic material, as on a slab of yttrium iron garnet.

surface map *See* surface chart.

surface mining [MIN ENG] Mining at or near the surface; includes placer mining, mining in open glory-hole or milling pits, mining and removing ore from opencuts by hand or with mechanical excavating and transportation equipment, and the removal of capping or overburden to uncover the ores.

surface navigation [NAV] Navigation of a craft on the surface of the earth; in particular, navigation of vessels on the surface of water.

surface noise [ELECTR] The noise component in the electric output of a phonograph pickup due to irregularities in the contact surface of the groove. Also known as needle scratch.

surface of discontinuity [METEOROL] An interface, applied to the atmosphere; for example, an atmospheric front is represented ideally by a surface of discontinuity of velocity, density, temperature, and pressure gradient.

surface of revolution [MATH] A surface realized by rotating a planar curve about some axis in its plane.

surface orientation [PHYS CHEM] Arrangement of molecules on the surface of a liquid with one part of the molecule turned toward the liquid.

surface passivation [ELECTR] A method of coating the surface of a *p*-type wafer for a diffused junction transistor with an oxide compound, such as silicon oxide, to prevent penetration of the impurity in undesired regions.

surface phase [GEOCHEM] A thin rock layer differing in geochemical properties from those of the volume phases on either side. Also known as volume phase.

surface-piercing hydrofoil [NAV ARCH] A hydrofoil craft which attains its stability by hydrodynamically balancing the amount of foil area above and below the water surface.

surface pipe [PETRO ENG] The string of casing first set in a well, usually to shut off shallow, fresh-water sands from contamination by deeper, saline waters.

surface plate [DES ENG] A plate having a very accurate plane surface used for testing other surfaces or to provide a true surface for accurately measuring and locating testing fixtures.

surface pressure [METEOROL] The atmospheric pressure at a given location on the earth's surface; the expression is applied loosely and about equally to the more specific terms: station pressure and sea-level pressure. [PHYS] *See* film pressure.

surface reaction [CHEM] A chemical reaction carried out on a surface as on an adsorbent or solid catalyst.

surface recombination velocity [SOLID STATE] A measure of the rate of recombination between electrons and holes at the surface of a semiconductor, equal to the component of the electron or hole current density normal to the surface divided by the excess electron or hole volume charge density close to the surface.

surface resistivity [ELEC] The electric resistance of the surface of an insulator, measured between the opposite sides of a square on the surface; the value in ohms is independent of the size of the square and the thickness of the surface film.

surface retention *See* surface storage.

surface rights [MIN ENG] **1.** Ownership of the surface land only, mineral rights being reserved. **2.** Ownership of the surface land plus mineral rights. **3.** The right of a mineral owner or an oil and gas lessee to use as much surface land as may be reasonably necessary for the conduct of operations under the lease.

surface rolling [MET] A cold-rolling process for hardening the surface of a metal.

surface roughness [ENG] The closely spaced unevenness of a solid surface (pits and projections) that results in friction for solid-solid movement or for fluid flow across the solid surface.

surface runoff [HYD] Runoff that moves over the soil surface to the nearest surface stream.

surface-set bit [DES ENG] A bit containing a single layer of diamonds set so that the diamonds protrude on the surface of the crown. Also known as single-layer bit.

surface sizing *See* sizing treatment.

surface soil [GEOL] The soil extending 5 to 8 inches (13 to 20 centimeters) below the surface.

surface state [SOLID STATE] An electron state in a semiconductor whose wave function is restricted to a layer near the surface.

surface storage [HYD] The part of precipitation retained temporarily at the ground surface as interception or depression storage so that it does not appear as infiltration or surface runoff

either during the rainfall period or shortly thereafter. Also known as initial detention; surface retention.

surface temperature [METEOROL] Temperature of the air near the surface of the earth. [OCEANOGR] Temperature of the layer of seawater nearest the atmosphere.

surface tension [FL MECH] The force acting on the surface of a liquid, tending to minimize the area of the surface; quantitatively, the force that appears to act across a line of unit length on the surface. Also known as interfacial force; interfacial tension; surface tensity.

surface tension number [FL MECH] A dimensionless number used in studying mass transfer in packed columns equal to the square of the dynamic viscosity of a fluid times the length of the perimeter of a packing element, divided by the product of the surface area of the packing element, the surface tension, and the density of the liquid. Symbol T_s.

surface tensity *See* surface tension.

surface thermometer [ENG] A thermometer, mounted in a bucket, used to measure the temperature of the sea surface.

surface-to-air missile [ORD] A guided missile designed to be fired at an airborne target from the ground or from the deck of a surface ship; examples include Bomarc, Hawk, Nike, Talos, Tartar, Terrier, and Wizard. Abbreviated SAM.

surface-to-surface missile [ORD] A guided missile designed to be fired at a surface target from a surface position on land or water; examples include Atlas, Corporal, Dart, Jupiter, Lacross, Mace, Matador, Navaho, Pershing, Polaris, Redstone, Regulus, Sergeant, Snark, Thor, and Titan. Abbreviated SSM.

surface treating [ENG] Any method of treating a material (metal, polymer, or wood) so as to alter the surface, rendering it receptive to inks, paints, lacquers, adhesives, and various other treatments, or resistant to weather or chemical attack.

surface vibrator [MECH ENG] A vibrating device used on the surface of a pavement or flat slab to consolidate the concrete.

surface visibility [METEOROL] The visibility determined from a point on the ground, as opposed to control-tower visibility.

surface wash *See* sheet erosion.

surface water [HYD] All bodies of water on the surface of the earth. [OCEANOGR] *See* mixed layer.

surface waterproofing [ENG] Waterproofing concrete by painting a waterproofing liquid on the surface.

surface wave [COMMUN] *See* ground wave. [ELECTROMAG] A wave that can travel along an interface between two different mediums without radiation; the interface must be essentially straight in the direction of propagation; the commonest interface used is that between air and the surface of a circular wire. [FL MECH] A wave that distorts the free surface that separates two fluid phases, usually a liquid and a gas. [MECH] *See* Rayleigh wave. [OCEANOGR] A progressive gravity wave in which the disturbance is of greatest amplitude at the air-water interface.

surface-wave transmission line [ELECTROMAG] A single conductor transmission line energized in such a way that a surface wave is propagated along the line with satisfactorily low attenuation.

surface weather observation [METEOROL] An evaluation of the state of the atmosphere as observed from a point at the surface of the earth, as opposed to an upper-air observation, and applied mainly to observations which are taken for the primary purpose of preparing surface synoptic charts.

surface wind [METEOROL] The wind measured at a surface observing station; customarily, it is measured at some distance above the ground itself to minimize the distorting effects of local obstacles and terrain.

surface zero *See* ground zero.

surfacing [MET] Depositing filler metal on a metal surface by welding or spraying.

surfacing mat *See* overlay.

surfactant *See* surface-active agent.

surfactant flooding *See* micellar flooding.

surf beat [OCEANOGR] Oscillations of water level near shore, associated with groups of high breakers.

surficial creep *See* soil creep.

surficial deposit [GEOL] Unconsolidated alluvial, residual, or glacial deposits overlying bedrock or occurring on or near the surface of the earth. Also known as superficial deposit; surface deposit.

surficial geology [GEOL] The scientific study of surficial deposits, including soils.

surf ripple [GEOL] A ripple mark formed on a sandy beach by wave-generated currents.

surf zone [OCEANOGR] The area between the landward limit of wave uprush and the farthest seaward breaker.

surge [ASTROPHYS] An unusually violent solar prominence that usually accompanies a smaller flare, consisting of a brilliant jet of gas which shoots out into the solar corona with a speed on the order of 300 kilometers per second and reaches a height on the order of 100,000 kilometers. [ELEC] A momentary large increase in the current or voltage in an electric circuit. [ENG] **1.** An upheaval of fluid in a processing system, frequently causing a carryover (puking) of liquid through the vapor lines. **2.** The peak system pressure. **3.** An unstable pressure buildup in a plastic extruder leading to variable throughput and waviness of the hollow plastic tube. [FL MECH] A wave at the free surface of a liquid generated by the motion of a vertical wall, having a change in the height of the surface across the wavefront and violent eddy motion at the wavefront. [OCEANOGR] **1.** Wave motion of low height and short period, from about ½ to 60 minutes. **2.** *See* storm surge.

surge admittance [ELEC] Reciprocal of surge impedance.

surge arrester [ELEC] A protective device designed primarily for connection between a conductor of an electrical system and ground to limit the magnitude of transient overvoltages on equipment. Also known as arrester; lightning arrester.

surge bunker [MIN ENG] A large-capacity storage hopper, installed near the pit bottom or at the input end of a processing plant to provide uniform bulk deliveries.

surge column [PETRO ENG] A large-sized pipe of sufficient height to provide a static head able to absorb the surging liquid discharge of the process tank to which it is connected. Also known as boot.

surge current [ELEC] A short-duration, high-amperage electric current wave that may sweep through an electrical network, as a power transmission network, when some portion of it is strongly influenced by the electrical activity of a thunderstorm.

surge drum *See* accumulator.

surge electrode current *See* fault electrode current.

surge generator [ELEC] A device for producing high-voltage pulses, usually by charging capacitors in parallel and discharging them in series.

surge header *See* accumulator.

surge impedance *See* characteristic impedance.

surge line [METEOROL] A line along which a discontinuity in the wind speed occurs.

surgery [MED] The branch of medicine that deals with conditions requiring operative procedures.

surge stress [MECH] The physical stress on process equipment or systems resulting from a sudden surge in fluid (gas or liquid) flow rate or pressure.

surge suppressor [ELECTR] A circuit that responds to the rate of change of a current or voltage to prevent a rise above a predetermined value; it may include resistors, capacitors, coils, gas tubes, and semiconducting disks. Also known as transient suppressor.

surge tank [ENG] **1.** A standpipe or storage reservoir at the downstream end of a closed aqueduct or feeder pipe, as for a water wheel, to absorb sudden rises of pressure and to furnish water quickly during a drop in pressure. Also known as surge drum. **2.** An open tank to which the top of a surge pipe is connected so as to avoid loss of water during a pressure surge. [MIN ENG] In pumping of ore pulps, a relatively small tank which maintains a steady loading of the pump.

surgical needle [MED] Any sewing needle used in a surgical operation.

surging [ENG] Motion of a ship that alternately moves forward and aft, usually when moored.

surging breaker *See* plunging breaker.

surging glacier [HYD] A glacier that alternates periodically between surges (brief periods of rapid flow) and stagnation.

surjection [MATH] A mapping f from a set A to a set B such that for every element b of B there is an element a of A such that $f(a) = b$. Also known as surjective mapping.

surjective mapping *See* surjection.

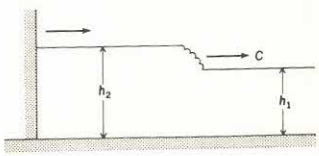
suroet [METEOROL] A persistent, rain-bearing southwest wind on the west coast of France.

surprint [GRAPHICS] **1.** To superimpose an image upon a

SURFACE-TO-AIR MISSILE

Surface-to-air missile known as Hawk, for defense against low-flying aircraft. *(Official U.S. Army photograph)*

SURGE



Sketch of a surge wave (fl mech). C = speed of propagation; h_1 = height of water before passage of surge; h_2 = height of water after passage of surge.

previously printed image. **2.** An image that has been surprinted.

sursassite [MINERAL] $Mn_5Al_4Si_5O_{21}\cdot 3H_2O$ A mineral composed of hydrous manganese aluminum silicate.

surveillance [ENG] Systematic observation of air, surface, or subsurface areas or volumes by visual, electronic, photographic, or other means, for intelligence or other purposes.

surveillance approach [NAV] An instrument approach conducted according to directions issued by a controller using information which appears on the surveillance radar display.

surveillance radar [NAV] Ground radar used for traffic-control purposes in the approach and landing zone; it is used to assist controllers in converting random arrivals to regular landings and in positioning such aircraft so that they may make low approaches by the use of a fixed-beam, low-approach system or by a precision radar low-approach system.

surveillance satellite [AERO ENG] A satellite whose function is to make systematic observations of the earth, usually by photographic means, for military intelligence or for other purposes.

survey [ENG] **1.** The process of determining accurately the position, extent, contour, and so on, of an area, usually for the purpose of preparing a chart. **2.** The information so obtained. [NUCLEO] Measurement of radiation in the vicinity of a nuclear reactor or other source.

survey foot [MECH] A unit of length, used by the U.S. Coast and Geodetic Survey, equal to 12/39.37 meter, or approximately 1.000002 feet.

surveying altimeter [ENG] A barometric-type instrument consisting of a pressure-sensitive element which contracts or expands in proportion to atmospheric pressure, connected through a linkage to a pointer; its dial is graduated in units of linear measurement (feet or meters) to indicate differences of elevation only.

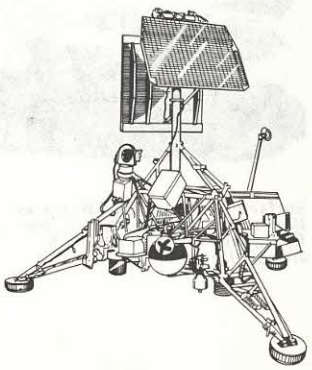
surveying sextant *See* hydrographic sextant.

survey instrument [NUCLEO] A portable instrument used to detect and measure radiation. Also known as survey meter.

survey meter *See* survey instrument.

Surveyor program [AERO ENG] A program in which unmanned spacecraft made soft landings on the moon to take photographs, analyze samples of soil, and obtain other data that could be transmitted back to earth for guidance in planning manned landings.

SURVEYOR PROGRAM



Surveyor full-scale science training model which is used in operational simulation of the instrument complement. *(NASA)*

surveyor's compass [ENG] An instrument used to measure horizontal angles in surveying.

surveyor's cross [ENG] An instrument for setting out right angles in surveying; consists of two bars at right angles with sights at each end.

surveyor's level [ENG] A telescope and spirit level mounted on a tripod, rotating vertically and having leveling screws for adjustment.

surveyor's measure [ENG] A system of measurement used in surveying having the engineer's, or Gunter's chain, as a unit.

survivability [ORD] The capability of a system to withstand a man-made hostile environment without suffering an abortive impairment of its ability to accomplish its designated mission.

survivable route [COMMUN] A communication cable system begun in 1960 in which the cable, main stations, amplifiers, and power feed stations are placed underground; it incorporates the latest techniques of protection against natural disasters and nuclear blasts, and avoids possible target areas.

survival curve [NUCLEO] The curve obtained by plotting the number or percentage of organisms surviving at a given time against the dose of radiation, or the number surviving at different intervals after a particular dose of radiation.

survival probability [ORD] The chance that a target will survive a given operation.

survival ratio [BIOL] The number of organisms surviving irradiation by ionizing radiation divided by the number of organisms before irradiation.

survivor curve [IND ENG] A curve showing the percentage of a group of machines or facilities surviving at a given age.

Surwell clinograph [ENG] A directional surveying instrument which records photographically the direction and magnitude of well deviations from the vertical; powered by batteries, it contains a box level gage (indicating vertical deviation), a gyroscopic compass (indicating azimuth direction) and a watch and a dial thermometer, so that a simultaneous record of amount and direction of deviation, temperature, and time can be made on 16-millimeter film.

SUSPENSION BRIDGE

Verrazano-Narrows Bridge, New York City, an example of a suspension bridge. *(Triborough Bridge and Tunnel Authority)*

susannite [MINERAL] $Pb_4(SO_4)(CO_3)_2(OH)_2$ A greenish or yellowish, rhombohedral mineral that is dimorphous with leadhillite.

suscept [PL PATH] A plant that is susceptible to disease caused by either parasitic or nonparasitic plant pathogens.

susceptance [ELEC] The imaginary component of admittance.

susceptance standard [ELEC] Standard that introduces calibrated small values of shunt capacitance into 50-ohm coaxial transmission arrays.

susceptibility [ELEC] *See* electric susceptibility. [ELECTROMAG] *See* magnetic susceptibility. [ORD] The degree to which a device, equipment, or weapons system is open to effective attack due to one or more inherent weaknesses.

susceptometer [ENG] An instrument that measures paramagnetic, diamagnetic, or ferromagnetic susceptibility.

suspended acoustical ceiling [BUILD] An acoustical ceiling which is suspended from either the roof or a higher ceiling.

suspended ceiling [BUILD] The suspension of the furring members beneath the structural members of a ceiling.

suspended formwork [CIV ENG] Formwork suspended from supports for the floor being cast.

suspended load [GEOL] The part of the stream load that is carried for a long time in suspension. Also known as suspension load.

suspended solids *See* suspension.

suspended span [CIV ENG] A simple span supported from the free ends of cantilevers.

suspended transformation [THERMO] The cessation of change before true equilibrium is reached, or the failure of a system to change immediately after a change in conditions, such as in supercooling and other forms of metastable equilibrium.

suspended tray conveyor [MECH ENG] A vertical conveyor having pendant trays or other carriers on one or more endless chains.

suspended tubbing [MIN ENG] A permanent method of lining a circular shaft, in which the tubbing (German type) is temporarily suspended from the next wedging curb above and for which no temporary supports are required; slurry is run in behind the tubbing by means of a funnel passing through the holes provided in the segments.

suspended water *See* vadose water.

suspension [CHEM] A mixture of fine, nonsettling particles of any solid within a liquid or gas, the particles being the dispersed phase, while the suspending medium is the continuous phase. Also known as suspended solids. [ENG] A fine wire or coil spring that supports the moving element of a meter. [MIN ENG] The bolting of rock to secure fragments or sections, such as small slabs barred down after blasting blocks of rock broken by fracture or joint patterns, which may subsequently loosen and fall.

suspension bridge [CIV ENG] A fixed bridge consisting of either a roadway or a truss suspended from two cables which pass over two towers and are anchored by backstays to a firm foundation.

suspension cable [ENG] A freely hanging cable; may carry mainly its own weight or a uniformly distributed load.

suspension current *See* turbidity current.

suspension feeder [ZOO] An animal that feeds on small particles suspended in water; particles may be minute living plants or animals, or products of excretion or decay from these or larger organisms.

suspension insulator [ELEC] A type of insulator used to support a conductor of an overhead transmission line, consisting of one or a string of insulating units suspended from a pole or tower, with the conductor attached to the end.

suspension load *See* suspended load.

suspension roast *See* flash roast.

suspension roof [BUILD] A roof that is supported by steel cables.

suspension system [MECH ENG] A system of springs, shock absorbers, and other devices supporting the upper part of a motor vehicle on its running gear.

suspensor [BOT] A mass of cells in higher plants that pushes the embryo down into the embryo sac and into contact with the nutritive tissue. [MYCOL] A hypha which bears an apical gametangium in fungi of the Mucorales.

sussexite [MINERAL] $MnBO_2OH$ A white mineral composed of basic manganese borate occurring in fibrous veins.

sustained oscillation [CONT SYS] Continued oscillation

due to insufficient attenuation in the feedback path. [PHYS] Oscillation in which forces outside the system, but controlled by the system, maintain a periodic oscillation of the system at a period or frequency that is nearly the natural period of the system.

sustained rate of fire [ORD] Actual rate of fire that a weapon can continue to deliver for an indefinite length of time without seriously overheating.

sustained yield [BIOL] In a biological resource such as timber or grain, the replacement of a harvest yield by growth or reproduction before another harvest occurs.

sustainer rocket engine [AERO ENG] A rocket engine that maintains the velocity of a rocket vehicle once it has achieved its programmed velocity by use of a booster or other engine.

sustentacular cell [HISTOL] One of the supporting cells of an epithelium as contrasted with other cells with special function, as the nonnervous cells of the olfactory epithelium or the Sertoli cells of the seminiferous tubules.

Sutherland's formula [STAT MECH] **1.** The absolute viscosity of a gas is proportional to $T^{3/2}/(C + T)$, where T is the absolute temperature and C is a constant for a given gas. **2.** The mean free path of a molecule in a gas is proportional to $1/nd^2\sqrt{1 + C/T}$, where n is the number of molecules per unit volume, d is the diameter of a molecule, T is the absolute temperature, and C is a constant.

Sutro weir [CIV ENG] A dam with at least one curved side and horizontal crest, so formed that the head above the crest is directly proportional to the discharge.

suture [BIOL] A distinguishable line of union between two closely united parts. [MED] A fine thread used to close a wound or surgical incision.

sutured [PETR] Referring to rock texture in which mineral grains or irregularly shaped crystals interfere with their neighbors, producing interlocking, irregular contacts without interstitial spaces.

svabite [MINERAL] $Ca_5(AsO_4)_3F$ A colorless, yellow, rose, or reddish-brown mineral composed of fluoride-arsenate of calcium.

svanbergite [MINERAL] $SrAl_3(PO_4)(SO_4)(OH)_6$ A colorless to yellow mineral composed of basic phosphate and sulfate of strontium and aluminum; it is isomorphous with corkite, hinsdalite, and woodhouseite.

svedberg [PHYS CHEM] A unit of sedimentation coefficient, equal to 10^{-13} second.

Svedberg equation [STAT MECH] An equation which states that the amplitude of vibration of a particle which exhibits Brownian motion is proportional to its period.

sverdrup [FL MECH] A unit of volume transport equal to 1,000,000 cubic meters per second.

SW *See* switch.

swab [MIN ENG] **1.** A pistonlike device provided with a rubber cap ring that is used to clean out debris inside a borehole or casing. **2.** The act of cleaning the inside of a tubular object with a swab. [PETRO ENG] In petroleum drilling, to pull the drill string so rapidly that the drill mud is sucked up and overflows the collar of the borehole, thus leaving an undesirably empty borehole.

swage bolt [DES ENG] A bolt having indentations with which it can be gripped in masonry.

swaging [MET] Tapering a rod or tube or reducing its diameter by any of several methods, such as forging, squeezing, or hammering.

swale [GEOL] **1.** A slight depression, sometimes swampy, in the midst of generally level land. **2.** A shallow depression in an undulating ground moraine due to uneven glacial deposition. **3.** A long, narrow, generally shallow, troughlike depression which lies between two beach ridges and is aligned roughly parallel to the coastline.

swallow buoy *See* swallow float.

swallow float [ENG] A tubular buoy used to measure current velocities; it can be adjusted to be neutrally buoyant and to drift at a selected density level while being tracked by shipboard listening devices. Also known as neutrally buoyant float; swallow buoy.

swamp [ECOL] A waterlogged land supporting a natural vegetation predominantly of shrubs and trees.

swamp buggy [MECH ENG] A wheeled vehicle that runs on land, mud, or through shallow water; used especially in swamps.

swamper [MIN ENG] **1.** A rear brakeman in a metal mine. **2.** A laborer who assists in hauling ore and rock, coupling and uncoupling cars, throwing switches, and loading and unloading carriers.

swamp fever *See* infectious anemia.

swamping resistor [ELECTR] Resistor placed in the emitter lead of a transistor circuit to minimize the effects of temperature on the emitter-base junction resistance.

swamp itch *See* schistosome dermatitis.

swan [VERT ZOO] Any of several species of large waterfowl comprising the subfamily Anatinae; they are herbivorous stout-bodied forms with long necks and spatulate bills.

Swan *See* Cygnus.

Swann bands [ASTROPHYS] Particular bands seen in the visible spectra of comets; they arise from the presence of dimeric carbon (C_2) in the comet's tail.

Swanscombe man [PALEON] A partial skull recovered in Swanscombe, Kent, England, which represents an early stage of *Homo sapiens* but differing in having a vertical temporal region and a rounded occipital profile.

swapping [COMPUT SCI] A procedure in which a running program is temporarily suspended and moved onto secondary storage, and primary storage is reassigned to a more pressing job, in order to maximize the efficient use of primary storage.

swarf [ENG] Chips, shavings, and other fine particles removed from the workpiece by grinding tools.

swarmer cell [MICROBIO] The daughter cell which separates from the stalked mother cell in bacteria in the genus *Caulobacter*.

Swarts reaction [ORG CHEM] The reaction of chlorinated hydrocarbons with metallic fluorides to form chlorofluorohydrocarbons, such as CCl_2F_2, which is quite inert and nontoxic.

swartzite [MINERAL] $CaMg(UO_2)(CO_3)_3 \cdot 12H_2O$ A green monoclinic mineral composed of hydrous carbonate of calcium, magnesium, and uranium.

swash [GEOL] **1.** A narrow channel or ground within a sand bank, or between a sand bank and the shore. **2.** A bar over which the sea washes. [OCEANOGR] The rush of water up onto the beach following the breaking of a wave. Also known as run-up; uprush.

swash bulkhead *See* swash plate.

swash mark [GEOL] A fine, wavy or arcuate line or minute ridge consisting of fine sand, seaweed, and other debris on a beach; marks the farthest advance of wave uprush. Also known as debris line; wave line; wavemark.

swash plate [NAV ARCH] A partial bulkhead in the tank of an oil tanker; used to decrease the back-and-forth surge of liquid as the ship rocks or rolls. Also known as swash bulkhead.

swash-plate pump [MECH ENG] A rotary pump in which the angle between the drive shaft and the plunger-carrying body is varied.

S wave [GEOPHYS] A seismic body wave propagated in the crust or mantle of the earth by a shearing motion of material; speed is 3.0–4.0 kilometers per second in the crust and 4.4–4.6 in the mantle. Also known as distortional wave; equivoluminal wave; rotational wave; secondary wave; shake wave; shear wave; tangential wave; transverse wave.

sway [NAV ARCH] Lateral movement of the center of gravity of a ship.

swayback [MED] Increased lumbar lordosis with compensatory increased thoracic kyphosis. [VET MED] Sinking of the back, or lordosis.

sway brace [CIV ENG] One or a pair of diagonal members designed to resist horizontal forces, such as wind.

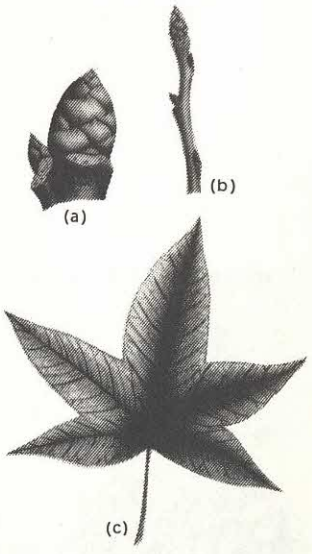
sway frame [CIV ENG] A unit in the system of members of a bridge that provides bracing against side sway; consists of two diagonals, the verticals, the floor beam, and the bottom strut.

sweat [CHEM] Exudation of nitroglycerin from dynamite due to separation of nitroglycerin from its adsorbent. [MET] Exudate of low-melting-point constituents from a metal on solidification. [PHYSIO] The secretion of the sweat glands. Also known as perspiration. [SCI TECH] Formation of moisture beads on a surface as a result of concentration.

sweat cooling [AERO ENG] A technique for cooling combustion chambers or aerodynamically heated surfaces by forcing a coolant through a porous wall, resulting in film cooling at the interface. Also known as transpiration cooling.

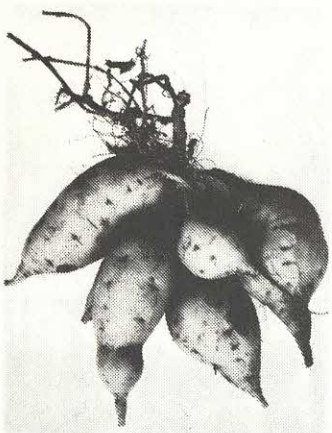
sweated wax [MATER] A white, moisture-free petroleum wax with the oil removed by a sweating process, in which the unrefined wax is heated in shallow pans.

SWEETGUM



Sweetgum *(Liquidambar styraciflua)*; *(a)* terminal bud, *(b)* twig, and *(c)* the distinctive five-lobed leaf.

SWEET POTATO



The sweet, fleshy, tuberous roots of big-stem Jersey type sweet potatoes. *(USDA)*

sweat gland [PHYSIO] A coiled tubular gland of the skin which secretes sweat.

sweating [CHEM ENG] Separation of paraffin oil from low-melting petroleum wax obtained from paraffin wax in a chamber (sweater) by first cooling the mixture until it is a solid cake, then warming gradually to cause partial fusion of the mixture to allow drainage of liquid from the cake. Also known as exudation.

sweating out [MET] Bringing small globules of low-melting constituents to the surface of an alloy during heat treatment (as lead out of bronze).

sweat soldering [MET] Soldering two parts by precoating with solder and merging them by application of heat.

swedenborgite [MINERAL] $NaBe_4SbO_7$ A colorless to wine-yellow mineral composed of sodium beryllium antimony oxide.

sweep [ELECTR] **1.** The steady movement of the electron beam across the screen of a cathode-ray tube, producing a steady bright line when no signal is present; the line is straight for a linear sweep and circular for a circular sweep. **2.** The steady change in the output frequency of a signal generator from one limit of its range to the other. [MET] A profile pattern used to form molds for symmetrical articles made by sweep casting. [ORD] **1.** Swift flight of a formation of combat airplanes over enemy territory. **2.** To cover a wide area with gunfire.

sweep amplifier [ELECTR] An amplifier used with a cathode-ray tube, such as in a television receiver or cathode-ray oscilloscope, to amplify the sawtooth output voltage of the sweep oscillator, to shape the waveform for the deflection circuits of a television picture tube, or to provide balanced signals to the deflection plates.

sweepback [AERO ENG] **1.** The backward slant of a leading or trailing edge of an airfoil. **2.** The amount of this slant, expressed as the angle between a line perpendicular to the plane of symmetry and a reference line in the airfoil.

sweep circuit [ELECTR] The sweep oscillator, sweep amplifier, and any other stage used to produce the deflection voltage or current for a cathode-ray tube. Also known as scanning circuit.

sweep-frequency reflectometer [ELECTROMAG] A reflectometer that measures standing-wave ratio and insertion loss in decibels over a wide range of frequencies, in either single- or sweep-frequency operation.

sweep generator Also known as sweep oscillator. [ELECTR] **1.** An electronic circuit that generates a voltage or current, usually recurrent, as a prescribed function of time; the resulting waveform is used as a time base to be applied to the deflection system of an electron-beam device, such as a cathode-ray tube. Also known as time-base generator; timing-axis oscillator. **2.** A test instrument that generates a radio-frequency voltage whose frequency varies back and forth through a given frequency range at a rapid constant rate; used to produce an input signal for circuits or devices whose frequency response is to be observed on an oscilloscope.

sweeping [NAV] **1.** The process of towing a line or object below the surface in order to determine whether an area is free from isolated submerged hazards to vessels and to determine the position of any such hazards that exist, or to determine the least depth of an area. **2.** The process of clearing an area or channel of mines or other hazards to navigation.

sweeping receivers [ELECTR] Automatically and continuously tuned receivers designed to stop and lock on when a signal is found, or to continually plot band occupancy.

sweep jamming [ELECTR] Jamming an enemy radarscope by sweeping the region of radar-beam coverage with electromagnetic waves having the same frequency as those received by the radarscope.

sweep oscillator *See* sweep generator.

sweep-out pattern [PETRO ENG] The areal pattern of water advance in a petroleum reservoir, as for a waterflood operation.

sweep rate [ELECTR] The number of times a radar radiation pattern rotates during 1 minute; sometimes expressed as the duration of one complete rotation in seconds.

sweepstakes route [ECOL] A means that allows chance migration across a sea on natural rafts, so that oceanic islands can be colonized.

sweep test [ELECTR] Test given coaxial cable with an oscilloscope to check attenuation.

sweep-through jammer [ELECTR] A jamming transmitter which is swept through a radio-frequency band in short steps to jam each frequency briefly, producing a sound like that of an aircraft engine.

sweep voltage [ELECTR] Periodically varying voltage applied to the deflection plates of a cathode-ray tube to give a beam displacement that is a function of time, frequency, or other data base.

sweet basil oil *See* basil oil.

sweet bay oil *See* volatile laurel oil.

sweet corrosion [PETRO ENG] Corrosion occurring in oil or gas wells where there is no iron-sulfide corrosion product, and there is no odor of hydrogen sulfide in the produced reservoir fluid.

sweet crudes [MATER] Crude petroleum oil containing little sulfur.

sweetening [CHEM ENG] Improvement of a petroleum-product color and odor by converting sulfur compounds into disulfides with sodium plumbite (doctor treating), or by removing them by contacting the petroleum stream with alkalies or other sweetening agents.

sweet gas [MATER] A petroleum natural gas containing no corrosive components, such as hydrogen sulfide and mercaptans.

sweetgum [BOT] *Liquidambar styraciflua*. A deciduous tree of the order Hamamelidales found in the southeastern United States, and distinguished by its five-lobed, or star-shaped, leaves, and by the corky ridges developed on the twigs.

sweet oil *See* olive oil.

sweet orange oil [MATER] A sweet, yellow, mild essential oil expressed from the peel of an orange, *Citrus aurantium;* soluble in glacial acetic acid, somewhat in alcohol; used in flavors, perfumes, and medicine. Also known as orange oil.

sweet potato [BOT] *Ipomoea batatas*. A tropical vine having variously shaped leaves, purplish flowers, and a sweet, fleshy, edible tuberous root.

sweet roast *See* dead roast.

sweet spirits of niter *See* ethyl nitrite.

swell [GEOL] **1.** The volumetric increase of soils on being removed from their compacted beds due to an increase in void ratio. **2.** A local enlargement or thickening in a vein or ore deposit. **3.** A low dome or quaquaversal anticline of considerable areal extent; long and generally symmetrical waves contribute to the mixing processes in the surface layer and thus to its sound transmission properties. **4.** Gently rising ground, or a rounded hill above the surrounding ground or ocean floor. [MIN ENG] *See* horseback. [OCEANOGR] Ocean waves which have traveled away from their generating area; these waves are of relatively long length and period, and regular in character.

swell-and-swale topography [GEOGR] A low-relief, undulating landscape characterized by gentle slopes and rounded hills interspersed with shallow depressions.

swell diameter [AERO ENG] In a body of revolution having an ogival portion, such as a projectile, the swell diameter is in the diameter of the maximum transverse section of the geometrical ogive.

swell direction [OCEANOGR] The direction from which swell is moving.

swelled ground [GEOL] A soil or rock that expands when wetted.

swell forecast [OCEANOGR] Prediction of the frequency and height of swell waves in a remote area from the characteristics of the waves at their origin.

swelling clay [GEOL] Clay that can absorb large amounts of water, such as bentonite.

swep [ORG CHEM] $C_8H_7Cl_2NO_2$ A white, crystalline compound with a melting point of 112–114°C; insoluble in water; used as a pre- and postemergence herbicide for rice, carrots, potatoes, and cotton. Also known as methyl-*N*-(3,4-dichlorophenyl)carbamate.

sweptback wing [AERO ENG] An airplane wing on which both the leading and trailing edges have sweepback, the trailing edge forming an acute angle with the longitudinal axis of the airplane aft of the root. Also known as swept wing.

swept wing *See* sweptback wing.

swim bladder [VERT ZOO] A gas-filled cavity found in the body cavities of most bony fishes; has various functions in different fishes, acting as a float, a lung, a hearing aid, and a sound-producing organ.

swimmeret [INV ZOO] Any of a series of paired biramous

appendages under the abdomen of many crustaceans, used for swimming and egg carrying.

swimmer's conjunctivitis *See* inclusion conjunctivitis.

swimmer's itch *See* schistosome dermatitis.

swimming bird [VERT ZOO] Any bird belonging to the orders Charadriiformes and Pelacaniformes.

swimming pool conjunctivitis *See* inclusion conjunctivitis.

swimming-pool reactor *See* pool reactor.

swine [AGR] A domesticated member of the family Suidae. [VERT ZOO] Any of various species comprising the Suidae.

swine erysipelas [VET MED] An infectious bacterial disease of swine caused by *Erysipelothrix insidiosa* in which involvement of the skin is predominant.

swine influenza [VET MED] A disease of swine caused by the associated effects of a filterable virus and *Hemophilus suis*, characterized by inflammation of the upper respiratory tract.

swine plague [VET MED] Hemorrhagic septicemia of swine caused by *Pasteurella suiseptica*, characterized by pleuropneumonia.

swine pox [VET MED] A benign infection of young hogs characterized by pox lesions on the body and inner surfaces of the legs.

swinestone [PETR] Limestone containing black bituminous matter, which gives off an objectionable odor when rubbed.

swing [ELEC] Variation in frequency or amplitude of an electrical quantity. [ENG] **1.** The arc or curve described by the point of a pick or mandril when being used. **2.** Rotation of the superstructure of a power shovel on the vertical shaft in the mounting. **3.** To rotate a revolving shovel on its base.

swing-around trajectory [AERO ENG] A planetary round-trip trajectory which requires minimal propulsion at the destination planet, but instead uses the planet's gravitational field to effect the bulk of the necessary orbit change to return to earth.

swing bridge [CIV ENG] A movable bridge that pivots in a horizontal plane about a center pier.

swing cut *See* slipping cut.

swinger *See* revolver.

swing-frame grinder [MECH ENG] A grinding machine hanging by a chain so that it may swing in all directions for surface grinding heavy work.

swing-hammer crusher [MIN ENG] A rotary crusher with rotating hammers that break up ore by impelling it against breaker plates.

swinging [NAV] The process of placing a craft on various headings and comparing magnetic compass readings with the corresponding magnetic directions to determine deviation; this usually follows compass adjustment or compass compensation, and is done to obtain information for making a deviation table, deviation card, or compass correction card.

swinging a claim [MIN ENG] The adjustment of the boundaries of a mining claim to more nearly conform to the strike of the vein.

swinging buoy [NAV] A buoy placed at a favorable location to assist a vessel to adjust its compass or swing ship; the bow of the vessel is made fast to one such buoy, and the vessel is swung by means of lines to a tug or to additional buoys.

swinging choke [ELEC] An iron-core choke having a core that can be operated almost at magnetic saturation; the inductance is then a maximum for small currents, and swings to a lower value as current increases. Also known as swinging reactor.

swinging compass [NAV] An accurate portable magnetic compass used to indicate magnetic headings during aircraft magnetic compass calibration.

swinging load [ENG] The load in pressure equipment which changes at frequent intervals.

swinging reactor *See* swinging choke.

swinging ship [NAV] The process of determining the deviation of the ship's magnetic compass by placing a vessel or an aircraft on various headings and comparing magnetic compass readings with the corresponding but previously determined magnetic directions; this procedure usually follows compass adjustment or compass compensation, and is done to obtain information for making a deviation table; usually called swinging when referred to an aircraft compass. Also known as compass calibration.

swinging the arc [NAV] The process of rotating a sextant about the line of sight to the horizon to determine the foot of the vertical circle through a body being observed. Also known as rocking the sextant.

swinging traverse [ORD] Type of fire used against dense troop formations moving toward a machine gun position or rapidly moving targets; the traversing clamp is loosened so that a gunner makes rapid changes by exerting pressure against the pistol-grip.

swing joint [DES ENG] A pipe joint in which the parts may be rotated relative to each other.

swing pipe [ENG] A discharge pipe whose intake end can be raised or lowered on a tank.

swing shift [IND ENG] Working arrangement in a three-shift, continuously run plant with working hours changed at regular intervals; during a swing shift the morning shift becomes the afternoon shift, while the afternoon shift becomes the morning shift of the next day, with only an 8-hour break on the first day of change.

swirl error [NAV] The additional error in the reading of a magnetic compass during a turn due to friction in the compass liquid.

swirl flowmeter *See* vortex precession flowmeter.

Swiss pattern file [DES ENG] A type of fine file used for precision filing of jewelry, instrument parts, and dies.

switch [COMPUT SCI] **1.** A hardware or programmed device for indicating that one of several alternative states or conditions have been chosen, or to interchange or exchange two data items. **2.** A symbol used to indicate a branch point, or a set of instructions to condition a branch. [CIV ENG] **1.** A device for enabling a railway car to pass from one track to another. **2.** The junction of two tracks. [ELEC] A manual or mechanically actuated device for making, breaking, or changing the connections in an electric circuit. Also known as electric switch. Symbolized SW.

switch angle [CIV ENG] The angle between the switch and stock rails of a railroad track, measured at the point of juncture between the gage lines.

switchback [MIN ENG] A zigzag arrangement of railroad tracks by means of which a train can reach a higher or lower level by a succession of easy grades.

switchblade knife [DES ENG] A knife in which the blade is restrained by a spring and swings open when released by a pushbutton.

switchboard [COMMUN] A manually operated apparatus at a telephone exchange, on which the various circuits from subscribers and other exchanges are terminated to enable operators to establish communications either between two subscribers on the same exchange, or between subscribers on different exchanges. Also known as telephone switchboard. [ELEC] A single large panel or assembly of panels on which are mounted switches, circuit breakers, meters, fuses, and terminals essential to the operation of electric equipment. Also known as electric switchboard.

switched capacitor [ELECTR] An integrated circuit element, consisting of a capacitor with two metal oxide semiconductor (MOS) switches, whose function is approximately equivalent to that of a resistor.

switched-message network [COMPUT SCI] A data transmission system in which a user can communicate with any other user of the network.

switch function [ELECTR] A circuit having a fixed number of inputs and outputs designed such that the output information is a function of the input information, each expressed in a certain code or signal configuration or pattern.

switchgear [ELEC] The aggregate of switching devices for a power or transforming station, or for electric motor control.

switch hook [ELEC] A switch on a telephone set that operates when the receiver is placed on the hook or removed from it.

switching [ELEC] Making, breaking, or changing the connections in an electrical circuit.

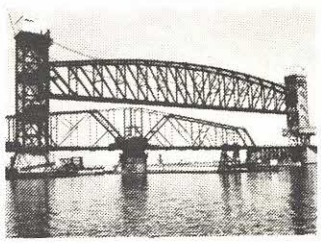
switching center [COMMUN] The equipment in a relay station for automatically or semiautomatically relaying communications traffic.

switching circuit [ELEC] A constituent electric circuit of a switching or digital processing system which receives, stores, or manipulates information in coded form to accomplish the specified objectives of the system.

switching control [COMMUN] Installation in a wire system where telephone or teletypewriter switchboards are installed to interconnect circuits.

switching device [ENG] An electrical or mechanical device

SWING BRIDGE



The vertical-lift span and the swing bridge across Arthur Kill, between Staten Island and New Jersey. The vertical-lift replaced the swing, in use since 1888. *(Baltimore and Ohio Railroad Co.)*

SYCAMORE

Terminal bud, leaf with seed capsule, and twig of American sycamore (*Platanus occidentalis*).

SYLLIDAE

Exogone, of the Syllidae (Exogoninae), dorsal view showing cirri and ova attached to body segments.

or mechanism, which can bring another device or circuit into an operating or nonoperating state. Also known as switching mechanism.

switching diode [ELECTR] A crystal diode that provides essentially the same function as a switch; below a specified applied voltage it has high resistance corresponding to an open switch, while above that voltage it suddenly changes to the low resistance of a closed switch.

switching gate [ELECTR] An electronic circuit in which an output having constant amplitude is registered if a particular combination of input signals exists; examples are the OR, AND, NOT, and INHIBIT circuits. Also known as logical gate.

switching key *See* key.

switching mechanism *See* switching device.

switching pad [ELECTR] Transmission-loss pad automatically cut in and out of a toll circuit for different desired operating conditions.

switching reactor [ELECTROMAG] A saturable-core reactor that has several input control windings and one or more output windings that essentially duplicate the functions of a relay.

switching substation [ELEC] An electric power substation whose equipment is mainly for connections and interconnections, and does not include transformers.

switching surface [CONT SYS] In feedback control systems employing bang-bang control laws, the surface in state space which separates a region of maximum control effort from one of minimum control effort.

switching system [COMMUN] An assembly of switching and control devices provided so that any station in a communications system may be connected as desired with any other station.

switching theory [ELECTR] The theory of circuits made up of ideal digital devices; included are the theory of circuits and networks for telephone switching, digital computing, digital control, and data processing.

switching-through relay [ELEC] Control relay of a line-finder selector, connector, or other stepping switch, which extends the loop of a calling telephone through to the succeeding switch in a switch train.

switching time [ELECTR] **1.** The time interval between the reference time and the last instant at which the instantaneous voltage response of a magnetic cell reaches a stated fraction of its peak value. **2.** The time interval between the reference time and the first instant at which the instantaneous integrated voltage response of a magnetic cell reaches a stated fraction of its peak value.

switching transistor [ELECTR] A transistor designed for on/off switching operation.

switching trunk [ELEC] Trunk from a long-distance office to a local exchange office used for completing a long-distance call.

switching tube [ELECTR] A gas tube used for switching high-power radio-frequency energy in the antenna circuits of radar and other pulsed radio-frequency systems; examples are ATR tube; pre-TR tube; TR tube.

switch jack [ELEC] Any of the devices that provide terminals for the control circuits of the switch.

switchman [MIN ENG] A laborer who throws switches of mine tracks in a coal mine.

switch over–travel [ELEC] That movement of a switch-operating lever which takes place after the switch has been actuated either to close or open its contacts.

switch plate [MIN ENG] An iron plate on tramroads in mines to change the direction of movement.

switch pretravel [ELEC] That movement of a switch-operating level that takes place before the switch is actuated either to close or to open its contacts.

switch register [COMPUT SCI] A manual switch on the control panel by means of which a bit may be entered in a processor register.

switch room [COMMUN] Part of a central office building that houses switching mechanisms and associated apparatus.

switch train [ELEC] A series of switches in tandem.

swivel [DES ENG] A part that oscillates freely on a headed bolt or pin. [PETRO ENG] A short piece of casing having one end belled over a heavy ring, and having a large hole through both walls, the other end being threaded.

swivel block [DES ENG] A block with a swivel attached to its hook or shackle permitting it to revolve.

swivel coupling [MECH ENG] A coupling that gives complete rotary freedom to a deflecting wedge-setting assembly.

swivel gun [ORD] A gun mounted on a pedestal so that it can be turned from side to side or up and down.

swivel head [MECH ENG] The assembly of a spindle, chuck, feed nut, and feed gears on a diamond-drill machine that surrounds, rotates, and advances the drill rods and drilling stem; on a hydraulic-feed drill the feed gears are replaced by a hydraulically actuated piston assembly.

swivel hook [DES ENG] A hook with a swivel connection to its base or eye.

swivel joint [DES ENG] A joint with a packed swivel that allows one part to move relative to the other.

swivel neck *See* water swivel.

swivel pin *See* kingpin.

Swordfish *See* Dorado.

SWS *See* deep sleep.

SXAPS *See* soft x-ray appearance potential spectroscopy.

syblet [COMMUN] One of the elements of speech; others are words, syllables, and phonemes.

sycamore [BOT] **1.** Any of several species of deciduous trees of the genus *Platanus*, especially *P. occidentalis* of eastern and central North America, distinguished by simple, large, three-to five-lobed leaves and spherical fruit heads. **2.** The Eurasian maple (*Acer pseudoplatanus*).

Sycettida [INV ZOO] An order of calcareous sponges of the subclass Calcaronea in which choanocytes occur in flagellated chambers, and the spongocoel is not lined with these cells.

Sycettidae [INV ZOO] A family of sponges in the order Sycettida.

Sycidales [PALEON] A group of fossil aquatic plants assigned to the Charophyta, characterized by vertically ribbed gyrogonites.

sycon [INV ZOO] A canal system in sponges in which the flagellated layer is confined to outpocketings of the paragaster that are indirectly connected to the incurrent canals.

syconium [BOT] A fleshy fruit, as a fig, with an enlarged pulpy receptacle internally lined with minute flowers.

sycosis [MED] An inflammatory disease affecting the hair follicles, particularly of the beard, and characterized by papules, pustules, and tubercles, perforated by hairs, together with infiltration of the skin and crusting.

Sydenham's chorea *See* St. Vitus dance.

syenite [PETR] A visibly crystalline plutonic rock with granular texture composed largely of alkali feldspar, with subordinate plagioclose and mafic minerals; the intrusive equivalent of trachyte.

syenodiorite [PETR] Plutonic rock consisting of acid plagioclase, orthoclase, and a ferromagnesian mineral.

syenogabbro [PETR] Plutonic rock consisting of basic plagioclase, orthoclase, and a dark mineral such as augite.

syllabic compandor [ELECTR] A compandor in which the effective gain variations are made at speeds allowing response to the syllables of speech but not to individual cycles of the signal wave.

Syllidae [INV ZOO] A large family of polychaete annelids belonging to the Errantia; identified by their long, linear, translucent bodies with articulated cirri; size ranges from minute *Exogone* to *Trypanosyllis*, which may be 100 millimeters long.

Syllinae [INV ZOO] A subfamily of polychaete annelids of the family Syllidae.

syllogism [MATH] A statement together with a conclusion; this usually has the form "if p then q."

Sylonidae [INV ZOO] A family of parasitic crustaceans in the order Rhizocephala.

Sylopidae [INV ZOO] A family of coleopteran insects in the superfamily Meloidea in which the elytra in males are reduced to small leathery flaps while the hindwings are large and fan-shaped.

sylvanite [MINERAL] $(Au,Ag)Te_2$ A steel-gray, silver-white, or brass-yellow mineral that crystallizes in the monoclinic system and often occurs in implanted crystals. Also known as goldschmidtite; graphic tellurium; white tellurium; yellow tellurium.

sylvatic plague [VET MED] Plague occurring in rodents; may be transmitted to man. Also known as endemic rural plague.

sylvester [MIN ENG] A hand-operated device for withdrawing supports from the waste or old workings in a mine by means of a long chain which allows the device to be positioned at a safe distance from the support to be extracted.

Sylvester's theorem [MATH] If A is a matrix with distinct

eigenvalues $\lambda_1,\ldots,\lambda_n$, then any analytic function $f(A)$ can be realized from the λ_i, $f(\lambda_i)$, and the matrices $A - \lambda I$, where I is the identity matrix.

Sylvicolidae [INV ZOO] A family of orthorrhaphous dipteran insects in the series Nematocera.

sylvine *See* sylvite.

sylvite [MINERAL] KCl A salty-tasting, white or colorless isometric mineral, occurring in cubes or crystalline masses or as a saline residue; the chief ore of potassium. Also known as leopoldite; sylvine.

sym- [ORG CHEM] A chemical prefix; denotes structure of a compound in which substituents are symmetrical with respect to a functional group or to the carbon skeleton.

symballophone [ENG] A double stethoscope for the comparison and lateralization of sounds; permits the use of the acute function of the two ears to compare intensity and varying quality of sounds arising in the body or mechanical devices.

symbiont [ECOL] A member of a symbiotic pair.

symbiosis [ECOL] **1.** An interrelationship between two different species. **2.** An interrelationship between two different organisms in which the effects of that relationship is expressed as being harmful or beneficial. Also known as consortism.

Symbiotes [MICROBIO] A genus of the tribe Wolbachieae; pleomorphic organisms; intracellular symbionts, generally found in special paired organs (mycetomes) in bedbugs.

symbiotic objects [ASTRON] Stars whose spectra have characteristics of two disparate spectral classes.

symblepharon [MED] Adhesion of the eyelids to the eyeball.

symbol [CHEM] Letter or combination of letters and numbers that represent various conditions or properties of an element, for example, a normal atom, O (oxygen); with its atomic weight, ^{16}O; its atomic number, $_8{}^{16}O$; as a molecule, O_2; as an ion, O^{2+}; in excited state, O*; or as an isotope, ^{18}O. [SCI TECH] **1.** A design used on a diagram to represent a component or to identify specific characteristics, quantities, or objects. **2.** A sign letter or abbreviation used on a diagram or in an equation to represent a quantity or to identify an object.

symbolic address [COMPUT SCI] In coding, a programmer-defined symbol that represents the location of a particular datum item, instruction, or routine. Also known as symbolic number.

symbolic age of neutrons *See* Fermi age.

symbolic algebraic manipulation language [COMPUT SCI] An algebraic manipulation language which admits the most general species of mathematical expressions, usually representing them as general tree structures, but which lacks certain special algorithms found in seminumerical and ghost languages.

symbolic assembly language listing [COMPUT SCI] A list that may be produced by a computer during the compilation of a program showing the source language statements together with the corresponding machine language instructions generated by them.

symbolic assembly system [COMPUT SCI] A system for forming programs that can be run on a computer, consisting of an assembly language and an assembler.

symbolic coding [COMPUT SCI] Instruction written in an assembly language, using symbols for operations and addresses. Also known as symbolic programming.

symbolic debugging [COMPUT SCI] A method of correcting known errors in a computer program written in a source language, in which certain statements are compiled together with the program.

symbolic deck [COMPUT SCI] Deck of cards punched out in programmer coding language as opposed to binary language.

symbolic language [COMPUT SCI] A language which expresses addresses and operation codes of instructions in symbols convenient to humans rather than in machine language.

symbolic logic [MATH] The formal study of symbolism and its use in the foundations of mathematical logic.

symbolic number *See* symbolic address.

symbolic programming *See* symbolic coding.

symbol input [COMPUT SCI] Includes all contextual symbols that may appear in a source text.

symbol sequence [COMPUT SCI] A sequence of contextual symbols not interrupted by space.

symbol table [COMPUT SCI] A mapping for a set of symbols to another set of symbols or numbers.

symclosene *See* trichloroisocyanuric acid.

symmetrical achromat lens [OPTICS] An older type of camera lens in which two positive achromatic meniscus lenses are symmetrically arranged about the stop.

symmetrical alternating quantity [PHYS] Alternating quantity of which all values separated by a half period have the same magnitude but opposite sign.

symmetrical avalanche rectifier [ELECTR] Avalanche rectifier that can be triggered in either direction, after which it has a low impedance in the triggered direction.

symmetrical band-pass filter [ELECTR] A band-pass filter whose attenuation as a function of frequency is symmetrical about a frequency at the center of the pass band.

symmetrical band-reject filter [ELECTR] A band-rejection filter whose attenuation as a function of frequency is symmetrical about a frequency at the center of the rejection band.

symmetrical clipper [ELECTR] A clipper in which the upper and lower limits on the amplitude of the output signal are positive and negative values of equal magnitude.

symmetrical deflection [ELECTR] A type of electrostatic deflection in which voltages that are equal in magnitude and opposite in sign are applied to the two deflector plates.

symmetrical fold [GEOL] A fold whose limbs have approximately the same angle of dip relative to the axial surface. Also known as normal fold.

symmetrical H attenuator [ELECTR] An H attenuator in which the impedance near the input terminals equals the corresponding impedance near the output terminals.

symmetrical inductive diaphragm [ELECTROMAG] A waveguide diaphragm which consists of two plates that leave a space at the center of the waveguide, and which introduces an inductance in the waveguide.

symmetrical lens [OPTICS] A lens system consisting of two parts, each of which is the mirror image of the other.

symmetrical O attenuator [ELECTR] An O attenuator in which the impedance near the input terminals equals the corresponding impedance near the output terminals.

symmetrical pi attenuator [ELECTR] A pi attenuator in which the impedance near the input terminals equals the corresponding impedance near the output terminals.

symmetrical T attenuator [ELECTR] A T attenuator in which the impedance near the input terminals equals the corresponding impedance near the output terminals.

symmetrical transducer [ELECTR] A transducer is symmetrical with respect to a specified pair of terminations when the interchange of that pair of terminations will not affect the transmission.

symmetric difference [MATH] The symmetric difference of two sets consists of all points in one or the other of the sets but not in both.

symmetric function [MATH] A function whose value is unchanged for any permutation of its variables.

symmetric group [MATH] The group consisting of all permutations of a finite set of symbols.

symmetric list [COMPUT SCI] A list with sequencing pointers to previous as well as subsequent items.

symmetric matrix [MATH] A matrix which equals its transpose.

symmetric relation [MATH] The property of a relation on a set that requires y to be related to x whenever x is related to y.

symmetric ripple mark [GEOL] A ripple mark whose cross-section profile is symmetric.

symmetric space [MATH] A differentiable manifold which has a differentiable multiplication operation that behaves similarly to the multiplication of a complex number and its conjugate.

symmetric top molecule [PHYS CHEM] A nonlinear molecule which has one and only one axis of threefold or higher symmetry.

Symmetrodonta [PALEON] An order of the extinct mammalian infraclass Pantotheria distinguished by the central high cusp, flanked by two smaller cusps and several low minor cusps, on the upper and lower molars.

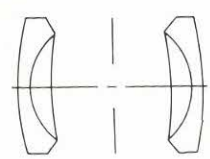
symmetry [BIOL] The disposition of organs and other constituent parts of the body of living organisms with respect to imaginary axes. [MATH] A geometric object G has this property relative to some configuration S of its points if S determines two pieces of G which can be reflected onto each other through S. [PHYS] *See* invariance.

symmetry axis *See* axis of symmetry; rotation axis.

symmetry axis of rotary inversion *See* rotoinversion axis.

symmetry axis of rotoinversion *See* rotoinversion axis.

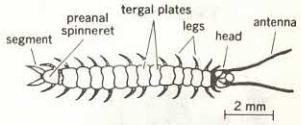
SYMMETRICAL ACHROMAT LENS



Geometry of symmetrical achromat lens.

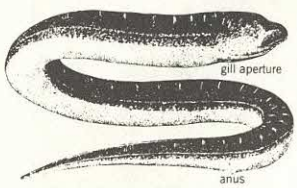
symmetry center *See* center of symmetry.
symmetry class *See* crystal class.
symmetry element [CRYSTAL] **1.** Some combination of rotations and reflections and translations which brings a crystal into a position that cannot be distinguished from its original position. Also known as symmetry operation; symmetry transformation. **2.** The rotational axes, mirror planes, and center of symmetry characteristic of a given crystal.
symmetry function *See* symmetry transformation.
symmetry group [MATH] A group composed of all rigid motions or similarity transformations of some geometric object onto itself.
symmetry law *See* invariance principle.
symmetry number [PHYS CHEM] The number of indistinguishable orientations that a molecule can exhibit by being rotated around symmetry axes.
symmetry operation *See* symmetry element.
symmetry plane *See* plane of mirror symmetry.
symmetry principle [MATH] The centroid of a geometrical figure (line, area, or volume) is at a point on a line or plane of symmetry of the figure. [PHYS] *See* invariance principle.
symmetry transformation [CRYSTAL] *See* symmetry element. [MATH] A rigid motion sending a geometric object onto itself; examples are rotations and, for the case of a polygon, permutations of the vertices. Also known as symmetry function.
symmict [GEOL] Referring to a sedimentation unit that is structureless and in which coarse- and fine-grained particles are mixed more extensively in the lower part.
symmictite [PETR] An eruptive breccia that is homogenized and is made up of a mixture of country rock and intrusive rock.
symmicton *See* diamicton.
symon fault *See* horseback.
Symon's cone crusher [MIN ENG] A modified gyratory crusher used in secondary ore crushing that consists of a downward-flaring bowl within which is gyrated a conical crushing head; the main shaft is gyrated by means of a long eccentric which is driven by bevel gears.
Symon's disk crusher [MIN ENG] A mill in which the crushing is done between two cup-shaped plates that revolve on shafts set at a small angle to each other.
sympathetic detonation [ENG] Explosion caused by the transmission of a detonation wave through any medium from another explosion.
sympathetic nervous system [ANAT] The portion of the autonomic nervous system, innervating smooth muscle and glands of the body, which upon stimulation produces a functional state of preparation for flight or combat.
sympathetic ophthalmia [MED] A granulomatous inflammation of the uveal tract following ocular injury or intraocular surgery.
sympathetic vibration [PHYS] The driving of a mechanical or acoustical system at its resonant frequency by energy from an adjacent system vibrating at the same frequency.
sympathicotropic cell [HISTOL] Any of various cells possessing special affinity for the sympathetic nervous system.
sympathochromaffin cell [HISTOL] One of the precursors of sympathetic and medullary cells in the adrenal medulla.
sympatholitic [PHARM] Of or pertaining to an effect antagonistic to that of the sympathetic nervous system.
sympathomimetic [PHARM] Having the ability to produce physiologic changes similar to those caused by action of the sympathetic nervous system.
sympatric [ECOL] Of a species, occupying the same range as another species but maintaining identity by not interbreeding.
sympetalous *See* gamopetalous.
symphile [ECOL] An organism, usually a beetle, living as a guest in the nest of a social insect, such as an ant, where it is reared and bred in exchange for its exudates.
Symphyla [INV ZOO] A class of the Myriapoda comprising tiny, pale, centipedelike creatures which inhabit humus or soil.
symphysis [ANAT] An immovable articulation of bones connected by fibrocartilaginous pads.
symphysis pubis *See* pubic symphysis.
Symphyta [INV ZOO] A suborder of the Hymenoptera including the sawflies and horntails characterized by a broad base attaching the abdomen to the thorax.
symplectite *See* symplektite.
symplektite [MINERAL] An intimate intergrowth of two different minerals. Also spelled symplectite.

SYMPHYLA



A symphylan, *Scutigerella immaculata. (From R. E. Snodgrass, A Textbook of Arthropod Anatomy, copyright 1952 by Cornell University Press; used by permission)*

SYNBRANCHIFORMES



Rice eel *(Monopterus albus)*; length to 35 inches (89 centimeters). *(After M. Weber and L. F. de Beaufort, The Fishes of the Indo-Australian Archipelago, vol. 3, 1916)*

symplesite [MINERAL] $Fe_2(AsO_4)_3 \cdot 8H_2O$ A blue to bluish-green triclinic mineral composed of hydrous iron arsenate.
sympodium [BOT] A branching system in trees in which the main axis is comprised of successive secondary branches, each representing the dominant fork of a dichotomy.
symptom [MED] A phenomenon of physical or mental disorder or disturbance which leads to complaints on the part of the patient.
symptomatology [MED] **1.** The science of symptoms. **2.** In common usage, the symptoms of disease taken together as a whole.
synadelphite [MINERAL] $(Mn,Mg,Ca,Pb)(AsO_4)(OH)_5$ A black mineral composed of basic arsenate of manganese, often with magnesium, calcium, lead, or other metals.
Synallactidae [INV ZOO] A family of echinoderms of the order Aspidochirotida comprising mainly deep-sea forms which lack tentacle ampullae.
synandrous [BOT] Having several united stamens.
synangium [BOT] A compound sorus made up of united sporangia. [VERT ZOO] In lower vertebrates, a peripheral arterial trunk from which branches arise.
synantectic [MINERAL] Refers to a mineral that was formed by the reaction of two other minerals.
synantexis [GEOL] Deuteric alteration.
Synanthae [BOT] An equivalent name for Cyclanthales.
Synanthales [BOT] An equivalent name for Cyclanthales.
synapse [ANAT] A site where the axon of one neuron comes into contact with and influences the dendrites of another neuron or a cell body.
synapsis [CYTOL] Pairing of homologous chromosomes during the zygotene stage of meiosis.
synaptic transmission [PHYSIO] The mechanisms by which a presynaptic neuron influences the activity of an anatomically adjacent postsynaptic neuron.
synapticulum [INV ZOO] A conical or cylindrical supporting process, as those extending between septa in some corals, or connecting gill bars in *Branchiostoma*.
Synaptidae [INV ZOO] A family of large sea cucumbers of the order Apodida lacking a respiratory tree and having a reduced water-vascular system.
synaptinemal complex [CYTOL] Ribbonlike structures that extend the length of synapsing chromosomes and are believed to function in exchange pairing.
synarthrosis [ANAT] An articulation in which the connecting material (fibrous connective tissue) is continuous, immovably binding the bones.
Synbranchiformes [VERT ZOO] An order of eellike actinopterygian fishes that, unlike true eels, have the premaxillae present as distinct bones.
Synbranchii [VERT ZOO] The equivalent name for Synbranchiformes.
sync *See* synchronization.
Syncarida [INV ZOO] A superorder of crustaceans of the subclass Melacostraca lacking a carapace and oostegites and having exopodites on all thoracic limbs.
syncarp [BOT] A compound fleshy fruit.
syncarpous [BOT] Descriptive of a gynoecium having the carpels united in a compound ovary.
sync generator *See* synchronizing generator.
synchisite *See* synchysite.
synchondrosis [ANAT] A type of synarthrosis in which the bone surfaces are connected by cartilage.
synchorology [ECOL] A study which involves the distribution ranges of plant communities, phytosociological zones, vegetation and geographical complexes, dissemination spectra, and current plant migration patterns.
synchro [ELEC] Any of several devices used for transmitting and receiving angular position or angular motion over wires, such as a synchro transmitter or synchro receiver. Also known as mag-slip (British usage); self-synchronous device; self-synchronous repeater; selsyn.
synchro- [SCI TECH] Occurring at the same time or made to occur at the same time.
synchro control transformer [ELEC] A transformer having its secondary winding on a rotor; when its three input leads are excited by angle-defining voltages, the two output leads deliver an alternating-current voltage that is proportional to the sine of the difference between the electrical input angle and the mechanical rotor angle.

synchro control transmitter [ELEC] A high-accuracy synchro transmitter, having high-impedance windings.

synchrocyclotron [NUCLEO] A circular particle accelerator for accelerating protons, deuterons, or alpha particles, in which the frequency of the accelerating voltage is modulated to maintain synchronism with the frequency of the particles which spiral outward and attain energies at which the relativistic mass increase becomes significant. Also known as frequency-modulated cyclotron; synchrophasotron.

synchro differential motor [ELEC] Motor which is electrically similar to the synchro differential generator except that a damping device is added to prevent oscillations; both its rotor and stator are connected to synchro generators, and its function is to indicate the sum or difference between the two signals transmitted by the generators.

synchro differential receiver [ELEC] A synchro receiver that subtracts one electrical angle from another and delivers the difference as a mechanical angle. Also known as differential synchro.

synchro differential transmitter [ELEC] A synchro transmitter that adds a mechanical angle to an electrical angle and delivers the sum as an electrical angle. Also known as differential synchro.

synchro generator *See* synchro transmitter.

synchromesh [MECH ENG] An automobile transmission device that minimizes clashing; acts as a friction clutch, bringing gears approximately to correct speed just before meshing.

synchro motor *See* synchro receiver.

synchronism [ELEC] Of a synchronous motor, the condition under which the motor runs at a speed which is directly related to the frequency of the power applied to the motor and is not dependent upon variables. [PHYS] Condition of two periodic quantities which have the same frequency, and whose phase difference is either constant or varies around a constant average value.

synchronization [ENG] The maintenance of one operation in step with another, as in keeping the electron beam of a television picture tube in step with the electron beam of the television camera tube at the transmitter. Also known as sync.

synchronization indicator [ENG] An indicator that presents visually the relationship between two varying quantities or moving objects.

synchronized blocking oscillator [ELECTR] A blocking oscillator which is synchronized with pulses occurring at a rate slightly faster than its own natural frequency.

synchronized shifting [MECH ENG] Changing speed gears, with the gears being brought to the same speed before the change can be made.

synchronizer [COMPUT SCI] A computer storage device used to compensate for a difference in rate of flow of information or time of occurrence of events when transmitting information from one device to another. [ELECTR] The component of a radar set which generates the timing voltage for the complete set.

synchronizing generator [ELECTR] An electronic generator that supplies synchronizing pulses to television studio and transmitter equipment. Also known as sync generator; sync-signal generator.

synchronizing pulse [COMMUN] In pulse modulation, a pulse which is transmitted to synchronize the transmitter and the receiver; it is usually distinguished from signal-carrying pulses by some special characteristic.

synchronizing reactor [ELEC] Current-limiting reactor for connecting momentarily across the open contacts of a circuit-interrupting device for synchronizing purposes.

synchronizing relay [ELEC] Relay which functions when two alternating-current sources are in agreement within predetermined limits of phase angle and frequency.

synchronizing signal *See* sync signal.

synchronous [ENG] In step or in phase, as applied to two or more circuits, devices, or machines. [GEOL] Geological rock units or features formed at the same time.

synchronous bombing [ORD] Bombing done with certain bombsights, such as the Norden bombsight, in which the travel of the telescope, focused upon the target, is synchronized with the ground speed of the airplane, and the course flown is determined by manual adjustment of the bombsight, the two together determining the dropping angle and correcting for drift so that the release occurs at the right instant.

synchronous booster converter [ELEC] Synchronous converter having an alternating-current generator mounted on the same shaft and connected in series with it to adjust the voltage at the commutator of the converter.

synchronous capacitor [ELEC] A synchronous motor running without mechanical load and drawing a large leading current, like a capacitor; used to improve the power factor and voltage regulation of an alternating-current power system.

synchronous clamp circuit *See* keyed clamp circuit.

synchronous clock [HOROL] An electric clock driven by a synchronous motor, for operation from an alternating-current power system in which the frequency is accurately controlled.

synchronous communications [COMPUT SCI] The high-speed transmission and reception of long groups of characters at a time, requiring synchronization of the sending and receiving devices.

synchronous computer [COMPUT SCI] A digital computer designed to operate in sequential elementary steps, each step requiring a constant amount of time to complete, and being initiated by a timing pulse from a uniformly running clock.

synchronous converter [ELEC] A converter in which motor and generator windings are combined on one armature and excited by one magnetic field; normally used to change alternating to direct current. Also known as converter; electric converter.

synchronous data transmission [COMMUN] Data transmission in which a clock defines transmission times for data; since start and stop bits for each character are not needed, more of the transmission bandwidth is available for message bits.

synchronous demodulator *See* synchronous detector.

synchronous detector [ELECTR] **1.** A detector that inserts a missing carrier signal in exact synchronism with the original carrier at the transmitter; when the input to the detector consists of two suppressed-carrier signals in phase quadrature, as in the chrominance signal of a color television receiver, the phase of the reinserted carrier can be adjusted to recover either one of the signals. Also known as synchronous demodulator. **2.** *See* cross-correlator.

synchronous gate [ELECTR] A time gate in which the output intervals are synchronized with an incoming signal.

synchronous generator [ELEC] A machine that generates an alternating voltage when its armature or field is rotated by a motor, an engine, or other means. The output frequency is exactly proportional to the speed at which the generator is driven.

synchronous growth [MICROBIO] A population of bacteria in which all cells divide at approximately the same time.

synchronous inverter *See* dynamotor.

synchronous machine [ELEC] An alternating-current machine whose average speed is proportional to the frequency of the applied or generated voltage.

synchronous motor [ELEC] A synchronous machine that transforms alternating-current electric power into mechanical power, using field magnets excited with direct current.

synchronous orbit [AERO ENG] **1.** An orbit in which a satellite makes a limited number of equatorial crossing points which are then repeated in synchronism with some defined reference (usually earth or sun). **2.** Commonly, the equatorial, circular, 24-hour case in which the satellite appears to hover over a specific point of the earth.

synchronous phase modifier [ELEC] A synchronous motor that runs without mechanical load, and is provided with means for varying its power factor to simulate a capacitive or inductive reactor; used in voltage regulation of alternating-current power systems.

synchronous pluton [GEOL] Any pluton whose time of emplacement coincides with a major orogeny.

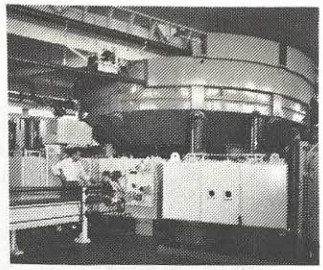
synchronous radar bombing [ORD] A kind of radar bombing in which special airborne radar equipment containing rate and steering mechanisms is used to control the direction of flight of the bombing aircraft, solve the bombing problem, and automatically drop bombs at the proper release point.

synchronous rectifier [ELECTR] A rectifier in which contacts are opened and closed at correct instants of time for rectification by a synchronous vibrator or by a commutator driven by a synchronous motor.

synchronous satellite *See* geostationary satellite.

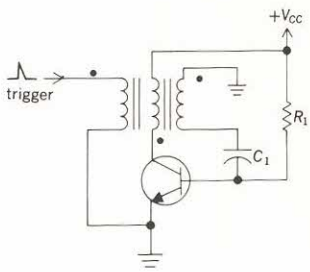
synchronous speed [ELECTROMAG] The speed of rotation of a magnetic field in a synchronous machine; in revolutions per second, it is equal to twice the frequency of the alternating current in hertz, divided by the number of poles in the machine.

SYNCHROCYCLOTRON



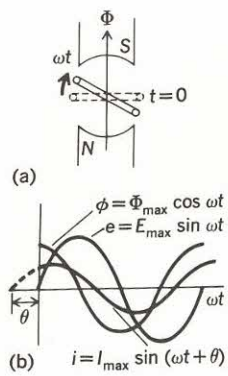
View of the vacuum tank and upper magnet coil of the 184-inch (4.67-meter) synchrocyclotron at the University of California. Pumps are in the foreground; target-handling equipment is at the lower left and the radio-frequency oscillator housing is at the right-hand edge. Note the magnet return yoke and the shielding at the top of the picture. *(University of California Lawrence Berkeley Laboratory)*

SYNCHRONIZED BLOCKING OSCILLATOR



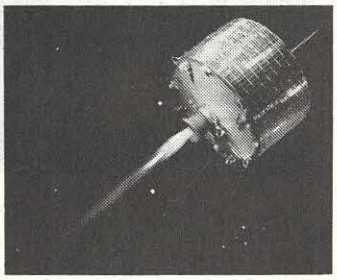
Circuit diagram of synchronized blocking oscillator. V_{CC} = collector supply voltage.

SYNCHRONOUS MACHINE



Single-phase, two-pole synchronous machine. *(a)* Schematic diagram. Φ is direction of flux. Coil is perpendicular to pole axis at time $t = 0$. ω = angular velocity of coil; ωt = angular displacement at time t. Angular displacement is proportional to ωt. *(b)* Graphs of flux linking coil ϕ, voltage induced in coil e, and current in coil i as functions of time. θ is phase angle.

SYNCOM



Syncom communications satellite. *(NASA)*

synchronous switch [ELECTR] A thyratron circuit used to control the operation of ignitrons in such applications as resistance welding.

synchronous system [COMMUN] A telecommunication system in which transmitting and receiving apparatus operate continuously at substantially the same rate, and correction devices are used, if necessary, to maintain them in a fixed relationship.

synchronous time-division multiplexing [COMMUN] A data transmission technique in which several users make use of a single channel by means of a system in which time slots are allotted on a fixed basis, usually in round-robin fashion. Abbreviated STDM.

synchronous timing [MET] Regulating the welding-transformer primary current in spot, seam, or projection welding so that the following conditions prevail: the first half-cycle is initiated at the proper time in relation to the voltage to ensure a balanced current wave, each succeeding half-cycle is essentially the same as the first, and the last half-cycle is of the opposite polarity to the first.

synchronous vibrator [ELECTROMAG] An electromagnetic vibrator that simultaneously converts a low direct voltage to a low alternating voltage and rectifies a high alternating voltage obtained from a power transformer to which the low alternating voltage is applied; in power packs, it eliminates the need for a rectifier tube.

synchronous working [COMPUT SCI] The mode of operation of a synchronous computer, in which the starting of each operation is clock-controlled.

synchrophasotron *See* synchrocyclotron.

synchro receiver [ELEC] A synchro that provides an angular position related to the applied angle-defining voltages; when two of its input leads are excited by an alternating-current voltage and the other three input leads are excited by the angle-defining voltages, the rotor rotates to the corresponding angular position; the torque of rotation is proportional to the sine of the difference between the mechanical and electrical angles. Also known as receiver synchro; selsyn motor; selsyn receiver; synchro motor.

synchro resolver *See* resolver.

synchroscope [ELECTR] A cathode-ray oscilloscope designed to show a short-duration pulse by using a fast sweep that is synchronized with the pulse signal to be observed. [ENG] An instrument for indicating whether two periodic quantities are synchronous; the indicator may be a rotating-pointer device or a cathode-ray oscilloscope providing a rotating pattern; the position of the rotating pointer is a measure of the instantaneous phase difference between the quantities.

synchro-shutter [ENG] A camera shutter with a circuit that flashes a light the instant the shutter opens.

synchro system [ELEC] An electric system for transmitting angular position or motion; in the simplest form it consists of a synchro transmitter connected by wires to a synchro receiver; more complex systems include synchro control transformers and synchro differential transmitters and receivers. Also known as selsyn system.

synchro transmitter [ELEC] A synchro that provides voltages related to the angular position of its rotor; when its two input leads are excited by an alternating-current voltage, the magnitudes and polarities of the voltages at the three output leads define the rotor position. Also known as selsyn generator; selsyn transmitter; synchro generator; transmitter; transmitter synchro.

synchrotron [NUCLEO] A device for accelerating electrons or protons in closed orbits in which the frequency of the accelerating voltage is varied (or held constant in the case of electrons) and the strength of the magnetic field is varied so as to keep the orbit radius constant.

synchrotron process [ELECTROMAG] The emission of electromagnetic radiation by relativistic electrons orbiting in a magnetic field.

synchrotron radiation [ELECTROMAG] Electromagnetic radiation generated by the acceleration of charged relativistic particles, usually electrons, in a magnetic field.

synchysite [MINERAL] $(Ce,La)Ca(Co_3)_2F$ A mineral composed of fluoride and carbonate of calcium, cerium, and lanthanum. Also spelled synchisite.

synclinal axis *See* trough surface.

synclinal valley [GEOL] Pertaining to a topographic valley whose sides coincide with a synclinal fold.

syncline [GEOL] A fold having stratigraphically younger rock material in its core; it is concave upward.

synclinorium [GEOL] A composite synclinal structure in a region of lesser folds.

Syncom [AERO ENG] One of a series of communication satellites placed in synchronous equatorial orbit; used for relaying television and radio communications over long distances.

syncope [MED] Swooning or fainting; temporary suspension of consciousness.

sync separator [ELECTR] A circuit that separates synchronizing pulses from the video signal in a television receiver.

sync signal [COMMUN] A signal transmitted after each line and field to synchronize the scanning process in a television or facsimile receiver with that of the receiver. Also known as synchronizing signal.

sync-signal generator *See* synchronizing generator.

syncytial trophoblast *See* syncytiotrophoblast.

syncytiotrophoblast [CYTOL] An irregular sheet or net of deeply staining cytoplasm in which nuclei are irregularly scattered. Also known as plasmoditrophoblast; syncytial trophoblast.

syncytium [CYTOL] A mass of multinucleated cytoplasm without division into separate cells.

syndactyly [ANAT] The condition characterized by union of two or more digits, as in certain birds and mammals; it is a familial anomaly in man.

syndesmosis [ANAT] An articulation in which the bones are joined by collagen fibers.

syndet *See* synthetic detergent.

syndiotactic polymer [ORG CHEM] A vinyl polymer in which the side chains alternate regularly above and below the plane of the backbone.

syndrome [MED] A group of signs and symptoms which together characterize a disease. Also known as complex.

syndynamics [ECOL] The study of the causes of and trends in successional changes within a plant community.

synecology [ECOL] The study of environmental relations of groups of organisms, such as communities.

Synentognathi [VERT ZOO] The equivalent name for Beloniformes.

syneresis [CHEM] Spontaneous separation of a liquid from a gel or colloidal suspension due to contraction of the gel.

synergic curve [AERO ENG] A curve plotted for the ascent of a rocket, space-air vehicle, or space vehicle, calculated to give optimum fuel economy and optimum velocity.

synergid [BOT] Either of two small cells lying in the embryo sac in seed plants adjacent to the egg cell toward the micropylar end.

synergism [ECOL] An ecological association in which the physiological processes or behavior of an individual are enhanced by the nearby presence of another organism. [MATER] An action where the total effect of two active components in a mixture is greater than the sum of their individual effects, for example, a mixture volume that is greater than the sum of the individual volumes, or in resin formulation, the use of two or more stabilizers, where the combination improves polymer stability more than expected from the additive effect of the stabilizers, a material that causes such an effect is known as a synergist.

Syngamidae [INV ZOO] A family of roundworms belonging to the Strongyloidea and including parasites of birds and mammals.

syngamy [BIOL] Sexual reproduction involving union of gametes.

syngeneic *See* isogeneic.

syngenesis [GEOL] In place formation of unconsolidated sediments.

syngenetic [GEOL] **1.** Pertaining to a primary sedimentary structure formed contemporaneously with sediment deposition. **2.** Pertaining to a mineral deposit formed contemporaneously with the enclosing rock. Also known as ideogenous.

syngenite [MINERAL] $K_2Ca(SO_4)_2 \cdot H_2O$ A colorless or white mineral composed of hydrous potassium calcium sulfate occurring in tabular crystals.

Syngnathidae [VERT ZOO] A family of fishes in the order Gasterosteiformes including the seahorses and pipefishes.

synkinematic *See* syntectonic.

synkinesia [PHYSIO] Involuntary movement coincident with purposeful movements carried out by a distant part of the

body, such as swinging the arms while walking. Also known as accessory movement; associated automatic movement.

synodic [ASTRON] Referring to conjunction of celestial bodies.

synodic month [ASTRON] A month based on the moon's phases.

synodic period [ASTRON] The time period between two successive astronomical conjunctions of the same celestial objects.

synonym [SYST] A taxonomic name that is rejected as being incorrectly applied, or incorrect in form, or not representative of a natural genetic grouping.

synopsis [SYST] In taxonomy, a brief summary of current knowledge about a taxon.

synoptic [METEOROL] Refers to the use of meteorological data obtained simultaneously over a wide area for the purpose of presenting a comprehensive and nearly instantaneous picture of the state of the atmosphere.

synoptic chart [METEOROL] Any chart or map on which data and analyses are presented that describe the state of the atmosphere over a large area at a given moment in time.

synoptic climatology [CLIMATOL] The study and analysis of climate in terms of synoptic weather information, principally in the form of synoptic charts; the information thus obtained gives the climate (that is, average weather) of a given locality in a given synoptic situation rather than the usual climatic parameters which represent averages over all synoptic conditions.

synoptic code [METEOROL] In general, any code by which synoptic weather observations are communicated; among the synoptic codes in use are the international synoptic code, ship synoptic code, U.S. Airways code, and RECCO code.

synoptic correlation *See* Eulerian correlation.

synoptic meteorology [METEOROL] The study and analysis of synoptic weather information.

synoptic model [METEOROL] Any model specifying a space distribution of some meteorological elements; the distribution of clouds, precipitation, wind, temperature, and pressure in the vicinity of a front is an example of a synoptic model.

synoptic oceanography [OCEANOGR] The study of the physical spatial parameters of the ocean through analysis of simultaneous observations from many stations.

synoptic report [METEOROL] An encoded and transmitted synoptic weather observation.

synoptic scale *See* cyclonic scale.

synoptic wave chart [OCEANOGR] A chart of an ocean area on which is plotted synoptic wave reports from vessels, along with computed wave heights for areas where reports are lacking; atmospheric fronts, highs, and lows are also shown; isolines of wave height and the boundaries of areas having the same dominant wave direction are drawn.

synoptic weather observation [METEOROL] A surface weather observation, made at periodic times (usually at 3- and 6-hourly intervals specified by the World Meteorological Organization), of sky cover, state of the sky, cloud height, atmospheric pressure reduced to sea level, temperature, dew point, wind speed and direction, amount of precipitation, hydrometeors and lithometeors, and special phenomena that prevail at the time of the observation or have been observed since the previous specified observation.

synorchidism [MED] Partial or complete fusion of the two testes within the abdomen or scrotum.

synorogenic [GEOL] Referring to a geologic process occurring at the same time as orogenic activity.

synostosis [ANAT] A type of synarthrosis in which the bones are continuous. [MED] Union of originally separate bones into a single bone structure.

synovia *See* synovial fluid.

synovial fluid [PHYSIO] A transparent viscid fluid secreted by synovial membranes. Also known as synovia.

synovial membrane [HISTOL] A layer of connective tissue which lines sheaths of tendons at freely moving articulations, ligamentous surfaces of articular capsules, and bursae.

synovioma [MED] Any tumor composed principally of cells similar to those covering the synovial membrane.

synovitis [MED] Inflammation of a synovial membrane.

synpelmous [VERT ZOO] Having the two main flexor tendons of the toes united beyond the branches that go to each digit, as in certain birds.

synphylogeny [ECOL] The study of the trends and changes in plant communities through historical and evolutionary perspectives.

synphysiology [ECOL] The study of the metabolic processes of plant communities or species which constantly compete with each other, by investigating water needs, transpiration, assimilation and production or organic matter, physiological effects of light, temperature, root exudates, and various other ecological factors.

synsepalous *See* gamosepalous.

syntactic analysis [COMPUT SCI] The problem of associating a given string of symbols through a grammar to a programming language, so that the question of whether the string belongs to the language may be answered.

syntactic extension [COMPUT SCI] An extension mechanism which creates new notations for existing or user-defined mechanisms in an extensible language.

syntactic foam [MATER] A cellular polymer made by dispersing rigid, microscopic particles in a fluid polymer and then curing it.

syntactic model *See* linguistic model.

syntactics [COMUN] The branch of semiotics that treats relations between symbols themselves, and defines valid relationships between the elements of a language.

syntactic semigroup [SYS ENG] For a sequential machine, the set of all transformations performed by all input sequences.

syntax [COMPUT SCI] The set of rules needed to construct valid expressions or sentences in a language.

syntax-directed compiler [COMPUT SCI] A general-purpose compiler that can service a family of languages by providing the syntactic rules for language analysis in the form of data, typically in tabular form, rather than using a specific parsing algorithm for a particular language. Also known as syntax-oriented compiler.

syntaxial overgrowth [MINERAL] A crystallographically oriented overgrowth of two alternating, chemically identical substances.

syntaxis [MAP] On a map, a sheaflike pattern of mountains converging on a common center.

syntax-oriented compiler *See* syntax-directed compiler.

syntectic [GEOL] *See* syntexis. [MET] Isothermal, reversible conversion of a solid phase into two conjugate liquid phases on applying heat.

syntectonic [GEOL] Refers to a geologic process or event occurring during tectonic activity. Also known as synkinematic.

Syntheliidae [INV ZOO] The sap-flow beetles, a small family of coleopteran insects in the superfamily Histeroidea.

syntenic group [GEN] The loci on the same chromosome pair, irrespective of whether or not they are known to show linkage in heredity.

Syntexidae [INV ZOO] A family of the Hymenoptera in the superfamily Siricoidea.

syntexis [GEOL] Magma made by the melting of two or more rock types and the assimilation of country rock. Also known as syntectic.

synthesis [CHEM] Any process or reaction for building up a complex compound by the union of simpler compounds or elements. [CONT SYS] *See* system design.

synthesis gas [CHEM ENG] A mixture of gases prepared as feedstock for a chemical reaction, for example, carbon monoxide and hydrogen to make hydrocarbons or organic chemicals, or hydrogen and nitrogen to make ammonia.

synthesizer [ELECTR] An electronic instrument which combines simple elements to generate more complex entities; examples are frequency synthesizer and sound synthesizer.

synthetase *See* ligase.

synthetic address *See* generated address.

synthetic aperture [ENG] A method of increasing the ability of an imaging system, such as radar or acoustical holography, to resolve small details of an object, in which a receiver of large size (or aperture) is in effect synthesized by the motion of a smaller receiver and the proper correlation of the detected signals.

synthetic-aperture radar [ENG] A radar system in which an aircraft moving along a very straight path emits microwave pulses continuously at a frequency constant enough to be coherent for a period during which the aircraft may have traveled about 1 kilometer; all echoes returned during this period can then be processed as if a single antenna as long as the flight path had been used.

synthetic crude [MATER] The total liquid, multicomponent hydrocarbon mixture resulting from a process involving molecular rearrangement of charge stock, as from oil shale or synthesis gas. Also known as synthetic oil.

synthetic detergent [MATER] A liquid or solid material able to dissolve oily materials and disperse them (or emulsify them) in water. Also known as syndet.

synthetic division [MATH] A long division process for dividing a polynomial $p(x)$ by a polynomial $(x - a)$ where only the coefficients of these polynomials are used.

synthetic fiber *See* artificial fiber.

synthetic gem [MATER] A precious or semiprecious stone made by artificial processes, for example, synthetic diamonds made by extreme heat and pressure on carbon, used industrially; and synthetic rubies made by high-temperature crystallization of aluminum oxide, used in laser equipment.

synthetic graphite [MATER] Graphitic crystalline material made by the high-temperature and pressure processing of carbon.

synthetic language [COMPUT SCI] A pseudocode or symbolic language; fabricated language.

synthetic lubricant [MATER] Any of a group of products, some of them based on petroleum, used as lubricants where heat, chemical resistance, and other requirements can be better met than with straight petroleum products.

synthetic mica [MATER] A fluorphlogopite mica made artificially by heating a large batch of raw material in an electric resistance furnace and allowing the mica to crystallize from the melt during controlled slow cooling.

synthetic oil *See* synthetic crude.

synthetic quartz [MATER] A quartz crystal grown commercially at high temperature and pressure around a seed of quartz suspended in a solution which contains scraps of natural quartz crystals.

synthetic resin [ORG CHEM] Amorphous, organic, semisolid, or solid material derived from the polymerization of unsaturated monomers such as ethylene, butylene, propylene, and styrene.

synthetic rubber [MATER] Synthetic products whose properties are similar to those of natural rubber, including elasticity and ability to be vulcanized; usually produced by the polymerization or copolymerization of petroleum-derived olefinic or other unsaturated compounds.

synthol process [CHEM ENG] A reaction of carbon monoxide and hydrogen with an iron and sodium carbonate catalyst; produces a mixture of higher alcohols, aldehydes, ketones, higher fatty acids, and aliphatic hydrocarbons, usable as a synthetic gasoline.

syntony [ELEC] Condition in which two oscillating circuits have the same resonant frequency.

Syntrophiidina [PALEON] A suborder of extinct articulate brachiopods of the order Pentamerida characterized by a strong dorsal median fold.

syntrophism [BIOL] Mutual dependence of cells for nutritional needs, especially between strains of bacteria.

syntrophoblast [EMBRYO] The outer synctial layer of the trophoblast that forms the outermost fetal element of the placenta.

syntype [SYST] Any specimen of a series when no specimen is designated as the holotype. Also known as cotype.

synusia [ECOL] A structural unit of a community characterized by uniformity of life-form or of height.

Synxiphosura [PALEON] An extinct heteorgeneous order of arthropods in the subclass Merostomata possibly representing an explosive proliferation of aberrant, terminal, and apparently blind forms.

syphilis [MED] An infectious disease caused by the spirochete *Treponema pallidum*, transmitted principally by sexual intercourse.

syphilitic meningoencephalitis *See* general paresis.

syphilophobia [PSYCH] An abnormal fear of syphilis.

syringe [MED] **1.** An apparatus commonly made of glass or plastic, fitted snugly onto a hollow needle, used to aspirate or inject fluids for diagnostic or therapeutic purposes. Also known as hypodermic syringe. **2.** A large glass barrel with a fitted rubber bulb at one end and a nozzle at the other, used primarily for irrigation purposes.

syringobulbia [MED] The presence of cavities in the medulla oblongata similar to those found in syringomyelia.

syringocystadenoma *See* syringoma.

syringocystoma *See* syringoma.

syringoma [MED] A multiple nevoid tumor of sweat glands. Also known as syringocystadenoma; syringocystoma.

syringomyelia [MED] A chronic disease characterized by the presence of cavities surrounded by gliosis near the canal of the spinal cord and often extending to the medulla.

Syringophyllidae [PALEON] A family of extinct corals in the order Tabulata.

syrinx [PALEON] A tube surrounding the pedicle in certain fossil brachiopods. [VERT ZOO] The vocal organ in birds.

Syrphidae [INV ZOO] The flower flies, a family of cyclorrhaphous dipteran insects in the series Aschiza.

syserskite [MINERAL] Mineral composed of an alloy of osmium (50–80%) and iridium (20–50%).

SYSIN [COMPUT SCI] The principal input stream of an operating system. Derived from system input.

syssiderite *See* stony-iron meteorite.

Systellomatophora [INV ZOO] An order of the subclass Pulmonata in which the eyes are contractile but stalks are not retractile, the body is sluglike, oval, or lengthened, and the lung is posterior.

system [ELECTR] A combination of two or more sets generally physically separated when in operation, and such other assemblies, subassemblies, and parts necessary to perform an operational function or functions. [ENG] A combination of several pieces of equipment integrated to perform a specific function; thus a fire control system may include a tracking radar, computer, and gun. [GEOL] **1.** A major time-stratigraphic unit of worldwide significance, representing the basic unit of Phanerozic rocks. **2.** A group of related structures, such as joints. [PHYS] A region in space or a portion of matter that has a certain amount of one or more substances, ordered in one or more phases. [SCI TECH] A method of organizing entities or terms; in particular, organizing such entities into a larger aggregate.

system analysis [CONT SYS] The use of mathematics to determine how a set of interconnected components whose individual characteristics are known will behave in response to a given input or set of inputs.

systematic analog network testing approach [ELECTR] An on-line minicomputer-based system with an integrated data-based and optimal human intervention, which provides computer printouts used in automatic testing of electronic systems; aimed at maximizing cost effectivity. Abbreviated SANTA.

systematic distortion [ELEC] Periodic or constant distortion, such as bias or characteristic distortion; the direct opposite of fortuitous distortion.

systematic error [ENG] An error due to some known physical law by which it might be predicted; these errors produced by the same cause affect the mean in the same sense, and do not tend to balance each other but rather give a definite bias to the mean. [STAT] An error which results from some bias in the measurement process and is not due to chance, in contrast to random error.

systematic error checking code [COMPUT SCI] A type of self-checking code in which a valid character consists of the minimum number of digits needed to identify the character and distinguish it from any other valid character, and a set of check digits which maintain a minimum specified signal distance between any two valid characters. Also known as group code.

systematic joints [GEOL] Joints occurring in patterns or sets and oriented perpendicular to the boundaries of the constituent rock unit.

systematics [BIOL] The science of animal and plant classification.

systematic sampling [MIN ENG] Extracting samples at evenly spaced periods or in fixed quantities from a unit of coal.

systematic support [MIN ENG] The regular setting of timber or steel supports at fixed intervals irrespective of the condition of the roof and sides.

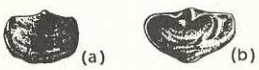
system bandwidth [CONT SYS] The difference between the frequencies at which the gain of a system is $\sqrt{2}/2$ (that is, 0.707) times its peak value.

system chart [COMPUT SCI] A flowchart that emphasizes the component operations which make up a system.

system check [COMPUT SCI] A check on the overall performance of the system, usually not made by built-in computer check circuits; for example, control total, hash totals, and record counts.

system design [COMPUT SCI] Determination in detail of the

SYNTROPHIIDINA



Pedicle valve of *Imbricata* in the Syntrophiidina; *(a)* exterior view, *(b)* interior view.

exact operational requirements of a system, resolution of these into file structures and input/output formats, and relation of each to management tasks and information requirements. [CONT SYS] A technique of constructing a system that performs in a specified manner, making use of available components. Also known as synthesis.

system designer [COMPUT SCI] A person who prepares final system documentation, analyzes findings, and synthesizes new system design.

system effectiveness [ENG] A measure of the extent to which a system may be expected to achieve a set of specific mission requirements expressed as a function of availability, dependability, and capability.

Système International d'Unités *See* International System of Units.

system engineering *See* systems engineering.

system evaluation [COMPUT SCI] A periodic evaluation of the system to assess its status in terms of original or current expectations and to chart its future direction.

system generation [COMPUT SCI] A process that creates a particular and uniquely specified operating system; it combines user-specified options and parameters with manufacturer-supplied general-purpose or nonspecialized program subsections to produce an operating system (or other complex software) of the desired form and capacity.

systemic circulation [PHYSIO] The general circulation, as distinct from the pulmonary circulation.

system improvement time [COMPUT SCI] The machine downtime needed for the installation and testing of new components, large or small, and machine downtime necessary for modification of existing components; this includes all programming tests following the above actions to prove the machine is operating properly.

system input *See* SYSIN.

system life cycle [ENG] The continuum of phases through which a system passes from conception through disposition.

system master tapes [COMPUT SCI] Magnetic tapes containing programmed instructions necessary for preparing a computer prior to running programs.

system operation [COMPUT SCI] The administration and operation of an automatic data-processing equipment-oriented system, including staffing, scheduling, equipment and service contract administration, equipment utilization practices, and time-sharing.

system optimization *See* optimization.

system reliability [ENG] The probability that a system will accurately perform its specified task under stated environmental conditions.

system response *See* response.

system safety [ENG] The optimum degree of safety within the constraints of operational effectiveness, time, and cost, attained through specific application of system safety engineering throughout all phases of a system.

system safety engineering [ENG] An element of systems management involving the application of scientific and engineering principles for the timely identification of hazards, and initiation of those actions necessary to prevent or control hazards within the system.

systems analysis [ENG] The analysis of an activity, procedure, method, technique, or business to determine what must be accomplished and how the necessary operations may best be accomplished.

systems definition [COMPUT SCI] A document describing a computer-based system for processing data or solving a problem, including a general description of the aims and benefits of the system and clerical procedures employed, and detailed program specification. Also known as systems specification.

systems ecology [ECOL] The combined approaches of systems analysis and the ecology of whole ecosystems and subsystems.

systems engineering [ENG] The design of a complex interrelation of many elements (a system) to maximize an agreed-upon measure of system performance, taking into consideration all of the elements related in any way to the system, including utilization of manpower as well as the characteristics of each of the system's components. Also known as system engineering.

systems for nuclear auxiliary power *See* SNAP.

systems implementation test [ENG] The test program that exercises the complete system in its actual environment to determine its capabilities and limitations; this test also demonstrates that the system is functionally operative, and is compatible with the other subsystems and supporting elements required for its operational employment.

system software [COMPUT SCI] Computer software involved with data and program management, including operating systems, control programs, and data-base management systems.

systems programming [COMPUT SCI] The development and production of programs that have to do with translation, loading, supervision, maintenance, control, and running of computers and computer programs.

systems specification *See* systems definition.

systems test [COMPUT SCI] The running of the whole system against test data, a complete simulation of the actual running system for purposes of testing out the adequacy of the system. [ENG] A test of an entire interconnected set of components for the purpose of determining proper functions and interconnections.

system study [COMPUT SCI] A detailed study to determine whether, to what extent, and how automatic data-processing equipment should be used; it usually includes an analysis of the existing system and the design of the new system, including the development of system specifications which provide a basis for the selection of equipment.

system supervisor [COMPUT SCI] A control program which ensures an efficient transition in running program after program and accomplishing setups and control functions.

system unit [COMPUT SCI] An individual card, section of tape, or the like, which is manipulated during operation of the system; class 1 systems have one unit per document; class 2 systems have one unit per vocabulary term or concept.

systole [PHYSIO] The contraction phase of the heart cycle.

syzygy [ASTRON] **1.** One of the two points in a celestial object's orbit where it is in conjunction with or opposition to the sun. **2.** Those points in the moon's orbit where the moon, earth, and sun are in a straight line. [INV ZOO] End-to-end union of the sporonts of certain gregarine protozoans.

szaibelyite [MINERAL] $(Mn,Mg)(BO_2)(OH)$ A white to buff or straw yellow, orthorhombic mineral consisting of a basic borate of manganese and magnesium; occurs as veinlets, masses, or embedded nodules.

szaskaite *See* smithsonite.

Szechtman cell [CHEM ENG] An electrolytic process for manufacture of chlorine that is a variation of both the mercury cell and molten salt cell.

Szilard-Chalmers effect [NUCLEO] The breaking of a chemical bond between a radioactive atom formed in a nuclear reaction and the molecule to which the atom belonged; used in the separation of isotopes by chemical means.

szmikite [MINERAL] $MnSO_4 \cdot H_2O$ A monoclinic mineral composed of hydrous manganese sulfate.

szomolnokite [MINERAL] $FeSO_4 \cdot H_2O$ A yellow or brown monoclinic mineral composed of hydrous ferrous sulfate.

T

t *See* troy system.

T *See* tera-; tesla.

2,4,5-T *See* 2,4,5-trichlorophenoxyacetic acid.

2,4,6-T *See* 2,4,6-trichlorophenol.

TΩ *See* teraohm.

Ta *See* tantalum.

Tabanidae [INV ZOO] The deer and horse flies, a family of orthorrhaphous dipteran insects in the series Brachycera.

tabbyite [MINERAL] A variety of solid asphalt found in the western United States; used as rubber filler and with roofing materials.

tab-card cutter [DES ENG] A device for die-cutting card stock to uniform tabulating-card size.

Taber ice *See* segregated ice.

tabes dorsalis [MED] A form of parenchymatous neurosyphilis in which there is demyelination and sclerosis of the posterior columns of the spinal cord. Also known as locomotor ataxia.

tabetisol *See* talik.

table [COMPUT SCI] A set of contiguous, related items, each uniquely identified either by its relative position in the set or by some label. [LAP] The flat face forming the top of a brilliant-cut stone. [MATH] An array or listing of computed quantities. [MECH ENG] That part of a grinding machine which directly or indirectly supports the work being ground. [MIN ENG] **1.** In placer mining, a wide, shallow sluice box designed to recover gold or other valuable material from screened gravel. **2.** A platform or plate on which coal is screened and picked.

table-driven compiler [COMPUT SCI] A compiler in which the source language is described by a set of syntax rules.

tabled whelk [INV ZOO] *Neptunea tabulata*. A marine gastropod mollusk about 5 inches (13 centimeters) in length and 2 inches (5 centimeters) in diameter, found at depths of 150–200 feet (45–60 meters), off the west coast of Canada and the United States.

table flotation [MIN ENG] A flotation process in which a slurry of ore is fed to a shaking table where flotable particles become glomerules, held together by minute air bubbles and edge adhesion; the glomerules roll across the table and are discharged nearly opposite the feed end; the process is helped by jets of low-pressure air.

table iceberg *See* tabular iceberg.

table knoll [GEOGR] A knoll with a comparatively smooth, flat top.

tableland [GEOGR] A broad, elevated, nearly level, and extensive region of land that has been deeply cut at intervals by valleys or broken by escarpments. Also known as continental plateau.

table look-up [COMPUT SCI] A procedure for calculating the location of an item in a table by means of an algorithm, rather than by conducting a search for the item.

table look-up device [ELECTR] A logic circuit in which the input signals are grouped as address digits to a memory device, and, in response to any particular combination of inputs, the memory device location that is addressed becomes the output.

tablemount *See* guyot.

table mountain [GEOGR] A flat-topped mountain.

table reef [GEOL] A small, isolated organic reef which has a flat top and does not enclose a lagoon.

table salt *See* sodium chloride.

tablespoonful [MECH] A unit of volume used particularly in cookery, equal to 4 fluid drams or ½ fluid ounce; in the United States this is equal to approximately 14.7868 cubic centimeters, in the United Kingdom to approximately 14.2065 cubic centimeters. Abbreviated tbsp.

table sugar *See* sucrose.

tableting [ENG] A punch-and-die procedure for the compaction of powdered or granular solids; used for pharmaceuticals, food products, fireworks, vitamins, and dyes.

tabling [MIN ENG] Separation of two materials of different densities by passing a dilute suspension over a slightly inclined table having a reciprocal horizontal motion or shake with a slow forward motion and a fast return.

tabula [PALEON] A transverse septum that closes off the lower part of the polyp cavity in certain extinct corals and hydroids.

tabular [GEOL] Referring to a sedimentary particle whose length is two to three times its thickness.

tabular berg *See* tabular iceberg.

tabular crystal [CRYSTAL] A crystal that appears broad and flat due to two prominent parallel faces.

tabular iceberg [OCEANOGR] An iceberg with clifflike sides and a flat top; usually arises by detachment from an ice shelf. Also known as table iceberg; tabular berg.

tabular interpolation [MATH] Method of finding from a table the values of the dependent variable for intermediate values of the independent variable.

tabular language [COMPUT SCI] A part of a program which represents the composition of a decision table required by the problem considered.

tabular spar *See* wollastonite.

Tabulata [PALEON] An extinct Paleozoic order of corals of the subclass Zoantharia characterized by an exclusively colonial mode of growth and by secretion of a calcareous exoskeleton of slender tubes.

tabulate [COMPUT SCI] To order a set of data into a table form, or to print a set of data as a table, usually indicating differences and totals, or just totals.

tabulated altitude [NAV] In navigational sight reduction tables, the altitude taken directly from a table for the entering arguments.

tabulated azimuth [NAV] Azimuth taken directly from a table, before interpolation.

tabulated azimuth angle [NAV] Azimuth angle taken directly from a table, before interpolation.

tabulating card [COMPUT SCI] Card into which coded holes are punched.

tabulating equipment [COMPUT SCI] Machinery to punch, sense, sort, or check coded holes in tabulating cards.

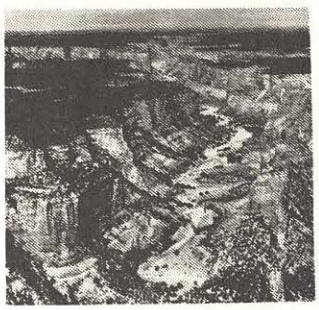
tabulating system [COMPUT SCI] Any group of machines which is capable of entering, converting, receiving, classifying, computing, and recording data by means of tabulating cards, and in which tabulating cards are used for storing data and for communicating with the system.

tabulation character [COMPUT SCI] A character that controls the action of a computer printer and is not itself printed, although it forms part of the data to be printed.

tabulator [COMPUT SCI] A machine that reads information from punched cards and produces lists, tables, and totals on separate forms or continuous paper.

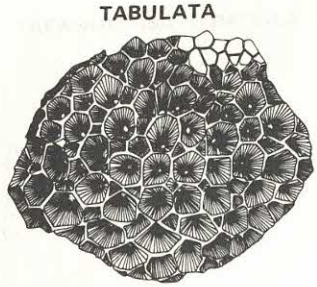
tabun [ORG CHEM] $(CH_3)_2NP(O)(C_2H_5O)(CN)$ A toxic

TABLELAND



View of an ideal tableland: Canyon de Chelly National Monument, northeastern Arizona. *(Spence Air Photos)*

TABULATA



Specimen of *Michelinia convexa* D'Orb, a representative species of the Tabulata, seen from above, from the Carboniferous Limestone of Ontario. *(After Billings)*

liquid with a boiling point of 240°C; soluble in organic solvents; used as a nerve gas.

TAB vaccine [IMMUNOL] A vaccine containing killed typhoid bacilli and the paratyphoid organisms (*Salmonella paratyphi* A and B) most frequently involved in paratyphoid fever.

Tacan *See* tactical air navigation system.

tache noire [MED] The primary painless lesion of the tick-borne typhus fevers of Africa, manifested by a raised red area with a typical black necrotic center which appears at the site of the tick bite.

Tachinidae [INV ZOO] The tachina flies, a family of bristly, grayish or black Diptera whose larvae are parasitic in caterpillars and other insects.

tachiol *See* silver fluoride.

tachometer [ENG] An instrument that measures the revolutions per minute or the angular speed of a rotating shaft.

tachycardia [MED] Excessive rapidity of the heart's action.

Tachyglossidae [VERT ZOO] A family of monotreme mammals having relatively large brains with convoluted cerebral hemispheres; comprises the echidnas or spiny anteaters.

tachyhydrite [MINERAL] $CaMg_2Cl_6 \cdot 12H_2O$ A honey yellow, hexagonal mineral consisting of a hydrated chloride of calcium and magnesium; occurs in massive form.

tachylite [GEOL] A black, green, or brown volcanic glass formed from basaltic magma. Also known as basalt glass; basalt obsidian; hyalobasalt; jaspoid; sordawalite; wichtisite.

Tachyniscidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

tachyon [PARTIC PHYS] A hypothetical particle that travels faster than light, consistent with the theory of relativity.

tachyphylaxis [IMMUNOL] Rapid desensitization against doses of organ extracts or serum by the previous inoculation of small subtoxic doses of the same preparation.

tachysterol [BIOCHEM] The precursor of calciferol in the irradiation of ergosterol; an isomer of ergosterol.

tachytely [EVOL] Evolution at a rapid rate resulting in differential selection and fixation of new types.

tack [DES ENG] A small, sharp-pointed nail with a broad flat head. [MATER] Adhesive stickiness, such as occurs on the surface of a varnish or ink that has not completely dried. Also known as tackiness. [NAV] To change the course of a sailing vessel by coming about so as to take the wind from over the opposite bow (starboard or port).

tack coat [CIV ENG] A thin layer of bitumen, road tar, or emulsion laid on a road to enhance adhesion of the course above it.

tackiness *See* tack.

tackiness agent [MATER] An additive used to impart adhesive properties to otherwise nonadhesive materials, such as oils and greases.

tacking [MET] Making small, isolated tack welds.

tackle [MECH ENG] Any arrangement of ropes and pulleys to gain a mechanical advantage. [NAV ARCH] An assemblage of lines and blocks in which the line passes through more than one block.

tack range [ENG] The length of time during which an adhesive will remain in the tacky-dry condition after application to an adherent.

tack weld [MET] A joint between two pieces of metal made by welding at isolated points.

Taconian orogeny [GEOL] A process of formation of mountains in the latter part of the Ordovician period, particularly in the northern Appalachians. Also known as Taconic orogeny.

Taconic orogeny *See* Taconian orogeny.

taconite [GEOL] The siliceous iron formation from which high-grade iron ores of the Lake Superior district have been derived; consists chiefly of fine-grained silica mixed with magnetite and hematite.

tactical [ORD] Of or pertaining to the arranging, positioning, or maneuvering of forces in contact or near contact with the enemy, so as to achieve an objective or objectives in a campaign or battle.

tactical air control center [COMMUN] The principal air-operations installation (land- or ship-based) from which all aircraft and air warning functions of tactical air operations are controlled.

tactical air controller [COMMUN] The officer who is in charge of all operations of the tactical air-control center, and who is responsible to the tactical air officer for the control of all aircraft and air warning facilities within the area of responsibility.

tactical air-control system [COMMUN] The organization and equipment necessary to plan, direct, and control tactical air operations and to coordinate air operations with other services; it is composed of communications-electronics facilities which provide the means for centralized control and decentralized execution of missions.

tactical aircraft shelter [CIV ENG] A shelter to house fighter-type aircraft and to provide protection to the aircraft from attack by conventional weapons, or damage from high winds or other elemental hazards.

tactical air-direction center [AERO ENG] An air operations installation under the overall control of the tactical air-control center, from which aircraft and air warning service functions of tactical air operations in an area of responsibility are directed.

tactical air force [AERO ENG] An air force charged with carrying out tactical air operations in coordination with ground or naval forces.

tactical airlift [AERO ENG] That airlift which provides the immediate and responsive air movement and delivery of combat troops and supplies directly into objective areas through air landing, extraction, airdrop, or other delivery techniques; and the air logistic support of all theater forces, including those engaged in combat operations, to meet specific theater objectives and requirements.

tactical air navigation system [NAV] Short-range ultra-high-frequency air navigation system that provides accurate slant-range distance and bearing information; this information is presented to the pilot in two dimensions, that is, distance and bearing from a selected ground station. Also known as Tacan.

tactical air observer [AERO ENG] An officer trained as an air observer whose function is to observe from airborne aircraft and report on movement and disposition of friendly and enemy forces, on terrain and weather and hydrography, and to execute other missions as directed.

tactical air operations [AERO ENG] An air operation involving the employment of air power in coordination with ground or naval forces to gain and maintain air superiority, to prevent movement of enemy forces into and within the objective area and to seek out and destroy these forces and their supporting installations, and to join with ground or naval forces in operations within the objective area in order to assist directly in attainment of their immediate objective.

tactical air reconnaissance [AERO ENG] The use of air vehicles to obtain information concerning terrain, weather, and the disposition, composition, movement, installations, lines of communications, and electronic and communication emissions of enemy forces.

tactical air support [AERO ENG] Air operations carried out in coordination with surface forces which directly assist the land or naval battle.

tactical air transport [AERO ENG] The use of air transport in direct support of airborne assaults, carriage of air-transported forces, tactical air supply, evacuation of casualties from forward airdromes, and clandestine operations.

tactical call sign [COMMUN] Call sign which identifies a tactical communications facility.

tactical command ship [NAV ARCH] A warship designed to serve as a command ship for a fleet or force commander; it is equipped with extensive communication equipment.

tactical communications system [COMMUN] A system which provides internal communications within tactical air elements, composed of transportable and mobile equipment assigned as unit equipment to the supporting tactical unit.

tactical control radar [ENG] Antiaircraft artillery radar which has essentially the same inherent capabilities as the target acquisition radar (physically it may be the same type of set) but whose function is chiefly that of providing tactical information for the control of elements of the antiaircraft artillery defenses in battle.

tactical diameter [NAV] In marine operations, the distance gained to the right or left of the original course when a turn of 180° with a constant rudder angle has been completed.

tactical electronic warfare [ELECTR] The application of electronic warfare to tactical air operations; tactical electronic warfare encompasses the three major subdivisions of electronic warfare: electronic warfare support measures, electronic countermeasures, and electronic counter-countermeasures.

tactical fire control [ORD] The manner in which fire power

is employed with regard to selection of targets, to opening, suspending, or ceasing fire, and to classes of fire.

tactical frequency [COMMUN] Radio frequency assigned to a military unit to be used in the accomplishment of a tactical mission.

tactical map [ORD] A large-scale map used for tactical and administrative purposes.

tactical missile [ORD] A missile for use in tactical operations.

tactical mobility [ORD] The capability of a unit, command, task force, or the like that enables it to be readily moved while engaged in combat.

tactical nuclear weapon [ORD] A nuclear weapon which is programmed primarily for employment against tactical targets in tactical military operations.

tactical nuclear weapon employment [ORD] The use of nuclear weapons by land, sea, or air forces against opposing forces and supporting installations or facilities, in support of operations which contribute to the accomplishment of a military mission of limited scope, or in support of the military commander's scheme of maneuver, usually limited to the area of military operations.

tactical range recorder [ENG] A sonar device in surface ships used to plot the time-range coordinates of submarines and determine firing of depth charges.

tactical reserve [ORD] A part of battalion, regiment, or similar force, held initially under the control of the commander as a maneuvering force to influence future action.

tactical target [ORD] Any physical object, person, group of persons, or position singled out for attack during the course of battle or tactical operations in order to reduce or destroy the enemy's ability to sustain combat operations.

tactical transport aircraft [AERO ENG] Aircraft designed primarily for carrying personnel or cargo over short or medium distances.

tactical unit [ORD] An organization of troops, aircraft, or ships which is intended to serve as a single unit in combat, and may include service units required for its direct support.

tactical vehicle [ORD] Any vehicle designed for field requirements in combat and tactical operations, or for training personnel for such operations.

tactic polymer [ORG CHEM] A polymer with regularity or symmetry in the structural arrangement of its molecules, as in a stereospecific polymer such as some types of polypropylene.

tactile [PHYSIO] Pertaining to the sense of touch.

tactile agnosia *See* astereognosis.

tactile hairs *See* vibrissae.

tactile receptor *See* tactoreceptor.

tactite [PETR] A rock with a complex mineralogical composition, formed by contact metamorphism and metasomatism of carbonate rocks.

tactoid [BIOCHEM] A particle that appears as a spindle-shaped body under the polarizing microscope and occurs in mosaic virus, fibrin, and myosin.

tactoreceptor [PHYSIO] A sense organ that responds to touch. Also known as tactile receptor.

tadpole [VERT ZOO] The larva of a frog or toad; at hatching it has a rounded body with a long fin-bordered tail, and the gills are external but shortly become enclosed.

tadpole shrimp [INV ZOO] Any of the phyllopod crustaceans that are members of the genus *Lepidurus*.

taele *See* frozen ground.

taenia [ANAT] A ribbon-shaped band of nerve fibers or muscle.

Taenia [INV ZOO] A genus of tapeworms which occur in humans and other mammals.

Taeniodidea [INV ZOO] An equivalent name for Cyclophyllidea.

Taeniodonta [PALEON] An order of extinct quadrupedal land mammals, known from early Cenozoic deposits in North America.

Taenioidea [INV ZOO] An equivalent name for Cyclophyllidea.

Taeniolabidoidea [PALEON] An advanced suborder of the extinct mammalian order Multituberculata having incisors that were self-sharpening in a limited way.

taeniolite [MINERAL] $KLiMg_2Si_4O_{10}F_2$ A white or colorless mica mineral.

taenite [MINERAL] A meteoritic mineral consisting of a nickel-iron alloy, with a nickel content varying from about 27 to 65%.

taenoglossate radula [INV ZOO] A long, narrow radula with seven teeth in each transverse row, found in certain pectinibranch bivalves.

Tafel slope [ELEC] The slope of a curve of overpotential or electrolytic polarization in volts versus the logarithm of current density.

taffeta [TEXT] A plain-woven, usually silk fabric that has a smooth finish and sheen on both sides.

taffrail log [ENG] A log consisting essentially of a rotator towed through the water by a braided log line attached to a distance-registering device usually secured at the taffrail, the railing at the stern. Also known as patent log.

tag [COMPUT SCI] **1.** A unit of information used as a label or marker. **2.** The symbol written in the location field of an assembly-language coding form, and used to define the symbolic address of the data or instruction written on that line. [NUCLEO] *See* isotopic tracer.

Tag closed-cup tester [ANALY CHEM] A laboratory device used to determine the flash point of mobile petroleum liquids flashing below 175°F (79.4°C). Also known as Tagliabue closed tester.

tag converting unit [COMPUT SCI] A device capable of reading the perforations of a price tag as input data.

tag format [COMPUT SCI] The arrangement of data in a short record inserted in a direct-access storage to indicate the location of an overflow record.

tagged molecule [CHEM] A molecule having one or more atoms which are either radioactive or have a mass which differs from that of the atoms which normally make up the molecule.

tagilite *See* pseudomalachite.

Tagliabue closed tester *See* Tag closed-cup tester.

Tag-Robinson colorimeter [ENG] A laboratory device used to determine the color shades of lubricating and other oils; the color, reported as a number, is determined by varying the thickness of a column of oil until its color matches that of a standard color glass.

tagua palm [BOT] *Phytelephas macrocarpa*. A palm tree of tropical America; the endosperm of the seed is used as an ivory substitute.

Tahuian [GEOL] A local Eocene time subdivision in Australia whose identification is based on foraminiferans.

taiga [ECOL] A zone of forest vegetation encircling the Northern Hemisphere between the arctic-subarctic tundras in the north and the steppes, hardwood forests, and prairies in the south.

taiga climate [CLIMATOL] In general, a climate which produces taiga vegetation, that is, too cold for prolific tree growth but milder than the tundra climate and moist enough to promote appreciable vegetation. Also known as subarctic climate.

tail [AERO ENG] **1.** The rear part of a body, as of an aircraft or a rocket. **2.** The tail surfaces of an aircraft or a rocket. [ASTRON] The part of a comet that extends from the coma in a direction opposite to the sun; it consists of dust and gas that have been blown away from the coma by the solar wind and the sun's radiation pressure. [ELECTR] **1.** A small pulse that follows the main pulse of a radar set and rises in the same direction. **2.** The trailing edge of a pulse. [VERT ZOO] **1.** The usually slender appendage that arises immediately above the anus in many vertebrates and contains the caudal vertebrae. **2.** The uropygium, and its feathers, of a bird. **3.** The caudal fin of a fish or aquatic mammal.

tail assembly *See* empennage.

tail clipping [ELECTR] Method of sharpening the trailing edge of a pulse.

tail fin [AERO ENG] A fin at the rear of a rocket or other body.

tailgate [CIV ENG] The downstream gate of a canal lock. [ENG] A hinged gate at the rear of a vehicle or railroad freight car that can be let down for convenience in loading.

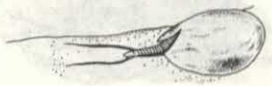
tail house [CHEM ENG] An installation in a refinery containing a look box, facilities for sampling, and controls for diverting the products to storage tanks or to other locations in the refinery for further processing.

tailings [ENG] The lighter particles which pass over a sieve in milling, crushing, or purifying operations. [MIN ENG] **1.** The parts, or a part, of any incoherent or fluid material separated as refuse, or separately treated as inferior in quality or value. **2.** The decomposed outcrop of a vein or bed. **3.** The refuse material resulting from processing ground ore.

TADPOLE

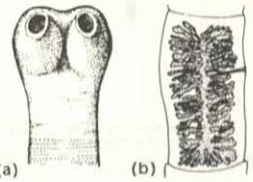
Tadpole of the common frog (*Rana temporaria*).

TADPOLE SHRIMP



Tadpole shrimp, *Lepidurus* (Notostraca). *(From T. I. Storer and R. L. Usinger, General Zoology, 4th ed., McGraw-Hill, 1965)*

TAENIA



Morphological features of the beef-inhabiting tapeworm *Taenia saginata*. *(a)* Scolex. *(b)* Mature proglottid. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

TAENOGLOSSATE RADULA

Taenoglossate radula from *Lanistes*, a fresh-water gastropod. *(From R. R. Shrock and W. H. Twenhofel, Principles of Invertebrate Paleontology, 2d ed., McGraw-Hill, 1953)*

tailings settling tank [MIN ENG] A vessel in which solids are removed from the tailings effluent in mineral processing plants.

tail of a stochastic process [MATH] A tail of a stochastic process represented by $x(t_1), x(t_2), \ldots$ is the process obtained by deleting the first n terms, for some n.

tail out [PETRO ENG] To place sucker rods on a rack as they are pulled from a well during oil production.

tail pulley [MECH ENG] A pulley at the tail of the belt conveyor opposite the normal discharge end; may be a drive pulley or an idler pulley.

tailrace [ENG] A channel for carrying water away from a turbine, waterwheel, or other industrial application. [MIN ENG] A channel for conveying mine trailings.

tail rope [MIN ENG] **1.** The rope which passes around the return sheave in main-and-tail haulage or a scraper loader layout. **2.** The rope that is used to draw the empty cars back into a mine in a tail-rope system. **3.** A counterbalance rope attached beneath the cage when the cages are hoisted in balance. **4.** A hemp rope used for moving pumps in shafts.

tail-rope system [MIN ENG] Haulage by a hoisting engine and two separate drums in which the main rope is attached to the front end of a trip of cars, and the tail rope is attached to the rear end of the trip.

tailshaft [NAV ARCH] That part of the shaft of a ship's propeller extending through the stern tube.

tail sheave [MIN ENG] The return sheave for an endless rope or the tail rope of the main-and-tail-rope system, placed at the far end of a haulageway.

tailstock [MECH ENG] A part of a lathe that holds the end of the work not being shaped, allowing it to rotate freely.

tail surface [AERO ENG] A stabilizing or control surface in the tail of an aircraft or missile.

tail track system [MIN ENG] A form of track layout for car or trip loading in which the track can be extended down the heading, turned right or left, or turned back, U-fashion, in an adjacent heading.

tail warning radar [ENG] Radar installed in the tail of an aircraft to warn the pilot that an aircraft is approaching from the rear.

tailwind [METEOROL] A wind which assists the intended progress of an exposed, moving object, for example, rendering an airborne object's ground speed greater than its airspeed; the opposite of a headwind. Also known as following wind.

taino [METEOROL] A tropical cyclone (hurricane) in parts of the Greater Antilles.

Tainter gate [CIV ENG] A spillway gate whose face is a section of a cylinder; rotates about a horizontal axis on the downstream end of the gate and can be closed under its own weight. Also known as radial gate.

takedown [COMPUT SCI] The actions performed at the end of an equipment operating cycle to prepare the equipment for the next setup; for example, to remove the tapes from the tape handlers at the end of a computer run is a takedown operation.

takedown time [COMPUT SCI] The time required to take down a piece of equipment.

takeoff [AERO ENG] Ascent of an aircraft or rocket at any angle, as the action of a rocket vehicle departing from its launch pad or the action of an aircraft as it becomes airborne.

takeoff assist [AERO ENG] **1.** The extra thrust given to an airplane or missile during takeoff through the use of a rocket motor or other device. **2.** The device used in such a takeoff.

takeoff weight [AERO ENG] The weight of an aircraft or rocket vehicle ready for takeoff, including the weight of the vehicle, the fuel, and the payload.

take the ground [NAV] A ship takes the ground when the tide leaves it aground for want of sufficient depth of water.

takeup [MECH ENG] A tensioning device in a belt-conveyor system for taking up slack of loose parts.

takeup pulley [MECH ENG] An adjustable idler pulley to accommodate changes in the length of a conveyor belt to maintain proper belt tension.

takeup reel [ENG] The reel that accumulates magnetic tape after it is recorded or played by a tape recorder.

taku wind [METEOROL] A strong, gusty, east-northeast wind, occurring in the vicinity of Juneau, Alaska, between October and March; it sometimes attains hurricane force at the mouth of the Taku River, after which it is named.

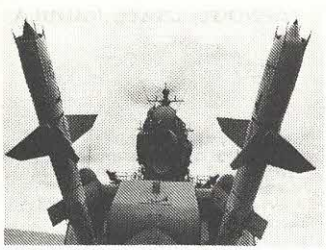
TALAR [NAV] A modular step-scan microwave landing system. Derived from tactical landing approach radar.

TALC

10 cm

Talc from the Ural Mountains, Soviet Union. *(American Museum of Natural History)*

TALOS



Twin Talos Launcher on the USS *Chicago*. *(Official U.S. Navy photograph)*

talbot [OPTICS] A unit of luminous energy equal to the luminous energy carried by a luminous flux of 1 lumen during a period of 1 second.

Talbot's bands [OPTICS] A series of dark bands that appear in the spectrum of white light when a glass plate of the proper thickness is placed across one half of the aperture of a spectroscope on the side of the blue end of the spectrum.

Talbot's law [OPTICS] The law that apparent brightness of an object flashing at a frequency greater than about 10 hertz is equal to its actual brightness times the ratio of the exposure time to the total time.

talbutal [PHARM] $C_{11}H_{16}N_2O_3$ A crystalline compound that melts at 108–110°C, and is soluble in alcohol, chloroform, acetone, and ether; used in medicine as a short-acting hypnotic and sedative. Also known as 5-allyl-5-*sec*-butylbarbituric acid.

talc [MINERAL] $Mg_3Si_4O_{10}(OH)_2$ A whitish, greenish, or grayish hydrated magnesium silicate mineral crystallizing in the monoclinic system; it is extremely soft (hardness is 1 on Mohs scale) and has a characteristic soapy or greasy feel.

talcose rock [PETR] A rock having a soft and soapy feel, that is, resembling talc.

talcosis [MED] A lung disease caused by inhalation of talc dust and characterized by chronic induration and fibrosis.

talc schist [PETR] A schist in which talc is the dominant schistose material.

talik [GEOL] A Russian term applied to permanently unfrozen ground in regions of permafrost; usually applies to a layer which lies above the permafrost but below the active layer, that is, when the permafrost table is deeper than the depth reached by winter freezing from the surface. Also known as tabetisol.

talipes [MED] Any of several foot deformities, especially of congenital origin.

talipes cavus [MED] A deformity of the foot marked by exaggeration of the longitudinal arch and by dorsal contractures of the toes.

Talitridae [INV ZOO] A family of terrestrial amphipod crustaceans in the suborder Gammaridea.

talk-back circuit *See* interphone.

talking [MIN ENG] A series of small bumps or cracking noises within the mine walls, indicating that the rock is beginning to yield to stresses.

talking battery *See* quiet battery.

talk-listen switch [ENG ACOUS] A switch provided on intercommunication units to permit using the loudspeaker as a microphone when desired.

tall oil [MATER] A yellow-black, malodorous, resinous admixture of rosin, fatty acids, sterols, high-molecular-weight alcohols, and other materials, derived from wood-pulping waste liquors; used in paint drying oils, alkyd resins, linoleum, soaps, lubricants, and greases. Also known as liquid rosin; tallol.

tallol *See* tall oil.

tallow [MATER] Animal fat with carbon chains containing 16–18 carbons, derived from cattle, sheep, and horses; used for soaps, leather dressings, candles, food, and greases, and as a chemical intermediate.

tallow-seed oil *See* stillingia oil.

tally [MIN ENG] A mark, number, or tin ticket placed by the miner on each car of coal or ore that is sent from the work place, thus facilitating a count or tally of all filled cars.

talon [VERT ZOO] A sharply hooked claw on the foot of a bird of prey.

Talos [ORD] A U.S. Navy surface-to-air guided missile having a speed of about Mach 3, a range of about 25 miles (40 kilometers), and beam-rider guidance; one version can carry nuclear warheads, and it can also be used against ships and shore bombardment targets.

Talpidae [VERT ZOO] The moles, a family of insectivoran mammals; distinguished by the forelimbs which are adapted for digging, having powerful muscles and a spadelike bony structure.

talus [ANAT] *See* astragalus. [GEOL] Also known as rubble; scree. **1.** Coarse and angular rock fragments derived from and accumulated at the base of a cliff or steep, rocky slope. **2.** The accumulated heap of such fragments.

talus creep [GEOL] The slow, downslope movement of talus.

talus glacier *See* rock glacier.

talus slope [GEOL] A steep, concave slope consisting of an accumulation of talus. Also known as debris slope.

tamarack [BOT] *Larix laricina*. A larch and a member of

the pine family; it has an erect narrowly pyramidal habit, and grows in wet and moist soils in the northeastern United States, west to the Lake States and across Canada to Alaska; used for railroad ties, posts, sills, and boats. Also known as hackmatack.

tamarugite [MINERAL] $NaAl(SO_4)_2 \cdot 6H_2O$ A colorless, monoclinic mineral consisting of a hydrated sulfate of sodium and aluminum; occurs as crystals and masses.

Tamm-Dancoff method [QUANT MECH] A method of forming an approximate wave function of a system of interacting particles, particularly nucleons and mesons, by describing it as an algebraic sum of several possible states, the number of such states determining the order of the approximation.

tamp [ENG] To tightly pack a drilled hole with clay or other stemming material after the charge has been placed.

tamper [NUCLEO] *See* reflector. [ORD] In a weapon, any substance that resists movement for a split microsecond, used so that the active materials may build up greater pressure behind the substance.

tamping bag [ENG] A bag filled with stemming material such as sand for use in horizontal and upward sloping shotholes.

tamping bar [ENG] A piece of wood for pushing explosive cartridges or forcing the stemming into shotholes.

tamping plug [ENG] A plug of iron or wood used instead of tamping material to close up a loaded blasthole.

tampon [MED] A plug of absorbent material, such as cotton or sponge, inserted into a cavity as packing.

tan *See* tangent.

Tanaidacea [INV ZOO] An order of eumalacostracans of the crustacean superorder Peracarida; the body is linear, more or less cylindrical or dorsoventrally depressed, and the first and second thoracic segments are fused with the head, forming a carapace.

tan alt *See* shadow factor.

Tanaostigmatidae [INV ZOO] A small family of hymenopteran insects in the superfamily Chalcidoidea.

tanbark [MATER] The fibrous portion of ground oak or hemlock bark; it is burned in a mixture with other fuels to maintain combustion; also used on a running track for horses.

tandem [AERO ENG] The fore and aft configuration used in boosted missiles, long-range ballistic missiles, and satellite vehicles; stages are stacked together in series and are discarded at burnout of the propellant for each stage. [ELEC] Two-terminal pair networks are in tandem when the output terminals of one network are directly connected to the input terminals of the other network.

tandem accelerator [NUCLEO] An electrostatic accelerator in which negative hydrogen ions generated in a special ion source are accelerated as they pass from ground potential up to a high-voltage terminal, both electrons are then stripped from the negative ion by passage through a very thin foil or gas cell, and the proton is again accelerated as it passes to ground potential.

tandem central office [COMMUN] A telephone office that makes connections between local offices in an area where there is such a high density of local offices that it would be uneconomical to make direct connections between them. Also known as tandem office.

tandem compensation *See* cascade compensation.

tandem connection *See* cascade connection.

tandem-drive conveyor [MECH ENG] A conveyor having the conveyor belt in contact with two drive pulleys, both driven with the same motor.

tandem duplication [CYTOL] The occurrence of two identical sequences, one following the other, in a chromosome segment.

tandem hoisting [MIN ENG] Hoisting in a deep shaft with two skips running in one shaft; the lower skip is suspended from the tail rope of the upper skip.

tandem mill [MET] A rolling mill consisting of two or more stands in succession, synchronized so that the metal passes directly from one to another.

tandem office *See* tandem central office.

tandem propellers [NAV ARCH] Two propellers on the same shaft, rotating in the same direction.

tandem roller [MECH ENG] A steam- or gasoline-driven road roller in which the weight is divided between heavy metal rolls, of dissimilar diameter, one behind the other.

tandem switching [COMMUN] System of routing telephone calls in which calls do not travel directly between local offices, but rather through a central office.

tandem system [COMPUT SCI] A computing system in which there are two central processing units, usually with one controlling the other, and with data proceeding from one processing unit into the other.

tang [ENG] **1.** The part of a file that fits into a handle. **2.** The end of a drill shank which allows transmission of torque from the drill press spindle to the body of the drill.

tangeite *See* calciovolborthite.

tangelo [BOT] A tree that is hybrid between a tangerine or other mandarin and a grapefruit or shaddock; produces an edible fruit.

tangent [MATH] **1.** A line is tangent to a curve at a fixed point P if it is the limiting position of a line passing through P and a variable point on the curve Q, as Q approaches P. **2.** The function which is the quotient of the sine function by the cosine function. Abbreviated tan. **3.** The tangent of an angle is the ratio of its sine and cosine. Abbreviated tan.

tangent arc [METEOROL] Generic name for several types of halo arcs that form as loci tangent to other halos; the halo of 22° occasionally exhibits the horizontal and vertical tangent arcs, and the halo of 46° exhibits the infralateral tangent arcs and the supralateral tangent arcs.

tangent bending [MET] In a single piece of metal, forming a series of identical bends with parallel axes.

tangent bundle [MATH] The fiber bundle $T(M)$ associated to a differentiable manifold M which is composed of the points of M together with all their tangent vectors. Also known as tangent space.

tangent galvanometer [ENG] A galvanometer in which a small compass is mounted horizontally in the center of a large vertical coil of wire; the current through the coil is proportional to the tangent of the angle of deflection of the compass needle from its normal position parallel to the magnetic field of the earth.

tangential acceleration [MECH] The component of linear acceleration tangent to the path of a particle moving in a circular path.

tangential component [MATH] A component of a given vector acting at right angles to a given radius of a given circle.

tangential focus *See* primary focus.

tangential helical-flow turbine *See* helical-flow turbine.

tangential stress *See* shearing stress.

tangential velocity [MECH] **1.** The instantaneous linear velocity of a body moving in a circular path; its direction is tangential to the circular path at the point in question. **2.** The component of the velocity of a body that is perpendicular to a line from an observer or reference point to the body.

tangential wave *See* S wave.

tangential wave path [ELECTROMAG] In radio propagation over the earth, a path of propagation of a direct wave which is tangential to the surface of the earth; the tangential wave path is curved by atmospheric refraction.

tangent latitude error [NAV] The angle between the local meridian and the settling position or spin axis in a nonpendulous gyrocompass where damping is accomplished by offsetting the point of application of the force of a mercury ballistic.

tangent offset [ENG] In surveying, a method of plotting traverse lines; angles are laid out by linear measurement, using a constant times the natural tangent of the angle.

tangent plane to a surface [MATH] The tangent plane to a surface at a point is the plane having every line in it tangent to some curve on the surface at that point.

tangent point *See* point of tangency.

tangent screw [ENG] A screw providing tangential movement along an arc, such as the screw which provides the final angular adjustment of a marine sextant during an observation.

tangent space *See* tangent bundle.

tangent vector [MATH] A tangent vector at a point of a differentiable manifold is any vector tangent to a differentiable curve in the manifold at this point; alternatively, a member of the tangent plane to the manifold at the point.

tangent welding [MET] Arc welding in which two or more electrodes are in a plane parallel to the line of travel.

tangerine [BOT] Any of several trees of the species *Citrus reticulata;* the fruit is a loose-skinned mandarin with a deep-orange or scarlet rind.

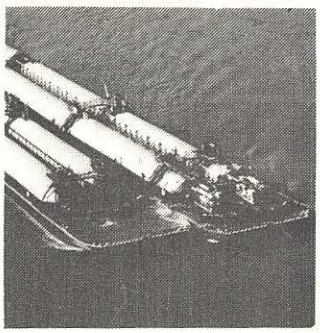
tangerine oil *See* mandarin oil.

tangling [SOLID STATE] The reduction of motion of dislocations in a substance by increasing the total number of dislocations, so that they tangle and interfere with each other's motions.

TANAIDACEA

Female *Apseudes spinosus* (M. Sars), a representative species of the order Tanaidacea. *(After G. O. Sars)*

TANK BARGE



Tank barges carrying refrigerated ammonia.

TANK PERISCOPE

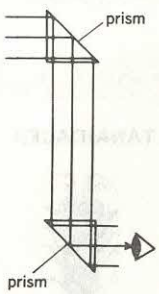


Diagram of a simple tank periscope with parallel reflecting surfaces.

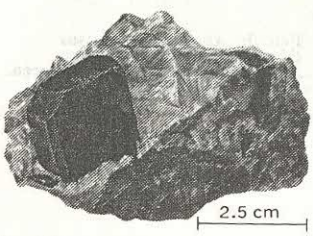
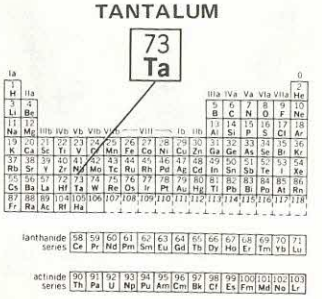
TANTALITE



Tantalite crystal in pegmatite from Raade, Norway. *(Specimen from Department of Geology, Bryn Mawr College)*

TANTALUM



Periodic table of the chemical elements showing the position of tantalum.

tangoreceptor [PHYSIO] A sense organ in the skin that responds to touch and pressure.

tanh *See* hyperbolic tangent.

tank [ELECTR] **1.** A unit of acoustic delay-line storage containing a set of channels, each forming a separate recirculation path. **2.** The heavy metal envelope of a large mercury-arc rectifier or other gas tube having a mercury-pool cathode. **3.** *See* tank circuit. [ENG] A large container for holding, storing, or transporting a liquid.

tankage [ENG] Contents of a storage tank. [MATER] Slaughter-house entrails and scraps used as fertilizer.

tank balloon [ENG] An air- and vapor-tight flexible container fitted to the breather pipe of a gasoline storage tank to receive gasoline vapors; as the tank cools, the vapors return to the tank.

tank barge [NAV ARCH] A barge equipped with tanks that may carry any one of a great variety of liquid commodities, such as petroleum and petroleum products, chemicals, and fertilizers.

tank battery [PETRO ENG] A grouping of interconnected storage tanks situated to receive the output of one or more oil wells.

tank bottom [CHEM ENG] The liquid material in a tank below the level of the outlet pipe; often a mixture of the stored liquid with rust and other sediment.

tank car [ENG] Railroad car onto which is mounted a cylindrical, horizontal tank designed for the transport of liquids, chemicals, gases, meltable solids, slurries, emulsions, or fluidizable solids.

tank circuit [ELECTR] A circuit which exhibits resonance at one or more frequencies, and which is capable of storing electric energy over a band of frequencies continuously distributed about the resonant frequency, such as a coil and capacitor in parallel. Also known as electrical resonator; tank.

tank ditch *See* antitank ditch.

tank dozer [ORD] Standard tank equipped with a detachable bulldozer blade.

tanker [NAV ARCH] A steel ship in which the hull is subdivided into tanks for carrying petroleum products or other liquid cargo in bulk. Also known as tankship.

tank farm [PETRO ENG] An area in which a number of large-capacity storage tanks are located, generally used for crude oil or petroleum products.

tank gage [ENG] A device used to measure the contents of a liquid storage tank; can be manual or automatic.

tank obstacle *See* antitank obstacle.

tank periscope [OPTICS] A periscope permitting a tank occupant to observe without being exposed to bullet fire; employs a pair of plane, parallel, reflecting surfaces (either mirrors or prisms) so arranged in a mount that the path of light through the instrument forms a letter Z.

tank reactor [NUCLEO] A nuclear reactor in which the core is suspended in a closed tank, as distinct from an open-pool reactor.

tank scale [ENG] A counterweighted suspension or platform weighing mechanism for tanks, hoppers, and similar solids or liquids containers.

tankship *See* tanker.

tank switch [PETRO ENG] An automatic control of lease tanks in oil fields, including controls of lines to fill tanks and for pipeline runs; can be electrically or pneumatically actuated.

tank truck [ENG] A truck body onto which is mounted a cylindrical, horizontal tank, designed for the transport of liquids, chemicals, gases, meltable solids, slurries, emulsions, or fluidizable solids.

tannase [BIOCHEM] An enzyme that catalyzes the hydrolysis of tannic acid to gallic acid; found in cultures of *Aspergillus* and *Penicillium*.

tannic acid [ORG CHEM] **1.** $C_{14}H_{10}O_9$ A yellowish powder with an astringent taste; soluble in water and alcohol, insoluble in acetone and ether; derived from nutgalls; decomposes at 210°C; used as an alcohol denaturant and a chemical intermediate, and in tanning and textiles. Also known as digallic acid; gallotannic acid; gallotannin; tannin. **2.** $C_{76}H_{52}O_{46}$ Yellowish-white to light-brown amorphous powder or flakes; decomposes at 210–215°C; very soluble in alcohol and acetone; used as a mordant in dyeing, in photography, as a reagent, and in clarifying wine or beer. Also known as pentadigalloylglucose.

tannin *See* tannic acid.

tanning [ENG] A process of preserving animal hides by chemical treatment (using vegetable tannins, metallic sulfates, and sulfurized phenol compounds, or syntans) to make them immune to bacterial attack, and subsequent treatment with fats and greases to make them pliable.

tanning agent [MATER] Any one of the tannins used to treat skins and hides to preserve the hide substance and to protect it from decay.

tanning extract [MATER] Tannin-rich liquor extracted from woods and pulps; used in leather tanning.

tan rot [PL PATH] A fungus disease of strawberries caused by *Pezizella lythri* and characterized by the appearance of tan depressions on the fruit.

tantalic acid anhydride *See* tantalum oxide.

tantalic chloride *See* tantalum chloride.

tantalite [MINERAL] $(Fe,Mn)Ta_2O_6$ An iron-black mineral that crystallizes in the orthorhombic system and commonly occurs in short prismatic crystals; luster is submetallic, hardness is 6 on Mohs scale, and specific gravity is 7.95; principal ore of tantalum.

tantalum [CHEM] Metallic element in group V, symbol Ta, atomic number 73, atomic weight 180.948; black powder or steel-blue solid soluble in fused alkalies, insoluble in acids (except hydrofluoric and fuming sulfuric); melts about 3000°C. [MET] A lustrous, platinum-gray ductile metal used in making dental and surgical tools, pen points, and electronic equipment.

tantalum capacitor [ELEC] An electrolytic capacitor in which the anode is some form of tantalum; examples include solid tantalum, tantalum-foil electrolytic, and tantalum-slug electrolytic capacitors.

tantalum carbide [INORG CHEM] TaC Hard, chemical-resistant crystals melting at 3875°C; used in cutting tools and dies.

tantalum chloride [INORG CHEM] $TaCl_5$ A highly reactive, pale-yellow powder decomposing in moist air; soluble in alcohol and potassium hydroxide; melts at 221°C; used to produce tantalum and as a chemical intermediate. Also known as tantalic chloride; tantalum pentachloride.

tantalum-foil electrolytic capacitor [ELEC] An electrolytic capacitor that uses plain or etched tantalum foil for both electrodes, with a weak acid electrolyte.

tantalum nitride [INORG CHEM] TaN A very hard, black, water-insoluble solid, melting at 3360°C.

tantalum nitride resistor [ELECTR] A thin-film resistor consisting of tantalum nitride deposited on a substrate, such as industrial sapphire.

tantalum oxide [INORG CHEM] Ta_2O_5 Prisms insoluble in water and acids (except for hydrofluoric); melts at 1800°C; used to make tantalum, in optical glass and electronic equipment, and as a chemical intermediate. Also known as tantalic acid anhydride; tantalum pentoxide.

tantalum pentachloride *See* tantalum chloride.

tantalum pentoxide *See* tantalum oxide.

tantalum-slug electrolytic capacitor [ELEC] An electrolytic capacitor that uses a sintered slug of tantalum as the anode, in a highly conductive acid electrolyte.

T antenna [ELECTROMAG] An antenna consisting of one or more horizontal wires, with a lead-in connection being made at the approximate center of each wire.

tanteuxenite [MINERAL] $(Y,Ce,Ca)(Ta,Nb,O)_2(O,OH)_6$ A brown or black variety of euxenite with tantalum substituting for niobium. Also known as delorenzite; eschwegeite.

tantiron [MET] An iron alloy containing silicon, carbon, manganese, phosphorus, and sulfur; used for chemical equipment where resistance to acids is needed.

Tanyderidae [INV ZOO] The primitive crane flies, a family of orthorrhaphous dipteran insects in the series Nematocera.

Tanypezidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalyptratae.

tap [DES ENG] **1.** A plug of accurate thread, form, and dimensions on which cutting edges are formed; it is screwed into a hole to cut an internal thread. **2.** A threaded cone-shaped fishing tool. [ELEC] A connection made at some point other than the ends of a resistor or coil. [ENG] A small, threaded hole drilled into a pipe or process vessel; used as connection points for sampling devices, instruments, or controls. [MET] **1.** A quantity of molten metal run out from a furnace at one time. **2.** To remove excess slag from the floor of a pot furnace. [MIN ENG] To intersect with a borehole and withdraw or drain the contained liquid, as water from a water-bearing formation or from underground workings.

tap bolt [DES ENG] A bolt with a head that can be screwed into a hole and held in place without a nut. Also known as tap screw.

tap changer [ELEC] A device which is used to change the ratio of the input and output voltages of a transformer over any one of a definite number of steps.

tap crystal [ELECTR] Compound semiconductor that stores current when stimulated by light and then gives up energy as flashes of light when it is physically tapped.

tap density [MET] The apparent density of a volume of metal powder obtained when its receptacle is tapped or vibrated.

tap drill [MECH ENG] A drill used to make a hole of a precise size for tapping.

tape [COMPUT SCI] A ribbonlike material used to store data in lengthwise sequential position. [ENG] A graduated steel ribbon used, instead of a chain, in surveying.

tape alternation [COMPUT SCI] The switching of a computer program back and forth between two tape units in order to avoid interruption of the program during mounting and removal of tape reels.

tape bootstrap routine [COMPUT SCI] A computer routine stored in the first block of a magnetic tape that instructs the computer to read certain programs from the tape.

tape cartridge [ENG ACOUS] A cartridge that holds a length of magnetic tape in such a way that the cartridge can be slipped into a tape recorder and played without threading the tape; in stereophonic usage, usually refers to an eight-track continuous-loop cartridge, which is larger than a cassette. Also known as cartridge.

tape cluster *See* magnetic tape group.

tape-controlled carriage [COMPUT SCI] A device which uses a loop of punched-paper or plastic mylar tape to control the motion of paper through a computer printer or typewriter.

tape-controlled machine [MECH ENG] A machine tool whose movements are automatically controlled by means of a magnetic or punched tape.

tape control unit [COMPUT SCI] A device which senses which tape unit is to be accessed for read or write purpose and opens up the necessary electronic paths. Formerly known as hypertape control unit.

tape copy [COMMUN] In teletypewriter operation, message in tape form rather than page form.

tape correction [ENG] A quantity applied to a taped distance to eliminate or reduce errors due to the physical condition of the tape and the manner in which it is used.

tape deck [ENG ACOUS] A tape-recording mechanism that is mounted on a motor board, including the tape transport, electronics, and controls, but no power amplifier or loudspeaker.

tape drive [COMPUT SCI] A tape reading or writing device consisting of a tape transport, electronics, and controls; it usually refers to magnetic tape exclusively. [ENG ACOUS] *See* tape transport.

tape editor [COMPUT SCI] A routine designed to help edit, revise, and correct a routine contained on a tape.

tape-float liquid-level gage [ENG] A liquid-level measurement by a float connected by a flexible tape to a rotating member, in turn connected to an indicator mechanism.

tape gage [ENG] A box- or float-type tide gage which consists essentially of a float attached to a tape and counterpoise; the float operates in a vertical box or pipe which dampens out short-period wind waves while admitting the slower tidal movement; for the standard installation, the tape is graduated with numbers increasing toward the float and is arranged with pulleys and counterpoise to pass up and down over a fixed reading mark as the tide rises and falls.

tape grass [BOT] *Vallisnerida spiralis*. An aquatic flowering plant belonging to the family Hydrocharitaceae. Also known as eel grass.

tape group *See* magnetic tape group.

tape label [COMPUT SCI] A record appearing at the beginning or at the end of a magnetic tape to uniquely identify the tape as the one required by the system.

tape-limited [COMPUT SCI] Pertaining to a computer operation in which the time required to read and write tapes exceeds the time required for computation.

tape loop [ENG ACOUS] A length of magnetic tape having the ends spliced together to form an endless loop; used in message repeater units and in some types of tape cartridges to eliminate the need for rewinding the tape.

tape mark [COMPUT SCI] **1.** A special character or coding, an attached piece of reflective material, or other device that indicates the physical end of recording on a magnetic tape. Also known as destination warning mark; end-of-tape mark. **2.** A special character that divides a file of magnetic tape into sections, usually followed by a record with data describing the particular section of the file. Also known as control mark.

tape operating system [COMPUT SCI] A computer operating system in which source programs and sometimes incoming data are stored on magnetic tape, rather than in the computer memory. Abbreviated TOS.

tape player [ENG ACOUS] A machine designed only for playback of recorded magnetic tapes.

tape plotting system [COMPUT SCI] A digital incremental plotter in which the digital data are supplied from a magnetic or paper tape.

tape-processing simultaneity [COMPUT SCI] A feature of some computer systems whereby reading or writing of data can be carried out on all the tape units at the same time, while the central processing unit continues to process data.

tape punch [COMPUT SCI] A machine that punches code holes and feed holes in paper tape.

taper [AERO ENG] An airfoil feature in which either the thickness or the chord length or both decrease from the root to the tip. [ELEC] Continuous or gradual change in electrical properties with mechanical position such as rotation or length; for example, continuous change of cross section of a waveguide, or distribution of resistance in a potentiometer.

taper bit [DES ENG] A long, cone-shaped noncoring bit used in drilling blastholes and in wedging and reaming operations.

tape reader *See* paper-tape reader.

tape reading [COMPUT SCI] A process of feeding coded tapes through a tape-to-card punch to convert the coded information into punched cards; tapes can be prepared on the typewriter tape punch or on the card-controlled tape punch; the latter is capable of punching tape that can be transmitted by telegraph.

tape recorder [ENG ACOUS] A device that records audio signals and other information on magnetic tape by selective magnetization of iron oxide particles that form a thin film on the tape; a recorder usually also includes provisions for playing back the recorded material.

tape recording [ENG ACOUS] The record made on a magnetic tape by a tape recorder.

tapered-bore [ORD] **1.** Referring to a gun with a tapered bore; the bore may be tapered throughout its length or only in the muzzle section. **2.** Pertaining to the ammunition for such a gun.

tapered core bit [DES ENG] A core bit having a conical diamond-inset crown surface tapering from a borehole size at the bit face to the next larger borehole size at its upper, shank, or reaming-shell end.

tapered joint [DES ENG] A firm, leakproof connection between two pieces of pipe having the thread formed with a slightly tapering diameter.

tapered pipeline [PETRO ENG] A changing of the pressure grade, either by change of wall thickness or material, of pipeline sections as working pressure is lessened.

tapered thread [DES ENG] A screw thread cut on the surface of a tapered part; it may be either a pine or box thread, or a V-, Acme, or square-screw thread.

tapered transmission line *See* tapered waveguide.

tapered waveguide [ELECTROMAG] A waveguide in which a physical or electrical characteristic changes continuously with distance along the axis of the waveguide. Also known as tapered transmission line.

tapered wheel [DES ENG] A flat-face grinding wheel with greater thickness at the hub than at the face.

tape-relay station [COMMUN] Component of a communications center which performs the function of receiving and forwarding messages by the tape-relay method of operation.

tape reperforator [COMMUN] A machine that automatically punches a paper tape from received signals. Also known as reperforator.

taper-in-thickness ratio [AERO ENG] A gradual change in the thickness ratio along the wing span with the chord remaining constant.

taper key [DES ENG] A rectangular machine key that is slightly tapered along its length.

taper pin [DES ENG] A small, tapered self-holding peg or nail used to connect parts together.

taper pipe thread *See* pipe thread.

TAPE-FLOAT LIQUID-LEVEL GAGE

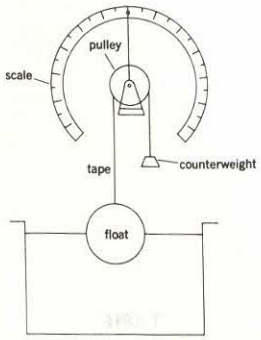


Diagram of tape-float liquid-level gage. *(D. M. Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

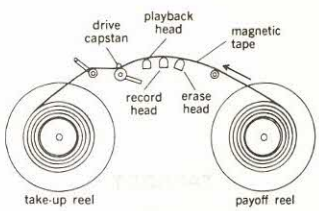
TAPE RECORDER

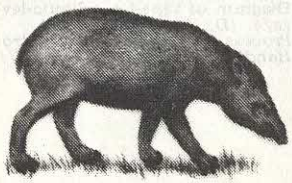


Elements of a typical magnetic tape recording and reproducing system. Capstan driven at constant angular speed ensures constant linear speed of the tape as it passes over magnetic heads. *(After H. F. Olson, Acoustical Engineering, Van Nostrand, 1957)*

TAPER KEY

End and longitudinal views of taper key with gib head. *(From P. H. Black and O. E. Adams, Jr., Machine Design, 3d ed., 1968)*

TAPIR



Brazilian tapir (*Tapirus terrestris*), the most common South American species of tapir.

TAPROOT

Taproot system of a dandelion.

taper plug gage [DES ENG] An internal gage in the shape of a frustrum of a cone used to measure internal tapers.

taper reamer [DES ENG] A reamer whose fluted portion tapers toward the front end.

taper ring gage [DES ENG] An external gage having a conical internal contour; used to measure external tapers.

taper-rolling bearing [MECH ENG] A roller bearing capable of sustaining end thrust by means of tapered rollers and coned races.

taper shank [DES ENG] A cone-shaped part on a tool that fits into a tapered sleeve on a driving member.

taper tap [DES ENG] A threaded cone-shaped tool for cutting internal screw threads.

tape search unit [COMPUT SCI] Small, fully transistorized, special-purpose, digital data-processing system using a stored program to perform logical functions necessary to search a magnetic tape in off-line mode, in response to a specific request.

tape serial number [COMPUT SCI] A number identifying a magnetic tape which remains unchanged throughout the time the tape is used, even though all other information about the tape may change.

tape skip [COMPUT SCI] A machine instruction to space forward and erase a portion of tape when a defect on the tape surface causes a write error to persist.

tape speed [ENG ACOUS] The speed at which magnetic tape moves past the recording head in a tape recorder; standard speeds are 15/16, 1 7/8, 3 3/4, 7 1/2, 15, and 30 inches per second (2.38125, 4.7625, 9.525, 19.05, 38.1, and 76.2 centimeters per second); faster speeds give improved high-frequency response under given conditions.

tape station [COMPUT SCI] A tape reading or writing device consisting of a tape transport, electronics, and controls; it may use either magnetic tape or paper tape.

tape-to-card [COMPUT SCI] The operation, or job step, required to transfer data from magnetic or paper tape to punched card.

tape-to-card converter [COMPUT SCI] A machine that converts information directly from punched or magnetic tape to cards.

tape-to-tape conversion [COMPUT SCI] A routine which directs a computer to copy information from one tape to another tape of a different kind; for example, from a seven-track onto a nine-track tape.

tape transmitter [COMMUN] **1.** Code-transmitting machine actuated by previously punched paper tape; used for high-speed sending because the tape can be fed through the machine much faster than it was originally punched. **2.** Facsimile transmitter designed to transmit subject copy printed on narrow tape.

tape transport [COMPUT SCI] The mechanism that physically moves a tape past a stationary head. Also known as transport. [ENG ACOUS] The mechanism of a tape recorder that holds the tape reels, drives the tape past the heads, and controls various modes of operation. Also known as tape drive.

tapetum [ANAT] **1.** A reflecting layer in the choroid coat behind the neural retina, chiefly in the eyes of nocturnal mammals. **2.** A tract of nerve fibers forming part of the roof of each lateral ventricle in the vertebrate brain. [BOT] A layer of nutritive cells surrounding the spore mother cells in the sporangium in higher plants; it is broken down to provide nourishment for developing spores.

tape unit [COMPUT SCI] A tape reading or writing device consisting of a tape transport, electronics, controls, and possibly a cabinet; the cabinet may contain one or more magnetic tape stations.

tape verifier [COMPUT SCI] A verifier for checking the accuracy of a punched paper tape by comparing it with a second manual punch of the same data; the machine stops whenever a character being punched the second time differs from that on the first tape.

tapeworm [INV ZOO] Any member of the class Cestoidea; all are vertebrate endoparasites, characterized by a ribbonlike body divided into proglottids, and the anterior end modified into a holdfast organ.

tape-wound core [ELECTROMAG] A length of ferromagnetic material in tape form, wound in such a way that each turn falls directly over the preceding turn.

taphocoenosis *See* thanatocoenosis.

taphole [MET] A hole in furnace or ladle through which molten metal is tapped.

taphonomy [PALEON] The study of fossil preservation, including all events during the transition of organisms from the biosphere to the lithosphere.

taphrogenesis *See* taphrogeny.

taphrogeny [GEOL] The formation of rift or trench phenomena, characterized by block faulting and associated subsidence. Also known as taphrogenesis.

taphrogeosyncline [GEOL] A geosyncline formed as a rift basin between faults.

taping [ENG] The process of measuring distances with a surveyor's tape.

tapioca [FOOD ENG] A food, high in starch, that is made from the cassava plant.

tapioca snow *See* snow pellets.

tapiolite [MINERAL] $Fe(Ta,Nb)_2O_6$ A mineral that is isomorphous with mossite; occurs in pegmatites or detrital deposits; an ore of tantalum.

tapir [VERT ZOO] Any of several large odd-toed ungulates of the family Tapiridae that have a heavy, sparsely hairy body, stout legs, a prehensile muzzle, a short tail, and small eyes.

Tapiridae [VERT ZOO] The tapirs, a family of perissodactyl mammals in the superfamily Tapiroidea.

Tapiroidea [VERT ZOO] A superfamily of the mammalian order Perissodactyla in the suborder Ceratomorpha.

tapped control [ELECTR] A rheostat or potentiometer having one or more fixed taps along the resistance element, usually to provide a fixed grid bias or for automatic bass compensation.

tapped-potentiometer function generator [ELECTR] A device used in analog computers for representing a function of one variable, consisting of a potentiometer with a number of taps held at voltages determined by a table of values of the variable; the input variable sets the angular position of a shaft that moves a slide contact, and the output voltage is taken from the slide contact.

tapped resistor [ELEC] A wire-wound fixed resistor having one or more additional terminals along its length, generally for voltage-divider applications.

tappet [MECH ENG] A lever or oscillating member moved by a cam and intended to tap or touch another part, such as a push rod or valve system.

tappet rod [MECH ENG] A rod carrying a tappet or tappets, as one for opening or closing the valves in a steam or an internal combustion engine.

tapping [MECH ENG] Forming an internal screw thread in a hole or other part by means of a tap. [MET] Opening the pouring hole of a melting furnace to remove molten metal.

tapping screw *See* self-tapping screw.

taproot [BOT] A root system in which the primary root forms a dominant central axis that penetrates vertically and rather deeply into the soil; it is generally larger in diameter than its branches.

tap screw *See* tap bolt.

tap switch [ELEC] Multicontact switch used chiefly for connecting a load to any one of a number of taps on a resistor or coil.

tap wrench [ENG] A tool used to clamp taps during tapping operations.

tar [MATER] A viscous material composed of complex, high-molecular-weight compounds derived from the distillation of petroleum or the destructive distillation of wood or coal.

tar acid [MATER] A mixture of phenols (phenols, cresols, and xylenols) found in tars and tar distillates; toxic, combustible, and soluble in alcohol and coal-tar hydrocarbons; used as a wood preservative and an insecticide for farm animals and also to make disinfectants.

taranakite [MINERAL] $KAl_3(PO_4)_3(OH)\cdot 9H_2O$ A white, gray, or yellowish-white mineral consisting of a hydrated basic phosphate of potassium and aluminum.

tarantata [METEOROL] A strong breeze from the northwest in the Mediterranean region.

tarantula [INV ZOO] **1.** Any of various large hairy spiders of the araneid suborder Mygalomorphae. **2.** Any of the wolf spiders comprising the family Lycosidae.

Tarantula *See* Loop Nebula.

tarapacaite [MINERAL] K_2CrO_4 A bright canary yellow, orthorhombic mineral consisting of potassium chromate; occurs in tabular form.

tar base [CHEM] A basic nitrogen compound found in coal tar, for example, pyridine and quinoline.

tarbuttite [MINERAL] $Zn_2(PO_4)(OH)$ A triclinic mineral of varying color, consisting of basic zinc phosphate.

tar camphor *See* naphthalene.

Tardigrada [INV ZOO] A class of microscopic, bilaterally symmetrical invertebrates in the subphylum Malacopoda; the body consists of an anterior prostomium and five segments surrounded by a soft, nonchitinous cuticle, with four pairs of ventrolateral legs.

tar distillate [MATER] A petroleum product produced by a tar still to which is charged the tarlike bottoms from continuous crude stills, pressure stills, cracking coils, or other petroleum refinery equipment.

tare [MECH] The weight of an empty vehicle or container; subtracted from gross weight to ascertain net weight.

tare effect [FL MECH] In wind tunnel testing, the forces and moments due to support assembly and mutual interference between support assembly and model.

target [COMPUT SCI] An index card or test document used to assist, reference, or calibrate equipment. [ATOM PHYS] The atom or nucleus in an atomic or nuclear reaction which is initially stationary. [ELECTR] **1.** In an x-ray tube, the anode or anticathode which emits x-rays when bombarded with electrons. **2.** In a television camera tube, the storage surface that is scanned by an electron beam to generate an output signal current corresponding to the charge-density pattern stored there. **3.** In a cathode-ray tuning indicator tube, one of the electrodes that is coated with a material that fluoresces under electron bombardment. [ENG] **1.** The sliding weight on a leveling rod used in surveying to enable the staffman to read the line of collimation. **2.** The point that a borehole or an exploratory work is intended to reach. **3.** In radar and sonar, any object capable of reflecting the transmitted beam. [ORD] **1.** A geographical area, complex, or installation planned for capture or destruction by military forces. **2.** A paper or pasteboard item of square or rectangular shape designed to be fired upon from a specified range during practice or while testing an automatic firearm such as an automatic rifle, machine gun, or submachine gun; it is used to establish a degree of accuracy; it usually consists of a series of geometric patterns of various shapes on a common background. [PHYS] An object or substance subjected to bombardment or irradiation by particles or electromagnetic radiation.

target acquisition [AERO ENG] The process of optically, manually, mechanically, or electronically orienting a tracking system in direction and range to lock on a target. [ELECTR] **1.** The first appearance of a recognizable and useful echo signal from a new target in radar and sonar. **2.** *See* acquire.

target acquisition radar [ENG] An antiaircraft artillery radar, normally of lesser range capabilities but of greater inherent accuracy than that of surveillance radar, whose normal function is to acquire aerial targets either by independent search or on direction of the surveillance radar, and to transfer these targets to tracking radars.

target analysis [ORD] Examination of potential targets to determine their military importance, their relative priority for attack, and the capabilities of available weapons for such attack.

target angle [NAV] The relative bearing of one craft from another craft, measured clockwise through 360°. [ORD] The angle at the target subtended by the observing base line.

target approach point [AERO ENG] In air transport operations, a navigational checkpoint over which the final turn-in to the drop zone–landing zone is made.

target array [ORD] A graphic representation of enemy forces, personnel, and facilities in a specific situation, accompanied by a target analysis.

target bearing [ORD] **1.** The true compass bearing of a target from a firing ship. **2.** The bearing of a target measured in the horizontal from the bow of one's own ship clockwise from 0 to 360°, or from the nose of one's own aircraft in hours of the clock.

target concentration [ORD] A grouping of geographically proximate targets.

target configuration [COMPUT SCI] The combination of input, output, and storage units and the amount of computer memory required to carry out an object program.

target cross section *See* echo area.

target-designating system [ELECTR] A system for designating to one instrument a target which has already been located by a second instrument; it employs electrical data transmitters and receivers which indicate on one instrument the pointing of another.

target deviation [ORD] Distance from point of impact or point of burst to the target.

target discrimination [ELECTR] The ability of a detection or guidance system to distinguish a target from its background or to discriminate between two or more targets that are close together.

target drone [AERO ENG] A pilotless aircraft controlled by radio from the ground or from a mother ship and used exclusively as a target for antiaircraft weapons.

target echo [ELECTROMAG] A radio signal reflected by an airborne or other target and received by the radar station which transmitted the original signal.

target glint *See* scintillation.

target identification [ORD] The act of determining the nature of a target, including whether it is a friend or foe.

target indicating system [ORD] A system which indicates to the tracker of an antiaircraft automatic weapon the direction of approach of a suitable target, or the approach of a new target after engagement with one target has been broken off.

target information center [ORD] An intelligence center set up afloat or ashore for assembly, evaluation, interpretation, dissemination, and coordination of target information for supporting weapons, that is, artillery, naval gunfire, and air strike.

target language [COMPUT SCI] The language into which a program (or text) is to be converted.

target length [ORD] Length of a target as it appears to an observer or gunner at the moment the gun is fired.

target noise [ELECTROMAG] Statistical variations in a radar echo signal due to the presence on the target of a number of reflecting elements randomly oriented in space; target noise can cause scintillation.

target offset [ORD] Horizontal angle at the target between a line from the target to the piece and a line from the target to the observation post.

target of opportunity [ORD] **1.** A target visible to a surface or air sensor or observer, which is within range of available weapons and against which fire has not been scheduled or requested. **2.** A nuclear target observed or detected after an operation begins that has not been previously considered, analyzed, or planned for a nuclear strike.

target pattern [AERO ENG] The flight path of aircraft during the attack phase.

target phase [COMPUT SCI] The stage of handling a computer program at which the object program is first carried out after it has been compiled.

target program *See* object program.

target range [ORD] Area equipped for practice in shooting at targets.

target response [ORD] The effect on men, material, and equipment of blast, heat, light, and nuclear radiation resulting from the explosion of a nuclear weapon.

target routine *See* object program.

target scintillation *See* scintillation.

target seeker [ORD] **1.** A missile having a self-contained system that provides homing guidance to the target. Also known as homer. **2.** The device within such a missile that directs it to the target.

target selector [ORD] Component of both a target-designating system and a target-indicating system; it is an off-carriage observing instrument provided for the purpose of selecting an initial or new target, and it is electrically connected to the gun mount in such a manner as to slew the gun to the approximate azimuth and elevation of a selected target (wnen the selector is a component of a target-designating system), and to give the tracker an indication of the direction of approach of selected target (when the selector is a component of a target-indicating system).

target signal [ELECTROMAG] The radio energy returned to a radar by a target. Also known as echo signal; video signal.

target signature [ELECTR] Characteristic pattern of the target displayed by detection and classification equipment.

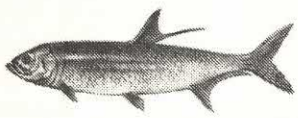
target spot [PL PATH] Any plant disease characterized by lesions in the form of concentric markings.

target spotter [ORD] Small, black metal disk attached to a target in practice shooting to show the shooter exactly where the bullet has hit.

target strength [ACOUS] A measure of the reflecting power of a sonar target, which is expressed in decibels by the equation $E + 2L - S$, where E is the echo level, L is the total transmission loss, and S is the source level.

target system [ORD] **1.** All the targets situated in a particular geographic area and functionally related. **2.** A group of

TARPON

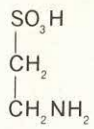


The tarpon *(Megalops atlantica)*, largest of the herringlike fishes, reaching a length of 8 feet (2.4 meters).

TARSIER

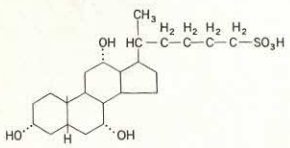
The tarsier has adhesive pads on the expanded ends of the fingers and toes.

TAURINE



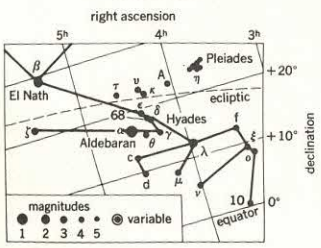
Structural formula of taurine.

TAUROCHOLIC ACID



Structural formula of taurocholic acid.

TAURUS



Line pattern of the constellation Taurus. The grid lines represent the coordinates of the sky. The apparent brightness, or magnitude, of the stars is shown by the sizes of the dots, which are graded by appropriate numbers as indicated.

targets which are so related that their destruction will produce some particular effect desired by the attacker.

target timing [NAV] The timing of successive positions of a radar target, as plotted on a polar coordinate diagram, for the purpose of determining ground speed and track of a craft.

target-type flowmeter [ENG] A fluid-flow measurement device with a small circular target suspended centrally in the flow conduit; the target transmits force to a force-balance transmitter by means of a pivoted bar.

target volume [ELECTROMAG] The volume of that part of a precipitation-type radar target from which a target signal is received; if the precipitation completely fills the radar beam, the target volume is identical with the radar volume.

target vulnerability [ORD] A factor considered in target selection that relates each potential target to a standard scale in terms of the degree to which it is considered vulnerable; each target is given a scale number.

tariff [COMMUN] The rate charged by a communications common carrier for the use of a specified service or facility. [IND ENG] A government-imposed duty on imported or exported goods.

tarlatan [TEXT] A thin, open-mesh, transparent muslin used for stiffening or decorating.

tarn [GEOGR] A landlocked pool or small lake that may occur in a marsh or swamp, or that may occupy a basin amid mountain ranges.

tarnish [MET] Discoloration of a metal surface due to the formation of a thin film of oxide, sulfide, or some other corrosion product. [MINERAL] The altered color and luster of a mineral surface; characteristic of copper-bearing minerals.

tar paper [MATER] Heavy construction paper coated or impregnated with tar.

tarpaulin [MATER] A sheet of waterproof canvas or other material; used to cover and protect construction materials and equipment, athletic fields, vehicles, or other exposed objects.

tarpon [VERT ZOO] *Megalops atlantica*. A herringlike fish of the family Elopidae weighing up to 300 pounds (136 kilograms) and reaching a length of 8 feet (2.4 meters); it has a single soft, rayed dorsal fin, strong jaws, a bony plate under the mouth, numerous small teeth, and coarse, bony flesh covered with large scales.

tarragon [FOOD ENG] A herb prepared from the pungent leaves of the tarragon tree (*Artemisia dracunculus*).

tarragon oil *See* estragon oil.

tarring [ENG] The coating of piles for permanent underground work with prepared acid-free tar.

tarsal gland [ANAT] Any of the sebaceous glands in the tarsal plates of the eyelids. Also known as Meibomian gland.

tar sand [GEOL] A type of oil sand; a sand whose interstices are filled with asphalt that remained after the escape of the lighter fractions of crude oil.

tar seep [GEOL] Natural tar that, because of its close proximity to the ground surface, seeps from cracks in the earth or from between rocks, often forming pits or pools.

tarsia *See* intarsia.

tarsier [VERT ZOO] Any of several species of primates comprising the genus *Tarsius* of the family Tarsiidae characterized by a round skull, a flattened face, and large eyes that are separated from the temporal fossae in the orbital depression, and by adhesive pads on the expanded ends of the fingers and toes.

Tarsiidae [VERT ZOO] The tarsiers, a family of prosimian primates distinguished by incomplete postorbital closure and a greatly elongated ankle region.

Tarsonemidae [INV ZOO] A small family of phytophagous mites in the suborder Trombidiformes.

tarsus [ANAT] **1.** The instep of the foot consisting of the calcaneus, talus, cuboid, navicular, medial, intermediate, and lateral cuneiform bones. **2.** The dense connective tissues supporting an eyelid.

tartar *See* dental calculi.

Tartar [ORD] A U.S. Navy surface-to-air guided missile intended primarily for use on destroyers; it is a smaller version of Terrier and has about the same range.

tartar emetic [ORG CHEM] $K(SbO)C_4H_4O_6 \cdot \frac{1}{2}H_2O$ A transparent crystalline compound, soluble in water; used to attract and kill moths, wasps, and yellow jackets. Also known as antimony potassium tartrate; potassium antimonyl tartrate.

tartaric acid [ORG CHEM] $HOOC(CHOH)_2COOH$ Water- and alcohol-soluble colorless crystals with an acid taste, melts at 170°C; used as a chemical intermediate and a sequestrant and in tanning, effervescent beverages, baking power, ceramics, photography, textile processing, mirror silvering, and metal coloring. Also known as dihydroxysuccinic acid.

tartary buckwheat [BOT] One of three buckwheat species grown commercially; the leaves are narrower than the other two species and arrow-shaped, and the flowers are smaller with inconspicuous greenish-white sepals. Also known as duck wheat; hulless buckwheat; rye buckwheat.

tartrate [ORG CHEM] $M_2C_4H_4O_6$ A salt or ester of tartaric acid, for example, sodium tartrate, $Na_2C_4H_4O_6$.

tartrazine [ORG CHEM] $C_{16}H_9N_4O_9S_2$ A bright orange-yellow, water-soluble powder, used as a food, drug, and cosmetic dye.

task [COMPUT SCI] A set of instructions, data, and control information capable of being executed by the central processing unit of a digital computer in order to accomplish some purpose; in a multiprogramming environment, tasks compete with one another for control of the central processing unit, but in a nonmultiprogramming environment a task is simply the current work to be done.

task descriptor [COMPUT SCI] The vital information about a task in a multitask system which must be saved when the task is interrupted. Also known as state vector.

task fleet [ORD] A mobile command consisting of ships and aircraft necessary for the accomplishment of a specific major task which may be of a continuing nature.

task management [COMPUT SCI] The functions, assumed by the operating system, of switching the processor among tasks, scheduling, sending messages or timing signals between tasks, and creating or removing tasks.

tasmanite [GEOL] An impure coal, transitional between cannel coal and oil shale. Also known as combustible shale; Mersey yellow coal; white coal; yellow coal.

tassel [BOT] The male inflorescence of corn and certain other plants.

taste [PHYSIO] A chemical sense by which flavors are perceived depending on taste, tactile, and warm and cold receptors in the mouth, as well as smell receptors in the nose.

taste bud [ANAT] An end organ consisting of goblet-shaped clusters of elongate cells with microvilli on the distal end to mediate the sense of taste.

TAT *See* thematic apperception test.

T attenuator [ELEC] **1.** A resistive attenuator with three resistors forming a T network. **2.** A power-tap type of attenuator which removes part of the power from a main line through a T connection and dissipates the power, without reflection into the main line.

tatting [TEXT] **1.** A knotted lace made by hand in various designs which are produced with the fingers and a shuttle. **2.** The process of making tatting lace by looping and knotting a single cotton thread with the fingers and a shuttle.

Tauber test [ANALY CHEM] A color test for identification of pentose sugars; the sugars produce a cherry-red color when heated with a solution of benzidine in glacial acetic acid.

tau meson [PARTIC PHYS] Former name for the K meson, especially one which decays into three pions.

Taurid meteor [ASTRON] A meteor shower occurring from about October 26 to November 16 in the Northern Hemisphere, with the maximum occurring about the first week in November; the radiant lies in the constellation Taurus.

taurine [ORG CHEM] $NH_2CH_2CH_2SO_3H$ A crystalline compound that decomposes at about 300°C; present in bile combined with cholic acid. Also known as 2-aminoethanesulfonic acid.

taurocholic acid [BIOCHEM] $C_{26}H_{45}NO_7S$ A common bile acid with a five-carbon chain; it is the product of the conjugation of taurine with cholic acid; crystallizes from an alcohol ether solution, and decomposes at about 125°C. Also known as cholaic acid; cholytaurine.

taurodont [ANAT] Of teeth, having a large pulp cavity and reduced roots.

Taurus [ASTRON] A northern constellation; right ascension 4 hours, declination 15° north; it includes the star Aldebaran, useful in navigation. Also known as Bull.

Taurus A [ASTRON] A strong, discrete radio source in the constellation Taurus, associated with the Crab Nebula.

Taurus cluster [ASTRON] A cluster of stars observed in the region of the constellation Taurus; it is about 130 light-years

(1.23×10^{18} meters) from the sun, and 58 light-years (5.49×10^{17} meters) in diameter.

taut-band ammeter [ENG] A modification of the permanent-magnet movable-coil ammeter in which the jeweled bearings and control springs are replaced by a taut metallic band rigidly held at the ends; the coil is firmly attached to the band, and restoring torque is supplied by twisting of the band.

taut-line cableway [MECH ENG] A cableway whose operation is limited to the distance between two towers, usually 3000 feet (914 meters) apart, has only one carrier, and the traction cable is reeved at the carrier so that loads can be raised and lowered; the towers can be mounted on trucks or crawlers, and the machine shifted across a wide area.

tautomerism [CHEM] The reversible interconversion of structural isomers of organic chemical compounds; such interconversions usually involve transfer of a proton.

tau-value [METEOROL] The time rate of change of D value at a fixed point defined by the relation $\tau = (\Delta D)/(\Delta t)$, where Δt is the change in time and ΔD is the change in D value during this time interval; tau-values are expressed in terms of feet per hour; tau-value lines are drawn on 4-D charts and constitute the time dimension of these charts.

tavistockite [MINERAL] $Ca_3Al_2(PO_4)_2(OH)_6$ A white, orthorhombic mineral consisting of a basic phosphate of calcium and aluminum.

tawing [ENG] A tanning process in which alum is used as a partial tannage, supplementing or replacing chrome.

Taxales [BOT] A small order of gymnosperms in the class Pinatae; members are trees or shrubs with evergreen, often needlelike leaves, with a well-developed fleshy covering surrounding the individual seeds, which are terminal or subterminal on short shoots.

taxi channel [CIV ENG] A defined path, on a water airport, intended for the use of taxiing aircraft.

taxi-channel lights [NAV] Aeronautical ground lights arranged along a taxi channel to indicate the route to be followed by taxiing aircraft.

taxis [PHYSIO] A mechanism of orientation by means of which an animal moves in a direction related to a source of stimulation.

taxiway [CIV ENG] A specially prepared or designated path on an airport for taxiing aircraft.

Taxocrinida [PALEON] An order of flexible crinoids distributed from Ordovician to Mississippian.

Taxodonta [INV ZOO] A subclass of pelecypod mollusks in which the hinge is of the taxodontal type, that is, the dentition is a series of similar alternating teeth and sockets along the hinge margin.

taxon [SYST] A taxonomic group or entity.

taxonomic category [SYST] One of a hierarchy of levels in the biological classification of organisms; the seven major categories are kingdom, phylum, class, order, family, genus, species.

taxonomy [SYST] A study aimed at producing a hierarchical system of classification of organisms which best reflects the totality of similarities and differences.

Tayassuidae [VERT ZOO] The peccaries, a family of artiodactyl mammals in the superfamily Suoidae.

Taylor connection [ELEC] A transformer connection for converting three-phase power to two-phase power, or vice versa.

Taylor effect [FL MECH] A phenomenon in which the relative motion of a homogeneous rotating liquid tends to be the same in all planes perpendicular to the axis of rotation.

taylorite *See* bentonite.

Taylor number [FL MECH] A nondimensional number arising in problems of a rotating viscous fluid, written as $T = (f^2h^4)/\nu^2$, where f is the Coriolis parameter (or, for a cylindrical system, twice the rate of rotation of the system), h the depth of the fluid, and ν the kinematic viscosity; the square root of the Taylor number is a rotating Reynolds number, and the fourth root is proportional to the ratio of the depth h to the depth of the Ekman layer.

Taylor-Orowan dislocation *See* edge dislocation.

Taylor process [MET] A process for making extremely fine wire by stretching wire in a glass tube at elevated temperatures, or drawing wire through a bead of molten glass and then through dies.

Taylor series [MATH] The Taylor series corresponding to a function $f(x)$ at a point x_0 is the infinite series whose nth term is $(1/n!)\cdot f^{(n)}(x_0)(x-x_0)^n$, where $f^{(n)}(x)$ denotes the nth derivative of $f(x)$. [NAV ARCH] Resistance charts based upon model tests of a series of ships derived by altering the proportions of a single parent form; used to study the effects of these alterations on resistance to the ship's motion, and to predict the powering requirements for new ships.

Taylor's theorem [MATH] The theorem that under certain conditions a real or complex function can be represented, in a neighborhood of a point where it is infinitely differentiable, as a power series whose coefficients involve the various order derivatives evaluated at that point.

Tay-Sachs disease [MED] A form of sphingolipidosis, transmitted as an autosomal recessive, in which there is an accumulation in neuronal cells of the neuraminic fraction of gangliosides; manifested clinically within the first few months of life by hypotonia progressing to spasticity, convulsions, and visual loss accompanied by the appearance of a cherry-red spot at the macula lutea. Also known as infantile amaurotic familial idiocy.

Tb *See* terbium.

TBE *See* binding energy.

T beam [CIV ENG] A metal beam or bar with a T-shaped cross section.

TBH *See* 1,2,3,4,5,6-hexachlorocyclohexane.

T bolt [DES ENG] A bolt with a T-shaped head, made to fit into a T-shaped slot in a drill swivel head or in the bed of a machine.

TBP *See* tributyl phosphate.

tbsp *See* tablespoonful.

TBT *See* tetrabutyl titanate.

Tc *See* technetium.

TCA *See* trichloroacetic acid.

T cell [IMMUNOL] One of a heterogeneous population of thymus-derived lymphocytes which participates in the immune responses.

Tchebycheff *See* Chebyshev.

Tchernozem *See* Chernozem.

Tchuprow-Neymann allocation [STAT] A technique of stratified sampling in which the size of each strata sample is proportional to the size of the strata population and the variance of the strata.

T circulator [ELECTROMAG] A circulator in which three identical rectangular waveguides are joined asymmetrically to form a T-shaped structure, with a ferrite post or wedge at its center; power entering any waveguide emerges from only one adjacent waveguide.

T connector [ELEC] A type of electric connector that joins a through conductor to another conductor at right angles to it.

TCP *See* tricresyl phosphate.

TCTP *See* tetrachlorothiophene.

TD *See* transmitter-distributor.

TDE *See* 2,2-bis(*para*-chlorophenyl)-1,1-dichloroethane.

TDR *See* time-domain reflectometer.

TDZ *See* touch-down zone.

Te *See* tellurium.

tea [BOT] *Thea sinensis*. A small tree of the family Theaceae having lanceolate leaves and fragrant white flowers; a caffeine beverage is made from the leaves of the plant.

TEA *See* transferred-electron amplifier.

teaching reactor *See* research reactor; subcritical reactor.

TEA chloride *See* tetraethylammonium chloride.

teakwood [MATER] The strong, durable, yellowish-brown wood obtained from the teak tree, *Tectona grandis*.

TEA laser [OPTICS] A gas laser in which a glow discharge is maintained without arc formation at atmospheric pressure (which is relatively high for a gas laser) by using a discharge which is transverse rather than parallel to the optic axis. Derived from transversely excited atmospheric pressure laser.

teallite [MINERAL] $PbSnS_2$ A grayish-black, orthorhombic mineral consisting of lead tin sulfide.

tear down [ENG] **1.** To disassemble a drilling rig preparatory to moving it to another drill site. **2.** To disassemble a machine or change the jigs and fixtures.

tear-down time [IND ENG] The downtime of a machine following a given work order which usually involves removing parts such as jigs and fixtures and which must be completely finished before setting up for the next order.

teardrop balloon [AERO ENG] A sounding balloon which, when operationally inflated, resembles an inverted teardrop; this shape was determined primarily by aerodynamic considera-

T CONNECTOR

Drawing of a T connector.

tions of the problem of obtaining maximum stable rates of a balloon ascension.

tear fault [GEOL] A very steep to vertical fault associated with and perpendicular to the strike of an overthrust fault.

tear gas [MATER] A substance (usually liquid) which, when atomized and of a certain concentration, causes temporary but intense eye irritation and a blinding flow of tears; chloroacetophenone is a common tear gas. Also known as lacrimator.

tear gland *See* lacrimal gland.

tears [COMMUN] In a television picture, a horizontal disturbance caused by noise, in which the picture appears to be torn apart.

tear strength [MECH] The force needed to initiate or to continue tearing a sheet or fabric.

teaser transformer [ELEC] Transformer, of two T-connected, single-phase units for three-phase to two-phase or two-phase to three-phase operation, which is connected between the midpoint of the main transformer and the third wire of the three-phase system.

teaspoonful [MECH] A unit of volume used particularly in cookery and pharmacy, equal to 1⅓ fluid drams, or ⅓ tablespoonful; in the United States this is equal to approximately 4.9289 cubic centimeters, in the United Kingdom to approximately 4.7355 cubic centimeters. Abbreviated tsp; tspn.

tebuthiuron [ORG CHEM] $C_9H_{16}N_4OS$ A colorless solid with a melting point of 161.5–164°C; used as an herbicide in noncropland areas. Also known as *N*-[5-(1,1-dimethyl)-1,3,4–thiadiazol-2-yl]-*N*,*N*′-dimethylurea.

technetium [CHEM] A member of group VII, symbol Tc, atomic number 43; derived from uranium and plutonium fission products; chemically similar to rhenium and manganese; isotope Tc^{99} has a half-life of 2×10^5 years; used to absorb slow neutrons in reactor technology. [MET] Silver-gray metal with a high melting point, slightly magnetic.

technetron [ELECTR] High-power multichannel field-effect transistor.

technical atmosphere [MECH] A unit of pressure in the metric technical system equal to one kilogram-force per square centimeter. Abbreviated at.

technical characteristics [ENG] Those characteristics of equipment which pertain primarily to the engineering principles involved in producing equipment possessing desired characteristics, for example, for electronic equipment; technical characteristics include such items as circuitry, and types and arrangement of components.

technical chlorinated camphene *See* toxaphene.

technical cohesive strength [MET] Fracture stress in a notched tensile test.

technical control board [ELEC] Testing position in a switch center or relay station with provisions for testing switches and associated access lines and trunks.

technical evaluation [ENG] The study and investigation to determine the technical suitability of material, equipment, or a system.

technical information [ENG] Information, including scientific information, which relates to research, development, engineering, testing, evaluation, production, operation, use, and maintenance of equipment.

technical inspection [ENG] Inspection of equipment to determine whether it is serviceable for continued use or needs repairs.

technical intelligence [ORD] Intelligence pertaining to foreign or enemy technological developments capable of, or having, a practical application to warfare.

technical load [ELEC] Portion of a communications-electronics facility operational power load required for primary and ancillary equipment, including necessary lighting and air conditioning or ventilation required for full continuity of operation.

technical maintenance [ENG] A category of maintenance that includes the replacement of unserviceable major parts, assemblies, or subassemblies, and the precision adjustment, testing, and alignment of internal components.

technical manual [ORD] A U.S. Army publication containing detailed information on technical procedures, including instructions on the operation, handling, maintenance, and repair of equipment.

technical representative [IND ENG] A person who represents one or more manufacturers in an area and who gives technical advice on the application, installation, operation, and maintenance of their products, in addition to selling the products.

technical specifications [ENG] A detailed description of technical requirements stated in terms suitable to form the basis for the actual design-development and production processes of an item having the qualities specified in the operational characteristics.

technical white oil *See* white oil.

technology [SCI TECH] Systematic knowledge of and its application to industrial processes; closely related to engineering and science.

technosphere [ECOL] The part of the physical environment affected through building or modification by humans.

Tectibranchia [INV ZOO] An order of mollusks in the subclass Opisthobranchia containing the sea hares and the bubble shells; the shell may be present, rudimentary, or absent.

tectite *See* tektite.

tectofacies [GEOL] A lithofacies that is interpreted tectonically.

tectogene [GEOL] A long, relatively narrow downward fold of sialic crust considered to be an early phase in mountain-building processes. Also known as geotectogene.

tectogenesis *See* orogeny.

tectonic analysis *See* petrotectonics.

tectonic breccia [PETR] A breccia developed from brittle rocks, formed as a result of crustal movements and produced by lateral or vertical pressure. Also known as dynamic breccia; pressure breccia.

tectonic conglomerate *See* crush conglomerate.

tectonic cycle [GEOL] The orogenic cycle which relates larger crustal features, such as mountain belts, to a series of stages of development. Also known as geosynclinal cycle.

tectonic framework [GEOL] The relationship in space and time of subsiding, stable, and rising tectonic elements in a sedimentary source area.

tectonic land [GEOL] Linear fold ridges and volcanic islands which existed for a short time in the interior sections of an orogenic belt during the geosynclinal phase.

tectonic lens [GEOL] An elongate, sausage-shaped body of rock formed by distortion of a continuous incompetent layer enclosed between competent layers, similar to a boudin, but genetically distinct.

tectonic map [GEOL] A map which shows the architecture of the upper portion of the earth's crust.

tectonic moraine [GEOL] An aggregation of boulders incorporated in the base of an overthrust mass.

tectonic patterns [GEOL] The arrangement of the large structural units of the earth's crust, such as mountain systems, shields or stable areas, basins, arches, and volcanic archipelagoes.

tectonic plate [GEOL] Any one of the internally rigid crustal blocks of the lithosphere which move horizontally across the earth's surface relative to one another. Also known as crustal plate.

tectonic rotation [GEOL] Internal rotation of a tectonite in the direction of transport.

tectonics [CIV ENG] **1.** The science and art of construction with regard to use and design. **2.** Design relating to crustal deformations of the earth. [GEOL] A branch of geology that deals with regional structural and deformational features of the earth's crust, including the mutual relations, origin, and historical evolution of the features. Also known as geotectonics.

tectonite [PETR] A rock in which the history of its deformation is reflected in its fabric.

tectonoeustatism [OCEANOGR] Fluctuations of sea level due to changes in the capacities of the ocean basins resulting from earth movements.

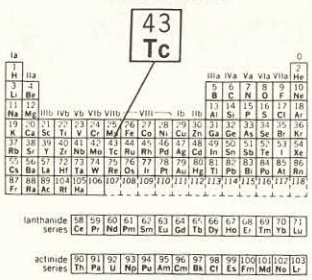
tectonomagnetism [GEOPHYS] Study of magnetic anomalies due to tectonic stress.

tectonometer [ENG] An apparatus, including a microammeter, used on the surface to obtain knowledge of the structure of the underlying rocks.

tectonophysicist [GEOPHYS] One who studies elastic deformation of flow and rupture of constituent materials of the earth's crust and makes deductions concerning the forces that cause these deformations.

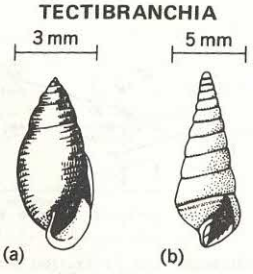
tectonophysics [GEOPHYS] A branch of geophysics dealing with the physical processes involved in forming geological structures.

TECHNETIUM



Periodic table of the chemical elements showing the position of technetium.

TECTIBRANCHIA



Shells of two genera of Tectibranchia. *(a) Acteon. (b) Pyramidella. (From A. M. Keen and J. C. Pearson, Illustrated Key to West North American Gastropod Genera, Stanford University Press, 1958)*

tectoquinone [ORG CHEM] $C_{15}H_{10}O_2$ A white compound with needlelike crystals; sublimes at 177°C; insoluble in water; used as an insecticide to treat wood. Also known as 2-methyl anthraquinone.

tectorial membrane [ANAT] **1.** A jellylike membrane covering the organ of Corti in the ear. **2.** A strong sheet of connective tissue running from the basilar part of the occipital bone to the dorsal surface of the bodies of the axis and third cervical vertebra.

tectosilicate [MINERAL] A structural type of silicate in which all four oxygen atoms of the silicate tetrahedra are shared with neighboring tetrahedra; tectosilicates include quartz, the feldspars, the feldspathoids, and zeolites. Also known as framework silicate.

tectosome [GEOL] A body of strata representing a tectotope.

tectosphere [GEOL] The region of the earth's crust occupied by the tectonic plates.

tectum [ANAT] A rooflike structure of the body, especially the roof of the midbrain including the corpora quadrigemina.

TEDP *See* tetraethyl dithionopyrophosphate.

tee [ENG] Shaped like the letter T.

tee joint [ENG] A joint in which members meet at right angles, forming a T.

teel oil *See* sesame oil.

teeming [MET] Pouring molten metal, usually a ferrous metal, into an ingot mold from a furnace or ladle.

teepleite [MINERAL] $Na_2BO_2Cl{\cdot}2H_2O$ A mineral composed of hydrous chloride and borate of sodium.

teeth of the gale [METEOROL] An old nautical term for the direction from which the wind is blowing (upwind, windward); to sail into the teeth of the gale is to sail to windward.

teflon shakes *See* metal fume fever.

TEG *See* tetraethylene glycol; triethylene glycol.

tegmen [BIOL] An integument or covering. [BOT] The inner layer of a seed coat. [INV ZOO] A thickened forewing of Orthoptera, Coleoptera, and certain other insects.

tegmentum [ANAT] A mass of white fibers with gray matter in the cerebral peduncles of higher vertebrates. [BOT] The outer layer, or scales, of a leaf bud. [INV ZOO] The upper layer of a shell plate in Amphineura.

Tego [MATER] A thin film phenol-formaldehyde adhesive, used with thin veneers.

tehuantepecer [METEOROL] A violent squally wind from north or north-northeast in the Gulf of Tehuantepec in winter; it originates in the Gulf of Mexico, as a norther which crosses the isthmus and blows through the gap between the Mexican and Guatemalan mountains.

teichoic acid [BIOCHEM] A polymer of ribitol or glycerol phosphate with additional compounds such as glucose linked to the backbone of the polymer; found in the cell walls of some bacteria.

Teiidae [VERT ZOO] The tegus lizards, a diverse family of the suborder Sauria that is especially abundant and widespread in South America.

T-E index *See* temperature-efficiency index.

teineite [MINERAL] $CuTeO_3{\cdot}2H_2O$ A greenish to yellowish, probably triclinic mineral consisting of a hydrated sulfatetellurate of copper; occurs as crystals.

tektite [GEOL] A collective term applied to certain objects of natural glass of debatable origin that are widely strewn over the land and in sediments under the oceans; composition and size vary, and overall shapes resemble splash forms; most tektites are believed to be of extraterrestrial origin. Also known as obsidianite; tectite.

TEL *See* tetraethyllead.

telain *See* provitrain.

telamon [INV ZOO] A curved chitinous outgrowth of the cloacal wall in various male nematodes.

telangiectasis [MED] Localized dilation of capillaries forming dark-red, wartlike elevations varying in size from about 1 to 7 millimeters.

telautograph [COMMUN] A writing telegraph instrument in which manual movement of a pen at the transmitting position varies the current in two circuits in such a way as to cause corresponding movements of a pen at the remote receiving instrument; ordinary handwriting can thus be transmitted over wires.

TELCOMP [COMPUT SCI] A computer language developed by Bolt, Beranek, and Newman, Inc., expressly as a time-sharing language; the user of the language is connected to a computer by a teletype terminal attached to a telephone line.

tele- [SCI TECH] Prefix meaning from a distance.

telecast [COMMUN] A television broadcast intended for reception by the general public, involving the transmission of the picture and sound portions of the program.

telecentric system [OPTICS] A telescopic system whose aperture stop is located at one of the foci of the objective lens.

teleceptor [PHYSIO] A sense receptor which transmits information about portions of the external environment which are not necessarily in direct contact with the organism, such as the receptors of the ear, eye, and nose.

telecine camera [ELECTR] A television camera used in conjunction with film or slide projectors to televise motion pictures and still images.

telecommunications [COMMUN] Communication over long distances.

telecommunications coordinating committee [COMMUN] Committee organized by the U.S. State Department and composed of major government departments and agencies; makes recommendations on telecommunications matters affecting international telecommunications.

teleconference [COMMUN] A conference between persons remote from one another but linked by a telecommunications system.

Telegeusidae [INV ZOO] The long-lipped beetles, a small family of colepteran insects in the superfamily Cantharoidea confined to the western United States.

telegraph alphabet *See* telegraph code.

telegraph bandwidth [COMMUN] The difference between the limiting frequencies of a channel used to transmit telegraph signals.

telegraph buoy [ENG] A buoy used to mark the position of a submarine telegraph cable.

telegraph cable [ELEC] A uniform conductive circuit consisting of twisted pairs of insulated wires or coaxially shielded wires or combinations of each, used to carry telegraph signals.

telegraph carrier [COMMUN] The single-frequency wave which is modulated by transmitting apparatus in carrier telegraphy.

telegraph circuit [COMMUN] The complete wire or radio circuit over which signal currents flow between transmitting and receiving apparatus in a telegraph system.

telegraph code [COMMUN] A system of symbols for transmitting telegraph messages in which each letter or other character is represented by a set of long and short electrical pulses, or by pulses of opposite polarity, or by time intervals of equal length in which a signal is present or absent. Also known as telegraph alphabet.

telegraph concentrator [ELEC] Switching arrangement by means of which a number of branch or subscriber lines or station sets may be connected to a lesser number of trunklines, operating positions, or instruments through the medium of manual or automatic switching devices to obtain more efficient use of facilities.

telegraph distributor [ELEC] Device which effectively associates one direct-current or carrier-telegraph channel in rapid succession with the elements of one or more sending or receiving devices.

telegraph emission [COMMUN] The signal transmitted by a telegraph system, classified by type of transmission, type of modulation, bandwidth, and supplementary characteristics.

telegrapher's equation [MATH] The partial differential equation $\partial^2 f/\partial x^2 = a^2(\partial^2 f/\partial y^2) + b(\partial f/\partial y) + cf$, where a, b, and c are constants; appears in the study of atomic phenomena.

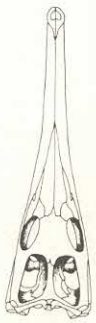
telegraph grade [COMMUN] The class of communication circuits that can transmit only telegraphic signals, comprising the lowest types of circuits in regard to speed, accuracy, and cost.

telegraph interference [COMMUN] Any undesired electrical energy that tends to interfere with the reception of telegraph signals.

telegraph receiver [ELEC] A tape reperforator, teletypewriter, or other equipment which converts telegraph signals into a pattern of holes on a tape, printed letters, or other forms of information.

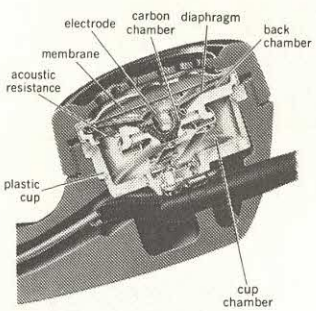
telegraph repeater [ELEC] A repeater inserted at intervals in long telegraph lines to amplify weak code signals, with or without reshaping of pulses, and to retransmit them automatically over the next section of the line.

TELEOSAURIDAE



Skull of typical Teleosauridae, with long snout.

TELEPHONE TRANSMITTER



Cut-away view of telephone transmitter of the direct-action granular-carbon type. Sound pressure on diaphragm varies pressure of dome-shaped electrode on the carbon, causing changes in resistance of the carbon granules, and, in turn, in the magnitude of the current.

telegraph signal distortion [COMMUN] Time displacement of transitions between conditions, such as marking and spacing, with respect to their proper relative positions in perfectly timed signals; the total distortion is the algebraic sum of the bias and the characteristic and fortuitous distortions.

telegraph transmitter [ELEC] A device that controls an electric power source in order to form telegraph signals.

telegraphy [COMMUN] Communication at a distance by means of code signals consisting of current pulses sent over wires or by radio.

telemagmatic [GEOL] Pertaining to a hydrothermal mineral deposit that is distant from its magmatic source.

telemeteorograph [ENG] Any meteorological instrument, such as a radiosonde, in which the recording instrument is located at some distance from the measuring apparatus; for example, a meteorological telemeter.

telemeteorography [ENG] The science of the design, construction, and operation of various types of telemeteorographs.

telemeteorometry [METEOROL] The study of making meteorological observations at a distance.

telemeter [ENG] **1.** The complete measuring, transmitting, and receiving apparatus for indicating or recording the value of a quantity at a distance. Also known as telemetering system. **2.** To transmit the value of a measured quantity to a remote point.

telemetering [ENG] Transmitting the readings of instruments to a remote location by means of wires, radio waves, or other means. Also known as remote metering; telemetry.

telemetering antenna [ELECTROMAG] A highly directional antenna, generally mounted on a servo-controlled mount for tracking purposes, used at ground stations to receive telemetering signals from a guided missile or spacecraft.

telemetering receiver [ELECTR] A device in a telemetering system which converts electrical signals into an indication or recording of the value of the quantity being measured at a distance.

telemetering system *See* telemeter.

telemetering transmitter [ELECTR] A device which converts the readings of instruments into electrical signals for transmission to a remote location by means of wires, radio waves, or other means.

telemetering wave buoy [ENG] A buoy assembly that transmits a radio signal that varies in frequency proportional to the vertical acceleration experienced by the buoy, thereby conveying information about the buoy's vertical motion as it rides the waves.

telemetry *See* telemetering.

telencephalon [EMBRYO] The anterior subdivision of the forebrain in a vertebrate embryo; gives rise to the olfactory lobes, cerebral cortex, and corpora striata.

teleology [SCI TECH] The doctrine that explanations of phenomena are to be sought in terms of final causes, purpose, or design in nature.

teleoperator [CONT SYS] A general-purpose, remotely controlled, cybernetic, dexterous person-machine system.

Teleosauridae [PALEON] A family of Jurassic reptiles in the order Crocodilia characterized by a long snout and heavy armor.

Teleostei [VERT ZOO] An infraclass of the subclass Actinopterygii, or rayfin fishes; distinguished by paired bracing bones in the supporting skeleton of the caudal fin, a homocercal caudal fin, thin cycloid scales, and a swim bladder with a hydrostatic function.

telephone [COMMUN] A system of converting sound waves into variations in electric current that can be sent over wires and reconverted into sound waves at a distant point, used primarily for voice communication; it consists essentially of a telephone transmitter and receiver at each station, interconnecting wires, signaling devices, a central power supply, and switching facilities. Also known as telephone system. [ENG ACOUS] *See* telephone set.

telephone-answering system [COMMUN] A special type of private branch exchange system used by a telephone-answering service bureau to provide secretarial service for its customers.

telephone carrier current [ELEC] A carrier current used for telephone communication over power lines or to obtain more than one channel on a single pair of wires.

telephone central office *See* central office.

telephone channel [COMMUN] A one-way or two-way path suitable for the transmission of audio signals between two stations.

telephone circuit [ELEC] The complete circuit over which audio and signaling currents travel in a telephone system between the two telephone subscribers in communication with each other; the circuit usually consists of insulated conductors, as ground returns are now rarely used in telephony.

telephone data set [COMPUT SCI] Equipment interfacing a data terminal with a telephone circuit.

telephone dial [ENG] A switch operated by a finger wheel, used to make and break a pair of contacts the required number of times for setting up a telephone circuit to the party being called.

telephone emission *See* telephone signal.

telephone induction coil [ELEC] A coil used in a telephone circuit to match the impedance of the line to that of a telephone transmitter or receiver.

telephone influence factor [COMMUN] A function giving the relative interfering effect of noise induced in a telephone circuit by voltage or current in a power circuit at various frequencies. Abbreviated TIF. Also known as influence factor.

telephone line [ELEC] The conductors extending between telephone subscriber stations and central offices.

telephone loading coil *See* loading coil.

telephone modem [ELECTR] A piece of equipment that modulates and demodulates one or more separate telephone circuits, each containing one or more telephone channels; it may include multiplexing and demultiplexing circuits, individual amplifiers, and carrier-frequency sources.

telephone pickup [ELEC] A large flat coil placed under a telephone set to pick up both voices during a telephone conversation for recording purposes.

telephone plug *See* phone plug.

telephone receiver [ENG ACOUS] The portion of a telephone set that converts the audio-frequency current variations of a telephone line into sound waves, by the motion of a diaphragm activated by a magnet whose field is varied by the electrical impulses that come over the telephone wire.

telephone relay [ELEC] A relay having a multiplicity of contacts on long spring strips mounted parallel to the coil, actuated by a lever arm or other projection of the hinged armature; used chiefly for switching in telephone circuits.

telephone repeater [ELECTR] A repeater inserted at one or more intermediate points in a long telephone line to amplify telephone signals so as to maintain the required current strength.

telephone repeating coil [ELEC] A coil used in a telephone circuit for inductively coupling two sections of a line when a direct connection is undesirable.

telephone ringer [ELECTROMAG] An electromagnetic device that actuates a clapper which strikes one or more gongs to produce a ringing sound; used with a telephone set to signal a called party.

telephone set [ENG ACOUS] An assembly including a telephone transmitter, a telephone receiver, and associated switching and signaling devices. Also known as telephone.

telephone signal [COMMUN] The electrical signal transmitted by a telephone system, classified by type of transmission, type of modulation, bandwidth, and supplementary characteristics. Also known as telephone emission.

telephone switchboard *See* switchboard.

telephone system *See* telephone.

telephone theory *See* frequency theory.

telephone transmitter [ENG ACOUS] The microphone used in a telephone set to convert speech into audio-frequency electric signals.

telephony [COMMUN] The transmission of speech to a distant point by means of electric signals.

telephoto *See* facsimile.

telephotography *See* facsimile.

telephoto lens [OPTICS] A lens for photographing distant objects; it is designed in a compact manner so that the distance from the front of the lens to the film plane is less than the focal length of the lens.

telephotometer [ENG] A photometer that measures the received intensity of a distant light source.

telephotometry [OPTICS] The body of principles and techniques concerned with measuring atmospheric extinction by using various types of telephotometers.

teleprinter [COMMUN] A device that responds to teletype signals and prints the corresponding characters on paper tape. [COMPUT SCI] Any typewriter-type device capable of

being connected to a computer and of printing out a set of messages under computer control.

teleprinter code [COMMUN] A telegraph code used with teletypewriters or teleprinters, in which each letter is represented by a number of time intervals of equal length in which a current is present or absent; there are usually five or seven units per letter, depending on the code.

teleprinting [COMMUN] Telegraphy in which the transmitter and receiver are teleprinters or teletypewriters.

teleprocessing [COMPUT SCI] **1.** The use of telecommunications equipment and systems by a computer. **2.** A computer service involving input/output at locations remote from the computer itself.

teleprocessing monitor [COMPUT SCI] A computer program that manages the transfer of information between local and remote terminals. Abbreviated TP monitor.

telepsychrometer [ENG] A psychrometer in which the wet- and dry-bulb thermal elements are located at a distance from the indicating elements.

Teleran *See* television and radar navigation system.

telerecording bathythermometer [ENG] A device which transmits measurements of sea water depth and temperature over a wire to a ship, where a graph of temperature versus depth is recorded.

telering [ELECTR] In telephony, a frequency-selector device for the production of ringing power.

telescope [ENG] Any device that collects radiation, which may be in the form of electromagnetic or particle radiation, from a limited direction in space. [OPTICS] An assemblage of lenses or mirrors, or both, that enhances the ability of the eye either to see objects with greater resolution or to see fainter objects.

Telescope *See* Telescopium.

telescope structure [GEOL] An alluvial fan structure characterized by younger fans with flatter gradients spreading out between older fans with steeper gradients.

telescopic alidade [ENG] An alidade used with a plane table, consisting of a telescope mounted on a straightedge ruler, fitted with a level bubble, scale, and vernier to measure angles, and calibrated to measure distances.

telescopic comet [ASTRON] A comet in which only the coma is observed.

telescopic derrick [ENG] A drill derrick divided into two or more sections, with the uppermost sections nesting successively into the lower sections.

telescopic loading trough [MIN ENG] A shaker conveyor trough of two sections, one nested in the other, used near the face for advancing the trough line without the necessity of adding either a standard or a short length of pan after each cut.

telescopic sight [ORD] Gunsight equipped with a telescope.

telescopic tripod [ENG] A drill or surveyor's tripod each leg of which is a series of two or more closely fitted nesting tubes, which can be locked rigidly together in an extended position to form a long leg or nested one within the other for easy transport.

telescoping gage [DES ENG] An adjustable internal gage with a telescoping plunger that expands under spring tension in the hole to be measured; it is locked into position to allow measurement after being withdrawn from the hole.

telescoping valve [MECH ENG] A valve, with sliding, telescoping members, to regulate water flow in a pipe line with minimum disturbance to stream lines.

Telescopium [ASTRON] A constellation, right ascension 19 hours, declination 50° south. known as Telescope.

teleseism [GEOPHYS] An earthquake that is far from the recording station.

teleseismology [GEOPHYS] The aspect of seismology dealing with records made at a distance from the source of the impulse.

Telestacea [INV ZOO] An order of the subclass Alcyonaria comprised of individuals which form erect branching colonies by lateral budding from the body wall of an elongated axial polyp.

telesynd [ELECTR] Telemeter or remote-control equipment which is synchronous in both speed and position.

teletext [COMMUN] A data broadcasting service in which preprogrammed sequences of frames of data are broadcast cyclically, and a user equipped with a standard television receiver and a special decoder selects the desired frames of information for viewing.

teletherapy [MED] Radiation treatment administered by using a source that is at a distance from the body, usually employing gamma-ray beams from radioisotope sources.

telethermal [GEOL] Pertaining to a hydrothermal mineral deposit precipitated at a shallow depth and at a mild temperature.

telethermometer [ENG] A temperature-measuring system in which the heat-sensitive element is located at a distance from the indicating element.

telethermoscope [ENG] A temperature telemeter, frequently used in a weather station to indicate the temperature at the instrument shelter located outside.

teletypesetter [GRAPHICS] A system automatically operating a linecasting machine (Linotype or Intertype) to produce lines of type at high speed under the control of perforated tape or equivalent electrical signals.

teletypewriter [COMMUN] A special electric typewriter that produces coded electric signals corresponding to manually typed characters, and automatically types messages when fed with similarly coded signals produced by another machine. Also known as TWX machine.

teletypewriter code [COMMUN] Special code in which each code group is made up of five units, or elements, of equal length which are known as marking or spacing impulses; the five-unit start-stop code consists of five signal impulses preceded by a start impulse and followed by a stop impulse.

teletypewriter exchange service [COMMUN] A service furnished by telephone companies to 60,000 subscribers in the United States, whereby any of the subscribers can communicate directly with any other subscriber via teletypewriter. Also known as TWX service.

teletypewriter signal distortion [COMMUN] Of a start-stop teletypewriter signal, the shifting of the transition points of the signal pulses from their proper positions relative to the beginning of the start pulse; the magnitude of the distortion is expressed in percent of a perfect unit pulse length.

teletypewriter test tape [COMMUN] Perforated tape containing the identification of the transmitting station followed by repetitions of the letters RY, and a test consisting of letters and figures.

teleutospore *See* teliospore.

televise [COMMUN] To pick up a scene with a television camera and convert it into corresponding electric signals for transmission by a television station.

television [COMMUN] A system for converting a succession of visual images into corresponding electric signals and transmitting these signals by radio or over wires to distant receivers at which the signals can be used to reproduce the original images. Abbreviated TV.

television and radar navigation system [NAV] Navigational system which employs ground-based search radar equipment along an airway to locate aircraft flying near that airway; transmits, by television, information pertaining to these aircraft and other information to the pilots of properly equipped aircraft, and provides information to the pilots appropriate for use in the landing approach. Also known as Teleran; television-radar air navigation.

television antenna [ELECTROMAG] An antenna suitable for transmitting or receiving television broadcasts; since television transmissions in the United States are horizontally polarized, the most basic type of receiving antenna is a horizontally mounted half-wave dipole.

television bandwidth [COMMUN] The difference between the limiting frequencies of a television channel; in the United States, this is 6 megahertz.

television broadcast band [COMMUN] Several groups of channels, each containing a number of 6-megahertz channels, that are available for assignment to television broadcast stations.

television broadcasting [COMMUN] Transmission of television programs by means of radio waves, for reception by the public.

television camera [ELECTR] The pickup unit used to convert a scene into corresponding electric signals; optical lenses focus the scene to be televised on the photosensitive surface of a camera tube, and the tube breaks down the visual image into small picture elements and converts the light intensity of each element in turn into a corresponding electric signal. Also known as camera.

television camera tube *See* camera tube.

television channel [COMMUN] A band of frequencies 6

TELEVISION CAMERA

Color television camera. *(Philips Audio Video Systems Corp., Broadcast Equipment Div.)*

megahertz wide in the television broadcast band, available for assignment to a television broadcast station.

television emission *See* television signal.

television film scanner [ENG] A motion picture projector adapted for use with a television camera tube to televise 24-frame-per-second motion picture film at the 30-frame-per-second rate required for television.

television interference [COMMUN] Interference produced in television receivers by amateur radio and other transmitters. Abbreviated TVI.

television monitor [ELECTR] **1.** A television set connected to the transmitter at a television station, used to continuously check the image picked up by a television camera and the sound picked up by the microphones. **2.** A closed-circuit television system used to provide continuous observation of such things as hazardous or remote locations, the readings of gages for process control, or microscopic or telescopic images, for greater convenience of viewing.

television network [COMMUN] An arrangement of communication channels, suitable for transmission of video and accompanying audio signals, which link together groups of television broadcasting stations or closed-circuit television users in different cities so that programs originating at one point can be fed simultaneously to all others.

television pickup station [COMMUN] A land mobile station used for the transmission of television program material and related communications from the scene of an event occurring at a remote point to a television broadcast station.

television picture tube *See* picture tube.

television-radar air navigation *See* television and radar navigation.

television receiver [ELECTR] A receiver that converts incoming television signals into the original scenes along with the associated sounds. Also known as television set.

television reconnaissance [COMMUN] Reconnaissance in which television is used to transmit a scene from the reconnoitering point to another location on the surface or in the air.

television recording [COMMUN] Permanent record of video signals that is recorded photographically, electronically, or by other means, and may be displayed through a television system or projected as a motion picture film.

television relay system *See* television repeater.

television repeater [ELECTR] A repeater that transmits television signals from point to point by using radio waves in free space as a medium, such transmission not being intended for direct reception by the public. Also known as television relay system.

television satellite [AERO ENG] An orbiting satellite that relays television signals between ground stations.

television scanning [COMMUN] The process of scrutinizing the brightness of each element of detail contained in the image of a scene to be transmitted by television.

television screen [ELECTR] The fluorescent screen of the picture tube in a television receiver.

television set *See* television receiver.

television signal [COMMUN] A general term for the aural and visual signals that are broadcast together to provide the sound and picture portions of a television program. Also known as television emission.

television station [COMMUN] The installation, assemblage of equipment, and location where radio transmissions are sent or received.

television studio [COMMUN] A complex of rooms specifically designed for the origination of live television programs; in addition to the studio room in which the program takes place, there are three support rooms: the control room, equipment room, and prop room.

television tower [ENG] A tall metal structure used as a television transmitting antenna, or used with another such structure to support a television transmitting antenna wire.

television transmitter [ELECTR] An electronic device that converts the audio and video signals of a television program into modulated radio-frequency energy that can be radiated from an antenna and received on a television receiver.

television tuner [ELECTR] A component in a television receiver that selects the desired channel and converts the frequencies received to lower frequencies within the passband of the intermediate-frequency amplifier; for very-high-frequency reception there are 12 discrete positions (channels 2–13); for ultra-high-frequency reception continuous tuning is usually employed.

telewriter [COMMUN] System in which writing movement at the transmitting end causes corresponding movement of a writing instrument at the receiving end.

Telex [COMMUN] A worldwide teleprinter exchange service providing direct send and receive teleprinter connections between subscribers. Abbreviated TEX.

telford pavement [CIV ENG] A road pavement having a firm foundation of large stones and stone fragments, and a smooth hard-rolled surface of small stones.

telinite [GEOL] A variety of provitrinite composed of plant cell-wall material.

teliospore [MYCOL] A thick-walled spore of the terminal stage of Uredinales and Ustilaginales which is a probosidium or a group of probosidia. Also known as teleutospore.

Tellerette [CHEM ENG] A type of inert packing with the appearance of a circular-wound spiral, used to create a large surface area to increase contact between falling liquid and rising vapor; used in gas-absorption operations.

Teller-Redlich rule [PHYS CHEM] For two isotopic molecules, the product of the frequency ratio values of all vibrations of a given symmetry type depends only on the geometrical structure of the molecule and the masses of the atoms, and not on the potential constants.

telltale [ENG] A marker on the outside of a tank that indicates on an exterior scale the amount of fluid inside the tank.

telltale compass [NAV] A marine magnetic compass, usually of the inverted type, frequently installed in the master's cabin.

telltale float [CIV ENG] A water-level indicator in a reservoir.

telluric acid [INORG CHEM] H_6TeO_6 Toxic white crystals, slightly soluble in cold water, soluble in hot water and alkalies; melts at 136°C; used as an analytical reagent. Also known as hydrogen tellurate.

telluric current *See* earth current.

telluric line [SPECT] Any of the spectral bands and lines in the spectrum of the sun and stars produced by the absorption of their light in the atmosphere of the earth.

tellurinic acid [ORG CHEM] A compound of tellurium with the general formula R_2TeOOH; an example is methanetellurinic acid, C_6H_5TeOOH.

tellurite [MINERAL] TeO_2 A white or yellowish orthorhombic mineral consisting of tellurium dioxide, and occurring in crystals; it is dimorphous with paratellurite.

tellurium [CHEM] A member of group VI, symbol Te, atomic number 52, atomic weight 127.60; dark-gray crystals, insoluble in water, soluble in nitric and sulfuric acids and potassium hydroxide; melts at 452°C, boils at 1390°C; used in alloys (with lead or steel), glass, and ceramics.

tellurium bromide *See* tellurium dibromide.

tellurium chloride *See* tellurium dichloride.

tellurium dibromide [INORG CHEM] $TeBr_2$ Toxic, hygroscopic, green- or gray-black crystals with violet vapor, soluble in ether, decomposes in water, and melts at 210°C. Also known as tellurium bromide; tellurous bromide.

tellurium dichloride [INORG CHEM] $TeCl_2$ A toxic, amorphous, black or green-yellow powder decomposing in water, melting at 209°C. Also known as tellurium chloride; tellurous chloride.

tellurium dioxide [INORG CHEM] TeO_2 The most stable oxide of tellurium, formed when tellurium is burned in oxygen or air or by oxidation of tellurium with cold nitric acid; crystallizes as colorless, tetragonal, hexagonlike crystals that melt at 452°C.

tellurium disulfide [INORG CHEM] TeS_2 A toxic, red powder, insoluble in water and acids. Also known as tellurium sulfide.

tellurium glance *See* nagyagite.

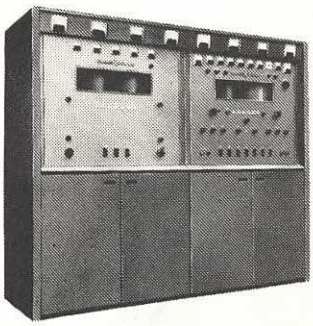
tellurium hexafluoride [INORG CHEM] TeF_6 A colorless gas which is formed from the elements tellurium and fluorine; it is slowly hydrolyzed by water.

tellurium monoxide [INORG CHEM] TeO A black, amorphous powder, stable in cold dry air; formed by heating the mixed oxide $TeSO_3$.

tellurium sulfide *See* tellurium disulfide.

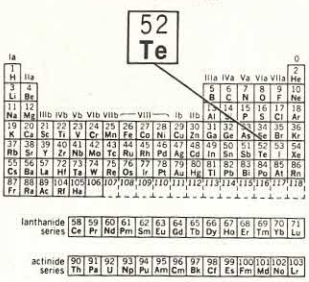
tellurobismuthite [MINERAL] Bi_2Te_3 A pale lead gray, hexagonal mineral consisting of a bismuth and tellurium compound; occurs as irregular plates or foliated masses.

TELEVISION TRANSMITTER



A very-high-frequency television transmitter with 15-kilowatt power output. *(General Electric Co.)*

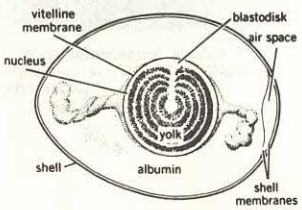
TELLURIUM



Periodic table of the chemical elements showing the position of tellurium.

telluroketone [ORD CHEM] One of a group of compounds with the general formula R_2CTe.
telluromercaptan [ORG CHEM] One of a group of compounds with the general formula RTeH.
tellurometer [ENG] A microwave instrument used in surveying to measure distance; the time for a radio wave to travel from one observation point to the other and return is measured and converted into distance by phase comparison, much as in radar.
tellurous acid [INORG CHEM] H_2TeO_3 Toxic, white crystals, soluble in alkalies and acids, slightly soluble in water and alcohol; decomposes at 40°C.
tellurous bromide *See* tellurium dibromide.
tellurous chloride *See* tellurium dichloride.
teloblast [INV ZOO] A large cell that produces many smaller cells at the growing end of many embryos, especially in annelids and mollusks.
telocentric [CYTOL] Pertaining to a chromosome with a terminal centromere.
telocoel [EMBRYO] A cavity of the telencephalon.
telodendrion [ANAT] The terminal branching of an axon. Also known as telodendron.
telodendron *See* telodendrion.
telogen [PHYSIO] A quiescent phase in the cycle of hair growth when the hair is retained in the hair follicle as a dead or "club" hair.
telolecithal [CYTOL] Of an ovum, having a large, evenly dispersed volume of yolk and a small amount of cytoplasm concentrated at one pole.
telomere [CYTOL] A centromere in the terminal position on a chromosome.
telophase [CYTOL] The phase of meiosis or mitosis at which the chromosomes, having reached the poles, reorganize into interphase nuclei with the disappearance of the spindle and the reappearance of the nuclear membrane; in many organisms telophase does not occur at the end of the first meiotic division.
Telosporea [INV ZOO] A class of the protozoan subphylum Sporozoa in which the spores lack a polar capsule and develop from an oocyst.
telotaxis [BIOL] Tactic movement of an organism by the orientation of one or the other of two bilaterally symmetrical receptors toward the stimulus source.
telotroch [INV ZOO] A preanal tuft of cilia in a trochophore larva.
Telpak [COMMUN] Trademark of the Bell System for a variety of leased wide-band communication channels.
telpher [MECH ENG] An electric hoist hanging from and driven by a wheeled cab rolling on a single overhead rail or a rope.
Telsmith breaker [MECH ENG] A type of gyratory crusher, often used for primary crushing; consists of a spindle mounted in a long eccentric sleeve which rotates to impart a gyratory motion to the crushing head, but gives a parallel stroke, that is, the axis of the spindle describes a cylinder rather than a cone, as in the suspended spindle gyratory.
telson [INV ZOO] The postabdominal segment in lobsters, amphipods, and certain other invertebrates.
Telstar satellite [AERO ENG] A spherical active repeater communications satellite, first launched on July 10, 1962.
telvar [ORG CHEM] The common name for the herbicide 3-(*para*-chlorophenyl)-1,1-dimethylurea; used as a soil sterilant.
TEM *See* triethylenemelamine.
TEMA standard [CHEM ENG] Shell-and-tube heat-exchange standard designed to supplement the ASME code for unfired pressure vessels.
TEM mode *See* transverse electromagnetic mode.
Temnocephalida [INV ZOO] A group of rhabdocoeles sometimes considered a distinct order but usually classified under the Neorhabdocoela; members are characterized by the possession of tentacles and adhesive organs.
Temnochilidae [INV ZOO] The equivalent name for Ostomidae.
Temnopleuridae [INV ZOO] A family of echinoderms in the order Temnopleuroida whose tubercles are imperforate, though usually crenulate.
Temnopleuroida [INV ZOO] An order of echinoderms in the superorder Echinacea with a camarodont lantern, smooth or sculptured test, imperforate or perforate tubercles, and bronchial slits which are usually shallow.
Temnospondyli [PALEON] An order of extinct amphibians in the subclass Labyrinthodontia having vertebrae with reduced pleurocentra and large intercentra.
TE mode *See* transverse electric mode.
temper [ENG] **1.** To moisten and mix clay, plaster, or mortar to the proper consistency for use. **2.** To anneal or toughen glass. [MET] **1.** The hardness and strength of a rolled metal. **2.** The nominal carbon content of steel. **3.** To soften hardened steel or cast iron by reheating to some temperature below the eutectoid temperature. **4.** An alloy added to pure tin to make the finest pewter.
tempera [MATER] **1.** An opaque watercolor paint consisting of pigment ground in water and mixed with egg yolk. **2.** A poster paint that uses glue or gum as a binder.
temperament [ACOUS] The adjustment of the pitch of the notes of a keyboard instrument so that the diatonic scale in all keys approximates just tuning; this permits modulation to any key.
temperate and cold savannah [ECOL] A regional vegetation zone, very extensively represented in North America and in Eurasia at high altitudes; consists of scattered or clumped trees (very often conifers and mostly needle-leaved evergreens) and a shrub layer of varying coverage; mosses and, even more abundantly, lichens form an almost continuous carpet.
temperate and cold scrub [ECOL] Regional vegetation zone whose density and periodicity vary a good deal; requires a considerable amount of moisture in the soil, whether from mist, seasonal downpour, or snowmelt; shrubs may be evergreen or deciduous; and undergrowth of ferns and other large-leaved herbs are quite frequent, especially at subalpine level; wind shearing and very cold winters prevent tree growth. Also known as bosque; fourré; heath.
temperate belt [CLIMATOL] A belt around the earth within which the annual mean temperature is less than 20°C (68°F) and the mean temperature of the warmest month is higher than 10°C (50°F).
temperate climate [CLIMATOL] The climate of the middle latitudes; the climate between the extremes of tropical climate and polar climate.
temperate glacier [HYD] A glacier which, at the end of the melting season, is composed of firn and ice at the melting point.
temperate mixed forest [ECOL] A forest of the North Temperate Zone containing a high proportion of conifers with a few broad-leafed species.
temperate phage [VIROL] A deoxyribonucleic acid phage, the genome (DNA) of which can under certain circumstances become integrated with the genome of the host.
temperate rainforest [ECOL] A vegetation class in temperate areas of high and evenly distributed rainfall characterized by comparatively few species with large populations of each species; evergreens are somewhat short with small leaves, and there is an abundance of large tree ferns. Also known as cloud forest; laurel forest; laurisilva; moss forest; subtropical forest.
temperate rainy climate [CLIMATOL] One of the major categories in W. Kippen's climatic classification; the coldest-month mean temperature is less than 64.4°F (18°C) and greater than 26.6°F (−3°C), and the warmest-month mean temperature is more than 50°F (10°C).
temperate westerlies *See* westerlies.
temperate-westerlies index [METEOROL] A measure of the strength of the westerly wind between latitudes 35°N and 55°N; the index is computed from the average sea-level pressure difference between these latitudes and is expressed as the west to east component of geostrophic wind in meters and tenths of meters per second.
temperate woodland [ECOL] A vegetation class similar to tropical woodland in spacing, height, and stratification, but it can be either deciduous or evergreen, broad-leaved or needle-leaved. Also known as parkland; woodland.
Temperate Zone [CLIMATOL] Either of the two latitudinal zones on the earth's surface which lie between 23°27′ and 66°32′ N and S (the North Temperate Zone and South Temperate Zone, respectively).
temperature [THERMO] A property of an object which determines the direction of heat flow when the object is placed in thermal contact with another object: heat flows from a region of higher temperature to one of lower temperature; it is measured either by an empirical temperature scale, based on some convenient property of a material or instrument, or by a scale of absolute temperature, for example, the Kelvin scale.
13.0 temperature *See* annealing point.

TELOLECITHAL



Telolecithal ovum of a hen.

TEMPERATE RAINFOREST

Temperate rainforest in Olympic National Park, Washington, showing sheath of moss on maple tree. *(Photograph by J. O. Sumner, from National Audubon Society)*

temperature-actuated pressure relief valve [MECH ENG] A pressure relief valve which operates when subjected to increased external or internal temperature.

temperature bath [THERMO] A relatively large volume of a homogeneous substance held at constant temperature, so that an object placed in thermal contact with it is maintained at the same temperature.

temperature belt [METEOROL] The belt which may be drawn on a thermograph trace or other temperature graph by connecting the daily maxima with one line and the daily minima with another.

temperature-chlorinity-depth recorder [ENG] An instrument in which an underwater unit suspended from a cable records temperature, chlorinity, and depth sequentially on a single-pen strip recorder, each quantity being recorded for several seconds at a time.

temperature coefficient [PHYS] The rate of change of some physical quantity (such as resistance of a conductor or voltage drop across a vacuum tube) with respect to temperature.

temperature coefficient of reactivity [NUCLEO] The change in reactor reactivity (per degree of temperature) occurring when the operating temperature of the reactor changes.

temperature color scale [THERMO] The relation between an incandescent substance's temperature and the color of the light it emits.

temperature-compensated Zener diode [ELECTR] Positive-temperature-coefficient reversed-bias Zener diode (*pn* junction) connected in series with one or more negative-temperature forward-biased diodes within a single package.

temperature-compensating capacitor [ELEC] Capacitor whose capacitance varies with temperature in a known and predictable manner; used extensively in oscillator circuits to compensate for changes in the values of other parts with temperatures.

temperature compensation [ELECTR] The process of making some characteristic of a circuit or device independent of changes in ambient temperature.

temperature control [ENG] A control used to maintain the temperature of an oven, furnace, or other enclosed space within desired limits.

temperature-efficiency index [ECOL] For a given location, a measure of the long-range effectiveness of temperature (thermal efficiency) in promoting plant growth. Abbreviated T-E index. Also known as thermal-efficiency index.

temperature-efficiency ratio [ECOL] For a given location and month, a measure of thermal efficiency; it is equal to the departure, in degrees Fahrenheit, of the normal monthly temperature above 32°F (0°C) divided by 4: $(T - 32)/4$. Abbreviated T-E ratio. Also known as thermal-efficiency ratio.

temperature error [ENG] That instrument error due to nonstandard temperature of the instrument.

temperature gradient [THERMO] For a given point, a vector whose direction is perpendicular to an isothermal surface at the point, and whose magnitude equals the rate of change of temperature in this direction.

temperature-humidity index [METEOROL] An index which gives a numerical value, in the general range of 70–80, reflecting outdoor atmospheric conditions of temperature and humidity as a measure of comfort (or discomfort) during the warm season of the year; equal to 15 plus 0.4 times the sum of the dry-bulb and wet-bulb temperatures in degrees Fahrenheit. Also known as comfort index; discomfort index. Abbreviated CI; DI; THI.

temperature-indicating compound [MATER] A temperature-sensitive material with a predetermined melting point; used to indicate when a predesignated temperature is reached in such processes as heat treating, welding, and molding.

temperature inversion [METEOROL] A layer in the atmosphere in which temperature increases with altitude; the principal characteristic of an inversion layer is its marked static stability, so that very little turbulent exchange can occur within it; strong wind shears often occur across inversion layers, and abrupt changes in concentrations of atmospheric particulates and atmospheric water vapor may be encountered on ascending through the inversion layer. [OCEANOGR] A layer of a large body of water in which temperature increases with depth.

temperature log [PETRO ENG] A continuous record of temperature versus depth in an oil-well borehole.

temperature profile recorder [ENG] A portable instrument for measuring temperature as a function of depth in shallow water, particularly in lakes, in which a thermistor element transmits data over an electrical cable to a recording drum and depth is measured by the amount of wire paid out.

temperature province [CLIMATOL] A major division of C.W. Thornthwaite's schemes of climatic classification, determined as a function of the temperature-efficiency index or the potential evapotranspiration.

temperature resistance coefficient [ELEC] The ratio of the change of electrical resistance in a wire caused by a change in its temperature of 1°C as related to its resistance at 0°C.

temperature-salinity diagram [OCEANOGR] The plot of temperature versus salinity data of a water column; the resulting diagram identifies the water masses within the column, the column's stability, indicates the σ_T value via lines of constant σ_T printed on paper, and allows an estimate of the accuracy of the temperature and salinity measurements. Also known as T-S curve; T-S diagram; T-S relation.

temperature saturation [ELECTR] The condition in which the anode current of a thermionic vacuum tube cannot be further increased by increasing the cathode temperature at a given value of anode voltage; the effect is due to the space charge formed near the cathode. Also known as filament saturation; saturation.

temperature scale [THERMO] An assignment of numbers to temperatures in a continuous manner, such that the resulting function is single valued; it is either an empirical temperature scale, based on some convenient property of a substance or object, or it measures the absolute temperature.

temperature-sensitive mutant [GEN] A mutant gene that is functional at high (low) temperature but is inactivated by lowering (elevating) the temperature.

temperature sensor [ENG] A device designed to respond to temperature stimulation.

temperature survey [PETRO ENG] An analysis of temperature changes or differences down an oil-well borehole, based on a temperature log; used to locate the top of casing cement, lost circulation zones, or gas entry zones.

temperature transducer [ENG] A device in an automatic temperature-control system that converts the temperature into some other quantity such as mechanical movement, pressure, or electric voltage; this signal is processed in a controller, and is applied to an actuator which controls the heat of the system.

temperature wave [CRYO] A disturbance in which a variation in temperature propagates through a medium; the chief example of this is second sound. Also known as thermal wave.

temperature zone [CLIMATOL] A portion of the earth's surface defined by relatively uniform temperature characteristics, and usually bounded by selected values of some measure of temperature or temperature effect.

temper brittleness [MET] A brittle state resulting when certain low-alloy steels are slowly cooled in a range of 600–300°C or reheated in this range after quenching from 600°C.

tempering [MET] Heat treatment of hardened steels to temperatures below the transformation temperature range, usually to improve toughness.

tempering air [ENG] Low-temperature air added to a heated airstream to regulate the stream temperature.

tempering oil [MATER] A high-viscosity neutral petroleum oil, such as a steam cylinder stock, used for the drawing or tempering of steel. Also known as steam-hammer oil; summer black oil.

temper screw *See* stirrup.

temper time [MET] In resistance welding, that part of the postweld interval during which the current is suitable for tempering or heat treatment.

tempilstick [MATER] A crayon that, when applied to a surface, indicates when the surface temperature exceeds a given value by changing color.

template [COMPUT SCI] A prototype pattern against which observed patterns are matched in a pattern recognition system. [ENG] **1.** A two-dimensional representation of a machine or other equipment used for building layout design. **2.** A guide or a pattern used in manufacturing items. Also spelled templet. [MOL BIO] The macromolecular model for the synthesis of another macromolecule.

templet *See* template.

temporal [SCI TECH] Pertaining to or limited by time.

temporal arteritis *See* giant-cell arteritis.

temporal bone [ANAT] The bone forming a portion of the

lateral aspect of the skull and part of the base of the cranium in vertebrates.

temporal decomposition [CONT SYS] The partitioning of the control or decision-making problem associated with a large-scale control system into subproblems based on the different time scales relevant to the associated action functions.

temporale [METEOROL] A rainy wind from the southwest to west resulting from a deflection of the southeast trades of the eastern South Pacific onto the Pacific coast of Central America.

temporal-lobe epilepsy [MED] Recurrent seizures originating in lesions of the temporal lobe of the brain.

temporary base level [GEOL] Any base level, other than sea level, below which a land area temporarily cannot be reduced by erosion. Also known as local base level.

temporary geographic grid [ORD] A particular grid specified by military authorities for temporary and local use.

temporary hardness [CHEM] The portion of the total hardness of water that can be removed by boiling whereby the soluble calcium and magnesium bicarbonate are precipitated as insoluble carbonates.

temporary plankton *See* meroplankton.

temporary storage [COMPUT SCI] The storage capacity reserved or used for retention of temporary or transient data.

Tempra [TEXT] Trade name of industrial rayon yarn made by the American Enka Corporation.

TEM wave *See* transverse electromagnetic wave.

tenacity [TEXT] In yarn manufacture and textile engineering, the tensile strength of a yarn or a filament for its given size.

Ten Broecke chart [THERMO] A graphical plot of heat transfer and temperature differences used to calculate the thermal efficiency of a countercurrent cool-fluid–warm-fluid heat-exchange system.

tendency [METEOROL] The local rate of change of a vector or scalar quality with time at a given point in space.

tendency chart *See* change chart.

tendency equation [METEOROL] An equation for the local change of pressure at any point in the atmosphere, derived by combining the equation of continuity with an integrated form of the hydrostatic equation.

tendency interval [METEOROL] The finite increment of time over which a change of the value of a meteorological element is measured in order to estimate its tendency; the most familiar example is the three-hour time interval over which local pressure differences are measured in determining pressure tendency.

tender [NAV ARCH] A naval auxiliary ship that serves as a mobile base for repair and limited resupply of other ships.

Tendipedidae [INV ZOO] The midges, a family of orthorrhaphous dipteran insects in the series Nematocera whose larvae occupy intertidal wave-swept rocks on the seacoasts.

tendon [ANAT] A white, glistening, fibrous cord which joins a muscle to some movable structure such as a bone or cartilage; tendons permit concentration of muscle force into a small area and allow the muscle to act at a distance. [CIV ENG] A steel bar or wire that is tensioned, anchored to formed concrete, and allowed to regain its initial length to induce compressive stress in the concrete before use.

tendonitis [MED] Inflammation of a tendon.

tendon sheath [ANAT] The synovial membrane surrounding a tendon.

tendril [BOT] A stem modification in the form of a slender coiling structure capable of twining about a support to which the plant is then attached.

tenebrescence [PHYS] Darkening and bleaching under suitable irradiation; materials having this property are called scotophors; darkening may be produced by primary x-rays or cathode rays, while bleaching may be produced by heat or by photons of appropriate wavelength.

Tenebrionidae [INV ZOO] The darkling beetles, a large cosmopolitan family of coleopteran insects in the superfamily Tenebrionoidea; members are common pests of grains, dried fruits, beans, and other food products.

Tenebrionoidea [INV ZOO] A superfamily of the Coleoptera in the suborder Polyphaga.

tenggara [METEOROL] A strong, dry, hazy, east or southeast wind during the east monsoon in the Spermunde Archipelago.

teniae coli [HISTOL] The three bands comprising the longitudinal layer of the tunica muscularis of the colon: the tenia libera, tenia mesocolica, and tenia omentalis.

tennantite [MINERAL] $(Cu,Fe)_{12}As_4S_{13}$ A lead-gray mineral crystallizing in the isometric system; it is isomorphous with tetrahedrite; an important ore of copper.

tennecetin *See* pimaricin.

tenon [ENG] A tonguelike projection from the end of a framing member which is made to fit into a mortise.

tenorite [MINERAL] CuO A triclinic mineral that occurs in small, shining, steel-gray scales, in black powder, or in black earthy masses; an ore of copper.

tenosynovitis [MED] Inflammation of a tendon and its sheath.

tenrec [VERT ZOO] Any of about 30 species of unspecialized, insectivorous mammals indigenous to Madagascar, and which have poor vision and clawed digits.

Tenrecidae [VERT ZOO] The tenrecs, a family of insectivores in the group Lipotyphla.

ten's complement [MATH] In decimal arithmetic, the unique numeral that can be added to a given N-digit numeral to form a sum equal to 10^N (that is, a one followed by N zeros).

tensile bar [ENG] A molded, cast, or machined specimen of specified cross-sectional dimensions used to determine the tensile properties of a material by use of a calibrated pull test. Also known as tensile specimen; test specimen.

tensile modulus [MECH] The tangent or secant modulus of elasticity of a material in tension.

tensile specimen *See* tensile bar.

tensile strength [MECH] The maximum stress a material subjected to a stretching load can withstand without tearing. Also known as hot strength.

tensile stress [MECH] Stress developed by a material bearing a tensile load.

tensile test [ENG] A test in which a specimen is subjected to increasing longitudinal pulling stress until fracture occurs.

tension [MECH] **1.** The condition of a string, wire, or rod that is stretched between two points. **2.** The force exerted by the stretched object on a support.

tension crack [GEOL] An extension fracture caused by tensile stress.

tension fault [GEOL] A fault in which crustal tension is a factor, such as a normal fault. Also known as extensional fault.

tension fracture [GEOL] A minor rock fracture developed at right angles to the direction of maximum tension. Also known as subsidiary fracture.

tension jack [MIN ENG] A type of jack with a jackscrew for wedging against the mine roof and a ratchet device for applying tension on a chain that is attached to the tail or foot section of a belt conveyor, and used to restore the proper tension to the belt.

tension joint [GEOL] A joint that is a tension fracture.

tension packer [PETRO ENG] A device to pressure-seal the annular space between an oil-well casing and tubing, held in place by tension against an upward push; a type of production packer.

tension pulley [MECH ENG] A pulley around which an endless rope passes mounted on a trolley or other movable bearing so that the slack of the rope can be readily taken up by the pull of the weights.

tension-type hanger [PETRO ENG] A type of tubing hanger for multiple-completion oil wells to allow for the varying lengths of tubing strings.

tensor [MATH] An object relative to a locally euclidean space which possesses a specified system of components for every coordinate system and which changes under a transformation of coordinates.

tensor analysis [MATH] The abstract study of mathematical objects having components which express properties similar to those of a geometric tensor; this study is fundamental to Riemannian geometry and the structure of euclidean spaces. Also known as tensor calculus.

tensor calculus *See* tensor analysis.

tensor contraction [MATH] For a tensor having an upper and a lower index, summation over the components in which these indexes have the same value, in order to obtain a new tensor two lower in rank.

tensor differentiation [MATH] An operation on a tensor in which a term involving a Christoffel symbol is subtracted from the ordinary derivative, to obtain another tensor of one higher rank.

tensor field [MATH] A tensor or collection of tensors defined in some open subset of a Riemann space.

tensor force [NUC PHYS] A spin-dependent force between nucleons, having the same form as the interaction between

TENDER

Polaris submarine tender USS *Hunley*. *(Official U.S. Navy photograph)*

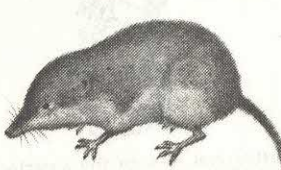
TENDRIL

Portion of a grape plant stem with leaf and tendril.

TENEBRIONIDAE

Representative species of family Tenebrionidae. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

TENREC



Tenrec, showing characteristic features.

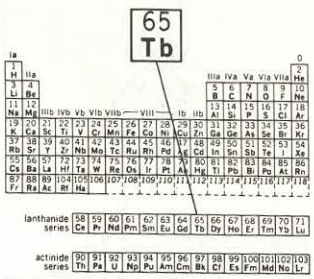
TENTED ARCH

Fingerprint having tented arch pattern with upthrust. *(Federal Bureau of Investigation)*

TENTHREDINIDAE

Representative species of family Tenthredinidae. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

TERBIUM



Periodic table of the chemical elements showing the position of terbium.

TEREBELLIDAE

Left-lateral view of the anterior end of *Artacamella* species in the subfamily Artacaminae of the Terebellidae.

magnetic dipoles; it is introduced to account for the observed values of the magnetic dipole moment and electric quadrupole moment of the deuteron.

tensorial set [MATH] Any collection of quantities that are associated with a system of spatial coordinates and which undergo a linear transformation when this system rotates; examples are the components of a tensor and the eigenfunctions of a quantum mechanical operator.

tensor muscle [PHYSIO] A muscle that stretches a part or makes it tense.

tensor product [MATH] **1.** The product of two tensors is the tensor whose components are obtained by multiplying those of the given tensors. **2.** In algebra, a multiplicative operation performed between modules.

tensor quantity [MATH] A quantity mathematically represented by a tensor or possessing properties analogous to a tensor.

tensor space [MATH] A fiber bundle composed of the points of a Riemannian manifold and tensor fields.

tentacle [INV ZOO] Any of various elongate, flexible processes with tactile, prehensile, and sometimes other functions, and which are borne on the head or about the mouth of many animals.

Tentaculata [INV ZOO] A class of the phylum Ctenophora whose members are characterized by having variously modified tentacles.

tentaculocyst [INV ZOO] A sense organ located at the margin of the umbrella in some coelenterate medusoids, consisting of a modified tentacle with a cavity that often contains lithites.

tentaculozoid [INV ZOO] A slender tentacular individual of a hydrozoan colony.

tented arch [ANAT] A fingerprint pattern which possesses either an angle, an upthrust, or two of the three basic characteristics of a loop.
